

AMA Glossary of Medical Terms

(Source: www.ama-assn.org)

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

A

Abdominal cavity- the part of the body between the bottom of the ribs and the top of the thighs, containing most of the digestive and urinary systems along with some reproductive organs

ABO blood groups- The system by which human blood is classified, based on proteins occurring on red blood cells; the four classification groups are A, AB, B, and O

Abortion- termination of a pregnancy; can occur because of natural causes (called a miscarriage) or be a medical intervention

Abscess- an accumulation of [pus](#) in a body tissue, usually caused by a bacterial infection

ACE inhibitor- a drug typically used to treat high [blood pressure](#) (Angiotensin-Converting Enzyme inhibitor)

Achilles tendon- the [tendon](#) at the back of the lower leg that connects the calf muscle to the heel bone

Acid-base balance- the mechanisms that the body uses to keep its fluids close to neutral (neither basic nor acidic) so that the body can function properly

Acidosis- a condition marked by abnormally high acid levels in the blood, associated with some forms of [diabetes](#), lung disease, and severe kidney disease

Acid reflux- a disorder in which acid in the stomach comes up into the [esophagus](#), because the valve separating the stomach and esophagus does not function properly

Acne- a skin condition characterized by inflamed, [pus](#)-filled areas that occur on the skin's surface, most commonly occurring during adolescence

Acquired- a word describing any condition that is not present at birth, but develops some time during life

Acquired immunodeficiency syndrome- infection by the [human immunodeficiency virus \(HIV\)](#), which causes a weakening of the immune system

Acute- describes a condition or illness that begins suddenly and is usually short-lasting

Acute respiratory disease- an urgent condition in which oxygen levels in the blood are lower than normal and breathing is difficult

Addiction- dependence on a substance (such as alcohol or other drugs) or an activity, to the point that stopping is very difficult and causes severe physical and mental reactions

Adenitis- infection and inflammation of a [gland](#), especially a [lymph node](#)

Adipose tissue- another term for fatty tissue; it stores energy, insulates, and cushions the body

Adjuvant therapy- the use of drugs or [radiation therapy](#) in the treatment of cancer along with surgery

Adrenal failure- a condition in which the adrenal glands do not produce enough of the [hormones](#) that control important functions such as blood pressure

Adrenal glands- two small [glands](#) located on top of the kidneys that secrete several important [hormones](#) into the blood

Adverse reaction- an unintended and unwanted side effect of some sort of treatment, usually drug therapy

Aerobic exercise- physical activity during which the heart and lungs must work harder to meet the body's increased [oxygen](#) demand

Affective disorder- a mental disorder involving abnormal moods and emotions; affective disorders include [manic-depressive disorder](#)

Afterbirth- the [placenta](#) and membranes that are eliminated from the woman's [uterus](#) following the birth of a child

Afterpains- normal contractions of the uterus after childbirth that usually occur for the first few days after delivery

AIDS- see [Acquired immunodeficiency syndrome](#)

AIDS-related complex- symptoms including weight loss, fever, and enlarged lymph nodes experienced by people who are infected with [HIV](#) but do not yet have AIDS

Air embolism- the blockage of an [artery](#) by air bubbles, which may have entered during surgery or after an injury

Airway obstruction- blockage of the passage of air through the windpipe to the lungs

Airways- the passageways that air moves through while traveling in and out of the lungs during breathing

Albinism- a condition in which people are born with insufficient amounts of the pigment melanin, which is responsible for hair, skin, and eye color

Alcoholic cardiomyopathy- heart damage and failure caused by intake of too much alcohol

Alimentary canal- another term for the digestive tract

Alkalosis- dangerously decreased acidity of the blood, which can be caused by high altitudes, [hyperventilation](#), and excessive vomiting

Alkylating agents- substances used in cancer treatment that interfere with the division of cells

Allergen- a substance that causes an allergic reaction

Allergic rhinitis- irritation of the nasal passages and the whites of the eyes, causing sneezing, runny nose, and sore eyes

Allergy- a negative reaction to a substance that in most people causes no reaction

Alopecia- baldness or loss of hair, mainly on the head, either in defined patches or completely; the cause is unknown

ALS- see [Amyotrophic lateral sclerosis](#)

Altitude sickness- headaches, dizziness, and nausea usually experienced at heights above 8,000 ft because of reduced [oxygen](#) in the air

Alzheimer disease- a condition that occurs late in life and worsens with time in which brain cells degenerate; it is accompanied by memory loss, physical decline, and confusion

Amenorrhea- absence of menstrual periods, occurring either after or before [menstruation](#) has begun

Amniocentesis- a procedure in which a small amount of amniotic fluid is removed from the mother's womb in order to detect abnormalities of the fetus

Amniotic fluid- clear fluid that surrounds a fetus during pregnancy and cushions and protects it

Amyotrophic lateral sclerosis- the most common of a group of disorders known as motor neuron diseases, in which the [nerves](#) in the brain that control the movement of muscles degenerate and muscle function is gradually lost; commonly called Lou Gehrig's disease

Anabolic steroid- a drug similar to the male hormone [testosterone](#) that builds muscles and strengthens bones, but has adverse side effects

Anal fissure- a long, open sore on the skin of the [anus](#)

Anal fistula- an abnormal tubelike passage connecting the [anus](#) to the surface of the surrounding skin

Analgesic- a drug that relieves pain, such as aspirin or acetaminophen

Anal sphincter- a ring of muscle fibers at the opening of the [rectum](#), controlling the opening and closing of the [anus](#)

Anaphylactic shock- a life-threatening allergic reaction resulting in difficulty breathing and low blood pressure

Anatomy- the structure of bodies; commonly refers to the study of body structure

Androgen- a [hormone](#) (such as testosterone) that causes development of male characteristics and sex organs

Anemia- a condition in which the blood does not contain enough hemoglobin, the compound that carries [oxygen](#) from the lungs to other parts of the body

Anencephaly- a fatal birth defect in which the brain and [spinal cord](#) have failed to develop, resulting in the absence of a portion of the skull and brain

Anesthesia- a loss of sensation in a certain part of the body or throughout the body

Anesthetic- a substance that temporarily causes a person to be unable to feel pain, either in a certain area or over the entire body

Aneurysm- an abnormal swelling of the wall of an [artery](#), caused by a weakening in the vessel wall

Angina pectoris- pain experienced in the chest, arms, or jaw because of a lack of [oxygen](#) to the heart muscle

Angioma- a [tumor](#) made of blood vessels or lymph vessels that is not cancerous

Angioplasty- the use of surgery to make a damaged blood vessel function properly again; may involve widening or reconstructing the blood vessel

Anorexia nervosa- a dangerous eating disorder mainly affecting young girls in which the sufferer has an intense fear of looking fat, avoids food, and loses weight excessively

Antacid- a drug that neutralizes stomach acids; used to treat [indigestion](#), [heartburn](#), and [acid reflux](#)

Antibiotic resistance- the development by bacteria of the ability to live in the presence of a certain antibiotic, making treatment difficult

Antibiotics- bacteria-killing substances that are used to fight infection

Antibody- a protein made by [white blood cells](#) that reacts with a specific foreign protein as part of the immune response

Anticoagulants- drugs used to stop abnormal blood clotting, such as to prevent [stroke](#)

Antiemetics- drugs used to treat nausea and vomiting

Antihistamine- a drug that relieves an allergic reaction by stopping the effects of histamine, the substance responsible for the negative symptoms associated with the reaction

Antihypertensives- drugs used to relieve the symptoms and prevent the damage that can occur from high blood pressure

Antioxidants- substances that protect against cell damage by guarding the cell from [oxygen free radicals](#)

Antipsychotics- drugs used to treat severe mental disorders

Antiseptics- chemicals applied to the skin that prevent infection by killing bacteria and other harmful organisms

Anus- the opening through which feces are passed from the body

Aorta- the main [artery](#) in the body, carrying oxygenated blood from the heart to other arteries in the body

Aortic stenosis- narrowing of the opening of the aortic [valve](#) in the heart, which increases resistance to blood flow from the left ventricle to the aorta; commonly a [birth defect](#) or caused by scarring and calcium accumulation in the valve from [rheumatic fever](#)

Apgar score- a system for evaluating the health of a newborn baby; rated on a scale of 0-10

Aplasia- the complete or partial failure of any organ or tissue to grow

Aplastic anemia- a severely reduced number of [red blood cells](#), [white blood cells](#), and [platelets](#)

Apnea- a possibly life-threatening condition in which breathing stops, for either a short or long period of time

Appendectomy- surgical removal of the [appendix](#) to treat appendicitis

Appendicitis- inflammation of the [appendix](#)

Appendix- a short, tubelike structure that branches off the large [intestine](#); does not have any known function

ARC- see [AIDS-related complex](#)

Arteriosclerosis- a disorder causing thickening and hardening of [artery](#) walls

Arteritis- inflammation of the walls of an [artery](#) that causes the passageway to become narrower; can lead to tissue damage because [oxygen](#) is not properly supplied

Artery- a large blood vessel that carries blood from the heart to tissues and organs in the body

Arthritis- a disease of the joints characterized by [inflammation](#), pain, stiffness, and redness

Arthroscopy- a procedure used to examine the inside of a joint using a viewing tube (an [endoscope](#))

Artificial insemination- injection of [semen](#) into the [cervix](#)

Artificial respiration/ventilation- the forcing of air (either by mouth-to-mouth or mouth-to-nose means) into the lungs of a person who has stopped breathing

Ascites- excess fluid in the abdominal cavity, which leads to swelling

Ascorbic acid- the chemical term for [vitamin C](#)

Aspermia- the failure either to produce or to ejaculate [sperm](#)

Asphyxia- the medical term for suffocation; can be caused by choking on an object, by lack of [oxygen](#) in the air, or by chemicals such as carbon monoxide, which reduce the amount of oxygen in the blood

Asthma- a disorder characterized by inflamed [airways](#) and difficulty breathing

Astigmatism- a disorder in which the front surface of the eye (the cornea) is not correctly spherical, resulting in blurry vision

Atherectomy- a procedure performed to remove [plaque](#) that is blocking an artery

Atheroma- fatty deposits on the inner walls of blood vessels, which can cause narrowing and decrease blood flow

Atherosclerosis- narrowing of the lining of the [arteries](#) due to the accumulation of fat and other materials; leads to [coronary heart disease](#), [stroke](#), and other disorders

Athlete's foot- an infection between the toes caused by a [fungus](#), which leads to sore, cracked, and peeling skin

Atresia- a [birth defect](#) in which a normal body opening or canal is absent; usually requires surgical repair soon after birth

Atria- the two upper chambers of the heart; the singular form is atrium

Atrial fibrillation- an irregular heartbeat in which the upper chambers of the heart (the atria) beat inconsistently and rapidly

Atrial flutter- an irregular heartbeat in which the upper chambers of the heart (the atria) beat rapidly but consistently

Atrial septal defect- a hole located in the wall between the two upper chambers of the heart

Atrophy- the shrinkage or near disappearance of a tissue or organ

Attention-deficit disorder- a disorder mainly present in children and adolescents, characterized by learning and behavior problems, inability to pay attention, and sometimes [hyperactivity](#)

Audiogram- a graph showing a person's hearing ability, determined from a set of tests examining hearing acuity of different sound frequencies

Aura- a "warning" signal that comes before a migraine headache or an epileptic seizure, which might include emotions or sensations of movement or discomfort

Auscultation- the act of listening to sounds within the body, such as the heartbeat, with a stethoscope

Autism- a mental disorder characterized by an inability to relate to other people and extreme withdrawal

Autoimmune disease- a disorder in which the body's [immune system](#) attacks itself

Autonomic nervous system- the part of the nervous system that controls automatic body functions, such as heart rate, sweating, pupil dilation, and digestion; divided into the [sympathetic nervous system](#) and the [parasympathetic nervous system](#)

Autopsy- the examination of a body following death, possibly to determine the cause of death or for research

Autosomal dominant- a term describing a [gene](#) on any chromosome other than the sex chromosomes that produces its effect whenever it is present; can also describe the effect of the gene itself

Autosomal recessive- a term used to describe a [gene](#) on any chromosome other than the sex chromosomes that produces its effect only when two copies of it are present; can also describe the effect of the gene itself

Axilla- medical term for the armpit

B

Bacillus- any bacteria that is rod-shaped; responsible for [diphtheria](#), [dysentery](#), [tetanus](#), and [tuberculosis](#), as well as other diseases

Bacteremia- a condition in which bacteria are present in the bloodstream; may occur after minor surgery or infection and may be dangerous for people with a weakened [immune system](#) or abnormal [heart valves](#)

Bacteriostatic- term used to describe a substance that stops the growth of bacteria (such as an [antibiotic](#))

Bacterium- a tiny, single-celled [microorganism](#), commonly known as a germ; some bacteria, called [pathogens](#), cause disease

Bacteriuria- bacteria in the urine; large amounts can indicate [bladder](#), [urethra](#), or [kidney](#) infection

Ball-and-socket joint- a joint consisting of a ball-shaped bone that fits into a cup-shaped bone, making the joint free to rotate; examples include the hip and shoulder

Balloon angioplasty- a technique that uses a balloon catheter to open [arteries](#) clogged with fatty deposits

Balloon catheter- a hollow tube with a small, inflatable balloon at the tip; used to open a narrowed [artery](#) or organ that has become blocked

Barbiturates- a group of [sedatives](#) that reduce activity in the brain; are habit-forming and are possibly fatal when taken with alcohol

Barium enema- a technique in which barium is placed into the large [intestine](#) and [rectum](#) and then X-rays are taken to check for possible disorders of these organs

Barrier method of contraception- a [birth-control](#) technique using a condom, diaphragm, or another similar device to block the path of sperm to an egg

Bartholin's glands- two pea-sized [glands](#) that, when sexually aroused, release a fluid that lubricates the [vagina](#)

Basal cell carcinoma- a type of skin [cancer](#) that is caused by exposure to large amounts of sunlight; commonly found on the neck, face, and arms

Basal metabolic rate- the lowest rate at which a person can possibly use energy and remain alive; at this rate, only absolutely necessary functions such as breathing are maintained

B cell- a [white blood cell](#) that makes [antibodies](#) to fight infections caused by foreign proteins

BCG vaccine- a [vaccine](#) used to protect against [tuberculosis](#)

Becker's muscular dystrophy- a [hereditary](#) disease in which the muscles weaken and waste away; similar to [Duchenne muscular dystrophy](#) but starts later in life and advances more slowly

Bell's palsy- another name for facial palsy, the usually one-sided, temporary numbing of the facial muscles, caused by an inflamed [nerve](#)

Bends- see [Decompression sickness](#)

Benign tumor- a tumor that is not cancerous, which means it does not spread through the body, but may grow and become dangerous

Beta blocker- a type of drug used to treat high blood pressure and heart disorders by reducing the strength and rate of the pumping by the heart

Beta carotene- a pigment found in orange vegetables and fruits, which the body converts to [vitamin A](#); possibly protects against [cancer](#)

Bifocal- a lens that corrects both near and distant vision by having two parts with different focusing strengths

Bilateral- a term describing a condition that affects both sides of the body or two paired organs, such as bilateral deafness (deafness in both ears)

Bile- a yellow-green liquid produced in the liver whose function is to remove waste from the [liver](#) and break down fats as food is digested

Bile duct- a tube that carries bile from the [liver](#) to the [gallbladder](#) and then to the small [intestine](#)

Biliary atresia- a birth defect in which the [bile ducts](#) are not completely developed; often a liver transplant is necessary

Biliary colic- a severe pain in the upper right section of the abdomen, usually caused by a [gallstone](#) passing out of the bladder or through the bile ducts

Biliary tract- the system of organs and ducts through which [bile](#) is made and transported from the [liver](#) to the [small intestine](#)

Bilirubin- the orange-yellow pigment in [bile](#), causing [jaundice](#) if it builds up in the blood and skin; the levels of bilirubin in the blood are used to diagnose liver disease

Binging and purging- behavior characteristic of the disorder [bulimia](#) in which a person overeats then rids themselves of the food before it can be absorbed by the body, either by forced vomiting or through the use of [laxatives](#)

Biochemistry- the science that studies the chemistry of living organisms, including humans

Bioequivalent- a drug that has the same effect on the body as another drug

Biofeedback- a technique used to gain control over a function that is normally automatic (such as blood pressure or pulse rate); the function is monitored and relaxation techniques are used to change it to a desired level

Bipolar disorder- an illness in which the patient goes back and forth between opposite extremes; the most notable bipolar disorder is [manic-depressive disorder](#), which is characterized by extreme highs and lows in mood

Birth canal- the passage that includes the [uterus](#) and [vagina](#) through which the baby passes at birth

Birth control- the regulation of the number of children born, referring either to the prevention of pregnancy (by birth control pill, sterilization, etc) or the prevention of birth (by abortion, etc)

Birth defect- an abnormality that is present when a baby is born

Birthmark- any area of discolored skin that is present when a baby is born

Bisexuality- sexual interest in members of both sexes

Bladder- an organ located in the pelvis whose function is to collect and store urine until it is expelled

Blepharitis- [inflammation](#) of the eyelids

Blind spot- a spot in the field of vision that is not sensitive to light; it is a product of the entrance of the [optic nerve](#) into the eyeball, where no light receptors are present on the [retina](#)

Blood-brain barrier- a layer of tightly bound cells that prevents certain substances carried in the bloodstream from entering the brain

Blood clot- a semisolid mass of blood that forms to help seal and prevent bleeding from a damaged vessel

Blood poisoning- see [Septicemia](#)

Blood pressure- the tension in the main [arteries](#) that is created by the beating of the heart and the resistance to flow and elasticity of the blood vessels

Blood transfusion- the transfer of blood or any of its parts to a person who has lost blood due to an injury, disease, or operation

Blood type- a category used to describe a person's blood according to the kinds of [proteins](#) present on the surface of the [red blood cells](#)

B lymphocyte- a type of [white blood cell](#) that makes [antibodies](#) and is an important part of the immune response

Boil- an inflamed, raised area of skin that is [pus](#)-filled; usually an infected [hair follicle](#)

Bone marrow- the fatty yellow or red tissue inside bones that is responsible for producing blood cells

Bone marrow transplant- a surgical procedure in which defective or cancerous bone marrow is replaced with healthy marrow, either from the patient or a donor

Bone spur- an abnormal growth of bone out of another bone, often located on the heel and usually painful

Booster- an additional dose of a [vaccine](#) taken after the first dose to maintain or renew the first one

Botulism- poisoning from poorly preserved food contaminated with a dangerous bacterial toxin that results in paralysis

Bowel- see [Intestine](#)

Bradycardia- a slow heart rate, usually below 60 beats per minute in adults

Brain damage- permanent death or damage of brain cells resulting in decreased mental ability

Brain death- the condition in which the brain stops functioning while the heart continues to beat

Breech birth- childbirth in which the baby is turned around in the [uterus](#) and emerges head-last instead of head-first

Bronchiolitis- an infection caused by a [virus](#) in the bronchioles (the smallest airways in the lungs), mainly affecting young children

Bronchitis- inflammation of the bronchial tubes, which connect the [trachea](#) to the lungs

Bronchoconstrictor- a substance that causes the lung [airways](#) to tighten up and become more narrow

Bronchodilator- a drug that widens the [airways](#) in the lungs to improve breathing; works by relieving muscle contraction or buildup of [mucus](#)

Bronchospasm- the temporary narrowing of the [airways](#) in the lungs, either as a result of muscle contraction or inflammation; may be caused by [asthma](#), infection, lung disease, or an allergic reaction

Bruise- see [Contusion](#)

Bruxism- an unaware clenching or grinding of the teeth, usually during sleep

Bubonic plague- a form of [plague](#) in which [lymph nodes](#) in the groin and armpit swell

Bulimia- a disorder in which a person eats large amounts of food then forces vomiting or uses [laxatives](#) to prevent weight gain (called binging and purging)

Bunion- a hard, fluid-filled pad along the inside joint of the big toe; may be caused by wearing high-heeled shoes or a genetically weak joint

Burkitt's lymphoma- a cancer of lymph tissue that most frequently occurs in the abdomen, the ovaries, and the bones of the face; it is associated with [malaria](#)

Bursa- a fluid-filled sac that cushions and reduces friction in certain parts of the body

Bursitis- [inflammation](#) of a bursa due to excessive pressure or friction, or from injury

Butterfly bandage- a butterfly-shaped bandage that can help close a minor cut for proper healing

Bypass- a surgical technique in which the flow of blood or another body fluid is redirected around a blockage

C

Calcification- the depositing of calcium salts in the body, which occurs normally in teeth and bones but abnormally in injured muscles and narrowed [arteries](#)

Calcitonin- a [hormone](#) made in the [thyroid gland](#) that controls calcium levels in the blood by slowing the loss of calcium from bones; used to treat hypercalcemia (excess calcium in the blood)

Calcium- a plentiful [mineral](#) in the body and the basic component of teeth and bones; essential for cell function, muscle contraction, transmission of nerve impulses, and blood clotting

Calcium channel blocker- a drug used to treat chest pain, high blood pressure, and irregular heartbeat by preventing the movement of calcium into the muscle

Callus- a thickened area of skin due to consistent pressure or friction, or the area around a bone break where new bone is formed

Calorie- a unit that is used to measure the energy content in food

Canal- a tunnel-like passage

Cancer- a group of diseases in which cells grow unrestrained in an organ or tissue in the body; can spread to tissues around it and destroy them or be transported through blood or [lymph](#) pathways to other parts of the body

Cancer staging- a method to determine how much a cancer has developed

Candidiasis- a yeast infection caused by the [fungus](#) *Candida albicans*; occurs most often in the [vagina](#), but also in the mouth, on moist skin, or on the penis

Canker sore- small, painful sore that usually occurs on the inside of the lip or cheek, or sometimes under the tongue; caused by bacteria, irritation of the area, stress, or allergies

Capillary- a tiny blood vessel that connects the smallest [arteries](#) to the smallest [veins](#) and allows exchange of oxygen and other materials between blood cells and body tissue cells

Carbohydrate- a substance, mainly sugar and starch, that is a main source of energy for the body and is found in sources such as cereals, breads, pastas, grains, and vegetables

Carbon dioxide- a colorless, odorless gas present in small amounts in the atmosphere and formed during respiration

Carcinogen- anything that can cause [cancer](#)

Carcinoma- a [cancer](#) that occurs on the surface or lining of an organ

Cardiac arrest- the sudden cessation of the heart's pumping action, possibly due to a heart attack, respiratory arrest, electrical shock, extreme cold, blood loss, drug overdose, or a severe allergic reaction

Cardiogenic shock- a severely dangerous condition involving decreased blood output from the heart, usually as a result of a heart attack

Cardiomegaly- a condition marked by enlargement of the heart, either because of a thickened heart muscle or an enlarged heart chamber; usually a result of the heart having to work harder than normal, as occurs with high blood pressure

Cardiomyopathy- a disease of the heart muscle that results in decreased output and reduced blood flow

Cardiopulmonary resuscitation- the administration of heart compression and [artificial respiration](#) to restore circulation and breathing

Cardiovascular system- the heart and blood vessels that are responsible for circulating blood throughout the body

Carditis- inflammation of the heart

Carotene- an orange pigment present in colored plants such as carrots that is converted by the body to the essential nutrient [vitamin A](#)

Carotid arteries- four main [arteries](#) that carry blood to the head and neck

Carpal bones- eight bones that together make the wrist

Carpal tunnel syndrome- a condition in which pressure on the [median nerve](#) in the wrist causes soreness, tingling, and numbness in the thumb and index and middle fingers

Cartilage- a [connective tissue](#) (softer than bone) that is part of the skeletal system, including the joints

Cast- a hard plaster or fiberglass shell that molds to a body part such as an arm and holds it in place for proper healing

Cataract- a disorder in which the lens of the eye becomes less transparent and in some cases a milky white, making vision less clear

Catheter- a hollow, flexible tube inserted into the body to put in or take out fluid, or to open up or close blood vessels

Catheterization- a technique in which a hollow, flexible tube is used to drain body fluids (such as urine), to introduce fluids into the body, or to examine or widen a narrowed [vein](#) or [artery](#)

CAT scanning- see [Computed tomography scanning](#)

Cat-scratch fever- an illness transmitted to humans through a cat's bite or scratch, which is thought to be caused by an unidentified bacteria; characterized by a swollen [lymph node](#) or blister near the bite or scratch, fever, rash, and headache; most commonly occurring in children

Cauliflower ear- a deformed ear caused by repeated injury

Cauterization- the use of heat, an electric current, or a chemical to destroy tissue or stop bleeding

Cecum- the beginning of the large intestine, which is connected to the [appendix](#) at its lower end

Cell- the tiny structures that make up all the tissues of the body and carry out all of its functions

Cellulitis- a skin [infection](#) caused by bacteria (usually streptococci); can lead to tissue damage and blood poisoning if untreated; characterized by fever, chills, heat, tenderness, and redness

Central nervous system- the brain and [spinal cord](#)

Cerebellum- a region of the brain located at the back; responsible for coordination of movement and maintaining balance

Cerebral palsy- a group of disorders of movement and posture resulting from damage to the brain early in a child's development; causes muscle weakness, difficulty coordinating voluntary movements, and sometimes complete loss of motion

Cerebrospinal fluid- a clear, watery fluid circulating in and around the brain and spinal column, which contains [glucose](#), [proteins](#), and salts for nutrition

Cerebrovascular disease- a disease affecting any [artery](#) supplying blood to the brain; may cause blockage or rupture of a blood vessel, leading to a [stroke](#)

Cerebrum- the largest part of the brain and the site of most of its activity, including sensory and motor functions

Cervical cap- a small rubber cup that is placed tightly over the [cervix](#) to prevent pregnancy

Cervical dysplasia- changes that occur in the [cells](#) on the surface of the [cervix](#) that usually precede the stages of cancer

Cervical incompetence- a weakness of the neck of the [uterus](#), which can lead to spontaneous [abortion](#) due to an inability to support the weight of the [fetus](#)

Cervical smear- a procedure in which [cells](#) are scraped off of the [cervix](#) and examined to detect changes that might precede the stages of cancer; also called a Pap smear

Cervicitis- inflammation of the [cervix](#)

Cervix- a small, round organ making up the neck of the [uterus](#) and separating it from the [vagina](#)

Cesarean section- an operation performed to remove a [fetus](#) by cutting into the [uterus](#), usually through the abdominal wall

Chancre- a painless sore that has a thick, rubbery base and a defined edge; usually occurs on the genitals after the contraction of the sexually transmitted disease [syphilis](#)

Chemotherapy- the treatment of [infections](#) or [cancer](#) with drugs that act on disease-producing organisms or cancerous tissue; may also affect normal cells

Chickenpox- a contagious disease that causes a rash and a fever; most commonly occurs during childhood

Chlamydia- microorganisms that cause several human infections and can be transmitted sexually

Cholecystectomy- the surgical removal of the [gallbladder](#)

Cholera- a bacterial [infection](#) of the small intestine that causes severe watery diarrhea, [dehydration](#), and possibly death

Cholesterol- a substance in body [cells](#) that plays a role in the production of hormones and bile salts and in the transport of fats in the bloodstream

Chondritis- inflammation of [cartilage](#)

Chondroma- a noncancerous tumor that occurs in [cartilage](#)

Chondromalacia patellae- painful damage to the [cartilage](#) behind the kneecap

Chondrosarcoma- a cancerous [cartilage](#) tumor that develops inside of bone or on its surface

Chorionic villus sampling- a method of diagnosing fetal defects in which a small amount of tissue is taken from the [placenta](#) and analyzed for abnormalities

Choroiditis- inflammation of the blood vessels behind the [retina](#) that line the back of the eye

Chromosome analysis- examination of a person's chromosomes either to determine if that person has an abnormality or to investigate one

Chronic- describes a disorder that continues for a long period of time

Chronic obstructive lung disease- a combination of the lung diseases [emphysema](#) and [bronchitis](#), characterized by blockage of airflow in and out of the lungs

Cilia- tiny, hairlike structures on the outside of some [cells](#), providing mobility

Circumcision- the surgical removal of the [foreskin](#) of the penis

Cirrhosis of the liver- gradual loss of liver function due to cell damage and internal scarring

Claudication- a cramping pain in one or both legs while walking, which can cause limping

Claustrophobia- fear of being confined in an enclosed or crowded space

Clavicle- the medical term for the collarbone

Cleft lip- a birth defect in which the upper lip is split vertically, extending into one or both nostrils

Cleft palate- a birth defect in which the roof of the mouth is split, extending from behind the teeth to the nasal cavity; often occurs with other birth defects such as cleft lip and partial deafness

Clinical trial- carefully monitored and planned testing of a new drug or treatment

Clitoris- a small female organ located near the opening of the [vagina](#) that swells when sexually aroused

Clone- an exact copy of a [gene](#), [cell](#), or [organism](#)

Closed fracture- a bone break that does not break the skin

Clotting factor- a substance in the blood that is needed for blood to harden and stop a wound from bleeding

Clubfoot- a [genetic disorder](#) in which the foot is twisted and misshapen

Cluster headache- severe pain that occurs suddenly and affects one side of the head, including the face and neck

CNS- see [Central nervous system](#)

Coagulation- a process that plays a large role in the hardening and thickening of blood to form a clot

Cocarcinogen- a substance that does not cause [cancer](#) by itself, but increases the effect of a substance that does cause cancer

Coccyx- four fused bones that form a triangular shape at the base of the [spine](#) (also known as the tailbone)

Cochlea- a coiled organ in the inner ear that plays a large role in hearing by picking up sound vibrations and transmitting them as electrical signals

Coitus- sexual intercourse

Cold sore- a small blister anywhere around the mouth that is caused by the herpes simplex virus

Colectomy- the complete or partial surgical removal of the large intestine (the colon), usually as treatment of a cancerous tumor or a narrowing and blockage of the intestine

Colic- waves of pain in the abdomen that increase in strength, disappear, and return; usually caused by a stone blocking a [bile](#) or urine passageway or an intestinal infection

Colitis- inflammation of the large intestine (the colon), which usually leads to abdominal pain, fever, and diarrhea with blood and [mucus](#)

Collapsed lung- a condition in which all or part of a lung cannot expand and fill with air

Colon- the main part of the large intestine, between the [cecum](#) and the [rectum](#)

Colonoscopy- investigation of the inside of the colon using a long, flexible [fiberoptic](#) tube

Color blindness- any vision disorder in which the person sees colors abnormally, has trouble distinguishing between them, or cannot see them at all

Colostomy- a surgical procedure in which some part of the [colon](#) is cut and moved to the surface of the abdomen so that feces can be passed into a bag worn outside of the body

Coma- a condition in which the area of the brain involved in maintaining consciousness is somehow affected, resulting in a state of unconsciousness in which the patient does not respond to stimulation

Comminuted fracture- a crushed or shattered bone

Common cold- an infection caused by a [virus](#), which results in an inflamed lining of the nose and throat; characterized by a stuffy and runny nose and, sometimes, a sore throat

Communicable disease- a disease that can be passed from one individual to another

Compound fracture- a bone break that breaks the skin

Compression fracture- a break in a short bone in which its soft tissue is crushed

Computed tomography scanning- a technique for producing cross-sectional images of the body in which X-rays are passed through the body at different angles and analyzed by a computer; also called CT scanning or CAT scanning

Concussion- disturbance of electrical activity in the brain due to a blow to the head or neck, causing temporary loss of consciousness

Congenital- present or existing at the time of birth

Congestive heart failure- inability of the heart to efficiently pump blood through the body, causing buildup of blood in the [veins](#) and of other body fluids in tissue

Conjunctiva- the clear membrane covering the white of the eye and the inside of the eyelid that produces a fluid that lubricates the [cornea](#) and eyelid

Conjunctivitis- inflammation of the conjunctiva; commonly called pinkeye

Connective tissue- strong tissue that connects and supports body structures

Constipation- difficult or infrequent bowel movements of hard, dry feces

Contraindication- an aspect of a patient's condition that makes the use of a certain drug or therapy an unwise or dangerous decision

Contusion- damage to the skin and underlying tissue as a result of a blunt injury; a bruise

Corn- a thickened callus on the foot that is caused by an improperly fitting shoe

Cornea- the clear, dome-shaped front portion of the eye's outer covering

Coronary- describes structures that encircle another structure (such as the [coronary arteries](#), which circle the heart); commonly used to refer to a coronary thrombosis or a heart attack

Coronary arteries- the arteries that branch off from the [aorta](#) and supply oxygen-rich blood to the heart muscle

Coronary artery bypass surgery- an operation in which a piece of vein or artery is used to [bypass](#) a blockage in a coronary artery; performed to prevent [myocardial infarction](#) and relieve [angina pectoris](#)

Coronary heart disease- disorders that restrict the blood supply to the heart, including [atherosclerosis](#)

Coronary thrombosis- the blockage of a coronary artery by a blood clot

Corpuscle- a tiny, rounded structure in the body, such as a red or white blood cell

Corticosteroids- synthetic drugs that are used to replace natural [hormones](#) or to suppress the [immune system](#) and help prevent inflammation

CPR- see [Cardiopulmonary resuscitation](#)

Creatinine- a waste product that is filtered from the blood by the [kidneys](#) and expelled in urine

Croup- a usually mild and temporary condition common in children under the age of 4 in which the walls of the [airways](#) become inflamed and narrow, resulting in wheezing and coughing

Cruciate ligaments- two [ligaments](#) in the knee that cross each other and help stabilize the knee joint

CT scanning- a procedure that uses X-rays and computers to create cross-sectional images of the body to diagnose and monitor disease

Culture- the artificial growth of [cells](#), tissue, or microorganisms such as bacteria in a laboratory

Curettage- the use of a sharp, spoonlike instrument (a curet) to scrape away tissue that is abnormal or to obtain a sample that can be analyzed

CVS- see [Chorionic villus sampling](#)

Cyanosis- a bluish discoloration of the skin, caused by low levels of [oxygen](#) in the blood

Cyst- a lump filled with either fluid or soft material, occurring in any organ or tissue; may occur for a number of reasons but is usually harmless unless its presence disrupts organ or tissue function

Cystectomy- surgical removal of the bladder; the [bladder](#) is often replaced with a short length of [small intestine](#)

Cystic fibrosis- an inherited disorder in which the lungs are prone to infection, and fats and other nutrients cannot be absorbed into the body

Cystoscopy- examination of the [urethra](#) and [bladder](#) using a long, thin, fiberoptic tube

Cystostomy- the surgical placement of a drainage opening in the [bladder](#)

D

D and C- see [Dilatation and Curettage](#)

Debridement- surgical removal of dead, damaged, or infected tissue, or some foreign material from a wound or burn

Decompression sickness- the formation of gas bubbles in the body's tissues as a result of a scuba diver ascending too quickly from depth; commonly called the bends

Deep-vein thrombosis- the formation of a blood clot inside of a deep-lying [vein](#), usually in the legs

Defecation- the passing of feces out of the body through the [anus](#); a bowel movement

Defibrillation- a short electric shock to the chest to normalize an irregular heartbeat

Degenerative arthritis- the breakdown of the [cartilage](#) lining the bones in joints, usually weight-bearing joints (such as the knee); causes stiffness and pain (also called osteoarthritis)

Dehydration- excessive, dangerous loss of water from the body

Dementia- a gradual decline in mental ability usually caused by a brain disease, such as [Alzheimer disease](#)

Depilatory- a chemical hair remover

Depot injection- [injection](#) of a drug into a muscle; the drug is designed to absorb slowly into the body

Depression- feelings of hopelessness, sadness, and a general disinterest in life, which for the most part have no cause and may be the result of a psychiatric illness

Dermabrasion- removal of the surface layer of skin with a sanding wheel to treat scarring or to remove tattoos

Dermatitis- [inflammation](#) of the skin

Dermis- the inner skin layer

Desensitization- the process of making a person less allergic to a substance by injecting gradually increasing amounts of the substance; sometimes done to prevent [anaphylactic shock](#)

Detoxification- treatment given either to fight a person's dependence on alcohol or other drugs or to rid the body of a poisonous substance and its effects

Dextrocardia- a rare genetic condition in which the heart is located on the right side of the body, instead of the left

Dextrose- another name for the sugar [glucose](#)

Diabetes insipidus- a rare condition characterized by increased urine production

Diabetes mellitus- a common form of diabetes in which the body cannot properly store or use glucose (sugar), the body's main source of energy

Dialysis- a procedure to treat kidney failure in which artificial means are used to filter waste, maintain [acid-base balance](#), and remove excess fluid from the body

Diaper rash- a common condition in babies in which the skin in the diaper area becomes irritated and red, usually because of exposure to urine, feces, or heat

Diaphragm- the large, dome-shaped muscle separating the abdomen and chest that contracts and relaxes to make breathing possible; also, a thin, rubber dome that is used as a method of female contraception

Diastolic pressure- the [blood pressure](#) measured when the heart is at rest between beats

Diathermy- the use of high-frequency currents, microwaves, or ultrasound to produce heat in the body to increase blood flow, relieve pain, or destroy diseased tissue

Dilatation and Curettage- a procedure in which the vagina and cervix are widened and the lining of the uterus is scraped away to diagnose and treat disorders of the uterus

Diphtheria- a bacterial infection that causes a fever, headache, sore throat, and possibly death; diphtheria is rare in developed countries

Disk prolapse- a disorder in which one of the disks located between the [vertebrae](#) in the spine breaks down and the pulpy interior squeezes out, causing pressure on a [nerve](#); commonly called a "slipped" or "ruptured" disk

Dislocation- displacement of the two bones in a joint

Distention- swelling, enlargement, or stretching

Diuretic- a drug that increases the amount of water in the urine, removing excess water from the body; used in treating high blood pressure and fluid retention

Diverticulitis- inflammation of diverticula (small sacs in the intestine's inner lining); can cause fever, pain, and tenderness

DNA- deoxyribonucleic acid; responsible for passing genetic information in nearly all organisms

Dominant gene- a [gene](#) that always produces its effect when it is present

Dopamine- a chemical that transmits messages in the brain and plays a role in movement

Down syndrome- a [genetic disorder](#) in which a person's cells have 1 too many chromosomes, causing moderate to severe mental handicap and a characteristic appearance

Duchenne muscular dystrophy- a genetic condition in boys in which [nerves](#) degenerate and muscles get progressively weaker

Duodenal ulcer- an erosion in the inner lining of the wall of the first part of the small intestine (called the duodenum)

Duodenum- the first part of the small intestine, immediately following the stomach

Dysentery- a severe intestinal [infection](#), causing abdominal pain and diarrhea with blood or [mucus](#)

Dyspnea- difficulty breathing

Dystrophy- any disorder in which [cells](#) become damaged or do not develop properly because they do not receive adequate nutrition

E

Eardrum- a thin, oval-shaped membrane that separates the inner ear from the outer ear and is responsible for transmitting sound waves

ECG (sometimes called an EKG)- an electrocardiogram, which is a record of the electrical impulses that trigger the heartbeat; used to diagnose heart disorders

Echocardiogram- an image of the heart that is created by high-frequency (ultrasound) sound waves

Eclampsia- a serious condition that occurs in late pregnancy, characterized by [seizures](#) in the woman

Ectopic- occurring at an abnormal position or time

Eczema- inflammation of the skin, usually causing itchiness and sometimes blisters and scaling; may be caused by allergies, but often occurs for no apparent reason

Edema- abnormal buildup of fluid in the body, which may cause visible swelling

EEG- see [Electroencephalography](#)

Elective- describes a treatment or procedure that is not urgent and can be arranged at the patient's convenience

Electroencephalography- a procedure for recording the electrical impulses of brain activity

Embolism- the blockage of a blood vessel by an embolus - something previously circulating in the blood (such as a [blood clot](#), gas bubble, tissue, bacteria, bone marrow, [cholesterol](#), fat, etc)

Embryo- a term used to describe a child in the womb from [fertilization](#) to 8 weeks following fertilization

Emetic- a substance that causes vomiting; used to treat some cases of poisoning and drug overdose

Emphysema- a chronic disease in which the small air sacs in the lungs (the alveoli) become damaged; characterized by difficulty breathing

Encephalitis- inflammation of the brain, usually caused by a [virus](#); may be very mild and barely noticeable, but is usually serious and can progress from headache and fever to [hallucinations](#), [paralysis](#), and sometimes [coma](#)

Endarterectomy- surgery performed to remove the lining of an [artery](#) that has been narrowed by fatty tissue buildup

Endemic- describes a disease that is always present in a certain population of people

Endocarditis- inflammation of the inner lining of the heart, usually the [heart valves](#); typically caused by an [infection](#)

Endocardium- the inner lining of the heart

Endocrine gland- a [gland](#) that secretes [hormones](#) into the bloodstream

Endogenous- arising from inside of the body

Endometrial polyp- a growth (usually noncancerous) occurring on the lining of the [uterus](#)

Endometriosis- a condition in which fragments of the endometrium are found in other pelvic organs

Endometrium- the membrane that lines the [uterus](#)

Endophthalmitis- [inflammation](#) of the inside of the eye

Endorphin- a group of chemicals produced in the brain that reduce pain and positively affect mood

Endoscope- a lighted instrument used to view the inside of a body cavity

Endothelium- the layer of flat [cells](#) that lines the blood and lymph vessels, the heart, and other structures in the body

Endotracheal tube- a plastic tube that is fed down into the [trachea](#) through the mouth or nose to supply oxygen to a person who is not breathing properly

Enteritis- inflammation of the [small intestine](#), usually causing diarrhea

Enterobiasis- infestation by a [pinworm](#)

Enuresis- the medical term for wetting the bed

Enzyme- a chemical, originating in a [cell](#), that regulates reactions in the body

Epidemic- a term used to describe a disease that is rare then suddenly affects more people than usually expected

Epidermis- the outer layer of the skin

Epididymis- a long, coiled tube, exiting from the back of the [testicle](#), in which sperm mature

Epidural anesthesia- a method of pain relief in which a painkilling drug is injected into the space surrounding the [spinal cord](#) to block sensations in the abdomen and lower body

Epilepsy- a disorder of the nervous system in which abnormal electrical activity in the brain causes [seizures](#)

Epinephrine- a [hormone](#) produced by the [adrenal glands](#) in response to stress, exercise, or fear; increases heart rate and opens [airways](#) to improve breathing; also called adrenaline

Episcleritis- a patch of [inflammation](#) on the outer layer of the white of the eye

Episiotomy- a surgical procedure in which an incision is made in the tissue between the [vagina](#) and [anus](#) to prevent tearing of this tissue during childbirth

Epithelium- the layer of [cells](#) that covers the body and lines many organs

Epstein-Barr virus- a virus that is the cause of [mononucleosis](#) and is involved in [Burkitt's lymphoma](#)

Erysipelas- an infection caused by [streptococci](#) bacteria; characterized by fever and rash

Erythema- redness of the skin

Erythrocyte- a [red blood cell](#)

Erythrocyte sedimentation rate- a measure of the time it takes for [red blood cells](#) to collect at the bottom of a sample of blood; an elevated rate may mean that there is inflammation somewhere in the body

Erythroplakia- red patches in the [mucous membranes](#) of the mouth, throat, or voice box (larynx) that can become cancerous; risk factors include smoking pipes and chewing tobacco

Esophageal spasm- irregular contractions of the muscles in the [esophagus](#), which lead to difficulty swallowing

Esophageal varices- swollen veins in the lower esophagus and possibly the upper part of the stomach; can cause vomiting of blood and passing of black stool

Esophagus- a tube-shaped canal in the digestive tract, connecting the throat to the stomach

Estrogen- a group of [hormones](#) (produced mainly in the [ovaries](#)) that are necessary for female sexual development and reproductive functioning

Estrogen replacement therapy- treatment with synthetic estrogen drugs to relieve symptoms of [menopause](#) and to help protect women against [osteoporosis](#) and heart disease

Eustachian tube- the tube that connects the middle ear and the back of the nose, draining the middle ear and regulating air pressure

Euthanasia- painlessly ending the life of a patient with an incurable disease who requests to die

Excision- the surgical removal of diseased tissue

Excretion- the process by which the body rids itself of waste

Exercise stress test- the monitoring of the heart during strenuous exercise, usually on a treadmill or exercise bicycle, to evaluate how the heart responds to stress

Exercise thallium test- an imaging test performed during and after an exercise stress test to evaluate functioning of the heart muscles

Exogenous- arising from outside of the body

Expectorant- a medication used to promote the coughing up of [phlegm](#) from the respiratory tract

Extensor muscle- a muscle that causes a joint or limb to straighten

External version- external repositioning of the [fetus](#) in the womb to the correct birth position

Extracorporeal shock wave lithotripsy- a procedure performed to destroy [kidney stones](#) using external shock waves

Extradural anesthesia- [injection](#) of an [anesthetic](#) into the space outside the dura mater, the fibrous membrane that envelops the [spinal cord](#)

E

Facial palsy- inability to move the muscles of the face, usually on only one side, due to inflammation of a [nerve](#)

Failure to thrive- describes a baby who grows and gains weight slower than expected

Fallopian tube- either of two long, slender ducts connecting a woman's [uterus](#) to her [ovaries](#), where eggs are transported from the ovaries to the uterus and sperm may fertilize an egg

Familial- a term describing a disorder or characteristic (such as male pattern baldness) that occurs within a family more often than would be expected

Fasciitis- inflammation of the layer of [connective tissue](#) that covers, separates, and supports muscles

Fatty acid- any of a number of carbon-, oxygen-, and hydrogen-containing molecules that make up fats

Febrile- a term used to describe something related to a fever, such as febrile [seizures](#) (seizures occurring in a child who has a fever)

Fecal occult blood test- a test that uses a piece of chemically sensitive paper to detect blood in a stool sample; used to screen for possible signs of [cancer](#) in the [large intestine](#) or [rectum](#)

Femoral artery- the main [artery](#) that supplies blood to the leg

Femur- the bone located between the hip and the knee; the thighbone

Fertility- the ability to produce a child

Fertility drug- a drug used to treat [infertility](#) that contains [hormones](#) or substances associated with hormones

Fertilization- the joining of an egg and a sperm, creating the first cell of a new life

Fetal alcohol syndrome- a combination of defects in a [fetus](#) as a result of the mother drinking alcohol during pregnancy

Fetal distress- physical distress experienced by a [fetus](#) because of lack of [oxygen](#)

Fetal monitoring- the use of an instrument to record or listen to a [fetus'](#) heartbeat during pregnancy and labor

Fetal tissue transplant- an experimental procedure in which [cells](#) are taken from an aborted fetus and placed into the brain of a person with a brain disease such as [Parkinson's](#)

Fetus- the term used to refer to an unborn child from 8 weeks after [fertilization](#) to birth

Fiber- a constituent of plants that cannot be digested, which helps maintain healthy functioning of the bowels

Fiberoptics- thin, flexible instruments that transmit light and images, allowing structures inside of the body to be viewed

Fibrillation- rapid, inefficient contraction of muscle fibers of the heart caused by disruption of [nerve](#) impulses

Fibroadenoma- a noncancerous tumor commonly found in the breast

Fibrocystic breast disease- the most common cause of breast lumps

Fibroid- a noncancerous tumor of the [uterus](#) made up of smooth muscle and [connective tissue](#)

Fibroma- a noncancerous tumor of [connective tissue](#)

Fibrosis- abnormal formation of connective or scar tissue

Fifth disease- a childhood infection caused by a [virus](#), which often starts as a rash on the cheeks and spreads

Fissure- a groove or slit on the body or in an organ

Fistula- an abnormal passageway from one organ to another or from an organ to the body surface

Fitness- a measure of a person's physical strength, flexibility, and endurance

Flatulence- excessive air or gas in the intestines, which is expelled through the [anus](#)

Floatters- small spots that float across the field of vision, caused by debris floating in the gel-like substance that fills the eye

Flu- see [Influenza](#)

Fluke- a parasitic flatworm that can infest humans

Fluoride- a mineral that helps protect teeth against decay

Fluoroscopy- a method used to view organ structure and function by passing X-rays through the body and monitoring the resulting image on a fluorescent screen

Folic acid- a vitamin essential to the production of [red blood cells](#); plays an important role in the growth a developing [fetus](#)

Follicle- a tiny pouchlike cavity in a structure of the body, such as a hair follicle

Follicle stimulating hormone- a [hormone](#) produced by the [pituitary gland](#) in the brain that stimulates the testicles to produce sperm in males and causes eggs to mature in females

Folliculitis- the inflammation of [hair follicles](#) due to a bacterial infection, causing boils or tiny blisters containing [pus](#)

Fontanelles- the two soft spots on a baby's scalp that are the result of gaps in the skull where bones have not yet fused

Food poisoning- stomach pain, diarrhea, and/or vomiting caused by eating contaminated food

Forceps- instruments resembling tweezers that are used to handle objects or tissue during surgery

Forceps delivery- the use of an instrument that cups the baby's head (called an obstetric forceps), to help deliver a baby

Foreign body- an object in an organ or body cavity that is not normally present

Foreskin- the loose skin that covers the head of the [penis](#)

Fracture- a bone break

Fraternal twins- twins that develop from two different eggs fertilized by two different sperm; are not identical

Free radical- see [Oxygen free radical](#)

Frostbite- damage to body tissue as a result of freezing

FSH- see [Follicle stimulating hormone](#)

Fulminant- describes a disorder that begins suddenly and worsens quickly

Fungus- an organism that is dependent on another organism for nourishment

G

Galactocele- a milk-filled tumor in a blocked breast milk duct

Galactorrhea- breast milk production by a woman who is not pregnant and has not just given birth

Galactose- a sugar that is formed from the breakdown of lactose

Galactosemia- a [genetic disorder](#) in which galactose cannot be converted into glucose

Gallbladder- a small, pear-shaped sac positioned under the [liver](#), which concentrates and stores [bile](#)

Gallstone- a round, hard mass of [cholesterol](#), [bile](#), or calcium salts that is found in the gallbladder or a [bile duct](#)

Gallstone ileus- an abnormal condition in which a gallstone passes from the gallbladder into the [intestines](#) through an abnormal passage and blocks the intestine

Gamete intrafallopian transfer- a method of treating [infertility](#) in which eggs are taken from a woman's [ovaries](#) and fertilized with sperm and then the fertilized egg is injected into one of her [fallopian tubes](#)

Gamma globulin- a substance prepared from blood that carries [antibodies](#) to most common infections; also used in immunizations

Ganglion- a fluid-filled [cyst](#) attached to a tendon sheath or joint

Gangrene- death of a tissue because of a lack of blood supply

Gastrectomy- surgical removal of all or part of the stomach

Gastric acid- the digestive acid in the stomach

Gastric juice- digestive fluids produced by the lining of the stomach that break down [proteins](#) and destroy harmful organisms

Gastric lavage- washing out of the stomach with water, often to treat poisoning; commonly called "stomach pumping"

Gastric ulcer- a [peptic ulcer](#)

Gastrin- a [hormone](#) that stimulates the release of [gastric acid](#) in the stomach

Gastrinoma- a [tumor](#) that produces gastrin, making the stomach and [duodenum](#) more acidic

Gastritis- inflammation of the [mucous membrane](#) lining of the stomach; can have a number of causes, including viruses, bacteria, and use of alcohol and other drugs

Gastroenteritis- inflammation of the stomach and intestines

Gastrointestinal series- a set of X-rays, taken at different intervals after a barium sulfate solution is swallowed, to examine the gastrointestinal tract

Gastrointestinal tract- the part of the digestive system that includes the mouth, [esophagus](#), stomach, and [intestines](#)

Gastroscopy- examination of the [esophagus](#), stomach, and the first part of the small intestine (duodenum) using an [endoscope](#) inserted through the mouth

Gastrectomy- the surgical creation of an opening in the abdominal wall into the stomach for drainage or a feeding tube

Gaucher's disease- a [genetic disorder](#) in which [lipids](#) cannot be properly broken down and build up in certain cells; causes enlargement of the spleen and liver, bone damage, and [anemia](#)

Gavage- an artificial feeding technique in which liquids are passed into the stomach by way of a tube inserted through the nose

Gene- the basic unit of [DNA](#), which is responsible for passing genetic information; each gene contains the instructions for the production of a certain [protein](#)

General anesthesia- a method of preventing pain in which the patient is induced to lose consciousness

Generic drug- a drug marketed under its chemical name, instead of a brand name

Gene therapy- an experimental procedure in which disease-causing [genes](#) are replaced by normal, healthy genes

Genetic analysis- examination of [DNA](#) in a laboratory to diagnose [genetic disorders](#)

Genetic counseling- information and advice given to persons considering pregnancy about the risk that a child will have an inheritable [birth defect](#) or genetic disorder

Genetic disorder- a disorder caused partly or completely by a defect in [genes](#), which carry hereditary information

Genetic engineering- the alteration of genetic information to change an organism; mainly used to produce [vaccines](#) and drugs such as [insulin](#)

Genital herpes- an infection caused by the [herpes simplex](#) virus, which causes a painful rash of fluid-filled blisters on the genitals; transmitted through sexual contact

Genital tract- the organs that make up the [reproductive system](#)

Genital wart- a growth on the skin in or around the vagina, penis, or anus, transmitted by sexual contact; can cause [cancer](#) of the [cervix](#)

Genome- the complete set of an organism's [genes](#)

Geographic tongue- a condition in which the tongue is patchy where surface cells break down

German measles- the common name for [Rubella](#)

Germ cell- a sperm or egg cell, or the immature form of either

Gestation- the period of time between [fertilization](#) of an egg by a sperm and birth of a baby

Giardiasis- [infection](#) with a single-celled parasite, causing abdominal cramps, diarrhea, and nausea

GIFT- see [Gamete intrafallopian transfer](#)

Gingivectomy- surgical removal of a diseased part of the gums

Gingivitis- inflammation of the gums, typically caused by a buildup of [plaque](#) due to poor hygiene

GI series- see [Gastrointestinal series](#)

Gland- a group of cells or an organ that produces substances (such as [hormones](#) and [enzyme](#)) that are used by the body

Glaucoma- a disease in which eye damage is caused by an increase in the pressure of the fluid within the eye

Glioblastoma multiforme- a fast-growing, cancerous brain [tumor](#)

Glioma- a brain [tumor](#) arising from cells that support nerve cells

Glomerulonephritis- inflammation of the filtering structures in the [kidneys](#), hindering removal of waste products from the blood

Glomerulosclerosis- scarring of the filtering structures in the [kidneys](#) due to damage

Glossectomy- surgical removal of all or part of the tongue

Glucagon- a [hormone](#) produced by the [pancreas](#) that converts stored carbohydrates (glycogen) into glucose, the body's energy source

Glucose- a sugar that is the main source of energy for the body

Glucose tolerance test- a test that evaluates the body's response to glucose after a period of fasting; used to check for [diabetes mellitus](#)

Glycogen- the main form that glucose, the body's energy source, takes when it is stored

Glycosuria- [glucose](#) in the urine

Goiter- enlargement of the [thyroid gland](#), which produces a swelling on the neck

Gonadotropic hormones- [hormones](#) that stimulate activity in the [ovaries](#) and [testicles](#)

Gonorrhea- a common sexually transmitted disease, characterized by painful urination or a discharge from the penis or vagina

Gout- a disorder marked by high levels of uric acid in the blood; usually experienced as [arthritis](#) in one joint

Graft- healthy tissue that is used to replace diseased or defective tissue

Grand mal- a type of [seizure](#) occurring with [epilepsy](#), producing loss of consciousness and involuntary jerking movements

Granuloma- a mass of tissue that forms at a site of inflammation, injury, or infection as a part of the healing process

Graves' disease- an [autoimmune disease](#) that causes [goiter](#), overproduction of thyroid hormones, and sometimes bulging eyeballs

Guillain-Barré syndrome- a [peripheral nervous system](#) disease in which nerve inflammation causes weakness, loss of movement, and loss of sensation in the arms and legs

Guthrie test- a blood test performed on babies to test for [phenylketonuria](#)

H

Hair follicle- a tiny opening in the skin from which a hair grows

Halitosis- the clinical term for bad breath; commonly caused by poor oral hygiene or eating certain foods; if persistent it can be a sign of illness

Hallucination- a perception that occurs when there is actually nothing there to cause it (such as hearing voices when there are none)

Hammer toe- an abnormality in the [tendons](#) of the toe that causes the toe to be flexed at all times

Hamstring muscle- a muscle located at the back of the thigh that bends the leg at the knee and moves the leg backward

Hardening of the arteries- the common name for [arteriosclerosis](#)

Hashimoto's disease- a disease in which the body's [immune system](#) attacks cells of the [thyroid gland](#), resulting in a decrease in thyroid hormones

Hay fever- the common name for [allergic rhinitis](#)

HDL- see [High-density lipoprotein](#)

Heart attack- see [Myocardial infarction](#)

Heart block- a disorder of the heart caused by a blockage of the [nerve](#) impulses to the heart that regulate heartbeat; may lead to dizziness, fainting, or stroke

Heartburn- a burning sensation experienced in the center of the chest up to the throat; may be caused by overeating, eating spicy food, or drinking alcohol; recurrent heartburn may be caused by [acid reflux](#)

Heart disease- see [Coronary heart disease](#)

Heart failure- the inability of the heart to pump blood effectively

Heart-lung machine- a machine that takes over the functions of the heart and lungs during certain types of surgery

Heart rate- the rate at which the heart pumps blood, measured in the number of heartbeats per minute

Heart valve- the structure at each exit of the four chambers of the heart that allows blood to exit but not to flow back in

Heat exhaustion- fatigue, dizziness, and [nausea](#) experienced because of overexposure to heat; if not treated it can result in heat stroke

Heat stroke- a life-threatening condition resulting from extreme overexposure to heat, which disrupts the body's system of regulating temperature

Heel spur- an abnormal, often painful outgrowth of bone on the back of the heel

Heimlich maneuver- a first-aid technique for choking; dislodges an object that is blocking a person's airway

Helper T cells- [white blood cells](#), responsible for regulating other cells in the body's [immune system](#), that are the main targets of the AIDS virus; also called CD4 cells

Hemangioma- a purple-red mark on the skin, caused by an excess of blood vessels

Hemarthrosis- bleeding into and swelling of a joint

Hematemesis- vomiting of blood

Hematocrit- the percentage of total blood volume that consists of [red blood cells](#), which is determined by laboratory testing; can be an indicator of disease or injury

Hematoma- an accumulation of blood from a broken blood vessel

Hematuria- blood in the urine, which can be caused by urinary tract disorders (such as [cysts](#), [tumor](#), or stones) or by an [infection](#)

Hemochromatosis- a [genetic disorder](#) in which too much [iron](#) is absorbed from food

Hemodialysis- a method used to treat kidney failure, in which blood is passed through a machine that purifies it and returns it to the body

Hemoglobin- the pigment in [red blood cells](#) that is responsible for carrying [oxygen](#); hemoglobin bound to oxygen gives blood its red color

Hemoglobinuria- hemoglobin in the urine

Hemolysis- the breakdown of red blood cells in the [spleen](#), which is normal but can cause [jaundice](#) and [anemia](#) when the red blood cells are broken down too quickly

Hemophilia- an inherited disorder in which a person's blood lacks a certain [protein](#) important in forming blood clots, leading to excessive bleeding

Hemorrhage- the medical term for bleeding

Hemorrhoid- a bulging [vein](#) either at the opening of the [anus](#) or just inside the anus, often caused by childbirth or straining during bowel movements

Hemospermia- blood in the [semen](#)

Hemostasis- the stopping of bleeding by the body's mechanisms

Hemothorax- an accumulation of blood between the chest wall and the lungs

Hepatectomy- surgical removal of all or part of the [liver](#)

Hepatic- a term used to describe something that is related to the [liver](#)

Hepatitis- inflammation of the [liver](#), which may be caused by a viral [infection](#), poisons, or the use of alcohol or other drugs

Hepatitis A- a form of hepatitis caused by the hepatitis A virus, usually transmitted by contact with contaminated food or water

Hepatitis B- a form of hepatitis (generally more serious than hepatitis A) caused by the hepatitis B virus, which is transmitted through sexual contact or contact with infected blood or body fluids

Hepatitis C- a form of hepatitis caused by the hepatitis C virus, which is transmitted through sexual contact or contact with infected blood or body fluids

Hepatitis D- a form of hepatitis that only causes symptoms when the individual is already infected with [hepatitis B](#)

Hepatoma- a cancerous [tumor](#) of the [liver](#)

Hepatomegaly- enlargement of the [liver](#)

Hereditary- describes a genetic trait that is passed from parents to children

Hereditary spherocytosis- a [genetic disorder](#) in which [red blood cells](#) are smaller, rounder, and more fragile than normal, causing hemolytic anemia

Hermaphroditism- a rare condition in which an individual is born with both male and female reproductive organs

Hernia- the bulging of an organ or tissue through a weakened area in the muscle wall

Herniated disk- see [Disk prolapse](#)

Herpes encephalitis- brain inflammation caused by a herpes simplex virus that has spread from another part of the body

Herpes simplex- infection by the herpes simplex virus, which causes blisterlike sores on the face, lips, mouth, or genitals; in rare cases, can also affect the eyes, fingers, or brain

Herpes zoster- see [Shingles](#)

Heterosexuality- being sexually attracted to members of the opposite sex

Hiatal hernia- a type of hernia in which the stomach bulges up into the chest cavity through an opening in the [diaphragm](#)

Hiccup- involuntary sudden contraction of the [diaphragm](#) along with the closing of the [vocal cords](#), producing a "hiccup" sound

High-density lipoprotein- a type of [protein](#) found in the blood that removes [cholesterol](#) from tissues, protecting against heart disease

Hirschsprung's disease- a condition that is present at birth in which nerve cells do not develop in parts of the [intestine](#), causing the intestine to narrow and block the passage of feces

Hirsutism- excessive hair or hair growth in unusual places, especially in women

Histamine- a chemical in some cells of the body that is released during allergic reactions, causing [inflammation](#); also causes production of acid in the stomach and narrowing of the [airways](#)

H₁ (histamine) blocker- a drug that blocks the action of histamine; used to treat inflammation

H₂ (histamine) blocker- a drug used in the treatment of [peptic ulcers](#) that blocks histamine from causing acid production in the stomach

Histoplasmosis- a respiratory disease acquired by inhaling the spores of a [fungus](#) found in soil, especially where there are bird or bat droppings

HIV- see [Human immunodeficiency virus](#)

Hives- the common term for urticaria, an itchy, inflamed rash that results from an allergic reaction

Hodgkin's disease- a [cancer](#) of lymphoid tissue (found in [lymph nodes](#) and the [spleen](#)) that causes the lymph nodes to enlarge and function improperly; may cause illness, fever, loss of appetite, and weight loss

Homeostasis- the body's coordinated maintenance of the stable, internal environment by regulating blood pressure, blood sugar, body temperature, etc

Homocystinuria- a [genetic disorder](#) in which an [enzyme](#) deficiency causes a substance called homocystine to build up in the blood, leading to mental handicap and skeletal abnormalities

Homosexuality- being sexually attracted to members of the same sex

Hookworm- infestation by a small, round, blood-sucking parasite; commonly causes a rash on the foot, but can also cause cough, [pneumonia](#), and [anemia](#)

Hormonal implant- surgical insertion of a small object just under the skin that slowly releases a synthetic hormone for purposes such as [birth control](#)

Hormone- a chemical produced by a gland or tissue that is released into the bloodstream; controls body functions such as growth and sexual development

Hormone replacement therapy- the use of natural or artificial hormones to treat hormone deficiencies

Hospice- a hospital or an area of a hospital dedicated to treating people who are dying, often of a specific cause

Hot flash- a sudden, temporary feeling of heat and sometimes sweating; usually occurs as a result of low [estrogen](#) levels in women because of [menopause](#) or after a [hysterectomy](#)

HTLV- see [Human T-cell lymphotrophic virus](#)

Human immunodeficiency virus- a [retrovirus](#) that attacks [helper T cells](#) of the immune system and causes acquired immunodeficiency syndrome (AIDS); transmitted through sexual intercourse or contact with infected blood

Human T-cell lymphotrophic virus- a virus similar to HIV that affects the same [helper T cells](#), but usually accompanies adult [T-cell leukemia](#) or T-cell lymphomas

Hydramnios- an excess of [amniotic fluid](#) in the [uterus](#) during pregnancy

Hydrocele- a painless swelling of the [scrotum](#), caused by a collection of fluid around the [testicle](#); commonly occurs in middle aged men

Hydrocephalus- excess [cerebrospinal fluid](#) within the brain; commonly referred to as "water on the brain"

Hydrocortisone- a [corticosteroid](#) drug that is used to treat inflammation and allergies

Hygiene- the practice, maintenance, and study of health; commonly refers to cleanliness

Hymen- a thin fold of membrane partly closing the opening of the [vagina](#); usually torn during first sexual intercourse or insertion of a tampon

Hyperactivity- a type of behavior characterized by excessive physical activity, sometimes associated with neurological or psychological causes

Hyperalimentation- a method of providing [nutrients](#) by the use of a tube or intravenously to a person who cannot eat food or needs nutrients because of an illness

Hyperbilirubinemia- a condition in which there is too much [bilirubin](#), a substance produced when red blood cells are broken down; can lead to [jaundice](#)

Hypercalcemia- a condition marked by abnormally high levels of [calcium](#) in the blood; can lead to disturbance of cell function in the nerves and muscles and, if not treated, can be fatal

Hypercholesterolemia- an abnormally high level of [cholesterol](#) in the blood, which can be the result of an inherited disorder or a diet that is high in fat

Hyperglycemia- a condition characterized by abnormally high levels of [glucose](#) in the blood, usually as a result of untreated or improperly controlled [diabetes mellitus](#)

Hyperlipidemia- a general term for a group of disorders in which [lipid](#) levels in the blood are abnormally high, including hypercholesterolemia

Hyperparathyroidism- overactivity of the [parathyroid glands](#), which increases calcium levels in the blood (called [hypercalcemia](#)) and decreases calcium in bones (causing [osteoporosis](#))

Hyperplasia- the enlargement of an organ or tissue

Hypersensitivity- an excessive response of the body's [immune system](#) to a foreign [protein](#)

Hypertension- abnormally high [blood pressure](#), even when at rest

Hyperthermia- an abnormally high body temperature

Hyperthyroidism- overactivity of the [thyroid gland](#), causing nervousness, weight loss, fatigue, and diarrhea

Hypertrophy- increase in the size of an organ due to an increase in the size of its cells

Hyperventilation- abnormally rapid breathing

Hypochondriasis- an abnormal condition in which a person is overly concerned with health and believes that he or she is suffering from a major illness despite medical opinion to the contrary

Hypodermic needle- a thin, hollow needle attached to a syringe; used to inject a medication under the skin, into a vein, or into a muscle

Hypoglycemia- abnormally low levels of [glucose](#) in the blood

Hypoplasia- failure of a tissue or organ to develop normally

Hypotension- the medical term for abnormally low [blood pressure](#), which results in reduced blood flow to the brain, causing dizziness and fainting

Hypothermia- an abnormally low body temperature

Hypothyroidism- underactivity of the [thyroid gland](#), causing tiredness, cramps, a slowed heart rate, and possibly weight gain

Hypoventilation- a slower-than-normal breathing rate

Hypoxemia- a reduced level of oxygen in the blood

Hypoxia- a reduced level of oxygen in tissues

Hysterectomy- surgical removal of the uterus

Hysteria- a term used to describe symptoms that are caused by mental stress and occur in someone who does not have a mental disorder

Hysterosalpingography- an X-ray examination performed to examine the inside of the uterus and fallopian tubes, in order to investigate and possibly treat infertility

Hysteroscopy- a method used to examine the inside of the uterus and the cervix using a viewing instrument

I

Iatrogenic- a term used to describe a disease, disorder, or medical condition that is a direct result of medical treatment

Ichthyosis- a variety of diseases in which the skin is dry and scaly

Idiopathic- a term used to describe something that occurs of an unknown cause

Ileostomy- a surgical procedure in which the lower part of the [small intestine](#) (the ileum) is cut and brought to an opening in the abdominal wall, where feces can be passed out of the body

Ileum- the lowest section of the [small intestine](#), which attaches to the large intestine

Ilium- one of the two bones that form the hip on either side of the body

Imaging- the technique of creating pictures of structures inside of the body using X-rays, ultrasound waves, or magnetic fields

Immune deficiency- impairment of the immune system, which reduces protection against infection and illness

Immune system- the cells, substances, and structures in the body that protect against [infection](#) and illness

Immunity- resistance to a specific disease because of the responses of the immune system

Immunization- the process of causing [immunity](#) by injecting [antibodies](#) or provoking the body to make its own antibodies against a certain microorganism

Immunocompromised- weakening of the body's [immune system](#)

Immunodeficiency- failure of the body's [immune system](#) to fight disease

Immunoglobulin- [proteins](#) in blood and tissue fluids that help destroy [microorganisms](#) such as bacteria and viruses

Immunology- the study of the [immune system](#), including how it functions and disorders that affect it

Immunostimulant- a drug that increases the ability of the body's [immune system](#) to fight disease

Immunosuppressant- a drug that inhibits the activity of the [immune system](#); used to prevent rejection of a transplant organ and in disorders where the body's immune system attacks its own tissues

Impacted fracture- a bone break in which the two broken ends have been forced into each other

Imperforate anus- a [birth defect](#) in which the opening of the [anus](#) is not formed normally

Impetigo- a highly contagious skin [infection](#) caused by bacteria, usually occurring around the nose and mouth; commonly occurring in children

Implant- an organ, tissue, or device surgically inserted and left in the body

Impotence- the inability to acquire or maintain an erection of the [penis](#)

Incompetent cervix- an abnormally weak [cervix](#), which widens prematurely during pregnancy as a result of the weight of a developing [fetus](#); may result in a [miscarriage](#)

Incontinence- inability to hold urine or feces inside of the body

Incubation period- the time period between when an infectious organism enters the body and when symptoms occur

Indigestion- uncomfortable symptoms brought on by overeating or eating spicy, rich, or fatty foods; characterized by [heartburn](#), pain in the abdomen, [nausea](#), and gas, and can be more serious if recurrent

Induction of labor- the use of artificial means to start the process of childbirth

Infarction- tissue death due to lack of blood supply

Infection- disease-causing [microorganisms](#) that enter the body, multiply, and damage cells or release [toxins](#)

Infective arthritis- [arthritis](#) caused by bacteria from a wound or the bloodstream entering a joint

Infertility- the inability to have children as a result of sexual intercourse

Inflammation- redness, pain, and swelling in an injured or infected tissue produced as a result of the body's healing response

Inflammatory bowel disease- the general term for two inflammatory disorders affecting the [intestines](#); also known as Crohn's disease and [ulcerative colitis](#)

Inflammatory joint disease- any type of [arthritis](#) that causes a joint to become inflamed

Influenza- a viral [infection](#) characterized by headaches, muscle aches, fever, weakness, and cough; commonly called the "flu"

Informed consent- agreement to undergo a medical procedure after the technique, its risks, and its possible complications have been explained

Infusion- the introduction of a substance, such as a drug or [nutrient](#), into the bloodstream or a body cavity

Ingestion- taking something into the body through the mouth

Ingrown toenail- a painful condition of the big toe in which the nail grows into the skin on either side, causing [inflammation](#) and/or [infection](#)

Inguinal hernia- the bulging of a portion of the [intestines](#) or abdominal tissue into the muscles of the groin (the area just below the abdomen)

Inhaler- a device used to introduce a powdered or misted drug into the lungs through the mouth, usually to treat respiratory disorders such as [asthma](#)

Inheritance- the passing of traits from parent to child through [genes](#)

Injection- the use of a syringe and needle to insert a drug into a vein, muscle, or joint or under the skin

Insemination- the placement of [semen](#) into a woman's [uterus](#), [cervix](#), or [vagina](#)

In situ- "in place"; often describes a cancer that has not spread

Insomnia- difficulty falling or remaining asleep

Insulin- a [hormone](#) made in the [pancreas](#) that plays an important role in the absorption of [glucose](#) (the body's main source of energy) into muscle cells

Insulinoma- a noncancerous [tumor](#) of the insulin-producing cells of the [pancreas](#); the tumor releases excess insulin into the blood, causing [glucose](#) levels to drop dangerously low

Intensive care- close monitoring of a patient who is seriously ill

Interferon- a [protein](#) produced by body cells that fights viral infections and certain cancers

Internal fixation- a method of holding a broken bone in place using surgically inserted screws, rods, or plates

Interstitial- lying between body structures or in the interspaces of tissues

Interstitial cystitis- persistent inflammation of the lining and muscle of the [bladder](#)

Interstitial lung disease- a disease of the [connective tissue](#) surrounding the air sacs of the lungs that causes a dry cough, scarring of lung tissue, and shortness of breath

Interstitial pulmonary fibrosis- scarring of [connective tissue](#) in the lungs that leads to shortness of breath

Interstitial radiation therapy- a treatment for [cancer](#) in which a radioactive material is inserted into or near a [tumor](#) to provide direct radiation

Intervertebral disks- broad, flat [cartilage](#) structures containing a gel-like fluid that cushion and separate [vertebrae](#)

Intestinal bypass- a surgical procedure in which the beginning of the [large intestine](#) is joined to its end so that less food is absorbed; because of serious side effects, usually performed only on seriously obese people

Intestine- a long, tube-shaped organ that extends from the stomach to the [anus](#); absorbs food and water and passes the waste products of digestion as feces

Intra-aortic balloon pump- a small balloon inserted into the [aorta](#) that helps to circulate blood by inflating between heartbeats

Intractable- describes a condition that does not respond to treatment

Intramedullary rod- a strong metal rod that is placed inside of a broken bone to help it heal correctly

Intraocular pressure- the pressure of the fluids within the eye

Intrauterine device- a device inserted into the [uterus](#) that helps to prevent pregnancy

Intravenous- inside of or into a [vein](#)

Intrinsic- a term used to describe something originating from or located in a tissue or organ

Intubation- the passage of a tube into an organ or body structure; commonly used to refer to the passage of a tube down the windpipe for [artificial respiration](#)

Invasive- describes something that spreads throughout body tissues, such as a [tumor](#) or [microorganism](#); also describes a medical procedure in which body tissues are penetrated

In vitro- "in glass"; a biological test or process that is carried out in a laboratory

In vitro fertilization- a treatment for [infertility](#) in which an egg and a sperm are joined outside the woman's body, and the fertilized egg is then inserted into the [uterus](#) or [fallopian tube](#)

In vivo- "in the living body"; a biological process that occurs inside of the body

Involuntary- occurring without a person's control or participation

Iodine- an element for the formation of thyroid hormones

Ionizing radiation- [radiation](#) that damages cells or genes; can be used to treat [cancer](#)

IQ- intelligence quotient; a measure of a person's intelligence as determined by specific tests

Iris- the colored part of the eye

Iron- a [mineral](#) necessary for the formation of important biological substances such as [hemoglobin](#), myoglobin, and certain [enzymes](#)

Iron-deficiency anemia- a type of [anemia](#) caused by a greater-than-normal loss of iron due to bleeding, problems absorbing iron, or a lack of iron in the diet

Irrigation- the cleansing of a wound by flushing it with water, a medicated solution, or some other fluid

Irritable bladder- involuntary contractions of muscles in the bladder, which can cause lack of control of urination

Irritable bowel syndrome- abnormal muscle movement in the [intestines](#), which causes abdominal pain and irregular bowel movements (diarrhea, [constipation](#), or both)

Ischemia- a condition in which a tissue or organ does not receive a sufficient supply of blood

IUD- see [Intrauterine device](#)

IVF- see [In vitro fertilization](#)

J

Jaundice- yellowing of the skin and whites of the eyes because of the presence of excess bilirubin in the blood; usually a sign of a disorder of the liver

Jock itch- an infection in the groin area caused by a fungus

Juvenile rheumatoid arthritis- a rare form of persistent joint inflammation that affects children

K

Kaposi's sarcoma- a skin [cancer](#) that is characterized by purple-red [tumors](#) that start at the feet and spread upward on the body; commonly occurs in people who have AIDS

Kawasaki disease- a childhood disease causing fever, rash, skin peeling, swollen [lymph nodes](#), and possibly complications of the heart and brain

Keloid- a raised, firm, thick scar that forms as a result of a defect in the natural healing process

Keratin- a tough [protein](#) found in skin, nails, and hair

Keratitis- inflammation of the [cornea](#)

Keratolytic- drugs that remove the [keratin](#)-containing outer layer of skin; used to treat skin disorders such as [warts](#) and dandruff

Keratoplasty- surgical replacement or reshaping of the [cornea](#)

Keratosis- a growth on the skin that is the result of overproduction of the protein keratin

Ketoacidosis- the dangerous accumulation of chemicals called ketones in the blood, sometimes occurring as a complication of [diabetes mellitus](#); also called ketosis

Kidney- one of two organs that are part of the urinary tract; responsible for filtering the blood and removing waste products and excess water as urine

Kidney stone- a hard mass composed of substances from the urine that form in the kidneys

Killer T cells- [white blood cells](#) that are part of the immune system and destroy microorganisms and cancer cells

Kilocalorie- a unit of energy; equal to a nutritional calorie

Kimmelstiel-Wilson syndrome- a [kidney](#) disorder that can occur as a complication of [diabetes mellitus](#); can cause swelling, high blood pressure, and kidney failure

Klinefelter's syndrome- a [genetic disorder](#) in which a man has at least 1 extra [X chromosome](#) in his cells, causing [infertility](#) and female characteristics

Knee-jerk reflex- a test for a reflexive extension of the leg to check the functioning of the nervous system; tapping the knee just below the kneecap should cause the lower part of the leg to jerk upward

Kyphosis- excessive curvature of the [spine](#), which usually affects the top part of the spine and causes a hump

L

Labia- the two pairs of skinfolds that protect the opening of the [vagina](#)

Labor- the interval from onset of contractions to birth of a baby

Labyrinthitis- [inflammation](#) of the fluid-containing chamber of the inner ear (called the labyrinth) that maintains balance; can cause a feeling that one's surroundings are spinning around (known as vertigo)

Laceration- a torn or ragged wound

Lactase deficiency- an inherited disorder in which a person does not have the enzyme lactase, which breaks down lactose (the sugar found in dairy products); lactase deficiency leads to lactose intolerance, which means the inability to digest lactose

Lactation- the production of breast milk after giving birth

Lactation suppression- a decrease in milk production during pregnancy as a result of high levels of [estrogen](#) in the blood

Lactic acid- an acid produced by [glucose](#)-burning cells when these cells have an insufficient supply of oxygen

Lactose- the sugar found in dairy products

Lactose intolerance- inability to break down and absorb the sugar lactose

Lamaze method- a method of preparing for childbirth that stresses physical conditioning, relaxation, and breathing exercises

Laminectomy- a surgical procedure that removes part of a [vertebra](#) to relieve pressure on the [spinal cord](#) or a nerve branching from the spinal cord

Laparoscope- a viewing instrument used to examine and treat disorders in the abdominal cavity; consists of a long tube with an eyepiece, a lens, and often a camera, which allows the image to be viewed on a monitor

Laparoscopic cholecystectomy- surgical removal of the [gallbladder](#) using a [laparoscope](#)

Laparoscopy- a procedure done to examine the abdominal cavity using a [laparoscope](#), usually to investigate pelvic pain or gynecologic conditions such as [infertility](#)

Large-cell carcinoma- one of the 4 major types of lung [cancer](#)

Large intestine- the part of the digestive tract that is located between the [small intestine](#) and the [anus](#)

Laryngectomy- surgical removal of all or part of the voice box (larynx) as a treatment for [cancer](#)

Laryngitis- [inflammation](#) of the voice box, usually caused by a viral infection; characterized by a hoarse voice

Larynx- the medical term for the voice box, the organ in the throat that produces voice and also prevents food from entering the airway

Laser treatment- the use of a laser (a concentrated beam of light) to perform medical procedures, such as the destruction of [tumors](#)

Latent infection- an [infection](#) that lies dormant in the body for months or years but can reappear

Lateral- on one side

Laxatives- drugs used to clear feces from the [intestines](#); commonly used to treat [constipation](#)

Lazy eye- the common name for the visual defect resulting from untreated strabismus, in which the eyes are not correctly aligned

LDL- see [Low-density lipoprotein](#)

Lead poisoning- damage to the brain, [nerves](#), [red blood cells](#), or digestive system because of ingestion of lead

Learning disability- any of a variety of disorders, including [hyperactivity](#), dyslexia, and hearing problems, that can interfere with a person's ability to learn

Legionnaires' disease- a form of [pneumonia](#) that is mainly spread through air-conditioning systems and water

Leiomyoma- a noncancerous [tumor](#) of smooth muscle

Leishmaniasis- a group of parasitic diseases affecting the skin, [mucous membranes](#), and internal organs; transmitted by the bite of a sandfly

Leptospirosis- [infection](#) by a spiral-shaped bacterium that affects the skin, eyes, muscles, kidneys, and liver; leptospirosis is carried by rodents

Lesch-Nyhan syndrome- a [genetic disorder](#) affecting only men that causes mental handicap, self-mutilation, and aggressive behavior

Lesion- an abnormality of structure or function in the body

Leukemia- a group of bone marrow [cancers](#) in which [white blood cells](#) divide uncontrollably, affecting the production of normal white blood cells, red blood cells, and platelets

Leukocyte- another name for a [white blood cells](#)

Leukocyte count- the number of [white blood cells](#) in the blood, which is used as a measure of health and possible infection

Leukodystrophy- a group of childhood [genetic disorders](#) in which the protective coverings of the [nerves](#) are destroyed

Leukoplakia- white patches that can develop in the mouth or on the [penis](#) or the opening of the [vagina](#) and are potentially cancerous

LH- see [Luteinizing hormone](#)

Lichen planus- a common skin disease in which itchy, small, pink or purple spots appear on the arms or legs

Ligament- a tough, elastic band of tissue that connects bones and supports organs

Ligation- the process of closing a blood vessel or duct by tying it off

Lipid-lowering drugs- drugs taken to lower the levels of specific fats called [lipids](#) in the blood in order to reduce the risk of narrowing of the arteries

Lipidosis- any disorder in which fats cannot be properly broken down by the digestive system

Lipids- a group of fats stored in the body and used for energy

Lipoma- a noncancerous [tumor](#) of fatty tissue

Lipoproteins- substances containing [lipids](#) and [proteins](#), comprising most fats in the blood

Liposarcoma- a cancerous [tumor](#) of fatty tissue

Liposuction- a surgical procedure in which fat is removed from areas of the body using a suction pump

Listeriosis- a rare bacterial [infection](#) acquired by eating undercooked infected meat or from infected live animals; can be dangerous to newborns and the elderly

Lithotripsy- a procedure done to break up stones in the urinary tract using ultrasonic shock waves, so that the fragments can be easily passed from the body

Liver- the largest organ in the body, producing many essential chemicals and regulating the levels of most vital substances in the blood

Liver failure- the final stage of liver disease, in which liver function becomes so impaired that other areas of the body are affected, most commonly the brain

Lobe- a well-defined, separate part of an organ

Lobectomy- surgical removal of a [lobe](#)

Local anesthesia- a method of preventing pain by inducing the loss of sensation in a certain area of the body while the patient remains awake

Locked joint- a joint that cannot be moved because of a disease or a lodged piece of bone or [cartilage](#)

Lockjaw- a spasm of the jaw muscles that prevents the mouth from opening, such as that caused by [tetanus](#)

Locomotor system- the structures of the body that are responsible for its movement

Lordosis- the inward curvature of the [spine](#) at the lower back, which is normal to a certain degree; abnormal as a result of certain medical conditions, being overweight, or having muscle problems

Lou Gehrig's disease- see [Amyotrophic lateral sclerosis](#)

Low-density lipoprotein- a type of [lipoprotein](#) that is the major carrier of [cholesterol](#) in the blood, with high levels associated with narrowing of the arteries and heart disease

Lumbago- dull, aching pain in the lower back

Lumbar puncture- a procedure in which a needle is inserted into the lower region of the spinal canal to take out a sample of spinal fluid or to inject a drug

Lumbar spine- the lower part of the [spine](#) between the lowest pair of ribs and the pelvis; made up of five [vertebrae](#)

Lumpectomy- surgical removal of a section of breast containing [cancer](#)

Lung collapse- a condition in which all or part of a lung cannot expand and fill with air

Lungs- two organs in the chest that take in [oxygen](#) from the air and release [carbon dioxide](#)

Lupus erythematosus- a disorder of the [immune system](#) that causes inflammation of [connective tissue](#)

Luteinizing hormone- a [hormone](#) produced by the [pituitary gland](#) that causes the [ovaries](#) and [testicles](#) to release sex hormones and plays a role in the development of eggs and sperm

Lyme disease- a disease caused by bacteria transmitted through the bite of a tick; characterized by fever, rash, and [inflammation](#) of the heart and joints

Lymph- a milky fluid containing [white blood cells](#), [proteins](#), and fats; plays an important role in absorbing fats from the intestine and in the functioning of the [immune system](#)

Lymphadenopathy- swollen [lymph nodes](#)

Lymphangiography- an X-ray procedure that creates images of the lymphatic system

Lymphatic system- a network of vessels that drain lymph back into the blood

Lymph node- a small gland that is part of the immune system; contains white blood cells and antibodies and helps fight against the spread of infection

Lymphocyte- a white blood cell that is an important part of the body's immune system, helping to destroy invading microorganisms

Lymphocytic leukemia- a disease in which white blood cells called lymphocytes divide uncontrollably

Lymphogranuloma venereum- a sexually transmitted chlamydial infection; common in countries with a tropical climate

Lymphomas- a group of cancer of the lymph nodes and spleen that can spread to other parts of the body

Lymphosarcoma- another name for a non-Hodgkin's sarcoma; a cancerous tumor in lymphoid tissue

M

Macula- the area of the [retina](#) that allows fine details to be observed at the center of vision; also refers to any small, flat spot on the skin

Macular degeneration- gradual loss of vision due to deterioration of nerve tissue in the [retina](#)

Magnesium- a [mineral](#) that is essential for many body functions, including [nerve](#) impulse transmission, formation of bones and teeth, and muscle contraction

Magnetic resonance imaging (MRI)- a technique that uses magnetic fields and radio waves to create high-quality cross-sectional images of the body without using [radiation](#)

Malabsorption- an impaired ability of the lining of the [small intestine](#) to absorb [nutrients](#) from food

Malaria- a parasitic disease spread by mosquitos that causes chills and fever; potentially fatal complications in the liver, kidneys, blood, and brain are possible

Malformation- abnormal development of an organ or tissue

Malignant- a word used to describe a condition that is characterized by uncontrolled growth and/or that can be fatal, such as a cancerous tumor

Malignant hyperthermia- a reaction to certain anesthesia gases involving intense muscle contractions and a high fever

Malignant melanoma- the most serious type of skin [cancer](#), in which a [mole](#) changes shape, darkens, becomes painful, and/or bleeds easily

Mallory-Weiss syndrome- a condition associated with alcoholism in which the lower end of the [esophagus](#) tears, causing vomiting of blood

Mammography- an X-ray procedure done to detect breast [cancer](#)

Mammoplasty- a general term for a cosmetic operation on the breasts; includes breast reduction, enlargement, and reconstruction after a [mastectomy](#)

Mandible- another term for the lower jaw

Mania- a mental disorder characterized by extreme excitement, happiness, overactivity, and agitation; usually refers to the high of the highs and lows experienced in manic-depressive disorder

Manic-depressive disorder- a mental disorder characterized by extreme mood swings, including either mania, [depression](#), or a continuing shift between the two extremes

MAO inhibitor- see [Monoamine oxidase inhibitor antidepressant](#)

Marfan's syndrome- a rare [genetic disorder](#) that affects [connective tissue](#), leading to abnormalities of joints, bones, tendons, ligaments, arteries, and/or the heart

Mast cell- a type of [cell](#) present in most body tissues that releases substances in response to an allergen, which causes symptoms such as [inflammation](#)

Mastectomy- a surgical procedure in which all or part of the breast is removed to prevent the spread of [cancer](#)

Mastitis- [inflammation](#) of the breast, which is usually caused by a bacterial infection

Maxilla- one of two bones that form the upper jaw, the roof of the mouth, and the center portion of the face

Measles- an illness caused by a viral [infection](#), causing a characteristic rash and a fever; primarily affects children

Meconium- thick, sticky, greenish-brown [stool](#) passed by a postmature fetus, or one experiencing [fetal distress](#), into the amniotic fluid, or by an infant during the first couple of days after birth

Medial- a term used to describe something situated on or near the midline of the body or a body structure

Median nerve- a [nerve](#) running down the arm to the hand; controls muscle movement in the forearm and hand and conveys sensation from part of the hand

Mediastinoscopy- investigation of the central chest compartment using an [endoscope](#) that is inserted through an incision in the neck

Medulla- the center part of an organ or body structure; sometimes used to refer to the lower part of the brain stem

Medulloblastoma- a type of cancerous [tumor](#), occurring in the section of the brain that controls posture and balance; found mainly in children

Megacolon- a severely swollen [large intestine](#), causing severe [constipation](#) and abdominal bloating; may be present at birth or develops later

Megaloblastic anemia- a type of [anemia](#) in which a lack of the [vitamin B12](#) or folic acid interferes with red blood cells and causes them to be enlarged and deformed, resulting in tiredness and weight loss

Meiosis- the type of cell division that occurs only in the [ovaries](#) and [testicles](#), producing cells with half the genes of the original cell; these cells then form eggs and sperm

Melanin- the pigment that gives skin, hair, and eyes their coloring

Melanocytes- cells that produce the pigment [melanin](#)

Melanocyte-stimulating hormone- a [hormone](#) that coordinates pigmentation of the skin, eyes, and hair

Melanoma- a skin [tumor](#) composed of cells called [melanocytes](#)

Menarche- the beginning of [menstruation](#)

Meniere's disease- a disorder of the inner ear, causing hearing loss, ringing in the ear, and the sensation that one's surroundings are spinning

Meninges- the three membranes that surround and protect the [spinal cord](#) and brain

Meningioma- a rare noncancerous [tumor](#) developing in the protective membranes covering the brain called the meninges; can cause headaches and problems with vision and mental function

Meningitis- [inflammation](#) of the [meninges](#); usually caused by infection by a [microorganism](#) (meningitis caused by bacteria is life-threatening; viral meningitis is milder)

Meningocele- a protrusion of the [meninges](#) through an opening in the skull or [spinal cord](#) due to a genetic defect

Meniscectomy- surgical removal of all or part of a [cartilage](#) disk from a joint

Meniscus- a crescent-shaped pad of [cartilage](#) in joints that helps to reduce friction

Menopause- the period in a woman's life when [menstruation](#) stops, resulting in a reduced production of [estrogen](#) and cessation of egg production

Menorrhagia- excessive loss of blood during [menstruation](#), which can be caused by disorders of the [uterus](#)

Menstrual cycle- the periodic discharge of blood and mucosal tissue from the [uterus](#), occurring from [puberty](#) to [menopause](#) in a woman who is not pregnant

Menstruation- the shedding of the lining of the [uterus](#) during the menstrual cycle

Mesenteric infarction- death of tissue in the [intestine](#) due to lack of blood supply to that tissue

Mesenteric lymphadenitis- inflammation of [lymph nodes](#) in an abdominal membrane

Mesothelioma- a cancerous [tumor](#) occurring in the lining of the lungs and chest cavity, often associated with exposure to asbestos dust

Mesothelium- a tissue layer that lines the heart, abdomen, chest cavity, and lungs

Messenger RNA- an [RNA](#) molecule that transports the information stored in [DNA](#) out of a cell's nucleus in order to make [proteins](#)

Metabolic rate- the speed at which the body uses energy

Metabolism- a general term for all of the chemical processes that occur in the body

Metabolite- any substance that takes part in a chemical reaction in the body

Metastasis- the spreading of a cancerous [tumor](#) to another part of the body through [lymph](#), blood, or across a cavity; also sometimes refers to a tumor that has been produced in this way

Metered-dose inhaler- an [inhaler](#) that gives a specific amount of medication with each use

Microbe- another term for a [microorganism](#), especially one that causes disease

Microbiology- the study of [microorganisms](#)

Microcephaly- an abnormally small head

Microdisectomy- surgical removal of the protruding part of a [prolapsed disk](#)

Microorganism- any tiny, single-celled organism (such as a [bacterium](#), [virus](#), or [fungus](#))

Microsurgery- a surgical technique that uses a special binocular microscope to operate on tiny, delicate, or hard-to-reach tissues

Micturition syncope- fainting or feeling weak while standing at the toilet; caused by an abnormal heartbeat or a drop in blood pressure

Middle ear- the small cavity between the [eardrum](#) and inner ear; contains three tiny, linked bones that transmit sound to the inner ear

Middle ear effusion- the buildup of fluid in the middle ear, which can affect hearing

Midwifery- a profession concerned with providing care to a mother and baby during pregnancy and childbirth

Migraine- a severe headache, usually accompanied by vision problems and/or [nausea](#) and vomiting, and that typically recurs

Mineral- a substance that is a necessary part of a healthy diet (such as [potassium](#), [calcium](#), [sodium](#), [phosphorus](#), and [magnesium](#))

Minipill- an [oral contraceptive](#) containing only the synthetic hormone progesterone (birth control pills contain [estrogen](#) and [progesterone](#))

Miotic- a drug that causes the [pupil](#) to constrict

Miscarriage- expulsion of a [fetus](#) before it has developed sufficiently to survive on its own

Mites- small eight-legged animals, many of which burrow and feed on blood

Mitosis- the process by which most [cells](#) divide in order to reproduce

Mitral insufficiency- a problem with the ability of the [mitral valve](#) in the heart to close, which causes the heart to pump harder and reduces its efficiency

Mitral stenosis- a condition in which the mitral valve in the heart becomes narrowed, making the heart work harder to pump blood; can lead to symptoms such as shortness of breath

Mitral valve- the valve in the heart that allows blood to flow from the left atrium to the left ventricle, but prevents blood from flowing back in

Mitral valve prolapse- a common condition in which the mitral valve in the heart is deformed, causing blood to leak back across the valve; characterized by a heart [murmur](#) and sometimes chest pain and disturbed heart rhythm

Modified radical mastectomy- a treatment for breast [cancer](#) in which the entire breast, a section of the chest muscle, and [lymph nodes](#) in the chest and underarm are removed

Molar tooth- large, strong teeth at the back of the jaw, primarily used to grind food

Mole- a brown to dark-brown spot on the skin that can be flat or raised

Molecule- the smallest unit of a substance that possesses its characteristics

Molluscum contagiosum- a viral [infection](#) that causes white bumps on the skin; usually clears up in a few months

Mongolian spot- a brown to blue-black spot on the lower back and buttocks at birth, caused by a concentration of pigment-producing cells; usually disappears by the age of 3 or 4 years

Monoamine oxidase inhibitor antidepressant- a substance that works by stopping an [enzyme](#) that breaks down stimulating chemicals in the brain; used to treat [depression](#)

Monoclonal antibodies- an [antibody](#) that is produced in the laboratory so that it will react with only one specific foreign protein; used to help diagnose certain kinds of [cancer](#)

Mononucleosis- an infection caused by a [virus](#) that invades a type of [white blood cell](#) called a monocyte, causing fever, sore throat, and swollen [lymph nodes](#)

Monounsaturated fat- a type of fat that is thought to be beneficial in the prevention of [coronary heart disease](#); found in foods such as olive oil and peanut oil

Morbidity- the state of being ill or having a disease

Morning sickness- [nausea](#) and vomiting experienced early in a pregnancy, affecting about half of all pregnant women

Mortality- the death rate, measured as the number of deaths per a certain population; may describe the population as a whole, or a specific group within a population (such as infant mortality)

Motor nerve- a [nerve](#) that carries messages to a muscle that cause the muscle to contract

Motor neuron disease- degeneration of the [nerves](#) in the [spinal cord](#) and brain that are responsible for muscle movement, causing weakness and muscle deterioration

Mouth-to-mouth resuscitation- a method of artificial breathing in which someone rhythmically forces air into the lungs of a person who has stopped breathing

MRI - see [Magnetic resonance imaging](#)

MS- see [Multiple sclerosis](#)

Mucocele- a sac or body cavity that is swollen because of the production of [mucus](#) by the cells in its lining

Mucolytic- a drug that lessens the sticky quality of [phlegm](#) and makes it easier to cough up

Mucous membrane- the soft, pink layer of cells that produce mucus in order to keep body structures lubricated; found in structures such as the eyelids, respiratory tract, and urinary tract

Mucus- a slippery fluid produced by mucous membranes that lubricates and protects the internal surfaces of the body

Multi-infarct dementia- [dementia](#) caused by multiple [strokes](#)

Multiple-gated acquisition scan- a technique for evaluating heart efficiency by measuring blood flow into and out of the heart

Multiple myeloma- a [cancer](#) that causes uncontrolled production of white blood cells in the [bone marrow](#)

Multiple pregnancy- the presence of more than one [fetus](#) in the uterus, such as occurs with twins

Multiple sclerosis- a disease in which the protective coverings (myelin) of nerve fibers in the brain are gradually destroyed; symptoms vary from numbness to paralysis and loss of control of bodily function

Mumps- a viral infection that causes [inflammation](#) of salivary glands; primarily affects children

Murmur- a characteristic sound (heard through a stethoscope) of blood flowing irregularly through the heart; can be harmless or may be an indication of disease

Muscle fibers- specialized, contracting [cells](#) that are bundled together to form muscles

Muscle relaxants- a group of drugs used to relieve muscle spasm and to treat conditions such as [arthritis](#), back pain, and nervous system disorders such as [stroke](#) and [cerebral palsy](#)

Muscle tone- the natural tension in resting muscles

Muscle wasting- the degeneration of a muscle (loss of bulk), caused by disease or starvation

Muscular dystrophy- a rare [genetic disorder](#) in which muscles degenerate gradually and strength is lost

Mutagen- anything that can increase the rate of abnormal change in cells, which can lead to [cancer](#)

Mutation- a change in the genetic information within a cell

Myalgia- the medical term for muscle pain

Myasthenia gravis- a disease in which the muscles, mainly those in the face, eyes, throat, and limbs, become weak and tire quickly; caused by the body's [immune system](#) attacking the receptors in the muscles that pick up nerve impulses

Mycobacterium- a type of slow-growing [bacterium](#); resistant to the body's defense mechanisms and are responsible for diseases such as [tuberculosis](#) and leprosy

Mycoplasma- the smallest free-living [microorganisms](#)

Mycosis- any disease caused by a [fungus](#)

Mydriatic- a drug that causes the [pupil](#) to dilate (widen)

Myelin sheath- the fat- and protein-containing material that surrounds and protects some [nerves](#)

Myelitis- [inflammation](#) of the [spinal cord](#), which can cause headaches, fever, muscle stiffness, pain, weakness, and eventually paralysis

Myelocele- protrusion of the [spinal cord](#) and its coverings out from the spine; one of the more severe forms of [spina bifida](#)

Myeloma- a [cancer](#) affecting cells in the [bone marrow](#); sometimes used as an abbreviation for multiple myeloma

Myelosclerosis- buildup of fibrous [connective tissue](#) in the [bone marrow](#), affecting the production of blood components

Myocardial infarction- the death of an area of heart muscle as a result of being deprived of its blood supply; characterized by severe pain in the chest; commonly called a heart attack

Myocarditis- inflammation of the heart muscle, which can be caused by a virus, certain drugs, or radiation therapy

Myocardium- the medical term for heart muscle

Myomectomy- the surgical removal of a noncancerous tumor from muscle

Myopathy- a muscle disease, usually one that results in the deterioration of muscle

Myopia- the medical term for nearsightedness

Myositis- muscle inflammation, causing pain and weakness

Myringotomy- a surgical opening in the eardrum that allows for drainage

Myxoma- a noncancerous tumor made of mucous material and fibrous connective tissue

N

Narcolepsy- a disorder that causes excessive sleepiness during the day and frequent and uncontrollable episodes of falling asleep

Narcosis- a drug (or other chemical)-induced drowsiness or stupor

Narcotic- an addictive substance that blunts the senses; can cause confusion, stupor, coma, and death with increased dosages

Narcotic analgesics- a type of painkiller that blocks the transmission of pain signals in the brain; often cause tolerance (the need for higher amounts of the drug to produce the same effect) and drug dependence

Nasal septum- the section of the nose that divides the left and right nostrils; made of cartilage and bone and covered by a mucous membrane

Nasogastric tube- a thin, plastic tube that is inserted through the nose, down the esophagus, and into the stomach; used to drain, wash, or take samples from the stomach, or to feed very sick patients who cannot eat

Nasopharynx- the passageway connecting the back of the nose to the top of the throat

Natural childbirth- a technique of giving birth that stresses relaxation techniques so that the use of pain-relieving drugs can be minimized; also called prepared childbirth

Natural methods of family planning- methods of planning a family that focus on a woman's time of ovulation, either so that pregnancy can be avoided or conception is likely

Nausea- feeling the need to vomit

Nebulizer- an instrument that provides a drug in its misted form through a face mask; used for severe asthma attacks and for children who have asthma but cannot use an inhaler

Necrosis- the medical term for the death of tissue cells

Needle aspiration- the use of a thin, hollow needle and syringe to remove body fluid for examination

Needle biopsy- the use of a hollow, wide-diameter needle to remove a sample of tissue for examination

Neonate- a term used to describe a newborn infant from birth to 1 month of age

Neoplasm- another term for a tumor

Nephrectomy- the surgical removal of one or both kidneys

Nephritis- inflammation of one or both kidneys because of an [infection](#), an abnormal [immune system](#) response, or a disorder of [metabolism](#)

Nephroblastoma- a fast-growing [cancer](#) of the kidneys that occurs most commonly in children under 4 years of age

Nephrolithotomy- surgical removal of a [kidney stone](#)

Nephrons- the tiny filtering units of the [kidney](#)

Nephrosclerosis- the replacement of normal kidney structures with scar tissue

Nephrostomy- the surgical placement of a tube into the [kidney](#) to drain urine

Nephrotic syndrome- symptoms that result from damage to the filtering units of the [kidney](#)

Nerve- a bundle of fibers that transmit electrical messages between the brain and areas of the body; these messages convey sensory or motor function information

Nerve block- the dulling of sensation in an area of the body by injecting a painkiller into or around a nerve leading to that section of the body

Nerve cell- the basic unit of the nervous system; transmits chemical messages throughout the body

Nerve compression- pressure on a [nerve](#), which can cause nerve damage and muscle weakness

Neuralgia- pain along the course of a [nerve](#) caused by irritation or damage to the nerve

Neural tube- the tube located along the back of an [embryo](#) that later develops into the [spinal cord](#) and brain

Neural tube defects- problems in the development of the [spinal cord](#) and brain in an [embryo](#), such as the failure of the spine to enclose the spinal cord ([spina bifida](#)) and the failure of the brain to develop (anencephaly)

Neuritis- inflammation of a [nerve](#), often characterized by pain, numbness, or tingling; also used to describe nerve damage and disease from causes other than inflammation

Neuroblastoma- a cancerous childhood tumor located in the [adrenal glands](#) or the [sympathetic nervous system](#)

Neurofibrillary tangles- abnormal spiral filaments on nerve cells in the brain; characteristic of [Alzheimer disease](#)

Neurofibromatosis- a condition in which connective tissue [tumors](#) occur on [nerves](#) in the skin

Neuroleptic- an [antipsychotic](#) drug

Neuroma- a noncancerous [tumor](#) occurring in [nerve](#) tissue

Neuron- another term for a [nerve](#) cell

Neuropathy- disease, inflammation, or damage to the [nerves](#) connecting the brain and [spinal cord](#) to the rest of the body

Neurosis- relatively mild emotional disorders (such as mild [depression](#) and [phobias](#))

Neurotoxins- chemicals that attack and damage [nerve](#) cells

Neurotransmitters- chemicals that transfer messages from one [nerve](#) cell to another or from a nerve cell to a muscle cell

Neutrophil- a type of [white blood cell](#)

Nevus- a marking on the skin; can be present at birth (birthmark) or develop later (such as a [mole](#))

Newborn respiratory distress syndrome- a disorder in which premature babies lack [surfactant](#), a substance that stops the lungs from collapsing

Niacin- a vitamin important in many chemical processes in the body; also known as vitamin B3

Night terrors- a form of nightmare causing abrupt awakening in terror; occurs mostly in children

Nitrates- a group of drugs that widen blood vessels; used to treat insufficient blood supply to the heart ([angina pectoris](#)) and reduced pumping efficiency of the heart ([heart failure](#))

Nocturia- urination or a sleep-disturbing need to urinate during the night

Nocturnal emission- ejaculation of [semen](#) during sleep, which is normal in adolescent males; commonly called a wet dream

Node- a small, rounded tissue mass

Nodule- a small lump of tissue that is usually abnormal; can form under the skin or protrude

Nondisjunction- an error that occurs during the division of sex chromosomes, causing either too much or too little genetic information to be placed in an egg or sperm when it is formed

Non-Hodgkin's lymphoma- any cancer in lymphoid tissue (found mostly in the spleen and lymph glands) that is not [Hodgkin's disease](#)

Non-insulin-dependent diabetes- a type of [diabetes mellitus](#) that occurs mainly in those over 40 who are overweight; it is usually treated with diet changes and drugs that increase production of [insulin](#) by the [pancreas](#) (also known as type II diabetes mellitus)

Noninvasive- a term that is used to describe medical procedures that do not enter or penetrate the body; also refers to noncancerous [tumors](#) that do not spread to other sections of the body

Nonnarcotic analgesic- a drug that relieves pain by blocking the production of chemicals that stimulate pain-sensing [nerves](#)

Nonsteroidal anti-inflammatory drugs- a group of drugs that relieve pain and reduce [inflammation](#)

Norepinephrine- a [hormone](#) that regulates [blood pressure](#) by causing blood vessels to narrow and the heart to beat faster when blood pressure drops

Norwalk virus- a virus that causes acute [gastroenteritis](#)

Nosocomial infection- an infection acquired in a hospital

NSAID- see [Nonsteroidal anti-inflammatory drug](#)

Nucleic acids- substances found in every living organism that provide the instructions for development; includes [DNA](#) and [RNA](#)

Nucleotide bases- molecules that form nucleic acids

Nucleus- the center or most important point of an object

Numbness- the lack of sensation in a part of the body because of interruption of [nerve](#) impulses

Nurse-midwife- a registered nurse who specializes in the care of a mother and child during pregnancy, labor, and delivery

Nutrient- any substance that the body can use to maintain its health

Nystagmus- persistent, rapid, involuntary movement of the eyes

O

Oat cell carcinoma- another term for [small-cell carcinoma](#)

Obesity- a condition in which there is an excess of body fat; used to describe those who weigh at least 20 percent more than the maximum amount considered normal for their age, sex, and height

Obsessive-compulsive disorder- a mental disorder in which a person is obsessed with certain thoughts, leading them to repeatedly perform specific acts; for example, constantly washing the hands out of fear of germs and dirt

Obstructive sleep apnea- the blockage of the [airways](#) during sleep, which causes breathing to stop for very short periods of time, commonly caused by excessive relaxation of muscles at the back of the throat

Occlusion- the blocking of an opening or passageway in the body

Occult blood- blood in the feces that can be detected only by chemical tests

Occupational disease- a disease that occurs as a result of factors in the workplace

Occupational therapy- treatment to relearn physical skills lost as a result of an illness or accident

Ocular- describes something related to the eyes

Oculomotor nerves- [nerves](#) that stimulate movement of the eyeball

Olfactory nerves- [nerves](#) that play a role in the sense of smell

Oligodendrogloma- a rare type of cancerous brain [tumor](#) that occurs most commonly in the [cerebrum](#)

Oligohydramnios- an unusually small amount of [amniotic fluid](#) surrounding the [fetus](#) in the uterus, which can lead to complications with the pregnancy

Oligospermia- a low level of sperm in the [semen](#); one of the main causes of [infertility](#) in men

Oncogenes- [genes](#) that, when altered by environmental factors or viruses, can cause abnormal cell growth

Oocyte- an egg cell that has not developed completely

Oophorectomy- the surgical removal of one or both [ovaries](#); used to treat the growth of ovarian [cysts](#) or [tumors](#)

Open heart surgery- any operation in which the heart is stopped temporarily and a machine is used to take over its function of pumping blood throughout the body

Ophthalmia- severe [inflammation](#) of the eyes

Ophthalmologist- a doctor who specializes in care of the eyes; treats eye diseases and disorders

Ophthalmoplegia- partial or total loss of the ability to move the eyes

Ophthalmoscopy- examination of the inside of the eye using a lighted viewing instrument

Opportunistic infection- [infection](#) by organisms that would be harmless to a healthy person, but cause infection in those with a weakened [immune system](#) (for example, persons with AIDS or chemotherapy patients)

Optic- pertaining to the eyes

Optician- a person who specializes in the making and adjustment of eyeglasses and contact lenses

Optic nerves- the pair of [nerves](#) that carry visual information from the [retina](#) to the brain

Optic neuritis- inflammation of the optic nerve, often causing a partial loss of vision

Oral contraceptives- drugs taken in pill form to prevent pregnancy; contain synthetic [progesterone](#) and [estrogen](#) hormones

Orbit- the socket in the skull that contains the eyeball, along with its blood vessels, nerves, and muscles

Orchiectomy- the surgical removal of one or both of the [testicles](#)

Orchiopexy- an operation to correct an [undescended testicle](#)

Orchitis- [inflammation](#) of a [testicle](#), which can be caused by infection with the mumps virus

Organ donation- an agreement to allow one or more organs to be removed and transplanted into someone else

Organism- any single, functioning form of life

Orgasm- involuntary contraction of genital muscles experienced at the peak of sexual excitement

Orphan drugs- drugs used to treat rare diseases; not normally produced because potential sales are small

Orthopnea- breathing difficulty experienced while lying flat; can be a symptom of [heart failure](#) or [asthma](#)

Orthotic- a device used to correct or control deformed bones, muscles, or joints

Osgood-Schlatter disease- painful enlargement and inflammation of the area of the shinbone just below the knee, usually occurring in adolescent boys

Osmosis- the process of passage of the solvent portion of a lesser-concentrated solution through a semipermeable membrane into a higher-concentrated solution until the two solutions are equal in concentration; plays an important role in water distribution in the body

Ossification- the formation and maintenance of bone

Osteitis- [inflammation](#) of bone

Osteitis deformans- another name for [Paget's disease](#)

Osteoarthritis- see [Degenerative arthritis](#)

Osteoblast- a [cell](#) that forms bone

Osteochondritis dissecans- bone degeneration inside of a joint, causing small pieces of bone and [cartilage](#) to become detached

Osteochondritis juvenilis- [inflammation](#) of a growing section of bone in a child or adolescent

Osteochondroma- a noncancerous [tumor](#) made up of bone and [cartilage](#)

Osteoclast- a [cell](#) that breaks down unwanted bone tissue; also refers to a device for fracturing a bone to correct a deformity

Osteodystrophy- defective bone formation

Osteogenesis imperfecta- a [genetic disorder](#) in which bones are abnormally fragile, leading to multiple breaks and deformity

Osteolysis- the softening and destruction of bone

Osteoma- a noncancerous bone [tumor](#)

Osteomalacia- the loss of [minerals](#) and softening of bones because of a lack of [vitamin D](#); called [rickets](#) in children

Osteomyelitis- the [inflammation](#) of bones and [bone marrow](#) because of an [infection](#), usually caused by bacteria

Osteopetrosis- a rare [hereditary](#) disorder in which bones become harder and more dense, causing them to break more easily

Osteophyte- an outgrowth of bone near a joint

Osteoporosis- a condition in which bones become less dense, more brittle, and fracture easily

Osteosarcoma- a cancerous bone [tumor](#)

Osteosclerosis- an abnormal increase in density and hardness of bone

Otalgia- the medical term for an earache

OTC remedy- see [Over-the-counter remedy](#)

Otitis externa- [inflammation](#) of the outer ear due to an [infection](#); commonly called swimmer's ear

Otitis media- [inflammation](#) of the middle ear (between the eardrum and inner ear) because of the spread of an [infection](#) from the nose, sinuses, and throat

Otorrhea- a discharge from an inflamed ear

Otosclerosis- progressive deafness caused by bone formation around structures in the middle ear

Ototoxicity- harmful effect that some drugs have on the organs or nerves in the ears, which can lead to hearing and balance problems

Outpatient treatment- medical attention that does not include an overnight stay at a hospital

Ovaries- two almond-shaped glands located at the opening of the [fallopian tubes](#) on both sides of the [uterus](#); produce eggs and the sex hormones [estrogen](#) and [progesterone](#)

Overdose- an excessively large dose of a drug, which can lead to [coma](#) and death

Over-the-counter remedy- a medication that can be purchased without a physician's prescription

Ovulation- the development and release of the egg from the ovary, which usually occurs halfway through a woman's [menstrual cycle](#)

Ovum- another term for an egg cell

Oxidation- a chemical reaction involving active sources of oxygen (called [oxygen free radicals](#)) that damages cells

Oximetry- determination of the amount of oxygen in the blood by measuring the amount of light transmitted through an area of skin

Oxygen- a gas that is colorless, odorless, and tasteless; essential to almost all forms of life

Oxygen free radicals- active forms of oxygen found in pollution, cigarette smoke, and radiation that can damage cells and are believed to play a role in the aging process and cancer

Oxytocin- a hormone produced in the pituitary gland that causes contraction of the uterus during childbirth and stimulation of milk flow during breast-feeding

Ozone- a poisonous form of oxygen that is present in the earth's upper atmosphere, where it helps to screen the earth from damaging ultraviolet rays

P

Pacemaker- a small electronic device that is surgically implanted to stimulate the heart muscle to provide a normal heartbeat

Paget's disease- a disorder occurring in the middle-aged and elderly in which bone does not form properly, causing bone weakening, thickening, and deformity

Palate- the roof of the mouth

Palliative treatment- treatment that relieves the symptoms of a disorder without curing it

Pallor- abnormally pale skin; usually refers to the skin of the face

Palpation- the use of the hands to feel parts of the body to check for any abnormalities

Palpitation- an abnormally rapid and strong heartbeat

Palsy- loss of sensation or ability to move

Pancreas- a long [gland](#) located behind the stomach that produces [enzymes](#) that help to break down food and hormones ([insulin](#) and glucagon) that help to regulate [glucose](#) levels in the blood

Pancreatitis- [inflammation](#) of the pancreas, which is often caused by alcohol abuse

Pandemic- a widespread [epidemic](#)

Panic disorder- an emotional disorder characterized by attacks of anxiety that have no normal causes; usually made worse by stress

Papilloma- a [tumor](#) occurring on the skin or [mucous membranes](#); usually not cancerous

Pap smear- a test in which cells are scraped off the [cervix](#) and examined for abnormalities; used to detect changes that might precede cervical cancer and to diagnose viral infections such as [herpes simplex](#)

Paracentesis- the insertion of a needle into a body cavity to relieve pressure, inject a drug, or remove a sample for analysis

Paralysis- the inability to use a muscle because of injury to or disease of the [nerves](#) leading to the muscle

Paramedic- a person trained to give first aid and other emergency medical care

Paranoia- a disorder in which a person becomes overly suspicious and emotionally sensitive

Paraphimosis- strangulation of the head of the [penis](#) by a tight or inflamed [foreskin](#) that has been pulled back

Paraplegia- complete or partial loss of sensation and movement of the legs

Parasite- an organisms that lives on or in other organisms, from which it obtains [nutrients](#)

Parasympathetic nervous system- the part of the [autonomic nervous system](#) that is stimulated during times of relaxation

Parathyroidectomy- the surgical removal of one or more of the [parathyroid glands](#)

Parathyroid glands- small [glands](#) located in the neck that produce a [hormone](#) that regulates the levels of [calcium](#) in the blood

Parathyroid hormone- a hormone released by the [parathyroid glands](#) that plays a role in controlling [calcium](#) levels in the blood

Parentral- the introduction of a substance into the body by any route other than the digestive tract, such as through a vein or muscle

Paresis- partial [paralysis](#)

Paresthesia- numbness or tingling in the skin; commonly referred to as "pins and needles"

Parkinson's disease- a brain disorder in which there is a lack of the chemical messenger dopamine, which helps control muscle movement; leads to muscle stiffness, weakness, and trembling

Paronychia- a bacterial or yeast [infection](#) of the skin around the nail

Parotid glands- [salivary glands](#) located in the mouth near the ears

Paroxysm- a sudden attack or worsening of a disease's symptoms

Partial mastectomy- a treatment for breast [cancer](#) in which a [tumor](#) is removed, along with the skin covering it and some of the surrounding tissues and muscles

Partial seizure- an abnormal electrical discharge in a certain area of the brain, affecting only certain functions

Passive exercise- exercise of an injured part of the body involving no effort from that injured part

Passive smoking- a nonsmoker inhaling the cigar, cigarette, or pipe smoke of others (called second-hand smoke) in the same area, which increases the nonsmoker's risk of [cancer](#) and respiratory disorders

Patella- the medical term for the kneecap

Patent- not obstructed; open

Patent ductus arteriosus- a [genetic disorder](#) of the heart in which a channel connecting the [pulmonary artery](#) and the [aorta](#) fails to close and the heart must work harder to supply the body with blood

Paternity testing- use of blood tests to match up [DNA](#) or specific blood [proteins](#) to determine whether a man is the father of a child

Pathogen- any substance capable of causing a disease; usually refers to a disease-causing [microorganism](#)

Pathogenesis- the production and development of a disease or disorder

Pathology- the study of disease

Patient-controlled analgesia- a system for administering pain-killing drugs in which the amount of drug delivered is controlled by the patient

Peak flow measurement- the maximum speed that air is exhaled from the lungs; used to diagnose [asthma](#) or to determine the effectiveness of asthma medications

Pectoral muscles- the muscles of the upper part of the chest that move the arm across the body, raise some of the ribs, and move the shoulders

Pellagra- a deficiency of the vitamin [niacin](#); causes [dermatitis](#), diarrhea, and mental disorders

Pelvic examination- an examination of a woman's reproductive organs

Pelvic inflammatory disease- [inflammation](#) of a woman's internal reproductive organs, usually as a result of a bacterial infection; one of the most common causes of pelvic pain and [infertility](#) in women

Pelvis- the group of bones in the lower part of the trunk that support the upper body and protect the abdominal organs

Penile function tests- tests used to determine the cause of [impotence](#), including blood tests and nerve function tests

Penile implant- an inflatable device surgically inserted into the penis that allows a man with [impotence](#) to have sexual intercourse

Penis- the external male reproductive organ, which passes urine and [semen](#) out of the body

Pepsin- the [enzyme](#) found in [gastric juice](#) that helps digest protein

Peptic ulcer- an erosion in the lining of the esophagus, stomach, or small intestine, usually caused in part by the corrosive action of [gastric acid](#)

Percutaneous- a procedure that is performed through the skin, such as an injection

Perforation- a hole in an organ or body structure caused by disease or injury

Periarteritis nodosa- inflammation and weakening of small and medium [arteries](#)

Pericardial effusion- fluid buildup inside of the [pericardium](#), affecting the performance of the heart

Pericarditis- [inflammation](#) of the membranous sac that covers the heart, causing chest pain and fever

Pericardium- the membranous sac that covers the heart and the base of the blood vessels that are attached to the heart

Perinatal- occurring just before or just after birth

Periosteum- the tissue covering bones, except the surfaces in joints

Periostitis- inflammation of the [periosteum](#)

Peripheral nervous system- the [nerves](#) that branch out from the brain and spinal cord to the rest of the body

Peripheral vascular disease- the narrowing of blood vessels in the legs or arms, causing pain and possibly tissue death ([gangrene](#)) as a result of a reduced flow of blood to areas supplied by the narrowed vessels

Peristalsis- wavelike movement of smooth muscle-containing tubes, such as the digestive tract

Peritoneum- the membrane that lines the abdominal cavity and covers the abdominal organs

Peritonitis- inflammation of the [peritoneum](#)

Pernicious anemia- an [anemia](#) caused by a failure to absorb [vitamin B₁₂](#); which is essential in the production of normal red blood cells

Perthes' disease- inflammation of the growing head of a [femur](#); a type of [osteochondritis juvenilis](#)

Pertussis- a bacterial [infection](#) of the respiratory tract characterized by short, convulsive coughs that end in a whoop sound when breath is inhaled (commonly called whooping cough); mainly affects children

Petit mal- a [seizure](#) characterized by loss of awareness for brief periods

PET scanning- see [Positron emission tomography scanning](#)

Peutz-Jeghers syndrome- a [genetic disorder](#) in which there are [polyps](#) in the small intestine and brown melanin spots on the lips, mouth, fingers, and toes

pH- a measure of the acidic or basic character of a substance

Phagocyte- an [immune system](#) cell that can surround and digest foreign bodies, unwanted cellular material, and [microorganisms](#)

Phantom limb- the sensation of a limb after it has been amputated

Pharmacology- the study of medications, including drug development

Pharyngitis- [inflammation](#) of the throat (the pharynx), causing sore throat, fever, earache, and swollen glands

Pharynx- the throat; the tube connecting the back of the mouth and nose to the [esophagus](#) and windpipe

Phenothiazines- a group of drugs used as [antipsychotics](#), [antihistamines](#), and [antiemetics](#)

Phenylketonuria- a hereditary disorder in which the [enzyme](#) that converts the amino acid phenylalanine into another amino acid is defective, meaning phenylalanine must be kept out of the diet

Pheochromocytoma- a noncancerous [tumor](#) of cells that produce [epinephrine](#) and [norepinephrine](#), causing higher levels of these hormones in the blood and an increase in blood pressure

Phimosis- tightness of the foreskin, which prevents it from being moved back over the head of the [penis](#)

Phlebitis- [inflammation](#) of a [vein](#)

Phlebothrombosis- formation of a blood clot in a [vein](#)

Phlegm- [mucus](#) and other material produced by the lining of the respiratory tract; also called sputum

Phobia- a persisting fear of and desire to avoid something

Phosphates- salts containing [phosphorus](#); essential to some body functions such as the bones and teeth

Phospholipids- fatty substances that make up the membranes surrounding [cells](#)

Phosphorus- a [mineral](#) that is an important part of structures such as bones, teeth, and membranes in the body; also involved in numerous other chemical reactions

Photocoagulation- tissue destruction using a focused beam of light

Photophobia- an abnormal sensitivity of the eyes to light

Photosensitivity- an abnormal reaction to sunlight, which usually occurs as a [rash](#)

Phototherapy- treatment with some form of light

Physical therapy- the treatment of injuries or disorders using physical methods, such as exercise, massage, or the application of heat

Physiology- the study of the body's functions

Phytochemicals- chemicals in plants that might help protect against disorders such as cancer

Pica- a desire to eat materials that are not food

Pickwickian syndrome- extreme [obesity](#) along with shallow breathing, [sleep apnea](#), excessive sleepiness, and [heart failure](#)

PID- see [Pelvic inflammatory disease](#)

Pigmentation- the coloration of the skin, hair, and eyes by the pigment [melanin](#)

Pinkeye- [inflammation](#) of the membrane that covers the white of the eyes and lines the eyelids, causing redness, discomfort, and a discharge; can be caused by infection or allergies

Pinworm- a small [parasite](#) worm that can live in the [intestines](#); commonly affects children

Pituitary adenoma- a noncancerous [tumor](#) of the pituitary gland

Pituitary gland- a small, round [gland](#) located at the base of the brain that releases [hormones](#) that control other glands and body processes

Pityriasis alba- a common childhood or adolescent disorder in which there are pale, scaly patches on the skin of the face

Pityriasis rosea- a mild skin condition in which flat, scaly spots occur on the trunk and upper arms

Pivot joint- a joint designed for rotational movement

PKU- see [Phenylketonuria](#)

Placebo- a chemically inactive substance given in place of a drug to test how much of a drug's effectiveness can be attributed to a patient's expectations that the drug will have a positive effect

Placebo effect- the positive or negative response to a drug that is caused by a person's expectations of a drug rather than the drug itself

Placenta- an organ formed in the [uterus](#) during pregnancy that links the blood of the mother to the blood of the [fetus](#); provides the fetus with nutrients and removes waste

Placental abruption- the separation of the placenta from the wall of the [uterus](#) before childbirth, which causes severe bleeding that threatens the life of the mother and the [fetus](#)

Placental insufficiency- a disorder occurring during pregnancy in which the [placenta](#) does not function properly, causing the [fetus](#) to be deprived of nutrients

Placenta previa- a disorder in which the [placenta](#) develops at the lower section of the [uterus](#) (close to or covering the cervix); varies in severity, from no effect on a pregnancy to vaginal bleeding and danger to the mother and the [fetus](#)

Plague- a serious infectious disease transmitted to humans through bites of rodent fleas

Plantar reflex- the normal curling of the toes downward when the sole of the foot is stroked

Plantar wart- a rough-surfaced, hard spot on the sole of the foot that is caused by a [virus](#)

Plaque- an area of buildup of fat deposits in an [artery](#), causing narrowing of the artery and possibly heart disease; dental plaque refers to a coating on the teeth, consisting of saliva, bacteria, and food debris, which causes tooth decay

Plasma- the liquid part of the blood, containing substances such as nutrients, salts, and [proteins](#)

Plasma cell- a [white blood cell](#) that makes [antibodies](#)

Plasmapheresis- a procedure for removing unwanted substances from the blood in which blood is drawn, its [plasma](#) is separated and replaced, and the cleansed blood is returned to the body

Platelet- the smallest particle found in the blood, which plays a major role in forming [blood clots](#)

Pleura- the double-layered membrane that lines the lungs and chest cavity and allows for lung movement during breathing

Pleural effusion- a buildup of fluid between the membranes that line the lungs and chest cavity (the pleura); causes compression of the lungs, which leads to breathing difficulty

Pleural membranes- the [pleura](#)

Pleural rub- a rubbing sound produced by inflamed pleural membranes that can be heard when breathing

Pleural space- the space between the two layers of the [pleura](#)

Pleurisy- [inflammation](#) of the lining of the lungs and chest cavity, usually caused by a lung [infection](#); characterized by sharp chest pain

Pleurodynia- pain in the chest caused by a [virus](#)

Plummer-Vinson syndrome- difficulty swallowing due to an abnormal web of tissue across the upper part of the [esophagus](#)

PMS- see [Premenstrual syndrome](#)

Pneumoconiosis- a respiratory disease caused by dust inhalation

Pneumocystis pneumonia- an [opportunistic infection](#) of the lungs caused by a single-celled [parasite](#)

Pneumonectomy- surgical removal of a lung

Pneumonia- [inflammation](#) of the lungs due to a bacterial or viral [infection](#), which causes fever, shortness of breath, and the coughing up of [phlegm](#)

Pneumothorax- a condition in which air enters the space between the chest wall and the lungs, causing chest pain and shortness of breath; may occur spontaneously or be the result of a disease or an accident

Poliomyelitis- an infectious disease caused by a [virus](#); usually causes only mild symptoms but in rare cases can attack the brain and spinal cord and cause [paralysis](#) or death

Polyarthritis- [arthritis](#) occurring in more than one joint

Polycystic kidney disease- a condition in which there are multiple, slow-growing [cysts](#) on both [kidneys](#)

Polycystic ovary syndrome- a hereditary disease characterized by multiple [cysts](#) on the [ovaries](#), obesity, excessive hairiness, [infertility](#), and irregular menstruation

Polycythemia- an increased amount of [red blood cells](#) in the blood

Polydactyly- the presence of an excessive number of fingers or toes

Polydipsia- excessive thirst

Polymyalgia rheumatica- a rare disease of the elderly, characterized by muscle stiffness and pain in the hips, thighs, shoulders, and neck

Polymyositis- an [autoimmune disease](#) of [connective tissue](#) in which muscles weaken and become inflamed

Polyp- a growth that occurs on [mucous membranes](#) such as those in the nose and [intestine](#); bleeds easily and can become cancerous

Polysaccharide- a complex [carbohydrate](#) composed of three or more simple carbohydrate molecules joined together

Polyunsaturated fat- a fat or oil that contains well below the maximum number of hydrogen atoms possible; thought to reduce the risk of [coronary heart disease](#)

Polyuria- the excessive production of urine; can be a symptom of various diseases, most notably [diabetes mellitus](#)

Porphyria- a group of [genetic disorders](#) in which substances called porphyrins build up in the blood, often causing rashes brought on by exposure to sunlight and reactions to certain drugs

Portal hypertension- increased blood pressure in the portal vein

Portal vein- the [vein](#) connecting the stomach, intestines, and spleen to the liver

Positron emission tomography scanning- an imaging method in which substances emitting positrons (positively charged particles) are introduced into the body, and detectors connected to a computer are used to form images of the tissues

Postcoital contraception- the prevention of pregnancy after sexual intercourse has occurred

Posterior- describes something that is located in or relates to the back of the body

Postmenopausal bleeding- bleeding from the [vagina](#) that occurs after [menopause](#)

Postmortem examination- examination of a body after death to determine the cause of death; commonly called an autopsy

Postmyocardial infarction syndrome- a condition that occurs following a heart attack or heart surgery; characterized by fever, chest pain, [pericarditis](#), and [pleurisy](#)

Postnatal- describes something that occurs after birth, usually to the baby

Postpartum- a term that describes something that occurs after childbirth, usually to the mother

Post-traumatic stress disorder- feelings of anxiety experienced after a particularly frightening or stressful event, which include recurring dreams, difficulty sleeping, and a feeling of isolation

Postural drainage- drainage of [mucus](#) from specific areas of the lungs by placing the body in a specific position

Postural hypotension- unusually low [blood pressure](#) that occurs after suddenly standing or sitting up

Potassium- a [mineral](#) that plays an important role in the body, helping to maintain water balance, normal heart rhythm, conduction of nerve impulses, and muscle contraction

Precancerous- describes a condition from which cancer is likely to develop

Precordial movement- movement of the heart that is seen and felt through the chest wall

Preeclampsia- a serious disorder that occurs in the second half of pregnancy, in which a woman experiences high blood pressure, fluid retention, nausea, and headaches; if not treated it can lead to [eclampsia](#)

Premature labor- [labor](#) that begins before the full term of pregnancy (about 37 weeks)

Premature rupture of membranes- the rupture of the sac that holds the fluid surrounding the [fetus](#) before the full term of pregnancy (about 37 weeks)

Premedication- drugs, usually painkillers, taken 1 to 2 hours before surgery

Premenopausal- a term that describes the period of a few years in a woman's life just before [menopause](#)

Premenstrual syndrome- physical and emotional changes that occur in a woman 1 or 2 weeks before [menstruation](#), at or after [ovulation](#); characterized by irritability, tension, [depression](#), and fatigue

Prenatal care- medical care of a pregnant woman and the [fetus](#)

Prenatal diagnosis- techniques used to diagnose abnormalities in a [fetus](#)

Prenatal testing- tests performed on a pregnant woman or her [fetus](#) to prevent or diagnose abnormalities

Prepared childbirth- a technique in which a pregnant woman tries to minimize use of pain-relief medications during childbirth by learning relaxation techniques

Prepuce- the [foreskin](#)

Presbycusis- the loss of hearing that occurs naturally with age

Presbyopia- the loss of the ability to focus the eyes on near objects that occurs naturally with age, as a result of loss of elasticity of the lens of the eyes

Pressure point- specific points on the body where external pressure can be applied to prevent excessive arterial bleeding

Pressure sore- an [ulcer](#) (erosion) on the skin that is a result of being bedridden; commonly called a bedsore

Priapism- a painful, persistent erection without sexual arousal, requiring emergency treatment

Prickly heat- a rash involving small, red, itchy spots and a prickly sensation that usually appears where sweat builds up

Primary- a disease that began in the affected location

Prion- an agent that is believed to cause several degenerative brain diseases

Procidentia- severe [prolapse](#) of an organ

Proctalgia- pain in the [rectum](#)

Proctitis- [inflammation](#) of the [rectum](#), which causes soreness and sometimes [mucus](#) and/or [pus](#) in the stool

Proctoscopy- examination of the [rectum](#) using a viewing instrument

Productive cough- a cough that brings up [phlegm](#), which is the body's natural way of clearing blocked airways

Progeria- an extremely rare condition in which the body ages prematurely

Progesterone- a female sex [hormone](#) that plays many important roles in reproduction, including the thickening of the lining of the uterus during the [menstrual cycle](#); and during pregnancy, the functioning of the [placenta](#), and the initiation of labor

Prognosis- a doctor's probable forecast of the effects and outcome of a disease

Progressive muscular atrophy- gradual degeneration and weakening of muscles due to a degenerative spinal cord

Prolactin- a [hormone](#) released by the [pituitary gland](#) that is responsible for the development of breasts and milk production in females

Prolapse- the displacement of an organ from its normal position to a new one

Prolapsed disk- see [Disk prolapse](#)

Prophylactic- anything used to prevent disease

Proprioception- the body's system for determining its position relative to the outside world

Prostatectomy- the partial or complete surgical removal of the [prostate gland](#)

Prostate gland- an organ located under the bladder that produces a large part of the [semen](#)

Prostatism- symptoms caused by an enlarged [prostate gland](#), including difficulty with urination

Prostatitis- [inflammation](#) of the [prostate gland](#), usually due to a bacterial infection spread from the [urethra](#)

Prosthesis- an artificial replacement for a missing part of the body

Proteins- large molecules made up of amino acids that play many major roles in the body, including forming the basis of body structures such as skin and hair, and important chemicals such as [enzymes](#) and [hormones](#)

Prothrombin time- the time it takes for a sample of blood to clot after substances that speed clotting time have been added; used to measure the effect of [anticoagulants](#)

Proton pump inhibitor- a drug used to treat [peptic ulcers](#) that reduces the amount of gastric acid produced

Proto-oncogene- a [gene](#) that is normally inactive but can become a cancer-causing oncogene if made active

Protozoan- a simple, single-celled organism

Proximal- located nearer to a central point of reference on the body, such as the trunk

Pruritus- the medical term for itching

Pseudogout- a form of [arthritis](#) with symptoms similar to gout that results from the depositing of calcium salts in a joint

Pseudomembranous enterocolitis- severe inflammation of the [colon](#) as a result of antibiotic use by an [immunocompromised](#) individual

Psittacosis- a chlamydial [infection](#) resembling influenza that is spread to humans by the droppings of infected birds

Psoralens- drugs that contain chemicals derived from plants; used to treat the skin disorders psoriasis and [vitiligo](#)

Psoriasis- a skin disorder characterized by patches of thick, red skin often covered by silvery scales

Psoriatic arthritis- a form of [arthritis](#) that develops as a complication of the skin disorder psoriasis

Psychogenic- resulting from psychological or emotional disorders

Psychological- relating to the mind and the processes of the mind

Psychosis- a mental disorder in which a serious inability to think, perceive, and judge clearly causes loss of touch with reality

Psychosomatic- describes a physical condition that is influenced by psychological or emotional factors

Psychotherapy- the treatment of mental and emotional disorders using [psychological](#) methods, such as counseling, instead of physical means

Psychotic- relating to [psychosis](#)

Psychotropic drug- a drug that has a [psychological](#) effect

Ptosis- the drooping of the upper eyelid

Puberty- the period of time (usually between the ages of 10 and 15) during which sexual development occurs, allowing reproduction to become possible

Pubic louse- a small insect that lives in pubic hair, feeds on blood, and is usually spread by sexual contact; pubic lice are popularly called "crabs"

Pudendal block- a local [anesthesia](#) procedure used during childbirth, causing the lower part of the [vagina](#) to be insensitive to pain

Pudendum- the external genitals, usually referring to the female

Puerperal sepsis- infection of the female genital tract following childbirth, abortion, or miscarriage

Puerperium- the time period after childbirth (about 6 weeks) during which a woman's body returns to its normal physical state

Pulmonary artery- the [artery](#) that supplies the lungs with blood from the heart

Pulmonary edema- the buildup of fluid in lung tissue, which is usually caused by [heart failure](#)

Pulmonary embolism- blockage of the [pulmonary artery](#) by a floating mass in the blood

Pulmonary fibrosis- a condition in which the tissue of the lungs has become thick and scarred, usually because of [inflammation](#) caused by lung conditions such as [pneumonia](#) or [tuberculosis](#)

Pulmonary heart valve- the heart valve that stops blood pumped to the lungs from leaking back into the heart

Pulmonary hypertension- increased blood pressure in the [arteries](#) supplying blood to the lungs; caused by increased resistance to blood flow in the lungs, usually a result of a lung disease

Pulmonary insufficiency- a rare defect in the [pulmonary heart valve](#) in which it fails to close properly after each muscle contraction, allowing blood to leak back into the heart; weakens the heart's pumping ability

Pulmonary stenosis- obstruction of the flow of blood from the heart to the lungs

Pulp- the soft tissue inside of a tooth that contains blood vessels and [nerves](#)

Pulse- the expansion and contraction of a blood vessel due to the blood pumped through it; determined as the number of expansions per minute

Pupil- the opening at the center of the [iris](#) in the eye that constricts (contracts) and dilates (widens) in response to light

Purpuric rash- areas of purple or reddish-brown spots on the skin, which are caused by bleeding from underlying tissues

Pus- a thick, yellowish or greenish fluid that contains dead [white blood cells](#), tissues, and bacteria; occurs at the site of a bacterial [infection](#)

Pustule- a small blister containing pus

PUVA- a form of [phototherapy](#) that combines the use of [psoralens](#) and ultraviolet light to treat skin disorders

Pyelolithotomy- surgical removal of a [kidney stone](#)

Pyelonephritis- [inflammation](#) of the [kidney](#), usually due to a bacterial [infection](#)

Pyloric sphincter- a circular muscle located at the junction of the stomach and [small intestine](#) that controls the passage of food into the small intestine

Pyloric stenosis- narrowing of the outlet located at the junction of the stomach and [small intestine](#)

Pyloroplasty- surgical widening of the outlet between the stomach and [small intestine](#)

Pyrexia- a body temperature of above 98.6°F in the mouth or 99.8°F in the [rectum](#)

Pyrogen- any substance that causes a fever

Pyuria- the presence of [white blood cells](#) in the urine; usually an indication of kidney or urinary tract [infection](#)

Q

Quadriceps muscle- the muscle (consisting of 4 distinct parts) located at the front of the thigh that straightens the leg

R

Rabies- an infectious viral disease primarily affecting animals; can be transmitted to humans through an infected animal's bite; if untreated, can result in paralysis and death

Radial keratotomy- a surgical procedure for correcting nearsightedness in which tiny cuts are made in the cornea to change its shape and focusing properties

Radiation- a variety of types of energy, such as X-rays and ultraviolet

Radiation therapy- treatment of a disease, such as cancer, using forms of radioactivity that damage or destroy abnormal cells

Radical surgery- treatment of disease by surgically removing all tissue that is or may be affected

Radiculopathy- any disease of the nerve roots; can be caused by disk prolapse, arthritis, and other problems

Radioallergosorbent test- a blood test performed to help determine the cause of an allergy by detecting the presence of antibodies to various allergens

Radiography- the formation of images of the inside of the body using radiation projected through the body and onto film; a radiograph is also called an X-ray

Radionuclide scanning- an imaging technique in which a radioactive substance is introduced into the body and its emitted radiation is detected; specific organs can be studied according to the amount of the radioactive substance that they absorb

Radius- one of the two long bones of the forearm, located on the thumb side of the arm

Radon- a colorless, odorless, tasteless radioactive gas that is produced by materials in soil, rocks, and building materials; suspected of causing cancer

Rales- abnormal crackling or bubbling sounds heard in the lungs during breathing

Rash- an area of inflammation or a group of spots on the skin

Raynaud's disease- a condition in which the fingers and toes become pale when exposed to cold or emotional stress, owing to sudden narrowing of the arteries that supply them with blood

Receptor- a nerve cell that responds to a stimulus and produces a nerve impulse; also refers to the area on the surface of a cell that a chemical must bind to in order to have its effect

Recessive gene- a gene that does not produce its effect when it occurs with a dominant gene, but produces its effect only when there are two copies of it

Reconstructive surgery- surgery to rebuild part of the body that has been damaged or defective from birth

Rectal prolapse- bulging of the lining of the [rectum](#) through the [anus](#), usually due to straining during a bowel movement

Rectum- a short tube located at the end of the [large intestine](#), which connects the intestine to the [anus](#)

Red blood cell- a doughnut-shaped blood cell that carries [oxygen](#) from the lungs to body tissues

Reduction of fracture- the realignment of the broken ends of a bone

Referred pain- pain felt in a part of the body remote from the site where pain originates

Reflex- an automatic, involuntary response of the nervous system to a stimulus

Reflux esophagitis- the backflow of [gastric acid](#) from the stomach to the lower [esophagus](#), owing to a defect in the valve that separates them

Regurgitation- the backflow of fluid; can refer to food and drink flowing back up from the stomach into the mouth or blood flowing back into the heart through a defective [heart valve](#)

Rehabilitation- treatment for an injury or illness aimed at restoring physical abilities

Rehydration- treatment for dehydration (an abnormally low level of water in the body) in which levels are restored by taking fluids containing water, salt, and glucose by mouth or, if severe, through a [vein](#)

Reiter's syndrome- a disorder characterized by [inflammation](#) of the joints, [urethra](#), and sometimes the [conjunctiva](#)

Relapse- the return of a disease or symptom after it had disappeared

Remission- the temporary disappearance of a disease or its symptoms, either partially or completely; also refers to the time period in which this occurs

REM sleep- rapid eye movement sleep; the stage of sleep in which dreaming occurs

Renal cell carcinoma- the most common type of kidney cancer

Renal colic- severe pain on one side of the lower back, usually as a result of a [kidney stone](#)

Renal tubular acidosis- inability of the [kidneys](#) to remove sufficient amounts of acid from the body, making the blood more acidic than normal

Renin- an [enzyme](#) that plays a role in increasing a low blood pressure

Repetitive strain injury- an injury that occurs when the same movement is repeated continuously

Reproductive system- the organs and structures that allow men and women to have sexual intercourse and produce children

Resection- partial or complete surgical removal of a diseased organ or structure

Respiration- the process by which [oxygen](#) is taken in and used by tissues in the body and carbon dioxide is released

Respirator- another term for a [ventilator](#)

Respiratory arrest- a condition in which a person suddenly stops breathing

Respiratory distress syndrome- a condition experienced after an illness or injury damages the lungs, causing severe breathing difficulty and resulting in a life-threatening lack of [oxygen](#) in the blood

Respiratory failure- the failure of the body to exchange gases properly, which leads to a buildup of [carbon dioxide](#) and a lack of [oxygen](#) in the blood

Respiratory system- the organs that carry out the process of [respiration](#)

Resting pulse- the [pulse](#) rate when a person is not experiencing any physical activity or mental stress

Reticulocyte- an immature [red blood cell](#)

Retina- a membrane lining the inside of the back of the eye that contains light-sensitive [nerve](#) cells that convert focused light into nerve impulses, making vision possible

Retinal artery occlusion- obstruction of an [artery](#) that supplies blood to the [retina](#), resulting in some degree of temporary or permanent blindness

Retinitis pigmentosa- gradual loss of the field of vision, owing to a degeneration of the light-sensitive nerve cells of the [retina](#)

Retinoblastoma- a hereditary, cancerous [tumor](#) of the [retina](#) affecting infants and children

Retinoid- a substance resembling vitamin A that is used to treat skin conditions such as [acne](#) and has been reported to reduce skin wrinkling

Retinopathy- any disease or disorder of the [retina](#); usually refers to damage to the retina caused by high blood pressure or [diabetes mellitus](#)

Retinoscopy- a method of determining focusing errors of the eye in which light is shined through the [pupil](#) and the reflected beam is measured

Retroviruses- a group of viruses that are made up of RNA instead of DNA, including HIV and the virus that causes T-cell leukemia

Reye's syndrome- a rare disorder mainly affecting those under the age of 15 that is characterized by brain and liver damage following a viral infection such as chickenpox or the flu; may be linked to taking aspirin to treat a viral infection

Rh blood group- a blood group classifying whether the substances called Rhesus (Rh) factors are present on the surface of red blood cells; the "positive" or "negative" designation in blood classification (for example, "O negative")

Rheumatic fever- a disorder that follows a throat infection by the streptococcus bacteria and causes inflammation in body tissues

Rheumatoid arthritis- a condition in which joints in the body become inflamed, stiff, painful, and sometimes deformed because of the body's own immune system attacking the tissues

Rheumatoid factors- antibodies that are present in about 80% of people with rheumatoid arthritis; their detection through blood testing can help to diagnose the disorder

Rh immunoglobulin- a substance used to prevent a woman who is Rh incompatible with her fetus from becoming Rh sensitized

Rh incompatibility- a condition in which a pregnant woman's Rh factor does not match that of the fetus; can lead to the production of antibodies by the mother that destroy the fetus' red blood cells

Rhinitis- inflammation of the mucous membrane lining the nose, which can cause sneezing, runny nose, congestion, and pain; when caused by substances in the air, it is called allergic rhinitis or hay fever

Rhinophyma- a bulb-shaped deformity and redness of the nose as a result of severe rosacea

Rhinoplasty- surgery that changes the structure of the nose, either to improve appearance or to correct a deformity or injury

Rh sensitized- a condition in which a woman who has a negative Rh factor develops permanent antibodies against Rh-positive blood as a result of exposure to the blood of her fetus; can cause fetal hemolysis in subsequent pregnancies

Rhythm method- a method of preventing pregnancy in which a couple does not have sexual intercourse during the days of the menstrual cycle during which fertilization can occur

Riboflavin- a vitamin belonging to the vitamin B complex that is important in many processes in the body and helps to maintain healthy skin

Rickets- a childhood disease in which bones lack [calcium](#) and are deformed as a result of [vitamin D](#) deficiency (vitamin D helps the body absorb [calcium](#))

Rigor mortis- the stiffness that occurs in the body after death

Ringworm- a skin [infection](#) caused by a [fungus](#) that spreads out in an even circle, characterized by ring-like, scaly patches of red skin

Rinne's test- a test that uses a tuning fork to diagnose hearing loss resulting from poor conduction of sound from the outer to the inner ear

RNA- ribonucleic acid, which helps to decode and process the information contained in [DNA](#)

Rocky mountain spotted fever- a rare disease transmitted to humans through the bites of ticks; characterized by small pink spots on the wrists and ankles that spread to other parts of the body, become larger, and bleed

Rosacea- a skin disorder that is characterized by patches of red skin on the nose and cheeks and acne-like bumps; most commonly occurs in middle-aged women

Roseola infantum- a common disease in young children characterized by a sudden fever and rash

Rotator cuff- a structure made up of four muscle [tendons](#) that reinforces the shoulder joint

Roundworm- a group of worms that includes many of the major human [parasites](#)

Rubella- a mild viral infection (also known as German measles) that produces a rash and fever; dangerous when it infects a woman during the early stages of pregnancy, when it can spread causing [birth defects](#) in the fetus

Rubeola- another term for [measles](#)

Rupture- a tear or break in an organ or tissue

S

Saccharides- a group of [carbohydrates](#), including sugars and starches

Sacroiliac joints - the pair of joints located in the [pelvis](#) between the [sacrum](#) and the hipbones

Sacroiliitis- [inflammation](#) of the sacroiliac joints, which causes pain in the lower body

Sacrum- the triangular bone located at the bottom of the spine that is connected to the tailbone, the hipbones near the [sacroiliac joints](#), and the rest of the spine

SADS- see [Seasonal affective disorder syndrome](#)

Safe sex- measures taken to reduce the risk of acquiring a sexually transmitted disease, such as the use of a condom

Saline- a salt solution or any substance that contains salt

Salivary glands- a group of [glands](#) that secrete saliva into the mouth

Salmonella- a group of bacteria; includes a species that causes food poisoning and another responsible for [typhoid fever](#)

Salmonellosis- [infection](#) by salmonella bacteria

Salpingectomy- surgical removal of one or both [fallopian tubes](#)

Salpingitis- [inflammation](#) of a [fallopian tube](#)

Salpingography- X-ray examination of the [fallopian tubes](#)

Salpingolysis- removal of abnormal scar tissue between a [fallopian tube](#) and nearby tissue

Salpingo-oophorectomy- the surgical removal of one or both of the [fallopian tubes](#) and one or both of the [ovaries](#)

Salpingostomy- surgical opening of a [fallopian tube](#) for drainage or removal of an obstruction

Sarcoidosis- a rare disease with no known cause that leads to [inflammation](#) in tissues throughout the body, including the [lymph nodes](#), lungs, [liver](#), skin, and eyes

Sarcoma- a [cancer](#) in connective tissue, fibrous tissue, or blood vessels

Saturated fat- fats that contain the maximum amount of hydrogen possible, such as those found in meats and dairy products; can contribute to [coronary heart disease](#) and the development of some [cancers](#)

Saturday night palsy- temporary [paralysis](#) of the arm after extended pressure on a nerve in the armpit

Scabies- a highly contagious skin disorder caused by a mite that burrows into the skin and produces an intense, itchy rash

Scarlet fever- an infectious childhood disease, caused by a streptococcus bacteria, that leads to a sore throat, fever, and rash

Schistosomiasis- infestation by a parasitic blood worm that can damage the liver, bladder, and intestines

Schizophrenia- a group of mental disorders characterized by abnormal thoughts, moods, and actions; sufferers have a distorted sense of reality, and a split personality (thoughts do not logically fit together)

Schönlein-Henoch purpura- inflammation and leakage of blood vessels, causing a rash

Sciatica- pain along the sciatic nerve, which runs down the length of the leg to the foot; usually caused by pressure on the nerve due to [disk prolapse](#) or a [tumor](#), [abscess](#), or [blood clot](#)

Sclera- the tough, white coating that covers and protects the inner structures of the eye

Scleroderma- an [immune system](#) disorder of varying degree that can affect many areas of the body

Sclerotherapy- treatment of [varicose veins](#) by injection of a solution that destroys them

Scoliosis- a condition in which the spine curves to one side and usually curves toward the opposite side in another section to compensate, producing a characteristic S shape

Screening- the testing of an otherwise healthy person in order to diagnose disorders at an early stage

Scrotum- the sac containing the [testicles](#)

Scurvy- a disease caused by a lack of [vitamin C](#), characterized by weakness, bleeding and pain in joints and muscles, bleeding gums, and abnormal bone and tooth growth

Seasonal affective disorder syndrome- a type of [depression](#) that seems to be linked to shorter periods of daylight during the fall and winter

Sebaceous cyst- a swelling that occurs under the skin, most commonly on the scalp, face, ears, and genitals; although usually harmless, can grow very large and become painful if infected

Seborrhea- excessive oiliness of the face and scalp

Sebum- the oily, lubricating substance that is secreted by glands in the skin

Secondary- describes a disease or disorder that follows or is caused by another one

Sedatives- a group of drugs that have a calming effect; used to treat anxiety and pain, bring on sleep, and help relax a person before surgery

Seizure- sudden uncontrolled waves of electrical activity in the brain, causing involuntary movement or loss of consciousness

Selenium- an element needed by the body only in very small amounts that helps maintain tissue elasticity

Semen- fluid released during ejaculation that contains [sperm](#) along with fluids produced by the prostate gland and the [seminal vesicles](#)

Semen analysis- a procedure in which a semen sample is examined to determine the amount of sperm present, along with their shape and ability to move; commonly used in the treatment of male [infertility](#)

Seminal vesicles- two saclike [glands](#) in men that produce part of the fluid in [semen](#)

Seminiferous tubules- coiled tubes inside of the [testicle](#) that are the site of sperm production

Seminoma- a type of testicular [cancer](#) that is made up of only a single type of [cell](#)

Senile plaques- abnormal deposits of a protein called amyloid in the brain; characteristic of [Alzheimer disease](#)

Sensorineural hearing loss- deafness caused by damage to the inner ear or the nerve that conducts signals from the ear to the brain

Sensory nerve- nerves that carry information about the body's senses toward the brain

Sensory organ- an organ that receives and relays information about the body's senses to the brain

Sepsis- the infection of a wound or tissue with bacteria, causing the spread of the bacteria into the bloodstream; now also known as [systemic inflammatory response syndrome](#) caused by a [microbe](#)

Septal defect- a [birth defect](#) in which a hole is present in the wall that separates the left and right sides of the heart

Septic arthritis- joint inflammation caused by a bacterial [infection](#)

Septicemia- a life-threatening condition in which bacteria multiply in the blood and produce toxic materials; commonly known as blood poisoning; now also known as [systemic inflammatory response syndrome](#).

Septic shock- a life-threatening condition in which tissues become damaged and [blood pressure](#) drops due to bacteria multiplying and producing poisons in the blood

Serotonin- a chemical that transmits [nerve](#) impulses in the brain, causes blood vessels to constrict (narrow) at sites of bleeding, and stimulates smooth muscle movement in the [intestines](#)

Serum- the clear, watery fluid that separates from clotted blood

Sex chromosomes- the X and Y chromosomes that determine a person's gender; women normally have two X chromosomes and men normally have one X and one Y

Sex hormones- [hormones](#) responsible for producing sex characteristics and controlling sexual functions

Sex-linked disorder- a disorder that is caused by [genes](#) located on the [sex chromosomes](#)

Sexually transmitted disease- infections that are most commonly spread through sexual intercourse or genital contact

Shigellosis- a bacterial [infection](#) of the [intestines](#), causing abdominal pain and diarrhea

Shingles- a nerve [infection](#) caused by the chickenpox [virus](#), causing areas of painful rash covered with blisters

Shin splints- pain and tenderness experienced in the lower leg as a result of damage or strain to leg muscles and [tendons](#); usually caused by exercise

Shock- a reduced flow of blood throughout the body, usually caused by severe bleeding or a weak heart; without treatment, can lead to a collapse, [coma](#), and death

Shunt- an artificially constructed or an abnormal passage connecting two usually separate structures in the body

Sickle cell anemia- a [genetic disorder](#) in which the [red blood cells](#) are abnormal and deformed, causing anemia (reduced ability to transport [oxygen](#) in the blood) and clogging of blood vessels; bouts of fever, headache, and weakness result

Sickle cell trait- a less serious form of [sickle cell anemia](#)

Sick sinus syndrome- abnormal functioning of the structure that regulates the heartbeat, causing episodes of abnormal heart rhythm

SIDS- see [Sudden infant death syndrome](#)

Sigmoidoscopy- an examination of the [rectum](#) and the lowest part of the [large intestine](#) using a flexible viewing tube inserted through the [anus](#)

Silicone- a group of compounds of silicon and oxygen; commonly used as implants in cosmetic surgery because they resist body fluids and are not rejected by the body

Silicosis- a respiratory disease caused by inhalation of dust containing the mineral silica

Single photon emission computed tomography- an imaging technique in which a radioactive substance is introduced into the body and the [radiation](#) emitted by the substance is detected by a camera and is transformed into cross-sectional images by a computer

Sinoatrial node- the structure that regulates the heartbeat; a natural "pacemaker"

Sinus- a cavity within bone or a channel that contains blood; also refers to an abnormal tract in the body

Sinus bradycardia- a regular heart rate of less than 60 beats per minute

Sinusitis- [inflammation](#) of the lining of the cavities in the bone surrounding the nose (the sinuses), usually as a result of a bacterial [infection](#) spreading from the nose

Sinus rhythm- normal heart rhythm

Sinus tachycardia- a regular heart rate of over 100 beats per minute

Sjögren's syndrome- a condition characterized by dryness of the eyes, mouth, and [vagina](#) that tends to occur along with certain disorders of the [immune system](#)

Skin graft- a method of treating damaged or lost skin in which a piece of skin is taken from another area of the body and transplanted in a damaged or missing section

Skin patch- a sticky patch attached to the surface of the skin that releases drugs into the bloodstream

Skin patch test- a diagnostic test in which different [allergens](#) are taped to the skin to determine which causes an allergic reaction

Skin prick test- a test performed to determine a person's sensitivity to a certain [allergen](#) by applying it to a small needle and using that needle to pierce the skin

Skull- the bones that form the framework of the head and enclose and protect the brain and other sensory organs

Sleep apnea- a condition in which breathing stops for very short periods of time during sleep

Sleeping sickness- an infectious disease in Africa spread by the bite of a tsetse fly that causes a fever and weakness

Slipped disk- the common term for [disk prolapse](#)

Small-cell carcinoma- the most serious form of lung cancer

Small intestine- the long tube running from the stomach to the [large intestine](#) that is involved in digestion of foods and absorption of nutrients

Smallpox- a highly contagious and often fatal viral [infection](#) that has been completely eradicated by [immunization](#)

Smear- a sample of [cells](#) spread across a glass slide to be examined through a microscope

Sodium- a [mineral](#) that plays a role in the body's water balance, heart rhythm, nerve impulses, and muscle contraction; present in table salt (sodium chloride)

Sodium bicarbonate- a substance used as an [antacid](#)

Solar plexus- the largest network of [nerves](#) in the body, located behind the stomach

Somatic- pertaining to the body

Spasm- an involuntary muscle contraction; can sometimes be powerful and painful

Spasticity- muscle stiffness caused by an increase in contractions of the muscle fibers

Spastic paralysis- [spasticity](#) involving partial [paralysis](#)

SPECT- see [Single photon emission computed tomography](#)

Speculum- an instrument that holds an opening of the body open so that an examination can be performed or a sample can be taken

Speech therapy- treatment to help someone overcome a problem communicating verbally

Sperm- the male sex cell produced in the [testicles](#)

Sperm antibody- an [antibody](#) against sperm that can be produced by a woman's [immune system](#)

Spermatocele- a harmless [cyst](#) containing fluid and sperm that occurs in the tube through which sperm travel from the [testicles](#)

Sperm count- the amount of normally functioning sperm per some unit of [semen](#); used to determine a man's [fertility](#)

Spermicide- a contraceptive substance that kills [sperm](#)

Sphincter- a ring of muscle fibers located around a naturally occurring passage or opening in the body that opens and closes to regulate passage of substances

Sphygmomanometer- an instrument used to measure [blood pressure](#)

Spider nevus- a collection of dilated (widened) [capillaries](#) on the skin that creates a patch resembling a spider

Spina bifida- a [birth defect](#) in which a section of the baby's spine fails to develop completely, leaving the [spinal cord](#) exposed in that section

Spina bifida occulta- the least dangerous form of [spina bifida](#), in which bones in the spine fail to close but there is no protrusion of the [spinal cord](#) or its fluid cushion out of the body

Spinal cord- a long tube of [nerve](#) tissue inside the spinal column, running from the brain down the length of the back inside of the [spine](#)

Spinal fusion- the surgical joining of two or more adjacent [vertebrae](#) using bone fragments; used to help severe back pain or prevent damage to the spinal cord

Spinal tap- another term for a [lumbar puncture](#)

Spine- the column of bones and [cartilage](#) running along the midline of the back that surrounds and protects the [spinal cord](#) and supports the head

Spiral fracture- a coiled break in a bone, resembling a corkscrew

Spirometry- a test of lung condition; a person breathes into a machine called a spirometer that measures the volume of air exhaled

Spleen- an organ located in the upper left abdomen behind the ribs that removes and destroys old [red blood cells](#) and helps fight [infection](#)

Splenectomy- surgical removal of the [spleen](#)

Splint- a device that is used to immobilize a part of the body

Splinter hemorrhage- a splinter-shaped area of bleeding under a fingernail or toenail

Spondylitis- [inflammation](#) of the joints between the bones of the [spine](#)

Spondylolisthesis- the slipping of a [vertebra](#) in the [spine](#) over the one below it

Spondylosis- a disorder in which the lower part of the [spine](#) is weakened by an abnormally soft [vertebra](#)

Sporotrichosis- an infection with a [fungus](#) acquired through a skin wound; causes an [ulcer](#) at the site of infection and small, rounded masses of tissue near it

Sprain- the tearing or stretching of the [ligaments](#) in a joint, characterized by pain, swelling, and an inability to move the joint

Sprue- a digestive disorder in which [nutrients](#) cannot be properly absorbed from food, causing weakness and loss of weight

Sputum- [mucus](#) and other material produced by the lining of the respiratory tract; also called phlegm

Squamous cell carcinoma- a type of skin cancer arising from flat cells of the [epithelium](#); can also affect the lungs, [cervix](#), and [esophagus](#)

Stapedectomy- surgical removal of a stapes (a sound-conducting bone in the middle ear) that cannot move to transmit sound; performed to treat hearing loss caused by [otosclerosis](#)

Staphylococci- common bacteria that cause skin [infections](#) and a number of other disorders

Status asthmaticus- a life-threatening [asthma](#) attack requiring immediate treatment

Status epilepticus- a life-threatening succession of epileptic [seizures](#)

STD- see [Sexually transmitted disease](#)

Stein-Leventhal syndrome- see [Polycystic ovary syndrome](#)

Stem cells- cells that give rise to the different types of blood cells

Stenosis- narrowing of a body passageway

Stent- a device used to hold tissues in place, such as to support a skin graft

Stereotaxic surgery- brain surgery done through a small opening in the skull and guided by X-rays or computer-aided imaging techniques

Sterilization- a surgery performed to make a person incapable of reproducing; also refers to the process of killing [microorganisms](#) on objects such as surgical instruments

Sternum- the long, flat bone located at the center of the chest

Steroids- a group of drugs that includes [corticosteroids](#), which resemble hormones produced by the adrenal glands, and [anabolic steroids](#), which are similar to the hormones produced by the male sex organs

Stillbirth- a baby that is born dead after the 28th week of pregnancy; also called late fetal death

Stoma- a surgically formed opening on a body surface

Stomach bypass- a surgical procedure to treat an obstructed stomach or severe [obesity](#) in which the passage of food is diverted around the stomach and directly into the [small intestine](#)

Stomach stapling- a procedure in which the stomach is made smaller by partitioning it off using metal staples; used as an extreme treatment of severe [obesity](#)

Stool- another term for feces

Strabismus- a condition in which the eyes are not aligned correctly, such as cross-eye (one eye points inward) and walleye (one eye points outward)

Straight-leg raising- a simple test performed in a doctor's office to check for [disk prolapse](#)

Strain- muscle damage resulting from excessive stretching or forceful contraction

Strangulated hernia- a [hernia](#) in which the protruding organ or tissue loses its blood supply, requiring emergency surgery

Strawberry nevus- a bright red, raised [birthmark](#) that usually disappears without treatment

Strep throat- a throat [infection](#) caused by streptococcus bacteria; characterized by a sore throat, fever, and enlarged [lymph nodes](#) in the neck

Streptococci- bacteria that cause a variety of diseases, including [pneumonia](#) and [strep throat](#)

Stress fracture- a bone break resulting from repeated pressure on the bone

Stretch marks- lines on the skin that occur when the inner skin layer is stretched thin and loses its elasticity

Stroke- damage to part of the brain because of a lack of blood supply (due to a blockage in an [artery](#)) or the rupturing of a blood vessel; leads to complete or partial loss of function in the area of the body that is controlled by the damaged part of the brain

Stye- a pus-filled [abscess](#) in the follicle of an eyelash; caused by a bacterial [infection](#)

Subcutaneous- a medical term meaning "beneath the skin"

Submucosa- the layer of [connective tissue](#) under a [mucous membrane](#)

Suction lipectomy- see [Liposuction](#)

Sudden infant death syndrome- the unexpected, sudden death of an apparently healthy baby, the cause of which cannot be found; also called crib death

Suppository- a solid cone or bullet-shaped object made up of a chemically inactive substance and a drug that is inserted into the [rectum](#) or [vagina](#); used to administer a drug

Suppuration- the production of [pus](#)

Surfactant- a mixture of substances secreted by the air sacs of the lungs that prevents the air sacs from collapsing during exhalation

Surrogate- a woman who agrees to become pregnant and give her baby to someone else when the child is born

Suture- a surgical stitch that helps close an incision or wound so that it can heal properly

Sweat glands- tiny structures in the skin that secrete sweat

Sweat test- a measure of the saltiness of sweat to help diagnose [cystic fibrosis](#)

Swimmer's ear- see [Otitis externa](#)

Sycosis barbae- a bacterial [infection](#) of the hair follicles in the beard area

Sympathetic nervous system- the part of the [autonomic nervous system](#) that raises [blood pressure](#) and heart rate in response to stress

Syndactyly- a condition in which fingers or toes are fused together

Syndrome- a group of symptoms that indicate a certain disorder when they occur together

Synovectomy- surgical removal of the [synovial membrane](#)

Synovial fluid- a lubricating fluid secreted by the [synovial membrane](#)

Synovial membrane- the thin membrane that lines the inside of a joint capsule

Synovitus- [inflammation](#) of the membrane lining a joint capsule as a result of injury or infection or due to a chronic illness such as [rheumatoid arthritis](#); characterized by redness, swelling, stiffness, and pain

Syphilis- a [sexually transmitted disease](#); initially causes only painless sores on the genitals but can be life-threatening if untreated

Systemic- affecting the whole body

Systemic inflammatory response syndrome- a condition characterized by having two of the following four clinical criteria: fever, rapid breathing, increased heart rate, and abnormal [white blood cell count](#)

Systemic lupus erythematosus- a disease of the [immune system](#) that causes inflammation of [connective tissue](#) in many areas of the body, including the skin, lungs, heart, joints, and kidneys

Systolic pressure- the blood pressure measured while the heart is contracting

I

Tachycardia- a rapid heart rate (over 100 beats per minute)

Tapeworm- a parasitic worm that lives in the [intestines](#); causes diarrhea and abdominal discomfort

Tar- the sticky, brown substance in cigarettes that coats the lungs; causes lung and other [cancers](#)

Tarsorrhaphy- a procedure in which the eyelids are sewn shut; performed to protect the [corneas](#)

Tartar- the hard deposit formed on teeth when mineral salts in saliva combine with [plaque](#); can cause dental problems such as gum disease if not controlled

Tay-Sachs disease- a severe [genetic disorder](#) that causes nervous system disturbances and death, usually before the age of 3

TB- see [Tuberculosis](#)

T cell- see [T-lymphocyte](#)

T-cell leukemia- a type of [leukemia](#) caused by a [virus](#) in which [T-lymphocytes](#) divide uncontrollably

Tear duct- a tiny passageway that drains lubricating tears from the surface of the eye to the back of the nose

Telangiectasia- redness of an area of skin, caused by enlargement and proliferation of the underlying small blood vessels

Temperature method- a natural method of family planning in which a woman determines her time of [ovulation](#) by changes in her daily temperature

Temporal arteritis- inflammation and narrowing of [arteries](#) in the head and neck, including those in the scalp near the temple, which can cause blindness if untreated

Temporomandibular joint syndrome- headache, facial pain, and jaw tenderness caused by irregularities in the way the joints, muscles, and ligaments in the jaw work together

Tendinitis- [inflammation](#) of a tendon, usually caused by injury, characterized by pain, tenderness, and sometimes limited movement in the attached muscle

Tendon- strong [connective tissue](#) cords that attach muscle to bone or muscle to muscle

Tendon transfer- surgical cutting and repositioning of a tendon so that the muscle attached to it has a new function

Tennis elbow- a form of [tendinitis](#) that causes pain and tenderness in the elbow and forearm

Tenosynovitis- inflammation of the inner lining of the sheath that covers a [tendon](#)

Tenovaginitis- inflammation of the fibrous wall of the sheath that covers a [tendon](#)

TENS- see [Transcutaneous electrical nerve stimulation](#)

Tension headache- a headache caused by emotional strain or tension in the muscles of the head and neck

Teratogen- anything that causes abnormalities in a developing [embryo](#) or [fetus](#), such as a drug or virus

Teratoma- a [tumor](#) composed of cells not normally found in the part of the body when the tumor occurred

Termination of pregnancy- see [Abortion](#)

Testicles- the two male sex organs that produce sperm and the sex hormone testosterone

Testicular feminization factor- a [genetic disorder](#) in which an individual who is genetically male has the external appearance of a female because the body is unresponsive to testosterone

Testicular torsion- severe pain and swelling of a testicle, due to twisting of the spermatic cord

Testosterone- the sex hormone that stimulates development of male sex characteristics and bone and muscle growth; produced by the [testicles](#) and in small amounts by the [ovaries](#)

Tetanus- a sometimes fatal disease affecting the brain and [spinal cord](#); caused by [infection](#) with bacterium present in soil and manure

Tetracyclines- a group of [antibiotic](#) drugs used to treat a wide variety of infections, including [bronchitis](#) and some types of [pneumonia](#)

Tetralogy of Fallot- a genetic heart disease involving four structural defects in the heart, which result in insufficient levels of [oxygen](#) in the blood

Thalamus- a structure in the brain that relays and processes incoming sensory information from the eyes and ears and from pressure and pain receptors

Thalassemia- a group of genetic blood disorders characterized by a defect in the ability to produce [hemoglobin](#), leading to the rupturing of [red blood cells](#) (called hemolytic anemia)

Thallium scanning- a type of [radionuclide scanning](#) used to assess the heart

Therapeutic range- the range of doses of a drug that will produce beneficial results without side effects

Thoracoscopy- examination of the membranes covering the lungs using an [endoscope](#)

Thoracotomy- a procedure in which the chest is surgically opened to operate on an organ in the chest cavity

Thorax- the chest

Thrill- a vibration felt when the hand is placed flat on the chest; caused by abnormal blood flow through the heart as a result of disease

Thrombectomy- removal of a [blood clot](#)

Thrombocytopenic purpura- a decrease in the number of [platelets](#) in the blood, causing abnormal bleeding of blood vessels into the skin

Thromboembolism- blockage of a blood vessel by a blood clot fragment that has broken off and traveled from another area of the body

Thrombophlebitis- inflammation of a [vein](#), along with clot formation in the affected area

Thrombosis- a condition in which a blood clot (thrombus) has formed inside a blood vessel

Thrombus- a blood clot in a blood vessel

Thrush- a [candidiasis](#) infection

Thymoma- a tumor of the [thymus gland](#)

Thymus gland- an immune system [gland](#) located in the upper part of the chest that plays an important role in the production of [T-lymphocytes](#)

Thyroglossal cyst- a swelling at the front of the neck; forms from a duct that fails to disappear during embryonic development

Thyroid gland- a [gland](#) located in the front of the neck below the voice box that plays an important role in metabolism (the chemical processes in the body) and growth; the gland produces thyroid hormone

Thyroiditis- inflammation of the [thyroid gland](#)

Thyrotoxicosis- a toxic condition resulting from overactivity of the [thyroid gland](#)

Thyroxin- a hormone produced by the [thyroid gland](#) that helps regulate energy production in the body

TIA- see [Transient ischemic attack](#)

Tibia- the thicker of the two long bones in the lower leg; commonly called the shin

Tic- an involuntary, repetitive movement such as a twitch

Tic douloureux- see [Trigeminal neuralgia](#)

Ticks- small, eight-legged animals that can attach to humans and animals and feed on blood; sometimes spread infectious organisms via their bites

Tietze's syndrome- inflammation of the [cartilage](#) that joins ribs to the breastbone, causing chest pain

Tinea- a group of common infections occurring on the skin, hair, and nails that are caused by a [fungus](#); commonly referred to as [ringworm](#)

Tinnitus- a persistent ringing or buzzing sound in the ear

Tipped uterus- an abnormal condition in which the [uterus](#) is tilted backward instead of slightly forward

Tissue plasminogen activator- a substance produced by the body and as a genetically engineered drug to prevent abnormal blood clotting

Tissue typing- tests used to determine the compatibility of tissues used in [grafts](#) and [transplants](#)

T-lymphocyte- a type of [white blood cell](#) that fights infections and destroys abnormal cells directly; as compared with releasing [antibodies](#) to fight [infection](#)

T-lymphocyte killer cell- a type of T-lymphocyte white blood cell that attaches to abnormal cells and releases chemicals that destroy them

TMJ syndrome- see [Temporomandibular joint syndrome](#)

Tolerance- decreased sensitivity of the body to a certain drug, usually either because the [liver](#) becomes more efficient at breaking down the drug or the body's tissues become less sensitive to it; increased tolerance creates a need for a higher dose of the drug in order to have the same effects

Tonometry- the procedure used to measure the pressure within the eye; is useful in detecting [glaucoma](#)

Tonsillectomy- surgical removal of the tonsils, usually to treat [tonsillitis](#)

Tonsillitis- [infection](#) and [inflammation](#) of the tonsils

Tonsils- masses of lymphoid tissue located at either side of the back of the throat

Tourette's syndrome- a movement disorder characterized by involuntary [tics](#) and noises, and in some cases uncontrollable shouting of obscenities

Tourniquet- a device placed tightly around an arm or leg in order to stop blood flow; can be used to locate [veins](#) in order to take a blood sample or to control blood flow during some operations

Toxemia- the presence of bacterial [toxins](#) in the blood

Toxic epidermal necrolysis- a severe rash in which the outer layers of skin blister and peel off

Toxicity- the extent to which a substance is poisonous

Toxic shock syndrome- a life-threatening condition caused by a staphylococci toxin

Toxin- a poisonous substance

Toxocariasis- human infestation with the larvae of a worm found in the intestines of dogs

Toxoplasmosis- a common [protozoan](#) infection that is usually only dangerous to a [fetus](#) in early pregnancy or a person who is [immunocompromised](#)

TPA- see [Tissue plasminogen activator](#)

Trachea- the tube running from the larynx (the voice box) down the neck and into the upper part of the chest, where it divides to form the two bronchi of the lungs; commonly called the windpipe

Tracheitis- inflammation of the [trachea](#)

Tracheotomy- insertion of a tube through a surgical opening in the [trachea](#) to maintain an open airway

Trachoma- a persistent, contagious form of [conjunctivitis](#) that can lead to complications such as blindness if untreated

Traction- the use of tension to hold a body part in place or to correct or prevent an alignment problem

Transcutaneous- through the skin

Transcutaneous electrical nerve stimulation- a method of relieving pain by applying tiny electrical impulses to [nerve](#) endings beneath the skin

Transferrin- a substance in the blood that transports [iron](#) throughout the body

Transient ischemic attack- a temporary block in the supply of blood to the brain, resulting in temporary loss of sensation, movement, vision, or speech; often called mini-strokes and can be precursors to a real [stroke](#)

Transmissible- able to be passed from one organism to another

Transplant- transferring a healthy tissue or organ to replace a damaged tissue or organ; also refers to the tissue or organ transplanted

Transurethral prostatectomy- removal of cancerous tissue from the [prostate gland](#) using a resectoscope (a long, narrow instrument passed up the [urethra](#)), which allows the surgeon to simultaneously view the prostate and cut away the cancerous tissue

Trauma- physical injury or emotional shock

Travelers' diarrhea- diarrhea when traveling in a foreign country, caused by contaminated food or water

Tremor- an involuntary, rhythmic, shaking movement caused by alternating contraction and relaxation of muscles; can be the normal result of age or the abnormal effect of a disorder

Triage- a system used to classify sick or injured people according to the severity of their conditions

Trichiasis- growth of the eyelashes inward toward the [cornea](#), causing persistent irritation of the eyeball

Trichinosis- infestation by the larvae of the parasitic worm *Trichinella spiralis*, usually acquired by eating undercooked pork

Trichomoniasis- infection of the [vagina](#) by the single-celled [parasite](#) *Trichomonas vaginalis*, which may cause inflammation, itchiness, and discharge from the vagina

Tricuspid valve- the valve located between the two left chambers of the heart (the left atrium and the left ventricle)

Tricyclic antidepressants- drugs used in the treatment of clinical [depression](#)

Trigeminal neuralgia- a disorder of the trigeminal [nerve](#) (a cranial nerve) that causes brief attacks of severe pain in the lips, cheeks, gums, or chin on one side of the face

Triglyceride- the main form of fat in the blood; determining levels of triglyceride is useful in diagnosing and treating diabetes, high blood pressure, and heart disease

Trimester- one of three periods lasting about 3 months each; the stages into which pregnancy is divided

Triple X syndrome- the presence of an extra X chromosome in a woman, which may cause some degree of mental retardation

Trismus- the medical term for [lockjaw](#)

Trisomy- the presence in the cells of three copies of a certain chromosome instead of the normal two copies

Trisomy 21- see [Down syndrome](#)

Tubal ligation- a procedure in which the [fallopian tubes](#) are cut and tied off; usually a permanent form of [sterilization](#)

Tubal pregnancy- a pregnancy that occurs in the [fallopian tubes](#), with a fertilized egg implanting in the tube instead of the [uterus](#); severely painful and can be fatal if not detected and treated

Tuberculin test- skin tests performed to determine previous infection with [tuberculosis](#); can help rule out the possibility of being currently infected with tuberculosis

Tuberculosis- an infectious bacterial disease transmitted through the air that mainly affects the lungs

Tuberous sclerosis- a [genetic disorder](#) of the skin and nervous system characterized by [epilepsy](#), mental retardation, and a skin condition resembling acne

Tuboplasty- surgical repair of a damaged [fallopian tube](#) to treat [infertility](#)

Tumor- an abnormal mass that occurs when [cells](#) in a certain area reproduce unchecked; can be cancerous (malignant) or noncancerous (benign)

Tunnel vision- loss of peripheral vision so that only objects directly ahead can be seen; most commonly due to damage caused by increased pressure within the eye (glaucoma)

Turner's syndrome- a [genetic disorder](#) in women in which only one X chromosome is present, or both chromosomes are present but one is defective

Tympanic membrane- the medical term for the [eardrum](#)

Tympanoplasty- a surgical procedure used to treat hearing loss in which the [eardrum](#) or structures in the middle ear are repaired

Typhoid fever- an acute bacterial [infection](#) causing fever, headache, abdominal discomfort, and enlargement of the [liver](#) and [spleen](#)

Typhus- a group of diseases caused by the microorganism rickettsia, spread by the bites of fleas, mites, or ticks; symptoms include headache, fever, rash, and a series of complications if untreated

U

Ulcer- an open sore that occurs on the skin or on a [mucous membrane](#) because of the destruction of surface tissue

Ulcerative colitis- a chronic condition in which ulcers occur on the [mucous membrane](#) lining of the colon (the end of the large intestine) and the [rectum](#)

Ultrasound scanning- an imaging procedure used to examine internal organs in which high-frequency sound waves are passed into the body, reflected back, and used to build an image; also sometimes called sonography

Ultraviolet light- a form of invisible light in sunlight that is responsible for the tanning and burning of skin and can cause [cataracts](#) and skin [cancer](#)

Umbilical cord- the tubal structure (consisting of two arteries and one vein) that connects the [fetus](#) to the [placenta](#), supplying the fetus with [oxygen](#) and [nutrients](#) and removing some waste products

Umbilical hernia- a condition present at birth in which a part of the baby's [intestines](#) bulge through a weak area of the abdominal wall, creating a swelling around the navel

Unconsciousness- a temporary or prolonged loss of awareness of self and of surroundings

Undescended testicle- a [testicle](#) that has not moved down from the abdomen, where it develops, into the [scrotum](#)

Unsaturated fat- a fat or oil found mainly in vegetables; thought to reduce the risk of [coronary heart disease](#)

Urea- a waste product of the metabolism of [proteins](#) that is formed by the [liver](#) and secreted by the kidneys

Uremia- abnormally high levels of waste products such as [urea](#) in the blood

Ureters- two tubes that carry urine from the [kidneys](#) to the [bladder](#)

Urethra- the tube by which urine is released from the [bladder](#)

Urethritis- inflammation of the [urethra](#)

Urethrocele- a bulging of the [urethra](#) into the [vagina](#)

Urethrocystitis- inflammation of the [urethra](#) and the [bladder](#)

Urinalysis- a group of physical and chemical tests done on a sample of urine to check for various disorders, including those of the [kidneys](#) and [urinary tract](#)

Urinary diversion- an operation to allow urine passage when the [bladder](#) or [urethra](#) has become blocked or been removed

Urinary incontinence- the involuntary release of urine because of the inability to control [bladder](#) muscles; may occur as a natural part of the aging process or be caused by an injury or disorder

Urinary tract- the structures in the body that are responsible for the production and release of urine, including the kidneys, ureters, bladder, and urethra

Urticaria- an allergic reaction in which itchy white lumps surrounded by areas of inflammation appear on the skin; commonly called "hives"

Uterine prolapse- a condition in which the uterus moves downward into the [vagina](#) due to a weakness of the [ligaments](#) and muscles that hold the uterus in place

Uterus- the hollow female reproductive organ in which a fertilized egg is implanted and a [fetus](#) develops

Uvea- a structure consisting of the colored area of the eye and the middle layer of the eye that contains blood vessels

Uveitis- inflammation of the [uvea](#)

V

Vaccination- a form of immunization in which killed or weakened [microorganisms](#) are placed into the body, where [antibodies](#) against them are developed; if the same types of microorganisms enter the body again, they will be destroyed by the antibodies

Vaccine- a preparation of weakened [microorganisms](#) given to create resistance to a certain disease

Vacuum aspiration- removal of the contents of the [uterus](#) using a suction device

Vacuum extraction- a technique used to facilitate childbirth using a suction device to help move the baby through the birth canal

Vagina- the muscular passage connecting the [uterus](#) with the outside genitals; a component of the female reproductive system

Vaginismus- an involuntary muscle spasm at the opening of the vagina when sexual intercourse is attempted; can be quite painful and may make sexual intercourse nearly impossible

Vaginitis- [inflammation](#) of the [vagina](#), which can be the result of infection, aging, a hormone deficiency, or a foreign object (such as a tampon)

Valve- a structure that allows fluid flow in only one direction

Valvotomy- surgical correction of a narrowed [heart valve](#)

Valvular heart disease- a [heart valve](#) defect

Valvuloplasty- reconstruction or repair of a narrowed [heart valve](#)

Varicella- the medical term for [chickenpox](#)

Varices- enlarged or twisted blood or lymph vessels

Varicocele- the appearance of varicose veins around the [testicles](#); commonly occurs and is harmless, but may cause discomfort

Varicose veins- enlarged, twisted [veins](#) just below the surface of the skin, caused by defective [valves](#) in the veins

Variola- another term for [smallpox](#)

Vascular- pertaining to blood vessels

Vasculitis- inflammation of blood vessels

Vas deferens- a thin tube that stores and transports [sperm](#)

Vasectomy- a usually permanent method of [sterilization](#) in which the tubes carrying sperm from the [testicles](#) (the vas deferens) are cut and tied off; as a result, the [semen](#) will no longer contain sperm

Vasoconstriction- narrowing of blood vessels

Vasodilation- widening of blood vessels

Vasovagal attack- a sudden slowing of the heart, causing fainting

VD- see [Venereal disease](#)

Vein- a blood vessel that carries blood toward the heart

Venereal disease- any disease that is usually spread through sexual intercourse or genital contact

Venipuncture- piercing of a [vein](#) with a hollow needle to inject fluid or withdraw blood

Venography- an X-ray procedure for viewing [veins](#)

Venom- a poisonous substance produced by certain animals

Ventilation- the process through which [oxygen](#) and [carbon dioxide](#) are exchanged between the lungs and the air; also refers to the use of a machine to carry out this process in someone who cannot breathe on his or her own

Ventilator- a machine used to take over breathing when a person cannot breathe on his or her own

Ventricle- a small cavity or chamber; there are four ventricles in the brain that circulate [cerebrospinal fluid](#) through it, and two in the heart that pump blood throughout the body

Ventricular fibrillation- rapid, irregular contractions of the heart

Ventricular septal defect- a hole in the wall that separates the two lower chambers of the heart (called the ventricles)

Vernix- the thick, greasy substance that covers the skin of a newborn baby

Version- a shift in the position of the [fetus](#) inside of the [uterus](#), either occurring naturally or as performed by a doctor to facilitate delivery

Vertebra- any one of the 33 bones that make up the [spine](#)

Vertebral arteries- a pair of [arteries](#) running up the neck to supply the brain with blood

Vertebrobasilar insufficiency- episodes of dizziness and weakness caused by insufficient blood flow to the brain

Vertex presentation- the usual, head-first presentation of the [fetus](#) during delivery

Vertigo- the feeling that one or one's surroundings are spinning

Very low-density lipoprotein- a class of blood proteins, a high level of which is associated with [coronary heart disease](#)

Vesicle- a small skin blister, or any sac in the body, that contains fluid

Vestibular glands- two small [glands](#) located at the opening of the [vagina](#) that secrete a lubricating fluid during sexual stimulation

Villi- the millions of fingerlike projections on the lining of the [small intestine](#) that aid in the absorption of food

Viral- a term describing something related to or caused by a [virus](#)

Viremia- the presence of [viruses](#) in the blood

Virilization- the process by which a woman develops male characteristics; caused by overproduction of male [sex hormones](#)

Virulence- the relative ability of an organism to cause disease

Virus- the smallest known disease-causing [microorganism](#); viruses are very simple in structure and can only multiply when they are inside the cell of another organism

Visual acuity- a measure of the sharpness of a person's vision

Visual field- the area on both sides that can be seen while looking straight ahead

Vital sign- any sign, such as a [pulse](#), that indicates that a person is alive

Vitamin A- a vitamin essential for normal growth and development of the body (most notably the bones and teeth), protection of [mucous membranes](#) from infection, normal vision, and healthy skin and hair

Vitamin B complex- a group of vitamins including thiamine, niacin, riboflavin, pantothenic acid, pyridoxine, biotin, and folic acid; plays a variety of important roles in the body, including in hormone production, metabolism, and functioning of the nerves, muscle, heart, and digestive system

Vitamin B₆- a vitamin that plays an important role in the breakdown and use of energy sources, production of [red blood cells](#) and [antibodies](#), and normal functioning of the nervous system

Vitamin B₁₂- a vitamin that is essential to the production of [DNA](#) (the genetic material in cells) and [red blood cells](#) and in the functioning of the nervous system

Vitamin C- a vitamin with many essential roles, including in maintaining healthy bones, teeth, gums, ligaments, and blood vessels and in the [immune system's](#) response to infection

Vitamin D- a vitamin that plays a role in the absorption of [calcium](#) by the intestines and is essential for healthy bones and teeth

Vitamin E- a vitamin that protects tissues from damage by [oxygen free radicals](#), helps to form [red blood cells](#), maintains the function of enzymes, and maintains cell structure

Vitamin K- a vitamin that is essential for normal blood clotting and the body's absorption of [calcium](#)

Vitamins- complex substances that are necessary in small amounts to maintain health and ensure proper development and functioning of the body

Vitiligo- a condition in which patches of skin on the body lose their color; thought to be caused by the [immune system](#) attacking the skin tissues, causing the absence of [melanin](#)

Vitreous humor- the clear, watery fluid that fills the cavity of the eye behind the lens

VLDL- see [Very low-density lipoprotein](#)

Vocal cords- two strips of tissue in the voice box that have the ability to produce sound when air passing through them causes the tissues to vibrate

Volvulus- twisting and obstruction of an area of [intestine](#)

Von Willebrand's disease- a [genetic disorder](#) characterized by excessive bleeding

V/Q lung scans- images produced by [radionuclide scanning](#) of the lungs; used to help diagnose a [pulmonary embolism](#)

Vulva- the outer, visible portion of the female genitals

Vulvitis- inflammation of the [vulva](#)

Vulvovaginitis- inflammation of the [vulva](#) and [vagina](#)

W

Walleye- a condition in which one eye turns outward

Wart- a contagious, harmless growth caused by a [virus](#) that occurs on the skin or a [mucous membrane](#)

Weber's test- a test in which a vibrating tuning fork is held against the forehead to help determine the cause of hearing loss

Wegener's granulomatosis- a disorder in which nodules associated with inflammation of blood vessels develop in the lungs, kidneys, and nasal passageways

Weight-bearing exercise- exercise that puts stress on bones, such as walking, which helps build up bone density and prevent the bones from becoming brittle

Wernicke's encephalopathy- a brain disorder characterized by abnormal eye movements, difficulties with muscle coordination, and confusion; usually the result of chronic alcoholism

Wheeze- a high-pitched sound produced during breathing because of narrowing of the [airways](#); common sign of [asthma](#)

Whiplash injury- injury to the [ligaments](#), joints, and soft tissues of the neck region of the spine because of a sudden, violent jerking motion of the head

Whipple's disease- a rare disorder that has widespread effects on the body, including impaired absorption of [nutrients](#), weight loss, joint pain, and [anemia](#)

Whipworm- a small, parasitic worm that can live in the [intestines](#) of a human and may cause diarrhea, abdominal pain, and anemia

White blood cell- a group of colorless blood cells that are part of the [immune system](#), helping prevent and fight [infection](#)

White blood cell count- the number of white blood cells present in a blood sample; useful in diagnosing and evaluating various diseases and infections

Whitehead- a painless, small, white bump; usually occurs in groups on the nose, cheeks, or around the eyes

Whitlow- an [abscess](#) on the end of a finger or a toe that is caused by the [herpes simplex virus](#) or a bacterial infection

Whooping cough- see [Pertussis](#)

Wilms tumor- a type of kidney [cancer](#) that usually affects children under the age of 5

Wilson's disease- a rare [genetic disorder](#) in which copper builds up in the liver and is released into other parts of the body, eventually causing damage to the [liver](#) and brain

Withdrawal bleeding- bleeding from the [vagina](#) that occurs when [hormone](#) levels drop, such as [menstruation](#) or the bleeding that occurs at the end of each cycle of the combined [oral contraceptive pill](#)

X

Xanthelasma- fatty deposits around the eyes that are common in elderly people and are associated with high levels of [cholesterol](#) in the blood

Xanthine- a [bronchodilator](#) drug that is used to treat [asthma](#)

Xanthomatosis- a condition in which fatty deposits occur in various parts of the body, possibly leading to [atherosclerosis](#)

X chromosome- one of the two sex chromosomes; determines female sex characteristics

Xeroderma pigmentosum- a [genetic disorder](#) in which the skin is extremely sensitive to sunlight, causing it to age prematurely and leaving the individual particularly susceptible to skin [cancer](#)

Xerophthalmia- excessive dryness of the [cornea](#) and [conjunctiva](#) due to a lack of vitamin A

X-linked disorder- a [genetic disorder](#) in which the abnormal gene is located on the X chromosome; those affected are almost always men

X-ray- see [Radiography](#)

XYY syndrome- a disorder in which a man has an extra [Y chromosome](#), causing him to be unusually tall and to have behavioral disorders

Y

Y chromosome- one of the two sex chromosomes; determines male sex characteristics

Yeast infection- a term usually referring to a [candidiasis](#) infection

Yellow fever- a life-threatening viral infection transmitted by mosquitoes that causes [jaundice](#), fever, headache, and vomiting

Z

ZIFT- see [Zygote intrafallopian transfer](#)

Zinc chloride- a white powder used as an [antiseptic](#) and antiperspirant

Zollinger-Ellison syndrome- a rare disorder in which tumors form in the pancreas and secrete the hormone gastrin, which causes increased production of [gastric acid](#) and recurrent [peptic ulcers](#)

Zoonosis- a parasite-caused or infectious disease in animals that can be transferred to humans

Zygote- the cell that results when an egg is fertilized by a [sperm](#)

Zygote intrafallopian transfer- a method used to treat [infertility](#) in which an egg fertilized outside the body is placed into a woman's [fallopian tube](#)

Text Production and Proofreading
Heather Bateman, Ruth Hillmore, Daisy Jackson, Sarah Lusznat,
Katy McAdam, Charlotte Regan

This book is produced using paper that is made from wood grown in managed, sustainable forests. It is natural, renewable and recyclable. The logging and manufacturing processes conform to the environmental regulations of the country of origin.

Text computer typeset by A & C Black
Printed in Spain by Graphycems

Preface

This dictionary provides the user with the basic vocabulary currently being used in a wide range of healthcare situations. The areas covered include the technical language used in diagnosis, patient care, surgery, pathology, general practice, pharmacy, dentistry and other specialisations, as well as anatomical and physiological terms. Informal, everyday and sometimes euphemistic terms commonly used by people in discussing their condition with healthcare professionals are also included, as are common words used in reading or writing reports, articles or guidelines.

The dictionary is designed for anyone who needs to check the meaning or pronunciation of medical terms, but especially for those working in health-related areas who may not be healthcare professionals or for whom English is an additional language. Each headword is explained in clear, straightforward English. Pronunciations, uncommon plurals and uncommon verb forms are provided. Illustrations of some basic anatomical terms are also included.

Very many people have helped or advised on the compilation and checking of the dictionary in its various editions. In particular, thanks are due to Dr Judith Harvey for her helpful comments and advice on this fourth edition and to Dr Marie Condon for some revisions and clarification. Also to Lesley Bennun, Lesley Brown and Margaret Baker who copy-edited the text and Dinah Jackson who revised the pronunciations.

Pronunciation Guide

The following symbols have been used to show the pronunciation of the main words in the dictionary.

Stress is indicated by a main stress mark (') and a secondary stress mark (,). Note that these are only guides, as the stress of the word changes according to its position in the sentence.

<i>Vowels</i>		<i>Consonants</i>	
æ	back	b	buck
ɑ:	harm	d	dead

ʌ	shut	ʒ	measure
		z	zone

A

A /eɪ/ *noun* a human blood type of the ABO system, containing the A antigen (NOTE: Someone with type A can donate to people of the same group or of the AB group, and can receive blood from people with type A or type O.)

AA *abbr* Alcoholics Anonymous

A & E /eɪ ənd 'i:/, **A & E department** /eɪ ənd 'i: dɪ,pa:tment/ *noun* same as **accident and emergency department**

A & E medicine /eɪ ənd 'i: ,med(ə)sɪn/ *noun* the medical procedures used in A & E departments

AB /eɪ 'bi:/ *noun* a human blood type of the ABO system, containing the A and B antigens (NOTE: Someone with type AB can donate to people of the same group and receive blood from people with type O, A, AB or B.)

ab- /æb/ *prefix* away from

ABC /eɪ bi: 'sɪz/ *noun* the basic initial checks of a casualty's condition. Full form **airway, breathing and circulation**

abdomen /'æbdəmən/ *noun* a space inside the body below the diaphragm, above the pelvis and in front of the spine, containing the stomach, intestines, liver and other vital organs ○ **pain in the abdomen** (NOTE: For other terms referring to the abdomen, see words beginning with **coeli-, coelio-.**)

COMMENT: The abdomen is divided for medical purposes into nine regions: at the top, the right and left hypochondriac regions with the epigastrum between them; in the centre, the right and left lumbar regions with the umbilical between them; and at the bottom, the right and left iliac regions with the hypogastrium between them.

abdomin- /æbdəmɪn/ *prefix* same as **abdomino-** (*used before vowels*)

abdominal /æb'dɒmɪn(ə)l/ *adjective* located in the abdomen, or relating to the abdomen

abdominal aorta /æb,dɒmɪn(ə)l e'rtə:tə/ *noun* the part of the aorta which lies between the diaphragm and the point where the aorta divides into the iliac arteries. See illustration at **KIDNEY** in Supplement

abdominal cavity /æb,dɒmɪn(ə)l 'kævɪtɪ/ *noun* the space in the body below the chest

abdominal distension /æb'dɒmɪn(ə)l dɪs 'tenʃ(ə)n/ *noun* a condition in which the abdomen is stretched because of gas or fluid

abdominal pain /æb'dɒmɪn(ə)l peɪn/ *noun* pain in the abdomen caused by indigestion or more serious disorders

abdominal viscera /æb,dɒmɪn(ə)l 'vɪsərə/ *plural noun* the organs which are contained in the abdomen, e.g. the stomach, liver and intestines

abdominal wall /æb'dɒmɪn(ə)l wɔ:l/ *noun* muscular tissue which surrounds the abdomen

abdomino- /æbdəmɪnəʊ/ *prefix* referring to the abdomen

abdominopelvic /æb,dɒmɪnəʊ'pelvɪk/ *adjective* referring to the abdomen and pelvis

abdominoperineal /æb,dɒmɪnəʊ'perɪ 'ni:əl/ *adjective* referring to the abdomen and perineum

abdominoperineal excision /æb,dɒmɪnəʊ'perɪ 'ni:əl ek'sɪz(ə)n/ *noun* a surgical operation that involves cutting out tissue in both the abdomen and the perineum

abdominoposterior /æb,dɒmɪnəʊ'pə:stɪ'reɪə/ *adjective* referring to a position of a fetus in the uterus, where the fetus's abdomen is facing the mother's back

abdominoscopy /æb,dɒmɪn'ɒnskəpi/ *noun* an internal examination of the abdomen, usually with an endoscope

abdominothoracic /æb,dɒmɪnəʊθɔ:rə'sɪk/ *adjective* referring to the abdomen and thorax

abduce /æb'dju:s/ *verb* same as **abduct**

abducens nerve /æb'dju:s(ə)nz ,nɜ:v/ *noun* the sixth cranial nerve, which controls the muscle which makes the eyeball turn outwards

abducent /æb'dju:s(ə)nt/ *adjective* referring to a muscle which brings parts of the body away from each other or moves them away from the central line of the body or a limb. Compare **adductor**

abducent nerve /æb'dju:sənt ,nɜ:v/ *noun* same as **abducens nerve**

abduct /æb'dukt/ *verb* (*of a muscle*) to pull a leg or arm in a direction which is away from

the centre line of the body, or to pull a toe or finger away from the central line of a leg or arm. Compare **adduct**

abduction /æb'dʌkʃən/ *noun* the movement of a part of the body away from the centre line of the body or away from a neighbouring part. Opposite **adduction**. See illustration at **ANATOMICAL TERMS** in Supplement

'Mary was nursed in a position of not more than 90° upright with her legs in *abduction*.' [British Journal of Nursing]

abductor /æb'dʌktə/, **abductor muscle** /æb'dʌktə ,mʌs(ə)l/ *noun* a muscle which pulls a part of the body away from the centre line of the body or away from a neighbouring part. Opposite **adductor**

aberrant /æ'berənt/ *adjective* not usual or expected

aberration /,æbə'reɪʃ(ə)n/ *noun* an action or growth which is not usual or expected

ablation /æ'bleɪʃ(ə)n/ *noun* the removal of an organ or of a part of the body by surgery

abnormal /æb'nɔ:m(ə)l/ *adjective* not usual ○ *abnormal behaviour* ○ *an abnormal movement*

'...the synovium produces an excess of synovial fluid, which is abnormal and becomes thickened. This causes pain, swelling and immobility of the affected joint.' [Nursing Times]

abnormality /,æbno:tɪ'ærəlti/ *noun* a form or condition which is not usual (NOTE: For other terms referring to abnormality, see words beginning with **terat-**, **terato-**.)

'Even children with the milder forms of sickle-cell disease have an increased frequency of pneumococcal infection. The reason for this susceptibility is a profound abnormality of the immune system in children with SCD.' [Lancet]

abocclusion /,æbə'klju:ʒ(ə)n/ *noun* a condition in which the teeth in the top and bottom jaws do not touch

aboral /æ'bɔ:rəl/ *adjective* situated away from or opposite the mouth

abort /ə'bɔ:t/ *verb* to eject an embryo or fetus, or to cause an embryo or fetus to be ejected, and so end a pregnancy before the fetus is fully developed

abortifacient /ə,bɔ:tɪ'feɪʃ(ə)nt/ *noun* a drug or instrument which provokes an abortion

abortion /ə'bɔ:ʃ(ə)n/ *noun* a situation where a fetus leaves the uterus before it is fully developed, especially during the first 28 weeks of pregnancy, or a procedure which causes this to happen □ **to have an abortion** to have an operation to make a fetus leave the uterus during the first period of pregnancy

COMMENT: In the UK, an abortion can be carried out legally if two doctors agree that the mother's life is in danger, that she risks grave permanent injury to the physical or mental health of herself or her children, or that the fetus is likely to be born with severe disabilities.

abortionist /ə'bɔ:ʃ(ə)nɪst/ *noun* a person who helps a woman abort, usually a person who performs an illegal abortion

abortion pill /ə'bɔ:ʃ(ə)n pɪl/ *noun* a drug that causes an abortion to occur very early in pregnancy

abortion trauma syndrome /ə,bɔ:ʃ(ə)n 'trɔ:mə ,sɪndrəʊm/ *noun* a set of symptoms sometimes experienced in the period after an abortion including guilt, anxiety, depression, low self-esteem, eating and sleeping disorders and suicidal thoughts

abortive /ə'bɔ:tɪv/ *adjective* not successful ○ *an abortive attempt*

abortive poliomyelitis /ə,bɔ:tɪv ,pəliə'meɪtɪs/ *noun* a mild form of polio which only affects the throat and intestines

abortus /ə'bɔ:təs/ *noun* a fetus which is expelled during an abortion or miscarriage

abortus fever /ə'bɔ:təs ,fɪ:və/ *noun* same as **brucellosis**

ABO system /,eɪ bi: 'eʊ ,sɪstəm/ *noun* a system of classifying blood groups. ♦ **blood group**

abrasion /ə'breɪʒ(ə)n/ *noun* a condition in which the surface of the skin has been rubbed off by a rough surface and bleeds

COMMENT: As the intact skin is an efficient barrier to bacteria, even minor abrasions can allow infection to enter the body and thus should be cleaned and treated with an antiseptic.

abreact /,æbri'æk't/ *verb* to release unconscious psychological tension by talking about or regularly remembering the events that caused it

abreaction /,æbri'ækʃən/ *noun* the treatment of a person with a neurosis by making him or her think again about past bad experiences

abruptio placentae /ə,bræptɪə plə'sentɪ:/ *noun* an occasion when the placenta suddenly comes away from the uterus earlier than it should, often causing shock and bleeding

abscess /'æbses/ *noun* a painful swollen area where pus forms ○ *She had an abscess under a tooth.* ○ *The doctor decided to lance the abscess.* (NOTE: The formation of an abscess is often accompanied by a high temperature. The plural is **abscesses**.)

COMMENT: An acute abscess can be dealt with by opening and draining when it has reached the stage where sufficient pus has been formed. A chronic abscess is usually treated with drugs.

absolute alcohol /,æbsəlu:t 'ælkəhɒl/ *noun* alcohol which contains no water

absorb /ə'bɔ:b/ *verb* to take up or soak up something, especially a liquid, into a solid ○ *Cotton wads are used to absorb the discharge from the wound.*

absorbable suture /əb,zɔ:bəb(ə)l 'su:tʃə/ *noun* a suture which will eventually be ab-

sorbed into the body, and does not need to be removed

absorbent cotton /əb'zɔ:bənt 'kɒt(ə)n/ *noun* a soft white material used as a dressing to put on wounds

absorption /əb'zɔ:pʃən/ *noun* 1. the process by which a liquid is taken into a solid 2. the process of taking into the body substances such as proteins or fats which have been digested from food and enter the bloodstream from the stomach and intestines □ **absorption rate** the rate at which a liquid is absorbed by a solid

abstainer /əb'steɪnə/ *noun* a person who does not drink alcohol

abstinence /'æbstɪnəns/ *noun* a deliberate act of not doing something over a period of time, especially not eating or drinking ○ *abstinence from alcohol*

abulia /ə'bʊliə/ *noun* a lack of willpower

abuse *noun* 1. the act of using something wrongly ○ *the abuse of a privilege* 2. the illegal use of a drug or overuse of alcohol ○ *substance abuse* 3. same as **child abuse** 4. bad treatment of a person ○ *physical abuse* ○ *sexual abuse* ■ *verb* /ə'bju:z/ 1. to use something wrongly ○ *Heroin and cocaine are drugs which are commonly abused.* □ **to abuse one's authority** to use one's powers in an illegal or harmful way 2. to treat someone badly ○ *sexually abused children* ○ *He had physically abused his wife and child.*

a.c. *adverb (used on prescriptions)* before food. Full form **ante cibum**

acanthosis /ə,kænθ'θəʊsɪs/ *noun* a disease of the prickle cell layer of the skin, where warts appear on the skin or inside the mouth

acapnia /eɪ'kæpnɪə/ *noun* the condition of not having enough carbon dioxide in the blood and tissues

acariasis /,ækə'ræɪəsɪs/ *noun* the presence of mites or ticks on the skin

acaricide /ə'kærɪsaɪd/ *noun* a substance which kills mites or ticks

acarophobia /,ækərə'fəʊbiə/ *noun* an unusual fear of mites or ticks

acatalasia /eɪ,kætə'lɛɪzɪə/ *noun* an inherited condition which results in a lack of catalase in all tissue

accessory /ək'sesəri/ *noun* something which helps something else to happen or operate, but may not be very important in itself ■ *adjective* helping something else to happen or operate

accessory nerve /ək'sesəri ,nɜ:v/ *noun* the eleventh cranial nerve which supplies the muscles in the neck and shoulders

accessory organ /ək'sesəri 'ɔ:gən/ *noun* an organ which has a function which is controlled by another organ

accident /'æksɪd(ə)nt/ *noun* 1. an unpleasant event which happens suddenly and harms someone's health ○ *She had an accident in the kitchen and had to go to hospital.* ○ *Three people were killed in the accident on the motorway.* 2. chance, or something which happens by chance ○ *I met her by accident at the bus stop.*

accidental injury /,æksɪdənt(ə)l 'ɪndʒəri/ *noun* an injury that happens to someone in an accident

accident and emergency department /,æksɪd(ə)nt ənd ɪ'mɜ:dʒənsɪ dɪ,pɑ:tment/ *noun* the part of a hospital which deals with people who need urgent treatment because they have had accidents or are in sudden serious pain. Abbr **A & E**

accident form /'æksɪd(ə)nt fɔ:m/, **accident report form** /,æksɪd(ə)nt rɪ'pɔ:t fɔ:m/ *noun* a form to be filled in with details of an accident

accident prevention /,æksɪd(ə)nt p्रɪ'venʃən/ *noun* the work of taking action or changing procedures to prevent accidents from happening

accident ward /'æksɪd(ə)nt wɔ:d/ *noun* a ward for urgent accident victims. Also called **casualty ward**

accommodation /ə,kɒmə'deɪʃ(ə)n/, **accommodation reflex** /ə,kɒmə'deɪʃ(ə)n ri:fleks/ *noun (of the lens of the eye)* the ability to focus on objects at different distances, using the ciliary muscle

accommodative squint /ə,kɒmədeɪtɪv 'skwɪnt/ *noun* a squint when the eye is trying to focus on an object which is very close

accouchement /ə'ku:ʃmən/ *noun* the time when a woman is being looked after because her baby is being born, or has just been born

accretion /ə'kri:ʃ(ə)n/ *noun* a gradual increase in size, as through growth or external addition ○ *an accretion of calcium around the joint*

ACE /eɪs/ *noun* an enzyme that increases blood pressure

acebutolol /,æsɪ'bju:təlɒl/ *noun* a drug which reduces both the heart rate and how strongly the heart muscles contract, used in the treatment of high blood pressure and irregular heart rhythms

ACE inhibitor /'eɪs ɪn,hɪbɪtə/ *noun* same as **angiotensin-converting enzyme inhibitor**

acephalus /eɪ'sefələs/ *noun* a fetus born without a head

acetabuloplasty /,æsɪ'tæbjʊləplæsti/ *noun* a surgical operation to repair or rebuild the acetabulum

acetabulum /,æsɪ'tæbjʊləm/ *noun* the part of the pelvic bone, shaped like a cup, into which the head of the femur fits to form the hip joint. Also called **cotyloid cavity** (NOTE: The plural is **acetabula**.)

acetaminophen /ə,sɪ:tə'mɪnəfən/ *noun US*
same as **paracetamol**

acetazolamide /ə,sɪ:tə'zɒləməɪd/ *noun* a drug which helps a person to produce more urine, used in the treatment of oedema, glaucoma and epilepsy

acetonaemia /ə,sɪ:təʊ'nɪ:miə/ same as **ketonaemia**

acetone /'æsɪt əʊn/ *noun* a colourless volatile substance formed in the body after vomiting or during diabetes. ☞ **ketone**

acetonuria /ə,sɪ:təʊ'nju:riə/ *noun* the presence of acetone in the urine, shown by the fact that the urine gives off a sweet smell

acetylcholine /,æsɪtaɪl'kɔ:lɪ:n/ *noun* a substance released from nerve endings, which allows nerve impulses to move from one nerve to another or from a nerve to the organ it controls

COMMENT: Acetylcholine receptors are of two types, muscarinic, found in parasympathetic post-ganglionic nerve junctions, and nicotinic, found at neuromuscular junctions and in autonomic ganglia. Acetylcholine acts on both types of receptors, but other drugs act on one or the other.

acetylcoenzyme A /,æsɪtaɪlkɔ:enzaɪm 'eɪ/ *noun* a compound produced in the metabolism of carbohydrates, fatty acids and amino acids

acetylsalicylic acid /,æsɪtaɪl'sæləsɪlik 'æsɪd/ *noun* ♦ **aspirin**

achalasia /,ækə'lɛzɪə/ *noun* the condition of being unable to relax the muscles

ache /eɪk/ *noun* a pain which goes on for a time, but is not very severe ○ *He complained of various aches and pains.* ■ *verb* to have a pain in part of the body ○ *His tooth ached so much he went to the dentist.*

Achilles tendon /ə,kili:z 'tendən/ *noun* a tendon at the back of the ankle which connects the calf muscles to the heel and which acts to pull up the heel when the calf muscle is contracted

achillorrhaphy /,ækɪ'lɔ:rəfi/ *noun* a surgical operation to stitch a torn Achilles tendon

achillotomy /,ækɪ'lɒtəmɪ/ *noun* a surgical operation to divide the Achilles tendon

aching /'eɪkɪŋ/ *adjective* causing someone a continuous mild pain ○ *aching legs*

achlorhydria /,ækɪlɔ:'haɪdrɪə/ *noun* a condition in which the gastric juices do not contain hydrochloric acid, a symptom of stomach cancer or pernicious anaemia

acholia /eɪ'kaʊliə/ *noun* the absence or failure of the secretion of bile

acholuria /,eɪkə'lʊ:ri:riə/ *noun* the absence of bile colouring in the urine

acholuric jaundice /,eɪkəlu:ri:k 'dʒɔ:ndɪs/ *noun* a disease where unusually round red blood cells form, leading to anaemia, an en-

larged spleen and the formation of gallstones.
Also called **hereditary spherocytosis**

achondroplasia /,eɪkɒndrə'pleɪzɪə/ *noun* an inherited condition in which the long bones in the arms and legs do not grow fully while the rest of the bones in the body grow as usual, resulting in dwarfism

achromatopsia /,eɪkrəʊmə'tɒpsiə/ *noun* a rare condition in which a person cannot see any colours, but only black, white and shades of grey

achy /'eɪki/ *adjective* feeling aches all over the body (*informal*)

aciclovir /eɪ'saɪkləʊvɪr/ *noun* a drug that is effective against herpesviruses. Also called **acyclovir**

acid /'æsɪd/ *noun* a chemical compound containing hydrogen, which reacts with an alkali to form a salt and water

acidæmia /,æsɪ'di:miə/ *noun* a state in which the blood has too much acid in it. It is a feature of untreated severe diabetes.

acid-base balance /,æsɪd 'beɪs ,bæləns/ *noun* the balance between acid and base, i.e. the pH level, in plasma

acidity /'o:sɪdɪti/ *noun* 1. the level of acid in a liquid ○ *The alkaline solution may help to reduce acidity.* 2. same as **hyperacidity**

acidosis /,æsɪ'doʊsɪs/ *noun* 1. a condition when there are more acid waste products such as urea than usual in the blood because of a lack of alkali 2. same as **acidity**

acidotic /,æsɪ'dɒtɪk/ *adjective* relating to acidosis

acid reflux /,æsɪd 'ri:fλəks/ *noun* a condition caused by a faulty muscle in the oesophagus allowing the acid in the stomach to pass into the oesophagus

acid stomach /,æsɪd 'stʌmæk/ *noun* same as **hyperacidity**

aciduria /,æsɪ'djuəriə/ *noun* a condition in which there is a higher level of acidity of the urine than is desirable

acinus /'æsɪnəs/ *noun* 1. a tiny sac which forms part of a gland 2. part of a lobule in the lung (NOTE: The plural is **acini**.)

acne /'ækni/ *noun* an inflammation of the sebaceous glands during puberty which makes blackheads appear on the skin, usually on the face, neck and shoulders. These blackheads often then become infected. ○ *She is using a cream to clear up her acne.*

acne rosacea /,ækni rəʊ'zeɪʃə/ *noun* same as **rosacea**

acne vulgaris /,ækni vʊl'gə:ris/ *noun* same as **acne**

acoustic /ə'ku:stɪk/ *adjective* relating to sound or hearing

acoustic nerve /ə'ku:stɪk nɜ:v/ *noun* the eighth cranial nerve which governs hearing and balance

acoustic neurofibroma /ə'ku:stɪk 'njuərəʊfərə'brœmə/, **acoustic neuroma** /ə'ku:stɪk njuə'rəʊmə/ *noun* a tumour in the sheath of the auditory nerve, causing deafness

acoustic trauma /ə'ku:stɪk 'trɔ:mə/ *noun* physical damage caused by sound waves, e.g. hearing loss, disorientation, motion sickness or dizziness

acquired /ə'kwaɪəd/ *adjective* referring to a condition which is neither congenital nor hereditary and which a person develops after birth in reaction to his or her environment

acquired immunity /ə'kwaɪəd ɪ'mju:nɪti/ *noun* an immunity which a body acquires from having caught a disease or from immunisation, not one which is congenital

acquired immunodeficiency syndrome /ə'kwaɪəd, ɪm'ju:nəʊdɪ'fɪʃ(ə)nɪ, 'sɪndrəʊm/, **acquired immune deficiency syndrome** /ə'kwaɪəd ɪm'ju:n ɪ'dɪ'fɪʃ(ə)nɪ, 'sɪndrəʊm/ *noun* a viral infection which breaks down the body's immune system. Abbr **AIDS**

acrivastine /ə'krɪvə sti:n/ *noun* a drug which reduces the amount of histamine produced by the body. It is used in the treatment of rhinitis, urticaria and eczema.

acro- /ækruə/ *prefix* referring to a point or tip

acrocephalia /ækruəsə'feilɪə/ *noun* same as **oxycephaly**

acrocephaly /ækruə'sefəlɪ/ *noun* same as **oxycephaly**

acrocyanosis /ækruəsaɪə'nəʊsɪs/ *noun* a blue coloration of the extremities, i.e. the fingers, toes, ears and nose, which is due to poor circulation

acrodynia /ækruə'dɪniə/ *noun* a children's disease, caused by an allergy to mercury, where the child's hands, feet and face swell and become pink, and the child is also affected with fever and loss of appetite. Also called **erythroedema, pink disease**

acromegaly /ækruə'megəli/ *noun* a disease caused by excessive quantities of growth hormone produced by the pituitary gland, causing a slow enlargement of the hands, feet and jaws in adults

acromial /ə'krəʊmiəl/ *adjective* referring to the acromion

acromioclavicular /ækruəməiəuklu'veɪklə/ *adjective* relating to the acromion and the clavicle

acromion /ə'krəʊmiən/ *noun* the pointed top of the scapula, which forms the tip of the shoulder

acronyx /'ækruːnɪks, 'eɪkruːnɪks/ *noun* a condition in which a nail grows into the flesh

acroparaesthesia /ækruəpærɪəs'θi:ziə/ *noun* a condition in which the patient experiences sharp pains in the arms and numbness in the fingers after sleep

acrophobia /ækro'fəʊbiə/ *noun* a fear of heights

acrosclerosis /ækruəsklə'rəʊsɪs/ *noun* sclerosis which affects the extremities

ACTH *abbr* adrenocorticotrophic hormone

actinomycin /æktɪnə'mai:sɪn/ *noun* an antibiotic used in the treatment of children with cancer

actinomycosis /æktɪnəʊmətɪ'kəʊsɪs/ *noun* a fungal disease transmitted to humans from cattle, causing abscesses in the mouth and lungs (pulmonary actinomycosis) or in the ileum (intestinal actinomycosis)

action potential /'ækʃən pə'tenʃəl/ *noun* a temporary change in electrical potential which occurs between the inside and the outside of a nerve or muscle fibre when a nerve impulse is sent

active /'æktyv/ *adjective* 1. *(of a person)* lively and energetic ○ *Although she is over eighty she is still very active.* Opposite **passive** 2. *(of a disease)* having an effect on a patient ○ *experienced two years of active rheumatoid disease* Compare **dormant** 3. *(of a drug)* having medicinal effect

active immunity /'æktyv ɪ'mju:nɪti/ *noun* immunity which is acquired by catching and surviving an infectious disease or by vaccination with a weakened form of the disease, which makes the body form antibodies

active ingredient /'æktyv ɪn'grɪ:dɪənt/ *noun* the main medicinal ingredient of an ointment or lotion, as opposed to the base

active movement /'æktyv 'mu:vment/ *noun* movement made by a person using his or her own willpower and muscles

active principle /'æktyv 'prɪnsɪp(ə)l/ *noun* the main medicinal ingredient of a drug which makes it have the required effect on a person

activities of daily living /æk'trɪvɪtɪz əv 'deili 'lɪvɪŋ/ *noun* a scale used by geriatricians and occupational therapists to assess the capacity of elderly or disabled people to live independently. Abbr **ADLs**

activity /æk'trɪvɪtɪ/ *noun* 1. what someone does ○ *difficulty with activities such as walking and dressing* 2. the characteristic behaviour of a chemical ○ *The drug's activity only lasts a few hours.* □ **antibacterial activity** effective action against bacteria

act on /'æk tɒn/, **act upon** /'æk tə,pɒn/ *verb*

1. to do something as the result of something which has been said ○ *He acted on his doctor's advice and gave up smoking.* 2. to have an effect on someone or something ○ *The antibiotic acted quickly on the infection.*

act out /'æk t'aut/ *verb* to express negative feelings by behaving in a socially unacceptable way

acuity /ə'kjū:ti/ *noun* keenness of sight, hearing or intellect

acupressure /'ækjʊp'resʃə/ *noun* a treatment which is based on the same principle as acupuncture in which, instead of needles, fingers are used on specific points on the body, called pressure points

acupuncture /'ækjʊpʌŋktʃə/ *noun* a treatment based on needles being inserted through the skin into nerve centres in order to relieve pain or treat a disorder

acupuncturist /'ækju:pʌŋktʃərist/ *noun* a person who practises acupuncture

acute /'ækjūt/ *adjective* 1. referring to a disease or condition which develops rapidly and can be dangerous □ *an acute abscess* Opposite **chronic** 2. referring to pain which is sharp and intense (*informal*) □ *He felt acute chest pains.*

acute abdomen /'ækjūt 'æbdəmən/ *noun* any serious condition of the abdomen which requires surgery

acute bed /'ækjūt bed/ *noun* a hospital bed reserved for people requiring immediate treatment

'...the survey shows a reduction in acute beds in the last six years. The bed losses forced one hospital to send acutely ill patients to hospitals up to sixteen miles away.' [Nursing Times]

acute care /'ækjūt keə/ *noun* medical or surgical treatment in a hospital, usually for a short period, for a patient with a sudden severe illness or injury

acute disseminated encephalomyelitis /'ækjūt di'seimeneɪtɪd en,kefələ'maɪətɪs/ *noun* an encephalomyelitis or myelitis believed to result from an autoimmune attack on the myelin of the central nervous system

acute glaucoma /'ækjūt glɔ:/ 'kəumə/ *noun* same as **angle-closure glaucoma**

acute hospital /'ækjūt 'hɒspɪt(ə)l/ *noun* a hospital where people go for major surgery or intensive care of medical or surgical conditions

acutely /'ækjūtli/ *adverb* 1. having or causing a suddenly developing medical condition □ *acutely ill patients* □ *acutely toxic chemicals* 2. extremely (*informal*)

acute lymphocytic leukaemia /'ækjūt ,limfəsɪtɪk lu:'kɪmɪə/ *noun* a form of leukaemia that is the commonest cancer affecting children

acute nonlymphocytic leukaemia /'ækjūt ,nɒnlɪmfəsɪtɪk lu:'kɪmɪə/ *noun* a form of leukaemia that affects adults and children and is usually treated with chemotherapy

acute pancreatitis /'ækjūt ,pænkrɪə'taɪtɪs/ *noun* inflammation after pancreatic enzymes have escaped into the pancreas, causing symptoms of acute abdominal pain

acute respiratory distress syndrome /'ækjūt rɪ'spirət(ə)rɪ dɪ'stres ,sɪndrəʊm/ *noun* an infection of the lungs, often following injury, which prevents them functioning properly. Abbr **ARDS**

acute rheumatism *noun* same as **rheumatic fever**

acute rhinitis /'ækjūt rai'naitɪs/ *noun* a virus infection which causes inflammation of the mucous membrane in the nose and throat

acute suppurative arthritis /'ækjūt ,səpjurətɪv arθ'rartɪs/ *noun* same as **pyarthrosis**

acute toxicity /'ækjūt tɒk'sisɪti/ *noun* a level of concentration of a toxic substance which makes people seriously ill or can cause death

acute yellow atrophy /'ækjūt ,jeləʊ 'ætrəfi/ □ **yellow atrophy**

acyclovir /eɪ'saɪkləʊvɪə/ *noun* same as **aciclovir**

acystia /eɪ'sistɪə/ *noun* a condition in which a baby is born without a bladder

AD abbr Alzheimer's disease

Adam's apple /,ædəmz 'æpəl/ *noun* a part of the thyroid cartilage which projects from the neck below the chin in a man. Also called **laryngeal prominence**

adapt /'ædæpt/ *verb* 1. to change one's ideas or behaviour to fit into a new situation □ *She has adapted very well to her new job in the children's hospital.* 2. to change something to make it more useful □ *The brace has to be adapted to fit the patient.*

adaptation /'ædæp'teɪʃən/ *noun* 1. a change which has been or can be made to something 2. the act of changing something so that it fits a new situation 3. the process by which sensory receptors become accustomed to a sensation which is repeated

ADD abbr attention deficit disorder

addicted /'ædɪktɪd/ *adjective* physically or mentally dependent on a harmful substance □ **addicted to alcohol or drugs** needing to take alcohol or a harmful drug regularly

addictive /'ædɪktɪv/ *adjective* referring to a drug which is habit-forming and which people can become addicted to

Addison's anaemia /,ædɪs(ə)nz ə'nɪ:miə/ same as **pernicious anaemia** [Described 1849. After Thomas Addison (1793–1860), from Northumberland, founder of the science of endocrinology.]

Addison's disease /'ædɪs(ə)nz dɪ,zɪ:z/ *noun* a disease of the adrenal glands, causing a change in skin colour to yellow and then to dark brown and resulting in general weakness, anaemia, low blood pressure and wasting away. Treatment is with corticosteroid injections. [Described 1849. After Thomas Addison (1793–1860), from Northumberland, founder of the science of endocrinology.]

adducent /'ædjʊ:s(ə)nt/ *adjective* referring to a muscle which brings parts of the body together or moves them towards the central line of the body or a limb. Compare **abducent**

adduct /ə'dʌkt/ *verb (of a muscle)* to pull a leg or arm towards the central line of the body, or to pull a toe or finger towards the central line of a leg or arm. Opposite **abduct**

adducted /ə'dʌktɪd/ *adjective* referring to a body part brought towards the middle of the body

adduction /ə'dʌkʃən/ *noun* the movement of a part of the body towards the midline or towards a neighbouring part. Compare **abduction**. See illustration at **ANATOMICAL TERMS** in Supplement

adductor /ə'dʌktə/, **adductor muscle** /ə'dʌktə ,mʌs(ə)l/ *noun* a muscle which pulls a part of the body towards the central line of the body. Opposite **abductor**

aden- /'ædɪn/ *prefix* same as **adeno-** (*used before vowels*)

adenectomy /'ædɪ'nektəmi/ *noun* the surgical removal of a gland

adenine /'ædənī:n/ *noun* one of the four basic chemicals in DNA

adenitis /'ædɪ'naitɪs/ *noun* inflammation of a gland or lymph node. ♦ **lymphadenitis**

adeno- /'ædɪnəʊ/ *prefix* referring to glands

adenocarcinoma /'ædɪnəʊkɑ:sɪ'nəʊmə/ *noun* a malignant tumour of a gland

adenohypophysis /'ædɪnəʊhaɪ'pɔfɪsɪs/ *noun* the front lobe of the pituitary gland which secretes most of the pituitary hormones

adenoid /'ædɪnɔɪd/ *adjective* like a gland

adenoidal /'ædɪnɔɪd(ə)l/ *adjective* referring to the adenoids

adenoidal expression /'ædɪnɔɪd(ə)l ɪk'spreʃ(ə)n/ *noun* a common symptom of a child suffering from adenoids, where his or her mouth is always open, the nose is narrow and the top teeth appear to project forward

adenoidal tissue /'ædɪnɔɪd(ə)l 'tɪsʃu:/ *noun* same as **adenoids**

adenoidectomy /'ædɪnɔɪd(ə)l'dektəmi/ *noun* the surgical removal of the adenoids

adenoidism /'ædɪnɔɪdɪz(ə)m/ *noun* the condition of a person with adenoids

adenoids /'ædɪnɔɪdz/ *plural noun* a mass of tissue at the back of the nose and throat that can restrict breathing if enlarged. Also called **pharyngeal tonsils**

adenoid vegetation /'ædɪnɔɪd ,vedʒə'teɪʃ(ə)n/ *noun* a condition in children where the adenoidal tissue is covered with growths and can block the nasal passages or the Eustachian tubes

adenolymphoma /'ædɪnəʊlɪm'fəʊmə/ *noun* a benign tumour of the salivary glands

adenoma /'ædɪ'nəʊmə/ *noun* a benign tumour of a gland

adenoma sebaceum /'ædɪnəʊmə sə'bɛ:səm/ *noun* a skin condition of the face shown by raised red vascular bumps appearing in late childhood or early adolescence

adenomyoma /'ædɪnəʊmətə'əʊmə/ *noun* a benign tumour made up of glands and muscle

adenopathy /'ædɪ'nɒpəθi/ *noun* a disease of a gland

adenosclerosis /'ædɪnəʊsklə'rəʊsɪs/ *noun* the hardening of a gland

adenosine /'ædɪnəʊsɪ:n/ *noun* a drug used to treat an irregular heartbeat

adenosine diphosphate /'ædɪnəʊsɪ:n daɪ'fɒsfɪt/ *noun* a chemical compound which provides energy for processes to take place within living cells, formed when adenosine triphosphate reacts with water. Abbr **ADP**

adenosine triphosphate /'ædɪnəʊsɪ:n tra'fɒsfɪt/ *noun* a chemical which occurs in all cells, but mainly in muscle, where it forms the energy reserve. Abbr **ATP**

adenosis /'ædɪ'nəʊsɪs/ *noun* any disease or disorder of the glands

adenovirus /'ædɪnəʊ,vairəs/ *noun* a virus which produces upper respiratory infections and sore throats and can cause fatal pneumonia in infants

ADH abbr antidiuretic hormone

ADHD noun full form **attention deficit hyperactivity disorder**. ♦ **hyperactivity**

adhesion /'æd̩hi:ʒ(ə)n/ *noun* a stable connection between two parts in the body, either in a healing process or between parts which are not usually connected

adhesive dressing /'æd̩hi:sɪv 'dresɪŋ/ *noun* a dressing with a sticky substance on the back so that it can stick to the skin

adhesive strapping /'æd̩hi:sɪv 'stræpɪŋ/ *noun* overlapping strips of adhesive plaster used to protect a lesion

adipo- /'ædɪpəʊ/ *prefix* referring to fat

adipose /'ædɪpəʊs/ *adjective* containing fat, or made of fat

COMMENT: Fibrous tissue is replaced by adipose tissue when more food is eaten than is necessary.

adipose degeneration /'ædɪpəʊs di'zɛnə'reɪʃ(ə)n/ *noun* an accumulation of fat in the cells of an organ such as the heart or liver, which makes the organ less able to perform its proper function. Also called **fatty degeneration**

adipose tissue /'ædɪpəʊs 'tɪsʃu:/ *noun* a tissue where the cells contain fat

adiposis /'ædɪ'pəʊsɪs/ *noun* a state where too much fat is accumulated in the body

adiposis dolorosa /'ædɪ,pəʊsɪs ,dɒlə'rəʊsəl/ *noun* a disease of middle-aged women in which painful lumps of fatty substance form in the body. Also called **Dercum's disease**

adiposogenitalis /'ædɪ,pəʊsəʊ,dʒen'teɪlɪs/ *noun* same as **Fröhlich's syndrome**

adiposuria /'ædɪpsəʊ'jurɪə/ *noun* the presence of fat in the urine

adiposus /ædɪ'pəʊsəs/ ♦ **panniculus adiposus**

aditus /'ædɪtəs/ *noun* an opening or entrance to a passage

adjustment /ə'dʒʌstmənt/ *noun* a specific directional high-speed movement of a joint performed by a chiropractor

adjvant /'ædʒuvənt/ *adjective* referring to treatment by drugs or radiation therapy after surgery for cancer ■ *noun* a substance added to a drug to enhance the effect of the main ingredient

adjvant therapy /'ædʒuvənt θerəpi/ *noun* therapy using drugs or radiation after cancer surgery

ADLs *abbr* activities of daily living

administer /'æd'mіnіstər/ *verb* to give someone medicine or a treatment □ **to administer orally** to give a medicine by mouth

admission /'æd'mіʃ(ə)n/ *noun* the act of being registered as a hospital patient

admit /'æd'mіt/ *verb* to register a patient in a hospital ○ *He was admitted to hospital this morning.*

'80% of elderly patients admitted to geriatric units are on medication' [Nursing Times]

'...ten patients were admitted to the ICU before operation, the main indications being the need for evaluation of patients with a history of severe heart disease' [Southern Medical Journal]

adnexa /æd'neksə/ *plural noun* structures attached to an organ

adolescence /,ædə'les(ə)ns/ *noun* the period of life when a child is developing into an adult

adolescent /,ædə'les(ə)nt/ *noun* a person who is at the stage of life when he or she is developing into an adult ■ *adjective* developing into an adult, or occurring at that stage of life ○ *adolescent boys and girls* ○ *adolescent fantasies*

adopt /ə'dɒpt/ *verb* 1. to decide to use a particular plan or idea or way of doing something ○ *The hospital has adopted a new policy on visiting.* 2. to become the legal parent of a child who was born to other parents

adoptive /ə'dɒptɪv/ *adjective* 1. taking over the role of something else 2. referring to people who have adopted a child or a child that has been adopted ○ *adoptive parents*

adoptive immunotherapy /ə,dɒptɪv ɪm jūnə'θerəpi/ *noun* a treatment for cancer in which the patient's own white blood cells are used to attack cancer cells

COMMENT: This technique can halt the growth of cancer cells in the body but it can have distressing toxic side-effects.

ADP *abbr* adenosine diphosphate

adrenal /ə'dri:n(ə)l/ *adjective* situated near the kidney ■ *noun* same as **adrenal gland**

adrenal body /ə'dri:n(ə)l ,bɒdɪ/ *noun* same as **adrenal gland**

adrenal cortex /ə,dri:n(ə)l 'kɔ:tɛks/ *noun* the firm outside layer of an adrenal gland, which secretes a series of hormones affecting the metabolism of carbohydrates and water

adrenalectomy /ə,dri:nə'lektəmi/ *noun* the surgical removal of one of the adrenal glands

adrenal gland /ə'dri:n(ə)l glænd/ *noun* one of two endocrine glands at the top of the kidneys which secrete cortisone, adrenaline and other hormones. Also called **adrenal body**, **adrenal**. See illustration at **KIDNEY** in Supplement
adrenaline /ə'drenəlin/ *noun* a hormone secreted by the medulla of the adrenal glands which has an effect similar to stimulation of the sympathetic nervous system (NOTE: The US term is **epinephrine**.)

COMMENT: Adrenaline is produced when a person experiences surprise, shock, fear or excitement and it speeds up the heartbeat and raises blood pressure. It is administered as an emergency treatment of acute anaphylaxis and in cardiopulmonary resuscitation.

adrenal medulla /ə,dri:n(ə)l me'dʌlə/ *noun* the inner part of the adrenal gland which secretes adrenaline and noradrenaline. Also called **suprenal medulla**

adrenergic /,ædrə'nɪ:s:dʒɪk/ *adjective* referring to a neurone or receptor which is stimulated by adrenaline. ♦ **beta blocker**

adrenergic receptor /,ædrənɪ:s:dʒɪk rɪ'septə/ *noun* same as **adrenoceptor**

COMMENT: Three types of adrenergic receptor act in different ways when stimulated by adrenaline. Alpha receptors constrict the bronchi, beta 1 receptors speed up the heart-beat and beta 2 receptors dilate the bronchi.

adrenoceptor /ə,drenəʊ'septə/ *noun* a cell or neurone which is stimulated by adrenaline. Also called **adrenoreceptor**, **adrenergic receptor**

adrenocortical /ə,dri:nəʊ'kɔ:tɪk(ə)l/ *adjective* relating to the cortex of the adrenal glands

adrenocorticotrophic hormone /ə,dri:nəʊ,kɔ:təkɔ:ttrɒfɪk 'hɔ:məʊn/ *noun* a hormone secreted by the pituitary gland, which makes the cortex of the adrenal glands produce corticosteroids. Abbr **ACTH**. Also called **corticotrophin**

adrenogenital syndrome /ə,dri:nəʊ'dʒenɪt(ə)l ,sɪndrəm/ *noun* a condition caused by overproduction of male sex hormones, where boys show rapid sexual development and females develop male characteristics

adrenoleukodystrophy /ə,dri:nə'lju:kədɪs'trofi/ *noun* an inherited disorder of the adrenal glands in boys

adrenolytic /ə'dri:nə'lɪtɪk/ *adjective* acting against the secretion of adrenaline

adrenoreceptor /ə,drenəʊrɪ'septə/ *noun* same as **adrenoceptor**

adsorbent /æd'sɔ:bənt/ *adjective* being capable of adsorption

adsorption /æd'sɔ:pʃ(ə)n/ *noun* the attachment of one substance to another, often the bonding of a liquid with a gas or vapour which touches its surface

adult /'ædʌlt, ə'dʌlt/ *adjective* grown-up ○ Adolescents reach the adult stage about the age of eighteen or twenty. ■ *noun* someone who is no longer a child

adult coeliac disease /,ædʌlt 'si:liæk dɪ'zi:z/ *noun* a condition in adults where the villi in the intestine become smaller and so reduce the surface which can absorb nutrients

adult dentition /,ædʌlt den'tɪʃ(ə)n/ *noun* the 32 teeth which an adult has

adulteration /ə,dʌltə'refɪʃ(ə)n/ *noun* the act of making something less pure by adding another substance

adult-onset diabetes /,ædʌlt ,ɒnset ,daɪət'bɪ:tɪz/ *noun* a form of diabetes mellitus that develops slowly in older people as the body becomes less able to use insulin effectively

adult respiratory distress syndrome /,ædʌlt rɪ'spirat(ə)ri dr'stres ,sɪndrəʊm/ *noun* a description of various lung infections which reduce the lungs' efficiency. Abbr ARDS

advanced trauma life support /ad've:nst ,trə:ma 'laif sə,pɔ:t/ *noun* the management of a trauma patient during the critical first hour after injury. Abbr ATLS

adventitia /,ædvɛn'tɪʃə/ *noun* same as **tunica adventitia**

adventitious /,ædvən'tɪʃəs/ *adjective* on the outside or in an unusual place

adventitious bursa /,ædvəntɪʃəs 'bɜ:sə/ *noun* a bursa which develops as a result of continued pressure or rubbing

adverse /'ædvɜ:s/ *adjective* harmful or unfavourable □ **the treatment had an adverse effect on his dermatitis** the treatment made the dermatitis worse

adverse occurrence /,ædvɜ:s ə'kʌrəns/ *noun* a harmful event which occurs during treatment

adverse reaction /,ædvɜ:s rɪ'ækʃən/ *noun* a situation where someone experiences harmful effects from the application of a drug

advocacy /'ædvəkəsi/ *noun* active support for something, especially in order to help people who would have difficulty in gaining attention without your help

dynamic ileus /eɪ,dɪna'metɪk 'ɪliəs/ *noun* same as **paralytic ileus**

aegophony /i:'gɒfəni/ *noun* a high sound of the voice heard through a stethoscope, where there is fluid in the pleural cavity

aer- /eə/ *prefix* same as **aero-** (*used before vowels*)

aeration /eə'reɪʃ(ə)n/ *noun* the adding of air or oxygen to a liquid

aero- /eərəʊ/ *prefix* referring to air

aeroba /eə'rəʊba/, **aerobe** /'eərəʊb/ *noun* a tiny organism which needs oxygen to survive

aerobic /eə'rəʊbɪk/ *adjective* needing oxygen to live, or taking place in the presence of oxygen

aerobic respiration /eə,rəʊbɪk,respə'reɪʃ(ə)n/ *noun* the process where the oxygen which is breathed in is used to conserve energy as ATP

aeroembolism /,eərəʊ'embəlɪz(ə)m/ *noun* same as **air embolism**

aerogenous /eə'rəʊdʒənəs/ *adjective* referring to a bacterium which produces gas

aerophagia /,eərə'feɪdʒɪə/, **aerophagy** /eə'rə'fədʒɪ/ *noun* the habit of swallowing air when suffering from indigestion, so making the stomach pains worse

aerosol /'eərəsɒl/ *noun* tiny particles of a liquid such as a drug or disinfectant suspended in a gas under pressure in a container and used as a spray

aetiological agent /i:tɪəlodʒɪk(ə)l 'eɪdʒ(ə)nt/ *noun* an agent which causes a disease

aetiology /i:ti'lɒdʒɪ/ *noun* 1. the cause or origin of a disease 2. the study of the causes and origins of diseases (NOTE: [all senses] The US spelling is **etiology**)

'...a wide variety of organs or tissues may be infected by the Salmonella group of organisms, presenting symptoms which are not immediately recognised as being of Salmonella aetiology' [Indian Journal of Medical Sciences]

afebrile /eɪ'fi:b्रɪl/ *adjective* with no fever

affect /'æfekt/ *verb* to make something or someone change, especially to have a bad effect on something or someone ○ Some organs are rapidly affected if the patient lacks oxygen for even a short time. ■ *noun* same as **affection**

affection /'æfekʃən/, **affect** /'æfekt/ *noun* the general state of a person's emotions

'Depression has degrees of severity, ranging from sadness, through flatness of affection or feeling, to suicide and psychosis' [British Journal of Nursing]

affective /'æf'ektɪv/ *adjective* relating to a person's moods or feelings

affective disorder /'æf'ektɪv dɪs,ɔ:də/ *noun* a condition which changes someone's mood, making him or her depressed or excited

afferent /'æf(ə)rənt/ *adjective* conducting liquid or electrical impulses towards the inside. Opposite **efferent**

afferent nerve *noun* same as **sensory nerve**

afferent vessel /'æf(ə)rənt ,ves(ə)l/ *noun* a tube which brings lymph to a gland

affinity /ə'fɪnitɪ/ *noun* an attraction between two substances

aflatoxin /,æflə'tɒksɪn/ *noun* a poison produced by some moulds in some crops such as peanuts

African trypanosomiasis /æfrɪkən trɪpənəʊsəʊ'maɪəsɪs/ noun same as **sleeping sickness**

afterbirth /'ɑːftəbɜːθ/ noun the tissues, including the placenta and umbilical cord, which are present in the uterus during pregnancy and are expelled after the birth of a baby

aftercare /'ɑːftəkeər/ noun 1. the care of a person who has had an operation. Aftercare treatment involves changing dressings and helping people to look after themselves again. 2. the care of a mother who has just given birth

after-effect /'ɑːftər ɪ'fekt/ noun a change which appears only some time after the cause

○ *The operation had some unpleasant after-effects.*

after-image /'ɑːftər ,ɪmɪdʒ/ noun an image of an object which remains in a person's sight after the object itself has gone

afterpains /'ɑːftəpeɪnz/ plural noun regular pains in the uterus which are sometimes experienced after childbirth

afunctional /eɪ 'fʌŋkʃən(ə)l/ adjective which does not function properly

agalactia /,eɪgə'lækʃə/ noun a condition in which a mother is unable to produce milk after childbirth

agammaglobulinaemia /eɪ,ɡæmæglɒbjuːlɪ 'niːmiːə/ noun a deficiency or absence of immunoglobulins in the blood, which results in a reduced ability to provide immune responses

agar /'eɪgə:/, **agar agar** /,eɪgər: 'eɪgə:/ noun a culture medium based on an extract of seaweed used for growing microorganisms in laboratories

age /eɪdʒ/ noun the number of years which a person has lived ○ *What's your age on your next birthday?* ○ *He was sixty years of age.* ○ *The size varies according to age.* ■ verb to grow old

age group /'eɪdʒ gruːp/ noun all the people of a particular age or within a particular set of ages ○ *The age group 20–25*

ageing /'eɪdʒɪŋ/, **aging** noun the fact of growing old

COMMENT: Changes take place in almost every part of the body as the person ages. Bones become more brittle and skin becomes less elastic. The most important changes affect the blood vessels which are less elastic, making thrombosis more likely. This also reduces the supply of blood to the brain, which in turn reduces the mental faculties.

ageing process /'eɪdʒɪŋ ,prəses/ noun the physical changes which take place in a person as he or she grows older

agency /eɪdʒənsi/ noun 1. an organisation which carries out work on behalf of another organisation, e.g. one which recruits and employs nurses and supplies them to hospitals temporarily when full-time nursing staff are unavailable 2. the act of causing something to

happen ○ *The disease develops through the agency of bacteria present in the bloodstream.*

'The cost of employing agency nurses should be no higher than the equivalent full-time staff.' [Nursing Times]

'Growing numbers of nurses are choosing agency careers, which pay more and provide more flexible schedules than hospitals.' [American Journal of Nursing]

agenesis /eɪ'dʒenəsɪs/ noun the absence of an organ, resulting from a failure in embryonic development

agent /'eɪdʒənt/ noun 1. a chemical substance which makes another substance react 2. a substance or organism which causes a disease or condition 3. a person who acts as a representative of another person or carries out some kinds of work on his or her behalf

agglutinate /ə'gluːtɪneɪt/ verb to form into groups or clusters, or to cause things to form into groups or clusters

agglutination /ə'gluːtɪneɪʃ(ə)n/ noun the act of coming together or sticking to one another to form a clump, as of bacteria cells in the presence of serum, or blood cells when blood of different types is mixed ◇ **agglutination test** 1. a test to identify bacteria 2. a test to identify if a woman is pregnant

agglutinin /ə'gluːtɪnɪn/ noun a factor in a serum which makes cells stick together in clumps

agglutinogen /ægluː'tɪnədʒən/ noun a factor in red blood cells which reacts with a specific agglutinin in serum

aggravate /'ægrəveɪt/ verb to make something worse ○ *Playing football only aggravates his knee injury.* ○ *The treatment seems to aggravate the disease.*

aggression /ə'gresʃ(ə)n/ noun the state of feeling violently angry towards someone or something

aggressive /ə'gresɪv/ adjective referring to treatment which involves frequent high doses of medication

aging /'eɪdʒɪŋ/ noun another spelling of **ageing**

agitated /'ædʒɪteɪtɪd/ adjective moving about or twitching nervously because of worry or another psychological state ○ *The person became agitated and had to be given a sedative.*

agitation /,ædʒɪ'teɪʃ(ə)n/ noun a state of being very nervous and anxious

aglossia /eɪ'glɒsɪə/ noun the condition of not having a tongue from birth

agnosia /æg'nəʊzɪə/ noun a brain disorder in which a person fails to recognise places, people, tastes or smells which they used to know well

agonist /'ægənɪst/ noun 1. a muscle which causes part of the body to move and another muscle to relax when it contracts. Also called

prime mover **2.** a substance which produces an observable physiological effect by acting through specific receptors. ◊ **antagonist**

agony /'ægəni/ **noun** a very severe physical or emotional pain ◊ *He lay in agony on the floor.* ◊ *She suffered the agony of waiting for weeks until her condition was diagnosed.*

agoraphobia /,æg(ə)rə'fəʊbiə/ **noun** a fear of being in open spaces. Compare **claustrophobia**

agoraphobic /,æg(ə)rə'fəʊbɪk/ **adjective** afraid of being in open spaces. Compare **claustrophobic**

agranulocytosis /ə,grænju'ləʊsəsɪt'əʊsɪs/ **noun** a usually fatal disease where the number of granulocytes, a type of white blood cell, falls sharply because of a bone marrow condition

agraphia /eɪ'græfiə/ **noun** the condition of being unable to put ideas into writing

AHF abbr antihæmophilic factor

aid /eɪd/ **noun** **1.** help **2.** a machine, tool or drug which helps someone do something ◊ *He uses a walking frame as an aid to exercising his legs.* ■ **verb** to help someone or something ◊ *The procedure is designed to aid the repair of tissues after surgery.*

AID /eɪ əɪ 'di:/ **noun** full form **artificial insemination by donor.** now called **DI**

AIDS /eɪdz/, **Aids** **noun** a viral infection which breaks down the body's immune system. Full form **acquired immunodeficiency syndrome, acquired immune deficiency syndrome**

COMMENT: AIDS is a disease caused by the human immunodeficiency virus (HIV). It is spread mostly by sexual intercourse and can affect anyone. It is also transmitted through infected blood and plasma transfusions, through using unsterilised needles for injections, and can be passed from a mother to a fetus. The disease takes a long time, usually years, to show symptoms, and many people with HIV are unaware that they are infected. It causes a breakdown of the body's immune system, making the patient susceptible to any infection and often results in the development of rare skin cancers. It is not curable.

AIDS dementia /,eɪdz dɪ'menʃə/ **noun** a form of mental degeneration resulting from infection with HIV

AIDS-related complex /,eɪdz rɪ,leɪtɪd 'kɒmplɛks/, **AIDS-related condition** /,eɪdz rɪ ,leɪtɪd kən'dɪʃ(ə)n/ **noun** early symptoms shown by someone infected with the HIV virus, e.g. weight loss, fever and herpes zoster. Abbr **ARC**

AIH abbr artificial insemination by husband **ailment** /'eɪlmənt/ **noun** an illness, though not generally a very serious one ◊ *Chickenpox is one of the common childhood ailments.*

ailurophobia /,aɪlu'rəfəʊbiə/ **noun** a fear of cats

air /eə/ **noun** a mixture of gases, mainly oxygen and nitrogen, which cannot be seen, but which exists all around us and which is breathed ◊ *Open the window and let some fresh air into the room.* ◊ *He breathed the polluted air into his lungs.*

air bed /'eə bed/ **noun** a mattress which is filled with air, used to prevent the formation of bedsores. ◊ **conduction**

airborne infection /,eəbɔ:n ɪn'fekʃən/ **noun** an infection which is carried in the air

air conduction /'eə kən,dʌkʃən/ **noun** the process by which sounds pass from the outside to the inner ear through the auditory meatus

air embolism /eər 'embəlɪz(ə)m/ **noun** a blockage caused by bubbles of air, that stops the flow of blood in vessels

air hunger /'eə ,hʌŋgə/ **noun** a condition in which the patient needs air because of lack of oxygen in the tissues

air passage /'eə ,pæsɪdʒ/ **noun** any tube which takes air to the lungs, e.g. the nostrils, pharynx, larynx, trachea and bronchi

air sac /'eə sæk/ **noun** a small sac in the lungs which contains air. ◊ **alveolus**

airsick /'eəsɪk/ **adjective** feeling sick because of the movement of an aircraft

airsickness /'eəsɪknəs/ **noun** a queasy feeling, usually leading to vomiting, caused by the movement of an aircraft

airway /'eəwei/ **noun** a passage through which air passes, especially the trachea

airway clearing /'eəwei ,klɪəriŋ/ **noun** making sure that the airways in a newborn baby or an unconscious person are free of any obstruction

airway obstruction /,eəwei əb'strækʃ(ə)n/ **noun** something which blocks the air passages

akathisia /,eɪkə'θɪsiə/ **noun** restlessness

akinesia /,eɪkɪ'nɪzɪə/ **noun** a lack of voluntary movement, as in Parkinson's disease

akinetic /,eɪkɪ'nɛtɪk/ **adjective** without movement

alacrima /eɪ'lækrimə/ **noun** same as **xerosis**

alactasia /,eɪlæk'teɪziə/ **noun** a condition in which there is a deficiency of lactase in the intestine, making the patient incapable of digesting lactose, the sugar in milk

alalia /eɪ'lɛlɪə/ **noun** a condition in which a person completely loses the ability to speak

alanine /'ælənī:n/ **noun** an amino acid

alanine aminotransferase /,ælənī:n ə ,mi:nəʊ'trænsfəreɪz/ **noun** an enzyme which is found in the liver and can be monitored as an indicator of liver damage. Abbr **ALT**

alar cartilage /,eɪlər 'ka:tɪlɪdʒ/ **noun** cartilage in the nose

alba /'ælbə/ ♀ **linea alba**

Albee's operation /'ɔ:lbɪ:z əpə,reɪʃ(ə)n/ **noun** **1.** a surgical operation to fuse two or more vertebrae **2.** a surgical operation to fuse

the femur to the pelvis [After Frederick Houdlett Albee (1876–1945), US surgeon]

albicans /'ælbɪkænz/ ▶ **corpus albicans**

albinism /'ælbɪnɪz(ə)m/ *noun* a condition in which a person lacks the pigment melanin and so has pink skin and eyes and white hair. It is hereditary and cannot be treated. ◇ **vitiligo**

albino /æl'bɪ:nəʊ/ *noun* a person who is deficient in melanin and has little or no pigmentation in the skin, hair or eyes

albuginea /,ælbɪju'dʒɪniə/ *noun* a layer of white tissue covering a part of the body

albuginea oculi /,ælbɪjudʒɪniə 'ɒkjulai/ *noun* same as **sclera**

albuminometer /,ælbɪjومɪ'nɒmɪtə/ *noun* an instrument for measuring the level of albumin in the urine

albuminuria /,ælbɪjومɪ'njuəriə/ *noun* a condition in which albumin is found in the urine, usually a sign of kidney disease, but also sometimes of heart failure

albumose /'ælbɪju:məʊz/ *noun* an intermediate product in the digestion of protein

alcohol /'ækθəhol/ *noun* a pure colourless liquid which is formed by the action of yeast on sugar solutions and forms part of drinks such as wine and whisky

COMMENT: Alcohol is used medicinally to dry wounds or harden the skin. When drunk, alcohol is rapidly absorbed into the bloodstream. It is a source of energy, so any carbohydrates taken at the same time are not used by the body and are stored as fat. Alcohol is a depressant, not a stimulant, and affects the way the brain works.

alcohol abuse /'ækθəhol ə,bju:s/ *noun* the excessive use of alcohol adversely affecting a person's health

alcohol addiction /'ækθəhol ə,dɪkʃən/ *noun* a condition in which a person is dependent on the use of alcohol

alcohol-fast /'ækθəhol fa:st/ *adjective* referring to an organ stained for testing which is not discoloured by alcohol

alcoholic /,ælkə'holɪk/ *adjective* 1. containing alcohol 2. caused by alcoholism ◇ *alcoholic poisoning* ■ *noun* a person who is addicted to drinking alcohol and shows changes in behaviour and personality

alcoholic cardiomyopathy /,ælkəhɒlɪk ,ku:dɪəmətə'ɒpθɪ/ *noun* a disease of the heart muscle arising as a result of long-term heavy alcohol consumption

alcoholic cirrhosis /,ælkəhɒlɪk sɪ'rəʊsɪs/ *noun* cirrhosis of the liver caused by alcoholism

alcoholic hepatitis /,ælkəhɒlɪk ,hepə'taɪtɪs/ *noun* inflammation of the liver as a result of long-term heavy alcohol consumption, often leading to cirrhosis

Alcoholics Anonymous /,ælkəhɒlɪks ə'nɒmɪməs/ *noun* an organisation of former al-

coholics which helps people to overcome their dependence on alcohol by encouraging them to talk about their problems in group therapy.

Abbr AA

alcoholicum /,ælkə'hɒlɪkəm/ ▶ **delirium alcoholicum**

alcoholism /'ækθəholɪz(ə)m/ *noun* excessive drinking of alcohol which becomes addictive

alcohol poisoning /'ækθəhol ,pɔɪz(ə)nɪŋ/ *noun* poisoning and disease caused by excessive drinking of alcohol

alcohol rub /'ækθəhol rəb/ *noun* the act of rubbing a bedridden person with alcohol to help protect against bedsores and as a tonic

alcoholuria /,ækθəhɒ'ljuəriə/ *noun* a condition in which alcohol is present in the urine (NOTE: The level of alcohol in the urine is used as a test for drivers who are suspected of driving while drunk.)

aldosterone /æl'dɒstərəʊn/ *noun* a hormone secreted by the cortex of the adrenal gland, which regulates the balance of sodium and potassium in the body and the amount of body fluid

aldosteronism /æl'dɒst(ə)rənɪz(ə)m/ *noun* a condition in which a person produces too much aldosterone, so that there is too much salt in the blood. This causes high blood pressure and the need to drink a lot of liquids.

alert /ə'lɜ:t/ *adjective* referring to someone who takes an intelligent interest in his or her surroundings ◇ *The patient is still alert, though in great pain.*

aleukaemic /eɪlu:'ki:mɪk/ *adjective* 1. referring to a state where leukaemia is not present 2. referring to a state where leucocytes are not normal

Alexander technique /,ælɪg'zə:ndə tek'nɪk/ *noun* a method of improving the way a person stands and moves, by making them much more aware of how muscles behave

alexia /eɪ'leksiə/ *noun* a condition in which the patient cannot understand printed words. Also called **word blindness**

alfacalcidol /,ælfə'kælsɪdɒl/ *noun* a substance related to vitamin D, used by the body to maintain the right levels of calcium and phosphate, and also as a drug to help people who do not have enough vitamin D

algesimeter /,ældʒɪ'sɪmɪtə/ *noun* an instrument to measure the sensitivity of the skin to pain

-**algia** /ældʒiə/ *suffix* a word ending that indicates a painful condition

algid /'ældʒɪd/ *adjective* referring to a stage in a disease that causes fever during which the body becomes cold

algophobia /,ælgəʊ'fəʊbiə/ *noun* an unusually intense fear of pain

alienation /ə'lɪə'nɛf(ə)n/ *noun* a psychological condition in which a person develops the feeling of not being part of the everyday world, and as a result often becomes hostile to other people

alignment /ə'laɪnmənt/ *noun* the arrangement of something in a straight line, or in the correct position in relation to something else

alimentary /ə'lɪ'ment(ə)ri/ *adjective* providing food, or relating to food or nutrition

alimentary canal /ə'lɪ'ment(ə)ri kæ'næl/ *noun* a tube in the body going from the mouth to the anus and including the throat, stomach and intestine, through which food passes and is digested

alimentary system /ə'lɪ'ment(ə)ri ,sɪstəm/ *noun* same as **digestive system**

alimentation /ə'lɪmen'teɪʃ(ə)n/ *noun* the act of providing food or nourishment

aliquot /'ælkwɔ:t/ *noun* a part of a larger thing, especially a sample of something which is taken to be examined

alive /ə'lɑ:v/ *adjective* living, not dead ○ *The man was still alive, even though he had been in the sea for two days.* (NOTE: **Alive** cannot be used in front of a noun: *The person is alive* but a *living person*. Note also that **live** can be used in front of a noun: *The person was injected with live vaccine.*)

alkalaemia /'ælkə'lɪ:miə/ *noun* an excess of alkali in the blood

alkali /'ælkə'lætɪ/ *noun* one of many substances which neutralise acids and form salts (NOTE: The UK plural is **alkalis**, but the US plural is **alkalies**.)

alkaline /'ælkə'læɪn/ *adjective* containing more alkali than acid

alkalinity /,ælkə'lɪnɪtɪ/ *noun* the level of alkali in a body ○ *Hyperventilation causes fluctuating carbon dioxide levels in the blood, resulting in an increase of blood alkalinity.*

COMMENT: Alkalinity and acidity are measured according to the pH scale. pH7 is neutral, and pH8 and upwards are alkaline. Alkaline solutions are used to counteract the effects of acid poisoning and also of bee stings. If strong alkali, such as ammonia, is swallowed, the patient should drink water and an acid such as orange juice.

alkaloid /'ælkəlɔɪd/ *noun* one of many poisonous substances found in plants and used as medicines, e.g. atropine, morphine or quinine

alkalosis /,ælkə'ləʊsɪs/ *noun* a condition in which the alkali level in the body tissue is high, producing cramps

alkaptonuria /,ælkæptə'njuəriə/ *noun* a hereditary condition where dark pigment is present in the urine

allantoin /ə'læntəʊɪn/ *noun* powder from the herb comfrey, used to treat skin disorders

allantois /ə'læntəʊɪs/ *noun* one of the membranes in the embryo, shaped like a sac, which grows out of the embryonic hindgut

allele /ə'li:/ *noun* one of two or more alternative forms of a gene, situated in the same area on each of a pair of chromosomes and each producing a different effect

allergen /'ælədʒən/ *noun* a substance which produces hypersensitivity

COMMENT: Allergens are usually proteins and include foods, dust, hair of animals, as well as pollen from flowers. Allergic reaction to serum is known as **anaphylaxis**. Treatment of allergies depends on correctly identifying the allergen to which the patient is sensitive. This is done by patch tests in which drops of different allergens are placed on scratches in the skin. Food allergens discovered in this way can be avoided, but other allergens such as dust and pollen can hardly be avoided and have to be treated by a course of desensitising injections.

allergenic /,ælə'dʒenɪk/ *adjective* producing an allergic reaction ○ *the allergenic properties of fungal spores*

allergenic agent /,ælədʒenɪk 'eɪdʒənt/ *noun* a substance which produces an allergy

allergic /ə'lɪ:s:dʒɪk/ *adjective* having an allergy to something ○ *She is allergic to cats.* ○ *I'm allergic to penicillin.*

allergic agent /ə'lɪ:s:dʒɪk ,eɪdʒənt/ *noun* a substance which produces an allergic reaction

allergic purpura /ə,lɪ:s:dʒɪk 'pɜ:pjʊrə/ *noun* a form of the skin condition purpura, found most often in children

allergic reaction /ə,lɪ:s:dʒɪk ri'ækʃən/ *noun* an effect produced by a substance to which a person has an allergy, such as sneezing or a skin rash

allergic rhinitis /ə,lɪ:s:dʒɪk rai'naitɪs/ *noun* inflammation in the nose and eyes caused by an allergic reaction to plant pollen, mould spores, dust mites or animal hair. ♀ **hayfever**

allergist /'ælədʒɪst/ *noun* a doctor who specialises in the treatment of allergies

allergy /'ælədʒɪ/ *noun* an unusual sensitivity to some substances such as pollen or dust, which cause a physical reaction such as sneezing or a rash in someone who comes into contact with them ○ *She has an allergy to household dust.* ○ *He has a penicillin allergy.* (NOTE: You **have an allergy** or you **are allergic to** something.)

allergy bracelet /'ælədʒɪ ,breɪslət/ *noun* ♀ **medical alert bracelet**

alleviate /ə'lɪ:vɪet/ *verb* to make pain or discomfort less severe ○ *The drug is effective in alleviating migraine headaches.*

allied health professional /,æliaɪd 'helθ prə,fesʃ(ə)n(ə)l/ *noun* a professional working in medicine who is not a doctor or nurse, e.g. a physiotherapist or paramedic

allo- /æləʊ/ *prefix* different

allodynia /'ælə'dɪniə/ *noun* pain of the skin caused by something such as clothing which usually does not cause pain

allogeneic /'ælədʒə'nēɪk/ *adjective* ((of body tissues)) genetically different and therefore incompatible when transplanted

allograft /'æləʊgræft/ *noun* same as **homograft**

allopathy /'ælɒpəθi/ *noun* the treatment of a condition using drugs which produce opposite symptoms to those of the condition. Compare **homeopathy**

allopurinol /,æləʊ'pjjuərɪnɒl/ *noun* a drug which helps to stop the body producing uric acid, used in the treatment of gout

all or none law /,ɔ:l ɔ: 'nʌn lɔ:/ *noun* the rule that the heart muscle either contracts fully or does not contract at all

allylestrenol /,æləl'estrənl/ *noun* a steroid used to encourage pregnancy

alopecia /,æləp'si:pɪ:sə/ *noun* a condition in which hair is lost. Compare **hypotrichosis**

alopecia areata /æləp'si:pɪ:sə ,ærɪ'eɪtə/ *noun* a condition in which the hair falls out in patches

alpha /'ælfə/ *noun* the first letter of the Greek alphabet

alpha-adrenoceptor antagonist /,ælfə ə ,dri:nəʊrɪ'septə æn,tægənɪst/, **alpha-adrenoceptor blocker** /'ælfə ə ,dri:nəʊrɪ'septə ,blɒkə/ *noun* a drug which can relax smooth muscle, used to treat urinary retention and hypertension. Also called **alpha blocker**

alpha cell /'ælfə sel/ *noun* a type of cell found in the islets of Langerhans, in the pancreas, which produces glucagon, a hormone that raises the level of glucose in the blood. ◊ **beta cell**

alpha-fetoprotein /,ælfə ,fi:tə'prəʊtɪ:n/ *noun* a protein produced by the liver of the human fetus, which accumulates in the amniotic fluid. A high or low concentration is tested for by amniocentesis in the antenatal diagnosis of spina bifida or Down's syndrome, respectively.

alpha rhythm /'ælfə ,rɪðəm/ *noun* the pattern of electrical activity in the brain of someone who is awake but relaxed or sleepy, registering on an electroencephalograph at 8–13 hertz

Alport's syndrome /'ɔ:lpo:təs ,sɪndrəʊm/ *noun* a genetic disease of the kidneys which sometimes causes a person to lose his or her hearing and sight

alprostadil /æ'l prɒstədɪl/ *noun* a drug which makes blood vessels wider, used to treat impotence, prevent coagulation, and maintain babies with congenital heart conditions

ALS abbr 1. amyotrophic lateral sclerosis 2. antilymphocytic serum

ALT abbr alanine aminotransferase

alternative medicine /ɔ:l'tɜ:nətɪv 'med(ə)sɪn/ *noun* the treatment of illness using therapies such as homoeopathy or naturopathy which are not considered part of conventional Western medicine. ◊ **complementary medicine**

altitude sickness /'æltɪtjʊd ,sɪknəs/ *noun* a condition caused by reduced oxygen in the air above altitudes of 7000 to 8000 feet (3600 metres). Symptoms include headaches, breathlessness, fatigue, nausea and swelling of the face, hands and feet. Also called **high-altitude sickness, mountain sickness**

aluminium /,ælə'miniəm/ *noun* a metallic element extracted from the ore bauxite (NOTE: The US spelling is **aluminum**. The chemical symbol is Al.)

aluminium hydroxide /ælə'miniəm haɪ'droksaɪd/ *noun* a chemical substance used as an antacid to treat indigestion. Formula: Al(OH)₃ or Al₂O₃·3H₂O.

alveolar /,ælvɪ'ələ, æl've:i:ələ/ *adjective* referring to the alveoli

alveolar bone /,ælvɪ'ələ bən/ *noun* part of the jawbone to which the teeth are attached

alveolar duct /,ælvɪ'ələ dʌkt/ *noun* a duct in the lung which leads from the respiratory bronchioles to the alveoli. See illustration at **LUNGS** in Supplement

alveolar wall /,ælvɪ'ələ wɔ:l/ *noun* one of the walls which separate the alveoli in the lungs

alveolitis /,ælvɪə'laitɪs/ *noun* inflammation of an alveolus in the lungs or the socket of a tooth

alveolus /,ælvɪ'ələs, æl've:i:ələs/ *noun* a small cavity, e.g. an air sac in the lungs or the socket into which a tooth fits. See illustration at **LUNGS** in Supplement (NOTE: The plural is **alveoli**.)

Alzheimer plaque /'æltʃaɪmə plæk/ *noun* a disc-shaped plaque of amyloid found in the brain in people who have Alzheimer's disease

Alzheimer's disease /'æltʃaɪməz dɪ,zi:z/ *noun* a disease where a person experiences progressive dementia due to nerve cell loss in specific brain areas, resulting in loss of mental faculties including memory [Described 1906. After Alois Alzheimer (1864–1915), Bavarian physician.]

COMMENT: No single cause of Alzheimer's disease has been identified, although an early onset type occurs more frequently in some families, due to a mutation in a gene on chromosome 21. Risk factors include age, genes, head injury, lifestyle and environment.

amalgam /ə'mælgəm/ *noun* a mixture of metals, based on mercury and tin, used by dentists to fill holes in teeth

amaurosis /,æməʊ'rəʊsɪs/ *noun* blindness caused by disease of the optic nerve

amaurosis fugax /'æməʊrəʊsɪs 'fju:gæks/ noun temporary blindness in one eye, caused by problems of circulation

amaurotic familial idiocy /'æmə:rɒtɪk fə'milɪəl 'ɪdɪəsɪ/, **amaurotic family idiocy** /'æmə:rɒtɪk, fæm(ə)li 'ɪdɪəsɪ/ noun same as **Tay-Sachs disease**

amb- /'æmb/ prefix same as **ambi-** (used before vowels)

ambi- /'æmbi/ prefix both

ambidextrous /'æmbi'dekstrəs/ adjective referring to a person who can use both hands equally well and who is not right- or left-handed

ambiguous genitalia /'æm,bɪgjuəs ,dʒenɪəl'teɪliə/ noun a congenital condition in which the outer genitals do not look typical of those of either sex

ambisexual /'æmbɪ'sekʃuəl/ adjective, noun same as **bisexual**

amblyopia /'æmblɪ'əʊpiə/ noun a lack of normal vision without a structural cause. A common example is squint and other forms may be caused by the cyanide in tobacco smoke or by drinking methylated spirits.

amblyopic /'æmblɪ'ɒpɪk/ adjective affected by amblyopia

amblyoscope /'æmbliəʊskəʊp/ noun an instrument for measuring the angle of a squint and how effectively someone uses both their eyes together. Also called **orthoptoscope**

ambulance /'æmbjuləns/ noun a van for taking sick or injured people to hospital ◎ *The injured man was taken away in an ambulance.* ◎ *The telephone number of the local ambulance service is in the phone book.* ♦ **St John Ambulance Association and Brigade**

ambulant /'æmbbjələnt/ adjective able to walk

ambulation /'æmbju'lɛɪʃ(ə)n/ noun walking ◻ **early ambulation is recommended** patients should try to get out of bed and walk about as soon as possible after the operation

ambulatory /'æmbju'leɪt(ə)rɪ/ adjective referring to a patient who is not confined to bed but is able to walk

‘...ambulatory patients with essential hypertension were evaluated and followed up at the hypertension clinic’ [British Medical Journal]

ambulatory care /'æmbju,leɪt(ə)rɪ 'keə/ noun treatment of a patient which does not involve staying in hospital during the night

ambulatory fever /'æmbju'leɪt(ə)rɪ ,fi:və/ noun a mild fever where the patient can walk about and can therefore act as a carrier, e.g. during the early stages of typhoid fever

ameba /'ɑ:mī:bə/ noun US same as **amoeba**

amelia /'ə:mī:liə/ noun the absence of a limb from birth, or a condition in which a limb is short from birth

amelioration /ə'mi:lɪə'reɪʃ(ə)n/ noun the process of getting better

ameloblastoma /'æmələʊblæ'stəʊmə/ noun a tumour in the jaw, usually in the lower jaw

amenorrhoea /'eɪmenə'rɪ:ə/ noun the absence of one or more menstrual periods, usual during pregnancy and after the menopause

ametropia /'æmətrəʊpiə/ noun a condition in which the eye cannot focus light correctly onto the retina, as in astigmatism, hypermetropia and myopia. Compare **emmetropia**

amphetamine /'æm'fetəmī:n/ noun an addictive drug, similar to adrenaline, used to give a feeling of wellbeing and wakefulness. Also called **amphetamine**

amikacin /'æmɪkə'sɪn/ noun a type of antibiotic used to treat infections caused by aerobic bacteria

amiloride /'æmɪləraɪd/ noun a drug which helps to increase the production of urine and preserve the body’s supply of potassium

amino acid /ə,mī:nəʊ 'æsɪd/ noun a chemical compound which is broken down from proteins in the digestive system and then used by the body to form its own protein

COMMENT: Amino acids all contain carbon, hydrogen, nitrogen and oxygen, as well as other elements. Some amino acids are produced in the body itself, but others have to be absorbed from food. The eight essential amino acids are: isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan and valine.

aminobutyric acid /ə,mī:nəʊbju:tɪrɪk 'æsɪd/ noun ♦ **gamma aminobutyric acid**

aminoglycoside /ə,mī:nəʊ'glaikəsɔɪd/ noun a drug used to treat many Gram-negative and some Gram-positive bacterial infections (NOTE: Aminoglycosides include drugs with names ending in -cin: **gentamicin**.)

aminophylline /'æmɪ'nɒfɪli:n/ noun a drug that makes the bronchial tubes wider, used in the treatment of asthma

amiodarone /'æmɪ'bɒrəʊn/ noun a drug that makes the blood vessels wider, used in the treatment of irregular heartbeat

amitosis /'æmɪ'təʊsɪs/ noun the multiplication of a cell by splitting of the nucleus

amitriptyline /'æmɪ't्रɪptɪli:n/ noun a sedative drug used to treat depression and persistent pain

amlodipine /'æm'lɒdɪpi:n/ noun a drug that helps to control the movement of calcium ions through cell membranes. It is used to treat hypertension and angina.

ammonia /'ə:mōniə/ noun a gas with a strong smell, a compound of nitrogen and hydrogen, which is a usual product of human metabolism

ammonium /'ə:mōniəm/ noun an ion formed from ammonia

amnesia /'ə:m'ni:ziə/ noun loss of memory

amnia /'æmnɪə/ plural of **amnion**

amnihook /'æmnihök/ *noun* a hooked instrument used to induce labour by pulling on the amniotic sac

amnio /'æmniəʊ/ *noun* same as **amniocentesis** (*informal*)

amniocentesis /,æmniəʊsən'tɪ:sɪs/ *noun* a procedure which involves taking a test sample of the amniotic fluid during pregnancy using a hollow needle and syringe

COMMENT: Amniocentesis and amnioscopy, the examination and testing of the amniotic fluid, give information about possible congenital disorders in the fetus as well as the sex of the unborn baby.

amniography /,æmni'ɒgrəfi/ *noun* an X-ray of the womb

amnion /'æmniən/ *noun* the thin sac containing the amniotic fluid which covers an unborn baby in the uterus. Also called **amniotic sac**

amioscope /'æmniəskəʊp/ *noun* an instrument used to examine a fetus through the cervical channel, before the amniotic sac is broken

amnioscopy /,æmni'ɒskəpi/ *noun* an examination of the amniotic fluid during pregnancy

amniotic /,æmni'ɒtɪk/ *adjective* relating to the amnion

amniotic cavity /,æmniotɪk 'kævɪtɪ/ *noun* a space formed by the amnion, full of amniotic fluid

amniotic fluid /,æmniotɪk 'flu:ɪd/ *noun* the fluid contained in the amnion which surrounds an unborn baby

amniotic sac /,æmniotɪk 'sæk/ *noun* same as **amnion**

amniotomy /,æmni'ɒtəmi/ *noun* a puncture of the amnion to help induce labour

amoeba /ə'mi:bə/ *noun* a form of animal life, made up of a single cell (NOTE: The plural is amoebae.)

amoebiasis /,æmni'bæɪəsɪs/ *noun* an infection caused by amoebae which can result in amoebic dysentery in the large intestine (intestinal amoebiasis) and sometimes affects the lungs (pulmonary amoebiasis)

amoebic /ə'mi:bɪk/ *adjective* relating to or caused by amoebae

amoebic dysentery /ə'mi:bɪk 'dɪs(ə)ntri/ *noun* a form of dysentery mainly found in tropical areas that is caused by *Entamoeba histolytica* which enters the body through contaminated water or unwashed food

amoebicide /ə'mi:bɪsaɪd/ *noun* a substance which kills amoebae

amorphous /ə'mɔ:fəs/ *adjective* with no regular shape

amoxicillin /ə'mɒksɪsɪlɪn/ *noun* an antibiotic

Amoxil /ə'mɒksɪl/ a trade name for amoxicillin

amphetamine /æm'fetəmī:n/ *noun* same as **amfetamine**

amphetamine abuse /æm'fetəmī:n ə,bju:sɪ/ *noun* the repeated addictive use of amphetamines which in the end affects the mental faculties

amphiarthrosis /,æmfɪə:'θrəʊsɪs/ *noun* a joint which only has limited movement, e.g. one of the joints in the spine

amphotericin /,æmfəʊ'terɪsɪn/ *noun* an antifungal agent, used against *Candida*

ampicillin /,æmpɪ'sɪlɪn/ *noun* a type of penicillin, used as an antibiotic

ampoule /'æmpu:l/, **ampule** /'æmpju:l/ *noun* a small glass container, closed at the neck, used to contain sterile drugs for use in injections

ampulla /æm'pʊlə/ *noun* a swelling of a canal or duct, shaped like a bottle (NOTE: The plural is **ampullae**.)

amputate /'æmpjʊteɪt/ *verb* to remove a limb or part of a limb in a surgical operation ○ *The patient's leg needs to be amputated below the knee.* ○ *After gangrene set in, surgeons had to amputate her toes.*

amputation /,æmpjʊ'teɪʃ(ə)n/ *noun* the surgical removal of a limb or part of a limb

amputee /,æmpjʊ'ti:/ *noun* someone who has had a limb or part of a limb removed in a surgical operation

amygdala /'æmgdələ/ *noun* an almond-shaped body in the brain, at the end of the caudate nucleus of the thalamus. Also called **amygdaloid body**

amygdaloid body /'æmgdələɪd ˌbɒdi/ *noun* same as **amygdala**

amyl- /æm(ə)l/ *prefix* referring to starch

amylase /'æməlæz/ *noun* an enzyme which converts starch into maltose

amyl nitrate /,æm(ə)l 'naitrətɪ/ *noun* a drug used to reduce blood pressure (NOTE: Amyl nitrate is also used as a recreational drug.)

amyloid /'æmɪləɪd/ *noun* a waxy protein that forms in some tissues during the development of various diseases, e.g. forming disc-shaped plaques in the brain in Alzheimer's disease

amyloid disease /'æmɪləɪd dɪ,zɪ:z/ *noun* same as **amyloidosis**

amyloidosis /,æmɪləɪd'dəʊsɪs/ *noun* a disease of the kidneys and liver, where amyloid develops in the tissues. Also called **amyloid disease**

amyloid precursor protein /,æmɪləɪd pri 'kɜ:sə ,prə'trəʊtɪn/ *noun* a compound found in cell membranes from which beta amyloid is derived. A mutation of the gene causes early-onset Alzheimer's disease in a few families.

amylopsin /,æmɪ'lɒpsɪn/ *noun* an enzyme which converts starch into maltose

amylose /'æmɪləʊz/ *noun* a carbohydrate of starch

amyotonia /,eɪmaɪə'təʊniə/ *noun* a lack of muscle tone

amyotonia congenita /,eɪmətənɪətənɪə kən'dʒenɪtə/ *noun* a congenital disease of children in which the muscles lack tone. Also called **floppy baby syndrome**

amyotrophia /eɪ'maɪə'trəʊfiə/ *noun* a condition in which a muscle wastes away

amyotrophic lateral sclerosis /eɪ'maɪətrɒfɪk 'lætərə(ł) sklə'rəʊsɪs/ *noun* a motor neurone disease in which the limbs twitch and the muscles gradually waste away. Also called **Gehrig's disease**. Abbr **ALS**

amyotrophy /eɪ'maɪə'trəfɪ/ same as **amyotrophia**

an- /æn/ *prefix* same as **ana-** (*used before vowels*)

ana- /ænə/ *prefix* without or lacking

anabolic /,ænə'bɒlɪk/ *adjective* referring to a substance which synthesises protein

'...insulin, secreted by the islets of Langerhans, is the body's major anabolic hormone, regulating the metabolism of all body fuels and substrates' [Nursing Times]

anabolic steroid /ænə'bɒlɪk 'stɪərɔɪd/ *noun* a drug which encourages the synthesis of new living tissue, especially muscle, from nutrients

anabolism /æ'næbəlɪz(ə)m/ *noun* the process of building up complex chemical substances on the basis of simpler ones

anacrotism /'a'nakrətɪz(ə)m/ *noun* a second stroke in the pulse

anaemia /'a'ni:mɪə/ *noun* a condition in which the level of red blood cells is less than usual or where the haemoglobin is less, making it more difficult for the blood to carry oxygen. The symptoms are tiredness and pale colour, especially pale lips, nails and the inside of the eyelids. The condition can be fatal if not treated. (NOTE: The US spelling is **anemia**.)

anaemic /'a'ni:mɪk/ *adjective* having anaemia (NOTE: The US spelling is **anemic**.)

anaerobe /'ænərəʊb, æn'eərəʊb/ *noun* a microorganism which lives without oxygen, e.g. the tetanus bacillus

anaerobic /,ænə'rəʊbɪk/ *adjective* 1. not needing oxygen for metabolism ○ *anaerobic bacteria* 2. without oxygen ○ *anaerobic conditions*

anaesthesia /,ænəs'θi:ziə/ *noun* 1. a state, deliberately produced in a patient by a medical procedure, in which he or she can feel no pain, either in a part or in the whole of the body 2. a loss of feeling caused by damage to nerves (NOTE: The US spelling is **anesthesia**.)

anaesthesiologist /,ænəs'θi:zɪ'lɒðəzɪst/ *noun* US a specialist in the study of anaesthetics

anaesthetic /,ænəs'θetɪk/ *adjective* inducing loss of feeling ■ *noun* a substance given to someone to remove feeling, so that he or she can undergo an operation without pain

'Spinal and epidural anaesthetics can also cause gross vasodilation, leading to heat loss' [British Journal of Nursing]

anaesthetic induction /,ænəsθetɪk ɪn'dʌkʃən/ *noun* a method of inducing anaesthesia in a patient

anaesthetic risk /,ænəsθetɪk 'rɪsk/ *noun* the risk that an anaesthetic may cause serious unwanted side effects

anaesthetise /'a'ni:sθətaɪz/, **anaesthetize** *verb* to produce a loss of feeling in a person or in part of the person's body

anaesthetist /'a'ni:sθətɪst/ *noun* a specialist who administers anaesthetics

anal /'eɪn(ə)l/ *adjective* relating to the anus

anal canal /'eɪn(ə)l kə'næl/ *noun* a passage leading from the rectum to the anus

analeptic /,ænə'leptɪk/ *noun* a drug used to make someone regain consciousness or to stimulate a patient

anal fissure /'eɪn(ə)l 'fɪsʃə/ *noun* a crack in the mucous membrane of the wall of the anal canal

anal fistula /'eɪn(ə)l 'fɪstjʊlə/ *noun* a fistula which develops between the rectum and the outside of the body after an abscess near the anus. Also called **fistula in ano**

analgesia /,æn(ə)l'dʒi:ziə/ *noun* a reduction of the feeling of pain without loss of consciousness

analgesic /,æn(ə)l'dʒi:zɪk/ *adjective* relating to analgesia ■ *noun* a painkilling drug which produces analgesia and reduces pyrexia

COMMENT: There are two types of analgesic: non-opioid such as paracetamol and aspirin (acetylsalicylic acid), and opioid such as codeine phosphate. Opioid analgesics are used for severe pain relief such as in terminal care, as cough suppressants and to reduce gut motility in cases of diarrhoea. Analgesics are commonly used as local anaesthetics, for example in dentistry.

anally /'eɪn(ə)li/ *adverb* through the anus ○ *The patient is not able to pass faeces anally.*

anal passage /,eɪn(ə)l 'pæsɪdʒ/ *noun* same as anus

anal sphincter /,eɪn(ə)l 'sfɪŋktə/ *noun* a strong ring of muscle which closes the anus

anal triangle /,eɪn(ə)l 'traɪæŋg(ə)l/ *noun* the posterior part of the perineum. Also called **rectal triangle**

analyse /'ænəlaɪz/ *verb* to examine something in detail ○ *The laboratory is analysing the blood samples.* ○ *When the food was analysed it was found to contain traces of bacteria.* (NOTE: The US spelling is **analyze**.)

analyser /'ænəlaɪzə/ *noun* a machine which analyses blood or tissue samples automatically (NOTE: The US spelling is **analyzer**.)

analysis /'ænələsɪs/ *noun* an examination of a substance to find out what it is made of (NOTE: The plural is **analyses**.)

analyst /'ænəlist/ *noun* 1. a person who examines samples of substances or tissue, to find out what they are made of 2. same as **psycho-analyst**

anamnesis /,ænæm'ni:sɪs/ *noun* someone's medical history, especially given in their own words

anamnestic /,ænæm'nestɪk/ *adjective* showing a secondary immunological response to an antigen some time after immunisation
anaphase /'ænəfeɪz/ *noun* a stage in cell division, after the metaphase and before the telophase

anaphylactic /,ænəfɪ'læktɪk/ *adjective* relating to or caused by extreme sensitivity to a substance

anaphylactic shock /,ænəfɪlæktɪk 'ʃɒk/ *noun* a sudden severe reaction, which can be fatal, to something such as an injected substance or a bee sting

anaphylaxis /,ænəfɪ'læksɪs/ *noun* 1. extreme sensitivity to a substance introduced into the body 2. same as **anaphylactic shock**

anaplasia /,ænæ'plæziə/ *noun* the loss of a cell's typical characteristics, caused by cancer

anaplastic /,ænæ'plæstɪk/ *adjective* referring to anaplasia

anaplastic neoplasm /,ænəplæstɪk 'ni:əoplæz(ə)m/ *noun* a cancer where the cells are not similar to those of the tissue from which they come

anarthria /æn'ɑ:tθriə/ *noun* the loss of the ability to speak words properly

anasarca /,ænə'sa:kə/ *noun* the presence of fluid in the body tissues. ☐ **oedema**

anastomose /'ænæstəməuz/ *verb* to join two blood vessels or tubular structures together

anastomosis /,ænæstə'məʊsɪs/ *noun* a connection made between two blood vessels or tubular structures, either naturally or by surgery

anat. abbr 1. anatomical 2. anatomy
anatomical /,ænæ'tɒmɪk(ə)l/ *adjective* relating to the anatomy ○ *the anatomical features of a fetus*

anatomical position /,ænætɒmɪk(ə)l pə'zɪʃ(ə)n/ *noun* in anatomy, the standard position of the body from which all directions and positions are derived. The body is assumed to be standing, with the feet together, the arms to the side, and the head, eyes and palms facing forward.

anatomy /'ænætəmi/ *noun* 1. the structure, especially the internal structure, of the body 2. the branch of science that studies the structure of the bodies of humans, animals and plants ○ *They are studying anatomy.* □ **the anatomy of a bone** a description of the structure and shape of a bone

ancillary staff /æn'sɪləri stu:f/ *noun* the staff in a hospital who are not administrators,

doctors or nurses, e.g. cleaners, porters, kitchen staff

ancillary worker /æn'sɪlərɪ ,wɜ:kə/ *noun* someone who does a job for patients such cooking or cleaning which is supplementary to medical care

anconeus /æŋ'kɔnɪəs/ *noun* a small triangular muscle at the back of the elbow

Ancylostoma /,ænsɪlə'stəʊmə/ *noun* a parasitic worm in the intestine which holds onto the wall of the intestine with its teeth and lives on the blood and protein of the carrier

ancylostomiasis /,ænsɪləʊstə'maɪəsɪs/ *noun* a disease of which the symptoms are weakness and anaemia, caused by a hook-worm which lives on the blood of the carrier. In severe cases the person may die.

androgen /'ændrədʒən/ *noun* a male sex hormone, testosterone or androsterone, which increases the male characteristics of the body

androgenic /,ændrə'dʒenɪk/ *adjective* producing male characteristics

androgynous /,æn'drɒdʒənəs/ *adjective* same as **hermaphrodite**

andrology /æn'drɒlədʒi/ *noun* the study of male sexual characteristics and subjects such as impotence, infertility and the male menopause

androstosterone /æn'drɒstərəʊn/ *noun* one of the male sex hormones

anemia /ə'ni:miə/ *noun* US same as **anaemia**

anencephalous /,ænen'kefələs/ *adjective* having no brain

anencephaly /,ænen'kefəlɪ/ *noun* the absence of a brain, which causes a fetus to die a few hours after birth

anergy /'ænədʒi/ *noun* 1. a state of severe weakness and lack of energy 2. lack of immunity

anesthesia, etc /,ænəs'θi:zə/ US same as **anaesthesia, etc**

aneurine /'æn'juərɪn/ *noun* same as **Vitamin B₁**

aneurysm /'ænjərɪz(ə)m/ *noun* a swelling caused by the weakening of the wall of a blood vessel

COMMENT: Aneurysm usually occurs in the wall of the aorta, 'aortic aneurysm', and is often due to atherosclerosis, and sometimes to syphilis.

angi- /ændʒi/ *prefix* same as **angio-** (used before vowels)

angiectasis /,ændʒi'ektəsɪs/ *noun* a swelling of the blood vessels

angitis /,ændʒi'aitɪs/ *noun* an inflammation of a blood vessel

angina /æn'dʒaɪnə/ *noun* a pain in the chest following exercise or eating, which is caused by an inadequate supply of blood to the heart muscles because of narrowing of the arteries.

It is commonly treated with nitrates or calcium channel blocker drugs.

anginal /æn'dʒaɪnl/ *adjective* referring to angina □ *He suffered anginal pains.*

angina pectoris /æn,dʒaɪnə 'pektərɪs/ *noun* same as **angina**

angio- /ændʒiəʊl/ *prefix* referring to a blood vessel

angiogram /,ændʒiəʊ'ka:diəgræm/ *noun* a series of pictures resulting from angiography

angiography /,ændʒiə'ɒku:di'bgrəfi/ *noun* an X-ray examination of the cardiac system after injection with an opaque dye so that the organs show up clearly on the film

angiomyolysis /,ændʒiə'ɒdɪs'pleɪzɪə/ *noun* a condition where the blood vessels in the colon dilate, resulting in loss of blood

angiogenesis /,ændʒiəʊ'dʒenəsɪs/ *noun* the formation of new blood vessels, e.g. in an embryo or as a result of a tumour

angiogram /'ændʒiəʊgram/ *noun* an X-ray picture of blood vessels

angiography /,ændʒi'i'bgrəfi/ *noun* an X-ray examination of blood vessels after injection with an opaque dye so that they show up clearly on the film

angiology /,ændʒi'i'ɒlədʒi/ *noun* the branch of medicine which deals with blood vessels and the lymphatic system

angioma /,ændʒi'i'əʊmə/ *noun* a benign tumour formed of blood vessels, e.g. a naevus

angioneurotic oedema /,ændʒiə'ɒnju,rɒtɪk'ɪ:dɪ:mə/ *noun* a sudden accumulation of liquid under the skin, similar to nettle rash

angiopathy /,ændʒi'i'ɒpəθi/ *noun* a disease of vessels such as blood and lymphatic vessels

angioplasty /'ændʒiəʊ,plæsti/ *noun* plastic surgery to repair a blood vessel, e.g. a narrowed coronary artery

angiosarcoma /,ændʒiə'səʊ:kəmə/ *noun* a malignant tumour in a blood vessel

angioscope /'ændʒiəʊskəʊp/ *noun* a long thin surgical instrument threaded into a patient's blood vessels to allow surgeons to observe and perform operations without making large incisions

angiospasm /'ændʒiəʊspæz(ə)m/ *noun* a spasm which constricts blood vessels

angiotensin /'ændʒiə'tensɪn/ *noun* a polypeptide which affects blood pressure by causing vasoconstriction and increasing extracellular volume

COMMENT: The precursor protein, alpha-2-globulin is converted to angiotensin I, which is inactive. A converting enzyme changes angiotensin I into the active form, angiotensin II. Drugs which block the conversion to the active form, ACE inhibitors, are used in the treatment of hypertension and heart failure.

angiotensin-converting enzyme inhibitor /,ændʒiə'tensɪn kən,vɜ:tɪŋ 'enzaim ɪn

,hɪbɪtə/ *noun* a drug which inhibits the conversion of angiotensin I to angiotensin II, which constricts arteries, used in the treatment of hypertension and heart failure. Also called **ACE inhibitor** (NOTE: ACE inhibitors have names ending in -pril: **captopril**.)

COMMENT: Contraindications include use with diuretics, when hypotension can occur and should be avoided in patients with renovascular disease.

angle-closure glaucoma /,æŋgəl,k्लəʊzəgɪlɔ:'kəʊmə/ *noun* an unusually high pressure of fluid inside the eyeball caused by pressure of the iris against the lens, trapping the aqueous humour. Also called **acute glaucoma**

angular stomatitis /,æŋgjulə, stəʊmə'taɪtɪs/ *noun* a condition of the lips, mouth and cheeks characterised by cracks and fissures and caused by a bacterial infection

angular vein /'ængjulə veɪn/ *noun* a vein which continues the facial vein at the side of the nose

anhedonia /,ænhrɪ'dəʊniə/ *noun* a psychological condition in which a person is unable to enjoy all the experiences that most people enjoy

anhidrosis /,ænhi'drəʊsɪs/ *noun* a condition in which sweating by the body is reduced or stops completely

anhidrotic /,ænhi'drɒtɪk/ *adjective* referring to a drug which reduces sweating

anhydramia /,ænhaɪ'dri:miə/ *noun* a lack of sufficient fluid in the blood

anhydrous /æn'haidrəs/ *adjective* referring to compounds or crystals that contain no water

anhydrous alcohol /,ænhaɪdrəs 'ælkəhɒl/ *noun* same as **absolute alcohol**

anidrosis /,ænɪ'drəʊsɪs/ *noun* same as **anhidrosis**

aniridia /,ænɪ'rɪdiə/ *noun* a congenital absence of the iris

anisocytosis /,ænaisəʊsəsɪt'əʊsɪs/ *noun* a variation in size of red blood cells

anisomelia /,ænaisəmə'mi:liə/ *noun* a difference in length of the legs

anisometropia /,ænaisəʊmə'trəʊpiə/ *noun* a state where the refraction in the two eyes is different

ankle /'æŋkəl/ *noun* the part of the body where the foot is connected to the leg □ **he twisted his ankle, he sprained his ankle** he hurt it by stretching it or bending it

anklebone /'æŋkəl,bəʊn/ *noun* same as **talus**

ankle jerk /'æŋkəl dʒɔ:kl/ *noun* a sudden jerk as a reflex action of the foot when the back of the ankle is tapped

ankle joint /'æŋkəl dʒoint/ *noun* a joint which connects the bones of the lower leg (the tibia and fibula) to the talus

ankyloblepharon /æŋkɪləʊ'blefərɒn/ *noun* a state where the edges of the eyelids are stuck together

ankylose /æŋkɪləʊz/ *verb* to fuse together, or to cause bones to fuse together

ankylosing spondylitis /æŋkɪləʊzɪŋ spɒndɪ'lætɪs/ *noun* a condition occurring more frequently in young men, in which the vertebrae and sacroiliac joints are inflamed and become stiff

ankylosis /æŋkɪl'əʊsɪs/ *noun* a condition in which the bones of a joint fuse together

Ankylostoma /æŋkɪl'stəʊmə/ *noun* same as *Ancylostoma*

ankylostomiasis /æŋkɪləʊstə'maɪəsɪs/ *noun* same as *ancylostomiasis*

ANLL *abbr* acute nonlymphocytic leukaemia

annular /'ænjurəl/ *adjective* shaped like a ring

annulus /'ænjuləs/ *noun* a structure shaped like a ring

ano- /ænəʊ/ *prefix* referring to the anus

anococcygeal /ænəkɒksɪ'dʒiːəl/ *adjective* referring to both the anus and coccyx

anodyne /'ænədæɪn/ *noun* a drug which reduces pain, e.g. aspirin or codeine ■ *adjective* referring to drugs that bring relief from pain or discomfort

anomalous /ə'nɒmələs/ *adjective* different from what is usual

anomalous pulmonary venous drainage /ə,nɒmələs, pʌlmən(ə)rɪ 'vi:nəs, dreɪnɪŋz/ *noun* a condition in which oxygenated blood from the lungs drains into the right atrium instead of the left

anomaly /ə'nɒməli/ *noun* something which is different from the usual

anomie /'ænəmi/ *noun* a psychological condition in which a person develops the feeling of not being part of the everyday world, and behaves as though they do not have any supporting social or moral framework

anonychia /,ænə'nɪkiə/ *noun* a congenital absence of one or more nails

anopheles /ə'noflə:z/ *noun* a mosquito which carries the malaria parasite

anoplasty /eɪnəʊplæsti/ *noun* surgery to repair the anus, as in treating haemorrhoids

anorchism /æn'ɔ:kɪz(ə)m/ *noun* a congenital absence of testicles

anorectal /eɪnəʊ'rekt(ə)l/ *adjective* referring to both the anus and rectum

anorectic /,ænə'rektɪk/ *noun* a medicine that suppresses the appetite ■ *adjective* relating to life-threatening loss of appetite

anorexia /,ænə'reksiə/ *noun* loss of appetite

anorexia nervosa /ænə'reksɪə nɔ:vəsə/ *noun* a psychological condition, usually found in girls and young women, in which a person refuses to eat because of a fear of becoming fat

anorexic /,ænə'reksɪk/ *adjective* 1. referring to anorexia 2. having anorexia ○ *The school*

has developed a programme of counselling for anorexic students.

anosmia /æn'ɒzmiə/ *noun* the lack of the sense of smell

anovulant /æn'ɒvju:lənt/ *noun* a drug that prevents ovulation, e.g. a birth-control pill

anovular /æn'ɒvju:lər/ *adjective* without an ovum

anovular bleeding /æn'ɒvju:lər 'blɪ:dɪŋ/ *noun* bleeding from the uterus when ovulation has not taken place

anovulation /æn'ɒvju'leɪʃ(ə)n/ *noun* a condition in which a woman does not ovulate and is therefore infertile

anoxaemia /ænɒk'si:miə/ *noun* a reduction of the amount of oxygen in the blood

anoxia /æn'ɒksiə/ *noun* a lack of oxygen in body tissue

anoxic /æn'ɒksɪk/ *adjective* referring to anoxia or lacking oxygen

anserina /,ænsə'rɪnə/ ♦ *cutis anserina*

antacid /ænt'æsɪd/ *adjective* preventing too much acid forming in the stomach or altering the amount of acid in the stomach ■ *noun* a substance that stops too much acid forming in the stomach, used in the treatment of gastrointestinal conditions such as ulcers, e.g. calcium carbonate or magnesium trisilicate

antagonism /æn'tægənɪz(ə)m/ *noun* 1. the opposing force that usually exists between pairs of muscles 2. the interaction between two or more chemical substances in the body that reduces the effect that each substance has individually

antagonist /æn'tægənɪst/ *adjective* 1. referring to a muscle which opposes another muscle in a movement 2. referring to a substance which opposes another substance ■ *noun* a substance which acts through specific receptors to block the action of another substance, but which has no observable physiological effect itself ○ *Atropine is a cholinergic antagonist and blocks the effects of acetylcholine.*

ante- /æntɪ/ *prefix* before

ante cibum /,æntɪ 'tʃɪbəm, ,æntɪ 'sɪbəm/ *adverb* full form of *a.c.*

anteflexion /,æntɪ'flekʃən/ *noun* the curving forward of an organ, e.g. the usual curvature of the uterus

antegrade amnesia /,æntɪg'reɪd æm 'ni:zɪə/ *noun* a form of memory loss relating to the things that happen after a traumatic event

antemortem /,æntɪ'mɔ:təm/ *noun* the period before death

antenatal /,æntɪ'nætɪ'lneɪt(ə)l/ *adjective* during the period between conception and childbirth

antenatal clinic /,æntɪ'nætɪ'lneɪt(ə)l ,klinɪk/ *noun* a clinic where expectant mothers are taught how to look after babies, do exercises and have medical checkups. Also called **maternity clinic**

antenatal diagnosis /,ænti'neɪt(ə)l ,daɪəg̩ 'nəʊsɪs/ *noun* a medical examination of a pregnant woman to see if the fetus is developing in the usual way. Also called **prenatal diagnosis**

antepartum /,ænti'pa:təm/ *noun* the period of three months before childbirth ■ *adjective* referring to the three months before childbirth **antepartum haemorrhage** /,ænti'pa:təm 'hemərɪdʒ/ *noun* bleeding from the vagina before labour. Abbr APH

anterior /æn'tiəriə/ *adjective* in front. Opposite **posterior**

anterior aspect /æn,tɪəriə 'æspekt/ *noun* a view of the front of the body, or of the front of part of the body. See illustration at **ANATOMICAL TERMS** in Supplement

anterior chamber /æn,tɪəriə 'tʃeɪmbə/ *noun* part of the aqueous chamber of the eye which is in front of the iris

anterior fontanelle /æn,tɪəriə fɔntə'nel/ *noun* the cartilage at the top of the head where the frontal bone joins the two parietals

anterior jugular /æn,tɪəriə 'dʒʌgjʊlə/ *noun* a small jugular vein in the neck

anterior nares /æn,tɪəriə 'neəri:z/ *plural noun* the two nostrils. Also called **external nares**

anterior superior iliac spine /æn,tɪəriə su,pɪəriə 'iliæk spæɪn/ *noun* a projection at the front end of the iliac crest of the pelvis

anterior synechia /æn,tɪəriə sɪ'nekiə/ *noun* a condition of the eye, where the iris sticks to the cornea

anterograde amnesia /,æntərəʊg'reɪd æm 'ni:ziə/ *noun* a brain condition in which the person cannot remember things which happened recently

anteversion /,ænti'vɜ:s(j(ə)n/ *noun* the tilting forward of an organ, whether usual, as of the uterus, or unusual

anthelmintic /,ænθəl'mɪntɪk/ *noun* a substance which removes worms from the intestine ■ *adjective* removing worms from the intestine

anthracosis /,ænθrə'kəʊsɪs/ *noun* a lung disease caused by breathing coal dust

anthrax /'ænθræks/ *noun* a disease of cattle and sheep which can be transmitted to humans

COMMENT: Caused by *Bacillus anthracis*, anthrax can be transmitted by touching infected skin, meat or other parts of an animal, including bone meal used as a fertiliser. It causes pustules on the skin or in the lungs, 'woolsorter's disease'.

anthrop- /,ænθrəp/ *prefix* referring to human beings

anthropometry /,ænθra'pɒmətri/ *noun* the study of human body measurements (NOTE: The uses of anthropometry include the design of ergonomic furniture and the examination and comparison of populations.)

anti-/ænti/ *prefix* against

antiallergenic /,æntiælə'dʒenɪk/ *adjective* referring to something such as a cosmetic which will not aggravate an allergy

antiarrhythmic /,æntiə'rɪðmɪk/ *adjective* referring to a drug which corrects an irregular heartbeat

antiasthmatic /,æntiæs'mætɪk/ *adjective* referring to a drug that is used to treat asthma

antibacterial /,æntibæk'tɪriəl/ *adjective* destroying bacteria

antibiogram /,ænti'baiəgræm/ *noun* a laboratory technique which establishes to what degree an organism is sensitive to an antibiotic

antibiotic /,æntibɪə'tɒtɪk/ *adjective* stopping the spread of bacteria ■ *noun* a drug which is developed from living substances and which stops the spread of bacteria, e.g. penicillin ○ *He was given a course of antibiotics.* ○ *Antibiotics have no effect against viral diseases.*

COMMENT: Penicillin is one of the commonest antibiotics, together with streptomycin, tetracycline, erythromycin and many others. Although antibiotics are widely and successfully used, new forms of bacteria have developed which are resistant to them.

antibody /'æntɪbɒdi/ *noun* a protein that is stimulated by the body to produce foreign substances such as bacteria, as part of an immune reaction ○ *Tests showed that he had antibodies in his blood.*

antibody-negative /,æntɪbɒdi 'negatɪv/ *adjective* showing none of a particular antibody in the blood ○ *The donor tested antibody-negative.*

antibody-positive /,æntɪbɒdi 'pozɪtɪv/ *adjective* showing the presence of particular antibodies in the blood ○ *The patient is HIV antibody-positive.*

anti-cancer drug /,ænti 'kænsə dræg/ *noun* a drug which can control or destroy cancer cells

anticholinergic /,æntikəʊlɪ'nɜ:dʒɪk/ *adjective* blocking nerve impulses which are part of the stress response ■ *noun* one of a group of drugs which are used to control stress

anticholinesterase /,æntikəʊlɪ'n'estəreɪz/ *noun* a substance which blocks nerve impulses by reducing the activity of the enzyme cholinesterase

anticoagulant /,æntikəʊ'ægjʊlənt/ *adjective* slowing or stopping the clotting of blood ■ *noun* a drug which slows down or stops the clotting of blood, used to prevent the formation of a thrombus (NOTE: Anticoagulants have names ending in -parin: **heparin**.)

anticonvulsant /,æntikən'vel's(ə)nt/ *adjective* acting to control convulsions ■ *noun* a drug used to control convulsions, as in the treatment of epilepsy, e.g. carbamazepine

anti-D /,ænti 'di/, **anti-D gamma-globulin** /,ænti ,di:, ,gæmə 'globjʊlɪn/ *noun* Rh D im-

munoglobulin, used to treat pregnant women who develop antibodies when the mother is Rh-negative and the fetus is Rh-positive

antidepressant /,æntidi'pres(ə)nt/ *adjective* acting to relieve depression ■ *noun* a drug used to relieve depression by stimulating the mood of a depressed person. Examples are tricyclic antidepressants, selective serotonin re-uptake inhibitors and monoamine oxidase inhibitors.

antidiabetic /,æntidaiə'tetik/ *noun* a drug used in the treatment of diabetes ■ *adjective* referring to an antidiabetic drug

antidiarrhoeal /,æntidaɪə'rɪ:əl/ *noun* a drug used in the treatment of diarrhoea ■ *adjective* referring to an antidiarrhoeal drug (NOTE: [all senses] The US spelling is **antidiarrheal**.)

anti-D immunoglobulin /ænti ,di: im jʊnəʊ'glɒbjʊlɪn/ *noun* immunoglobulin administered to Rh-negative mothers after the birth of an Rh-positive baby, to prevent haemolytic disease of the newborn in the next pregnancy

antidiuretic /,æntidai̯rɔ:retik/ *noun* a substance which stops the production of excessive amounts of urine ○ *hormones which have an antidiuretic effect on the kidneys* ■ *adjective* preventing the excessive production of urine

anti-diuretic hormone /,æntidai̯rɔ:,retik 'hɔ:mən/ *noun* a hormone secreted by the posterior lobe of the pituitary gland which acts on the kidneys to regulate the quantity of salt in body fluids and the amount of urine excreted by the kidneys. Also called **vasopressin**

antidote /'æntɪdəut/ *noun* a substance which counteracts the effect of a poison ○ *There is no satisfactory antidote to cyanide.*

antiembolic /,ænti'embolɪk/ *adjective* preventing embolism

antiemetic /,ænti'emetɪk/ *noun* a drug which prevents vomiting ■ *adjective* acting to prevent vomiting

antiepileptic drug /,æntiepi'lɛptɪk dræg/ *noun* a drug used in the treatment of epilepsy and convulsions, e.g. carbamazepine

antifibrinolytic /,æntifaɪbrɪnə'lɪtɪk/ *adjective* acting to reduce fibrosis

antifungal /,ænti'fʌŋgəl/ *adjective* referring to a substance which kills or controls fungal and yeast infections, e.g. candida and ringworm (NOTE: Antifungal drugs have names ending in **-conazole**: **fluconazole**.)

antigen /'æntɪdʒən/ *noun* a substance that stimulates the body to produce antibodies, e.g. a protein on the surface of a cell or microorganism

antigenic /,æntɪ'dʒenɪk/ *adjective* referring to a substance which stimulates the formation of antibodies

antihaemophilic factor /,æntihī:mə'fɪlɪk ,fæktə/ *noun* factor VIII, used to encourage blood-clotting in haemophiliacs. Abbr **AHF**

antihelminthic /,æntihel'minθɪk/ *noun* a drug used in the treatment of worm infections such as threadworm, hookworm or roundworm

antihistamine /,ænti'hɪstəmɪ:n/ *noun* a drug used to control the effects of an allergy which releases histamine, or reduces gastric acid in the stomach for the treatment of gastric ulcers (NOTE: Antihistamines have names ending in **-tidine**: **loratidine** for allergies, **cimetidine** for gastric ulcers.)

anti-HIV antibody /,ænti ,eɪtʃ aɪ vɪ: 'ænti bndɪ/ *noun* an antibody which attacks HIV

antihypertensive /,æntihaɪpə'tensɪv/ *adjective* acting to reduce blood pressure ■ *noun* a drug used to reduce high blood pressure

anti-inflammatory /,ænti in'flæmət(ə)rɪ/ *adjective* referring to a drug which reduces inflammation

antilymphocytic serum /,æntilimfə'sʊ'sitɪk ,sɪrəm/ *noun* a serum used to produce immunosuppression in people undergoing transplant operations. Abbr **ALS**

antimalarial /,æntimə'leəriəl/ *noun* a drug used to treat malaria and in malarial prophylaxis ■ *adjective* treating or preventing malaria

antimetabolite /,æntimə'tæbəlaɪt/ *noun* a substance which can replace a cell metabolism, but which is not active

antimicrobial /,æntimə'krəʊbiəl/ *adjective* acting against microorganisms that cause disease

antimigraine /,ænti'maɪgrین/ *noun* a drug used in the treatment of migraine

antimitotic /,æntimai'totɪk/ *adjective* preventing the division of a cell by mitosis

antimuscarinic /,æntimaskə'rɪnɪk/ *adjective* referring to a drug which blocks acetylcholine receptors found on smooth muscle in the gut and eye

antimycotic /,æntimai'kɒtɪk/ *adjective* destroying fungi

antinauseant /,ænti'nɔ:zɪənt/ *adjective* referring to a drug which helps to suppress nausea

antioxidant /,ænti'oksɪd(ə)nt/ *noun* a substance which makes oxygen less damaging, e.g. in the body or in foods or plastics ○ **antioxidant vitamins**

antiperistalsis /,æntipər'i'sælsɪs/ *noun* a movement in the oesophagus or intestine which causes their contents to move in the opposite direction to usual peristalsis, so leading to vomiting

antiperspirant /,ænti'pɜ:sp(ə)rənt/ *noun* a substance which prevents sweating ■ *adjective* preventing sweating

antipruritic /æntipro'rɪtɪk/ *noun* a substance which prevents itching ■ *adjective* preventing itching

antipsychotic /æntisar'kɒtɪk/ *noun* a neuroleptic or major tranquilliser drug which calms disturbed people without causing sedation or confusion by blocking dopamine receptors in the brain

COMMENT: Extrapiramidal side-effects can occur from the use of antipsychotics, including Parkinsonian symptoms and restlessness.

antipyretic /æntipai'retɪk/ *noun* a drug which helps to reduce a fever ■ *adjective* reducing fever

anti-Rh body /ænti ə:r 'eɪtʃ bɒdi/ *noun* an antibody formed in a mother's blood in reaction to a Rhesus antigen in the blood of the fetus

antisepsis /ænti'septɪs/ *noun* a procedure intended to prevent sepsis

antiseptic /ænti'septɪk/ *adjective* preventing harmful microorganisms from spreading ○ *She gargled with an antiseptic mouthwash.* ■ *noun* a substance which prevents germs growing or spreading ○ *The nurse painted the wound with antiseptic.*

antisera /ænti'sɪərəm/ *noun* ♦ *serum* (NOTE: The plural is **antisera**.)

antisocial /ænti'səʊʃ(ə)l/ *adjective* referring to behaviour which is harmful to other people

antispasmodic /æntispæz'mɒdɪk/ *noun* a drug used to prevent spasms

antitetanus serum /ænti'tetənəs, sɪərəm/ *noun* a serum which protects a patient against tetanus. Abbr **ATS**

antithrombin /ænti'θrɒmbɪn/ *noun* a substance present in the blood which prevents clotting

antitoxic serum /ænti'tɒksɪk, sɪərəm/ *noun* an immunising agent, formed of serum taken from an animal which has developed antibodies to a disease, used to protect a person from that disease

antitoxin /ænti'tɒksɪn/ *noun* an antibody produced by the body to counteract a poison in the body

antitragus /ænti'treɪgəs/ *noun* a small projection on the outer ear opposite the tragus

antituberculous drug /æntɪtju'bɜ:kjʊləs dræg/ *noun* a drug used to treat tuberculosis, e.g. Isoniazid or rifampicin

antitussive /ænti'tʌsɪv/ *noun* a drug used to reduce coughing

antivenin /ænti'venɪn/, **antivenom** /ænti'venəm/, **antivenene** /ænti'venə'nɪ:n/ *noun* a substance which helps the body to fight the effects of a particular venom from a snake or insect bite

antiviral /ænti'veɪrəl/ *adjective* referring to a drug or treatment which stops or reduces the

damage caused by a virus ■ *noun* same as **antiviral drug**

antiviral drug /ænti'veɪrəl dræg/ *noun* a drug which is effective against a virus (NOTE: Antiviral drugs have names ending in **-ciclovir**.)

antra /'æntrə/ plural of **antrum**

antral /'æntrəl/ *adjective* referring to an antrum

antral puncture /,æntrəl 'pʌŋktʃə/ *noun* making a hole in the wall of the maxillary sinus to remove fluid

antrectomy /æn'trek्टəmɪ/ *noun* the surgical removal of an antrum in the stomach to prevent gastrin being formed

antroscopy /æn'trɒskəpi/ *noun* an examination of an antrum

antrostomy /æn'trɒstəmɪ/ *noun* a surgical operation to make an opening in the maxillary sinus to drain an antrum

antrum /'æntrəm/ *noun* any cavity inside the body, especially one in bone (NOTE: The plural is **antra**.)

anuria /æn'juəriə/ *noun* a condition in which the patient does not make urine, either because of a deficiency in the kidneys or because the urinary tract is blocked

anus /'eɪnəs/ *noun* a short passage after the rectum at the end of the alimentary canal, leading outside the body between the buttocks and through which faeces are passed. See illustration at **DIGESTIVE SYSTEM** in Supplement, **UROGENITAL SYSTEM (MALE)** in Supplement (NOTE: For other terms referring to the anus, see **anal** and words beginning with **ano-**.)

anvil /'ænvɪl/ *noun* same as **incus**

anxiety /æŋ'zaiəti/ *noun* the state of being very worried and afraid

anxiety disorder /æŋ'zaiəti dɪsɔ:də/ *noun* a mental disorder where someone is very worried and afraid, e.g. a phobia

anxiety neurosis /æŋ'zaiəti nju,rəʊsɪs/ *noun* a neurotic condition where the patient is anxious and has morbid fears

anxiolytic /æŋksɪə'lɪtɪk/ *noun* a drug used in the treatment of anxiety ■ *adjective* treating anxiety

anxious /æŋkʃəs/ *adjective* 1. very worried and afraid ○ *My sister is ill – I am anxious about her.* 2. eager ○ *She was anxious to get home. ○ I was anxious to see the doctor.*

aorta /eɪ'ɔ:tə/ *noun* the main artery in the body, which sends blood containing oxygen from the heart to other blood vessels around the body. See illustration at **HEART** in Supplement

COMMENT: The aorta is about 45 centimetres long. It leaves the left ventricle, rises where the carotid arteries branch off, then goes downwards through the abdomen and divides into the two iliac arteries. The aorta is the blood vessel which carries all arterial blood from the heart.

aortic /eɪr'ɔ:tɪk/ *adjective* relating to the aorta
aortic aneurysm /eɪr'ɔ:tɪk 'ænju:ri,z(ə)m/ *noun* a serious aneurysm of the aorta, associated with atherosclerosis

aortic arch /eɪr'ɔ:tɪk ɑ:tʃ/ *noun* a bend in the aorta which links the ascending aorta to the descending aorta

aortic hiatus /eɪr'ɔ:tɪk haɪ'etɪəs/ *noun* an opening in the diaphragm through which the aorta passes

aortic incompetence /eɪr'ɔ:tɪk 'ɪnkəmپɪٹ(ə)n̩s/ *noun* a condition in which the aortic valve does not close properly, causing regurgitation

aortic regurgitation /eɪr'ɔ:tɪk rɪ,gz:dʒɪ 'teɪʃ(ə)n/ *noun* a backward flow of blood caused by a malfunctioning aortic valve

aortic sinuses /eɪr'ɔ:tɪk 'sainəsɪz/ *plural noun* swellings in the aorta from which the coronary arteries lead back into the heart itself

aortic stenosis /eɪr'ɔ:tɪk ste'nəʊsɪs/ *noun* a condition in which the aortic valve is narrow, caused by rheumatic fever

aortic valve /eɪr'ɔ:tɪk 'vælv/ *noun* a valve with three flaps, situated at the opening into the aorta

aortitis /eɪr'ɔ:tɪs'taɪtɪs/ *noun* inflammation of the aorta

aortography /eɪr'ɔ:tɪs'toɡrəfi/ *noun* an X-ray examination of the aorta after an opaque substance has been injected into it

a.p. *adverb* before a meal. Full form *ante prandium*

apathetic /'æpə'θetɪk/ *adjective* referring to a person who takes no interest in anything

apathy /'æpəθi/ *noun* the condition of not being interested in anything, or of not wanting to do anything

aperient /ə'pɪrɪənt/ *noun* a substance which causes a bowel movement, e.g. a laxative or purgative ■ *adjective* causing a bowel movement

aperistalsis /eɪpər'ɪstælsɪs/ *noun* a lack of the peristaltic movement in the bowel

Apert's syndrome /'æpɜ:ts ,sɪnd्रəʊm/ *noun* a condition in which the skull grows tall and the lower part of the face is underdeveloped

aperture /'æpətʃə/ *noun* a hole

apex /eɪpeks/ *noun* 1. the top of the heart or lung 2. the end of the root of a tooth

apex beat /eɪpeks bi:t/ *noun* a heartbeat which can be felt if the hand is placed on the heart

Apgar score /'æpgə: skɔ:/ *noun* a method of judging the condition of a newborn baby in which the baby is given a maximum of two points on each of five criteria: colour of the skin, heartbeat, breathing, muscle tone and reaction to stimuli [Described 1952. After Virginia Apgar (1909–74), US anaesthesiologist.]

'...in this study, babies having an Apgar score of four or less had 100% mortality. The lower the Apgar score, the poorer the chance of survival' [Indian Journal of Medical Sciences]

APH abbr antepartum haemorrhage

aphagia /eɪ'feɪdʒɪə/ *noun* a condition in which a person is unable to swallow

aphakia /eɪ'feɪkiə/ *noun* the absence of the crystalline lens in the eye

aphakic /eɪ'feɪkɪk/ *adjective* referring to aphakia

aphasia /eɪ'feɪziə/ *noun* a condition in which a person is unable to speak or write, or to understand speech or writing because of damage to the brain centres controlling speech

apheresis /,æfə'rɪsɪs/ *noun* the transfusion of blood, from which some components have been removed, back into a patient

aphonia /eɪ'fəniə/ *noun* a condition in which a person is unable to make sounds

aphrodisiac /,æfrə'dɪziək/ *noun* a substance which increases sexual urges ■ *adjective* increasing sexual desire

aphtha /'æfθə/ *noun* a small white ulcer which appears in groups in the mouth in people who have the fungal condition thrush (NOTE: The plural is *aphthae*.)

aphthous stomatitis /,æfθəs ,stəʊmə 'taɪtɪs/ *noun* cancer sores which affect the mucous membrane in the mouth

aphthous ulcer /,æfθəs 'ʌlsə/ *noun* same as mouth ulcer

apical /'æpɪk(ə)l/ *adjective* situated at the top or tip of something

apical abscess /,æpɪk(ə)l 'æbses/ *noun* an abscess in the socket around the root of a tooth

apicectomy /,æpi'sektəmɪ/ *noun* the surgical removal of the root of a tooth

aplasia /eɪ'pleɪzɪə/ *noun* a lack of growth of tissue

aplastic /eɪ'plæstɪk/ *adjective* unable to develop new cells or tissue

aplastic anaemia /eɪ,plæstɪk ə'nɪ:mɪə/ *noun* anaemia caused by the bone marrow failing to form red blood cells

apnea /æp'nɪə/ *noun* US same as *apnoea*

apneusis /'æp'nju:sɪs/ *noun* a breathing pattern caused by brain damage, in which each breath is held for a long time

apnoea /æp'nɪə/ *noun* the stopping of breathing (NOTE: The US spelling is *apnea*.)

apnoeic /æp'nɪ:ɪk/ *adjective* where breathing has stopped (NOTE: The US spelling is *apneic*.)

apocrine /'æpəkrain/ *adjective* referring to apocrine glands

apocrine gland /'æpəkrain glænd/ *noun* a gland producing body odour where parts of the gland's cells break off with the secretions, e.g. a sweat gland

apocrinitis /,æpəkrɪ'naitɪs/ *noun* the formation of abscesses in the sweat glands

apolipoprotein E /ə,pɒlɪpəprəʊtɪn 'i:/ noun a compound found in three varieties which transport lipids within the cell and across cell membranes, the genes for two of which are linked with increased risk of Alzheimer's disease. Abbr **ApoE**

apomorphine /,æpə'mɔ:fɪ:n/ noun a substance that comes from morphine, used to make a person cough, sleep or be sick (NOTE: It is administered under the skin and is used to treat drug overdose, accidental poisoning and Parkinson's disease.)

aponeurosis /,æpə'nju'rəʊsɪs/ noun a band of tissue which attaches muscles to each other

apophyseal /æpə'fɪzɪəl/ adjective referring to apophysis

apophysis /'æpəfɪsɪs/ noun a growth of bone, not at a joint

apophysitis /æpəfɪ'saɪtɪs/ noun inflammation of an apophysis

apoplexy /'æpəpleksi/ noun same as cerebrovascular accident (dated)

apoptosis /ə'pɒptəsɪs/ noun a form of cell death that is necessary both to make room for new cells and to remove cells whose DNA has been damaged and which may become cancerous

APP abbr amyloid precursor protein

apparatus /,æpə'reɪtəs/ noun equipment used in a laboratory or hospital ○ *The hospital has installed new apparatus in the physiotherapy department.* ○ *The blood sample was tested in a special piece of apparatus.* (NOTE: No plural: use a piece of apparatus; some new apparatus.)

appendage /'æpendɪdʒ/ noun a part of the body or piece of tissue which hangs down from another part

appendectomy /,æpən'dektəmɪ/ noun US same as **appendicectomy**

appendiceal /,æpən'dɪsiəl/ adjective relating to the appendix ○ *There is a risk of appendiceal infection.*

appendiceal colic /,æpəndɪsiəl 'kɒlɪk/ noun colic caused by an inflamed appendix

appendicectomy /,æpən'dektəmɪ/ noun the surgical removal of an appendix

appendicitis /ə,pɛndɪ'saɪtɪs/ noun inflammation of the veriform appendix

COMMENT: Appendicitis takes several forms. In **acute appendicitis** there is a sudden attack of severe pain in the right lower part of the abdomen, accompanied by a fever. Acute appendicitis usually requires urgent surgery. In **chronic appendicitis**, the appendix is slightly inflamed, giving a dull pain or a feeling of indigestion over a period of time (a 'grumbling appendix').

appendicular /,æpən'dɪkjʊlər/ adjective 1. referring to body parts which are associated with the arms and legs 2. relating to the appendix

appendicular skeleton /æpən'dɪkjʊlər 'skelɪt(ə)n/ noun part of the skeleton, formed of the pelvic girdle, pectoral girdle and the bones of the arms and legs. Compare **axial skeleton**

appendix /ə'pendiks/ noun 1. a small tube attached to the caecum which serves no function but can become infected, causing appendicitis. Also called **vermiform appendix**. See illustration at **DIGESTIVE SYSTEM** in Supplement 2. any small tube or sac hanging from an organ

apperception /,æpə'septʃ(ə)n/ noun the conscious recognition of a stimulus

appetite /'æpitɪt/ noun the feeling of wanting food □ **good appetite** interest in eating food □ **loss of appetite** becoming uninterested in eating food

applanation tonometry /æplə,nɛf(ə)n tə 'nmotrɪ/ noun the measuring of the thickness of the cornea

appliance /ə'plaɪəns/ noun a piece of apparatus used on the body ○ *He was wearing a surgical appliance to support his neck.*

application /,æplɪk'keʃ(ə)n/ noun 1. the process of putting a medication or bandage on a body part ○ *Two applications of the lotion should be made each day.* 2. the process of asking officially for something, usually in writing ○ *If you are applying for the job, you must fill in an application form.*

applicator /'æplɪkɪtər/ noun an instrument for applying a substance

appointment /ə'pɔɪntmənt/ noun an arrangement to see someone at a particular time ○ *I have an appointment with the doctor or to see the doctor on Tuesday.*

apposition /,æpə'zɪʃ(ə)n/ noun 1. the relative positioning of two things 2. cell growth in which layers of new material are deposited on existing ones

appraisal /ə'preɪz(ə)l/ noun a judgment or opinion on something or somebody, especially one which decides how effective or useful they are

apprehension /,æpri'hɛnʃən/ noun a feeling of anxiety or fear that something bad or unpleasant will happen

approach /ə'prəʊʃ/ noun 1. a way of dealing with a problem ○ *The authority has adopted a radical approach to the problem of patient waiting lists.* 2. a method used by a surgeon when carrying out an operation

approve /ə'pru:v/ verb □ **to approve of something** to think that something is good ○ *I don't approve of patients staying in bed.* ○ *The Medical Council does not approve of this new treatment.*

apraxia /eɪ'præksɪə/ noun a condition in which someone is unable to make proper movements

apyprexia /,eɪpər'reksiə/ *noun* the absence of fever

apyprexiāl /,eɪpər'reksɪəl/ *adjective* no longer having any fever

aqua /'ækwə/ *noun* water

aqueduct /'ækwidʌkt/ *noun* a tube which carries fluid from one part of the body to another

aqueduct of Sylvius /,ækwidʌkt əv 'sɪlvɪəs/ *noun* same as **cerebral aqueduct**

aqueous /'eɪkwɪəs, 'ækwɪəs/ *adjective* referring to a solution made with water ■ *noun* a fluid in the eye between the lens and the cornea

aqueous humour /,eɪkwɪəs 'hju:mə/ *noun* same as **aqueous**. see illustration at **EYE** in Supplement

AR *abbr* attributable risk

arachidonic acid /ə,rækɪdɒnɪk 'æsɪd/ *noun* an essential fatty acid

arachnidism /'ə'ræknɪdɪz(ə)m/ *noun* poisoning by the bite of a spider

arachnodactyly /ə,ræknəʊ'dæktɪli/ *noun* a congenital condition in which the fingers and toes are long and thin

arachnoid /ə'ræknɔɪd/ *noun* the middle of the three membranes covering the brain. ♀ **dura mater**

arachnoiditis /ə,ræknɔɪ'daɪtɪs/ *noun* inflammation of the arachnoid

arachnoid mater /ə'ræknɔɪd ,meɪtə/, **arachnoid membrane** /ə'ræknɔɪd ,membreɪn/ *noun* same as **arachnoid**

arachnoid villi /ə,ræknɔɪd 'vɪlɪ/ *plural noun* villi in the arachnoid which absorb cerebrospinal fluid

arborisation /,a:bərəɪ'zeɪʃ(ə)n/, **arborization** *noun* the branching ends of some nerve fibres, of a motor nerve in muscle fibre or of venules, capillaries and arterioles

arbor vitae /,a:bə 'vaitɪ/ *noun* the structure of the cerebellum or of the uterus which looks like a tree

arbovirus /'a:bəvəs,vairəs/ *noun* a virus transmitted by blood-sucking insects

arc /a:k/ *noun* 1. a nerve pathway 2. part of a curved structure in the body

ARC *abbr* AIDS-related complex or AIDS-related condition

arc eye /'a:k aɪ/ *noun* temporary painful blindness caused by ultraviolet rays, especially in arc welding

arch /a:tʃ/ *noun* a curved part of the body, especially under the foot

arch- /a:tʃ/ *prefix* chief, most important

arcuate /'a:kjʊət/ *adjective* arched

arcuate artery /'a:kjʊət ,a:təri/ *noun* a curved artery in the foot or kidney

arcuate ligaments /'a:kjʊət ,a:təri/ *plural noun* three ligaments forming a fibrous arch to which the diaphragm is attached

arcus /'ɑ:kəs/ *noun* an arch

arcus senilis /,ɑ:kəs sə'nailɪs/ *noun* an opaque circle around the cornea of the eye which can develop in old age

ARDS /a:dz/ *abbr* adult respiratory distress syndrome

areata /,æri'eɪtə/ *noun* ♀ **alopecia areata**

areola /'ə:rɪ'ələ/ *noun* 1. the coloured part round a nipple 2. in the eye, the part of the iris closest to the pupil

areolar tissue /'ə:rɪ'ələ ,tɪ'sju:/ *noun* a type of connective tissue

arginine /'a:dʒɪnɪ:n/ *noun* an amino acid which helps the liver form urea

argon laser /'a:gɒn ,leɪzə/ *noun* a laser used in sealing blood vessels and destroying specific lesions

Argyll Robertson pupil /a:,garl 'rɒbətson ,pjʊ:p(ə)/ *noun* a condition of the eye, in which the lens is able to focus but the pupil does not react to light. It is a symptom of tertiary syphilis or of locomotor ataxia.

arboflaviosis /eɪ,raibəfleɪvɪ'nəʊsɪs/ *noun* a condition caused by not having enough vitamin B₂. The symptoms are very oily skin and hair and small cuts in the mouth.

arm /a:m/ *noun* the part of the body from the shoulder to the hand, formed of the upper arm, the elbow and the forearm ○ *She broke her arm* skiing. ○ *Lift your arms up above your head.* (NOTE: For other terms referring to the arm see words beginning with **brachi-**, **brachio-**.)

arm bones /'a:m bəonz/ *plural noun* the humerus, the ulna and the radius

armpit /'a:mpɪt/ *noun* the hollow under the shoulder, between the upper arm and the body, where the upper arm joins the shoulder, containing several important blood vessels, lymph nodes and sweat glands. Also called **axilla**

arm sling /'a:m slɪŋ/ *noun* a support for an injured arm that prevents it from moving by tying it against the chest

Arnold-Chiari malformation /,a:nəld ki 'eəri mælfɔ:,meɪʃ(ə)n/ *noun* a congenital condition in which the base of the skull is malformed, allowing parts of the cerebellum into the spinal canal [Described 1894. After Julius A. Arnold (1835–1915), Professor of Pathological Anatomy at Heidelberg, Germany, and Hans von Chiari (1851–1916), Professor of Pathological Anatomy at Strasbourg and later at Prague, Czech Republic.]

aromatherapist /ə,rəʊmə'θerəpɪst/ *noun* a person specialising in aromatherapy

aromatherapy /ə,rəʊmə'θerəpi/ *noun* treatment to relieve tension and promote wellbeing in which fragrant oils and creams containing plant extracts are massaged into the skin

arousal /ə'raʊz(ə)/ *noun* 1. feelings and physical signs of sexual desire 2. the act of

waking up from sleep, unconsciousness or a drowsy state

arrector pili /ə,rek'tər 'pailə ,mʌs(ə)/ noun a small muscle which contracts and makes the hair on the skin stand up when someone is cold or afraid

arrest /ə'rest/ noun the stopping of a bodily function. ◊ **cardiac arrest**

arrhythmia /ə'rɪðmɪə/ noun a variation in the rhythm of the heartbeat

'Cardiovascular effects may include atrial arrhythmias but at 30°C there is the possibility of spontaneous ventricular fibrillation' [British Journal of Nursing]

arrhythmic /ə'rɪðmɪk/ adjective (of a heart-beat or breathing) rhythmically irregular. ◊ **antiarrhythmic**

arsenic /'ɑ:snɪk/ noun a chemical element which forms poisonous compounds such as arsenic trioxide and which was formerly used in some medicines (NOTE: The chemical symbol is As.)

ART abbr assisted reproductive technology

artefact /'ɑ:tɪfækt/ noun something which is made or introduced artificially

arter- /ə:tə/ prefix same as **arterio-** (used before vowels)

arterial /ə:'tɪəriəl/ adjective relating to arteries □ **arterial supply to the brain** the supply of blood to the brain by the internal carotid arteries and the vertebral arteries

arterial bleeding /ə:,tɪəriəl 'bli:dɪŋ/ noun bleeding from an artery

arterial block /ə:'tɪəriəl blɒk/ noun the blocking of an artery by a blood clot

arterial blood /ə:'tɪəriəl blæd/ noun same as oxygenated blood

arterial haemorrhage /ə:,tɪəriəl 'hem(ə)rɪdʒ/ noun a haemorrhage of bright red blood from an artery

arterectomy /ə:,tɪəri'ektəmi/ noun the surgical removal of an artery or part of an artery

arterio- /ə:tɪəriəu/ prefix referring to arteries

arteriogram /ə:'tɪəriəgræm/ noun an X-ray photograph of an artery, taken after injection with an opaque dye

arteriography /ə:,tɪəri'ɒgrəfi/ noun the work of taking X-ray photographs of arteries after injection with an opaque dye

arteriole /ə:tɪəriələ/ noun a very small artery

arteriopathy /ə:,tɪəri'ɒpəθi/ noun a disease of an artery

arterioplasty /ə:'tɪəriəplæsti/ noun plastic surgery to make good a damaged or blocked artery

arteriorrhaphy /ə:,tɪəri'ɔ:rəfɪ/ noun the act of stitching an artery

arteriosclerosis /ə:,tɪəriəsklə'rəʊsɪs/ noun the arterial disease atherosclerosis (dated)

arteriosus /ə:,tɪəri'əʊsəs/ noun ♀ **ductus arteriosus**

arteriotomy /ə:,tɪəri'ɒtəmi/ noun a puncture made in the wall of an artery

arteriovenous /ə:,tɪəriəv'vi:nəs/ adjective referring to both an artery and a vein

arteritis /ə:tə'raɪtɪs/ noun inflammation of the walls of an artery

artery /ə:təri/ noun a blood vessel taking blood from the heart to the tissues of the body

COMMENT: In most arteries the blood has been oxygenated in the lungs and is bright red in colour. In the pulmonary artery, the blood is deoxygenated and so is darker. The arterial system begins with the aorta which leaves the heart and from which all the arteries branch.

arthr- /ə:θrə/ prefix same as **arthro-** (used before vowels)

arthralgia /ə:'θrældʒə/ noun pain in a joint

arthrectomy /ə:'θrektəmɪ/ noun the surgical removal of a joint

arthritic /ə:'θrɪtɪk/ adjective affected by or relating to arthritis □ *She has an arthritic hip.*

■ noun a person suffering from arthritis

arthritis /ə:'θraɪtɪs/ noun a painful inflammation of a joint. ◊ **osteoarthritis, rheumatoid arthritis, reactive arthritis**

arthro- /ə:θrə/ prefix referring to a joint

arthroclasis /ə:θrə'u'kleɪzə/ noun removal of ankylosis in a joint

arthrodesis /ə:θrə'u'di:sɪs/ noun a surgical operation in which a joint is fused in position, so preventing pain from movement

arthrodynia /ə:θrə'u'dɪniə/ noun pain in a joint

arthrogram /'ə:θrəugræm/ noun an X-ray of the inside of a damaged joint

arthrography /ə:'θrəgrəfi/ noun X-ray photography of a joint

arthrogryposis /,ə:θrəugrɪ'pəʊsɪs/ noun a group of disorders in which movement becomes progressively restricted

arthropathy /ə:'θrəpəθi/ noun a disease in a joint

arthroplasty /'ə:θrəoplæsti/ noun a surgical operation to repair or replace a joint

arthroscope /'ə:θrəʊskəp/ noun an instrument which is inserted into the cavity of a joint to inspect it

arthroscopy /'ə:θrəskəpi/ noun a procedure to examine the inside of a joint by means of an arthroscope

arthrosis /ə:'θrəʊsɪs/ noun the degeneration of a joint

arthrotomy /ə:'θrətəmɪ/ noun a procedure that involves cutting into a joint to drain pus

articular /ə:'tɪkjʊlə/ adjective referring to joints

articular cartilage /ə:tɪkjʊlə 'kɑ:təlɪdʒ/ noun a layer of cartilage at the end of a bone where it forms a joint with another bone. See

illustration at **BONE STRUCTURE** in Supplement, **SYNOVIAL JOINT** in Supplement

articular facet /ə:tɪkjʊlət 'fæsɪt/ *noun* the point at which a rib articulates with the spine
articular process /ə:tɪkjʊlət 'prəʊses/ *noun* a piece of bone which sticks out of the neural arch in a vertebra and links with the next vertebra

articulate /ə:tɪkju:lət/ *verb* to be linked with another bone in a joint

articulating bone /ə:tɪkju:lətɪŋ bəun/ *noun* a bone which forms a joint

articulating process /ə:tɪkju:lətɪŋ ,prəʊses/ *noun* same as **articular process**

articulation /ə:tɪkju'lɪʃ(ə)n/ *noun* a joint or series of joints

artificial /ə:tɪfɪʃ(ə)l/ *adjective* 1. made by humans and not a natural part of the body ○ **artificial cartilage** ○ **artificial kidney** ○ **artificial leg** 2. happening not as a natural process but through action by a doctor or another person or a machine ○ **artificial feeding**

artificial insemination /ə:tɪfɪʃ(ə)n/ in ,sem'i:nɛʃ(ə)n/ *noun* the introduction of semen into a woman's uterus by artificial means

artificial insemination by donor /ə:tɪfɪʃ(ə)l insemi,nɛʃ(ə)n bər 'dəʊnər/ *noun* same as **donor insemination**. Abbr **AID**

artificial insemination by husband /ə:tɪfɪʃ(ə)l insemi,nɛʃ(ə)n bər 'hæzbənd/ *noun* artificial insemination using the semen of the husband. Abbr **AIH**

artificial lung /ə:tɪfɪʃ(ə)l 'lʌŋ/ *noun* a machine through which a person's deoxygenated blood is passed to absorb oxygen to take back to the bloodstream

artificial pneumothorax /ə:tɪfɪʃ(ə)l ,nu:ju:məʊθ'θə:ræks/ *noun* a former method of treating tuberculosis, in which air was introduced between the layers of the pleura to make the lung collapse

artificial respiration /ə:tɪfɪʃ(ə)l ,respi'reɪʃ(ə)n/ *noun* a way of reviving someone who has stopped breathing, e.g. mouth-to-mouth resuscitation

artificial rupture of membranes /ə:tɪfɪʃ(ə)l ,ræptʃər əv 'membrænz/ *noun* the breaking of the amniotic sac with an amni-hook, so releasing the amniotic fluid

artificial ventilation /ə:tɪfɪʃ(ə)l ,ventɪ 'leɪʃ(ə)n/ *noun* breathing which is assisted or controlled by a machine

arytenoid /ərɪ'ti:nɔɪd/ *adjective* located at the back of the larynx

arytenoid cartilage /ərɪ'ti:nɔɪd ,kɑ:tɪlɪdʒ/ *noun* a small cartilage at the back of the larynx

arytenoidectomy /ərɪ'ti:nɔɪd'ektəmɪ/ *noun* an operation to remove the arytenoid cartilage

asbestosis /æsbe'stəʊsis/ *noun* a disease of the lungs caused by inhaling asbestos dust

COMMENT: Asbestos was formerly widely used in cement and cladding and other types of fire-proof construction materials. It is now recognised that asbestos dust can cause many lung diseases, leading in some cases to forms of cancer.

ascariasis /,æskə'sræsɪs/ *noun* a disease of the intestine and sometimes the lungs, caused by infestation with *Ascaris lumbricoides*

Ascaris lumbricoides /,æskərɪs ləmbrɪ 'kɔ:di:z/ *noun* a type of large roundworm which is a parasite in the human intestine

ascending /ə'sendɪŋ/ *adjective* going upwards

ascending aorta /ə,sendɪŋ eɪ'ɔ:tə/ *noun* the first section of the aorta as it leaves the heart and turns upwards. Compare **descending aorta**

ascending colon /ə,sendɪŋ 'kəʊlon/ *noun* the first part of the colon which goes up the right side of the body from the caecum. Compare **descending colon**. See illustration at **DIGESTIVE SYSTEM** in Supplement

Aschoff nodules /'æʃof ,nɒdju:lz/, **Aschoff's nodules** /'æʃɒfs ,nɒdju:lz/ *plural noun* nodules which are formed mainly in or near the heart in rheumatic fever

ascites /ə'saitɪz/ *noun* an unusual accumulation of fluid from the blood in the peritoneal cavity, occurring in heart and kidney failure or as a result of malignancy

ascorbic acid /ə,skɔ:bɪk 'æsɪd/ *noun* same as **Vitamin C**

COMMENT: Ascorbic acid is found in fresh fruit, especially oranges and lemons and in vegetables. Lack of Vitamin C can cause anaemia and scurvy.

ASD abbr autistic spectrum disorders

-ase /eɪz, eɪs/ *suffix* enzyme

asepsis /eɪ'sepsi:s/ *noun* the absence of microorganisms which cause infection, usually achieved by sterilisation

aseptic /eɪ'septɪk/ *adjective* sterilised, or involving sterilisation, and therefore without infection

aseptic surgery /eɪ,septɪk 'sɜ:dʒəri/ *noun* surgery using sterilised equipment, rather than relying on antisceptic drugs to kill harmful microorganisms. Compare **antisептическая хирургия**

aseptic technique /eɪ,septɪk tek'nɪ:k/s/ *noun* a method of doing something using sterilised equipment

asexual /eɪ'seクʃuəl/ *adjective* not sexual, not involving sexual intercourse

asexual reproduction /eɪ,sekʃuəl ,rɪ:p्रे 'dʌkʃ(ə)n/ *noun* reproduction of a cell by cloning

Asian flu /,eɪzɪən 'flu:/ *noun* ♦ **flu**

-asis /ə'sɪs/ ♦ **-iasis**

asleep /ə'slɪp/ *adjective* sleeping ○ *The patient is asleep and must not be disturbed.*
(NOTE: Asleep cannot be used in front of a noun:

the patient is asleep but a sleeping patient.) □ she fell asleep she began to sleep □ **fast asleep** sleeping deeply

asparagine /ə'spærədʒɪ:n/ *noun* an amino acid

aspartame /ə'spa:tēm/ *noun* a protein produced from aspartic acid, used to make substances sweeter

aspartate aminotransferase /ə'spa:tēt ə'mi:nəʊ'trænsfəreɪz/ *noun* an enzyme found in heart muscle, liver cells, skeletal muscle cells and some other tissues. It is used in the diagnosis of liver disease and heart attacks.

aspartic acid /ə'spa:tik 'æsɪd/ *noun* an amino acid

aspect /'æspekt/ *noun* a direction from which the body is viewed, e.g. the view from above is the 'superior aspect'

Asperger's syndrome /'æspɜ:dʒəz ,sɪn drəʊm/ *noun* a developmental disorder characterised by difficulty in social interaction and a restricted range of interests, more common in boys than girls [Described 1944. After Hans Asperger (1906–80), Austrian psychiatrist.]

aspergillosis /,æspɜ:dʒɪ'ləʊsɪs/ *noun* infection of the lungs with the fungus *Aspergillus*

aspermia /eɪ'spɜ:mɪə/ *noun* the absence of sperm in semen

asphyxia /æs'fɪksiə/ *noun* a condition in which someone is prevented from breathing, e.g. by strangulation or breathing poisonous gas, and therefore cannot take oxygen into the bloodstream

asphyxia neonatorum /æs,fɪksɪə ,ni:əʊnərūt'ɔ:rəm/ *noun* failure to breathe in a newborn baby

asphyxiate /æs'fɪksɪeɪt/ *verb* to prevent someone from breathing, or be prevented from breathing □ An unconscious patient may become asphyxiated or may asphyxiate if left lying on his back. □ **suffocate**

asphyxiation /æs,fɪksɪ'eɪʃ(ə)n/ *noun* the state of being prevented from breathing, or the act of preventing someone from breathing. □ **suffocation**

aspire /'æspɪ'reɪt/ *verb* 1. to remove liquid or gas by suction from a body cavity 2. to inhale something, especially a liquid, into the lungs

aspiration /,æspɪ'reɪʃ(ə)n/ *noun* 1. the act of removing fluid from a cavity in the body, often using a hollow needle 2. same as **vacuum suction**

aspiration pneumonia /,æspɪ'reɪʃ(ə)n nju:'məʊnɪə/ *noun* a form of pneumonia in which infected matter is inhaled from the bronchi or oesophagus

aspirator /'æspɪ'reɪtə/ *noun* an instrument used to suck fluid out of a cavity such as the mouth or the site of an operation

aspirin /'æsprɪn/ *noun* a common pain-killer drug, or a tablet containing this drug. Also called **acetylsalicylic acid**

assay /'æsei, ə'sei/ *noun* the testing of a substance. □ **bioassay, immunoassay**

assimilate /ə'simi,leɪt/ *verb* to take into the body's tissues substances which have been absorbed into the blood from digested food

assimilation /ə'simi'læʃ(ə)n/ *noun* the action of assimilating food substances

assistance /ə'sist(ə)ns/ *noun* help

assistant /ə'sist(ə)nt/ *noun* a person who helps someone, usually as a job

assisted conception /ə,sistɪd kən 'sepʃ(ə)n/, **assisted reproduction** /ə,sistɪd ,ri:prou'dʌkʃ(ə)n/ *noun* the use of a technique such as in vitro fertilisation to help someone to become pregnant

assisted respiration /ə,sistɪd ,respa'reɪʃ(ə)n/ *noun* the use of a machine to help breathing

assisted suicide /ə,sistɪd 'su:isaid/ *noun* the suicide of someone who is terminally ill with the help of a doctor or friend at the request of the person who is dying

associate /ə'səusɪet/ *verb* to be related to or connected with something □ *side effects which may be associated with the drug* □ *The condition is often associated with diabetes.*

associate nurse /ə,səʊsi:t 'nɜ:s/ *noun* a nurse who assists a primary nurse by carrying out agreed care for someone based on a plan designed by a primary nurse

association area /ə,səʊsi'eɪʃ(ə)n ,eəriə/ *noun* an area of the cortex of the brain which is concerned with relating stimuli coming from different sources

association neuron /ə,səʊsi'eɪʃ(ə)n ,njuərən/ *noun* a neuron which links an association area to the main parts of the cortex

association tract /ə,səʊsi'eɪʃ(ə)n trækɪt/ *noun* one of the tracts which link areas of the cortex in the same cerebral hemisphere

asthenia /æs'θi:nɪə/ *noun* a condition in which someone is weak and does not have any strength

asthenic /æs'θenɪk/ *adjective* referring to a general condition in which someone has no strength and no interest in things

asthenopia /æsθi'nəʊpiə/ *noun* same as **eyestrain**

asthma /'æsmə/ *noun* a lung condition characterised by narrowing of the bronchial tubes, in which the muscles go into spasm and the person has difficulty breathing. □ **cardiac asthma**

asthmatic /æs'mætɪk/ *adjective* having the lung disease asthma, or relating to asthma □ *He has an asthmatic attack every spring.* □ **acute asthmatic attack** a sudden attack of asthma ■ *noun* a person who has asthma

asthmatic bronchitis /æs'mætɪk brɒn'kɑ:tɪs/ *noun* asthma associated with bronchitis

asthmaticus /æs'mætɪkəs/ *adjective* □ **status asthmaticus**

astigmatic /æstɪg'mætɪk/ *adjective* referring to astigmatism □ **he is astigmatic** he has astigmatism

astigmatism /æ'stɪg'mætɪz(ə)m/ *noun* a condition in which the eye cannot focus vertical and horizontal lines simultaneously, leading to blurring of vision

astragalus /æ'strægələs/ *noun* an old name for the talus (anklebone)

astringent /ə'strɪndʒənt/ *noun* a substance which makes the skin tissues contract and harden ■ *adjective* referring to an astringent

astrocyte /'æstrəsait/ *noun* a star-shaped cell of the connective tissue of the nervous system

astrocytoma /,æstrəsai'təʊmə/ *noun* a type of brain tumour which develops slowly in the connective tissue of the nervous system

asymmetric /,æsɪ'metrik/ *adjective* shaped or arranged so that the two sides do not match or balance each other

asymmetry /æ'simətri/ *noun* a state in which the two sides of the body or of an organ do not resemble each other

asymptomatic /,eɪsɪmptə'mætɪk/ *adjective* not showing any symptoms of disease

asyncitism /æ'sɪŋklɪtɪz(ə)m/ *noun* in childbirth, a situation in which the head of the baby enters the vagina at an angle

asynergia /,æsɪ'nɜ:dʒə/, **asynergy** /æ'sɪnədʒɪ/ *noun* awkward movements and bad coordination, caused by a disorder of the cerebellum. Also called **dyssynergia**

asytole /eɪ'sistəli/ *noun* a state in which the heart has stopped beating

ataractic /ætə'rækτɪk/ *noun* a drug which has a calming effect ■ *adjective* calming

ataraxia /,ætə'ræksiə/, **ataraxis** /,ætə'ræksɪs/ *noun* the state of being calm and not worrying

ataraxic /ætə'ræksɪk/ *noun*, *adjective* same as **ataractic**

ataxia /ə'tæksiə/ *noun* a failure of the brain to control movements

ataxic /ə'tæksɪk/ *adjective* having ataxia, or relating to ataxia

ataxic gait /ə,tæksɪk 'geɪt/ *noun* a way of walking in which the person walks unsteadily due to a disorder of the nervous system

ataxy /ə'tæksi/ *noun* same as **ataxia**

atelectasis /,ætə'lektəsɪs/ *noun* the failure of a lung to expand properly

atenolol /ə'tenəlɒl/ *noun* a drug used in controlling blood pressure and angina

arteriovenous malformation /ɑ:tɪəriəvən'vi:nəs mælfɔ:r'meɪʃ(ə)n/ *noun* a condition in

which the arteries and veins in the brain are not properly formed, leading to strokes or epilepsy. Abbr **AVM**

atherogenesis /,æθərəʊ'dʒenəsɪs/ *noun* the formation of fatty deposits (**atheromas**) in arteries

atherogenic /,æθərəʊ'dʒenɪk/ *adjective* referring to something which may produce atheroma

atheroma /,æθə'rəʊmə/ *noun* thickening of the walls of an artery by deposits of a fatty substance such as cholesterol

atheromatous /,æθə'rɒmətəs/ *adjective* referring to atheroma

atherosclerosis /,æθərəʊsklə'rəʊsɪs/ *noun* a condition in which deposits of fats and minerals form on the walls of an artery, especially the aorta or one of the coronary or cerebral arteries, and prevent blood from flowing easily

atherosclerotic /,æθərəʊsklə'rɒtɪk/ *adjective* referring to atherosclerosis

atherosclerotic plaque /,æθərəʊsklərɒtɪk 'plæk/ *noun* a deposit on the walls of arteries

athetosis /,æθə'təʊsɪs/ *noun* repeated slow movements of the limbs, caused by a brain disorder such as cerebral palsy

athlete's foot /,æθəli:t's 'fʊt/ *noun* an infectious skin disorder between the toes, caused by a fungus. Also called **tinea pedis**

atlas /'ætləs/ *noun* the top vertebra in the spine, which supports the skull and pivots on the axis or second vertebra

atmospheric pressure /,ætməsferɪk 'pre:sɪ/ *noun* the pressure of the air on the surface of the Earth

COMMENT: Disorders due to variations in atmospheric pressure include mountain sickness and caisson diseases.

atomic cocktail /ə,tɒmɪk 'kɒkteil/ *noun* a radioactive substance in liquid form, used to diagnose or treat cancer (*informal*)

atomiser /'ætəmaɪzə/ *noun* an instrument which sprays liquid in the form of very small drops like mist. Also called **nebuliser**

tonic /eɪ'tonɪk/ *adjective* referring to lack of muscle tone or tension

atonny /'ætəni/ *noun* a lack of tone or tension in the muscles

atopen /'ætəpen/ *noun* an allergen which causes an atopy

atopic /eɪ'tɒpɪk/ *adjective* referring to conditions arising from an inherited tendency to react to specific allergens, as in hay fever, some skin conditions and asthma

atopic eczema /eɪ,tɒpɪk 'eksɪmə/, **atopic dermatitis** /eɪ,tɒpɪk dɜ:ma'taɪtɪs/ *noun* a type of eczema often caused by a hereditary allergy

atopy /'ætəpi/ *noun* a hereditary allergic reaction

ATP abbr adenosine triphosphate

atracurium /æ'trə'kjʊəriəm/ *noun* a drug used as a relaxant

atresia /ə'tri:ziə/ *noun* an unusual closing or absence of a tube in the body

atretic /ə'tretɪk/ *adjective* referring to atresia

atretic follicle /ə'tretɪk 'fɒlik(ə)l/ *noun* the scarred remains of an ovarian follicle

atri- /eɪtri/ *prefix* referring to an atrium

atria /eɪtrɪə/ plural of **atrium**

atrial /'eɪtriəl/ *adjective* referring to one or both of the atria of the heart

atrial fibrillation /'eɪtriəl fai'bri'lɛf(ə)n/ *noun* a rapid uncoordinated fluttering of the atria of the heart, which causes an irregular heartbeat

atrial septal defect /,eɪtriəl 'sept(ə)l ,di:fekt/ *noun* a congenital condition in which a hole in the wall between the two atria of the heart allows blood to flow through the heart and lungs. Compare **ventricular septal defect**

atrioventricular /,eɪtriə'ven'trɪkjʊlə/ *adjective* referring to the atria and ventricles

atrioventricular bundle /,eɪtriə'ven'trɪkjʊlə 'bʌnd(ə)l/ *noun* a bundle of modified cardiac muscle which conducts impulses from the atrioventricular node to the septum and then divides to connect with the ventricles. Also called **AV bundle, bundle of His**

atrioventricular groove /,eɪtriə'ven'trɪkjʊlə 'gru:v/ *noun* a groove round the outside of the heart, showing the division between the atria and ventricles

atrioventricular node /ætriə'ven'trɪkjʊlə nəd/ *noun* a mass of conducting tissue in the right atrium of the heart, which continues as the atrioventricular bundle and passes impulses from the atria to the ventricles. Also called **AV node**

at-risk /ət 'rɪsk/ *adjective* exposed to danger or harm of some kind ○ *at-risk children*

atrium /'eɪtriəm/ *noun* 1. one of the two upper chambers in the heart. See illustration at **HEART** in Supplement 2. 2. a cavity in the ear behind the eardrum (NOTE: The plural is **atria**.)

COMMENT: The two atria in the heart both receive blood from veins. The right atrium receives venous blood from the superior and inferior vena cavae and the left atrium receives oxygenated blood from the pulmonary veins.

atrophic cirrhosis /æ'trɒfɪk sɪ'rəʊsɪs/ *noun* advanced portal cirrhosis in which the liver has become considerably smaller and clumps of new cells are formed on the surface of the liver where fibrous tissue has replaced damaged liver cells. Also called **hobnail liver**

atrophic gastritis /æ'trɒfɪk gæ'straitɪs/ *noun* inflammation of the stomach caused by being unable to produce enough acid to kill bacteria

atrophic vaginitis /æ'trɒfɪk, vædʒɪ'nɪtɪs/ *noun* inflammation, thinning and shrinking of

the tissues of the vagina caused by a lack of oestrogen

atrophy /'ætrəfi/ *noun* the wasting of an organ or part of the body ■ *verb (of an organ or part of the body)* to waste away

atropine /'ætrəpi:n/ *noun* an alkaloid substance derived from the poisonous plant belladonna and used, among other things, to enlarge the pupil of the eye, to reduce salivary and bronchial secretions during anaesthesia and as a muscarinic antagonist

ATS /eɪ ti: 'es/ *abbr* antitetanus serum

attack /ə'tæk/ *noun* a sudden occurrence of an illness ○ *He had an attack of fever. ○ She had two attacks of laryngitis during the winter.*

attempted suicide /ə'temptɪd 'su:said/ *noun* an unsuccessful attempt to kill oneself

attending physician /,ə,tendɪŋ fɪ'zɪʃ(ə)n/ *noun* a doctor who is looking after a particular patient ○ *He was referred to the hypertension unit by his attending physician.*

attention deficit disorder /ə,tenshən 'de:fɪsɪt ,dɪs/ *noun* a condition in which a person is unable to concentrate, does things without considering their actions properly and has little confidence. It occurs mainly in children. Abbr **ADD**

attention deficit hyperactivity disorder /ə,tenshən ,defɪsɪt ,haɪpəræk'tɪviti dɪs ,sɔ:də/ *noun* a condition in which a child has an inability to concentrate and shows disruptive behaviour. Abbr **ADHD**

attention deficit syndrome /ə,tenshən 'sɪndrəʊm/ *noun* same as **attention deficit disorder**

attenuation /ə,tenju'eɪʃ(ə)n/ *noun* a reduction in the effect or strength of something such as a virus, either because of environmental conditions or as a result of a laboratory procedure

atticotomy /,ætɪ'kɒtəmɪ/ *noun* the removal of the wall in the inner ear. Also called **cortical mastoidectomy**

attitude /'ættɪtju:d/ *noun* 1. an opinion or general feeling about something ○ *a positive attitude towards the operation* 2. a way of standing or sitting

attributable risk /ə,tribjʊtəb(ə)l 'rɪsk/ *noun* a measure of the excess risk of disease due to exposure to a particular risk. The excess risk of bacteriuria in oral contraceptive users attributable to the use of oral contraceptives is 1,566 per 100,000. Abbr **AR**

attrition /ə'trɪʃ(ə)n/ *noun* the condition of being worn away, as may be caused by friction ○ *Examination showed attrition of two extensor tendons.*

atypical /eɪ'tipi:k(ə)l/ *adjective* not usual or expected ○ *an atypical renal cyst*

audi- /ɔ:di/ *prefix* same as **audio-** (*used before vowels*)

audible limits /ə:dəb(ə)l 'limits/ *plural noun* upper and lower limits of the sound frequencies which can be heard by humans

audio- /ə:diəʊ/ *prefix* referring to hearing or sound

audiogram /'ɔ:diəʊgræm/ *noun* a graph drawn by an audiometer

audiologist /,ɔ:di'ɒlədʒɪst/ *noun* a specialist who deals in the treatment of hearing disorders

audiology /,ɔ:di'ɒlədʒi/ *noun* the scientific study of hearing, especially for diagnosing and treating hearing loss

audiometer /,ɔ:di'ɒmɪtə/ *noun* an apparatus for testing hearing, especially for testing the range of sounds that the human ear can detect
audiometry /,ɔ:di'ɒmətri/ *noun* the science of testing hearing

audit /'ɔ:dit/ *noun* a check on figures, scientific data or procedures ◻ *a medical audit regarding the outpatient appointment system*

audit cycle /'ɔ:dit ,sərk(ə)l/ *noun* the cycle in which medical topics are selected for review, observation and comparison with agreed standards and changes are decided on

auditory /'ɔ:dit(ə)ri/ *adjective* relating to hearing

auditory acuity /,ɔ:dit(ə)ri ə'kjy:utɪ/ *noun* the ability to hear sounds clearly

auditory canals /,ɔ:dit(ə)ri kə'nelz/ *plural noun* the external and internal passages of the ear

auditory nerve /'ɔ:dit(ə)ri nɜ:v/ *noun* the eighth cranial nerve which governs hearing and balance. See illustration at **EAR** in Supplement. Also called **vestibulocochlear nerve**

auditory ossicles /,ɔ:dit(ə)ri 'ɒsɪk(ə)lz/ *plural noun* the three little bones, the malleus, incus and stapes, in the middle ear

Auerbach's plexus /auərbɑ:ks 'pleksəs/ *noun* a group of nerve fibres in the intestine wall [Described 1862. After Leopold Auerbach (1828–97), Professor of Neuropathology at Breslau, now in Poland.]

aura /'ɔ:rə/ *noun* a warning sensation which is experienced before an attack of epilepsy, migraine or asthma

aural /'ɔ:rəl/ *adjective* referring to the ear

aural polyp /,ɔ:rəl 'polip/ *noun* a polyp in the middle ear

aural surgery /,ɔ:rəl 'sɜ:dʒəri/ *noun* surgery on the ear

auricle /'ɔ:rik(ə)l/ *noun* the tip of each atrium in the heart

auriculae /ɔ:'rikjʊli:/ ♦ **concha auriculae**

auricular /ɔ:'rikjʊlər/ *adjective* 1. referring to the ear 2. referring to an auricle

auricular vein /ɔ:'rikjʊlər vɪn/ *noun* a vein which leads into the posterior facial vein

auriscope /'ɔ:riskəʊp/ *noun* an instrument for examining the ear and eardrum. Also called **otoscope**

auscultation /,ɔ:skəl'teɪʃ(ə)n/ *noun* the act of listening to the sounds of the body using a stethoscope

auscultatory /ɔ:'skʌltət(ə)rɪ/ *adjective* referring to auscultation

Australia antigen /ɔ:'streiliə ,æntɪdʒən/ *noun* an antigen produced on the surface of liver cells infected with the hepatitis B virus

autism /'ɔ:tɪz(ə)m/ *noun* a condition developing in childhood, characterised by difficulty in social interaction, language and communication problems, learning difficulties and obsessional repetitive behaviour (NOTE: Autism is more common in boys than in girls.)

autistic /ɔ:'tɪstɪk/ *adjective* affected by, or relating to, autism

autistic spectrum disorders /ɔ:,tɪstɪk ,spekt्रəm dɪs'ɔ:dzəz/ *plural noun* autism in all its different forms and degrees of severity. Abbreviation **ASD**

auto- /ɔ:təʊ/ *prefix* self

autoantibody /,ɔ:təʊ'æntɪbɒdi/ *noun* an antibody formed to attack antigens in the body's own cells

autoclavable /'ɔ:təʊ,kleɪvəb(ə)l/ *adjective* able to be sterilised in an autoclave ◻ *Waste should be put into autoclavable plastic bags.*

autoclave /'ɔ:təʊklɛɪv/ *noun* equipment for sterilising surgical instruments using heat under high pressure █ *verb* to sterilise equipment using heat under high pressure ◻ *Autoclaving is the best method of sterilisation.*

autogenous /ɔ:'tɒdʒənəs/, **autogenic** /,ɔ:təʊ'dʒenɪk/ *adjective* produced either in the person's body, or using tissue from the person's own body ◻ *an autogenous vein graft*

autograft /'ɔ:təgræft/ *noun* a transplant made using parts of the person's own body

autoimmune /,ɔ:təʊ'mju:n/ *adjective* referring to an immune reaction in a person against antigens in their own cells

autoimmune disease /,ɔ:təʊ,mju:n ɪd'zi:z/ *noun* a disease in which the person's own cells are attacked by autoantibodies ◻ *Rheumatoid arthritis is thought to be an autoimmune disease.*

autoimmunisation /,ɔ:təʊ,imjʊnɪzə'zeɪʃ(ə)n/, **autoimmunization** *noun* the process leading to an immune reaction in a person to antigens produced in their own body

autoimmunity /,ɔ:təʊ'mju:nɪti/ *noun* a condition in which a person's own cells are attacked by autoantibodies

autoinfection /,ɔ:təʊfɪn'ekʃ(ə)n/ *noun* an infection by a microorganism already in the body, or infection of one part of the body by another part

autointoxication /ɔ:təʊntɒksɪ'keɪʃ(ə)n/ *noun* the poisoning of the body by toxins produced in the body itself

autologous /ɔ:t'ɒləgəs/ *adjective* referring to a graft or other material coming from the same source

autologous transfusion /ɔ:t, trələgəs træns'fju:z(ə)n/ *noun* a blood transfusion in which the blood is removed from the body for later transfusion after an operation. ◇ **transfusion**

autolysis /ɔ:t'ɒləsɪs/ *noun* a situation in which cells destroy themselves with their own enzymes

automatic /ɔ:tə'mætɪk/ *adjective* 1. done without conscious thought ◇ *an automatic reaction* 2. *(of a machine or process)* able to work by itself, without anyone giving instructions

automatism /ɔ:t'ɒmætɪz(ə)m/ *noun* a state in which a person acts without consciously knowing that he or she is acting

COMMENT: Automatic acts can take place after concussion or epileptic fits. In law, automatism can be a defence to a criminal charge when the accused states that he or she acted without knowing what they were doing.

autonomic /ɔ:tə'nɒmɪk/ *adjective* governing itself independently

autonomic nervous system /ɔ:tə,nɒmɪk 'nɜ:vəs ,sɪstəm/ *noun* the nervous system formed of ganglia linked to the spinal column. It regulates the automatic functioning of the main organs such as the heart and lungs and works when a person is asleep or even unconscious. ◇ **parasympathetic nervous system, sympathetic nervous system**

autonomy /ɔ:t'nəməti/ *noun* the state of being free to act as one wishes

autoplasty /ɔ:təplæsti/ *noun* the repair of someone's body using tissue taken from another part of their body

autopsy /'ɔ:tɒpsi/ *noun* the examination of a dead body by a pathologist to find out the cause of death ◇ *The autopsy showed that he had been poisoned.* Also called **post mortem**

autosomal /,ɔ:təʊ'səʊm(ə)l/ *adjective* referring to an autosome

autosome /'ɔ:təʊsəʊm/ *noun* a chromosome that is not a sex chromosome

autotransfusion /,ɔ:tətræns'fju:z(ə)n/ *noun* an infusion into a person of their own blood

auxiliary /ɔ:g'ziliəri/ *adjective* providing help ◇ *The hospital has an auxiliary power supply in case the electricity supply breaks down.* ■ *noun* an assistant

avascular /eɪ'veskjʊlər/ *adjective* with no blood vessels, or with a deficient blood supply

avascular necrosis /eɪ'veskjʊlər ne 'krəʊsɪs/ *noun* a condition in which tissue cells die because their supply of blood has been cut

AV bundle /eɪ 'vi: 'bʌnd(ə)l/ *noun* same as **atrioventricular bundle**

average /'æv(ə)rɪdʒ/ *noun* 1. the usual amount, size, rate, etc. ◇ *Her weight is above (the) average.* 2. a value calculated by adding together several quantities and then dividing the total by the number of quantities ■ *adjective* 1. usual ◇ *Their son is of above average weight.* 2. calculated by adding together several quantities and then dividing the total by the number of quantities ◇ *The average age of the group is 25.*

aversion therapy /ə'vɜ:sʃ(ə)n, ə'verəpi/ *noun* a treatment by which someone is cured of a type of behaviour by making him or her develop a great dislike for it

avitaminosis /eɪ,vitə'mi:n'əʊsɪs/ *noun* a disorder caused by a lack of vitamins

AVM *abbr* arteriovenous malformation

AV node /,eɪ 'vi: nəd/ *noun* same as **atrioventricular node**

AVPU *noun* a method of rating if a person is conscious: A = alert; V = verbal, responding to verbal commands; P = pain, responding to pain; U = unconscious

avulse /ə'vʌls/ *verb* to tear tissue or a body part away by force

avulsion /ə'vʌlʃən/ *noun* an act of pulling away tissue or a body part by force

avulsion fracture /ə, vʌlf(ə)n 'frækʃə/ *noun* a fracture in which a tendon pulls away part of the bone to which it is attached

awake /ə'weɪk/ *adjective* not asleep ◇ *He was still awake at 2 o'clock in the morning.* □ **wide awake** very awake

aware /ə'weə/ *adjective* 1. conscious enough to know what is happening ◇ *She is not aware of what is happening around her.* 2. knowing about something ◇ *The surgeon became aware of a problem with the heart-lung machine.*

awareness /ə'weənəs/ *noun* the fact of being aware, especially of a problem

'...doctors should use the increased public awareness of whooping cough during epidemics to encourage parents to vaccinate children' [Health Visitor]

axial /'æksiəl/ *adjective* referring to an axis

axial skeleton /,æksiəl 'skelɪt(ə)n/ *noun* the bones that make up the vertebral column and the skull. Compare **appendicular skeleton**

axilla /æk'sɪlə/ *noun* same as **armpit (technical)** (NOTE: The plural is **axillae**.)

axillary /æk'sɪləri/ *adjective* referring to the armpit

axillary artery /æk,sɪləri 'a:təri/ *noun* an artery leading from the subclavian artery in the armpit

axillary nodes /æk'sɪləri nəʊdz/ *plural noun* part of the lymphatic system in the arm

axillary temperature /æk,sɪləri 'temprɪ 'tʃə/ *noun* the temperature in the armpit

axis /'ækſɪs/ *noun* 1. an imaginary line through the centre of the body 2. a central vessel which divides into other vessels 3. the second vertebra on which the atlas sits (NOTE: The plural is **axes**.)

axodendrite /,æksəʊ'dendrɪt/ *noun* an appendage like a fibril on the axon of a nerve

axolemma /,æksə'lɛmə/ *noun* a membrane covering an axon

axon /'ækſən/ *noun* a nerve fibre which sends impulses from one neurone to another, linking with the dendrites of the other neurone. See illustration at **NEURONE** in Supplement

axon covering /'ækſən ,kʌv(ə)rɪŋ/ *noun* the myelin sheath which covers a nerve

Ayurvedic medicine /,aɪrveɪdɪk 'med(ə)s(ə)n/ *noun* a traditional Hindu system of healing that reviews a person's state of health and lifestyle and recommends treatment based on herbal products, dietary control and spiritual practices

azathioprine /,eɪzə'θaɪəpri:n/ *noun* a drug which suppresses the immune response, used after transplant surgery to prevent rejection

-azepam /æzɪpæm/ *suffix* used in names of benzodiazepines ◉ **diazepam**

azidothymidine /,eɪzɪdəʊ'θaɪmɪdɪ:n/ *noun* a drug used in the treatment of AIDS. Abbr **AZT**. Also called **zidovudine**

azo- /eɪzəʊ/ *prefix* containing a nitrogen group

azoospermia /,eɪzəʊə'spɜ:mɪə/ *noun* the absence of sperm

azotaemia /,eɪzəʊ'u'ti:miə/ *noun* the presence of urea or other nitrogen compounds in the blood

azoturia /,eɪzəʊ'tjuəriə/ *noun* the presence of urea or other nitrogen compounds in the urine, caused by kidney disease

AZT abbr azidothymidine

azygous /'æzɪgəs/ *adjective* single, not one of a pair

azygous vein /'æzɪgəs veɪn/ *noun* a vein which brings blood back into the vena cava from the abdomen

B

babesiosis /ba:bis'iəʊsis/ *noun* a disease caused by infection of red blood cells by a protozoan introduced by a tick bite

Babinski reflex /ba:binski 'ri:fleks/, **Babinski's reflex** /ba:binskiz 'ri:fleks/ *noun* an unusual curling upwards of the big toe when a finger is lightly run across the sole of the foot, while the others turn down and spread out, a sign of hemiplegia and pyramidal tract disease. Compare **plantar reflex** [Described 1896. After Joseph François Félix Babinski (1857–1932), French-born son of Polish refugees. A pupil of Charcot, he was head of the Neurological clinic at Hôpital de la Pitié, 1890–1927.]

Babinski test /ba:binski test/ *noun* a test for a Babinski reflex

baby /'beɪbi/ *noun* a very young child who is not yet old enough to talk or walk ○ *Babies start to walk when they are about 12 months old.* (NOTE: If you do not know the sex of a baby you can refer to the child as *it*: *The baby was sucking its thumb*)

baby blues /'beɪbi blu:z/ *plural noun* same as **postnatal depression** (*informal*)

baby care /'beɪbi keə/ *noun* the act of looking after babies

baby clinic /'beɪbi ,klinɪk/ *noun* a special clinic which deals with babies

bacillaemia /,bæst'lɪ:mɪə/ *noun* an infection of the blood by bacilli

bacillary /ba:sɪlərɪ/ *adjective* referring to bacilli

bacillary dysentery /ba:sɪlərɪ 'dɪs(ə)ntri/ *noun* dysentery caused by the bacillus *Shigella* in contaminated food

bacille Calmette-Guérin /bæ:silə 'kælmɛt 'gærən/ *noun* full form of **BCG** [After A. Calmette (1863–1933) and C. Guérin (1872–1961), French bacteriologists.]

bacilluria /,bæst'ljuərɪə/ *noun* the presence of bacilli in the urine

bacillus /ba:siləs/ *noun* a bacterium shaped like a rod (NOTE: The plural is **bacilli**)

back /bæk/ *noun* 1. the part of the body from the neck downwards to the waist, which is made up of the spine and the bones attached to it (NOTE: For other terms referring to the back,

see **dorsal** and words beginning with **dorsi-**, **dorso-**) 2. the other side from the front ○ *She has a swelling on the back of her hand.* ◊ **dorsum**

backache /'bækək/ *noun* pain in the back, often without a specific cause

COMMENT: Backache can result from bad posture or muscle strain, but it can also be caused by rheumatism (lumbago), fevers such as typhoid fever and osteoarthritis. Pains in the back can also be referred pains from gallstones or kidney disease.

backbone /'bækbaʊn/ *noun* a series of bones, the vertebrae, linked together to form a flexible column running from the pelvis to the skull. Also called **rachis, spine**

background carboxyhaemoglobin level /,bækgraʊnd 'ka:bɔksi hɪ:mə'gləʊbɪn 'lev(ə)l/ *noun* the level of carboxyhaemoglobin in the blood of a person who is not exposed to high levels of carbon monoxide

back muscles /'bæk ,mʌs(ə)lz/ *plural noun* the strong muscles in the back which help hold the body upright

back pain /'bæk peɪn/ *noun* pain in the back, especially long-lasting or severe pain

backside /'bæksaɪd/ *noun* someone's buttocks (*informal*)

back strain /'bæk streɪn/ *noun* a condition in which the muscles or ligaments in the back have been strained

baclofen /'bæklaʊfən/ *noun* a drug that relaxes skeletal muscles which are in spasm, either because of injury or as a result of multiple sclerosis

bacteraemia /,bæk'tə'rɪ:mɪə/ *noun* the fact of having bacteria in the blood. Bacteraemia is not necessarily a serious condition. Compare **septicaemia**. ◊ **blood poisoning**

bacteria /bæk'tɪəriə/ *plural* of **bacterium**

bacterial /bæk'tɪəriəl/ *adjective* relating to bacteria or caused by bacteria ○ *Children with sickle-cell anaemia are susceptible to bacterial infection.*

bacterial plaque /bæk'tɪəriəl ,plæk/ *noun* a hard smooth bacterial deposit on teeth

bacterial pneumonia /bæk'tɪəriəl nju: 'mənjuɪə/ *noun* a form of pneumonia caused by pneumococcus. ♦ **bronchopneumonia**

bacterial strain /bæk'tɪəriəl 'streɪn/ *noun* a group of bacteria which are different from others of the same general type

bactericidal /bæk'tɪərɪ'saɪd(ə)l/ *adjective* referring to a substance which destroys bacteria

bactericide /bæk'tɪərɪsaɪd/ *noun* a substance which destroys bacteria

bacteriological /bæk'tɪəriə'lɒdʒɪk(ə)l/ *adjective* referring to bacteriology

bacteriologist /bæk'tɪərɪ'ɒlədʒɪst/ *noun* a doctor who specialises in the study of bacteria

bacteriology /bæk'tɪəri'ɒlɒdʒɪ/ *noun* the scientific study of bacteria

bacteriolysin /bæk'tɪərɪ'ɒlɪsɪn/ *noun* a protein, usually an immunoglobulin, which destroys bacterial cells

bacteriolytic /bæk'tɪərɪ'ɒltɪk/ *adjective* referring to a substance which can destroy bacteria

bacteriophagy /bæk'tɪəriəfæɪdʒ/ *noun* a virus which affects bacteria

bacteriostasis /bæk'tɪəriə'u'steɪsɪs/ *noun* the action of stopping bacteria from multiplying

bacteriostatic /bæk'tɪəriə'u'stætɪk/ *adjective* referring to a substance which does not kill bacteria but stops them from multiplying

bacterium /bæk'tɪəriəm/ *noun* a microscopic organism. Some types are permanently present in the gut and can break down food tissue, but many can cause disease. (NOTE: The plural is **bacteria**.)

COMMENT: Bacteria can be shaped like rods (bacilli), like balls (cocci) or have a spiral form (spirochaetes). Bacteria, especially bacilli and spirochaetes, can move and reproduce very rapidly.

bacteruria /bæk'tɪəri'juəriə/ *noun* a condition in which bacteria are present in the urine

Bactrim /'bæktrɪm/ a trade name for co-trimoxazole

bad breath /'bæd 'breθ/ *noun* same as **halitosis** (*informal*)

Baghdad boil /,baegdæd 'boɪl/, **Baghdad sore** /,baegdæd 'sɔ:/ *noun* a skin disease of tropical countries caused by the parasite *Leishmania*. Also called **Oriental sore**

bag of waters /,baeg əv 'wɔ:təz/ *noun* part of the amniotic fluid which covers an unborn baby in the uterus and contains the amniotic fluid

BAHA *abbr* bone anchored hearing aid

Baker's cyst /,berkəz 'sist/ *noun* a swelling filled with synovial fluid, at the back of the knee, caused by weakness of the joint membrane [Described 1877. After William Morrant

Baker (1838–96), member of staff at St Bartholomew's Hospital, London, UK.]

baker's itch /,berkəz 'ɪtʃ/, **baker's dermatitis** /'berkəz də'ma'taitɪs/ *noun* an irritation of the skin caused by handling yeast

BAL *abbr* British anti-lewisite

balance /'bæləns/ *noun* 1. the act of staying upright, not falling □ **he stood on top of the fence and kept his balance** he did not fall off 2. the proportions of substances in a mixture, e.g. in the diet □ **to maintain a healthy balance of vitamins in the diet**

balanced diet /,bælənst 'daɪət/ *noun* a diet which provides all the nutrients needed in the correct proportions

balance of mind /,bæləns əv 'maɪnd/ *noun* someone's mental state □ **disturbed balance of mind** a state of mind when someone is for a time incapable of reasoned action, because of illness or depression

balanitis /,bælə'naitɪs/ *noun* inflammation of the glans of the penis

balanoposthitis /,bælənəʊpɒs'thaɪtɪs/ *noun* inflammation of the foreskin and the end of the penis

balantidiasis /,bæləntɪdɪ'sɪsɪs/ *noun* an infestation of the large intestine by a parasite *Balantidium coli*, which causes ulceration of the wall of the intestine, leading to diarrhoea and finally dysentery

balanus /'bælənəs/ *noun* the round end of the penis. ♦ **glans**

bald /bɔ:lɪd/ *adjective* with no hair, especially on the head □ **he is going bald or he is becoming bald** he is beginning to lose his hair

baldness /'bɔ:ldnəs/ *noun* the state of not having any hair

COMMENT: Baldness in men is hereditary; it can also occur in both men and women as a reaction to an illness or to a drug.

Balkan frame /,bɔ:lkən 'freɪm/, **Balkan beam** /,bɔ:lkən 'bi:m/ *noun* a frame fitted above a bed to which a leg in plaster can be attached. ♦ **Pearson bed**

ball /bɔ:l/ *noun* 1. the soft part of the hand below the thumb 2. the soft part of the foot below the big toe

ball and cage valve /,bɔ:l ən 'keɪdʒ vəlv/ *noun* an artificial heart valve, formed of a silicon ball which moves inside a metal cage to open and shut the valve

ball and socket joint /,bɔ:l ən 'spɒkɪt dʒɔ:nt/ *noun* a joint where the round end of a long bone is attached to a cup-shaped hollow in another bone in such a way that the long bone can move in almost any direction. Compare **ginglymus**

balloon /bə'lju:n/ *noun* a bag of light material inflated with air or a gas, used to unblock arteries

balloon angioplasty /bə'lju:n ,ændʒiə'plæsti/ *noun* same as **percutaneous angioplasty**

balloon catheter /bə'lju:n ,kæθɪtə/ *noun* a tube that can be inserted into a blood vessel or other body part and then inflated, e.g. to widen a narrow artery

ballottement /bə'lɒtmənt/ *noun* a method of examining the body by tapping or moving a part, especially during pregnancy

balneotherapy /,bælniəʊ'θerəpi/ *noun* the treatment of diseases by bathing in hot water or water containing beneficial natural chemicals

balsam /'bɔ:ls(ə)m/ *noun* a mixture of resin and oil, used to rub on sore joints or to put in hot water and use as an inhalant. ♦ **friar's balsam**

ban /bæn/ *verb* to say that something is not permitted ◎ *Smoking is banned throughout the building.* ◎ *Use of this drug has been banned.*

bandage /'bændɪdʒ/ *noun* a piece of cloth which is wrapped around a wound or an injured limb ◎ *His head was covered with bandages.* ■ *verb* to wrap a piece of cloth around a wound ◎ *She bandaged his leg.* ◎ *His arm is bandaged up.*

Bandl's ring /'bænd(ə)lz rɪŋ/ same as **retraction ring** [After Ludwig Bandl (1842–92), German obstetrician]

bank /bæŋk/ *noun* a place where blood or organs from donors can be stored until needed. ♦ **blood bank**

Bankart's operation /'bæŋkə:ts ɒpə'reɪʃ(ə)n/ *noun* an operation to repair a recurrent dislocation of the shoulder [First performed 1923. After Arthur Sydney Blundell Bankart (1879–1951), first orthopaedic surgeon at the Middlesex Hospital, London, UK.]

Banti's syndrome /'bæntiz ,sɪndrəʊm/, **Banti's disease** /'bæntiz dɪ,zɪz/ *noun* same as **splenetic anaemia** [Described 1882. After Guido Banti (1852–1925), Florentine pathologist and physician.]

Barbados leg /ba:,beɪdbəs 'leg/ *noun* a form of elephantiasis, a large swelling of the leg due to a Filaria worm

barber's itch /,bə:bəz 'ɪtʃ/, **barber's rash** /,bə:bəz 'ræʃ/ *noun* same as **sycosis barbae**

barbital /bə:bɪtəl/ *noun* US same as **barbitone**

barbitone /'bə:bɪtən/ *noun* a type of barbiturate

barbiturate /ba:'bitʃʊrət/ *noun* a sedative drug

barbiturate abuse /ba:'bitʃʊrət ə,bju:s/ *noun* repeated addictive use of barbiturates which in the end affects the brain

barbiturate dependence /ba:'bitʃʊrət di,pɛndəns/ *noun* being dependent on regularly taking barbiturate tablets

barbiturate poisoning /ba:'bitʃʊrət ,pɔɪzɪng/ *noun* poisoning caused by an overdose of barbiturates

barbotage /,bə:bə'ta:ʒ/ *noun* a method of spinal analgesia by which cerebrospinal fluid is withdrawn and then injected back

bare /bəə/ *adjective* with no covering □ **bare area of the liver** a large triangular part of the liver not covered with peritoneum

bariatrics /,bærɪ'tætriks/ *noun* the medical treatment of obesity

barium /'bærɪəm/ *noun* a chemical element, forming poisonous compounds, used as a contrast medium when taking X-ray photographs of soft tissue (NOTE: The chemical symbol is Ba.)

barium enema /,bærɪəm 'enɪmə/ *noun* a liquid solution containing barium sulphate which is put into the rectum to increase the contrast of an X-ray of the lower intestine

barium meal /,bærɪəm 'mi:l/, **barium solution** /,bærɪəm sə'lju:s(ə)n/ *noun* a liquid solution containing barium sulphate which someone drinks to increase the contrast of an X-ray of the alimentary tract

barium sulphate /,bærɪəm 'sʌlfət/ *noun* a salt of barium not soluble in water and which shows as opaque in X-ray photographs

Barlow's disease /'bɑ:ləʊz dɪ,zɪz/ *noun* scurvy in children, caused by a lack of vitamin C [Described 1882. After Sir Thomas Barlow (1845–1945), physician at various London hospitals and to Queen Victoria, King Edward VII and King George V.]

Barlow's sign /'bɑ:ləʊz sain/ *noun* a test for congenital dislocation of the hip, in which a sudden movement is felt and sometimes a sound is heard when the joint is manipulated

baroreceptor /bærəʊ'rɪ'septə/ *noun* one of a group of nerves near the carotid artery and aortic arch, which senses changes in blood pressure

barotitis /bærəʊ'taitɪs/ *noun* pain in the ear caused by differences in air pressure, e.g. during air travel

barotrauma /,bærəʊ'trɔ:mə/ *noun* an injury caused by a sharp increase in pressure

Barr body /'bə: ,bərdi/ *noun* a dense clump of chromatin found only in female cells, which can be used to identify the sex of a baby before birth [Described 1949. After Murray Llewellyn Barr (1908–95), head of the Department of Anatomy at the University of Western Ontario, Canada.]

Barre-Guillain syndrome /,bærə 'gi: jæn ,sɪndrəʊm/ ♦ **Guillain-Barré syndrome**

barrel chest /,bærəl 'tʃest/ *noun* a chest formed like a barrel, caused by asthma or emphysema

barrier cream /'bærɪə kri:m/ *noun* a cream put on the skin to prevent the skin coming into contact with irritating substances

barrier method /'bærɪə ,meθəd/ *noun* a method of contraception in which the entry of sperm to the womb is blocked by a protective device such as a condom or diaphragm

barrier nursing /'bærɪə ,nɜ:sɪŋ/ *noun* the nursing of someone who has an infectious disease. It involves keeping them away from other patients and making sure that faeces and soiled bedclothes do not carry the infection to other patients.

'...those affected by salmonella poisoning are being nursed in five isolation wards and about forty suspected sufferers are being barrier nursed in other wards' [Nursing Times]

bartholinitis /,ba:θəlɪ'naitɪs/ *noun* inflammation of the Bartholin's glands

Bartholin's glands /ba:θəlɪnz glændz/ *plural noun* two glands at the side of the vagina and between it and the vulva, which secrete a lubricating substance. Also called **greater vestibular glands** [After Caspar Bartholin (1655–1748), Danish anatomist]

basal /'beɪs(ə)l/ *adjective* located at the bottom of something, or forming its base

basal cell /'beɪs(ə)l sel/ *noun* a cell from the stratum germinativum. ♦ **stratum**

basal cell carcinoma /,beɪs(ə)l sel ,ka:sɪ 'næma:/ *noun* same as **rodent ulcer**

basale /ba'seɪlɪ/ *adjective* ♦ **stratum**

basal ganglia /,beɪs(ə)l 'gængglɪə/ *noun* masses of grey matter at the base of each cerebral hemisphere which receive impulses from the thalamus and influence the motor impulses from the frontal cortex

basalis /ba'seɪlɪs/ ♦ **decidua**

basal metabolic rate /,beɪs(ə)l metə'bɒlɪk reɪt/ *noun* the amount of energy used by the body in exchanging oxygen and carbon dioxide when at rest. It was formerly used as a way of testing thyroid gland activity. Abbr **BMR**

basal metabolism /,beɪs(ə)l mæ'tæbə ,lɪz(ə)m/ *noun* the minimum amount of energy needed to keep the body functioning and the temperature standard when at rest

basal narcosis /,beɪs(ə)l nɑ:'kəʊsɪs/ *noun* the administration a narcotic before a general anaesthetic

basal nuclei /,beɪs(ə)l 'nu:kliə/ *plural noun* masses of grey matter at the bottom of each cerebral hemisphere

base /beɪs/ *noun* 1. the bottom part ○ **the base of the spine** □ **base of the brain** the bottom surface of the cerebrum 2. the main ingredient of an ointment, as opposed to the active ingredient 3. a substance which reacts with an acid to form a salt ■ *verb* to use something as a base □ **cream based on zinc oxide** cream which uses zinc oxide as a base

Basedow's disease /'bæzɪdəuz dɪ,zi:z/ *noun* a form of hyperthyroidism [Described 1840. After Carl Adolph Basedow (1799–1854), general practitioner in Mersburg, Germany.]

basement membrane /'beɪsmənt ,mem brɛɪn/ *noun* a membrane at the base of an epithelium

basic /'beɪsɪk/ *adjective* 1. very simple, from which everything else comes □ **basic structure of the skin** the two layers of skin, the inner dermis and the outer epidermis 2. referring to a chemical substance which reacts with an acid to form a salt

basic salt /,beɪsɪk 'sɔ:lt/ *noun* a chemical compound formed when an acid reacts with a base

basilar /'bæzɪlə/ *adjective* referring to a base

basilar artery /,bæzɪlə 'a:təri/ *noun* an artery which lies at the base of the brain

basilar membrane /,bæzɪlə 'membreɪn/ *noun* a membrane in the cochlea which transmits nerve impulses from sound vibrations to the auditory nerve

basilic /ba'sɪlɪk/ *adjective* important or prominent

basilic vein /ba'zɪlɪk 'veɪn/ *noun* a large vein running along the inside of the arm

basin /'beɪs(ə)n/ *noun* a large bowl

basophil /'beɪsəfɪl/ *noun* a type of white blood cell which has granules in its cytoplasm and contains histamine and heparin

basophilia /,beɪsə'fɪliə/ *noun* an increase in the number of basophils in the blood

basophilic granulocyte /,beɪsəfɪlɪk 'grænju:ləsət/ *noun* same as **basophil**

basophilic leucocyte /,beɪsəfɪlɪk 'lu:kəsət/ *noun* same as **basophil**

Bachelor plaster /'bætʃələr ,pla:stə/ *noun* a plaster cast which keeps both legs apart [After J.S. Bachelor (b. 1905), British orthopaedic surgeon]

bathe /beɪð/ *verb* to wash a wound ○ *He bathed the grazed knee with boiled water.*

Batten's disease /'bæt(ə)nz dɪ,zi:z/ *noun* a hereditary disease which affects the enzymes of the brain, causing cells in the brain and eye to die

battered baby syndrome /'bætəd ,berbi ,sɪndrəm/, **battered child syndrome** /'bætəd 't'saɪld 'sɪndrəm/ *noun* a condition in which a baby or small child is frequently beaten, usually by one or both of its parents, sustaining injuries such as multiple fractures

battledore placenta /'bæt(ə)ldə: plə ,sentə/ *noun* a placenta where the umbilical cord is attached at the edge and not at the centre

Bazin's disease /'beɪzɪnз dɪ,zi:z/ *noun* same as **erythema induratum** [Described 1861. After Pierre Antoine Ernest Bazin (1807–78), dermatologist at Hôpital St Louis, Paris, France.]

He was an expert in parasitology associated with skin conditions.]

BC abbr bone conduction. ♦ **osteophony**

BCC abbr Breast Cancer Campaign

B cell /'bi: sel/ noun same as **beta cell**

BCG /,bi: si: 'dʒi: ,væksi:n/, **BCG vaccine** noun a vaccine which immunises against tuberculosis. Full form **bacille Calmette-Guérin**

BCh abbr Bachelor of Surgery

BDA abbr British Dental Association

bearing down /,beərɪŋ 'daʊn/ noun a stage in childbirth when the woman starts to push out the baby from the uterus

bearing-down pain /,beərɪŋ 'daʊn peɪn/ noun pain felt in the uterus during the second stage of labour (NOTE: Bearing-down pain is also associated with uterine prolapse.)

beat joint /'bi:t dʒɔɪnt/ noun an inflammation of a joint such as the elbow (beat elbow) or knee (beat knee) caused by frequent sharp blows or other pressure

Beck inventory of depression /,bek ,ɪnvɛnt(ə)rɪ əv di'pref(ə)n/ noun one of the rating scales for depression, in which a series of 21 questions refers to attitudes frequently shown by people suffering from depression

beclomethasone /,beklə'meθəsən/, noun a steroid drug usually used in an inhaler to treat asthma or hay fever

becquerel /'bekrəel/ noun an SI unit of measurement of radiation. Abbr **Bq** (NOTE: Now used in place of the **curie**.)

bed bath /'bed bɑ:θ/ noun an act of washing the whole body of someone who is unable to get up to wash. Also called **blanket bath**

bed blocker /'bed ,blkɒkə/ noun a patient who does not need medical attention but continues to stay in hospital because suitable care is not available elsewhere

bed blocking /'bed ,blkɒkɪŋ/ noun the fact of people being kept in hospital because other forms of care are not available, which means that other people cannot be treated

bedbug /'bedbʌg/ noun a small insect which lives in dirty bedclothes and sucks blood

bed occupancy /'bed ,ɒkju:pənsi/ noun the percentage of beds in a hospital which are occupied

bed occupancy rate /bed 'ɒkju:pənsi ,reɪt/ noun the number of beds occupied in a hospital shown as a percentage of all the beds in the hospital

bedpan /'bedpæn/ noun a dish into which someone can urinate or defecate without getting out of bed

bed rest /'bed rest/ noun a period of time spent in bed in order to rest and recover from an illness

bedridden /'bed,rɪd(ə)n/ adjective referring to someone who has been too ill to get out of bed over a long period of time

bedside manner /,bedsaɪd 'mænə/ noun the way in which a doctor behaves towards a patient, especially a patient who is in bed □ **a good bedside manner** the ability to make patients feel comforted and reassured

bedsore /'bedsɔ:/ noun an inflamed patch of skin on a bony part of the body, which develops into an ulcer, caused by pressure of the part on the mattress after lying for some time in one position. Special beds such as air beds, ripple beds and water beds are used to try to prevent the formation of bedsores. Also called **pressure sore, decubitus ulcer**

bedtable /'bedteɪb(ə)l/ noun a specially designed table which can be used by a person sitting up in bed

bedwetting /'bedwetɪŋ/ noun same as **nocturnal enuresis** (NOTE: This term is used mainly about children.)

Beer's knife /'bɪəz naɪf/ noun a knife with a triangular blade, used in eye operations [After George Joseph Beer (1763–1821), German ophthalmologist]

behaviour /bɪ'hɛviʊrɪ/ noun a way of acting ○ His behaviour was very aggressive. (NOTE: The US spelling is **behavior**.)

behavioural /bɪ'hɛviʊrəl/ adjective relating to behaviour (NOTE: The US spelling is **behavioral**.)

behavioural scientist /bɪ,hɛviʊrəl 'saɪəntɪst/ noun a person who specialises in the study of behaviour

behaviourism /bɪ'hɛviʊrɪz(ə)m/ noun a psychological theory proposing that only someone's behaviour should be studied to discover their psychological problems

behaviourist /bɪ'hɛviʊrɪst/ noun a psychologist who follows behaviourism

behaviour therapy /bɪ,hɛviʊrɪ 'θerəpi/ noun a form of psychiatric treatment in which someone learns how to improve their condition

Behcet's syndrome /'beɪsets ,sɪndrəʊm/ noun a chronic condition of the immune system with no known cause, experienced as a series of attacks of inflammation of small blood vessels accompanied by mouth ulcers and sometimes genital ulcers, skin lesions and inflamed eyes [Described 1937. After Halushi Behcet (1889–1948), Turkish dermatologist.]

behind /bɪ'haind/ noun same as **buttock** (*informal*)

bejel /'bedʒəl/ noun a non-venereal form of syphilis which is endemic among children in some areas of the Middle East and elsewhere and is caused by a spirochaete strain of bacteria

belch /bɛltʃ/ noun the action of allowing air in the stomach to come up through the mouth ■ verb to allow air in the stomach to come up through the mouth

belching /'beltʃɪŋ/ *noun* the action of allowing air in the stomach to come up through the mouth. Also called **eructation**

belladonna /,belə'dɒnə/ *noun* 1. a poisonous plant with berries containing atropine. Also called **deadly nightshade** 2. a form of atropine extracted from the belladonna plant

belle indifférence /,bel æn'difərəns/ *noun* an excessively calm state in a person, in a situation which would usually produce a show of emotion

Bellocq's cannula /be,lɒks 'kaenjʊlə/, **Bellocq's sound** /be,lɒks 'saʊnd/ *noun* an instrument used to control a nosebleed [After Jean Jacques Bellocq (1732–1807), French surgeon]

Bell's mania /,belz 'meiniə/ *noun* a form of acute mania with delirium [After Luther Vose Bell (1806–62), American physiologist]

Bell's palsy /,belz 'pɔ:lzi/ *noun* paralysis of the facial nerve on one side of the face, preventing one eye being closed. Also called **facial paralysis** [Described 1821. After Sir Charles Bell (1774–1842), Scottish surgeon. He ran anatomy schools, first in Edinburgh and then in London. Professor of Anatomy at the Royal Academy.]

belly /'beli/ *noun* 1. same as **abdomen** 2. the fatter central part of a muscle

bellyache /'beliæk/ *noun* a pain in the abdomen or stomach

belly button /'beli ,bat(ə)n/ *noun* the navel (*informal*)

Bence Jones protein /,bens 'dʒənz ˌprəti:n/ *noun* a protein found in the urine of people who have myelomatosis, lymphoma, leukaemia and some other cancers [Described 1848. After Henry Bence Jones (1814–73), physician at St George's Hospital, London, UK.]

bends /'bendz/ *plural noun* □ **the bends** ↗ **caisson disease**

Benedict's solution /'benɪdɪkts sə ,lu:ʃ(ə)n/ *noun* a solution used to carry out Benedict's test

Benedict's test /'benɪdɪkts test/ *noun* a test to see if sugar is present in the urine [Described 1915. After Stanley Rossiter Benedict (1884–1936), physiological chemist at Cornell University, New York, USA.]

benign /bə'nain/ *adjective* generally harmless

benign growth /bə'nain grəʊθ/ *noun* same as **benign tumour**

benign pancreatic disease /bə,nain ,pænkrɪ'ætik dɪ,zi:z/ *noun* chronic pancreaticitis

benign prostatic hypertrophy /bɪ,nain pr,stætɪk haɪ'pɔ:tropɪ/ *noun* a nonmalignant enlargement of the prostate. Abbr **BPH**

benign tumour /bə,nain 'tju:mə/ *noun* a tumour which will not grow again or spread to other parts of the body if it is removed surgically

but which can be fatal if not treated. Also called **benign growth**. Opposite **malignant tumour**

Bennett's fracture /,benɪts 'frækʃə/ *noun* a fracture of the first metacarpal, the bone between the thumb and the wrist [Described 1886. After Edward Halloran Bennett (1837–1907), Irish anatomist, later Professor of Surgery at Trinity College, Dublin, Ireland.]

bent /bent/ *adjective* □ **bent double** bent over completely so that the face is towards the ground □ *He was bent double with pain.*

benzocaine /'benzəkeɪn/ *noun* a drug with anaesthetic properties used in some throat lozenges and skin creams

benzodiazepine /,benzəʊdə'æzəpi:n/ *noun* a drug which acts on receptors in the central nervous system to relieve symptoms of anxiety and insomnia, although prolonged use is to be avoided (NOTE: Benzodiazepines have names ending in **-azepam**: **diazepam**.)

benzoin /'benzəʊɪn/ *noun* a resin used to make friar's balsam

benzyl benzoate /,benzɪl 'benzəʊeɪt/ *noun* a colourless oily liquid which occurs naturally in balsams, used in medicines and perfumes

benzylpenicillin /,benzɪl pen'i:silɪn/ *noun* an antibacterial drug used against streptococcal infections, meningococcal meningitis and other serious infections

bereavement /'bɪ:rɪ:vment/ *noun* the loss of someone, especially a close relative or friend, through death

beriberi /,beri'beri/ *noun* a disease of the nervous system caused by lack of vitamin B₁

COMMENT: Beriberi is prevalent in tropical countries where the diet is mainly formed of white rice, which is deficient in thiamine.

berylliosis /bə,rɪlɪ'əʊsɪs/ *noun* poisoning caused by breathing in particles of the poisonous chemical compound beryllium oxide

Besnier's prigo /,benieɪz pr'u:raɪgəu/ *noun* an itchy skin rash on the backs of the knees and the insides of the elbows [After Ernest Besnier (1831–1909), French dermatologist]

beta /'bi:tə/ *noun* the second letter of the Greek alphabet

beta-adrenergic receptor /,bi:tə ,ædrɛ 'nɜ:dʒɪk/ *noun* one of two types of nerve endings that respond to adrenaline by speeding up the heart rate or dilating the bronchi

beta amyloid /,bi:tə 'æmɪlɔɪd/ *noun* a wax-like protein formed from amyloid precursor protein in nerve cells which aggregates in Alzheimer's disease to form plaques

beta blocker /'bi:tə ,blɒkə/ *noun* a drug which reduces the activity of the heart (NOTE: Beta blockers have names ending in **-olol**: **atenolol**, **propranolol hydrochloride**.)

beta cell /'bi:tə sel/ *noun* a type of cell found in the islets of Langerhans, in the pancreas,

which produces insulin. Also called **B cell**. ♀ **alpha cell**

Betadine /'bi:tə'di:n/ *noun* a trade name for a form of iodine

betamethasone /,bi:tə'meθəsən/ *noun* a very strong corticosteroid drug

beta rhythm /'bi:tə,rɪθəm/ *noun* a pattern of electrical waves in the brain of someone who is awake and active, registering on an electroencephalograph at 18–30 hertz

betaxolol /'bɪ'tæksəlɒl/ *noun* a beta blocker drug used in the treatment of high blood pressure and glaucoma

bethanechol /be'θænɪkɒl/ *noun* an agonist drug used to increase muscle tone after surgery

Betnovate /'bɛtnəvæt/ *noun* a trade name for an ointment containing betamethasone

bi- /baɪ/ *prefix* two or twice

bias /'baɪəs/ *noun* a systematic error in the design or conduct of a study which could explain the results

bicarbonate of soda /baɪ'ka:bənət əv 'səʊdə/ *noun* same as **sodium bicarbonate**

bicellular /baɪ'seljʊlə/ *adjective* having two cells

biceps /'baɪsəps/ *noun* any muscle formed of two parts joined to form one tendon, especially the muscles in the front of the upper arm (biceps brachii) and the back of the thigh (biceps femoris). ♀ **triceps** (NOTE: The plural is **biceps**.)

bicipital /baɪ'sɪpɪtl(ə)s/ *adjective* 1. referring to a biceps muscle 2. with two parts

biconcave /baɪ'kɒŋkeɪv/ *adjective* referring to a lens which is concave on both sides

biconvex /baɪ'kɒnveks/ *adjective* referring to a lens which is convex on both sides

bicornuate /baɪ'kɔ:nju:t/ *adjective* divided into two parts (NOTE: The word is sometimes applied to a malformation of the uterus.)

bicuspid /baɪ'kʌspɪd/ *adjective* with two points ■ *noun* a premolar tooth

bicuspid valve /,baɪ'kʌspɪd ,vælv/ *noun* same as **mitral valve**. see illustration at **HEART** in Supplement

b.i.d. *adverb* (*used on prescriptions*) twice daily. Full form **bis in die**

bitifid /'baɪfɪd/ *adjective* in two parts

bitifida /'baɪfɪdə/ ♀ **spina bifida**

bifocal /baɪ'fəʊk(ə)s/ *adjective* referring to lenses made with two sections which have different focal lengths, one for looking at things which are near, the other for looking at things which are far away

bifocal glasses /baɪ'fəʊk(ə)s/ 'gla:sɪz/ **bifocal lenses** /baɪ'fəʊk(ə)s/ 'lenzɪz/, **bifocals** /baɪ'fəʊk(ə)s/ɪz/ *plural noun* spectacles with lenses which have two types of lens combined in the same piece of glass, the top part being used for seeing at a distance and the lower part for reading

bifurcate /'baɪfəkət/ *adjective* separating or branching off into two parts ■ *verb* to split or branch off into two parts

bifurcation /,baɪfə'keɪʃ(ə)n/ *noun* a place where something divides into two parts

bigeminy /baɪ'dʒemɪni/ *noun* same as **pulse bigeminus**

big toe /bɪg 'təʊ/ *noun* the largest of the five toes, on the inside of the foot. Also called **great toe**

biguanide /baɪ'gwā:naid/ *noun* a drug which lowers blood sugar, used in the treatment of Type II diabetes

bilateral /baɪ'læt(ə)rəl/ *adjective* affecting both sides

bilateral adrenalectomy /baɪ'læt(ə)rəl ə,dri:nə'lektəmɪ/ *noun* the surgical removal of both adrenal glands

bilateral pneumonia /baɪ'læt(ə)rəl nju:'məniə/ *noun* pneumonia affecting both lungs

bilateral vasectomy /baɪ'læt(ə)rəl və'sektəmɪ/ *noun* a surgical operation to cut both vasa deferentia and so make a man sterile

bile /baɪl/ *noun* a thick bitter brownish yellow fluid produced by the liver, stored in the gall bladder and used to digest fatty substances and neutralise acids (NOTE: For other terms referring to bile, see words beginning with **chol-**.)

COMMENT: In jaundice, excess bile pigments flow into the blood and cause the skin to turn yellow.

bile acid /'baɪl ,æsɪd/ *noun* an acid found in the bile, e.g. cholic acid

bile canal /'baɪl kə,næl/ *noun* a very small vessel leading from a hepatic cell to the bile duct

bile duct /'baɪl dʌkt/ *noun* a tube which links the cystic duct and the hepatic duct to the duodenum

bile pigment /'baɪl ,pɪgmənt/ *noun* colouring matter in bile

bile salts /'baɪl sɔ:ltz/ *plural noun* sodium salts of bile acids

bilharzia /bi'lha:tsiə/ *noun* 1. a fluke which enters the bloodstream and causes bilharziasis. Also called **Schistosoma** 2. same as **bilharziasis** (NOTE: Although strictly speaking, **bilharzia** is the name of the fluke, it is also generally used for the name of the disease: **bilharzia patients; six cases of bilharzia**.)

bilharziasis /,bi'lha:tsiə'sɪs/ *noun* a tropical disease caused by flukes in the intestine or bladder. Also called **bilharzia, schistosomiasis**

COMMENT: The larvae of the fluke enter the skin through the feet and lodge in the walls of the intestine or bladder. They are passed out of the body in stools or urine and return to water, where they lodge and develop in the water snail, the secondary host, before going back into humans. Patients experience fever and anaemia.

bili-/bili/ *prefix referring to bile* (NOTE: For other terms referring to bile, see words beginning with **chol-**, **chole-**)

biliary /'biliərɪ/ *adjective referring to bile*

biliary colic /,biliərɪ 'kɒlkɪk/ *noun* pain in the abdomen caused by gallstones in the bile duct or by inflammation of the gall bladder

biliary fistula /,biliərɪ 'fɪstʃʊlə/ *noun* an opening which discharges bile on to the surface of the skin from the gall bladder, bile duct or liver

bilious /'biliəs/ *adjective* 1. referring to bile 2. referring to nausea (*informal*)

biliousness /'biliəsnəs/ *noun* a feeling of indigestion and nausea (*informal*)

bilirubin /,bili'rʊ:bɪn/ *noun* a red pigment in bile

bilirubinaemia /,bili'rū:bɪ'nī:miə/ *noun* an excess of bilirubin in the blood

biluria /,bili'juəriə/ *noun* the presence of bile in the urine. Also called **choluria**

biliverdin /,bili'verdɪn/ *noun* a green pigment in bile, produced by oxidation of bilirubin

Billings method /'biliŋz ,meθəd/ *noun* a method of birth control which uses the colour and consistency of the cervical mucus as guides to whether ovulation is taking place

Billroth's operations /bilrɒθs ɒpə'reɪʃ(ə)nズ/ *plural noun* surgical operations in which the lower part of the stomach is removed and the part which is left is linked to the duodenum (Billroth I) or jejunum (Billroth II) [Described 1881. After Christian Albert Theodore Billroth (1829–94), Prussian surgeon.]

bilobate /baɪ'ləbət/ *adjective* with two lobes

bimanual /baɪ'mænjuəl/ *adjective* done with two hands, or needing both hands to be done

binary /'bainərɪ/ *adjective* made of two parts

binary fission /,bainərɪ 'fɪʃ(ə)n/ *noun* the process of splitting into two parts in some types of cell division

binaural /bain'ɔ:rəl/ *adjective* using, or relating to, both ears

binder /'baɪndə/ *noun* a bandage which is wrapped round a limb to support it

Binet's test /'bīneɪz test/ *noun* an intelligence test for children [Originally described 1905 but later modified at Stanford University, California, USA. After Alfred Binet (1857–1911), French psychologist and physiologist.]

binocular /bɪ'nɒkjʊlə/ *adjective* referring to the two eyes

binocular vision /bɪ,nɒkjʊlə 'vɪʒ(ə)n/ *noun* ability to see with both eyes at the same time, which gives a stereoscopic effect and allows a person to judge distances. Compare **monocular**

binocular /bɪ'nɒvjʊlə/ *adjective* referring to twins who develop from two different ova

bio- /baɪəʊ/ *prefix referring to living organisms*

bioactive /,baɪəʊ'æktyv/ *adjective* producing an effect in living tissue or in a living organism

bioassay /,baɪəʊə'seɪ/ *noun* a test of the strength of a drug, hormone, vitamin or serum, by examining the effect it has on living animals or tissue

bioavailability /,baɪəʊə'veɪlə'biliti/ *noun* the extent to which a nutrient or medicine can be taken up by the body

biochemical /,baɪəʊ'kemɪk(ə)l/ *adjective* referring to biochemistry

biochemistry /,baɪəʊ'kemɪstri/ *noun* the chemistry of living tissues

biocide /'baɪəʊsaɪd/ *noun* a substance which kills living organisms

biocompatibility /,baɪəʊkəmpætə'biliti/ *noun* the compatibility of a donated organ or artificial limb with the living tissue into which it has been introduced or with which it is brought into contact

biodegradable /,baɪəʊdrɪ'greɪdəb(ə)l/ *adjective* easily decomposed by organisms such as bacteria or by the effect of sunlight, the sea, etc.

bioengineering /,baɪəʊendʒɪ'nɪərɪŋ/ *noun* same as **biomedical engineering**

bioethics /'baɪəʊ,eθɪks/ *noun* the study of the moral and ethical choices in medical research and treatment of patients, especially when advanced technology is available

biofeedback /,baɪəʊ'fi:dbæk/ *noun* the control of the autonomic nervous system by someone's conscious thought, as he or she sees the results of tests or scans

biogenesis /,baɪəʊ'dʒenəsɪs/ *noun* a theory that living organisms can only develop from other living organisms

biohazard /'baɪəʊ,hæzəd/ *noun* a danger to human beings or their environment, especially one from a poisonous or infectious agent

bioinstrumentation /,baɪəʊnstrə'mēn'teɪʃ(ə)n/ *noun* instruments used to record and display information about the body's functions, or the use of such instruments

biological /,baɪə'lɒdʒɪk(ə)l/ *adjective* referring to biology

biological clock /,baɪəlɒdʒɪk(ə)l 'klɒk/ *noun* the rhythm of daily activities and bodily processes such as eating, defecating or sleeping, frequently controlled by hormones, which repeats every twenty-four hours. Also called **circadian rhythm**

biological parent /,baɪə,lɒdʒɪk(ə)l 'peərənt/ *noun* a parent who was physically involved in producing a child

biologist /baɪ'ɒlədʒɪst/ *noun* a scientist who specialises in biology

biology /baɪ'ɒlədʒɪ/ *noun* the study of living organisms

biomaterial /baɪəʊmə'trɪərɪəl/ *noun* a synthetic material which can be used as an implant in living tissue

biomedical engineering /baɪəʊmedɪk(ə)l, endʒɪ'nɪərɪŋ/ *noun* the application of engineering science such as robotics and hydraulics to medicine

biomedicine /'baɪəʊ,med(ə)s(ə)n/ *noun* 1. the use of the principles of biology, biochemistry, physiology and other basic sciences to solve problems in clinical medicine 2. the study of the body's ability to withstand unusual or extreme environments

biometry /baɪ'ɒmətri/ *noun* the science which applies statistics to the study of living things □ **biometry of the eye** measurement of the eye by ultrasound □ **biometry of a fetus** the measurement of the key parameters of growth of a fetus by ultrasound

biomonitoring /'baɪəʊ,mɔnɪt(ə)rɪŋ/ *noun* the measurement and tracking of a chemical substance in a living organism or biological material such as blood or urine, usually to check environmental pollution or chemical exposure

bionic ear /baɪ'ɒnɪk ɪə/ *noun* a cochlear implant (*informal*)

bionics /baɪ'ɒnɪks/ *noun* the process of applying knowledge of biological systems to mechanical and electronic devices

biopharmaceutical /,baɪəʊfɑ:mə'su:tɪk(ə)l/ *noun* a drug produced by biotechnological methods

biophysical profile /,baɪəʊfɪzɪk(ə)l 'prəʊfəl/ *noun* a profile of a fetus, based on such things as its breathing movement and body movement

biopsy /'baɪəpsi/ *noun* the process of taking a small piece of living tissue for examination and diagnosis □ *The biopsy of the tissue from the growth showed that it was benign.*

biorhythm /baɪəʊrɪθ(ə)m/ *noun* a regular process of change which takes place within living organisms, e.g. sleeping, waking or the reproductive cycle (NOTE: Some people believe that biorhythms affect behaviour and mood.)

biosensor /'baɪəʊ,sensə/ *noun* a device that uses a biological agent such as an enzyme or organelle to detect, measure or analyse chemicals (NOTE: Biosensors are increasingly used in tests to diagnose medical conditions such as blood pressure.)

biostatistics /,baɪəʊstə'tɪstɪks/ *plural noun* statistics used in medicine and the study of disease

biosurgery /'baɪəʊ,sɜ:dʒəri/ *noun* the use of living organisms in surgery and post-surgical treatment, especially the use of maggots or leeches to clean wounds

biotechnology /,baɪəotek'nɒlədʒi/ *noun* 1. the use of biological processes in industrial

production, e.g. in the production of drugs 2. same as **genetic modification**

biotherapy /'baɪəʊ,θerəpi/ *noun* the treatment of disease with substances produced through the activity of living organisms such as sera, vaccines or antibiotics

biotin /'baɪətɪn/ *noun* a type of vitamin B found in egg yolks, liver and yeast

biparietal /,baɪpə'ræjət(ə)l/ *adjective* referring to the two parietal bones

biparous /'bɪpərəs/ *adjective* producing twins

bipennate /baɪ'peneɪt/ *adjective* referring to a muscle with fibres which rise from either side of the tendon

bipolar /baɪ'pəʊlə/ *adjective* with two poles. See illustration at **NEURONE** in Supplement

bipolar disorder /,baɪ,pəʊlə dis'ɔ:də/ *noun* a psychological condition in which someone moves between mania and depression and experiences delusion. Also called **manic-depressive illness, manic depression**

bipolar neurone /baɪ,pəʊlə 'njuərəʊn/ *noun* a nerve cell with two processes, a dendrite and an axon, found in the retina. See illustration at **NEURONE** in Supplement. Compare **multipolar neurone, unipolar neurone**

birth /bɜ:θ/ *noun* the act of being born □ **to give birth** to have a baby □ *She gave birth to twins.*

birth canal /'bɜ:θ kə,næl/ *noun* the uterus, vagina and vulva

birth control /'bɜ:θ kən,trəʊl/ *noun* same as **contraception**

birth control pill /'bɜ:θ kən,trəʊl pil/ *noun* same as **oral contraceptive**

birth defect /'bɜ:θ ,di:fekt/ *noun* same as **congenital anomaly** (NOTE: The word 'defect' is now avoided.)

birthing /'bɜ:θɪŋ/ *noun* the process of giving birth using natural childbirth methods ■ *adjective* designed to help in childbirth

birthing chair /'bɜ:θɪŋ tʃeəl/ *noun* a special chair in which a woman sits to give birth

birthing pool /'bɜ:θɪŋ pu:l/ *noun* a special large bath in which pregnant women can relax before and when giving birth

birthing room /'bɜ:θɪŋ ru:m/ *noun* an area set up for childbirth in a hospital or other building to provide comfortable and homely surroundings

birth injury /'bɜ:θ ,ɪndʒəri/ *noun* an injury which a baby experiences during a difficult birth, e.g. brain damage

birthmark /'bɜ:θmɑ:k/ *noun* an unusual coloured or raised area on the skin which someone has from birth. Also called **naevus**

birth mother /'bɜ:θ ,mʌðə/ *noun* the woman who gave birth to a child

birth parent /'bɜ:θ ,peərənt/ *noun* one of the parents that physically produced a child

birth plan /bɜːθ plæn/ *noun* a list of a pregnant woman's wishes about how the birth of her baby should take place, e.g. whether she wants a natural birth and what pain relief she should be given

birth rate /'bɜːθ reɪt/ *noun* the number of births per year, shown per thousand of the population ◎ *a birth rate of 15 per thousand* ◎ *There has been a severe decline in the birth rate.*

birth trauma /'bɜːθ ,trɔːmə/ *noun* an injury caused to a baby during delivery

birth weight /'bɜːθ weɪt/ *noun* the weight of a baby at birth

bisacodyl /,baɪsə'kəʊdɪl/ *noun* a laxative drug

bisexual /baɪ'sɛksjʊəl/ *noun* someone who has both male and female sexual partners ■ *adjective* referring to a person who is sexually attracted to both males and females. Compare **heterosexual, homosexual**

bisexuality /baɪ'sɛksjʊə'lɪti/ *noun* the state of being sexually attracted to both males and females

bis in die /,bɪs in 'di:ə/ *adverb* full form of **b.i.d.**

bismuth /'bɪzməθ/ *noun* a chemical element (NOTE: The chemical symbol is **Bi**.)

bismuth salts /'bɪzməθ sɔ:lts/ *plural noun* salts used to treat acid stomach and formerly used in the treatment of syphilis

bistoury /'bɪstɔːri/ *noun* a sharp thin surgical knife

bite /baɪt/ *verb* 1. to cut into something with the teeth ◎ *He bit a piece out of the apple.* □ **to bite on something** to hold onto something with the teeth ◎ *The dentist told him to bite on the bite wing.* 2. (of an insect) to puncture someone's skin ■ *noun* 1. the action of biting or of being bitten 2. a place or mark where someone has been bitten ◎ *a dog bite* ◎ *an insect bite*

bite wing /'baɪt wɪŋ/ *noun* a holder for dental X-ray film, which a person clenches between the teeth, so allowing an X-ray of both upper and lower teeth to be taken

Bitot's spots /bi:təʊz 'spɒts/ *plural noun* small white spots on the conjunctiva, caused by vitamin A deficiency [Described 1863. After Pierre A. Bitot (1822–88), French physician.]

bivalve /'baɪvælv/ *noun* an organ which has two valves ■ *adjective* referring to a bivalve organ

black eye /blæk 'aɪ/ *noun* bruising and swelling of the tissues round an eye, usually caused by a blow

blackhead /'blæk'hed/ *noun* same as **comedo** (*informal*)

black heel /'blæk ,hi:l/ *noun* a haemorrhage inside the heel, characterised by black spots

black out /blæk 'aʊt/ *verb* to have sudden loss of consciousness ◎ *I suddenly blacked out and I can't remember anything more*

blackout /'blæktaʊt/ *noun* a sudden loss of consciousness (*informal*) ◎ *She must have had a blackout while driving.* Also called **fainting fit**

black spots /,blæk 'spɒts/ *plural noun* □ **black spots in front of the eyes** moving black dots seen when looking at something, more noticeable when a person is tired or run-down, and more common in shortsighted people

blackwater fever /'blækwɔːtə ,fɪrvə/ *noun* a form of malaria where haemoglobin from red blood cells is released into plasma and makes the urine dark

bladder /'blaɪdə/ *noun* any sac in the body, especially the sac where the urine collects before being passed out of the body ◎ *He is suffering from bladder trouble.* ◎ *She is taking antibiotics for a bladder infection.*

Blalock's operation /'bleɪlɔks ɒpə'reɪʃn/, **Blalock-Taussig operation** /'bleɪlɔk 'tɔ:sɪg ɒpə'reɪʃn/ *noun* a surgical operation to connect the pulmonary artery to the subclavian artery, in order to increase blood flow to the lungs of someone who has tetralogy of Fallot

bland /blaɪnd/ *adjective* referring to food which is not spicy, irritating or acid

bland diet /,blaɪnd 'daɪət/ *noun* a diet in which someone eats mainly milk-based foods, boiled vegetables and white meat, as a treatment for peptic ulcers

blanket bath /'blænkɪt ba:θ/ *noun* same as **bed bath**

blast /bla:st/ *noun* 1. a wave of air pressure from an explosion which can cause concussion 2. an immature form of a cell before distinctive characteristics develop

-**blast** /bla:st/ *suffix* referring to a very early stage in the development of a cell

blast injury /'bla:st ,ɪndʒəri/ *noun* a severe injury to the chest following a blast

blast- /bla:stəʊ/ *prefix* referring to a germ cell

blastocoele /'bla:stəʊsɪl/ *noun* a cavity filled with fluid in a morula (NOTE: The US spelling is **blastocoele**.)

blastocyst /'bla:stəʊsɪst/ *noun* an early stage in the development of an embryo

Blastomyces /,bla:stəʊ'maɪsɪz/ *noun* a type of parasitic fungus which affects the skin

blastomycosis /,bla:stəʊ'maɪkəʊ'sɪs/ *noun* an infection caused by *Blastomyces*

blastula /'bla:stjʊlə/ *noun* the first stage of the development of an embryo in animals

bleb /bleb/ *noun* a blister. Compare **bulla**

bled /bled/ ♦ **bleed**

bleed /'bli:d/ *verb* to lose blood ○ *His knee was bleeding.* ○ *He was bleeding from a cut on the head.* (NOTE: **bleeding – bled**)

bleeder /'bli:də/ *noun* 1. a blood vessel which bleeds during surgery 2. a person who has haemophilia (*informal*)

bleeding /'bli:dɪŋ/ *noun* an unusual loss of blood from the body through the skin, through an orifice or internally

COMMENT: Blood lost through bleeding from an artery is bright red and can rush out because it is under pressure. Blood from a vein is darker red and flows more slowly.

bleeding point /'bli:dɪŋ pɔɪnt/, **bleeding site** /'bli:dɪŋ saɪt/ *noun* a place in the body where bleeding is taking place

bleeding time /'bli:dɪŋ taim/ *noun* a test of the clotting ability of someone's blood, by timing the length of time it takes for the blood to congeal

blenno- /'blɛnəʊ/ *prefix* referring to mucus

blennorrhagia /,blɛnəʊ'reɪdʒə/ *noun* 1. the discharge of mucus 2. gonorrhoea

blennorrhœa /,blɛnə'rɪ:a/ *noun* 1. the discharge of watery mucus 2. gonorrhœa

bleomycin /'bli:əʊ'maɪsɪn/ *noun* an antibiotic used to treat forms of cancer such as Hodgkin's disease

blephar- /'blefər/ *prefix* same as **blepharo-** (*used before vowels*)

blepharitis /,blefə'rɪtaɪs/ *noun* inflammation of the eyelid

blepharo- /'blefərəʊ/ *prefix* referring to the eyelid

blepharoconjunctivitis /,blefərəʊkən'dʒʌŋktɪvɪtɪs/ *noun* inflammation of the conjunctiva of the eyelids

blepharon /'blefərɒn/ *noun* an eyelid

blepharospasm /'blefərəʊspæz(ə)m/ *noun* a sudden contraction of the eyelid, as when a tiny piece of dust gets in the eye

blepharotosis /,blefərəʊ'təʊsɪs/ *noun* a condition in which the upper eyelid is half closed because of paralysis of the muscle or nerve

blind /'blaɪnd/ *adjective* not able to see ■ *plural noun* □ **the blind** people who are blind. ♀ **visually impaired** ■ *verb* to make someone blind ○ *He was blinded in the accident.*

blind gut /,blaɪnd 'gʌt/ *noun* same as **caecum**

blind loop syndrome /'blaɪnd 'lu:p ,sɪn drəʊm/ *noun* a condition which occurs in cases of diverticulosis or of Crohn's disease, with steatorrhœa, abdominal pain and megaloblastic anaemia

blindness /'blaɪndnəs/ *noun* the fact of not being able to see

blind spot /'blaɪnd spɒt/ *noun* the point in the retina where the optic nerve joins it, which does not register light

blind study /'blaɪnd 'stʌdi/ *noun* an investigation to test an intervention such as giving a drug, in which a person does not know if he or she has taken the active medicine or the placebo

blink /'blɪŋk/ *verb* to close and open the eyelids rapidly several times or once ○ *He blinked in the bright light.*

blister /'blɪstə/ *noun* a swelling on the skin containing serum from the blood, caused by rubbing, burning or a disease such as chicken-pox ■ *verb* to produce blisters

bloated /'bləutɪd/ *adjective* experiencing the uncomfortable sensation of a very full stomach

block /'blɒk/ *noun* 1. the stopping of a function 2. something which obstructs 3. a large piece of something ○ *A block of wood fell on his foot.* 4. a period of time ○ *The training is in two three-hour blocks.* 5. one of the different buildings forming a section of a hospital ○ *The patient is in Block 2, Ward 7.* ○ *She is having treatment in the physiotherapy block.* ■ *verb* to fill the space in something and stop other things passing through it ○ *The artery was blocked by a clot.* ○ *He swallowed a piece of plastic which blocked his oesophagus.*

blockage /'blɒkɪdʒ/ *noun* 1. something which obstructs ○ *There is a blockage in the rectum.* 2. the act of being obstructed ○ *The blockage of the artery was caused by a blood clot.*

blocker /'blɒkə/ *noun* a substance which blocks an action. ♀ **beta blocker**

blocking /'blɒkɪŋ/ *noun* a psychiatric disorder, in which someone suddenly stops one train of thought and switches to another

blood /blɒd/ *noun* a red liquid moved around the body by the pumping action of the heart (NOTE: For other terms referring to blood, see words beginning with **haem-**, **haemo-**, **haemato-**) ◇ **blood chemistry or chemistry of the blood** 1. the substances which make up blood can be analysed in blood tests, the results of which are useful in diagnosing disease 2. the record of changes which take place in blood during disease and treatment

COMMENT: Blood is formed of red and white cells, platelets and plasma. It circulates round the body, going from the heart and lungs along arteries, and returns to the heart through the veins. As it moves round the body it takes oxygen to the tissues and removes waste material which is cleaned out through the kidneys or exhaled through the lungs. It also carries hormones produced by glands to the various organs which need them. The body of an average adult contains about six litres or ten pints of blood.

blood bank /'blɒd bænk/ *noun* a section of a hospital or a special centre where blood given by donors is stored for use in transfusions

blood blister /'blʌd ,blɪstə/ *noun* a swelling on the skin with blood inside, caused by nipping the flesh

blood-borne virus /,blʌd bɔ:n 'vairəs/ *noun* a virus carried by the blood

blood-brain barrier /,blʌd breɪn 'bærɪər/ *noun* the process by which some substances, which in other parts of the body will diffuse from capillaries, are held back by the endothelium of cerebral capillaries, preventing them from coming into contact with the fluids round the brain

blood casts /'blʌd ku:sts/ *plural noun* pieces of blood cells which are secreted by the kidneys in kidney disease

blood cell /'blʌd sel/ *noun* a red or a white cell in the blood

blood clot /'blʌd klɒt/ *noun* a soft mass of coagulated blood in a vein or an artery. Also called **thrombus**

blood clotting /'blʌd ,klɒtɪŋ/ *noun* the process by which blood changes from being liquid to being semi-solid and so stops flowing

blood corpuscle /'blʌd ,kɔ:pəs(ə)l/ *noun* ♦ **blood cell**

blood count /'blʌd kaʊnt/ *noun* a test to count the number and types of different blood cells in a sample of blood, in order to give an indication of the condition of the person's blood as a whole

blood culture /'blʌd ,kʌltʃə/ *noun* a method of testing a sample of blood by placing it on a culture medium to see if foreign organisms in it grow

blood donor /'blʌd ,dəʊnə/ *noun* a person who gives blood which is then used in transfusions to other people

blood dyscrasia /,blʌd dis'kreɪzɪə/ *noun* any unusual blood condition such as a low cell count or platelet count

blood formation /'blʌd fɔ:,meɪʃ(ə)n/ *noun* same as **haemopoiesis**

blood-glucose level /,blʌd 'glu:kəʊəz ,lev(ə)l/ *noun* the amount of glucose present in the blood. The usual blood-glucose level is about 60–100 mg of glucose per 100 ml of blood.

blood group /'blʌd gru:p/ *noun* one of the different groups into which human blood is classified. Also called **blood type**

COMMENT: Blood is classified in various ways. The most common classifications are by the agglutinogens (factors A and B) in red blood cells and by the Rhesus factor. Blood can therefore have either factor (Group A and Group B) or both factors (Group AB) or neither (Group O) and each of these groups can be Rhesus negative or positive.

blood grouping /'blʌd ,gru:piŋ/ *noun* the process of classifying people according to their blood groups

blood-letting /'blʌd ,letɪŋ/ *noun* same as **phlebotomy**

blood loss /'blʌd lɒs/ *noun* loss of blood from the body by bleeding

blood picture /'blʌd ,piktʃə/ *noun* US a full blood count

blood pigment /'blʌd ,pɪg'mənt/ *noun* same as **haemoglobin**

blood plasma /'blʌd ,plæzmə/ *noun* a yellow watery liquid which makes up the main part of blood

blood platelet /'blʌd ,plentlət/ *noun* a small blood cell which releases thromboplastin and which multiplies rapidly after an injury, encouraging the coagulation of blood

blood poisoning /'blʌd ,pɔɪz(ə)nɪŋ/ *noun* a condition in which bacteria are present in the blood and cause illness (*informal*) ◇ **septicaemia, bacteraemia, toxæmia**

blood pressure /'blʌd ,preʃə/ *noun* the pressure, measured in millimetres of mercury, at which the blood is pumped round the body by the heart ◇ **high blood pressure or raised blood pressure** a level of blood pressure which is higher than usual

... raised blood pressure may account for as many as 70% of all strokes. The risk of stroke rises with both systolic and diastolic blood pressure in the normotensive and hypertensive ranges. Blood pressure control reduces the incidence of first stroke and aspirin appears to reduce the risk of stroke after TIAs' [British Journal of Hospital Medicine]

COMMENT: Blood pressure is measured using a sphygmomanometer. A rubber tube is wrapped round the patient's arm and inflated and two readings of blood pressure are taken: the systolic pressure, when the heart is contracting and so pumping out, and the diastolic pressure, which is always a lower figure, when the heart relaxes. Healthy adult values are considered to be 160/95, unless the patient is diabetic or has heart disease, when lower target values are set.

blood product /'blʌd ,prɒdʌkt/ *noun* a substance such as plasma taken out of blood and used in the treatment of various medical conditions

blood relationship /,blʌd ri'leɪʃ(ə)nʃɪp/ *noun* a relationship between people who come from the same family and have the same parents, grandparents or ancestors, as opposed to a relationship by marriage

blood sample /'blʌd ,sæmplə/ *noun* a sample of blood, taken for testing

blood serum /'blʌd ,sɪərəm/ *noun* ♦ **serum**

bloodshot /'blʌdʃɒt/ *adjective* referring to an eye with small specks of blood in it from a small damaged blood vessel

bloodstained /'blʌdsteɪnd/ *adjective* having blood in or on it ◇ *He coughed up blood-stained sputum.*

bloodstream /'blʌdstri:m/ *noun* the blood flowing round the body ◇ *Hormones are secreted by the glands into the bloodstream.*

blood sugar /'blʌd 'ʃʊgə/ *noun* glucose present in the blood

blood sugar level /,blʌd 'ʃʊgə ,lev(ə)l/ *noun* the amount of glucose in the blood, which is higher after meals and in people with diabetes

blood test /'blʌd test/ *noun* a laboratory test of a blood sample to analyse its chemical composition ◎ *The patient will have to have a blood test.*

blood transfusion /'blʌd træns,fju:z(ə)n/ *noun* a procedure in which blood given by another person or taken from the patient at an earlier stage is transferred into the patient's vein

blood type /'blʌd taɪp/ *noun* same as **blood group**

blood typing /'blʌd ,taɪpɪŋ/ *noun* the analysis of blood for transfusion factors and blood group

blood urea /'blʌd ju'rɪə/ *noun* urea present in the blood. A high level occurs following heart failure or kidney disease.

blood vessel /'blʌd ,ves(ə)l/ *noun* any tube which carries blood round the body, e.g. an artery, vein or capillary (NOTE: For other terms referring to blood vessels, see words beginning with **angi-**, **angio-**)

blood volume /'blʌd ,vɒlvju:m/ *noun* the total amount of blood in the body

blotch /blɒtʃ/ *noun* a reddish patch on the skin

blot test /'blɒt test/ *noun* ▶ **Rorschach test**

blue baby /'blu: 'beɪbɪ/ *noun* a baby who has congenital cyanosis, born either with a congenital heart condition or with a collapsed lung, which prevents an adequate supply of oxygen reaching the tissues, giving the baby's skin a slight blue colour (*informal*)

blue disease /'blu: di'zi:z/, **blueness** /'blu:nəs/ *noun* ▶ **cyanosis**

blue litmus /'blu: 'lɪtməs/ *noun* treated paper which indicates the presence of acid by turning red

blurred vision /,blɜ:d 'vɪʒ(ə)n/ *noun* a condition in which someone does not see objects clearly

blush /blʌʃ/ *noun* a rush of red colour to the skin of the face, caused by emotion ■ *verb* to go red in the face because of emotion

bm abbr bowel movement

BM abbr Bachelor of Medicine

BMA abbr British Medical Association

BMI abbr body mass index

BMJ abbr British Medical Journal

BMR abbr basal metabolic rate

BMR test /'bi: ,em 'a: test/ *noun* a test of thyroid function

BNF abbr British National Formulary

bodily /'bɒdili/ *adjective* referring to the body

◎ *The main bodily functions are controlled by the sympathetic nervous system.*

body /'bɒdi/ *noun* 1. the physical structure of a person, as opposed to the mind 2. the main part of a person's body, not including the head or arms and legs 3. a dead person ■ an amount of something □ *noun* 1. the main part of something □ **body of sternum** the main central part of the breastbone □ **body of vertebra** the main part of a vertebra which supports the weight of the body □ **body of the stomach** main part of the stomach between the fundus and the pylorus. See illustration at **STOMACH** in Supplement 2. ▶ **foreign body**

body cavity /'bɒdi ,kævɪti/ *noun* an opening in the body, e.g. the mouth, oesophagus, vagina, rectum or ear

body fat /'bɒdi fæt/ *noun* tissue where the cells contain fat which replaces the fibrous tissue when too much food is eaten

body fluid /'bɒdi ,flu:ɪd/ *noun* a liquid in the body, e.g. water, blood or semen

body image /,bɒdi 'ɪmɪdʒ/ *noun* the mental image which a person has of their own body. Also called **body schema**

body language /'bɒdi ,læŋgwɪdʒ/ *noun* the expression on your face, or the way you hold your body, interpreted by other people as unconsciously revealing your feelings

body mass index /,bɒdi 'mæs ,ɪndeks/ *noun* a figure obtained by dividing someone's weight in kilos by the square of his or her height in metres. 19–25 is considered usual. Abbr **BMI**

COMMENT: If a person is 1.70m (5ft 7in.) and weighs 82kg (180 lbs), his or her BMI is 28 and so above average.

body odour /,bɒdi 'əʊdə/ *noun* an unpleasant smell caused by perspiration

body scan /'bɒdi skæn/ *noun* an examination of the whole of the body using ultrasound or other scanning techniques

body schema /,bɒdi 'ski:mə/ *noun* same as **body image**

body substance isolation /'bɒdi ,sə'bstəns ɪsə,leɪʃ(ə)n/ *noun* making sure that a trauma victim is kept isolated from the possibility of infection from moist body substances

body temperature /'bɒdi ,temprɪ,tʃə/ *noun* the internal temperature of the human body, usually about 37°C

Boeck's disease /'beks di'zi:z/, **Boeck's sarcoid** /'beks ,sa:kɔɪd/ *noun* same as **sarcoidosis** [Described 1899. After Caesar Peter Moeller Boeck (1845–1913), Professor of Dermatology at Oslo, Norway.]

Bohn's nodules /,bo:nz 'nɒdju:lz/, **Bohn's epithelial pearls** plural *noun* tiny cysts found in the mouths of healthy infants

boil /bɔɪl/ *noun* a tender raised mass of infected tissue and skin, usually caused by infection of a hair follicle by the bacterium *Staphylococcus aureus*. Also called **furuncle**

bolus /'bəʊləs/ *noun* 1. a mass of food which has been chewed and is ready to be swallowed 2. a mass of food passing along the intestine

bonding /'bɒndɪŋ/ *noun* the process by which a psychological link is formed between a baby and its mother ○ *In autistic children bonding is difficult.*

bone /bəʊn/ *noun* 1. calcified connective tissue 2. one of the calcified pieces of connective tissue which make the skeleton ○ *There are several small bones in the human ear.* See illustration at **SYNOVIAL JOINT** in Supplement ○ **bone structure** 1. the system of jointed bones forming the body 2. the arrangement of the various components of a bone

COMMENT: Bones are formed of a hard outer layer (compact bone) which is made up of a series of layers of tissue (Haversian systems) and a softer inner part (cancellous bone or spongy bone) which contains bone marrow.

bone-anchored hearing aid /,bəʊn ,æŋkəd 'hɪərɪŋ eɪd/ *noun* a hearing aid that is fitted surgically into the skull, usually behind the ear. Abbr **BAHA**

bone conduction /'bəʊn kən,dʌkʃ(ə)n/ *noun* same as **osteophony**

bone damage /'bəʊn ,dæmɪdʒ/ *noun* damage caused to a bone ○ *extensive bruising but no bone damage*

bone graft /'bəʊn grɑ:ft/ *noun* a piece of bone taken from one part of the body to repair a another bone

bone marrow /'bəʊn ,mærəʊ/ *noun* soft tissue in cancellous bone (NOTE: For other terms referring to bone marrow, see words beginning with **myel-**, **myelo-**)

COMMENT: Two types of bone marrow are to be found: red bone marrow or myeloid tissue, which forms red blood cells and is found in cancellous bone in the vertebrae, the sternum and other flat bones. As a person gets older, fatty yellow bone marrow develops in the central cavity of long bones.

bone marrow transplant /,bəʊn 'mærəʊ ,tra:nspλə:tnt/ *noun* the transplant of marrow from a donor to a recipient

bone scan *noun* a scan which tracks a radioactive substance injected into the body to find areas where a bone is breaking down or repairing itself

Bonney's blue /,bɔ:niz 'blu:/ *noun* a blue dye used as a disinfectant [After William Francis Victor Bonney (1872–1953), British gynaecologist]

bony /'bəʊni/ *adjective* 1. relating to bones, or made of bone 2. referring to a part of the body where the structure of the bones underneath can be seen ○ *thin bony hands*

bony labyrinth /,bəʊni 'læbərɪnθ/ *noun* a hard part of the temporal bone surrounding the membranous labyrinth in the inner ear. Also called **osseous labyrinth**

booster /'bu:stər/ *noun* in, dʒækʃ(ə)n/, **booster injection** *noun* a repeat injection of vaccine given some time after the first injection to maintain the immunising effect

boracic acid /bə,ræsɪk 'æsɪd/ *noun* a soluble white powder used as a general disinfectant. Also called **boric acid**

borax /'bɔ:ræks/ *noun* a white powder used as a household cleaner and disinfectant

borborygmus /,bɔ:bə'rɪgməs/ *noun* a rumbling noise in the abdomen, caused by gas in the intestine (NOTE: The plural is **borborygmi**.)

borderline /'bɔ:dəlaine/ *adjective* 1. not clearly belonging to either one of two categories ○ *a borderline case* 2. referring to a medical condition likely to develop in someone unless an effort is made to prevent it 3. characterised by emotional instability and self-destructive behaviour ○ *a borderline personality*

Bordetella /,bɔ:də'tela/ *noun* a bacterium of the family *Brucellaceae* (NOTE: *Bordetella pertussis* causes whooping cough.)

boric acid /,bɔ:rik 'æsɪd/ *noun* same as **boracic acid**

born /bɔ:n/ *verb* □ **to be born** to begin to live outside the mother's uterus

Bornholm disease /'bɔ:nhaʊm dr,zi:z/ *noun* same as **epidemic pleurodynia**

bottle-fed /'bɒt(ə)fɪd/ *adjective* referring to a baby which is fed from a bottle. Compare **breast-fed**

bottle feeding /,bɒt(ə)fɪd/ 'fi:dɪŋ/ *noun* the act of giving a baby milk from a bottle, as opposed to breast feeding. Compare **breast feeding**

bottom /'bɒtəm/ *noun* 1. the part of the body on which you sit. ♀ **buttock** 2. the anus (*informal*)

bottom shuffling /'bɒtəm ,ʃʌf(ə)lɪŋ/ *noun* the process by which a baby who cannot yet walk moves around by moving itself along on its hands and buttocks

botulinum toxin /,bɒtju'lainəm ,tɒksɪn/ *noun* a poison produced by the bacterium *Clostridium botulinum* and used, in small doses, to treat muscular cramps and spasms

botulism /'bɒtju'lɪz(ə)m/ *noun* a type of food poisoning, often fatal, caused by a toxin of *Clostridium botulinum* in badly canned or preserved food. Symptoms include paralysis of the muscles, vomiting and hallucinations.

buogie /'bu:ʒi:/ *noun* a thin tube which can be inserted into passages in the body such as the oesophagus or rectum, either to allow liquid to be introduced or to dilate the passage

bout /baʊt/ *noun* a sudden attack of a disease, especially one which recurs ○ *He is recovering from a bout of flu.* □ **bout of fever** a period

when someone is feverish ○ *She has recurrent bouts of malaria fever.*

bovine spongiform encephalopathy /'bəuvain ,spɒndʒɪfɔ:m en,kefə'lɒpəθi/ noun a fatal brain disease of cattle. Abbr **BSE**.

◊ **Creutzfeldt-Jakob disease**. Also called **mad cow disease**

bowel /'baʊəl/ noun the intestine, especially the large intestine (NOTE: **Bowel** is often used in the plural in everyday language.) □ **to open the bowels** to have a bowel movement

bowel movement /'baʊəl ,mu:vment/ noun 1. an act of passing faeces out of the body through the anus ○ *The patient had a bowel movement this morning.* Also called **motion**. ◊ **defecation** 2. the amount of faeces passed through the anus

bowels /'baʊəlz/ plural noun same as **bowel**

Bowen's disease /'bəʊin̩z dɪ,zi:z/ noun a form of carcinoma, appearing as red plaques on the skin

bowl /bəʊl/ noun a wide shallow container used for holding liquids

bow-legged /bəʊ 'legɪd/ adjective with bow legs

bow legs /bəʊ 'legz/ noun a state where the ankles touch and the knees are apart when a person is standing straight. Also called **genu varum**

Bowman's capsule /,bəʊmən̩z 'kæpsju:l/ noun the expanded end of a renal tubule, surrounding a glomerular tuft in the kidney, which filters plasma in order to reabsorb useful foodstuffs and eliminate waste. Also called **Malpighian glomerulus, glomerular capsule** [Described 1842. After Sir William Paget Bowman (1816–92), surgeon in Birmingham and later in London, who was a pioneer in work on the kidney and in ophthalmology.]

BP abbr 1. blood pressure 2. British Pharmacopoeia

BPH abbr benign prostatic hypertrophy

Bq symbol becquerel

brace /breɪs/ noun any type of splint or appliance worn for support, e.g. a metal support used on children's legs to make the bones straight or on teeth which are forming badly ○ *She wore a brace on her front teeth.*

bracelet /'breɪslət/ noun ♦ **identity bracelet, medical alert bracelet**

brachi- /breɪki:/ prefix same as **brachio-** (used before vowels)

brachial /'breɪkiəl/ adjective referring to the arm, especially the upper arm

brachial artery /'breɪkiəl ,a:təri/ noun an artery running down the arm from the axillary artery to the elbow, where it divides into the radial and ulnar arteries

brachialis muscle /,breɪki'eɪlɪs ,mʌs(ə)/ noun a muscle that causes the elbow to bend

brachial plexus /,breɪkiəl 'pleksəs/ noun a group of nerves at the armpit and base of the neck which lead to the nerves in the arms and hands. Injury to the brachial plexus at birth leads to Erb's palsy.

brachial pressure point /,breɪkiəl 'preʃə point/ noun the point on the arm where pressure will stop bleeding from the brachial artery

brachial vein /'breɪkiəl veɪn/ noun a vein accompanying the brachial artery, draining into the axillary vein

brachio- /breɪkiəʊ/ prefix referring to the arm

brachiocephalic artery /,breɪkiəʊsə ,fælkɪk 'a:təri/ noun the largest branch of the arch of the aorta, which continues as the right common carotid and right subclavian arteries

brachiocephalic vein /,breɪkiəʊsə,fælkɪk 'veɪn/ noun one of a pair of large veins on opposite sides of the neck that join to form the superior vena cava. Also called **innominate vein**

brachium /'breɪkiəm/ noun an arm, especially the upper arm between the elbow and the shoulder (NOTE: The plural is **brachia**.)

brachy- /brækɪ/ prefix short

brachycephaly /,brækɪ'sefəli/ noun a condition in which the skull is shorter than usual

brachytherapy /,brækɪ'θerəpi/ noun a radioactive treatment in which the radioactive material actually touches the tissue being treated

Bradford's frame /'brædfədz freɪm/ noun a frame of metal and cloth, used to support a patient [After Edward Hickling Bradford (1848–1926), US orthopaedic surgeon]

brady- /brædi/ prefix slow

bradycardia /,brædɪ'ka:dɪə/ noun a slow rate of heart contraction, shown by a slow pulse rate of less than 70 beats per minute

bradykinesia /,brædkai'nizɪə/ noun a condition in which the someone walks slowly and makes slow movements because of disease

bradykinin /,brædɪ'kainɪn/ noun a chemical produced in the blood when tissues are injured, that plays a role in inflammation. ◊ **kinin**

bradypnoea /,brædɪp'nɪ:ə/ noun unusually slow breathing (NOTE: The US spelling is **bradypnea**.)

Braille /breɪl/ noun a system of writing using raised dots on the paper to indicate letters which a blind person can read by passing their fingers over the page ○ *The book has been published in Braille.* [Introduced 1829–30. After Louis Braille (1809–52), blind Frenchman and teacher of the blind; he introduced the system which had originally been proposed by Charles Barbier in 1820.]

brain /breɪn/ noun the part of the central nervous system situated inside the skull. Also called **encephalon**. See illustration at **BRAIN** in Supplement

COMMENT: The main part of the brain is the cerebrum, formed of two sections or hemi-

spheres, which relate to thought and to sensations from either side of the body. At the back of the head and beneath the cerebrum is the cerebellum which coordinates muscle reaction and balance. Also in the brain are the hypothalamus which governs body temperature, hunger, thirst and sexual urges, and the tiny pituitary gland which is the most important endocrine gland in the body.

brain covering /'breɪn ,kʌv(ə)rɪŋ/ *noun* ▶ meninges

brain damage /'breɪn ,dæmɪdʒ/ *noun* damage caused to the brain as a result of oxygen and sugar deprivation, e.g. after a haemorrhage, accident, or though disease

brain-damaged /'breɪn ,dæmɪdʒd/ *adjective* referring to someone who has experienced brain damage

brain death /'breɪn deθ/ *noun* a condition in which the nerves in the brain stem have died, and the person can be certified as dead, although the heart may not have stopped beating

brain haemorrhage /'breɪn 'hem(ə)rɪdʒ/ *noun* same as **cerebral haemorrhage**

brain scan /'breɪn skæn/ *noun* an examination of the inside of the brain, made by passing X-rays through the head, using a scanner, and reconstituting the images on a computer monitor

brain scanner /'breɪn ,skænə/ *noun* a machine which scans the interior of the body, used to examine the brain

brain stem /'breɪn stem/ *noun* the lower narrow part of the brain which connects the brain to the spinal cord

brain tumour /'breɪn tju:mə/ *noun* a tumour which grows in the brain

COMMENT: Tumours may grow in any part of the brain. The symptoms of brain tumour are usually headaches and dizziness, and as the tumour grows it may affect the senses or mental faculties. Operations to remove brain tumours can be very successful.

brain wave /'breɪn stem/ *noun* a rhythmic wave of voltage produced by electrical activity in the brain tissue

bran /bræn/ *noun* the outside covering of the wheat seed, removed when making white flour, but an important source of roughage in the diet

branch /'bra:nʃ/ *noun* any part which grows out of a main part □ *verb* to split out into smaller parts ○ *The radial artery branches from the brachial artery at the elbow.*

branchia /'bræŋkiə/ *noun* a breathing organ similar to the gill of a fish found in human embryos in the early stages of development (NOTE: The plural is **branchiae**.)

branchial /'bræŋkiəl/ *adjective* referring to the branchiae

branchial cyst /,bræŋkiəl 'sist/ *noun* a cyst on the side of the neck of an embryo

branchial pouch /,bræŋkiəl 'paʊtʃ/ *noun* a pouch on the side of the neck of an embryo

Braun's frame /,braʊnz 'freɪm/, **Braun's splint** /,braʊnz 'splɪnt/ *noun* a metal splint and frame to which pulleys are attached, used for holding up a fractured leg while the person is lying in bed [After Heinrich Friedrich Wilhelm Braun (1862–1934), German surgeon]

Braxton-Hicks contractions /,brækstən 'hɪks kən,trækʃənz/ *plural noun* contractions of the uterus which occur throughout a pregnancy and become more frequent and stronger towards the end [After Dr Braxton-Hicks, 19th century British physician]

break /breɪk/ *noun* the point at which a bone has broken □ **clean break** a break in a bone which is not complicated and where the two parts will join again easily

breakbone fever /'breɪkbəʊn ,fi:və/ *noun* same as **dengue**

break down /,breɪk 'daʊn/ *verb* 1. to experience a sudden physical or psychological illness (*informal*) ○ *After she lost her husband, her health broke down.* 2. to start to cry and become upset (*informal*) ○ *She broke down as she described the symptoms to the doctor.* 3. to split or cause to split into smaller chemical components, as in the digestion of food

breakdown /'breɪkdaʊn/ *noun* ▶ **nervous breakdown**

breakdown product /'breɪkdaʊn ,prɒdʌkt/ *noun* a substance which is produced when a compound is broken down into its parts

breast /'brest/ *noun* one of two glands in a woman which secrete milk. Also called **mamma** (NOTE: For other terms referring to breasts, see words beginning with **mamm-**, **mammo-**, **mast-**, **masto-**.)

breast augmentation /'brest ,ɔ:g'men teɪʃ(ə)n/ *noun* a surgical procedure to increase the size of the breast for cosmetic purposes

breastbone /'brestbəʊn/ *noun* a bone which is in the centre of the front of the thorax and to which the ribs are connected. Also called **sternum**

breast cancer /'brest ,kænsə/ *noun* a malignant tumour in a breast

breast-fed /'brest fed/ *adjective* referring to a baby which is fed from the mother's breasts ○ *She was breast-fed for the first two months.*

breast feeding /'brest ,fi:dɪŋ/ *noun* feeding a baby from the mother's breasts as opposed to from a bottle. Compare **bottle feeding**

breast implant /'brest ,impla:nt/ *noun* a sac containing silicone, implanted to improve the appearance of a breast

breast milk /'brest milk/ *noun* the milk produced by a woman who has recently had a baby

breast palpation /'brest pæl,pelʃ(ə)n/ noun feeling a breast to see if a lump is present which might indicate breast cancer

breast pump /'brest pʌmp/ noun an instrument for taking milk from a breast

breast reconstruction noun the construction of a new breast for a woman who has had a breast removed because of cancer

breast reduction /'brest rɪ,dʌkʃ(ə)n/ noun a reduction of the size of the breast for cosmetic purposes

breath /breθ/ noun air which goes in and out of the body when you breathe ○ *He ran so fast he was out of breath.* ○ *Stop for a moment to get your breath back.* ○ *She took a deep breath and dived into the water.* □ **to hold your breath** to stop breathing out, after having inhaled deeply

breathe /bri:ð/ verb to take air in and blow air out through the nose or mouth ○ *The patient has begun to breathe normally.* □ **to breathe in** to take air into your lungs □ **to breathe out** to let the air out of your lungs ○ *He breathed in the smoke from the fire and it made him cough.* ○ *The doctor told him to take a deep breath and breathe out slowly.*

COMMENT: Children breathe about 20 to 30 times per minute, men 16–18 per minute, and women slightly faster. The breathing rate increases if the person is taking exercise or has a fever. Some babies and young children hold their breath and go blue in the face, especially when crying or during a temper tantrum.

breath-holding attack /'breθ ,həʊldɪŋ ə ,teɪk/ noun a period when a young child stops breathing, usually because he or she is angry

breathing /'bri:ðɪŋ/ noun same as **respiration** ○ *If breathing is difficult or has stopped, begin artificial ventilation immediately.* (NOTE: For other terms referring to breathing see words beginning with **pneum-**, **pneumo-**, **pneumat-**, **pneumato-**.)

breathing rate /'bri:ðɪŋ reɪt/ noun the number of times a person breathes in and out in a specific period

breathless /'breθləs/ adjective referring to someone who finds it difficult to breathe enough air ○ *After running upstairs she became breathless and had to sit down.*

breathlessness /'breθləsnəs/ noun difficulty in breathing enough air

'26 patients were selected from the outpatient department on grounds of disabling breathlessness present for at least five years' [Lancet]

breath sounds /'breθ saʊndz/ noun hollow sounds made by the lungs and heard through a stethoscope placed on a person's chest, used in diagnosis

breach /bri:tʃ/ noun the buttocks, especially of a baby

breach birth /'bri:tʃ ,bɜ:θ/, **breech delivery** /'bri:tʃ di,lv(ə)rɪ/ noun a birth in which the baby's buttocks appear first rather than its head

breech presentation /bri:tʃ ,prez(ə)n/ /'teɪʃ(ə)n/ noun a position of the baby in the uterus in which the buttocks will appear first during childbirth

breed /bri:d/ verb to reproduce, or reproduce animals or plants ○ *The bacteria breed in dirty water.* ○ *Insanitary conditions help to breed disease.*

bregma /'bregmə/ noun the point at the top of the head where the soft gap between the bones of a baby's skull hardens

bretilyium tosylate /brə,tɪliəm 'tɒsɪleɪt/ noun an agent used to block adrenergic transmitter release

bridge /brɪdʒ/ noun 1. the top part of the nose where it joins the forehead 2. an artificial tooth or set of teeth which is joined to natural teeth which hold it in place 3. a part joining two or more other parts

Bright's disease /'braɪts dɪ,zɪ:z/ noun inflammation of the kidneys, characterised by albuminuria and high blood pressure. Also called **glomerulonephritis** [Described 1836. After Richard Bright (1789–1858), physician at Guy's Hospital, London, UK.]

bring up /brɪŋ 'ʌp/ verb 1. to look after and educate a child 2. to cough up material such as mucus from the lungs or throat 3. to vomit (*informal*)

British anti-lewisite /,brɪtɪʃ ,ænti'lju:isait/ noun an antidote for gases which cause blistering, also used to treat cases of poisoning such as mercury poisoning. Abbr **BAL**

British Dental Association /,brɪtɪʃ 'dent(ə)l əsəusi,eɪʃ(ə)n/ noun in the UK, a professional association of dentists. Abbr **BDA**

British Medical Association /,brɪtɪʃ 'medɪk(ə)l əsəusi,eɪʃ(ə)n/ noun in the UK, a professional association of doctors. Abbr **BMA**

British National Formulary /,brɪtɪʃ ,næf(ə)nəl 'fɔ:mjulərɪ/ noun a book listing key information on the prescribing, dispensing and administration of prescription drugs used in the UK. Abbr **BNF**

British Pharmacopoeia /,brɪtɪʃ ,fɑ:məkə 'piə/ noun a book listing drugs approved in the UK and their dosages. Abbr **BP**

COMMENT: Drugs listed in the British Pharmacopoeia have the letters BP written after them on labels.

brittle /'brit(ə)l/ adjective easily broken ○ *The people's bones become brittle as they get older.*

brittle bone disease /,brɪt(ə)l 'bəʊn di,zɪ:z/ noun 1. same as **osteogenesis imperfecta** 2. same as **osteoporosis**

Broadbent's sign /'brɔ:dbents sam/ noun a movement of someone's left side near the lower ribs at each beat of the heart, indicating adhesion between the diaphragm and pericardium in cases of pericarditis [After Sir William

Henry Broadbent (1835–1907), British physician]

broad ligament /'bro:d 'lɪgəmənt/ *noun* peritoneal folds supporting the uterus on each side

broad-spectrum antibiotic /,brɔ:d ,spektrəm ,sen'trəbəl 'ɒtɪk/ *noun* an antibiotic used to control many types of microorganism

Broca's aphasia /,brəʊkəz ə'feziə/ *noun* a condition in which someone is unable to speak or write, as a result of damage to Broca's area

Broca's area /'brəʊkəz ,eəriə/ *noun* an area on the left side of the brain which governs the motor aspects of speaking [Described 1861. After Pierre Henri Paul Broca (1824–80), French surgeon and anthropologist. A pioneer of neurosurgery, he also invented various instruments, described muscular dystrophy before Duchenne, and recognised rickets as a nutritional disorder before Virchow.]

Brodie's abscess /,brəudɪz 'æbses/ *noun* an abscess of a bone, caused by staphylococcal osteomyelitis [Described 1832. After Sir Benjamin Collins Brodie (1783–1862), British surgeon.]

bromhidrosis /,brɒmhi'drəʊsɪs/ *noun* a condition in which body sweat has an unpleasant smell

bromide /'brəʊmaɪd/ *noun* a bromine salt (NOTE: Bromides are used as sedatives.)

bromine /'brəʊmi:n/ *noun* a chemical element (NOTE: The chemical symbol is Br.)

bromism /'brəʊmɪz(ə)m/ *noun* chronic ill health caused by excessive use of bromides

bromocriptine /,brəʊməʊ'kripti:n/ *noun* a drug which functions like dopamine, used to treat excessive lactation, breast pain, some forms of infertility, growth disorder and Parkinson's disease

bronch- /brɒŋk/, **bronchi-** /brɒŋki/ *prefix* same as **broncho-** (*used before vowels*)

bronchi /'brɒŋkai/ plural of **bronchus**

bronchial /'brɒŋkiəl/ *adjective* referring to the bronchi

bronchial asthma /,brɒŋkiəl 'æsmə/ *noun* a type of asthma mainly caused by an allergen or by exertion

bronchial breath sounds /,brɒŋkiəl 'breθ ,saʊndz/ *plural noun* distinctive breath sounds from the lungs which help diagnosis

bronchial pneumonia /,brɒŋkiəl nju: 'məʊniə/ *noun* same as **bronchopneumonia**

bronchial tree /'brɒŋkɪəl trɪ:/ *noun* a system of tubes (bronchi and bronchioles) which take the air from the trachea into the lungs

bronchiectasis /,brɒŋki'ektəsɪs/ *noun* a disorder of the bronchi which become wide, infected and filled with pus (NOTE: Bronchiectasis can lead to pneumonia.)

bronchio- /brɒŋkiəl/ *prefix* referring to the bronchioles

bronchiolar /,brɒŋki'əʊlə/ *adjective* referring to the bronchioles

bronchiole /'brɒŋkiəl/ *noun* a very small air tube in the lungs leading from a bronchus to the alveoli. See illustration at **LUNGS** in Supplement

bronchiolitis /,brɒŋkiəl'laɪtɪs/ *noun* inflammation of the bronchioles, usually in small children

bronchitic /brɒŋ'kɪtɪk/ *adjective* 1. referring to bronchitis 2. referring to a person who has bronchitis

bronchitis /brɒŋ'kaitɪs/ *noun* inflammation of the mucous membrane of the bronchi □

acute bronchitis an attack of bronchitis caused by a virus or by exposure to cold and wet

broncho- /brɒŋkəʊl/ *prefix* referring to the windpipe

bronchoconstrictor /,brɒŋkəʊkən'strɪktə/ *noun* a drug which narrows the bronchi

bronchodilator /,brɒŋkəʊdəl'leɪtə/ *noun* a drug which makes the bronchi wider, used in the treatment of asthma and allergy (NOTE: Bronchodilators usually have names ending in -terol; however, the most common bronchodilator is **salbutamol**.)

'19 children with mild to moderately severe perennial bronchial asthma were selected. These children gave a typical history of exercise-induced asthma and their symptoms were controlled with oral or aerosol bronchodilators' [Lancet]

bronchogram /'brɒŋkəʊgræm/ *noun* an X-ray picture of the bronchial tubes obtained by bronchography

bronchography /brɒŋ'kɒgrəfi/ *noun* an X-ray examination of the lungs after an opaque substance has been put into the bronchi

bronchomedastinal trunk /,brɒŋkəʊ mɪdɪə,stain(ə)l 'trʌŋk/ *noun* the set of lymph nodes draining part of the chest

bronchomycosis /,brɒŋkəʊmət'kəʊsɪs/ *noun* an infection of the bronchi by a fungus

bronchophony /brɒŋ'kɒfəni/ *noun* vibrations of the voice heard over the lungs, indicating solidification in the lungs

bronchopleural /,brɒŋkəʊ'pluərəl/ *adjective* referring to a bronchus and the pleura

bronchopneumonia /,brɒŋkəʊnju: 'məʊniə/ *noun* an infectious inflammation of the bronchioles, which may lead to general infection of the lungs

bronchopulmonary /,brɒŋkəʊ'pʌlmən(ə)ri/ *adjective* referring to the bronchi and the lungs

bronchorrhoea /,brɒŋkəʊ'rɪ:ə/ *noun* the secretion of mucus by the bronchi

bronchoscope /'brɒŋkəʊskəp/ *noun* an instrument which is passed down the trachea into the lungs, which a doctor can use to inspect the inside passages of the lungs

bronchoscopy /brɒn'kɒskəpi/ *noun* an examination of a person's bronchi using a bronchoscope

bronchospasm /'brɒŋkəʊspæz(ə)m/ *noun* a tightening of the bronchial muscles which causes the tubes to contract, as in asthma

bronchspirometer /,brɒŋkəʊspai'rɒmɪtə/ *noun* an instrument for measuring the volume of the lungs

bronchspirometry /,brɒŋkəʊspai'rɒmɪtri/ *noun* a procedure for measuring the volume of the lungs

bronchostenosis /,brɒŋkəʊstə'nəʊsɪs/ *noun* an unusual constriction of the bronchial tubes

bronchotracheal /,brɒŋkəʊtrə'ki:əl/ *adjective* referring to the bronchi and the trachea
bronchus /'brɒŋkəs/ *noun* one of the two air passages leading from the trachea into the lungs, where they split into many bronchioles. See illustration at LUNGS in Supplement (NOTE: The plural is **bronchi**.)

bronze diabetes /,brɒnz daɪə'bɪ:tɪ:z/ *noun* same as **haemochromatosis**

Brovian catheter /'braʊviæk ,kæθɪtə/ *noun* a type of thin catheter used to insert into a vein

brow /braʊ/ *noun* 1. same as **forehead** 2. same as **eyebrow**

brown fat /braʊn 'fæt/ *noun* dark-coloured body fat that can easily be converted to energy and helps to control body temperature

Brown-Séquard syndrome /,braʊn 'sɛ:kɑ: ,sɪndrəʊm/ *noun* a condition in which the spinal cord has been partly severed or compressed, with the result that the lower half of the body is paralysed on one side and loses feeling in the other side [Described 1851. After Charles Edouard Brown-Séquard (1817–94), French physiologist.]

Brucella /bru:'selə/ *noun* a type of rod-shaped bacterium

brucellosis /,bru:sɪ'ləʊsɪs/ *noun* a disease which can be caught from cattle or goats or from drinking infected milk, spread by a species of the bacterium *Brucella*. The symptoms include tiredness, arthritis, headache, sweating, irritability and swelling of the spleen. Also called **abortus fever**, **Malta fever**, **mountain fever**, **undulant fever**

Brufen /'bru:fən/ a trade name for ibuprofen
bruise /bru:z/ *noun* a dark painful area on the skin, where blood has escaped under the skin following a blow. □ **black eye** □ *verb* to cause a bruise on part of the body ○ *She bruised her knee on the corner of the table.* □ **she bruises easily** even a soft blow will give her a bruise

bruised /bru:zd/ *adjective* painful after a blow or showing the marks of a bruise ○ *a badly bruised leg*

bruising /'bru:zɪŋ/ *noun* an area of bruises ○ *The baby has bruising on the back and legs.*

bruit /bru:t/ *noun* an unusual noise heard through a stethoscope

Brunner's glands /'brʊnəz ,glændz/ *plural noun* glands in the duodenum and jejunum [Described 1687. After Johann Konrad Brunner (1653–1727), Swiss anatomist at Heidelberg, then at Strasbourg.]

bruxism /'brʌksɪz(ə)m/ *noun* the action of grinding the teeth, as a habit

BSE abbr bovine spongiform encephalopathy

bubo /'bju:bəʊ/ *noun* a swelling of a lymph node in the groin or armpit

bubonic plague /bju:,bɒnɪk 'pleɪg/ *noun* a usually fatal infectious disease caused by *Yersinia pestis* in the lymph system, transmitted to humans by fleas from rats

COMMENT: Bubonic plague was the Black Death of the Middle Ages. Its symptoms are fever, delirium, vomiting and swelling of the lymph nodes.

buccal /'bʌk(ə)l/ *adjective* referring to the cheek or mouth

buccal cavity /'bʌk(ə)l ,kævɪtɪ/ *noun* the mouth

buccal fat /'bʌk(ə)l fæt/ *noun* a pad of fat separating the buccinator muscle from the masseter

buccal smear /'bʌk(ə)l smɪə/ *noun* a gentle scraping of the inside of the cheek with a spatula to obtain cells for testing

buccinator /'bʌksɪneɪtə/ *noun* a cheek muscle which helps the jaw to move when chewing

Budd-Chiari syndrome /,bʌd k'reəri ,sɪndrəʊm/ *noun* a disease of the liver, where thrombosis has occurred in the hepatic veins [Described 1845. After George Budd (1808–82), Professor of Medicine at King's College Hospital, London; Hans von Chiari (1851–1916), Viennese pathologist who was Professor of Pathological Anatomy at Strasbourg and later at Prague.]

budesonide /bju:'desənɔɪd/ *noun* a corticosteroid drug taken by inhalation or in tablets, used in the treatment of hay fever and nasal polyps

Buerger's disease /'bɜ:gə dɪ,zɪ:z/ *noun* same as **thromboangiitis obliterans** [Described 1908. After Leo Buerger (1879–1943), New York physician of Viennese origin.]

buffer /'bʌfə/ *noun* 1. a substance that keeps a constant balance between acid and alkali 2. a solution where the pH is not changed by adding acid or alkali ■ *verb* to prevent a solution from becoming acid

buffer action /'bʌfə ,ækʃən/ *noun* the balancing process between acid and alkali

buffered /'bʌfəd/ *adjective* prevented from becoming acid ○ **buffered aspirin**

bug /bʌg/ *noun* an infectious disease (*informal*) ○ *He caught a bug on holiday.* ○ *Half the staff have got a stomach bug.*

build /bɪld/ *noun* the general size and shape of a person's body ○ *He has a heavy build for his height.* ○ *The girl is of slight build.*

build up /bɪld 'ʌp/ *verb* to form gradually by being added to, or to form something in this way (NOTE: **building – built**)

build-up /'bɪld ʌp/ *noun* a gradual process of being added to ○ *a build-up of fatty deposits on the walls of the arteries*

built /bɪlt/ *adjective* referring to the general size of a person's body ○ *a heavily built man* ○ *She's slightly built.*

bulb /bʌlb/ *noun* a round part at the end of an organ or bone □ **bulb of the penis** the round end of the penis. Also called **glans penis**

bulbar /'bʌlbər/ *adjective* 1. referring to a bulb 2. referring to the medulla oblongata

bulbar paralysis /,bʌlbər pe'ræləsɪs/, **bulbar palsy** /,bʌlbər 'pɔ:lɪzɪ/ *noun* a form of motor neurone disease which affects the muscles of the mouth, jaw and throat

bulbar poliomyelitis /,bʌlbər ,pəʊliəʊməlɪ'taɪtɪs/ *noun* a type of polio affecting the brain stem, which makes it difficult for a person to swallow or breathe

bulbospongiosus muscle /,bʌlbəsɒŋgjəsəs ,mʌsəl/ *noun* a muscle in the perineum behind the penis

bulbourethral gland /,bʌlbəʊrəʊjən'ri:θrəl ,glænd/ *noun* one of two glands at the base of the penis which secrete into the urethra. ♀

gland

bulge /bʌldʒ/ *verb* to push out ○ *The wall of the abdomen becomes weak and part of the intestine bulges through.*

bulging /'bʌldʒɪŋ/ *adjective* sticking out ○ *bulging eyes*

bulimia /bu'lɪmɪə/, **bulimia nervosa** /bu'lɪmɪə nə'veʊsə/ *noun* a psychological condition in which a person eats too much and is incapable of controlling his or her eating. The eating is followed by behaviour designed to prevent weight gain, e.g. vomiting, use of laxatives or excessive exercise.

bulimic /bu'lɪmɪk/ *adjective* 1. referring to bulimia 2. having bulimia ■ *noun* someone who has bulimia

bullea /'bʊla/ *noun* a large blister (NOTE: The plural is **buliae**.)

bumetanide /bju:'metənaɪd/ *noun* a drug which helps a patient to produce urine, used in the treatment of swelling caused by fluid accumulating in the tissues

bump /bʌmp/ *noun* a slightly swollen part on the skin, caused by something such as a blow or sting

bumper fracture /'bʌmpər ,frækʃə/ *noun* a fracture in the upper part of the tibia (NOTE: It has this name because it can be caused by a blow from the bumper of a car.)

bundle /'bʌnd(ə)l/ *noun* a group of nerves running in the same direction

bundle branch block /'bʌnd(ə)l bra:nɒk ,blk/ *noun* an unusual condition of the heart's conduction tissue

bundle of His /,bʌnd(ə)l əv 'hɪs/ *noun* same as **atrioventricular bundle** [Described 1893. After Ludwig His (1863–1934), Professor of Anatomy successively at Leipzig, Basle, Göttingen and Berlin.]

bunion /'bʌnjən/ *noun* an inflammation and swelling of the big toe, caused by tight shoes which force the toe sideways so that a callus develops over the joint between the toe and the metatarsal

buphthalmos /bʌf'θælməs/ *noun* a type of congenital glaucoma occurring in infants

bupivacaine /bju:'pɪvəkeɪn/ *noun* a powerful local anaesthetic, used in epidural anaesthesia

buprenorphine /bju:'prenəfɪ:n/ *noun* an opiate drug used in the relief of moderate to severe pain, and as an opioid substitute in treating drug addiction

Burkitt's tumour /,bɜ:kɪts 'tju:mər/, **Burkitt's lymphoma** /,bɜ:kɪts lim'foumə/ *noun* a malignant tumour, usually on the maxilla, found especially in children in Africa [Described 1957. After Denis Parsons Burkitt (1911–93), formerly Senior Surgeon, Kampala, Uganda; later a member of the Medical Research Council (UK).]

burn /bɜ:n/ *noun* an injury to skin and tissue caused by light, heat, radiation, electricity or chemicals ■ *verb* to harm or destroy something by fire ○ *She burnt her hand on the hot frying pan.* ○ *Most of his hair or his skin was burnt off.* (NOTE: **burning – burnt or burned**)

COMMENT: The modern classification of burns is into two categories: deep and superficial. Burns were formerly classified as first, second or third degree and are still sometimes referred to in this way.

burning /'bɜ:nɪŋ/ *adjective* referring to a feeling similar to that of being hurt by fire ○ *She had a burning pain or in her chest.*

burnout /'bɜ:naut/ *noun* a feeling of depression, fatigue and lack of energy caused by stress and being overworked ○ *He suffered a burnout and had to go on leave.*

burns unit /'bɜ:nz ,ju:nɪt/ *noun* a special department in a hospital which deals with burns

burp /bɜ:p/ (*informal*) *noun* an act of allowing air in the stomach to come up through the mouth ■ *verb* to allow air in the stomach to come up through the mouth □ **to burp a baby** to pat a baby on the back until it burps

burr /bɜ:/ *noun* a bit used with a drill to make holes in a bone such as the cranium or in a tooth

bursa /'bɜ:sə/ *noun* a sac containing fluid, forming part of the usual structure of a joint

such as the knee and elbow, where it protects against frequent pressure and rubbing (NOTE: The plural is **bursae**.)

bursitis /bɜː'saɪtɪs/ *noun* the inflammation of a bursa, especially in the shoulder

Buscopan /'bʌskəpæn/ a trade name for a form of hyoscine

butobarbitone /,bju:təʊ'ba:bɪtəʊn/ *noun* a barbiturate drug used as a sedative and hypnotic

buttock /'bʌtək/ *noun* one of the two fleshy parts below the back, on which a person sits,

made up mainly of the gluteal muscles. Also called **nates**

buttonhole surgery /'bʌt(ə)nhol ,sɜːdʒəri/ *noun* a surgical operation through a small hole in the body, using an endoscope

bypass /'baɪpɑːs/ *noun* 1. a surgical operation to redirect the blood, usually using a grafted blood vessel and usually performed when one of the person's own blood vessels is blocked 2. a new route for the blood created by a bypass operation

byssinosis /,bɪsɪ'nəʊsɪs/ *noun* a lung disease which is a form of pneumoconiosis caused by inhaling cotton dust

C

c symbol centi-

C symbol Celsius

CABG abbr coronary artery bypass graft

cachet /'kæʃət/ noun a quantity of a drug wrapped in paper, to be swallowed

cachexia /kæ'keksɪə/ noun a state of ill health characterised by wasting and general weakness

cadaver /kə'dævər/ noun a dead body, especially one used for dissection

cadaveric /kə'dævərɪk/, **cadaverous** /kə'dæv(ə)rəs/ adjective referring to a person who is thin or wasting away

caeca /'si:kə/ plural of **caecum**

caecal /'si:k(ə)l/ adjective referring to the caecum

caecosigmoidostomy /,si:kəʊ,sɪgmɔɪd'stəmɪ/ noun an operation to open up a connection between the caecum and the sigmoid colon

caecostomy /si:'kɒstəmɪ/ noun a surgical operation to make an opening between the caecum and the abdominal wall to allow faeces to be passed without going through the rectum and anus

caecum /'si:kəm/ noun the wider part of the large intestine in the lower right-hand side of the abdomen at the point where the small intestine joins it and which has the appendix attached to it. See illustration at **DIGESTIVE SYSTEM** in Supplement. Also called **cecum** (NOTE: The plural is **caeca**.)

caesarean /sɪ'zeəriən/, **caesarean section** /sɪ'zeəriən ,sek'seɪn/ noun a surgical operation to deliver a baby by cutting through the abdominal wall into the uterus. Compare **vaginal delivery** (NOTE: The US spelling is **cesarean**.)

COMMENT: A caesarean section is performed only when it appears that natural childbirth is impossible or might endanger mother or child, and only after the 28th week of gestation.

caesium /'si:ziəm/ noun a radioactive element, used in treatment by radiation (NOTE: The chemical symbol is **Cs**.)

caesium-137 /,si:ziəm wʌn θri: 'sev(ə)n/ noun a radioactive substance used in radiology

café au lait spots /,kæfeɪ əʊ 'leɪ spɔts/ plural noun brown spots on the skin, which are an indication of von Recklinghausen's disease

caffeine /'kæfi:n/ noun an alkaloid found in coffee, tea and chocolate, which acts as a stimulant

COMMENT: Apart from acting as a stimulant, caffeine also helps in the production of urine. It can be addictive, and exists in both tea and coffee in about the same percentages as well as in chocolate and other drinks.

caisson disease /'keɪs(ə)n dɪ,zi:z/ noun a condition in which a person experiences pains in the joints and stomach, and dizziness caused by nitrogen in the blood. Also called **the bends, compressed air sickness, decompression sickness**

COMMENT: The disease occurs in a person who has moved rapidly from high atmospheric pressure to a lower pressure area, such as a diver who has come back to the surface too quickly after a deep dive. The first symptoms, pains in the joints, are known as 'the bends'. The disease can be fatal.

calamine /'kæləmain/, **calamine lotion** /'kæləmain ,ləʊf(ə)n/ noun a lotion, based on zinc oxide, which helps relieve skin irritation, caused e.g. by sunburn or chickenpox

calc- /kæk'l/ prefix same as **calci-** (used before vowels)

calcaemia /kæl'si:miə/ noun a condition in which the blood contains an unusually large amount of calcium

calcaneal /kæl'keiniəl/ adjective referring to the calcaneus

calcaneal tendon /kæl,keiniəl 'tendən/ noun the Achilles tendon, the tendon at the back of the ankle which connects the calf muscles to the heel and which acts to pull up the heel when the calf muscle is contracted

calcaneus /kæl'keiniəs/, **calcaneum** /kæl'keiniəm/ noun the heel bone, situated underneath the talus. See illustration at **FOOT** in Supplement

calcareous degeneration /kæl,keəriəs di,dʒənə'reɪʃ(ə)n/ noun the formation of calcium on bones or at joints in old age

calci- /kælsɪ/ prefix referring to calcium

calcification /,kælsfɪʃ'keɪʃ(ə)n/ *noun* a process of hardening caused by the formation of deposits of calcium salts

COMMENT: Calcification can be expected in the formation of bones, but can occur unusually in joints, muscles and organs, where it is known as calcinosis.

calcified /'kælsfɪfaɪd/ *adjective* made hard ○ *Bone is calcified connective tissue.*

calcinosis /,kælsɪ'nəʊsɪs/ *noun* a medical condition where deposits of calcium salts form in joints, muscles and organs

calcitonin /,kæltɪ'ənɪn/ *noun* a hormone produced by the thyroid gland, which is believed to regulate the level of calcium in the blood. Also called **thyrocalcitonin**

calcium /'kælsiəm/ *noun* a metallic chemical element which is a major component of bones and teeth and which is essential for various bodily processes such as blood clotting (NOTE: The chemical symbol is **Ca**.)

COMMENT: Calcium is an important element in a balanced diet. Milk, cheese, eggs and certain vegetables are its main sources. Calcium deficiency can be treated by injections of calcium salts.

calcium antagonist /'kælsiəm æn'tægənɪst/ *noun* a drug which makes the arteries wider and slows the heart rate. It is used in the treatment of angina.

calcium channel blocker /'kælsiəm tʃænl(blo)kər/, **calcium blocker** /'kælsiəm 'blkər/ *noun* a drug which affects the smooth muscle of the cardiovascular system, used in the treatment of angina and hypertension (NOTE: Calcium channel blockers have names ending in **-dipine**: **nifedipine**. Not to be used in heart failure as they reduce cardiac function further.)

calcium deficiency /'kælsiəm dɪ,fɪʃ(ə)nsi/ *noun* a lack of calcium in the bloodstream

calcium phosphate /,kælsiəm 'fɒfəfɪt/ *noun* the main constituent of bones

calcium supplement /'kælsiəm, sʌplɪmənt/ *noun* the addition of calcium to the diet, or as injections, to improve the level of calcium in the bloodstream

calculosis /,kæklu'leʊsɪs/ *noun* a condition in which calculi exist in an organ

calculus /'kæklu'jʊləs/ *noun* a hard mass like a little piece of stone, which forms inside the body. Also called **stone** (NOTE: The plural is **calculi**.)

COMMENT: Calculi are formed of cholesterol and various inorganic substances, and are commonly found in the bladder, the gall bladder (gallstones) and various parts of the kidney.

Caldwell–Luc operation /,kɔ:ldwel 'lu:kɒpə,reɪʃ(ə)n/ *noun* a surgical operation to drain the maxillary sinus by making an incision above the canine tooth [Described 1893. After George Walter Caldwell (1834–1918), US

physician; Henri Luc (1855–1925), French laryngologist.]

calf /kɑ:f/ *noun* a muscular fleshy part at the back of the lower leg, formed by the gastrocnemius muscles (NOTE: The plural is **calves**.)

caliber /'kælbɪbər/ *noun* US same as **calibre**

calibrate /'kælibreɪt/ *verb* 1. to measure the inside diameter of a tube or passage 2. to measure the sizes of two parts of the body to be joined together in surgery 3. to adjust an instrument or piece of equipment against a known standard

calibrator /'kælibreɪtər/ *noun* 1. an instrument used to enlarge a tube or passage 2. an instrument for measuring the diameter of a tube or passage

calibre /'kælbɪbər/ *noun* the interior diameter of a tube or of a blood vessel

caliectasis /,keɪli'ektəsɪs/ *noun* swelling of the calyces

caliper /'kælɪpər/ *noun* 1. an instrument with two legs, used for measuring the width of the pelvic cavity 2. an instrument with two sharp points which are put into a fractured bone and weights attached to cause traction 3. a leg splint made of rods and straps and usually fastened to the lower leg to enable the hip bone rather than the foot to support the person's weight when walking

calliper /'kælɪpər/ *noun* same as **caliper** 3

callisthenic, /kælɪs'θenɪk/ *adjective* relating to callisthenics

callisthenics, /kælɪs'θenɪks/ *plural noun* energetic physical exercises for improving fitness and muscle tone, including push-ups, sit-ups and star jumps

callosity /kæ'lɒsɪtɪ/ *noun* a hard patch on the skin, e.g. a corn, resulting from frequent pressure or rubbing. Also called **callus**

callosum /kæ'ləsəm/ ▶ **corpus callosum**

callus /'kæləs/ *noun* 1. same as **callosity** 2. tissue which forms round a broken bone as it starts to mend, leading to consolidation ○ *Callus formation is more rapid in children and young adults than in elderly people.*

calm /kæ:m/ *adjective* quiet, not upset ○ *The patient was delirious but became calm after the injection.*

calomel /'kæləmel/ *noun* mercurous chloride, a poisonous substance used to treat pinworms in the intestine. Formula: Hg_2Cl_2 .

calor /'kælər/ *noun* heat

caloric /kæ'lɔrɪk/ *adjective* referring to calories or to heat

caloric energy /kæ'lɔrɪk 'enədʒi/ *noun* the amount of energy shown as a number of calories

caloric requirement /kæ'lɔrɪk rɪ'kwaɪəmənt/ *noun* the amount of energy shown in calories which a person needs each day

calorie /'kæləri/ *noun* 1. a unit of measurement of heat or energy, equivalent to the amount of heat needed to raise the temperature of 1g of water by 1°C. Now called **joule** 2. also **Calorie** a unit of measurement of energy in food (*informal*) ○ *a low-calorie diet* Now called **joule** □ **to count calories** to be careful about how much you eat

calvaria /kæl'veəriə/, **calvarium** /kæl'veəriəm/ *noun* the top part of the skull

calyx /'keɪlɪks/ *noun* a part of the body shaped like a cup especially the tube leading to a renal pyramid. See illustration at **KIDNEY** in Supplement (NOTE: The plural is **calyces**.)

COMMENT: The renal pelvis is formed of three major calyces, which themselves are formed of several smaller minor calyces.

CAM *abbr* complementary and alternative medicine

camphor /'kæmpfə/ *noun* white crystals with a strong smell, made from a tropical tree, used to keep insects away or as a liniment

camphor oil /'kæmpfə ɔɪl/, **camphorated oil** /'kæmfəreɪtɪd ɔɪl/ *noun* a mixture of 20% camphor and oil, used as a rub

Campylobacter /'kæmplo'bækter/ *noun* a bacterium which is a common cause of food poisoning in humans and of spontaneous abortion in farm animals

canal /kə'næl/ *noun* a tube along which something flows

canalicitis /,kænəlɪkju'lætɪs/ *noun* inflammation of the tear duct canal

canalicolotomy /,kænəlɪkju'lɒtəmi/ *noun* a surgical operation to open up a little canal

canaliculus /,kænə'lɪkjʊləs/ *noun* a little canal, e.g. a canal leading to the Haversian systems in compact bone, or a canal leading to the lacrimal duct (NOTE: The plural is **canaliculi**.)

cancellous bone /'kænsələs, 'bəun/ *noun* a light spongy bone tissue which forms the inner core of a bone and also the ends of long bones. See illustration at **BONE STRUCTURE** in Supplement

cancer /'kænsə/ *noun* a malignant growth or tumour which develops in tissue and destroys it, which can spread by metastasis to other parts of the body and which cannot be controlled by the body itself ○ *Cancer cells developed in the lymph.* ○ *She has been diagnosed as having lung cancer or as having cancer of the lung.* (NOTE: For other terms referring to cancer, see words beginning with **carcin-**.)

COMMENT: Cancers can be divided into cancers of the skin (**carcinomas**) or cancers of connective tissue such as bone or muscle (**sarcomas**). They have many causes. Many are curable by surgery, by chemotherapy or by radiation, especially if they are detected early.

cancerophobia /,kænsə'rəʊ'fəʊbiə/ *noun* a fear of cancer

cancerous /'kænsərəs/ *adjective* referring to cancer ○ *The X-ray revealed a cancerous growth in the breast.*

cancer phobia /'kænsə ,fəʊbiə/ *noun* same as **cancerophobia**

cancrum oris /,kæŋkrəm 'ɔ:ris/ *noun* severe ulcers in the mouth, leading to gangrene. Also called **noma**

Candida /'kændɪdə/ *noun* a type of fungus which causes mycosis. Also called **Monilia**

'It is incorrect to say that oral candida is an infection.

Candida is easily isolated from the mouths of up to 50% of healthy adults and is a normal commensal.' [Nursing Times]

Candida albicans /,kændɪdə 'ælbɪkænz/ *noun* one type of Candida which is usually present in the mouth and throat without causing any illness, but which can cause thrush

candidate /'kændɪdæit/ *noun* someone who could have an operation ○ *These types of patients may be candidates for embolisation.*

candidate vaccine /'kændɪdæit ,vækseɪn/ *noun* a vaccine which is being tested for use in immunisation

candidiasis /,kændɪ'daɪəsɪs/, **candidosis** /,kændɪ'dəʊsɪs/ *noun* infection with a species of the fungus Candida

COMMENT: When the infection occurs in the vagina or mouth it is known as 'thrush'. Thrush in the mouth usually affects small children.

canicula fever /kə'nɪkələ ,fi:və/ *noun* a form of leptospirosis, giving high fever and jaundice

canine /'keɪnain/, **canine tooth** /'keɪnain ,tuθ/ *noun* a pointed tooth next to an incisor. See illustration at **TEETH** in Supplement

COMMENT: There are four canines in all, two in the upper jaw and two in the lower. Those in the upper jaw are referred to as the 'eyeteeth'.

canities /kə'nɪjii:z/ *noun* a loss of pigments, which makes the hair turn white

canker sore /'kæŋkə ,sɔ:/ *noun* same as **mouth ulcer**

cannabis /'kænəbɪs/ *noun* a drug made from the dried leaves or flowers of the Indian hemp plant. Recreational use of cannabis is illegal and its use to relieve the pain associated with conditions such as multiple sclerosis is controversial. Also called **hashish, marijuana**

COMMENT: Cannabis has analgesic properties, and the possibility that it should be legalised for therapeutic use in conditions of chronic pain is being debated.

cannabis resin /,kænəbɪs 'rezɪn/ *noun* an addictive drug, a purified extract made from the flowers of the Indian hemp plant

cannula /'kænju:lə/ *noun* a tube with a trocar or blunt needle inside, inserted into the body to introduce fluids

cannulate /'kænjuleɪt/ *verb* to put a cannula into a vein or cavity to give drugs or to drain away fluid

canthal /'kænθəl/ *adjective* referring to the corner of the eye

cantholysis /kæn'θɒləsɪs/ *noun* same as **canthoplasty**

canthoplasty /'kænθəplæsti/ *noun* 1. an operation to repair the canthus of the eye 2. an operation to cut through the canthus to enlarge the groove in the eyelid

canthus /'kænθəs/ *noun* a corner of the eye

canula *noun* another spelling of **cannula**

canulate *verb* another spelling of **cannulate**

cap /kæp/ *noun* 1. a covering which protects something 2. an artificial hard covering for a damaged or broken tooth

CAPD *abbr* continuous ambulatory peritoneal dialysis

capeline bandage /'kæpəlайн, bændīdʒ/ *noun* a bandage shaped like a cap, either for the head, or to cover a stump after amputation

capillary /kə'piləri/ *noun* 1. a tiny blood vessel between the arterioles and the venules, which carries blood and nutrients into the tissues 2. any tiny tube carrying a liquid in the body

capillary bleeding /kə,piləri 'bli:dɪŋ/ *noun* bleeding where blood oozes out from small blood vessels

capita /'kæpɪtə/ plural of **caput**

capitate /'kæpɪteɪt/, **capitate bone** /'kæpɪteɪt, bən/ *noun* the largest of the eight small carpal bones in the wrist. See illustration at **HAND** in Supplement

capitellum /'kæpɪ'teləm/ *noun* a rounded enlarged part at the end of a bone, especially this part of the upper arm bone, the humerus, that forms the elbow joint with one of the lower bones, the radius. Also called **capitulum of humerus** (NOTE: The plural is **capitella**.)

capitis /kə'paɪtɪs/ ♀ **corona capitis**

capitular /kə'pitjulər/ *adjective* describing the rounded end (**capitulum**) of a bone

capitulum /kə'pitjuləm/ *noun* the rounded end of a bone which articulates with another bone, e.g. the distal end of the humerus (NOTE: The plural is **capitula**.)

capitulum of humerus /kə,pitjuləm əv 'hju:mrəs/ *noun* same as **capitellum**

caplet /'kæplət/ *noun* a small oblong tablet with a covering that dissolves easily and which usually cannot be broken in two

caps. *abbr* capsule

capsular /'kæpsjulər/ *adjective* referring to a capsule

capsule /'kæpsjul:/ *noun* 1. a membrane round an organ or joint 2. a small hollow digestible case filled with a drug that is taken by swallowing ○ *She swallowed three capsules of painkiller.* ○ *The doctor prescribed the drug in capsule form.*

capsulectomy /,kæpsjø'lektəmi/ *noun* the surgical removal of the capsule round a joint

capsulitis /,kæpsjø'laitɪs/ *noun* inflammation of a capsule

capsulotomy /,kæpsjø'lɒtəmi/ *noun* a surgical procedure involving cutting into the capsule around a body part, e.g. cutting into the lens of the eye during the removal of a cataract

captoril /'kæptəprɪl/ *noun* a drug which helps to prevent the arteries from being made narrower by an angiotensin. It is used to control high blood pressure.

caput /'kæpət/ *noun* 1. the head 2. the top of part of something (NOTE: [all senses] The plural is **capita**.)

carbamazepine /,ka:bə'mæzəpi:n/ *noun* a drug which reduces pain and helps to prevent convulsions. It is used in the treatment of epilepsy, pain and bipolar disorder.

carbenoxolone /,ka:bə'nɒksələn/ *noun* a liquorice agent, used to treat stomach ulcers

carbidopa /,ka:bɪ'dəʊpə/ *noun* an inhibitor used to enable levodopa to enter the brain in larger quantities in the treatment of Parkinson's disease

carbimazole /ka:'bɪməzələ/ *noun* a drug which helps to prevent the formation of thyroid hormones, used in the management of hyperthyroidism

carbohydrate /,ka:bəʊ'haidrət/ *noun* 1. a biological compound containing carbon, hydrogen and oxygen. Carbohydrates derive from sugar and are an important source of food and energy. 2. food containing carbohydrates ○ *high carbohydrate drinks*

carbolic acid /ka:,bɒlɪk 'æsɪd/ *noun* same as **phenol**

carbon /'ka:bən/ *noun* one of the common non-metallic elements, an essential component of living matter and organic chemical compounds (NOTE: The chemical symbol is **C**.)

carbon dioxide /,ka:bən daɪ'bɒksaɪd/ *noun* a colourless gas produced by the body's metabolism as the tissues burn carbon, and breathed out by the lungs as waste (NOTE: The chemical symbol is **CO₂**.)

COMMENT: Carbon dioxide can be solidified at low temperatures and is known as 'dry ice' or 'carbon dioxide snow', being used to remove growths on the skin.

carbon dioxide snow /,ka:bən daɪ'bɒksaɪd 'snəʊ/ *noun* solid carbon dioxide, used in treating skin growths such as warts, or to preserve tissue samples

carbonic anhydrase /ku:bɒnɪk æn'haidrɪz/ *noun* an enzyme which acts as a buffer and regulates the body's water balance, including gastric acid secretion and aqueous humour production

carbon monoxide /,ka:bən mə'nɒksaɪd/ *noun* a poisonous gas found in fumes from car engines, from burning gas and cigarette smoke (NOTE: The chemical symbol is **CO**.)

COMMENT: Carbon monoxide is dangerous because it is easily absorbed into the blood and takes the place of the oxygen in the blood, combining with haemoglobin to form carboxyhaemoglobin, which has the effect of starving the tissues of oxygen. Carbon monoxide has no smell and people do not realise that they are being poisoned by it. They become unconscious, with a characteristic red colouring to the skin. Poisoning with car exhaust fumes is sometimes used as a method of suicide. The treatment for carbon monoxide poisoning is very rapid inhalation of fresh air together with carbon dioxide if this can be provided.

carbon monoxide poisoning /,kɑ:bən mə'nɔksaɪd ,pɔɪz(ə)nɪŋ/ *noun* poisoning caused by breathing carbon monoxide

carboxyhaemoglobin /kɑ:,bɒksi'hæm'gləʊbɪn/ *noun* a compound of carbon monoxide and haemoglobin formed when a person breathes in carbon monoxide from tobacco smoke or car exhaust fumes

carboxyhaemoglobinaemia /kɑ:,bɒksi hɪ:mæ,glæubr'ni:mɪə/ *noun* the presence of carboxyhaemoglobin in the blood

carbuncle /'kɑ:bʌŋkəl/ *noun* a localised staphylococcal infection, which goes deep into the tissue

carcin- /kɑ:sɪn/ *prefix* same as **carcino-** (*used before vowels*)

carcino- /kɑ:sɪnə/ *prefix* referring to carcinoma or cancer

carcinogen /kɑ:'sɪnədʒən/ *noun* a substance which produces a carcinoma or cancer
COMMENT: Carcinogens are found in pesticides such as DDT, in asbestos, tobacco, aromatic compounds such as benzene and radioactive substances.

carcinogenesis /,kɑ:sɪnə'dʒenəsɪs/ *noun* the process of forming a carcinoma in tissue

carcinogenic /,kɑ:sɪnə'dʒenɪk/ *adjective* causing a carcinoma or cancer

carcinoid /'kɑ:sɪnɔɪd/ *noun* an intestinal tumour, especially in the appendix, which causes diarrhoea

carcinoid syndrome /'kɑ:sɪnɔɪd ,sɪndrəʊm/ *noun* a group of symptoms which are associated with a carcinoid tumour

carcinoid tumour /'kɑ:sɪnɔɪd ,tju:mə/ *same as carcinoid*

carcinoma /,kɑ:sɪ'nəʊmə/ *noun* a cancer of the epithelium or glands

carcinoma in situ /,kɑ:sɪ,nəʊmə in 'sɪtju:/ *noun* the first stage in the development of a cancer, where the epithelial cells begin to change

carcinomatosis /,kɑ:sɪnəʊmə'təʊsɪs/ *noun* a carcinoma which has spread to many sites in the body

carcinomatous /,kɑ:sɪ'nɒmətəs/ *adjective* referring to carcinoma

carcinosarcoma /,kɑ:sɪnəʊsə:'kəʊmə/ *noun* a malignant tumour containing elements of both a carcinoma and a sarcoma

cardi- /kɑ:di/ *prefix* same as **cardio-** (*used before vowels*)

cardia /'kɑ:diə/ *noun* 1. an opening at the top of the stomach which joins it to the gullet 2. the heart

cardiac /'kɑ:diæk/ *adjective* 1. referring to the heart 2. referring to the cardia

cardiac achalasia /,kɑ:diæk ,ækə'lɛziə/ *noun* a condition in which the patient is unable to relax the cardia, the muscle at the entrance to the stomach, with the result that food cannot enter the stomach. ♦ **cardiomotomy**

cardiac arrest /,kɑ:diæk ə'rest/ *noun* a condition in which the heart muscle stops beating

cardiac asthma /,kɑ:diæk 'æsmə/ *noun* difficulty in breathing caused by heart failure

cardiac catheter /,kɑ:diæk 'kæθətər/ *noun* a catheter passed through a vein into the heart, to take blood samples, to record pressure or to examine the interior of the heart before surgery

cardiac catheterisation /,kɑ:diæk ,kæθətərɪzə'seɪʃ(ə)n/ *noun* a procedure which involves passing a catheter into the heart

cardiac cirrhosis /,kɑ:diæk sɪ'rəʊsɪs/ *noun* cirrhosis of the liver caused by heart disease

cardiac compression /,kɑ:diæk kəm 'preʃ(ə)n/ *noun* the compression of the heart by fluid in the pericardium

cardiac conducting system /,kɑ:diæk kən'dʌktɪŋ ,sɪstəm/ *noun* the nerve system in the heart which links an atrium to a ventricle, so that the two beat at the same rate

cardiac cycle /,kɑ:diæk 'saɪk(ə)l/ *noun* the repeated beating of the heart, formed of the diastole and systole

cardiac decompression /,kɑ:diæk ,dɪk'mən'preʃ(ə)n/ *noun* the removal of a haematoma or constriction of the heart

cardiac failure /,kɑ:diæk 'feɪljə/ *noun* same as heart failure

cardiac glycoside /,kɑ:diæk 'glaɪkəsайд/ *noun* a drug used in the treatment of tachycardia and atrial fibrillation, e.g. digoxin

cardiac impression /,kɑ:diæk ɪm 'preʃ(ə)n/ *noun* 1. a concave area near the centre of the upper surface of the liver under the heart 2. a depression on the mediastinal part of the lungs where they touch the pericardium

cardiac index /,kɑ:diæk 'indeks/ *noun* the cardiac output per square metre of body surface, usually between 3.1 and 3.8 l/min/m² (litres per minute per square metre)

cardiac infarction /,kɑ:diæk in'fə:kʃən/ *noun* same as myocardial infarction

cardiac monitor /,kɑ:diæk 'mɒnɪtə/ *noun* same as electrocardiograph

cardiac murmur /,kɑ:diæk 'mɜ:mə/ *noun* same as heart murmur

cardiac muscle /'ka:diæk ,mʌs(ə)l/ *noun* a muscle in the heart which makes the heart beat

cardiac neurosis /,ka:diæk nju'rəʊsɪs/ *noun* same as **disordered action of the heart**

cardiac notch /,ka:diæk 'nɒtʃ/ *noun* 1. a point in the left lung, where the right inside wall is bent. See illustration at **LUNGS** in Supplement 2. a notch at the point where the oesophagus joins the greater curvature of the stomach

cardiac orifice /,ka:diæk 'ɔrifɪs/ *noun* an opening where the oesophagus joins the stomach

cardiac output /,ka:diæk 'aʊtpʊt/ *noun* the volume of blood expelled by each ventricle in a specific time, usually between 4.8 and 5.3 l/min (litres per minute)

cardiac pacemaker /,ka:diæk 'peɪsmeɪkə/ *noun* an electronic device implanted on a patient's heart, or which a patient wears attached to the chest, which stimulates and regulates the heartbeat

cardiac patient /'ka:diæk ,peɪʃ(ə)nt/ *noun* a patient who has a heart disorder

cardiac reflex /,ka:diæk 'ri:fleks/ *noun* the reflex which controls the heartbeat automatically

cardiac surgery /,ka:diæk 'sɜ:dʒəri/ *noun* surgery to the heart

cardiac tamponade /,ka:diæk ,tæmpə'nɛd/ *noun* pressure on the heart when the pericardial cavity fills with blood. Also called **heart tamponade**

cardiac vein /'ka:diæk veɪn/ *noun* one of the veins which lead from the myocardium to the right atrium

cardinal /'ka:dɪn(ə)l/ *adjective* most important

cardinal ligaments /,ka:dɪn(ə)l 'lɪgəmənts/ *plural noun* ligaments forming a band of connective tissue that extends from the uterine cervix and vagina to the pelvic walls. Also called **Mackenrodt's ligaments**

cardio- /'ka:diəʊ/ *prefix* referring to the heart

cardiogenic /,ka:di'a:dʒenɪk/ *adjective* resulting from activity or disease of the heart

cardiogram /'ka:di'græm/ *noun* a graph showing the heartbeat, produced by a cardiograph

cardiograph /'ka:di'græfɪ/ *noun* an instrument which records the heartbeat

cardiographer /,ka:di'ngrəfə/ *noun* a technician who operates a cardiograph

cardiography /,ka:di'bgrəfi/ *noun* the action of recording the heartbeat

cardiologist /,ka:di'ɒlədʒɪst/ *noun* a doctor who specialises in the study of the heart

cardiology /,ka:di'ɒlədʒɪ/ *noun* the study of the heart, its diseases and functions

cardiomegaly /,ka:diəʊ'megəli/ *noun* an enlarged heart

cardiomyopathy /,ka:diəʊmətɪ'ɒpəθi/ *noun* a disease of the heart muscle

cardiomyoplasty /,ka:diəʊ'maɪəʊ,plæsti/ *noun* an operation to improve the functioning of the heart, by using the latissimus dorsi as a stimulant

cardiomyotomy /,ka:diəʊmətɪ'ɒtəmɪ/ *noun* an operation to treat cardiac achalasia by splitting the ring of muscles where the oesophagus joins the stomach. Also called **Heller's operation**

cardiopathy /,ka:di'ɒpəθi/ *noun* any kind of heart disease

cardiophone /'ka:diəfəʊn/ *noun* a microphone attached to a patient to record sounds, usually used to record the heart of an unborn baby

cardioplegia /,ka:diəʊ'pli:dʒiə/ *noun* the stopping of a patient's heart, by chilling it or using drugs, so that heart surgery can be performed

cardiopulmonary /,ka:diəʊ'palmən(ə)ri/ *adjective* relating to both the heart and the lungs

cardiopulmonary bypass /,ka:diəʊ,palmən(ə)ri 'baɪpɔ:s/ *noun* a machine or method for artificially circulating the patient's blood during open-heart surgery. The heart and lungs are cut off from the circulation and replaced by a pump.

cardiopulmonary resuscitation /,ka:diəʊ,palmən(ə)ri rɪ,səsɪ'teɪʃ(ə)n/ *noun* an emergency technique to make a person's heart start beating again. It involves clearing the airways and then alternately pressing on the chest and breathing into the mouth. Abbr **CPR**

cardiopulmonary system /,ka:diəʊ'palmən(ə)ri ,sɪstəm/ *noun* the heart and lungs considered together as a functional unit

cardiorespiratory /,ka:diəʊrɪ'spirɪt(ə)ri/ *adjective* referring to both the heart and the respiratory system

cardioscope /'ka:diəskəʊp/ *noun* an instrument formed of a tube with a light at the end, used to inspect the inside of the heart

cardiospasm /'ka:diəospæz(ə)m/ *noun* same as **cardiac achalasia**

cardiothoracic /,ka:diəʊθə'ræsɪk/ *adjective* referring to the heart and the chest region

○ *a cardiothoracic surgeon*

cardiotocography /,ka:diəʊtɒk'ɒgrəfi/ *noun* the recording of the heartbeat of a fetus

cardiotomy /,ka:di'təmə/ *noun* an operation that involves cutting the wall of the heart

cardiotomy syndrome /,ka:di'təmə ,sɪnd्रəʊm/ *noun* fluid in the membranes round the heart after cardiotomy

cardiotoxic /,ka:diəʊ'tɒksɪk/ *adjective* which is toxic to the heart

cardiovascular /kə:dɪəʊ'væskjʊlə/ **adjective** referring to the heart and the blood circulation system

cardiovascular disease /kə:dɪəʊ'væskjʊlə dɪ,zɪ:z/ **noun** any disease which affects the circulatory system, e.g. hypertension
‘...cardiovascular diseases remain the leading cause of death in the United States’ [Journal of the American Medical Association]

cardiovascular system /kə:dɪəʊ'væskjʊlə,sɪstəm/ **noun** the system of organs and blood vessels by means of which the blood circulates round the body and which includes the heart, arteries and veins

cardioversion /kə:dɪəʊ'vɜ:ʃ(ə)n/ **noun** a procedure to correct an irregular heartbeat by applying an electrical impulse to the chest wall. ◊ **defibrillation**

carditis /kə:dɪtɪs/ **noun** inflammation of the connective tissue of the heart

caregiver /'keə,gɪvə/ **noun** same as **carer**

care pathway /'keə ,pa:θwei/ **noun** the entire process of diagnosis, treatment and care that a patient goes through

care plan /'keə plæn/ **noun** a plan drawn up by the nursing staff for the treatment of an individual patient

‘...all relevant sections of the nurses’ care plan and nursing process had been left blank’ [Nursing Times]

carer /'keərə/, **caregiver** /'keə,gɪvə/ **noun** someone who looks after a sick or dependent person

‘...most research has focused on those caring for older people or for adults with disability and chronic illness. Most studied are the carers of those who might otherwise have to stay in hospital for a long time’ [British Medical Journal]

caries /'keərɪz/ **noun** decay in a tooth or bone

carina /kə'rɪ:nə/ **noun** a structure shaped like the bottom of a boat, e.g. the cartilage at the point where the trachea branches into the bronchi

cariogenic /,keəriəʊ'dʒenɪk/ **adjective** referring to a substance which causes caries

carminative /'kə:minətɪv/ **noun** a substance which relieves colic or indigestion ■ **adjective** relieving colic or indigestion

carneous mole /,kə:nɪəs 'məʊl/ **noun** matter in the uterus after the death of a fetus

carotenaemia /,kærətə'nɪ:miə/ **noun** an excessive amount of carotene in the blood, usually as a result of eating too many carrots or tomatoes, which gives the skin a yellow colour. Also called **xanthaemia**

carotene /'kærəti:n/ **noun** an orange or red pigment in carrots, egg yolk and some oils, which is converted by the liver into vitamin A

carotid /kə'rɒtid/, **carotid artery** /kə,rɒtid 'a:təri/ **noun** either of the two large arteries in the neck which supply blood to the head

COMMENT: The common carotid artery is in the lower part of the neck and branches upwards

into the external and internal carotids. The ca-

rotid body is situated at the point where the carotid divides.

carotid artery thrombosis /kə,rɒtid 'a:təri θrɒm'bəʊsɪs/ **noun** the formation of a blood clot in the carotid artery

carotid body /kæ,rɒtid 'bɒdi/ **noun** tissue in the carotid sinus which is concerned with cardiovascular reflexes

carotid pulse /kə,rɒtid 'pɔ:l/ **noun** a pulse felt in the carotid artery at the side of the neck

carotid sinus /kæ,rɒtid 'saɪnəs/ **noun** an expanded part attached to the carotid artery, which monitors blood pressure in the skull

carp- /kə:p/ **prefix** same as **carpo-** (used before vowels)

carpal /'kə:p(ə)l/ **adjective** referring to the wrist

carpal bones /'kə:p(ə)l bəʊnz/, **carpals** /'kə:p(ə)lz/ **plural noun** the eight bones which make up the carpus or wrist. See illustration at **HAND** in Supplement

carpal tunnel release /,kə:p(ə)l 'tʌn(ə)l rɪ ,lɪ:s/ **noun** an operation to relieve the compression of the median nerve

carpal tunnel syndrome /,kə:p(ə)l 'tʌn(ə)l ,sɪnd्रəm/ **noun** a condition, usually affecting women, in which the fingers tingle and hurt at night. It is caused by compression of the median nerve.

carphology /kə:'fɒlədʒi/ **noun** the action of pulling at the bedclothes, a sign of delirium in typhoid and other fevers. Also called **floccitation**

carpi /'kə:pi:/ **plural of carpus**

carpo- /kə:pəu/ **prefix** referring to the wrist

carpometacarpal joint /,kə:pə'me:təpəl dʒɔ:nt/ **noun** one of the joints between the carpals and metacarpals. Also called **CM joint**

carpopedal spasm /,kə:pəpədəl dʒə:m/ 'spæz(ə)m/ **noun** a spasm in the hands and feet caused by lack of calcium

carpus /'kə:pəs/ **noun** the bones by which the lower arm is connected to the hand. Also called **wrist**. See illustration at **HAND** in Supplement (NOTE: The plural is **carpi**.)

COMMENT: The carpus is formed of eight small bones (the carpals): the capitate, hamate, lunate, pisiform, scaphoid, trapezium, trapezoid and triquetral.

carrier /'kærɪə/ **noun** 1. a person who carries bacteria of a disease in his or her body and who can transmit the disease to others without showing any signs of being infected with it ○ *Ten per cent of the population are believed to be unwitting carriers of the bacteria.* 2. an insect which carries disease and infects humans

3. a healthy person who carries a chromosome variation that gives rise to a hereditary disease such as haemophilia or Duchenne muscular dystrophy

carry /'kæri/ *verb* to have a disease and be capable of infecting others

cartilage /'ka:tɪlɪdʒ/ *noun* thick connective tissue which lines and cushions the joints and which forms part of the structure of an organ. Cartilage in small children is the first stage in the formation of bones.

cartilaginous /,kə:tɪ'lædʒɪnəs/ *adjective* made of cartilage

cartilaginous joint /,kə:tɪ'lædʒɪnəs dʒɔɪnt/ *noun* 1. **primary cartilaginous joint** same as **synchondrosis**. 2. **secondary cartilaginous joint** same as **sympathesis**

caruncle /kə'rʌŋkəl/ *noun* a small swelling

cascara /kæ'skʊ:rə/, **cascara sagrada** /kæ'skʊ:rə sə'grā:də/ *noun* a laxative made from the bark of a tropical tree

case /keɪs/ *noun* 1. a single occurrence of a disease ○ *There were two hundred cases of cholera in the recent outbreak.* 2. a person who has a disease or who is undergoing treatment ○ *The hospital is only admitting urgent cases.*

caseation /,keɪsɪ'eɪʃ(ə)n/ *noun* the process by which dead tissue decays into a firm and dry mass. It is characteristic of tuberculosis.

case control study /keɪs kən'trəʊl ,stʌdi/ *noun* an investigation in which a group of patients with a disease are compared with a group without the disease in order to study possible causes

case history /'keɪs ,hist(ə)ri/ *noun* details of what has happened to a patient undergoing treatment

casein /'keɪsi:n/ *noun* one of the proteins found in milk

caseinogen /'keɪsi:'ɪnədʒən/ *noun* the main protein in milk, from which casein is formed

Casey's model /'keɪsɪz ,mɒd(ə)l/ *noun* a model for the care of child patients, where the parents are involved in the treatment

cast /kə:st/ *noun* a mass of material formed in a hollow organ or tube and excreted in fluid

castor oil /,kə:stər 'ɔɪl/ *noun* a plant oil which acts as a laxative

castration /kæ'streʃ(ə)n/ *noun* the surgical removal of the sexual organs, usually the testicles, in males

casualty /'kæzjʊəlti/ *noun* 1. a person who has had an accident or who is suddenly ill ○ *The fire caused several casualties.* ○ *The casualties were taken by ambulance to the nearest hospital.* 2. also **casualty department** same as **accident and emergency department** ○ *The accident victim was rushed to casualty.*

casualty ward /'kæzjʊəlti wɔ:d/ *noun* same as **accident ward**

CAT /kæt/ *noun* same as **computerised axial tomography**

cata- /kætə/ *prefix* downwards

catabolic /,kætə'bɒlik/ *adjective* referring to catabolism

catabolism /kə:tæbəlɪz(ə)m/ *noun* the process of breaking down complex chemicals into simple chemicals

catalase /'kætəleɪz/ *noun* an enzyme present in the blood and liver which catalyses the breakdown of hydrogen peroxide into water and oxygen

catalepsy /'kætəlepsi/ *noun* a condition often seen associated with schizophrenia, where a person becomes incapable of sensation, the body is rigid and he or she does not move for long periods

catalyse /'kætəlaɪz/ *verb* to act as a catalyst and help make a chemical reaction take place
(NOTE: The US spelling is **catalyze**.)

catalysis /'kætəlaɪsɪs/ *noun* a process where a chemical reaction is helped by a substance (the catalyst) which does not change during the process

catalyst /'kætəlist/ *noun* a substance which produces or helps a chemical reaction without itself changing ○ *an enzyme which acts as a catalyst in the digestive process*

catalytic /,kætə'lɪtɪk/ *adjective* referring to catalysis

catalytic reaction /,kætəlɪtɪk ri'ækʃən/ *noun* a chemical reaction which is caused by a catalyst which does not change during the reaction

catamenia /,kætə'mi:nɪə/ *noun* menstruation (technical)

cataplexy /'kætəpleksi/ *noun* a condition in which a person's muscles become suddenly rigid and he or she falls without losing consciousness, possibly caused by a shock

cataract /'kætərækt/ *noun* a condition in which the lens of the eye gradually becomes hard and opaque

COMMENT: Cataracts form most often in people after the age of 50. They are sometimes caused by a blow or an electric shock. Cataracts can easily and safely be removed by surgery.

cataract extraction /'kætərækt ɪk ,strækʃ(ə)n/ *noun* the surgical removal of a cataract from the eye

cataractic lens /kætə'ræktəs lenz/ *noun* a lens on which a cataract has formed

catarrh /kə'tɑ:r/ *noun* inflammation of the mucous membranes in the nose and throat, creating an excessive amount of mucus

catarrhal /kə'tɑ:rəl/ *adjective* referring to catarrh ○ *a catarrhal cough*

catatonica /,kætə'tənɪə/ *noun* a condition in which a psychiatric patient is either motionless or shows violent reactions to stimulation

catatonic /,kætə'tɒnɪk/ *adjective* referring to behaviour in which a person is either motionless or extremely violent

catatonic schizophrenia /,kætətɒnɪk ,skɪtsə'u:fri:nɪə/ *noun* a type of schizophrenia

where the patient is alternately apathetic or very active and disturbed

catching /'kætʃɪŋ/ *adjective* infectious
(informal) ○ *Is the disease catching?*

catchment area /'kætmənt'ærɪə/ *noun* an area around a hospital which is served by that hospital

catecholamines /kætə'kɒləmi:nz/ *plural noun* the hormones adrenaline and noradrenaline which are released by the adrenal glands
category /'kætɪg(ə)rɪ/ *noun* a classification, the way in which things can be classified ○ *His condition is of a non-urgent category.*

catgut /'kætgʌt/ *noun* a thread made from part of the intestines of sheep, now usually artificially hardened, used to sew up cuts made during surgery

COMMENT: Catgut is slowly dissolved by fluids in the body after the wound has healed and therefore does not need to be removed. Ordinary catgut will dissolve in five to ten days; hardened catgut takes up to three or four weeks.

catharsis /kæθə:sɪs/ *noun* purgation of the bowels

cathartic /kæθə:tɪk/ *adjective* laxative or purgative

catheter /'kæθɪtə/ *noun* a tube passed into the body along one of the passages in the body

catheterisation /,kæθɪtə'reɪz'zeɪʃ(ə)n/, **catheterization** *noun* the act of putting a catheter into a patient's body

...high rates of disconnection of closed urine drainage systems, lack of hand washing and incorrect positioning of urine drainage bags have been highlighted in a new report on urethral catheterisation' [Nursing Times]

...the technique used to treat aortic stenosis is similar to that for any cardiac catheterisation. A catheter introduced through the femoral vein is placed across the aortic valve and into the left ventricle.' [Journal of the American Medical Association]

catheterise /'kæθɪtə'reɪz/, **catheterize** *verb* to insert a catheter into a patient

CAT scan /'kæt skæn/, **CT scan** /,sɪ: 'ti: skæn/ *noun* same as **CT scan**

cat-scratch disease /'kæt skrætʃ dɪ,zi:z/, **cat-scratch fever** /'kæt skrætʃ ,fi:və/ *noun* an illness in which the patient has a fever and swollen lymph glands, thought to be caused by a bacterium transmitted to humans by the scratch of a cat. It may also result from scratching with other sharp points.

cauda equina /,kɔ:də r'kwainə/ *noun* a group of nerves which go from the spinal cord to the lumbar region and the coccyx

caudal /'kɔ:d(ə)l/ *adjective* (in humans) referring to the cauda equina

caudal anaesthetic /,kɔ:d(ə)l ,ænəs'θetɪk/ *noun* an anaesthetic, injected into the base of the spine to remove feeling in the lower part of the body. It is often used in childbirth.

caudal analgesia /,kɔ:d(ə)l ,æn(ə)l 'dʒi:zɪə/ *noun* a method of pain relief that involves injecting an anaesthetic into the base of the spine to remove feeling in the lower part of the body

caudal block /'kɔ:d(ə)l blɒk/ *noun* a local analgesia of the cauda equina nerves in the lower spine

caudate /'kɔ:deɪt/ *adjective* like a tail

caudate lobe /'kɔ:deɪt lob/ *noun* a lobe at the back of the liver, behind the right and left lobes. Also called **posterior lobe**

caul /kɔ:l/ *noun* 1. a membrane which sometimes covers a baby's head at birth 2. same as **omentum**

cauliflower ear /,kɒlɪflaʊər 'ɪə/ *noun* a permanently swollen ear, caused by blows in boxing

causalgia /kɔ:'zældʒə/ *noun* burning pain in a limb, caused by a damaged nerve

causal organism /,kɔ:z(ə)l 'ɔ:gənɪz(ə)m/ *noun* an organism that causes a particular disease

caustic /'kɔ:stɪk/ *noun* a chemical substance that destroys tissues that it touches ■ *adjective* corrosive and destructive

cauterisation /,kɔ:tərəɪz'zeɪʃ(ə)n/, **cauterization** *noun* the act of cauterising ○ *The growth was removed by cauterisation.*

cauterise /'kɔ:tərəɪz/, **cauterize** *verb* to use burning, radiation or laser beams to remove tissue or to stop bleeding

cautery /'kɔ:tərɪ/ *noun* a surgical instrument used to cauterise a wound

cava /'keɪvə/ ♦ **vena cava**

cavernosum /,kævə'nəsəm/ ♦ **corpus cavernosum**

cavernous breathing sounds /,kævənəs 'brɪ:ðɪŋ ,saʊndz/ *plural noun* hollow sounds made by the lungs and heard through a stethoscope placed on a patient's chest, used in diagnosis

cavernous haemangioma /,kævənəs ,haɪ'mændʒɪ'əʊmə/ *noun* a tumour in connective tissue with wide spaces which contain blood

cavernous sinus /,kævənəs 'saɪnəs/ *noun* one of two cavities in the skull behind the eyes, which form part of the venous drainage system

cavitation /,kævɪ'teɪʃ(ə)n/ *noun* the forming of a cavity

cavity /'kævɪtɪ/ *noun* a hole or space inside the body

cc abbr cubic centimetre

CCU abbr coronary care unit

CD4 /,sɪ: di: 'fɔ:/ *noun* a compound consisting of a protein combined with a carbohydrate which is found in some cells and helps to protect the body against infection □ **CD4 count** a test used to monitor how many CD4 cells have been destroyed in people with HIV

CDH abbr congenital dislocation of the hip
cecum /'sɪkəm/ noun US same as **caecum**
cefactor /'sefəkləʊ/ noun an antibacterial drug used to treat septicaemia
cefotaxime /,sefə'tæksɪm/ noun a synthetic cephalosporin used to treat bacterial infection by pseudomonads
-cele /'si:l/ suffix referring to a swelling
celiac /'si:liæk/ adjective US same as **coeliac**
cell /sel/ noun a tiny unit of matter which is the base of all plant and animal tissue (NOTE: For other terms referring to cells, see words beginning with **cyt-**, **cyto-**)

COMMENT: The cell is a unit which can reproduce itself. It is made up of a jelly-like substance (cytoplasm) which surrounds a nucleus and contains many other small structures which are different according to the type of cell. Cells reproduce by division (mitosis) and their process of feeding and removing waste products is metabolism. The division and reproduction of cells is the way the human body is formed.

cell body /'sel ,bodi/ noun the part of a nerve cell which surrounds the nucleus and from which the axon and dendrites begin

cell division /'sel dɪ,viʒ(ə)n/ noun the way in which a cell reproduces itself. ♦ **mitosis, meiosis**

cell membrane /'sel ,membrēn/ noun a membrane enclosing the cytoplasm of a cell. ♦ **columnar cell, target cell**

cellular /'seljulər/ adjective 1. referring to cells, or formed of cells 2. made of many similar parts connected together

cellular tissue /,seljulər 'tɪʃu:/ noun a form of connective tissue with large spaces

cellulite /'seljulait/ noun lumpy deposits of subcutaneous fat, especially in the thighs and buttocks

cellulitis /'selju'laitɪs/ noun a usually bacterial inflammation of connective tissue or of the subcutaneous tissue

cellulose /'seljuləʊs/ noun a carbohydrate which makes up a large percentage of plant matter

COMMENT: Cellulose is not digestible and is passed through the digestive system as roughage.

Celsius /'selsiəs/ noun a metric scale of temperature on which 0° is the point at which water freezes and 100° is the point at which water boils under average atmospheric conditions. Also called **centigrade**. ♦ **Fahrenheit** (NOTE: It is usually written as a C after the degree sign: 52°C (say: 'fifty-two degrees Celsius').) [Described 1742. After Anders Celsius (1701–44), Swedish astronomer and scientist.]

COMMENT: To convert Celsius temperatures to Fahrenheit, multiply by 1.8 and add 32. So 20°C is equal to 68°F. Celsius is used in many countries, though not in the US, where the Fahrenheit system is still preferred.

Celsius temperature /'selsiəs ,temprɪtʃə/ noun temperature as measured on the Celsius scale

CEMACH /'si:mæʃ/ noun a UK research project investigating the causes of infant deaths and stillbirths. Full form **Confidential Enquiry into Maternal and Child Health**

cement /si'ment/ noun 1. an adhesive used in dentistry to attach a crown to the base of a tooth 2. same as **cementum**

cementum /si'mentəm/ noun a layer of thick hard material which covers the roots of teeth

census /'sensəs/ noun a systematic count or survey

center /'sentə/ noun US same as **centre**

-centesis /'sentɪ:sɪs/ suffix puncture

centi- /'sentɪ/ prefix one hundredth (10^{-2}). Symbol c

centigrade /'sentɪgred/ noun same as **Celsius**

centile chart /'sentɪal tʃa:t/ noun a chart showing the number of babies who fall into each percentage category, as regards, e.g., birth weight

centilitre /'sentɪlɪ:tə/, **centiliter** noun a unit of measurement of liquid equal to one hundredth of a litre. Symbol cl

centimetre /'sentɪmi:tə/, **centimeter** noun a unit of measurement of length equal to one hundredth of a metre. Symbol cm

central /'sentrəl/ adjective referring to the centre

central canal /,sentrəl kə'næl/ noun a thin tube in the centre of the spinal cord containing cerebrospinal fluid

central line /'sentrəl laɪn/ noun a catheter inserted through the neck, used to monitor central venous pressure in conditions such as shock where fluid balance is severely upset

central nervous system /,sentrəl 'nɜ:vəs ,sɪstəm/ noun the brain and spinal cord which link together all the nerves

central sulcus /,sentrəl 'sʌlkəs/ noun one of the grooves which divide a cerebral hemisphere into lobes

central temperature /,sentrəl 'temprɪtʃə/ noun the temperature of the brain, thorax and abdomen, which is constant

central vein /,sentrəl 'veɪn/ noun a vein in the liver

central venous pressure /,sentrəl 'vi:nəs ,preʃə/ noun blood pressure in the right atrium of the heart, which can be measured by means of a catheter

centre /'sentə/ noun 1. the middle point, or the main part of something ○ *The aim of the examination is to locate the centre of infection.*

2. a large building 3. the point where a group of nerves come together (NOTE: [all senses] The US spelling is **center**.)

centrifugal /'sentri'fju:g(ə)l, sen'trif(jug(ə))l/ *adjective* moving away from the centre

centrifugation /'sentrifju:'geʃ(ə)n/, **centrifuging** /'sentrifju:dʒɪŋ/ *noun* the process of separating the components of a liquid in a centrifuge

centrifuge /'sentrifju:dʒ/ *noun* a device to separate the components of a liquid by rapid spinning

centriole /'sentriəʊl/ *noun* a small structure found in the cytoplasm of a cell, which involved in forming the spindle during cell division

centripetal /,sentri'pi:t(ə)l, sen'tripit(ə)l/ *adjective* moving towards the centre

centromere /'sentrəmɪə/ *noun* a constricted part of a chromosome, seen as a cell divides

centrosome /'sentrəsəʊm/ *noun* the structure in the cytoplasm of a cell, near the nucleus, and containing the centrioles

centrum /'sentrəm/ *noun* the central part of an organ (NOTE: The plural is **centra**.)

cephal- /sefəl/ *prefix* same as **cephalo-** (*used before vowels*)

cephalalgia /,sefə'lældʒɪə/ *noun* same as headache

cephalexin /,sefə'leksɪn/ *noun* an antibiotic used to treat infections of the urinary system or respiratory tract

cephalhaematoma /,sefəlhī:mə'təʊmə/ *noun* a swelling found mainly on the head of babies delivered with forceps

cephalic /sə'fælik/ *adjective* referring to the head

cephalic index /sə,fælik 'ɪndeks/ *noun* a measurement of the shape of the skull

cephalic presentation /sə,fælik ,prez(ə)n 'teɪʃ(ə)n/ *noun* the usual position of a baby in the uterus, where the baby's head will appear first

cephalic version /sə,fælik 'vɜ:ʃ(ə)n/ *noun* turning a wrongly positioned fetus round in the uterus, so that the head will appear first at birth

cephalo- /sefə'ləʊ/ *prefix* referring to the head

cephalocele /'sefə'ləʊsɪ:l/ *noun* a swelling caused by part of the brain passing through a weak point in the bones of the skull

cephalogram /'sefə'ləʊgraem/ *noun* an X-ray photograph of the bones of the skull

cephalomentry /,sefa'lɒmɪtri/ *noun* measurement of the head

cephalopelvic /,sefə'ləʊ'pelvik/ *adjective* referring to the head of the fetus and the pelvis of the mother

cephalopelvic disproportion /,sefə'ləʊ'pelvik ,disproportion/ *noun* a condition in which the pelvic opening of the mother is not large enough for the head of the fetus

cephalosporin /,sefə'ləʊ'spɔ:rɪn/ *noun* a drug used in the treatment of bacterial infection

cephradine /'sefrədɪ:n/ *noun* an antibacterial drug used to treat sinusitis and urinary tract infections

cerclage /sɜ:klæ:ʒ/ *noun* the act of tying things together with a ring

cerea /'sɪəriə/ ♀ **flexibilitas cerea**

cerebellar /,serəbelər/ *adjective* referring to the cerebellum

cerebellar ataxia /,serəbelər ə'tæksiə/ *noun* a disorder where a person staggers and cannot speak clearly, due to a disease of the cerebellum

cerebellar cortex /,serəbelər 'kɔ:tɛks/ *noun* the outer covering of grey matter which covers the cerebellum

cerebellar gait /,serəbelər 'geɪt/ *noun* a way of walking where a person staggers along, caused by a disease of the cerebellum

cerebellar peduncle /,serəbelər pi'dʌŋk(ə)l/ *noun* a band of nerve tissue connecting parts of the cerebellum

cerebellar syndrome /,serəbelər 'sɪndrəʊm/ *noun* a disease affecting the cerebellum, the symptoms of which are lack of muscle coordination, spasms in the eyeball and impaired speech

cerebellum /,serə'beləm/ *noun* a section of the hindbrain, located at the back of the head beneath the back part of the cerebrum. See illustration at **BRAIN** in Supplement

COMMENT: The cerebellum is formed of two hemispheres with the vermis in the centre. Fibres go into or out of the cerebellum through the peduncles. The cerebellum is the part of the brain where voluntary movements are co-ordinated and is associated with the sense of balance.

cerebr- /serəbr/ *prefix* same as **cerebro-** (*used before vowels*)

cerebra /sə'rɪ:bɪə/ plural of **cerebrum**

cerebral /'serəbrəl/ *adjective* referring to the cerebrum or to the brain in general

cerebral aqueduct /,serəbrəl 'ækwidʌkt/ *noun* a canal connecting the third and fourth ventricles in the brain. Also called **aqueduct of Sylvius**

cerebral artery /,serəbrəl 'a:təri/ *noun* one of the main arteries which take blood into the brain

cerebral cavity /,serəbrəl 'kævɪti/ *noun* one of the four connected fluid-filled spaces in the brain

cerebral cortex /,serəbrəl 'kɔ:tɛks/ *noun* the outer layer of grey matter which covers the cerebrum

cerebral decompression /,serəbrəl ,dɪk'mə:p'ref(ə)n/ *noun* the removal of part of the skull to relieve pressure on the brain

cerebral dominance /,serəbrəl 'dɒminəns/ *noun* the usual condition where the centres for various functions are located in one cerebral hemisphere

cerebral haemorrhage /,serəbrəl 'hem(ə)rɪdʒ/ noun bleeding inside the brain from a cerebral artery. Also called **brain haemorrhage**

cerebral hemisphere /,serəbrəl 'hemisfɪə/ noun one of the two halves of the cerebrum

cerebral infarction /,serəbrəl in'fə:kʃən/ noun the death of brain tissue as a result of reduction in the blood supply to the brain

cerebral ischaemia /,serəbrəl i'ski:mɪə/ noun failure in the blood supply to the brain

cerebral palsy /,serəbrəl 'pɔ:lzi/ noun a disorder mainly due to brain damage occurring before birth, or due to lack of oxygen during birth, associated with poor coordination of muscular movements, impaired speech, hearing and sight, and sometimes mental impairment (NOTE: Premature babies are at higher risk.)

cerebral peduncle /,serəbrəl pi'dʌŋk(ə)l/ noun a mass of nerve fibres connecting the cerebral hemispheres to the midbrain. See illustration at **BRAIN** in Supplement

cerebral thrombosis /,serəbrəl θrɒm'bəʊsɪs/ noun same as **cerebrovascular accident**

cerebral vascular accident /,serəbrəl ,væskjulər 'æksɪd(ə)nt/ noun same as **cerebrovascular accident**

cerebration /,serə'breɪʃ(ə)n/ noun brain activity

cerebro- /serəbrəʊ/ prefix referring to the cerebrum

cerebrospinal /,serəbrəʊ'spaɪn(ə)l/ adjective referring to the brain and the spinal cord

cerebrospinal fever /,serəbrəʊ'spaɪn(ə)l 'fi:və/ noun same as **meningococcal meningitis**

cerebrospinal fluid /,serəbrəʊ'spaɪn(ə)l 'flu:d/ noun fluid which surrounds the brain and the spinal cord. Abbr **CSF**

COMMENT: CSF is found in the space between the arachnoid mater and pia mater of the brain, within the ventricles of the brain and in the central canal of the spinal cord. It consists mainly of water, with some sugar and sodium chloride. Its function is to cushion the brain and spinal cord and it is continually formed and absorbed to maintain the correct pressure.

cerebrospinal meningitis /,serəbrəʊ'spaɪn(ə)l ,menɪn'dʒaɪtɪs/ noun same as **meningococcal meningitis**

cerebrospinal tract /,serəbrəʊ'spaɪn(ə)l 'trækٹ/ noun one of the main motor pathways in the anterior and lateral white columns of the spinal cord

cerebrovascular /,serəbrəʊ'væskjulə/ adjective referring to the blood vessels in the brain

cerebrovascular accident /,serəbrəʊ ,væskjulər 'æksɪd(ə)nt/ noun a sudden

blocking of or bleeding from a blood vessel in the brain resulting in temporary or permanent paralysis or death. Also called **stroke**

cerebrovascular disease /,serəbrəʊ ,væskjulə dɪ'zi:z/ noun a disease of the blood vessels in the brain

cerebrum /sə'rɪ:b्रəm/ noun the largest part of the brain, formed of two sections, the cerebral hemispheres, which run along the length of the head. The cerebrum controls the main mental processes, including the memory. Also called **telencephalon**

certificate /sə'tifikət/ noun an official paper which states something

certify /sɜ:tifai/ verb to make an official statement in writing about something ○ *He was certified dead on arrival at hospital.*

cerumen /sə'ru:men/ noun wax which forms inside the ear. Also called **earwax**

ceruminous gland /sə'ru:minəs ,glænd/ noun a gland which secretes earwax. See illustration at **EAR** in Supplement

cervic- /sɜ:vɪk/ prefix same as **cervico-** (used before vowels)

cervical /sɜ:vɪk(ə)l, sə'vaɪk(ə)l/ adjective 1. referring to the neck 2. referring to any part of the body which is shaped like a neck, especially the cervix of the uterus

cervical canal /sɜ:vɪk(ə)l kə'næl/ noun a tube running through the cervix, from the point where the uterus joins the vagina to the entrance of the uterine cavity. Also called **cervicouterine canal**

cervical cancer /sɜ:vɪk(ə)l 'kænsər/ noun a cancer of the cervix of the uterus

cervical collar /,sɜ:vɪk(ə)l 'kɒlə/ noun a special strong orthopaedic collar to support the head of a person with neck injuries or a condition such as cervical spondylosis

cervical erosion /,sɜ:vɪk(ə)l ɪ'rəʊz(ə)n/ noun a condition in which the epithelium of the mucous membrane lining the cervix uteri extends outside the cervix

cervical ganglion /,sɜ:vɪk(ə)l 'gæŋgliən/ noun one of the bundles of nerves in the neck

cervical incompetence /,sɜ:vɪk(ə)l 'ɪnkomplɪt(ə)ns/ noun a dysfunction of the cervix of the uterus which is often the cause of spontaneous abortions and premature births and can be remedied by Shirodkar's operation

cervical intraepithelial neoplasia /,sɜ:vɪk(ə)l intræpi,θi:lɪəl ni:pə'leɪəz/ noun changes in the cells of the cervix which may lead to cervical cancer. Abbr **CIN**

cervical nerve /,sɜ:vɪk(ə)l 'nɜ:rv/ noun spinal nerve in the neck

cervical node /,sɜ:vɪk(ə)l 'nəud/ noun lymph node in the neck

cervical plexus /,sɜ:vɪk(ə)l 'pleksəs/ noun a group of nerves in front of the vertebrae in the neck, which lead to nerves supplying the

skin and muscles of the neck, and also the phrenic nerve which controls the diaphragm

cervical rib /sɜːvɪk(ə)l 'rib/ *noun* an extra rib sometimes found attached to the vertebrae above the other ribs and which may cause thoracic inlet syndrome

cervical smear /sɜːvɪk(ə)l 'smər/ *noun* a test for cervical cancer, where cells taken from the mucus in the cervix of the uterus are examined

cervical spondylosis /sɜːvɪk(ə)l spɒndɪ 'loʊsɪs/ *noun* a degenerative change in the neck bones. ☞ **spondylosis**

cervical vertebrae /sɜːvɪk(ə)l 'vɜːtibri:/ *plural noun* the seven bones which form the neck

cervicectomy /sɜːvɪk'ektəmɪ/ *noun* the surgical removal of the cervix uteri

cervices /sɜːvɪsɪz/ *plural of cervix*

cervicitis /sɜːvɪ'taɪtɪs/ *noun* inflammation of the cervix uteri

cervico- /sɜːvɪkəʊ/ *prefix* 1. referring to the neck 2. referring to the cervix of the uterus

cervicography /sɜːvɪk'ɒgrəfi/ *noun* the act of photographing the cervix uteri, used as a method of screening for cervical cancer

cervicouterine canal /sɜːvɪkəʊnju:təraɪn kə'næl/ *noun* same as **cervical canal**

cervix /sɜːvɪks/ *noun* 1. any narrow neck of an organ 2. the neck of the uterus, the narrow lower part of the uterus leading into the vagina. Also called **cervix uteri**

CESDI *noun* full form **Confidential Enquiry into Stillbirths and Deaths in Infancy**. ☞ **CEMACH**

cesium /'si:ziəm/ *noun* US same as **caesium**

cestode /'sestəd/ *noun* a type of tapeworm

cetrimide /'setrimaɪd/ *noun* a mixture of ammonium compounds, used in disinfectants and antiseptics

CF abbr cystic fibrosis

CFT abbr complement fixation test

chafe /tʃeif/ *verb* to rub something, especially to rub against the skin ☞ *The rough cloth of the collar chafed the girl's neck.*

chafing /'tʃeifɪŋ/ *noun* irritation of the skin due to rubbing ☞ *She was experiencing chafing of the thighs.*

Chagas' disease /'ʃa:gəz dɪ,zi:z/ *noun* a type of sleeping sickness found in South America, transmitted by insect bites which pass trypanosomes into the bloodstream. Children are mainly affected and if untreated the disease can cause fatal heart block in early adult life. [Described 1909. After Carlos Chagas (1879–1934), Brazilian scientist and physician.]

CHAI abbr Commission for Healthcare Audit and Improvement

chalasia /tʃə'lɛzɪə/ *noun* an excessive relaxation of the oesophageal muscles, which causes regurgitation

chalazion /kə'lɛzɪən/ *noun* same as **meibomian cyst**

challenge /'tʃælɪndʒ/ *verb* to expose someone to a substance to determine whether an allergy or other adverse reaction will occur ■ *noun* exposure of someone to a substance to determine whether an allergy or other adverse reaction will occur

chalone /'keɪləʊn, 'kæləʊn/ *noun* a hormone which stops a secretion, as opposed to those hormones which stimulate secretion

chamber /'tʃeɪmbə/ *noun* a hollow space (atrium or ventricle) in the heart where blood is collected

chancere /'fæŋkər/ *noun* a sore on the lip, penis or eyelid which is the first symptom of syphilis

chancroid /'fæŋkrɔɪd/ *noun* a venereal sore with a soft base, situated in the groin or on the genitals and caused by the bacterium *Haemophilus ducreyi*. Also called **soft chancre**

change of life /tʃeɪndʒ əv 'laɪf/ *noun* same as **menopause (dated informal)**

chapped /tʃæpt/ *adjective* referring to skin which is cracked due to cold

characterise /'kærɪktə'reɪz/; **characterize** /'kærɪktə'reɪz/ *verb* to be a typical or special quality or feature of something or someone ☞ *The disease is characterised by the development of lesions throughout the body.*

characteristic /,kærɪktə'rɪstɪk/ *noun* a quality which allows something to be recognised as different ☞ *Cancer destroys the cell's characteristics.* ■ *adjective* being a typical or distinguishing quality ☞ *symptoms characteristic of anaemia* ☞ *The inflammation is characteristic of shingles.*

charcoal /'tʃa:kəʊl/ *noun* a highly absorbent substance, formed when wood is burnt in the absence of oxygen, used to relieve diarrhoea or intestinal gas and in cases of poisoning

COMMENT: Charcoal tablets can be used to relieve diarrhoea or flatulence.

Charcot's joint /,ʃɑ:kəʊz 'dʒɔɪnt/ *noun* a joint which becomes deformed because the patient cannot feel pain in it when the nerves have been damaged by syphilis, diabetes or leprosy [Described 1868. After Jean-Martin Charcot (1825–93), French neurologist.]

Charcot's triad /,ʃɑ:kəʊz 'traɪəd/ *noun* three symptoms of multiple sclerosis: rapid eye movement, tremor and scanning speech

charleyhorse /tʃa:lɪhɔ:s/ *noun* US a painful cramp in a leg or thigh (*informal*)

Charnley clamps /tʃa:nli 'klæmps/ *plural noun* metal clamps fixed to a rod through a bone to hold it tight

chart /tʃɑ:t/ *noun* a record of information shown as a series of lines or points on graph paper ◇ *a temperature chart*

charting /'tʃɑ:tɪŋ/ *noun* the preparation and updating of a hospital patient's chart by nurses and doctors

ChB *abbr* bachelor of surgery

CHC *abbr* 1. child health clinic 2. community health council

CHD *abbr* coronary heart disease

check-up /'tʃek ʌp/ *noun* a general examination by a doctor or dentist ◇ *She went for a check-up.* ◇ *He had a heart check-up last week.*

cheek /tʃi:k/ *noun* 1. one of two fleshy parts of the face on each side of the nose 2. either side of the buttocks (*informal*)

cheekbone /'tʃi:kbaʊn/ *noun* an arch of bone in the face beneath the cheek which also forms the lower part of the eye socket

cheil- /kail/ *prefix* same as **cheilo-** (*used before vowels*)

cheilitis /'kar'laitɪs/ *noun* inflammation of the lips

cheilo- /kailəʊ/ *prefix* referring to the lips

cheiloschisis /kailəʊ'fæsɪs/ *noun* a double cleft upper lip

cheilosis /kar'ləʊsɪs/ *noun* swelling and cracks on the lips and corners of the mouth caused by lack of vitamin B

cheiro- /keɪrəʊ/ *prefix* referring to the hand

cheiropompholyx /,keɪrəʊ'pɒmfəlɪks/ *noun* a disorder of the skin in which tiny blisters appear on the palms of the hand

chelate /'ki:leɪt/ *verb* to treat someone with a chelating agent in order to remove a heavy metal such as lead from the bloodstream

chelating agent /'ki:leɪtɪŋ ,eɪdʒənt/ *noun* a chemical compound which can combine with some metals, used as a treatment for metal poisoning

keloid /'kɪ:lɔɪd/ *noun* same as **keloid**

chemical /'kemɪk(ə)l/ *adjective* referring to chemistry ■ *noun* a substance produced by a chemical process or formed of chemical elements

'The MRI body scanner is able to provide a chemical analysis of tissues without investigative surgery'
[*Health Services Journal*]

chemical composition /,kemɪk(ə)l ,kɒmpo'zɪʃ(ə)n/ *noun* the chemicals which make up a substance ◇ *They analysed the blood samples to find out their chemical composition.*

chemical symbol /,kemɪk(ə)l 'sɪmbəl/ *noun* letters which represent a chemical substance ◇ *Na is the symbol for sodium.*

chemist /'kemɪst/ *noun* a shop where you can buy medicine, toothpaste, soap and similar items ◇ *Go to the chemist to get some cough*

medicine. ◇ *The tablets are sold at all chemists.* ◇ *There's a chemist on the corner.*

chemistry /'kemɪstri/ *noun* the study of substances, elements and compounds and their reactions with each other ◇ **blood chemistry** or **chemistry of the blood** 1. substances which make up blood, which can be analysed in blood tests, the results of which are useful in diagnosing disease 2. a record of changes which take place in blood during disease and treatment

chemo /'kɪ:məʊ/ *noun* chemotherapy (*informal*)

chemo- /kɪ:məʊ/ *prefix* referring to chemistry

chemoreceptor /,kɪ:məʊrɪ'septə/ *noun* a cell which responds to the presence of a chemical compound by activating a nerve, e.g. a taste bud reacting to food or cells in the carotid body reacting to lowered oxygen and raised carbon dioxide in the blood

chemosis /kɪ:'məʊsɪs/ *noun* swelling of the conjunctiva

chemotaxis /,kɪ:məʊ'tæksɪs/ *noun* the movement of a cell when it is attracted to or repelled by a chemical substance

chemotherapeutic agent /,kɪ:məʊθerə'pju:tɪk ,eɪdʒənt/ *noun* a chemical substance used to treat a disease

chemotherapy /,kɪ:məʊ'θerəpi/ *noun* the use of drugs such as antibiotics, painkillers or antiseptic lotions to fight a disease, especially using toxic chemicals to destroy rapidly developing cancer cells

chest /tʃest/ *noun* 1. the upper front part of the body between the neck and stomach. Also called **thorax** 2. same as **thorax** (NOTE: For other terms referring to the chest, see **pectoral** and words beginning with **steth-**, **thorac-**, **thoraco-**.)

chest cavity /'tʃest ,kævɪtɪ/ *noun* a space in the body containing the diaphragm, heart and lungs

chest examination /'tʃest ɪg,zæmɪneɪʃ(ə)n/ *noun* an examination of someone's chest by percussion, stethoscope or X-ray

chest muscle /'tʃest ,mæs(ə)l/ *noun* same as **pectoral muscle**

chest pain /'tʃest peɪn/ *noun* pain in the chest which may be caused by heart disease

chesty /'tʃestɪ/ *adjective* having phlegm in the lungs, or having a tendency to chest complaints

Cheyne–Stokes respiration /,tʃeɪn 'stəʊks rɪspɪ'reɪʃ(ə)n/, **Cheyne–Stokes breathing** /'brɪ:nθɪŋ/ *noun* irregular breathing, usually found in people who are unconscious, with short breaths gradually increasing to deep breaths, then reducing again, until breathing appears to stop

CHI *abbr* Commission for Health Improvement

chiasm /'kaɪəz(ə)m/, **chiasma** /kaɪ'æzma/ noun \blacktriangleleft **optic chiasma**

chickenpox /tʃɪkɪn'pɒks/ noun an infectious disease of children, with fever and red spots which turn into itchy blisters. Also called **varicella**

COMMENT: Chickenpox is caused by a herpes-virus. In later life, shingles is usually a re-emergence of a dormant chickenpox virus and an adult with shingles can infect a child with chickenpox.

Chief Medical Officer /tʃi:f 'medɪk(ə)l, pfi:səl/ noun in the UK, a government official responsible for all aspects of public health. Abbr **CMO**

Chief Nursing Officer /tʃi:f 'nɜ:sɪŋ, pfi:sə/ noun in the UK, an official appointed by the Department of Health to advise Government Ministers and provide leadership to nurses and midwives. Abbr **CNO**

chilblain /'tʃɪlbleɪn/ noun a condition in which the skin of the fingers, toes, nose or ears becomes red, swollen and itchy because of exposure to cold. Also called **erythema pernio**

child /tʃaɪld/ noun a young boy or girl. Child is the legal term for a person under 14 years of age. (NOTE: The plural is **children**. For other terms referring to children, see words beginning with **paed-**, **paedo-** or **ped-**, **pedo-**)

child abuse /'tʃaɪld ə,bju:s/ noun cruel treatment of a child by an adult, including physical and sexual harm

childbearing /'tʃaɪldbeərɪŋ/ noun the act of carrying and giving birth to a child

childbirth /'tʃaɪldbɜ:θ/ noun the act of giving birth. Also called **parturition**

child care /'tʃaɪld keə/ noun the care of young children and study of their special needs

child health clinic /tʃaɪld 'helθ, klinɪk/ noun a special clinic for checking the health and development of small children under school age. Abbr **CHC**

childhood illness /,tʃaɪldhd ɪ'lness/ noun an illness which mainly affects children and not adults

child-proof /'tʃaɪld pru:f/ adjective designed so that a child cannot use it ○ *child-proof containers* ○ *The pills are sold in bottles with child-proof lids or caps.*

child protection /,tʃaɪld prə'tekʃən/ noun the measures taken to avoid abuse, neglect or exploitation of any kind towards children

children /'tʃɪldrən/ plural of **child**

children's hospital /'tʃɪldrənz, hɒspɪt(ə)l/ noun a hospital which specialises in treating children

chill /tʃɪl/ noun a short illness causing a feeling of being cold and shivering, usually the sign of the beginning of a fever, of flu or a cold

chin /tʃɪn/ noun the bottom part of the face, beneath the mouth

Chinese medicine /,tʃaɪni:z 'med(ə)sɪ/ noun a system of diagnosis, treatment and prevention of illness developed in China over many centuries. It uses herbs, minerals and animal products, exercise, massage and acupuncture.

Chinese restaurant syndrome /,tʃaɪni:z 'rest(ə)rənt, sɪndrəʊm/ noun an allergic condition which gives people severe headaches after eating food flavoured with monosodium glutamate (*informal*)

chiro- /kai'rəʊ/ prefix referring to the hand

chiroprivist /kɪ'rɒpədɪst/ noun a person who specialises in treatment of minor disorders of the feet

chiropody /kɪ'rɒpədi/ noun the study and treatment of minor diseases and disorders of the feet

chiropractic /,kai'rəʊ'prækτɪk/ noun the treatment and prevention of disorders of the neuromusculoskeletal system by making adjustments primarily to the bones of the spine

chiropractor /'kai'rəʊ,prækta/ noun a person who treats musculoskeletal disorders by making adjustments primarily to the bones of the spine

chiropracty /'kai'rəʊ,prækty/ noun same as **chiropractic** (*informal*)

Chlamydia /kla'mɪdiə/ noun a bacterium that causes trachoma and urogenital diseases in humans and psittacosis in birds, which can be transmitted to humans. It is currently a major cause of sexually transmitted disease.

chlamydial /kla'mɪdiəl/ adjective referring to infections caused by **Chlamydia**

chloasma /klu:ə'æzma/ noun the presence of brown spots on the skin from various causes

chlor- /klɔ:r/ prefix same as **chloro-** (*used before vowels*)

chlorambucil /klɔ:r'æmbjʊsɪl/ noun a drug which is toxic to cells, used in cancer treatment

chloramphenicol /,klɔ:ræm'fenɪkol/ noun a powerful antibiotic which sometimes causes the collapse of blood cell production, so is used only for treating life-threatening diseases such as meningitis

chloridiazepoxide /,klɔ:dai,æzi'pɒksaɪd/ noun a yellow crystalline powder, used as a tranquilliser and treatment for alcoholism

chlorhexidine /klɔ:hɛksɪdɪn/ noun a disinfectant mouthwash

chloride /'klɔ:raɪd/ noun a salt of hydrochloric acid

chlorination /,klɔ:ri:'neɪʃ(ə)n/ noun sterilisation by adding chlorine

COMMENT: Chlorination is used to kill bacteria in drinking water, in swimming pools and sewage farms, and has many industrial applications such as sterilisation in food processing.

chlorinator /'klɔ:rɪneɪtə/ noun apparatus for adding chlorine to water

chlorine /'klori:n/ *noun* a powerful greenish gas, used to sterilise water (NOTE: The chemical symbol is Cl.)

chlormethiazole /,klor'meθaɪəzəʊl/ *noun* a sedative used in the treatment of people with alcoholism

chloro- /klorɔ:/ *prefix* referring to chlorine

chloroform /'klorfɔ:m/ *noun* a powerful drug formerly used as an anaesthetic

chloroma /klor:'rəʊmə/ *noun* a bone tumour associated with acute leukaemia

chloroquine /'klor:rəkwin/ *noun* a drug used to prevent and treat malaria, but to which resistance has developed in some parts of the world

chlorosis /klor:'rəʊsɪs/ *noun* a type of severe anaemia due to iron deficiency, affecting mainly young girls

chlorothiazide /,klor:rəʊ'θaɪəzaid/ *noun* a drug which helps the body to produce more urine, used in the treatment of high blood pressure, swelling and heart failure

chloroxylenol /,klor:rəʊ'zætlənɒl/ *noun* a chemical used as an antimicrobial agent in skin creams and in disinfectants

chlorpheniramine /,klor:fen'aɪrəmɪ:n/, **chlorpheniramine maleate** /,klor:fenairəmɪ:n'mælɪet/ *noun* an antihistamine drug

chlorpromazine hydrochloride /klor:prouməzai:n ,haɪdrəu'klor:iəd/ *noun* a drug used to treat schizophrenia and other psychoses

chlorpropamide /klor:'prəʊpəməid/ *noun* a drug which lowers blood sugar, used in the treatment of diabetes

chlorthalidone /klor:'θælɪdəʊn/ *noun* a diuretic

ChM abbr Master of Surgery

choana /'kəʊənə/ *noun* any opening shaped like a funnel, especially the one leading from the nasal cavity to the pharynx (NOTE: The plural is *choanae*.)

chocolate cyst /tʃɔ:klt 'sɪst/ *noun* an ovarian cyst containing old brown blood

choke /tʃəuk/ *verb* to stop breathing because the windpipe becomes blocked by a foreign body or by inhalation of water, or to stop someone breathing by blocking the windpipe
 to choke on (something) to take something into the windpipe instead of the gullet, so that the breathing is interrupted
 A piece of bread made him choke or He choked on a piece of bread.

choking /'tʃəukɪŋ/ *noun* a condition in which someone is prevented from breathing. ☞ **asphyxia**

chol- /kɒl/ *prefix* same as **chole-** (*used before vowels*)

cholaemia /kə'lɪ:miə/ *noun* the presence of an unusual amount of bile in the blood

cholagogue /'kɒlægɒg/ *noun* a drug which encourages the production of bile

cholangiocarcinoma /kə,lændʒiəʊ,kɑ:sɪ'nəʊmə/ *noun* a rare cancer of the cells of the bile ducts

cholangiography /kə,lændʒi'ngrafi/ *noun* an X-ray examination of the bile ducts and gall bladder

cholangiolitis /kə,lændʒiəʊ'laitɪs/ *noun* inflammation of the small bile ducts

cholangiopancreatography /kə,læn,dʒiəʊ,pænkrɪə'tɒgrafi/ *noun* an X-ray examination of the bile ducts and pancreas

cholangitis /kə'læn,læn'dʒaɪtɪs/ *noun* inflammation of the bile ducts

chole- /kɒl/ *prefix* referring to bile

cholecalciferol /,kɒlkæk'fərɒl/ *noun* a form of vitamin D found naturally in fish-liver oils and egg yolks

cholecystectomy /,kɒlɪ'stɪ'stektəmɪ/ *noun* the surgical removal of the gall bladder

cholecystitis /,kɒlɪ'stɪ'staɪtɪs/ *noun* inflammation of the gall bladder

cholecystoduodenostomy /,kɒlɪ'stɪsduə'dənəstəmɪ/ *noun* a surgical operation to join the gall bladder to the duodenum to allow bile to pass into the intestine when the main bile duct is blocked

cholecystogram /,kɒlɪ'stɪsgræm/ *noun* an X-ray photograph of the gall bladder

cholecystography /,kɒlɪ'stɪsgrəfɪ/ *noun* an X-ray examination of the gall bladder

cholecystokinin /,kɒlɪ'stɪsə'kaɪnɪn/ *noun* a hormone released by cells at the top of the small intestine. It stimulates the gall bladder, making it contract and release bile.

cholecystotomy /,kɒlɪ'stɒtəmɪ/ *noun* a surgical operation to make a cut in the gall bladder, usually to remove gallstones

choledoch- /kəledək/ *prefix* referring to the common bile duct

choledocholithiasis /kə,ledəkəlɪ'θaɪəsɪs/ *noun* same as **cholelithiasis**

choledocholithotomy /kə,ledɪkəlɪ'θɒtəmɪ/ *noun* a surgical operation to remove a gallstone by cutting into the bile duct

choledochostomy /kə,ledə'kɒstəmɪ/ *noun* a surgical operation to make an opening in a bile duct

choledochotomy /kəledə'kɒtəmɪ/ *noun* a surgical operation to make a cut in the common bile duct to remove gallstones

cholelithiasis /kɒlɪ'lɪ'θaɪəsɪs/ *noun* a condition in which gallstones form in the gall bladder or bile ducts. Also called **choledocholithiasis**

cholelithotomy /kɒlɪ'lɪ'θɒtəmɪ/ *noun* the surgical removal of gallstones by cutting into the gall bladder

cholera /'kɒlərə/ *noun* a serious bacterial disease spread through food or water which has

been infected by *Vibrio cholerae* ○ A cholera epidemic broke out after the flood.

COMMENT: The infected person experiences diarrhoea, cramp in the intestines and dehydration. The disease is often fatal and vaccination is only effective for a relatively short period.

choleresis /kə'lɪərəsɪs/ noun the production of bile by the liver

choleretic /kɒlɪ'retɪk/ adjective referring to a substance which increases the production and flow of bile.

cholestasis /kɒlɪ'steɪsɪs/ noun a condition in which all bile does not pass into the intestine but some remains in the liver and causes jaundice

cholesteatoma /kə'lestɪə'teɪmə/ noun a cyst containing some cholesterol found in the middle ear and also in the brain

cholesterol /kə'lestərɒl/ noun a fatty substance found in fats and oils, also produced by the liver and forming an essential part of all cells

COMMENT: Cholesterol is found in brain cells, the adrenal glands, liver and bile acids. High levels of cholesterol in the blood are found in diabetes. Cholesterol is formed by the body, and high blood cholesterol levels are associated with diets rich in animal fat, such as butter and fat meat. Excess cholesterol can be deposited in the walls of arteries, causing arteriosclerosis.

cholesterolaemia /kə'lestərə'leɪmɪə/ noun a high level of cholesterol in the blood

cholesterosis /kə'lestə'rəʊsɪs/ noun inflammation of the gall bladder with deposits of cholesterol

cholic acid /kəʊlɪk 'æsɪd/ noun one of the bile acids

choline /'kəʊli:n/ noun a compound involved in fat metabolism and the precursor for acetyl-choline

cholinergic /kəʊlɪ'nɜ:dʒɪk/ adjective referring to a neurone or receptor which responds to acetylcholine

cholinesterase /kəʊlɪ'nestəreɪz/ noun an enzyme which breaks down a choline ester

choluria /kəʊ'ljuəriə/ noun same as **biliuria**

chondr- /kɒndr/ prefix referring to cartilage

chondritis /kɒn'draɪtɪs/ noun inflammation of a cartilage

chondroblast /'kɒndrəʊblæst/ noun a cell from which cartilage develops in an embryo

chondrocalcinosis /'kɒndrəʊsɪs, kælsɪ'nəʊsɪs/ noun a condition in which deposits of calcium phosphate are found in articular cartilage

chondrocyte /'kɒndrəʊsait/ noun a mature cartilage cell

chondrodysplasia /,kɒndrəʊdɪs'pleɪzɪə/ noun a hereditary disorder of cartilage which is linked to dwarfism

chondrodystrophy /,kɒndrəʊ'dɪstrəfɪ/ noun any disorder of cartilage

chondroma /kɒn'drəʊmə/ noun a tumour formed of cartilaginous tissue

chondromalacia /,kɒndrəʊmə'lɛʃə/ noun degeneration of the cartilage of a joint

chondrosarcoma /,kɒndrəʊsə:'kɑ:mə/ noun a malignant, rapidly growing tumour involving cartilage cells

chorda /'kɔ:də/ noun a cord or tendon (NOTE: The plural is **chordae**.)

chordae tendinae /,kɔ:dæ:tɛndɪneɪ/ plural noun tiny fibrous ligaments in the heart which attach the edges of some of the valves to the walls of the ventricles

chorddee /'kɔ:di:/ noun a painful condition where the erect penis is curved, a complication of gonorrhoea

chorditis /kɔ:'daitɪs/ noun inflammation of the vocal cords

chordotomy /kɔ:'dɒtəmɪ/ noun a surgical operation to cut a cord such as a nerve pathway in the spinal cord in order to relieve intractable pain

chorea /kɔ:'ri:ə/ noun a sudden severe twitching, usually of the face and shoulders, which is a symptom of disease of the nervous system

chorion /'kɔ:rɪən/ noun a membrane covering the fertilised ovum

chorionic /,kɔ:ri'ɒnɪk/ adjective referring to the chorion

chorionic gonadotrophin /kɔ:ri,pnɪk ɡənədəʊ'ntrəʊfin/ noun ♀ **human chorionic gonadotrophin**

chorionic villi /kɔ:ri,pnɪk 'vɪlɪ/ plural noun tiny finger-like folds in the chorion

chorionic villus sampling /kɔ:ri,pnɪk 'vɪlʊs ,sə:mplɪŋ/ noun an antenatal screening test carried out by examining cells from the chorionic villi of the outer membrane surrounding an embryo, which have the same DNA as the fetus

choroid /'kɔ:rɔɪd/ noun the middle layer of tissue which forms the eyeball, between the sclera and the retina. See illustration at **EYE** in Supplement

choroiditis /,kɔ:rɔɪ'daitɪs/ noun inflammation of the choroid in the eyeball

choroidocyclitis /kɔ:,rɔɪdəʊsər'klaitɪs/ noun inflammation of the choroids and ciliary body

choroid plexus /,kɔ:rɔɪd 'pleksəs/ noun part of the pia mater, a network of small blood vessels in the ventricles of the brain which produce cerebrospinal fluid. See illustration at **EYE** in Supplement

Christmas disease /'krɪsməs dɪ,zɪ:z/ noun same as **haemophilia B** [After Mr Christmas, the person in whom the disease was first studied in detail]

Christmas factor /'krɪsməs ,fæktə/ *noun*
same as **Factor IX**

chrom- /krəʊm/ *prefix* same as **chromo-**
(used before vowels)

-chromasia /krə'meziə/ *suffix* referring to colour

chromatid /'krəʊmətɪd/ *noun* one of two parallel filaments making up a chromosome

chromatin /'krəʊmətɪn/ *noun* a network which forms the nucleus of a cell and can be stained with basic dyes

chromatography /,krəʊmə'tɒgrəfi/ *noun* a method of separating chemicals through a porous medium, used in analysing compounds and mixtures

chromatophore /krə'o'mætəfɔ:/ *noun* any pigment-bearing cell in the eyes, hair and skin
chromic acid /,krəʊmɪk 'æsɪd/ *noun* an unstable acid existing only in solution or in the form of a salt, sometimes used in the removal of warts

chromicised catgut /,krəʊmɪsɪzd 'kætgʌt/ *noun* catgut which is hardened with chromium to make it slower to dissolve in the body

chromium /'krəʊmɪəm/ *noun* a metallic trace element (NOTE: The chemical symbol is Cr.)

chromo- /krəʊməʊ/ *prefix* referring to colour

chromosomal /,krəʊmə'səʊm(ə)l/ *adjective* referring to chromosomes

chromosomal aberration /,krəʊməsəʊm(ə)l ,æbə'reɪʃ(ə)n/ *noun* same as **chromosome aberration**

chromosome /'krəʊməsəʊm/ *noun* a rod-shaped structure in the nucleus of a cell, formed of DNA, which carries the genes

COMMENT: Each human cell has 46 chromosomes, 23 inherited from each parent. The female has one pair of X chromosomes, and the male one pair of XY chromosomes, which are responsible for the sexual difference. Sperm from a male have either an X or a Y chromosome. If a Y chromosome sperm fertilises the female's ovum the child will be male.

chromosome aberration /'krəʊməsəʊm ,æbə'reɪʃ(ə)n/ *noun* a change from the usual number or arrangement of chromosomes

chromosome mapping /'krəʊməsəʊm ,mæpɪŋ/ *noun* a procedure by which the position of genes on a chromosome is established
chronic /'krɒnɪk/ *adjective* 1. referring to a disease or condition which lasts for a long time ○ *He has a chronic chest complaint.* Opposite **acute** 2. referring to serious pain (*informal*)

chronic abscess /,krɒnɪk 'æbses/ *noun* an abscess which develops slowly over a period of time

chronic appendicitis /,krɒnɪk ə'pendi'saitɪs/ *noun* a condition in which the vermiform appendix is always slightly inflamed. ♀ **grumbling appendix**

chronic catarrhal rhinitis /,krɒnɪk kə'ta:rəl rai'naitɪs/ *noun* a persistent form of inflammation of the nose where excess mucus is secreted by the mucous membrane

chronic fatigue syndrome /,krɒnɪk fə'ti:g ,sɪndrəʊm/ *noun* same as **myalgic encephalomyelitis**

chronic glaucoma /,krɒnɪk glɔ:'kəʊmə/ *noun* same as **open-angle glaucoma**

chronic granulomatous disease /,krɒnɪk ,grænju'ləmætəs dɪ,zi:z/ *noun* a type of inflammation where macrophages are converted into epithelial-like cells as a result of infection, as in tuberculosis or sarcoidosis

chronic obstructive airways disease /,krɒnɪk ə'bstræktyv 'eəweɪz dɪ,zi:z/ *noun* Abbr **COAD**. Now called **chronic obstructive pulmonary disease**

chronic obstructive pulmonary disease /,krɒnɪk ə'bstræktyv 'pʌlmən(ə)ri dɪ,zi:z/ *noun* any of a group of progressive respiratory disorders where someone experiences loss of lung function and shows little or no response to steroid or bronchodilator drug treatments, e.g. emphysema and chronic bronchitis. Abbr **COPD**

chronic pancreatitis /,krɒnɪk pænkrɪə'ta:tɪs/ *noun* a persistent inflammation occurring after repeated attacks of acute pancreatitis, where the gland becomes calcified

chronic periarthritis /,krɒnɪk peria:θraɪtɪs/ *noun* inflammation of tissues round the shoulder joint. Also called **scapulohumeral arthritis**

chronic pericarditis /,krɒnɪk perika:dɪtɪs/ *noun* a condition in which the pericardium becomes thickened and prevents the heart from functioning normally. Also called **constrictive pericarditis**

Chronic Sick and Disabled Persons Act 1970 /,krɒnɪk ,sɪk ən dɪs,eɪb(ə)ld 'pɜ:zɪs(ə)nz ækt/ *noun* an Act of Parliament in the UK which provides benefits such as alterations to their homes for people with long-term conditions

chronic toxicity /,krɒnɪk tɒk'sisɪtɪ/ *noun* exposure to harmful levels of a toxic substance over a period of time

chrysotherapy /,kraɪsəʊ'θerəpi/ *noun* treatment which involves gold injections

Chvostek's sign /tʃe'vesteks sain/ *noun* an indication of tetany, where a spasm is produced if the facial muscles are tapped

chyle /kaɪl/ *noun* a fluid in the lymph vessels in the intestine, which contains fat, especially after a meal

chylomicron /kailəʊ'maɪkron/ *noun* a particle of chyle present in the blood

chluria /kaɪljuəriə/ *noun* the presence of chyle in the urine

chyme /kaim/ *noun* a semi-liquid mass of food and gastric juices, which passes from the stomach to the intestine

chymotrypsin /,kaɪməʊ'truːpsɪn/ *noun* an enzyme which digests protein

Ci abbr curie

cicatrise /'sɪkətraɪz/, **cicatrize** *verb* to heal and form scar, or to cause a wound to heal and form a scar

cicatrix /'sɪkətriks/ *noun* same as **scar**

-ciclovir /sɪkləvɪr/ *suffix* used in the names of antiviral drugs

-cide /saɪd/ *suffix* referring to killing

cilia /'siliə/ plural of **cilium**

ciliary /'siliəri/ *adjective* 1. referring to the eyelid or eyelashes 2. referring to cilia

ciliary body /'siliəri_,bɒdi/ *noun* the part of the eye which connects the iris to the choroid. See illustration at **EYE** in Supplement

ciliary ganglion /,siliəri_ 'gæŋgliən/ *noun* a parasympathetic ganglion in the orbit of the eye, supplying the intrinsic eye muscles

ciliary muscle /'siliəri_,mæs(ə)l/ *noun* a muscle which makes the lens of the eye change its shape to focus on objects at different distances. See illustration at **EYE** in Supplement

ciliary processes /,siliəri_ 'prəʊsesɪz/ *plural noun* the ridges behind the iris to which the lens of the eye is attached

ciliated epithelium /,siliətɪd epi'ti:lɪəm/ *noun* simple epithelium where the cells have tiny hairs or cilia

cilium /'siliam/ *noun* 1. an eyelash 2. one of many tiny hair-like processes which line cells in passages in the body and by moving backwards and forwards drive particles or fluid along the passage (NOTE: The plural is **cilia**.)

-illin /sɪlɪn/ *suffix* used in the names of penicillin drugs ○ *amoxycillin*

cimetidine /'sɪmetɪdɪn/ *noun* a drug which reduces the production of stomach acid, used in peptic ulcer treatment

cimex /'saimeks/ *noun* a bedbug or related insect which feeds on birds, humans and other mammals (NOTE: The plural is **cimices**.)

CIN abbr cervical intraepithelial neoplasia

-cin /sɪn/ *suffix* referring to aminoglycosides ○ *gentamicin*

cinematics /,sɪn'mætɪks/ *noun* the science of movement, especially of body movements

cineplasty /'sinplæsti/ *noun* an amputation where the muscles of the stump of the amputated limb are used to operate an artificial limb

cineradiography /,sɪnɪ'reɪdɪ'bgrəfɪ/ *noun* the practice of taking a series of X-ray photographs for diagnosis, or to show how something moves or develops in the body

cinesiology /sɪ,ni:si:b'lædʒi/ *noun* the study of muscle movements, particularly in relation to treatment

cingulectomy /,sɪngju'lektəmi/ *noun* a surgical operation to remove the cingulum

cingulum /'singjuləm/ *noun* a long curved bundle of nerve fibres in the cerebrum (NOTE: The plural is **cingula**.)

cinnarizine /'sɪnərəzɪ:n/ *noun* an antihistaminic used to treat Ménière's disease

ciprofloxacin /,saɪprəʊ'fləksəsɪn/ *noun* a powerful antibiotic used in eye drops to treat corneal ulcers and surface infections of the eye, and in the treatment of anthrax in humans

circadian /sɜː'keɪdiən/ *adjective* referring to a pattern which is repeated approximately every 24 hours

circadian rhythm /sɜː'keɪdiən 'rɪð(ə)m/ *noun* same as **biological clock**

circle of Willis /,sɜːk(ə)l əv 'wɪlɪs/ *noun* a circle of branching arteries at the base of the brain formed by the basilar artery, the anterior and posterior cerebral arteries, the anterior and posterior communicating arteries and the internal carotid arteries [Described 1664. After Thomas Willis (1621–75), English physician and anatomist.]

circular fold /'sɜːkjʊlə fəuld/ *noun* a large transverse fold of mucous membrane in the small intestine

circulation /,sɜːkju'leɪʃ(ə)n/ *noun* □ **circulation (of the blood)** movement of blood around the body from the heart through the arteries to the capillaries and back to the heart through the veins ○ *She has poor circulation in her legs.* ○ *Rub your hands to get the circulation going.*

COMMENT: Blood circulates around the body, carrying oxygen from the lungs and nutrients from the liver through the arteries and capillaries to the tissues. The capillaries exchange the oxygen for waste matter such as carbon dioxide which is taken back to the lungs to be expelled. At the same time the blood obtains more oxygen in the lungs to be taken to the tissues. The circulation pattern is as follows: blood returns through the veins to the right atrium of the heart. From there it is pumped through the right ventricle into the pulmonary artery, and then into the lungs. From the lungs it returns through the pulmonary veins to the left atrium of the heart and is pumped from there through the left ventricle into the aorta and from the aorta into the other arteries.

circulatory /,sɜːkju'leɪt(ə)rɪ/ *adjective* referring to the circulation of the blood

circulatory system /,sɜːkju'leɪt(ə)rɪ ,sɪstəm/ *noun* a system of arteries and veins, together with the heart, which makes the blood circulate around the body

circum- /sɜː:kəm/ *prefix* around

circumcise /'sɜː:kəmsaɪz/ *verb* to remove the foreskin of the penis

circumcision /,sɜː:kəm'sɪs(ə)n/ *noun* the surgical removal of the foreskin of the penis

circumduction /'sɜ:kəm'dʌkʃən/ *noun* the action of moving a limb so that the end of it makes a circular motion

circumflex /'sɜ:kəmfleks/ *adjective* bent or curved

circumflex artery /'sɜ:kəmfleks ə:təri/ *noun* a branch of the femoral artery in the upper thigh

circumflex nerve /'sɜ:kəmfleks nɜ:v/ *noun* a sensory and motor nerve in the upper arm

circumoral /'sɜ:kəm'ɔ:rəl/ *adjective* referring to rashes surrounding the lips

circumvallate papillae /'sɜ:kəm, væləlt pə'pili:/ *plural noun* large papillae at the base of the tongue, which have taste buds

cirrhosis /'sɜ:rʊsɪs/ *noun* a progressive disease of the liver, often associated with alcoholism, in which healthy cells are replaced by scar tissue □ **cirrhosis of the liver** hepatocirrhosis, a condition where some cells of the liver die and are replaced by hard fibrous tissue

COMMENT: Cirrhosis can have many causes: the commonest cause is alcoholism (alcoholic cirrhosis or Laennec's cirrhosis). It can also be caused by heart disease (cardiac cirrhosis), by viral hepatitis (postnecrotic cirrhosis), by autoimmune disease (primary biliary cirrhosis) or by obstruction or infection of the bile ducts (biliary cirrhosis).

cirrhotic /'sɜ:rɒtɪk/ *adjective* referring to cirrhosis ○ *The patient had a cirrhotic liver.*

cirs- /'sɜ:s/ *prefix* referring to dilation

cirsoid /'sɜ:sɔɪd/ *adjective* referring to a varicose vein which is dilated

cirsoid aneurysm /'sɜ:sɔɪd 'ænjərɪz(ə)m/ *noun* a condition in which arteries become swollen and twisted

cisplatin /'sɪs'pleɪtɪn/ *noun* a chemical substance which may help fight cancer by binding to DNA. It is used in the treatment of ovarian and testicular cancer.

cistern /'sistən/, **cisterna** /sɪ'stɜ:nə/ *noun* a space containing fluid

cisterna magna /sɪ,stɜ:nə 'mægnə/ *noun* a large space containing cerebrospinal fluid, situated underneath the cerebellum and behind the medulla oblongata

citric acid /'sitrik 'æsɪd/ *noun* an acid found in fruit such as oranges, lemons and grapefruit

citric acid cycle /'sitrik 'æsɪd ,saɪk(ə)l/ *noun* an important series of events concerning amino acid metabolism, which takes place in the mitochondria in the cell. Also called **Krebs cycle**

citrullinaemia /'sitrɒl'nɪ:miə/ *noun* a deficiency of an enzyme which helps break down proteins

citrulline /'sitrɒli:n, 'sitrəlайн/ *noun* an amino acid

CJD abbr Creutzfeldt-Jakob disease

cl abbr centilitre

clamp /klæmp/ *noun* a surgical instrument to hold something tightly, e.g. a blood vessel during an operation ■ *verb* to hold something tightly

clap /klæp/ *noun* same as **gonorrhoea** (*slang*)

classic /'klæsɪk/ *adjective* referring to a typically well-known symptom ○ *She showed classic heroin withdrawal symptoms: sweating, fever, sleeplessness and anxiety.*

classification /'klæsifi'keɪʃ(ə)n/ *noun* the work of putting references or components into order so as to be able to refer to them again and identify them easily ○ *the ABO classification of blood*

classify /'klæsɪfaɪ/ *verb* to put references or components into order so as to be able to refer to them again and identify them easily ○ *The medical records are classified under the surname of the patient.* ○ *Blood groups are classified according to the ABO system.*

claudication /,klo:drɪ'keɪʃ(ə)n/ *noun* the fact of limping or being lame

COMMENT: At first, the person limps after having walked a short distance, then finds walking progressively more difficult and finally impossible. The condition improves after rest.

claustrophobia /,klo:st्रə'fəʊbiə/ *noun* a fear of enclosed spaces or crowded rooms. Compare **agoraphobia**

claustrophobic /klo:st्रə'fəʊbɪk/ *adjective* afraid of being in enclosed spaces or crowded rooms. Compare **agoraphobic**

clavicle /'klævɪk(ə)l/ *noun* same as **collarbone**

clavicular /klə'veɪkju:lə/ *adjective* referring to the clavicle

clavus /'kleɪvəs/ *noun* 1. a corn on the foot 2. severe pain in the head, like a nail being driven in

claw foot /,klo: 'fʊt/ *noun* a deformed foot with the toes curved towards the instep and with a very high arch. Also called **pes cavus**

claw hand /,klo: 'hænd/ *noun* a deformed hand with the fingers, especially the ring finger and little finger, bent towards the palm, caused by paralysis of the muscles

clean /kli:n/ *adjective* 1. free from dirt, waste products or unwanted substances 2. sterile or free from infection ○ *a clean dressing* ○ *a clean wound* 3. not using recreational drugs

cleanliness /'klenlɪnəs/ *noun* the state of being clean ○ *The report praised the cleanliness of the hospital kitchen.*

clear /klɪə/ *adjective* 1. easily understood ○ *The doctor made it clear that he wanted the patient to have a home help.* ○ *The words on the medicine bottle are not very clear.* 2. not cloudy and easy to see through ○ *a clear glass bottle* ○ *The urine sample was clear.* 3. □ **clear of** free from ○ *The area is now clear of infection.* ■ *verb* to take away a blockage ○ *The inhalant will clear your blocked nose.* ○ *He is on*

antibiotics to try to clear the congestion in his lungs.

clear up /,klɪər 'ʌp/ *verb* to get better ○ *His infection should clear up within a few days. ○ I hope your cold clears up before the holiday.*

cleavage /'kli:vɪdʒ/ *noun* the repeated division of cells in an embryo

cleavage lines *plural noun* same as **Langer's lines**

cleft /klef/ *noun* a small opening or hollow place in a surface or body part ■ *adjective* referring to a surface or body part which has separated into two or more sections

cleft foot /,kleft 'fʊt/ *noun* same as **talipes**

cleft lip /,kleft 'lɪp/ *noun* a congenital condition in which the upper lip fails to form in the usual way during fetal development. Also called **harelip**

cleft palate /,kleft 'pælət/ *noun* a congenital condition in which the palate does not fuse during fetal development, causing a gap between the mouth and nasal cavity in severe cases

COMMENT: A cleft palate is usually associated with a cleft lip. Both can be successfully corrected by surgery.

cleido- /klaɪdəʊ/ *prefix* referring to the clavicle

cleidocranial dysostosis /,klaɪdəʊkraɪniəl ,dɪsɔ:s'təʊsɪs/ *noun* a hereditary bone malformation, with protruding jaw, lack of collarbone and malformed teeth

clerkling /'kla:kɪŋ/ *noun* the practice of writing down the details of a person on admission to a hospital (*informal*)

client /'klaɪənt/ *noun* a person visited by a health visitor or social worker

climacteric /'klai'mækტərik/ *noun* 1. same as **menopause** 2. a period of diminished sexual activity in a man who reaches middle age

climax /'klaimæks/ *noun* 1. an orgasm 2. the point where a disease is at its worst ■ *verb* to have an orgasm

clindamycin /,klɪndə'maɪsɪn/ *noun* a powerful antibiotic used to treat severe infections and acne

clinic /'klinik/ *noun* 1. a small hospital or a department in a large hospital which deals only with out-patients or which specialises in the treatment of particular medical conditions ○ *He is being treated in a private clinic. ○ She was referred to an antenatal clinic.* 2. a group of students under a doctor or surgeon who examine patients and discuss their treatment

clinical /'klinik(ə)l/ *adjective* 1. referring to the physical assessment and treatment of patients by doctors, as opposed to a surgical operation, a laboratory test or experiment 2. referring to instruction given to students at the bedside of patients as opposed to class instruction with no patient present 3. referring to a clinic

'...we studied 69 patients who met the clinical and laboratory criteria of definite MS' [Lancer]

'...the allocation of students to clinical areas is for their educational needs and not for service requirements' [Nursing Times]

clinical audit /,klinɪk(ə)l 'ɔ:dɪt/ *noun* an evaluation of the standard of clinical care

clinical care /,klinɪk(ə)l 'keə/ *noun* the care and treatment of patients in hospital wards or in doctors' surgeries

clinical effectiveness /,klinɪk(ə)l ɪ'fek tɪvəs/ *noun* the ability of a procedure or treatment to achieve the desired result

clinical governance /,klinɪk(ə)l 'gavən(ə)nəns/ *noun* the responsibility given to doctors to coordinate audit, research, education, use of guidelines and risk management to develop a strategy to raise the quality of medical care

clinically /'klinɪkli/ *adverb* using information gathered from the treatment of patients in a hospital ward or in the doctor's surgery ○ *Smallpox is now clinically extinct.*

clinical medicine /,klinɪk(ə)l 'med(ə)s(ə)n/ *noun* the study and treatment of patients in a hospital ward or in the doctor's surgery, as opposed to in the operating theatre or laboratory

clinical nurse manager /,klinɪk(ə)l 'nɜ:s ,mænɪdʒə/ *noun* the administrative manager of the clinical nursing staff of a hospital

clinical nurse specialist /,klinɪk(ə)l nɜ:s 'speʃ(ə)list/ *noun* a nurse who specialises in a particular branch of clinical care

clinical pathology /,klinɪk(ə)l pə'θɒlədʒɪ/ *noun* the study of disease as applied to the treatment of patients

clinical psychologist /,klinɪk(ə)l saɪ 'kɒlɒdʒɪst/ *noun* a psychologist who studies and treats sick patients in hospital

clinical thermometer /,klinɪk(ə)l θə 'mɒmɪtə/ *noun* a thermometer used in a hospital or by a doctor for measuring a person's body temperature

clinical trial /,klinɪk(ə)l 'traɪəl/ *noun* a trial carried out in a medical laboratory on a person or on tissue from a person

clinician /'kli'nɪʃ(ə)n/ *noun* a doctor, usually not a surgeon, who has considerable experience in treating patients

clinodactyly /,klaɪnəʊ'dæktɪli/ *noun* the permanent bending of a finger to one side

clip /klip/ *noun* a piece of metal with a spring, used to attach things together

clitoris /'klɪtərɪs/ *noun* a small erectile female sex organ, situated at the anterior angle of the vulva, which can be excited by sexual activity. See illustration at **UROGENITAL SYSTEM (FEMALE)** in Supplement

cloaca /kləʊ'ərkə/ *noun* the end part of the hindgut in an embryo

clomipramine /kləʊ'mɪprəmī:n/ *noun* a drug used to treat depression, phobias and obsessive-compulsive disorder

clonazepam /kləʊ'næzɪpæm/ *noun* a drug used to treat epilepsy

clone /kləʊn/ *noun* a group of cells derived from a single cell by asexual reproduction and so identical to the first cell ■ *verb* to reproduce an individual organism by asexual means

clonic /'klɒnɪk/ *adjective* 1. referring to clonus 2. having spasmodic contractions

clonic spasms /,klɒnɪk 'spæz(ə)mz/ *plural noun* spasms which recur regularly

clonidine /'klɒnidi:n/ *noun* a drug which relaxes and widens the arteries, used in the treatment of hypertension, migraine headaches and heart failure

cloning /'kləʊnɪŋ/ *noun* the reproduction of an individual organism by asexual means

clonorchiiasis /kləʊnə'skaɪəsɪs/ *noun* a liver condition, common in the Far East, caused by the fluke *Clonorchis sinensis*

clonus /'kləʊnəs/ *noun* the rhythmic contraction and relaxation of a muscle, usually a sign of upper motor neurone lesions

close /kləʊz/ *verb* 1. to become covered with new tissue as part of the healing process 2. to fix together the sides of a wound after surgery to allow healing to take place

closed fracture /,kləʊzd 'frækɪʃə/ *noun* same as **simple fracture**

Clostridium /klɒ'strɪdiəm/ *noun* a type of bacteria

COMMENT: Species of *Clostridium* cause botulism, tetanus and gas gangrene.

clot /klɒt/ *noun* a soft mass of coagulated blood in a vein or an artery ○ *The doctor diagnosed a blood clot in the brain.* ○ *Blood clots occur in thrombosis.* ■ *verb* to change from a liquid to a semi-solid state, or to cause a liquid to do this ○ *His blood does not clot easily.* (NOTE: **clotting – clotted**)

clotrimazole /klɒ'trɪməzəʊl/ *noun* a drug used to treat yeast and fungal infections

clotting /'klɒtɪŋ/ *noun* the action of coagulating

clotting factors /,klɒtɪŋ 'fæktəz/ *plural noun* substances in plasma, called Factor I, Factor II, and so on, which act one after the other to make the blood coagulate when a blood vessel is damaged

COMMENT: Deficiency in one or more of the clotting factors results in haemophilia.

clotting time /'klɒtɪŋ taɪm/ *noun* the time taken for blood to coagulate under usual conditions. Also called **coagulation time**

cloud /klaʊd/ *noun* the disturbed sediment in a liquid

cloudy /'klaudi/ *adjective* referring to liquid which is not transparent but which has an opaque substance in it

clubbing /'klʌbɪŋ/ *noun* a thickening of the ends of the fingers and toes, a sign of many different diseases

club foot /,klʌb 'fʊt/ *noun* same as **talipes**

cluster /'klʌstə/ *noun* 1. a group of small items which cling together 2. a significant subset in a statistical sample, e.g. of numbers of people affected by a particular disease or condition

cluster headache /'klʌstə ,hedeɪk/ *noun* a headache which occurs behind one eye for a short period

Clutton's joint /'klʌt(ə)nz ,dʒɔɪnt/ *noun* a swollen knee joint occurring in congenital syphilis [Described 1886. After Henry Hugh Clutton (1850–1909), surgeon at St Thomas's Hospital, London, UK.]

cm abbr centimetre

CMHN abbr community mental health nurse

CM joint /,sɪ: 'em dʒɔɪnt/ *plural noun* same as **carpometacarpal joint**

CMO abbr Chief Medical Officer

CMV abbr cytomegalovirus

C/N abbr charge nurse

CNS abbr central nervous system

COAD abbr chronic obstructive airways disease

coagulant /kəʊ'ægjulənt/ *noun* a substance which can make blood clot

coagulase /kəʊ'ægjulæs/ *noun* an enzyme produced by a staphylococcal bacteria which makes blood plasma clot

coagulate /kəʊ'ægjuleɪt/ *verb* to change from liquid to semi-solid, or to cause a liquid to do this ○ *His blood does not coagulate easily.*

◊ *comment:* Blood coagulates when fibrinogen, a protein in the blood, converts into fibrin under the influence of the enzyme thrombokinase.

coagulation /kəʊ,ægjʊ'lɛɪʃ(ə)n/ *noun* the action of clotting

coagulation time /kəʊægjʊ'lɛɪʃ(ə)n taim/ *noun* same as **clotting time**

coagulum /kəʊ'ægjuləm/ *noun* same as **blood clot** (NOTE: The plural is **coagula**.)

coalesce /,kəʊə'les/ *verb* to combine, or to cause things to combine, into a single body or group

coalescence /,kəʊə'les(ə)ns/ *noun* the process by which wound edges come together when healing

coarctation /,kəʊə:k'teɪʃ(ə)n/ *noun* the process of narrowing □ **coarctation of the aorta** congenital narrowing of the aorta, which results in high blood pressure in the upper part of the body and low blood pressure in the lower part

coarse tremor /,kɔ:s 'tremə/ *noun* severe trembling

coat /kəʊt/ *noun* a layer of material covering an organ or a cavity ■ *verb* to cover something with something else

coated tongue /,kəʊtɪd 'tʌŋ/ *noun* same as **furred tongue**

coating /'kəʊtɪŋ/ *noun* a thin covering ○ *a pill with a sugar coating*

cobalt /'kəʊbɔ:lt/ *noun* a metallic element (NOTE: The chemical symbol is **Co**.)

cobalt 60 /,kəʊbɔ:lt 'sɪkssti/ *noun* a radioactive isotope which is used in radiotherapy to treat cancer

cocaine /kəʊ'keɪn/ *noun* a narcotic drug not generally used in medicine because its use leads to addiction, but sometimes used as a surface anaesthetic

cocci /'kɒki/ plural of **coccus**

coccidioidomycosis /kɒk'sɪdiəd'maɪkəsɪs/ *noun* a lung disease, caused by inhaling spores of the fungus *Coccidioides immitis*

coccus /'kɒkəs/ *noun* a bacterium shaped like a ball (NOTE: The plural is **cocci**.)

COMMENT: Cocci grow together in groups: either in clusters (staphylococci) or in long chains (streptococci).

coccy- /'kɒksi/ *prefix* referring to the coccyx

coccydynia /,kɒk'si'dɪniə/ *noun* a sharp pain in the coccyx, usually caused by a blow. Also called **coccygodynia**

coccygeal vertebrae /kɒk'sɪdʒiəl 'vɜ:tɪbrɪ/ *plural noun* the fused bones in the coccyx

coccyges /kɒk'saɪdʒi:z/ plural of **coccyx**

coccygodynia /,kɒk'sigəʊ'dɪniə/ *noun* same as **coccydynia**

coccyx /'kɒksɪks/ *noun* the lowest bone in the backbone (NOTE: The plural is **coccyges**.)

COMMENT: The coccyx is a rudimentary tail made of four bones which have fused together into a bone in the shape of a triangle.

cochlea /'kɒklɪə/ *noun* a spiral tube inside the inner ear, which is the essential organ of hearing. See illustration at **EAR** in Supplement (NOTE: The plural is **cochleae**.)

COMMENT: Sounds are transmitted as vibrations to the cochlea from the ossicles through the oval window. The lymph fluid in the cochlea passes the vibrations to the organ of Corti which in turn is connected to the auditory nerve.

cochlear /'kɒklɪə/ *adjective* referring to the cochlea

cochlear duct /'kɒklɪə dʌkt/ *noun* a spiral channel in the cochlea

cochlear implant /,kɒklɪə 'implə:nt/ *noun* a type of hearing aid for profound hearing loss

cochlear nerve /'kɒklɪə nɜ:v/ *noun* a division of the auditory nerve

Cochrane database /,kɒkrən 'deɪta:bɛɪs/ *noun* a database of regular reviews carried out on research

code /kəʊd/ *noun* 1. a system of numbers, letters or symbols used to represent language or

information 2. same as **genetic code** ■ *verb* 1. to convert instructions or data into another form 2. (of a codon or gene) to provide the genetic information which causes a specific amino acid to be produced ○ *Genes are sections of DNA that code for a specific protein sequence.*

codeine /'kəʊdɪn/, **codeine phosphate** /,kəʊdɪn: 'fɒsfət/ *noun* a common painkilling drug that can also be used to suppress coughing and in the treatment of diarrhoea

code of conduct /,kəʊd əv 'kɒndʌkt/ *noun* a set of general rules showing how a group of people such as doctors or nurses should work
cod liver oil /,kɒd lɪvər 'ɔ:l/ *noun* a fish oil which is rich in calories and vitamins A and D

-**coele** /si:l/ *suffix* referring to a hollow (NOTE: The US spelling is usually -**cele**.)

coeli- /si:li:/ *prefix* same as **coelio-** (used before vowels) (NOTE: The US spelling is usually **celi-**)

coeliac /'si:liæk/ *adjective* referring to the abdomen

coeliac artery /,si:liæk 'ɑ:təri/, **coeliac axis** /,si:liæk 'æk'sɪs/ *noun* the main artery in the abdomen leading from the abdominal aorta and dividing into the left gastric, hepatic and splenic arteries. Also called **coeliac trunk**

coeliac disease /,si:liæk dɪ'zi:z/ *noun* same as **gluten-induced enteropathy**

coeliac ganglion /,si:liæk 'gængliən/ *noun* a ganglion on each side of the origins of the diaphragm, connected with the coeliac plexus

coeliac plexus /,si:liæk 'pleksəs/ *noun* a network of nerves in the abdomen, behind the stomach

coeliac trunk /,si:liæk 'trʌŋk/ *noun* same as **coeliac artery**

celio- /si:liəu/ *prefix* referring to a hollow, usually the abdomen (NOTE: The US spelling is usually **celio-**.)

coelioscopy /,si:li'ɒskəpi/ *noun* an examination of the peritoneal cavity by inflating the abdomen with sterile air and passing an endoscope through the abdominal wall (NOTE: The plural is **coelioscopies**.)

coelom /'si:ləm/ *noun* a body cavity in an embryo, which divides to form the thorax and abdomen (NOTE: The plural is **coeloms** or **coelomata**.)

coffee ground vomit /'kɒfi graond ,vɒmɪt/ *noun* vomit containing dark pieces of blood, indicating that the person is bleeding from the stomach or upper intestine

cognition /kɒgnɪʃ(ə)n/ *noun* the mental action or process of gaining knowledge by using your mind or your senses, or knowledge gained in this way

cognitive /'kɒgnɪtɪv/ *adjective* referring to the mental processes of perception, memory, judgment and reasoning ○ *a cognitive impairment*

cognitive disorder /kəgnɪtɪv dɪs'ɔ:də/ noun impairment of any of the mental processes of perception, memory, judgment and reasoning

cognitive therapy /,kəgnɪtɪv 'θerəpi/ noun a treatment of psychiatric disorders such as anxiety or depression which encourages people to deal with their negative ways of thinking

cohort /'kəohɔ:t/ noun a group of people sharing a particular characteristic such as age or gender who are studied in a scientific or medical investigation

cohort study /'kəohɔ:t ,stʌdi/ noun an investigation in which a group of people are classified according to their exposure to various risks and studied over a period of time to see if they develop a specific disease, in order to evaluate the links between risk and disease

coil /kɔɪl/ noun a device fitted into a woman's uterus as a contraceptive

coinfection /,kəʊnɪn'fekʃ(ə)n/ noun infection with two or more diseases or viruses at the same time

coital /'kəʊt(ə)l/ adjective referring to sexual intercourse

coitus /'kəʊtəs/, **coition** /kə'u'tɪʃ(ə)n/ noun same as **sexual intercourse**

coitus interruptus /,kəʊtəs intə'raptəs/ noun removal of the penis from the vagina before ejaculation, sometimes used as a method of contraception although it is not very efficient

cold /kəuld/ adjective not warm or hot ■ noun an illness, with inflammation of the nasal passages, in which someone sneezes and coughs and has a blocked and running nose ○ *She had a heavy cold.* Also called **common cold**, **coryza**

COMMENT: A cold usually starts with a virus infection which causes inflammation of the mucous membrane in the nose and throat. Symptoms include running nose, cough and loss of taste and smell. Coronaviruses have been identified in people with colds, but there is no cure for a cold at present.

cold burn /'kəuld bɜ:n/ noun an injury to the skin caused by exposure to extreme cold or by touching a very cold surface

cold cauterity /kəuld 'kɔ:təri/ noun the removal of a skin growth using carbon dioxide snow

cold compress /kəuld 'kɒmpres/ noun a wad of cloth soaked in cold water, used to relieve a headache or bruise

cold pack /'kəuld pæk/ noun a cloth or a pad filled with gel or clay which is chilled and put on the body to reduce or increase the temperature

cold sore /'kəuld sɔ:/ noun a painful blister, usually on the lips or nose, caused by herpes simplex Type I

colectomy /kə'lektəmi/ noun a surgical operation to remove the whole or part of the colon (NOTE: The plural is **colectomies**.)

colic /'kɒlik/ noun 1. pain in any part of the intestinal tract. Also called **enteralgia**, **tormina** 2. crying and irritability in babies, especially from stomach pains

COMMENT: Although colic can refer to pain caused by indigestion, it can also be caused by stones in the gall bladder or kidney.

colicky /'kɒlikɪ/ adjective referring to colic ○ *She had colicky pains in her abdomen.*

coliform bacterium /,kəʊlɪfɔ:m bæk'tɪrɪəm/ plural noun any bacterium which is similar to *Escherichia coli*

colistin /kɒ'lɪstɪn/ noun an antibiotic which is effective against a wide range of organisms and is used to treat gastrointestinal infections

colitis /kə'laitɪs/ noun inflammation of the colon. Also called **colonitis**

collagen /kɒlædʒən/ noun a thick protein fibre forming bundles, which make up the connective tissue, bone and cartilage

collagen disease /'kɒlædʒən dɪ,zɪ:z/ noun any disease of the connective tissue

COMMENT: Collagen diseases include rheumatic fever, rheumatoid arthritis, periarthritis nodosa, scleroderma and dermatomyositis.

collagenous /kə'lædʒɪnəs/ adjective 1. containing collagen 2. referring to collagen disease

collapse /kə'læps/ noun 1. a condition in which someone is extremely exhausted or semi-conscious ○ *She was found in a state of collapse.* 2. a condition in which an organ becomes flat or loses air ○ **lung collapse** ■ verb

1. to fall down in a semi-conscious state ○ *After running to catch his train he collapsed.* 2. to become flat, or lose air

collapsed lung /kə'læpsd lʌŋ/ noun same as **pneumothorax**

collarbone /'kɒləbəʊn/ noun one of two long thin bones which join the shoulder blades to the breastbone. Also called **clavicle** (NOTE: Collarbone fracture is one of the most frequent fractures in the body.)

collateral /kə'læt(ə)rəl/ adjective secondary or less important

'...embolisation of the coeliac axis is an effective treatment for severe bleeding in the stomach or duodenum, localized by endoscopic examination. A good collateral blood supply makes occlusion of a single branch of the coeliac axis safe.' [British Medical Journal]

collateral circulation /kə'læt(ə)rəl,sə:kju'leɪʃ(ə)n/ noun an enlargement of some secondary blood vessels as a response when the main vessels become slowly blocked

collection chamber /kə'lekʃən ,feɪmbə/ noun a section of the heart where blood collects before being pumped out

Colles' fracture /'kɒlis(ɪz) ,frækʃə/ noun a fracture of the lower end of the radius with

displacement of the wrist backwards, usually when someone has stretched out a hand to try to break a fall [After Abraham Colles (1773–1843), Irish surgeon]

colliculus /kə'lɪkjʊləs/ *noun* one of four small projections (**superior colliculi** and **inferior colliculi**) in the midbrain. See illustration at **BRAIN** in Supplement (NOTE: The plural is **colliculi**.)

collodion /kə'lədiən/ *noun* a liquid used for painting on a clean wound, where it dries to form a flexible covering

colloid /'kɒlɔɪd/ *noun* 1. a mass of tiny particles of one substance dispersed in another substance 2. the particles which are suspended in a colloid 3. a thick jelly-like substance which stores hormones, produced in the thyroid gland ■ *adjective* relating to or resembling a colloid ○ **colloid acne**

collyrium /kə'lɪriəm/ *noun* a solution used to bathe the eyes (NOTE: The plural is **collyria**.)

colo- /kɒləʊ/ *prefix* referring to the colon

cobloboma /kɒləʊ'bəʊmə/ *noun* a condition in which part of the eye, especially part of the iris, is missing

colon /'kælbən/ *noun* the main part of the large intestine, running from the caecum at the end of the small intestine to the rectum

COMMENT: The colon is about 1.35 metres in length, and rises from the end of the small intestine up the right side of the body, then crosses beneath the stomach and drops down the left side of the body to end as the rectum. In the colon, water is extracted from the waste material which has passed through the small intestine, leaving only the faeces which are pushed forward by peristaltic movements and passed out of the body through the rectum.

colonic /kə'lɒnik/ *adjective* referring to the colon

colonic irrigation /kə'lɒnik ɪrɪ'geɪʃ(ə)n/ *noun* the washing out of the contents of the large intestine using a tube inserted in the anus

colonitis /kɒlə'naitɪs/ *noun* same as **colitis**

colonoscope /kə'lɒnaskoʊp/ *noun* a surgical instrument for examining the interior of the colon

colonoscopy /kɒlə'nɒskəpi/ *noun* an examination of the inside of the colon, using a colonoscope passed through the rectum (NOTE: The plural is **colonoscopies**.)

colony /'kɒləni/ *noun* a group or culture of microorganisms

colorectal /kɒləʊ'rekt(ə)l/ *adjective* referring to both the colon and rectum

colostomy /kə'lɒstəmi/ *noun* a surgical operation to make an opening between the colon and the abdominal wall to allow faeces to be passed out without going through the rectum (NOTE: The plural is **colostomies**.)

COMMENT: A colostomy is carried out when the colon or rectum is blocked, or where part of the colon or rectum has had to be removed.

colostomy bag /kə'lɒstəmi bæg/ *noun* a bag attached to the opening made by a colostomy, to collect faeces as they are passed out of the body

colostrum /kə'lɒstrəm/ *noun* a fluid rich in antibodies and low in fat, secreted by the mother's breasts at the birth of a baby, before the true milk starts to flow

colour blindness /'kʌlər blaɪndnəs/ *noun* a condition of being unable to tell the difference between specific colours

COMMENT: Colour blindness is a condition which almost never occurs in women. The commonest form is the inability to tell the difference between red and green. The Ishihara test is used to test for colour blindness.

colour index /'kʌlərɪŋ ,ɪndeks/ *noun* the ratio between the amount of haemoglobin and the number of red blood cells in a specific amount of blood

colouring /'kʌlərɪŋ ,mætə/, **colouring matter** *noun* a substance which colours an organ

cop- /kɒpl/ *prefix* same as **colpo-** (used before vowels)

colpitis /kɒpl'paɪtɪs/ *noun* same as **vaginitis**

coplo- /kɒlpəʊ/ *prefix* referring to the vagina

copocele /'kɒlpəsɪ:l/ *noun* same as **colpopatosis**

colpocystitis /,kɒlpəʊsɪ'staɪtɪs/ *noun* inflammation of both the vagina and the urinary bladder

colpocystopexy /,kɒlpə'sɪstəpeksi/ *noun* a surgical operation to lift and stitch the vagina and bladder to the abdominal wall (NOTE: The plural is **colpocystoxies**.)

colpohysterectomy /,kɒlpəʊhɪstəktə'mi/ *noun* a surgical operation in which the womb is removed through the vagina (NOTE: The plural is **colpohysterectomies**.)

colpopexy /'kɒlpəpeksi/ *noun* a surgical operation to fix a prolapsed vagina to the abdominal wall (NOTE: The plural is **colpopexies**.)

coloplasty /'kɒlpəplæsti/ *noun* a surgical operation to repair a damaged vagina (NOTE: The plural is **coloplasties**.)

coloptosis /,kɒlpə'təʊsɪs/ *noun* a prolapse of the walls of the vagina. Also called **colpocoele** (NOTE: The plural is **coloptoses**.)

colporrhaphy /kɒl'pɒrəfi/ *noun* a surgical operation to stitch a prolapsed vagina (NOTE: The plural is **colporraphies**.)

colposcope /'kɒlpəʊskoʊp/ *noun* a surgical instrument used to examine the inside of the vagina. Also called **vaginoscope**

colposcopy /kɒl'ɒpskəpi/ *noun* an examination of the inside of the vagina (NOTE: The plural is **colposcopies**.)

colposuspension /,kɒlpəsʊsə'spenʃən/ *noun* a surgical operation to strengthen the pelvic floor muscles to prevent incontinence

colpotomy /kɒpl'pɒtəmɪ/ *noun* a surgical operation to make a cut in the vagina (NOTE: The plural is **colpotomies**.)

column /'kɒləm/ *noun* □ **vertebral column**

columnar /kə'lʌmnr/ *adjective* shaped like a column

columnar cell /kə'lʌmnr sel/ *noun* a type of epithelial cell shaped like a column

coma /'kəʊmə/ *noun* a state of unconsciousness from which a person cannot be awakened by external stimuli

COMMENT: A coma can have many causes: head injuries, diabetes, stroke or drug overdose. A coma is often fatal, but a patient may continue to live in a coma for a long time, even several months, before dying or regaining consciousness.

comatose /'kəʊmətəs/ *adjective* 1. unconscious or in a coma 2. like a coma

combined therapy /kəm'baind θerəpi/ *noun* the use of two or more treatments at the same time

comedo /'kɒmɪdəʊ/ *noun* a small point of dark, hard matter in a sebaceous follicle, often found associated with acne on the skin of adolescents (NOTE: The plural is **comedones**.)

come down with /,kʌm 'daʊn wɪθ/ *verb* to catch a cold, flu or other minor illness (*informal*)

come out in /,kʌm 'aut in/ *verb* to have something such as spots or a rash appear on the skin (*informal*)

come round /,kʌm 'raʊnd/ *verb* to regain consciousness, e.g. after being knocked out

comfort /'kʌmfət/ *verb* to help make someone less anxious or unhappy, especially when something bad has just happened

comfortable /'kʌmfθəbl/ *adjective* in a stable physical condition

comforter /'kʌmfətə/ *noun* 1. someone who helps to make another person less anxious or unhappy 2. a baby's dummy

commando operation /kə'ma:ndəʊ ,ɒpəreɪʃ(ə)n/, **commando procedure** /kə'ma:ndəʊ prə,si:dʒə/ *noun* a major operation to combat cancer of the face and neck. It involves the removal of facial features, which are later rebuilt.

commensal /kə'mens(ə)l/ *noun* an animal or plant which lives on another animal or plant but does not harm it in any way. Both may benefit from the association. ○ *Candida is a commensal in the mouths of 50% of healthy adults.* (NOTE: If a commensal causes harm, it is a **parasite**.) ■ *adjective* living on another animal or plant

communited fracture /,kɒmɪnju:tɪd 'frækɪtʃə/ *noun* a fracture where the bone is broken in several places

Commission for Health Improvement in the UK, the independent inspection body for the National Health Service, with the role of

helping to raise standards of patient care. It aims to identify where improvement is required and share good practice. Abbr **CHI**

commissure /'kɒmɪsʃuə/ *noun* a structure which joins two similar tissues, e.g. a group of nerves which crosses from one part of the central nervous system to another. □ **corpus callosum, grey commissure, white commissure**

commit /kə'mit/ *verb* to arrange legally for someone to enter a mental health facility, perhaps without the person's consent

commitment /kə'mɪtmənt/ *noun* an act of legally making someone enter a mental health facility

Committee on Safety of Medicines /kə'mɪti ɒn ,sefti əv 'med(ə)sɪnz/ *noun* the official body which advises the British Government on the safety and quality of medicines

commode /kə'moʊd/ *noun* a special chair with a removable basin used as a toilet by people with limited mobility

common /'kɒmən/ *adjective* 1. frequently occurring 2. shared □ **(in) common** belonging to more than one thing or person ○ *The viral diseases have several symptoms in common.*

common bile duct /,kɒmən 'baɪl dʌkt/ *noun* a duct leading to the duodenum, formed of the hepatic and cystic ducts

common carotid artery /,kɒmən kə'rɒtɪd ,a:təri/ *noun* the main artery running up each side of the lower part of the neck. Also called **carotid**

common cold /,kɒmən 'kəuld/ *noun* same as **cold**

common hepatic duct /,kɒmən hɪ'pætɪk dʌkt/ *noun* a duct from the liver formed when the right and left hepatic ducts join

common iliac artery /,kɒmən 'iliæk ,a:təri/ *noun* one of two arteries which branch from the aorta in the abdomen and in turn divide into the internal iliac artery, leading to the pelvis, and the external iliac artery, leading to the leg

common iliac vein /,kɒmən 'iliæk veɪn/ *noun* one of the veins draining the legs, pelvis and abdomen, which unite to form the inferior vena cava

common salt /,kɒmən 'sɔ:lt/ *noun* a white powder used to make food, especially meat, fish and vegetables, taste better. Also called **sodium chloride**

COMMENT: Too much salt in the diet is to be avoided, as it is implicated in hypertension. Persistent diarrhoea or vomiting can lead to a dangerous loss of salt from the body.

common wart /,kɒmən 'wɔ:t/ *noun* a wart which appears mainly on the hands

communicable disease /kə'mju:nɪkəb(ə)l dɪ'se:z/ *noun* a disease which can be passed from one person to another or from an animal to a person. □ **contagious disease, infectious disease**

communicating artery /kə'mju:nɪkeɪtɪŋ ,ə:təri/ *noun* one of the arteries which connect the blood supply from each side of the brain, forming part of the circle of Willis

community /kə'mju:niti/ *noun* a group of people who live and work in a district ○ *The health services serve the local community.*

community care /kə,mju:niti 'keə/ *noun* the providing of help to people such as those who are elderly or mentally ill in order to allow them to stay in their own homes, rather than requiring them to be cared for in hospitals or care homes

community health /kə,mju:niti 'helθ/ *noun* the health of a local community, or provision of services for a local community

community health council /kə,mju:niti 'helθ,kaʊnsəl/ *noun* a statutory body of interested people from outside the medical professions charged with putting forward the patients' point of view on local health issues. Abbr **CHC**

community hospital /kə'mju:niti ,hɒspɪt(ə)l/ *noun* a hospital serving a local community

community medicine /kə'mju:niti 'med(ə)s(ə)n/ *noun* the study of medical practice which examines groups of people and the health of the community, including housing, pollution and other environmental factors

community mental health nurse /kə,mju:niti ,ment(ə)n 'helθ ,nɜ:s/ *noun* a specialist nurse who works in a particular district visiting people in the area with mental health problems. Abbr **CMHN**

community midwife /kə,mju:niti 'mɪdʃwa:f/ *noun* a midwife who works in a community as part of a primary health care team

community nurse /kə,mju:niti 'nɜ:s/ *noun* a nurse who treats people in a local community

community psychiatric nurse /kə,mju:niti ,saɪki'ætri:k nɜ:s/ *noun* . Also called **community mental health nurse**. Abbr **CPN**

community services /kə,mju:niti 'sɜ:vɪsɪz/ *plural noun* nursing services which are available to the community

community trust /kə,mju:niti 'trəst/ *noun* an independent non-profit-making body set up to represent an area of public concern

compact bone /kɒmpækɪt 'beən/ *noun* a type of bone tissue which forms the hard outer layer of a bone. See illustration at **BONE STRUCTURE** in Supplement

compatibility /kəm'paetɪ'biliti/ *noun* 1. the ability of two drugs not to interfere with each other when administered together 2. the ability of a body to accept organs, tissue or blood from another person and not to reject them

compatible /kəm'paetɪb(ə)l/ *adjective* able to function together without being rejected ○ *The surgeons are trying to find a compatible*

donor or a donor with a compatible blood group.

compensate /'kɒmpənseɪt/ *verb* 1. to give someone an amount of money or something else to pay for loss or damage 2. (of an organ) to make good the failure of an organ by making another organ, or the undamaged parts of the same organ, function at a higher level ○ *The heart has to beat more strongly to compensate for the narrowing of the arteries.* 3. to emphasise a particular ability or personality characteristic in order to make the lack of another one seem less bad

compensation /kɒmpən'seɪʃ(ə)n/ *noun* 1. something which makes something else seem less bad or less serious 2. an amount of money or something else given to pay for loss or damage ○ *The drugs caused him to develop breathing problems, so he thinks he's entitled to medical compensation.* 3. the act of giving money to pay for loss or damage ○ *compensation for loss of a limb* 4. a situation where the body helps to correct a problem in a particular organ by making another organ, or the undamaged parts of the same organ, function at a higher level 5. behaviour that emphasises a particular ability or personality characteristic in order to make the lack of another one seem less bad

competence /'kɒmpit(ə)ns/ *noun* the ability to do something well, measured against a standard, especially ability which you get through experience or training ○ *encouraging the development of professional competence in the delivery of care to patients*

complaint /kəm'pleɪnt/ *noun* 1. an expression of dissatisfaction about something or someone ○ *The hospital administrator wouldn't listen to the complaints of the consultants.* 2. an illness ○ *a chest complaint* ○ *a nervous complaint*

complement *noun* /'kɒmplɪment/ a substance which forms part of blood plasma and is essential to the work of antibodies and antigens ■ *verb* /'kɒmplɪment/ to complete something by providing useful or pleasing qualities which it does not itself have

complementary /,kɒmpli'ment(ə)ri/ *adjective* 1. combining with or adding to something else ○ *Ultrasound and CT provide complementary information.* 2. used in or using complementary medicine ○ *complementary therapies* 3. referring to genes which are necessary to each other and produce their effect only when they are present together

complementary medicine /,kɒmpli'ment(ə)ri 'med(ə)sɪn/ *noun* alternative medicine in the forms which are now accepted by practitioners of conventional Western medicine, e.g. acupuncture and osteopathy

complement fixation test /,kɒmpli'ment fɪk'seɪʃ(ə)n test/ *noun* a test to measure the

amount of complement in antibodies and antigens. Abbr **CFT**

complete abortion /kəm'pli:t ə'bɔ:sʃ(ə)n/ noun an abortion where the whole contents of the uterus are expelled

complete blood count /kəm'pli:t 'bləd kaunt/ noun a test to find the exact numbers of each type of blood cell in a sample of blood. Abbr **CBC**

complex /'kɒmplɛks/ noun 1. (*in psychiatry*) a group of ideas which are based on the experience a person has had in the past and which influence the way he or she behaves 2. a group of items, buildings or organs ○ *He works in the new laboratory complex.* 3. a group of signs and symptoms due to a particular cause. ♦ **syndrome** ■ **adjective** complicated ○ *A gastrointestinal fistula can cause many complex problems, including fluid depletion.*

complexion /kəm'plekʃən/ noun the general colour of the skin on the face ○ *People with fair complexions burn easily in the sun.*

compliance /kəm'plaɪəns/ noun the agreement of a patient to co-operate with a treatment

complicated fracture /'kɒmplɪkɪtɪd 'frækʃə/ noun a fracture with an associated injury of tissue, as when a bone has punctured an artery

complication /kɒmplɪ'keɪʃ(ə)n/ noun 1. a condition in which two or more conditions exist in someone, whether or not they are connected ○ *He was admitted to hospital suffering from pneumonia with complications.* 2. a situation in which someone develops a second condition which changes the course of treatment for the first ○ *She appeared to be improving, but complications set in and she died in a few hours.*

...sickle cell chest syndrome is a common complication of sickle cell disease, presenting with chest pain, fever and leucocytosis' [British Medical Journal]

...venous air embolism is a potentially fatal complication of percutaneous venous catheterization' [Southern Medical Journal]

compos mentis /,kɒmpɒs 'mentɪs/ adjective not affected by a mental disorder (NOTE: The phrase is from Latin and means 'of sound mind'.)

compound /'kɒmpaʊnd/ noun a chemical substance made up of two or more components ■ **adjective** made up of two or more components

compound fracture /,kɒmpaʊnd 'frækʃə/ noun a fracture where the skin surface is damaged or where the broken bone penetrates the surface of the skin. Also called **open fracture**

compress noun /'kɒmpres/ a wad of cloth soaked in hot or cold liquid and applied to the skin to relieve pain or swelling, or to force pus

out of an infected wound ■ **verb** /kəm'pres/ to squeeze or press something

compressed air sickness /kəm',prest 'eə,sɪknəs/ noun same as **caisson disease**

compression /kəm'preʃ(ə)n/ noun 1. the act of squeezing or pressing ○ *The first- aider applied compression to the chest of the casualty.* 2. a serious condition in which the brain is compressed by blood or cerebrospinal fluid accumulating in it or by a fractured skull

compression stocking /kəm',preʃ(ə)n 'stokɪŋ/ noun a strong elastic stocking worn to support a weak joint in the knee or to hold varicose veins tightly

compression syndrome /kəm'preʃ(ə)n ,sɪndrəʊm/ noun pain in muscles after strenuous exercise

compulsion /kəm'pʌlʃən/ noun 1. an act of forcing someone to do something, or the fact of being forced to do something ○ *You are under no compulsion to treat a violent patient.* 2. a strong psychological force which makes someone do something, often unwillingly ○ *She felt a sudden compulsion to wash her hands again.*

compulsive /kəm'pʌlsɪv/ **adjective** referring to a feeling which cannot be stopped ○ *She has a compulsive desire to steal.*

compulsive eating /kəm,pʌlsɪv 'ɪtɪŋ/ noun a psychological condition in which someone has a continual desire to eat. ♦ **bulimia**

compulsive–obsessive disorder /kəm,pʌlsɪv ə'b'sesɪv dɪs,ɔ:dsə/ noun same as **obsessive-compulsive disorder**

compulsory admission /kəm,palsəri əd'mɪʃ(ə)n/ noun the process of admitting someone who is mentally ill to hospital for treatment whether or not they consent

computed tomography /kəm,pju:tɪd tə'mɒgrəfi/ noun same as **computerised axial tomography**. Abbr **CT**

computerised axial tomography /kəm,pju:təraɪzd ,æksiəl tə'mɒgrəfi/ noun a system of examining the body in which a narrow X-ray beam, guided by a computer, photographs a thin section of the body or of an organ from several angles, using the computer to build up an image of the section. Abbr **CAT**. Also called **computed tomography**

-conazole /kɒnæzəʊl/ **suffix** used in the names of antifungal drugs ○ **fluconazole**

concave /'kɒnkeɪv/ **adjective** curving towards the inside ○ *a concave lens*

conceive /kən'si:v/ **verb** 1. (*of a woman*) to become pregnant with a child. ♦ **conception** 2. □ **to be conceived** (*of a child*) to come into existence through the fertilisation of an ovum ○ *Our son was conceived during our holiday in Italy.*

concentrate /'kɒnsəntreɪt/ noun a solution from which water has been removed ■ **verb** 1.

to give full attention to something **2.** □ **to concentrate on** to examine something in particular **3.** to reduce a solution and increase its strength by evaporation

concept /'kɒnsept/ *noun* a thought or idea, or something which someone might be able to imagine

conception /kən'sepʃən/ *noun* the point at which a woman becomes pregnant and the development of a baby starts

COMMENT: Conception is usually taken to be either the moment when the sperm cell fertilises the ovum, or a few days later, when the fertilised ovum attaches itself to the wall of the uterus.

conceptual framework /kən'septʃuəl 'freimwɜːk/ *noun* the theoretical basis on which something is formed

conceptus /kən'septəs/ *noun* an embryo or fetus together with all the tissues that surround it during pregnancy (NOTE: The plural is **conceptuses**)

concha /'kɒŋkə/ *noun* a part of the body shaped like a shell (NOTE: The plural is **conchae**)

concha auriculae /,kɒŋkə ɔ:'rɪkjʊlɪ/ *noun* the depressed part of the outer ear that leads to the inner ear

concordance /kən'kɔ:d(ə)ns/ *noun* **1.** a state in which two or more things are in the correct or expected relationship to each other. For example, the atrioventricular concordance is the relationship between the atria and the ventricles in the heart. **2.** the fact of two related people sharing the same genetic characteristic ○ *the concordance of schizophrenia in identical twins* **3.** an agreement between a professional and a patient on a course of treatment, especially related to use of medicines

concretion /kən'kri:ʃ(ə)n/ *noun* a mass of hard material which forms in the body, e.g. a gallstone or deposits on bone in arthritis

concussed /kən'kʌst/ *adjective* referring to someone who has been hit on the head and has lost and then regained consciousness ○ *He was walking around in a concussed state.*

concussion /kən'kʌʃ(ə)n/ *noun* **1.** the act of applying force to any part of the body **2.** loss of consciousness for a short period, caused by a blow to the head

concussive /kən'kʌsɪv/ *adjective* causing concussion

condensed /kən'denst/ *adjective* made compact or more dense

condition /kən'dɪʃ(ə)n/ *noun* **1.** the particular state of someone or something ○ *in poor condition* ○ *Her condition is getting worse.* ○ *The conditions in the hospital are very good.* **2.** a particular illness, injury or disorder ○ *He is being treated for a heart condition.*

conditioned reflex /kən'diʃ(ə)nd 'ri:fleks/ *noun* an automatic reaction by a person to a

stimulus, or an expected reaction to a stimulus which comes from past experience

conditioned response /kən'diʃ(ə)nd rɪ'spɒns/ *noun* a response to a stimulus as a result of associating it with an earlier stimulus

COMMENT: The classic example of a conditioned response is Pavlov's experiment with dogs in which they produced saliva, ready to eat their food, when a bell rang, because on previous occasions they had been fed when the bell was rung.

condom /'kɒndɒm/ *noun* a rubber sheath worn on the penis during intercourse as a contraceptive and also as a protection against sexually transmitted disease

conducting system /kən'dʌktɪŋ ,sistəm/ *noun* the nerve system in the heart which links an atrium to a ventricle, so that the two beat at the same rate

conduction /kən'dʌkʃən/ *noun* the process of passing heat, sound or nervous impulses from one part of the body to another

conduction fibre /kən'dʌkʃən ,faɪbə/ *noun* a fibre which transmits impulses, e.g. in the bundle of His

conductive /kən'dʌktɪv/ *adjective* referring to conduction

conductive deafness /kən'dʌktɪv 'defnəs/, **conductive hearing loss** /kən'dʌktɪv 'hɪərɪŋ lɒs/ *noun* deafness caused by inadequate conduction of sound into the inner ear

conductor /kən'dʌktə/ *noun* **1.** a substance or object which allows heat, electricity, light or sound to pass along it or through it **2.** a tube with a groove in it along which a knife is slid to cut open a sinus

condyle /'kɒndail/ *noun* a rounded end of a bone which articulates with another

condyloid process /'kɒndilɔɪd ,prəses/ *noun* a projecting part at each end of the lower jaw which forms the head of the jaw, joining the jaw to the skull

condyloma /,kɒndɪ'ləʊmə/ *noun* a growth usually found on the vulva (NOTE: The plural is **condylomas** or **condylomata**)

cone /kəʊn/ *noun* **1.** a shape with a circular base or top and a part that tapers to a point, or an object with this shape **2.** one of two types of cell in the retina of the eye which is sensitive to light, used especially in the perception of bright light and colour. ◊ **rod** ■ **verb** to show a rapid change for the worse in neurological condition due to herniation of the midbrain through the foramen magnum in the skull, caused by raised pressure inside the brain (NOTE: **cones – coning – coned**)

cone biopsy /'kəʊn bai,ɒpsi/ *noun* the removing of a cone of tissue from the cervix for examination

confabulation /kən,fæju'læʃ(ə)n/ *noun* the act of making up plausible stories to cover up loss of memory

confidentiality /kɒnfɪdənʃi'ælɪti/ *noun* an obligation not to reveal professional information about a person or organisation

confined /kən'faɪnd/ *adjective* kept in a place ◇ *She was confined to bed with pneumonia.* ◇ *Since his accident he has been confined to a wheelchair.*

confinement /kən'fainmənt/ *noun* the period when a woman giving birth stays in hospital, from the beginning of labour until some time after the birth of her baby. This period is very short nowadays.

confounding factor /kən'faʊndɪŋ, fækta/ *noun* a factor which has an association with both a disease and a risk factor and thus complicates the nature of the relationship between them

confused /kən'fju:zd/ *adjective* unable to think clearly or act rationally ◇ *Many severely confused patients do not respond to spoken communication.*

confusion /kən'fju:ʒ(ə)n/ *noun* the state of being confused

congeal /kən'dʒi:l/ *verb (of fat or blood)* to become solid

congenita /kən'dʒenɪtə/ ♦ **amyotonia congenita**

congenital /kən'dʒenɪt(ə)l/ *adjective* existing at or before birth

congenital aneurysm /kən,dʒenɪt(ə)'ænjərɪz(ə)m/ *noun* a weakening of the arteries at the base of the brain, present at birth

congenital anomaly /kən,dʒenɪt(ə)l ə'nɒməli/ *noun* a medical condition arising during development of the fetus and present at birth. Also called **congenital defect**

COMMENT: A congenital condition is not always inherited from a parent through the genes, as it may be due to factors such as a disease which the mother had during pregnancy, e.g. German measles, or a drug which she has taken.

congenital cataract /kən,dʒenɪt(ə)l 'kætərækt/ *noun* a cataract which is present at birth

congenital defect /kən,dʒenɪt(ə)l 'di:fekt/ *noun* same as **congenital anomaly** (NOTE: The word 'defect' is now avoided.)

congenital dislocation of the hip /kən,dʒenɪt(ə)l dɪslə,keɪʃ(ə)n əv ðə 'hip/ *noun* a condition in which a person is born with weak ligaments in the hip, so that the femur does not stay in position in the pelvis

congenital heart disease /kən,dʒenɪt(ə)l 'ha:t dɪ,ziz:l, **congenital heart defect** /kən,dʒenɪt(ə)l 'ha:t ,di:fekt/ *noun* a heart condition existing at birth

congenital hyperthyroidism *noun* a disease caused by a malfunction of the thyroid before birth or in early life

congenitally /kən'dʒenitli/ *adverb* at or before birth ◇ *The baby is congenitally incapable of absorbing gluten.*

congenital malformation /kən,dʒenɪt(ə)l ,mælfɔ:t'meɪʃ(ə)n/ *noun* a malformation which is present at birth, e.g. a cleft palate

congenital syphilis /kən,dʒenɪt(ə)l 'sifilɪs/ *noun* syphilis which is passed on from a mother to her unborn child

congenital toxoplasmosis /kən,dʒenɪt(ə)l ,tɒksəplæz'mæosɪs/ *noun* a condition in which a baby has been infected with toxoplasmosis by its mother while still in the uterus

congested /kən'dʒestɪd/ *adjective* with blood or fluid inside ◇ **congested face** a red face, caused by blood rushing to the face

congestion /kən'dʒestʃən/ *noun* an accumulation of blood in an organ. ♦ **nasal congestion**

congestive /kən'dʒestɪv/ *adjective* referring to congestion

congestive heart failure /kən,dʒestɪv 'ha:t ,feɪljur/ *noun* a condition in which the heart is unable to pump away the blood returning to it fast enough, causing congestion in the veins

coni /'kəuni/ plural of **conus**

conisation /,kɒnɪz,eɪʃ(ə)n/, **conization** *noun* the surgical removal of a cone-shaped piece of tissue

conjoined twins /kən,dʒɔɪnd 'twɪnz/ *plural noun* twins who are joined together at birth. Also called **Siamese twins**

COMMENT: Conjoined twins are always identical and can be joined at the head, chest or hip. In some cases they can be separated by surgery, but this is not possible if they share a single important organ such as the heart.

conjugate /'kɒndʒʊgət/, **conjugate diameter** /,kɒndʒʊgət dæt'ærɪtə/ *noun* a measurement of space in a woman's pelvis, used to calculate if it is large enough for a child to be delivered

conjunctiva /,kɒndʒʌŋk'taɪvə/ *noun* a membrane which covers the front of the eyeball and the inside of the eyelids. See illustration at **EYE** in Supplement (NOTE: The plural is **conjunctivas** or **conjunctivae**.)

conjunctival /,kɒndʒʌŋk'l'taɪv(ə)l/ *adjective* referring to the conjunctiva

conjunctivitis /kən,dʒʌŋktɪ'veɪtɪs/ *noun* inflammation of the conjunctiva from a range of causes

connective tissue /kə,nektɪv 'tɪsu:/ *noun* tissue which forms the main part of bones and cartilage, ligaments and tendons, in which a large proportion of fibrous material surrounds the tissue cells

Conn's syndrome /'kɒnɪz,sɪndrəʊm/ *noun* a condition in which excessive production of the hormone aldosterone causes fluid retention and high blood pressure

consanguinity /kɒnsæn'gwɪnɪti/ *noun* a blood relationship between people

conscious /'kɒnʃəs/ *adjective* 1. awake and aware of what is happening ○ *He became conscious in the recovery room two hours after the operation.* 2. deliberate and intended ○ *a conscious choice*

-conscious /kɒnʃəs/ *suffix* giving importance to ○ *health-conscious* ○ *safety-conscious*

consciously /'kɒnʃəslɪ/ *adverb* in a deliberate and knowing way

consciousness /'kɒnʃəsnəs/ *noun* the state of being mentally alert and knowing what is happening □ **to lose consciousness** to become unconscious □ **to regain consciousness** to become conscious after being unconscious

consensus management /kən'sensəs mænɪdʒmənt/ *noun* a form of management which aims to get everyone to agree on what actions should be taken

consent /kən'sent/ *noun* agreement to allow someone to do something ○ *The parents gave their consent for their son's heart to be used in the transplant operation.*

consent form /kən'sent fɔ:m/ *noun* a form which a patient signs to show that he or she agrees to have a particular operation

conservative /kən'sɜ:vətɪv/ *adjective* 1. reluctant to accept new things 2. (of a treatment) designed to help relieve symptoms or preserve health with a minimum of medical intervention or risk ○ *Symptoms usually resolve with conservative treatment.*

consolidation /kən,sɒlɪ'deɪʃ(ə)n/ *noun* 1. a stage in mending a broken bone in which the callus formed at the break changes into bone 2. a condition in which part of the lung becomes solid, e.g. in pneumonia

constipated /'kɒnstɪpeɪtɪd/ *adjective* unable to pass faeces often enough

constipation /,kɒnstɪ'peɪʃ(ə)n/ *noun* difficulty in passing faeces

COMMENT: Constipated bowel movements are hard and may cause pain in the anus. Constipation may be caused by worry or by a diet which does not contain enough roughage or by lack of exercise, as well as by more serious diseases of the intestine.

constituent /kən'stitjʊənt/ *noun* a substance which forms part of something ○ *the chemical constituents of nerve cells*

constitution /,kɒnstɪ'tju:ʃ(ə)n/ *noun* the general health and strength of a person ○ *She has a strong constitution or a healthy constitution.* ○ *He has a weak constitution and is often ill.*

constitutional /,kɒnstrɪ'tju:ʃ(ə)nəl/ *adjective* referring to a person's constitution ■ *noun* a short walk taken for health reasons

constitutionally /,kɒnstrɪ'tju:ʃ(ə)n(ə)li/ *adverb* because of a person's constitution

constrict /kən'strɪkt/ *verb* 1. to make a passage narrower ○ *a constricted bowel* 2. to slow down or stop the flow of something such as blood

constriction /kən'strɪkʃən/ *noun* the process of becoming narrow, or the state of being narrow. ♀ **stenosis**

constrictive /kən'strɪktɪv/ *adjective* restricting

constrictive pericarditis /kən'strɪktɪv pərɪkɑ:'daitɪs/ *noun* same as **chronic pericarditis**

constrictor /kən'strɪktə/ *noun* a muscle which squeezes an organ or which makes an organ contract

consult /kən'salt/ *verb* to ask someone for his or her opinion ○ *He consulted an eye specialist.*

consultancy /kən'saltənsi/ *noun* the post of consultant ○ *She was appointed to a consultancy at a London hospital.*

consultant /kən'saltənt/ *noun* a doctor who is a senior specialist in a particular branch of medicine and who is consulted by GPs ○ *She was referred to a consultant at the orthopaedic hospital.*

consultation /,kɒnsəl'teɪʃ(ə)n/ *noun* 1. a discussion between two doctors about a case 2. a meeting between a doctor and a patient, in which the doctor may examine the patient, discuss his or her condition and prescribe treatment

consulting room /kən'saltɪŋ ru:m/ *noun* a room where a doctor sees his or her patients

consumption /kən'sʌmpʃən/ *noun* 1. the act of taking food or liquid into the body ○ *the patient's increased consumption of alcohol* 2. a former name for pulmonary tuberculosis

contact /'kɒntækt/ *noun* 1. an act of touching someone or something, or the state of touching □ **to have (physical) contact with someone** or something to actually touch someone or something □ **to be in or come into contact with someone** to be near to or touching someone ○ *The hospital is anxious to trace anyone who may have come into contact with the patient.* 2. an act of getting in touch or communicating with someone 3. a person who has been in contact with a person suffering from an infectious disease ○ *Now that Lassa fever has been diagnosed, the authorities are anxious to trace all contacts which the patient may have met.* ■ *verb* to meet or get in touch with someone

contact dermatitis /,kɒntækt də'mæ'taɪtɪs/ *noun* inflammation of the skin caused by touch, e.g. by touching some types of plant, soap or chemical. Also called **irritant dermatitis**

contact lens /'kɒntækt lenz/ *noun* a tiny plastic lens which fits over the eyeball and is worn instead of spectacles to improve eyesight

contact tracing /'kɒntækt ,treɪsɪŋ/ *noun* the process of tracing people with whom someone with an infectious disease has been in contact

contagion /kən'teɪdʒən/ *noun* 1. the process of spreading a disease by touching an infected person or objects which an infected person has touched 2. a disease spread by touch ○ *The contagion spread through the whole school.*

contagious /kən'teɪdʒəs/ *adjective* able to be transmitted by touching an infected person or objects which an infected person has touched □ **contagious stage** the period when a disease such as chickenpox is contagious and can be transmitted to someone else

contagious disease /kən'teɪdʒəs dɪ'zi:z/ *noun* a disease which can be transmitted by touching an infected person or objects which an infected person has touched. ◇ **communicable disease, infectious disease**

containment /kən'teinmənt/ *noun* 1. action taken to restrict the spread of something undesirable or dangerous such as a disease ○ *government policy of containment of the SARS virus* 2. the eradication of a global disease such as smallpox by removing it region by region

contaminant /kən'tæminənt/ *noun* a substance which contaminates something

contaminate /kən'tæmɪneɪt/ *verb* 1. to make something impure by touching it or by adding something to it ○ *Supplies of drinking water were contaminated by refuse from the factories.* ○ *The whole group of tourists fell ill after eating contaminated food.* 2. to spread infection to someone or something

contamination /kən,tæmɪ'nейʃ(ə)n/ *noun* the action of contaminating something, or the state of being contaminated ○ *The contamination resulted from polluted water.*

continence /'kɒntɪnəns/ *noun* 1. the ability to control the discharge of urine and faeces 2. self-restraint

continent /'kɒntɪnənt/ *adjective* able to exercise control over the discharge of urine and faeces

continuing education /kən,tɪnjuɪŋ edju'keɪʃ(ə)n/ *noun* regular courses or training designed to bring professional people up to date with the latest developments in their particular field

continuous ambulatory peritoneal dialysis /kən,tinjuəs ,æmbjʊlət(ə)ri pərɪtə'ni:əl dəɪ'ələsɪs/ *noun* a method of dialysis of people while they are walking about. Abbr **CAPD**

continuous positive airways pressure /kən,tinjuəs,pɒzɪtɪv 'eəwεɪz ,preʃə/ *noun* a method used in intensive care which forces air into the lungs of someone with lung collapse. Abbr **CPAP**

contra- /kəntrə/ *prefix* against, opposite, contrasting

contraception /,kɒntrə'sepfən/ *noun* the prevention of pregnancy, e.g. by using devices such as a condom or an IUD, or drugs in the form of contraceptive pills or injections at regular intervals. Also called **birth control**

contraceptive /,kɒntrə'septɪv/ *adjective* preventing conception ○ *a contraceptive device or drug* ■ *noun* a drug or device which prevents pregnancy

contraceptive sheath /,kɒntrə'septɪv ſi:θ/ *noun* same as **condom**

contraceptive sponge /,kɒntrə'septɪv ſpɒndʒ/ *noun* a piece of synthetic sponge impregnated with spermicide, which is inserted into the vagina before intercourse

contract /kən'trækt/ *verb* 1. to become smaller and tighter, or make a muscle or part of the body smaller and tighter ○ *As the muscle contracts the limb moves.* ○ *The diaphragm acts to contract the chest.* 2. to catch a disease ○ *He contracted Lassa fever.* 3. to make a formal or legally binding agreement with someone to do something ○ *An outside firm is contracted to do the hospital cleaning.* ■ *noun* a formal or legally binding agreement

contractibility /'kɒntræktilɪbɪlɪti/ *noun* the capacity to contract

contractile tissue /kən,træktaɪl 'tɪʃu:/ *noun* the tissue in muscle which makes the muscle contract

contraction /kən'trækʃən/ *noun* 1. the act of making something smaller or of becoming smaller ○ *the contraction of dental services* 2. a tightening movement which makes a muscle shorter, which makes the pupil of the eye smaller or which makes the skin wrinkle 3. a movement of the muscles of the uterus occurring during childbirth ○ *Her contractions began at one o'clock.*

contracture /kən'træktʃə/ *noun* a permanent tightening of a muscle caused by fibrosis

contraindication /,kɒntrəɪndɪkeɪʃ(ə)n/ *noun* something which suggests that someone should not be treated with a specific drug or not continue with a specific treatment because circumstances make that treatment unsuitable

contralateral /,kɒntrə'lætərəl/ *adjective* located on or affecting the opposite side of the body. Opposite **ipsilateral**

contrast medium /'kontra:st ,mi:dɪəm/ *noun* a radio-opaque dye, or sometimes gas, put into an organ or part of the body so that it will show clearly in an X-ray photograph ○ *In an MRI scan no contrast medium is required; in a CAT scan iodine-based contrast media are often required.*

contre-coup /'kɒntrəku:/ *noun* an injury to one point of an organ such as the brain, caused by a blow received on an opposite point of the organ

control *verb* 1. to have the ability or authority to direct someone or something ○ *Sometimes*

we need help to control people who think they have waited too long. 2. to limit or restrain something ○ **administered drugs to control the pain** ■ **noun** 1. the ability or authority to control something ○ *After her stroke she had no control over her left arm.* ○ *The administrators are in control of the admissions policy.* 2. a person or group whose test data are used as a comparison in a study 3. a comparison in a study

control group /kən'trəʊl gru:p/ *noun* a group of people who are not being treated but whose test data are used as a comparison in a study

controlled drug /kən'trəʊld 'drʌg/ *noun* a drug which is not freely available, which is restricted by law and classified as A, B, or C and of which possession may be an offence. Also called **controlled substance**

controlled respiration /kən'trəʊld ,rɛspə'reɪʃ(ə)n/ *noun* the control of a person's breathing by an anaesthetist during an operation, when regular breathing has stopped

controlled substance /kən'trəʊld 'sʌbstəns/ *noun* same as **controlled drug**

controlled trial /kən'trəʊld 'traɪəl/ *noun* a trial in which members of one group are treated with a test substance and those of another group are treated with a placebo as a control

controls assurance /kən'trəʊlz ə,fjuərəns/ *noun* a process designed to provide evidence that NHS organisations are doing their best to manage themselves both in order to meet their objectives and to protect patients, staff and the public against risks of all kinds

contused wound /kən,tju:zd 'wʊnd/ *noun* a wound caused by a blow where the skin is bruised as well as torn and bleeding

contusion /kən'tju:ʒ(ə)n/ *noun* same as **bruise**

conus /'kəʊnəs/ *noun* a structure shaped like a cone (NOTE: The plural is **coni**.)

convalesce /,kɒnvə'les/ *verb* to get back to good health gradually after an illness or operation

convalescence /,kɒnvə'les(ə)ns/ *noun* a period of time when someone is convalescing

convalescent /,kɒnvə'les(ə)nt/ *adjective* referring to convalescence ■ **noun** someone who is convalescing

convalescent home /,kɒnvə'les(ə)nt həʊm/ *noun* a type of hospital where people can recover from illness or surgery

convergent strabismus /kən,vɜ:dʒənt strə'bɪzməs/, **convergent squint** /kən,vɜ:dʒənt 'skwɪnt/ *noun* a condition in which one or both of a person's eyes look towards the nose. Also called **cross eye**

conversion /kən'vezʃ(ə)n/ *noun* the process of changing one thing into another ○ *the conversion of nutrients into tissue*

convex /'kɒnvɛks/ *adjective* curving towards the outside ○ *a convex lens*

convoluted /'kɒnvəlju:tɪd/ *adjective* folded and twisted

convoluted tubule /,kɒnvəlju:tɪd 'tju:bjʊ:l/ *noun* a coiled part of a nephron

convolution /,kɒnvə'lju:ʃ(ə)n/ *noun* a twisted shape ○ *the convolutions of the surface of the cerebrum*

convulse /kən'vels/ *verb* to shake violently and uncontrollably

convulsion /kən'velʃən/ *noun* the rapid involuntary contracting and relaxing of the muscles in several parts of the body ○ *The child had convulsions.* ♦ **fit** (NOTE: Often used in the plural.)

COMMENT: Convulsions in children may be caused by brain disease such as meningitis but can also often be found at the beginning of a disease such as pneumonia which is marked by a sudden rise in body temperature. In adults, convulsions are usually associated with epilepsy.

convulsive /kən'velsɪv/ *adjective* referring to convulsions ○ *He had a convulsive seizure.*

♦ **electroconvulsive therapy**

Cooley's anaemia /'ku:li:z ə,ni:mɪə/ *noun* same as **thalassaemia** [Described 1927. After Thomas Benton Cooley (1871–1945), Professor of Paediatrics at Wayne College of Medicine, Detroit, USA.]

Coombs' test /'ku:mz test/ *noun* a test for antibodies in red blood cells, used as a test for erythroblastosis foetalis and other haemolytic syndromes [Described 1945. After Robin Royston Amos Coombs (1921–), Quick Professor of Biology, and Fellow of Corpus Christi College, Cambridge, UK.]

coordinate /kəʊ'ɔ:dɪneɪt/ *verb* 1. to make things work together ○ *He was unable to coordinate the movements of his arms and legs.* 2. to organise a complex procedure

'...there are four recti muscles and two oblique muscles in each eye, which coordinate the movement of the eyes and enable them to work as a pair' [Nursing Times]

coordination /kəʊ',ɔ:di'nɛɪʃ(ə)n/ *noun* 1. the combining of two or more things as an effective unit, or the way things combine effectively ○ *requires coordination between nursing staff and doctors* 2. the ability to use two or more parts of the body at the same time to carry out a movement or task ○ *The patient showed lack of coordination between eyes and hands.*

'Alzheimer's disease is a progressive disorder which sees a gradual decline in intellectual functioning and deterioration of physical coordination' [Nursing Times]

COPD abbr chronic obstructive pulmonary disease

coping mechanism /'kəʊpiŋ ,mɛkə'menɪz(ə)m/ *noun* a method of dealing with situations which cause psychological stress

copper /'kɒpə/ *noun* a metallic trace element (NOTE: The chemical symbol is Cu.)

copr- /'kɒprə/ *prefix* faeces

coprolith /'kɒprəlɪθ/ *noun* a lump of hard faeces in the bowel

coproporphyrin /,kɒprə'pɔ:fərɪn/ *noun* porphyrin excreted by the liver

copulate /'kɒpjuleɪt/ *verb* to have sexual intercourse

copulation /,kɒpjʊlə'leɪʃ(ə)n/ *noun* same as sexual intercourse

cor /kɔ:/ *noun* the heart

coraco-acromial /,kɔ:rəkəʊ ə'krəumiəl/ *adjective* referring to the coracoid process and the acromion

coracobrachialis /,kɔ:rəkəʊbrækɪ'lɪəlɪs/ *noun* a muscle on the medial side of the upper arm, below the armpit

coracoid process /'kɔ:rəkɔɪd ,præ:ses/ *noun* a projecting part on the shoulder blade

cord /kɔ:d/ *noun* a long flexible structure in the body like a thread

cordectomy /kɔ:'dektəmɪ/ *noun* a surgical operation to remove a vocal cord (NOTE: The plural is **cordectomies**.)

cordon sanitaire /,kɔ:dn̩,sænɪ'teə/ *noun* a restriction of movement to and from an area to control the spread of a disease

cordotomy /kɔ:'dɒtəmɪ/ *noun* another spelling of **chordotomy**

corectopia /,kɔ:rek'təʊpiə/ *noun* ectopia of the pupil of the eye

corium /'kɔ:riəm/ *noun* same as **dermis**

corn /kɔ:n/ *noun* a hard painful lump of skin usually on a foot, where something such as a tight shoe has rubbed or pressed on the skin. Also called **heloma**

cornea /'kɔ:nɪə/ *noun* a transparent part of the front of the eyeball. See illustration at **EYE** in Supplement (NOTE: The plural is **cornea**e. For other terms referring to the cornea, see words beginning with **kerat-**, **kerato-**)

corneal /'kɔ:nɪəl/ *adjective* relating to a cornea

corneal abrasion /,kɔ:nɪəl ə'breɪz(ə)n/ *noun* a scratch on the cornea, caused by something sharp getting into the eye

corneal bank /'kɔ:nɪəl bæŋk/ *noun* a place where eyes of dead donors can be kept ready for use in corneal grafts

corneal graft, /,kɔ:nɪəl 'gra:fɪt/ *noun* 1. a surgical operation to graft corneal tissue from a donor or from a dead person to replace diseased tissue. Also called **corneal transplant**, **keratoplasty** 2. a piece of corneal tissue used in a graft

corneal reflex /,kɔ:nɪəl 'ri:fleks/ *noun* a reflex from touching or hitting the cornea which makes the eyelid close

corneal transplant /,kɔ:nɪəl ,trænspla:nt/ *noun* same as **corneal graft**

cornification /,kɔ:nifɪ'keɪʃ(ə)n/ *noun* same as **keratinisation**

cornu /'kɔ:njʊ:/ *noun* 1. a structure in the body which is shaped like a horn 2. each of the four processes of the thyroid cartilage (NOTE: The plural is **cornua**.)

corona /kɔ:tənə/ *noun* a structure in the body which is shaped like a crown

corona capititis /kə,tənə 'kæpitɪs/ *noun* the crown of the head or top part of the skull

coronal /'kɔ:rən(ə)l, kə'rən(ə)l/ *adjective* 1. referring to a corona 2. referring to the crown of a tooth

coronal plane /,kɔ:rən(ə)l 'pleɪn/ *noun* a plane at right angles to the median plane, dividing the body into dorsal and ventral halves. See illustration at **ANATOMICAL TERMS** in Supplement

coronal suture /,kɔ:rən(ə)l 'su:tʃə/ *noun* a horizontal joint across the top of the skull between the parietal and frontal bones

coronary /'kɔ:rən(ə)ri/ *noun* same as **coronary thrombosis** (*informal*) ■ *adjective* referring to any structure shaped like a crown, but especially to the arteries which supply blood to the heart muscles

coronary artery /'kɔ:rən(ə)ri ,a:tərɪ/ *noun* one of the two arteries which supply blood to the heart muscles

coronary artery bypass graft /,kɔ:rən(ə)ri ,a:tərɪ 'baɪpɔ:s gra:fɪt, **coronary artery bypass** /,kɔ:rən(ə)ri 'a:tərɪ ,baɪpɔ:s/ *noun* a surgical operation to treat angina by grafting pieces of vein around the diseased part of a coronary artery

coronary care unit /,kɔ:rən(ə)ri 'keə ,ju:nɪt/ *noun* the section of a hospital caring for people who have heart disorders or who have had heart surgery. Abbr **CCU**

coronary circulation /,kɔ:rən(ə)ri ,sɜ:kjʊ 'leɪʃ(ə)n/ *noun* blood circulation through the arteries and veins of the heart muscles

coronary heart disease /,kɔ:rən(ə)ri 'ha:t dɪ,zɪ:z/ *noun* any disease affecting the coronary arteries, which can lead to strain on the heart or a heart attack. Abbr **CHD**

‘...coronary heart disease (CHD) patients spend an average of 11.9 days in hospital. Among primary health care services, 1.5% of all GP consultations are due to CHD.’ [Health Services Journal]

‘...apart from death, coronary heart disease causes considerable morbidity in the form of heart attack, angina and a number of related diseases’ [Health Education Journal]

coronary ligament /,kɔ:rən(ə)ri 'lɪgəmənt/ *noun* folds of peritoneum connecting the back of the liver to the diaphragm

coronary obstruction /,kɔ:rən(ə)ri əb 'strækʃ(ə)n, **coronary occlusion** /,kɔ:rən(ə)ri ə'bklu:ʒ(ə)n/ *noun* a thickening of the walls of the coronary arteries or a blood clot in the coronary arteries which prevents

blood from reaching the heart muscles and leads to heart failure

coronary sinus /kɔ:rən(ə)ri 'saɪnəs/ *noun* a vein which takes most of the venous blood from the heart muscles to the right atrium

coronary thrombosis /kɔ:rən(ə)ri θrɒm'bəʊsɪs/ *noun* a blood clot which blocks the coronary arteries, leading to a heart attack. Also called **coronary**

coronary vein /'kɔ:rən(ə)ri veɪn/ *noun* a vein that drains blood from the muscles of the heart

coronavirus /kə'rəʊnə,vairəs/ *noun* a type of virus which has been identified in people who have the common cold

coroner /'kɔ:rənə/ *noun* a public official, either a doctor or a lawyer, who investigates sudden or violent deaths

COMMENT: Coroners investigate deaths which are caused by poison, violence, neglect or deprivation, deaths from unnatural causes, during the post-operative recovery period and when the doctor feels unable to give a reliable cause of death. They also investigate deaths of prisoners and deaths involving the police.

coronoid process /'kɔ:rənɔɪd,prə'ses/ *noun* 1. a projecting piece of bone on the ulna
2. a projecting piece on each side of the lower jaw

corpora plural of **corpus**

corpse /kɔ:ps/ *noun* the body of a dead person

cor pulmonale /kɔ: ,palmə'nelɪ/ *noun* pulmonary heart disease in which the right ventricle is enlarged

corpus /kɔ:ps/ *noun* any mass of tissue (NOTE: The plural is **corpora**.)

corpus albicans /kɔ:psə 'ælbɪkænz/ *noun* scar tissue which replaces the corpus luteum in the ovary

corpus callosum /kɔ:psəs kə'ləsəm/ *noun* the thick band of nerve fibres that connects the two hemispheres of the brain and allows them to communicate. See illustration at **BRAIN** in Supplement (NOTE: The plural is **corpora callosa**.)

corpus cavernosum /kɔ:psəs ,kævə'nəʊsəm/ *noun* a part of the erectile tissue in the penis and clitoris. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement (NOTE: The plural is **corpora cavernosa**.)

corpuscle /'kɔ:psl(ə)/ *noun* 1. a small round mass 2. a cell in blood or lymph

corpus haemorrhagicum /kɔ:psəs ,hemə'rædʒɪkəm/ *noun* a blood clot formed in an ovary where a Graafian follicle has ruptured (NOTE: The plural is **corpora haemorrhagica**.)

corpus luteum /kɔ:psəs 'lu:tɪəm/ *noun* a body which forms in each ovary after a Graafian follicle has ruptured. The corpus luteum secretes the hormone progesterone to prepare

the uterus for implantation of the fertilised ovum. (NOTE: The plural is **corpora lutea**.)

corpus spongiosum /kɔ:pəs spɒnʒi'əʊsəm/ *noun* the part of the penis round the urethra, forming the glans. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement (NOTE: The plural is **corpora spongiosa**.)

corpus striatum /,kɔ:pəs ,strai'eɪtəm/ *noun* a mass of nervous tissue in each cerebral hemisphere (NOTE: The plural is **corpora striata**.)

corrective /kə'rektɪv/ *adjective* intended to correct an irregularity or problem ◇ **corrective lenses** ■ *noun* a drug which changes the harmful effect of another drug

Corrigan's pulse /,kɔ:riɡənəs 'pʌls/ *noun* a condition occurring in the arterial pulse in the neck in which there is a visible rise in pressure followed by a sudden collapse, caused by aortic regurgitation. Also called **water-hammer pulse**

corrosive /kə'rəʊsɪv/ *adjective* destroying tissue ■ *noun* a substance which destroys tissue, e.g. acid or alkali

corrugator muscle /'kɔ:regeɪtə ,mʌs(ə)l/ *noun* one of the muscles which produce vertical wrinkles on the forehead when someone frowns

corset /'kɔ:sɪt/ *noun* a piece of stiff clothing worn on the chest or over the trunk to support the body, e.g. after a back injury

cortex /'kɔ:teksts/ *noun* the outer layer of an organ, as opposed to the soft inner medulla (NOTE: The plural is **cortices** or **cortexes**.)

Corti /'kɔ:ti/ ♀ **organ of Corti**

cortical /'kɔ:tɪk(ə)l/ *adjective* referring to a cortex

cortical mastoidectomy /,kɔ:tɪk(ə)l ,mæstɔ:tɪ'dektəmɪ/ *noun* same as **atticotomy**

cortices plural of **cortex**

corticospinal /,kɔ:tɪkəspɪnəl/ *adjective* referring to both the cerebral cortex and the spinal cord

corticosteroid /,kɔ:tɪkəst'ɪrəʊɪd/ *noun* 1. any steroid hormone produced by the cortex of the adrenal glands 2. a drug which reduces inflammation, used in asthma, gastro-intestinal disease and in adrenocortical insufficiency

corticosterone /,kɔ:tɪkəst'ɔ:riən/ *noun* a hormone secreted by the cortex of the adrenal glands

corticotrophin /,kɔ:tɪkət'rɔ:fɪn/ *noun* same as **adrenocorticotropic hormone** (NOTE: The US spelling is **corticotropin**.)

cortisol /'kɔ:tɪsɒl/ *noun* same as **hydrocortisone**

cortisone /'kɔ:tɪzən/ *noun* a hormone secreted in small quantities by the adrenal cortex ◇ *The doctor gave her a cortisone injection in the ankle.*

COMMENT: Synthetic cortisone was used in the treatment of rheumatoid arthritis, asthma and skin disorders, but it is now replaced by other drugs.

Corynebacterium /kəʊ,raɪnibæk'tɪərɪəm/ noun a genus of bacteria which includes the bacterium which causes diphtheria

coryza /kə'raɪzə/ noun an illness, with inflammation of the nasal passages, in which someone sneezes and coughs and has a blocked and running nose (*technical*) Also called **cold, common cold**

cosmetic surgery /kɒzɪtɪk 'sɜːdʒəri/ noun a surgical operation to improve a person's appearance

COMMENT: Whereas plastic surgery may be prescribed by a doctor to correct skin or bone conditions or the effect of burns or after a disfiguring operation, cosmetic surgery is carried out on the instructions of the patient to remove wrinkles, enlarge breasts or make some other perceived improvement.

cost- /kɒst/ prefix same as **costo-** (used before vowels)

costal /kɒst(ə)l/ adjective referring to the ribs

costal cartilage /,kɒst(ə)l 'ku:təlɪdʒ/ noun cartilage which forms the end of each rib and either joins the rib to the breastbone or to the rib above

costal pleura /,kɒst(ə)l 'pluərə/ noun a part of the pleura lining the walls of the chest

costive /'kɒstɪv/ adjective same as **constipated** ■ noun a drug which causes constipation

costo- /kɒstəʊ/ prefix referring to the ribs

costocervical trunk /,kɒstəʊsəvə:vi:k(ə)l 'trʌŋk/ noun a large artery in the chest

costodiaphragmatic /,kɒstəʊdəɪfræg'mætɪk/ adjective referring to both the ribs and the diaphragm

costovertebral joint /,kɒstəʊvə:tibr(ə)l 'dʒɔɪnt/ noun a joint between the ribs and the vertebral column

cot death /'kɒt deθ/ noun ♦ **sudden infant death syndrome** (NOTE: The US term is **crib death**.)

co-trimoxazole /kəʊ trɪ'mɒksəzəʊl/ noun a drug used to combat bacteria in the urinary tract

cottage hospital /,kɒtɪdʒ 'hɒspɪt(ə)l/ noun a small local hospital that admits patients under the care of a general practitioner

cotton bud /'kɒtən bʌd/ noun a little stick with some cotton wool usually at both ends, used for cleaning cavities

cotton wool /kɒtən 'wʊl/ noun purified fibres from the cotton plant used to clean the skin or as padding ○ *She dabbed the cut with cotton wool soaked in antiseptic.* (NOTE: The US term is **absorbent cotton**.)

cotyledon /,kɒtɪ'lɪ:d(ə)n/ noun one of the divisions of a placenta

cotyloid cavity /'kɒtɪlɔɪd ,kævɪtɪ/ noun same as **acetabulum**

couch /kaʊtʃ/ noun a long bed on which a person lies when being examined by a doctor in a surgery

couching /'kaʊtʃɪŋ/ noun a surgical operation to displace the opaque lens of an eye as a treatment for cataracts

cough /kɒf/ noun a reflex action, caused by irritation in the throat, when the glottis is opened and air is sent out of the lungs suddenly □ **barking cough** a loud noisy dry cough □ **dry cough** a cough where no phlegm is produced □ **hacking cough** a continuous short dry cough ■ an infection that causes coughing

○ *She has a bad cough and cannot make the speech.* ■ verb to send air out of the lungs suddenly because the throat is irritated ○ *The smoke made him cough.* ○ *She has a cold and keeps on coughing and sneezing.*

coughing fit /'kɒfɪŋ fit/ noun a sudden attack of coughing

cough medicine /'kɒf ,med(ə)sɪn/, **cough linctus** /'kɒf ,lɪŋktəs/, **cough mixture** noun a liquid taken to soothe the irritation which causes a cough

cough suppressant /'kɒf sə,presənt/ noun an opioid or sedative antihistamine drug such as pholcodine which suppresses the cough reflex

cough up /,kɒf 'ʌp/ verb to cough hard to expel a substance from the trachea ○ *He coughed up phlegm.* ○ *She became worried when the girl started coughing up blood.*

counselling /'kaʊnsəlɪŋ/ noun a method of treating especially psychiatric disorders in which a specialist talks with a person about his or her condition and how to deal with it

counsellor /'kaʊnsələ/ noun a person who advises and talks with someone about his or her problems

counteract /,kaʊntər'æk/ verb to act against something or reduce the effect of something ○ *The lotion should counteract the irritant effect of the spray on the skin.*

counteraction /,kaʊntər'ækʃən/ noun the action of one drug which acts against another drug

counterextension /,kaʊntərɪk'stenʃən/ noun an orthopaedic treatment in which the upper part of a limb is kept fixed and traction is applied to the lower part of it

counterirritant /,kaʊntər'ɪrit(ə)nt/ noun a substance which alleviates the pain in an internal organ by irritating an area of skin whose sensory nerves are close to those of the organ in the spinal cord

counterirritation /,kaʊntərɪrɪ'teɪʃ(ə)n/ noun a skin irritant applied artificially to alleviate the pain in another part of the body

counterstain /'kaʊntəsteɪn/ *noun* a stain used to identify tissue samples, e.g. red dye used to identify Gram-negative bacteria after having first stained them with violet dye ■ *verb* to stain specimens with a counterstain

coupling /'kʌplɪŋ/ *noun* 1. an act of joining together or linking two people, things or processes 2. something which joins two things, especially a device for connecting two pieces of pipe, hose or tube

course /kɔ:s/ *noun* 1. a programme of study or training ○ *went on a course to update his nursing skills* 2. a series of drugs to be taken, or a series of sessions of treatment ○ *We'll put you on a course of antibiotics.*

course of treatment /,kɔ:s əv 'tri:tment/ *noun* a series of applications of a treatment, e.g. a series of injections or physiotherapy

cover test /'kʌvər test/ *noun* a test for a squint in which an eye is covered and its movements are checked when the cover is taken off

Cowper's glands /'ku:pəz glændz/ *plural noun* two glands at the base of the penis which secrete into the urethra. Also called **bulbourethral glands** [Described 1700. After William Cowper (1666–1709), English surgeon.]

cowpox /'kaʊpɒks/ *noun* an infectious viral disease of cattle which can be transmitted to humans. It was used as a constituent of the first vaccines for smallpox.

cox- /kɒks/ *prefix* the hip joint

coxa /'kɒksə/ *noun* the hip joint (NOTE: The plural is **coxae**.)

coxalgia /kɒk'sældʒə/ *noun* pain in the hip joint

coxa vara /,kɒksə 'veərə/ *noun* an unusual development of the hip bone, making the legs bow

Coxsackie virus /kɒk'sækki ,vaɪrəs/ *noun* one of a group of enteroviruses which enter the cells of the intestines and can cause diseases such as aseptic meningitis and Bornholm disease [After Coxsackie, New York, where the virus was first identified]

CPAP *abbr* continuous positive airways pressure

CPN *abbr* community psychiatric nurse

CPR *abbr* cardiopulmonary resuscitation

crab /kræb/, **crab louse** /'kræb laʊs/ *noun* a louse, *Phthirus pubis*, which infests the pubic region and other parts of the body with coarse hair. Also called **pubic louse**

crack /kræk/ *noun* a thin break ○ *There's a crack in one of the bones in the skull.* ■ *verb* to make a thin break in something, or become split ○ *She cracked a bone in her leg.* □ **cracked lip** a lip where the skin has split because of cold or dryness

cradle /'kreɪd(ə)l/ *noun* a metal frame put over a person in bed to keep the weight of the bedclothes off the body ■ *verb* to carry a child

with one arm under the thigh and the other under the upper back

cradle cap /'kreɪd(ə)l kæp/ *noun* a yellow deposit on the scalp of babies, caused by seborrhoea

cramp /kræmp/ *noun* a painful involuntary spasm in the muscles, in which the muscle may stay contracted for some time

cran-i- /'kreɪni/ *prefix* same as **cranio-** (used before vowels)

cranial /'kreɪniəl/ *adjective* referring to the skull

cranial bone /'kreɪniəl bəʊn/ *noun* one of the bones in the skull

cranial cavity /'kreɪniəl ,kævɪtɪ/ *noun* a space inside the bones of the cranium, in which the brain is situated

cranial nerve /'kreɪniəl nɜ:v/ *noun* each of the nerves, twelve on each side, which are connected directly to the brain, governing mainly the structures of the head and neck

COMMENT: The cranial nerves are the olfactory, optic, oculomotor, trochlear, trigeminal, (ophthalmic, maxillary and mandibular), abducent, facial, auditory (vestibular and cochlear), glossopharyngeal, vagus, accessory and hypoglossal.

cranio- /'kreɪniəʊ/ *prefix* the skull

craniometry /,kreɪni'ɒmtrɪ/ *noun* the process of measuring skulls to find differences in size and shape

craniopharyngioma /,kreɪniəufə,rɪndʒi 'əʊmə/ *noun* a tumour in the brain originating in the hypophyseal duct (NOTE: The plural is **craniopharyngiomas** or **craniopharyngioma-ta.**)

craniostenosis /,kreɪniəʊst'e:nəsɪs/, **craniostostosis** /,kreɪniəʊ,sɪnəʊ'stəʊsɪs/ *noun* the early closing of the bones in a baby's skull, so making the skull contract

craniotubes /,kreɪniəʊ'teɪbɪ:z/ *noun* thinness of the bones in the occipital region of a child's skull, caused by rickets, marasmus or syphilis

craniotomy /,kreɪni'ɒtəmɪ/ *noun* a surgical operation on the skull, especially one cutting away part of the skull (NOTE: The plural is **craniotomies**.)

cranium /'kreɪniəm/ *noun* same as **skull** (NOTE: The plural is **craniums** or **crania**.)

COMMENT: The cranium consists of the occipital bone, two parietal bones, two temporal bones and the frontal, ethmoid and sphenoid bones.

cream /kri:m/ *noun* a medicinal oily substance, used to rub on the skin

creatine /'kri:tɪ:n/ *noun* a compound of nitrogen found in the muscles, produced by protein metabolism and excreted as creatinine

creatine phosphate /,kri:tɪ:n 'fɒsfəfeɪt/ *noun* a store of energy-giving phosphate in muscles

creatinine /kri'ætənɪ:n/ *noun* a substance which is the form in which creatine is excreted

creatinine clearance /kri,ætənɪ:n 'klɪərəns/ *noun* removal of creatinine from the blood by the kidneys

creatinuria /kri,ætɪ'njuəri:a/ *noun* excess creatine in the urine

creatorrhoea /kri:ətə'ri:a/ *noun* the presence of undigested muscle fibre in the faeces, occurring in some pancreatic diseases

Credé's method /kred'eɪθ ,mɛθəd/ *noun* 1. a method of extracting a placenta by massaging the uterus through the abdomen 2. the putting of silver nitrate solution into the eyes of a baby born to a mother who has gonorrhoea, in order to prevent gonococcal conjunctivitis [Described 1860. After Karl Sigmund Franz Credé (1819–92), German gynaecologist.]

creeping eruption /kri:pɪŋ ɪ'ræpfən/ *noun* an itching skin complaint, caused by larvae of various parasites which creep under the skin

crepitation /krepɪ'teɪʃ(ə)n/ *noun* an unusual soft crackling sound heard in the lungs through a stethoscope. Also called **raze**

crepitus /'kreptɪs/ *noun* 1. a harsh crackling sound heard through a stethoscope in a person with inflammation of the lungs 2. a scratching sound made by a broken bone or rough joint

crest /krest/ *noun* a long raised part on a bone

crest of ilium /krest əv 'iliəm/ *noun* same as **iliac crest**

cretinism /'kretɪnɪz(ə)m/ *noun* now called **congenital hyperthyroidism** (NOTE: This term is regarded as offensive.)

Creutzfeldt-Jakob disease /kraʊtsfēlt 'jækdb dʒi,zi:z/ *noun* a disease of the nervous system caused by a slow-acting prion which eventually affects the brain. It may be linked to BSE in cows. Abbr **CJD**. ◊ **variant CJD** [Described 1920 by H.G. Creutzfeldt (1885–1964); 1921 by A.M. Jakob (1884–1931), German psychiatrists]

cribiform /'krɪbrɪfɔ:m/ *adjective* having small holes like a sieve

cribiform plate /'krɪbrɪfɔ:m pleɪt/ *noun* the top part of the ethmoid bone which forms the roof of the nasal cavity and part of the roof of the eye sockets

crick /krik/ *noun* a painful stiffness in the neck or back (*informal*)

cricoid /'kraɪkɔɪd/ *adjective* relating to the lowest part of the cartilage of the larynx

cricoid cartilage /'kraɪkɔɪd 'kɑ:təlɪdʒ/ *noun* ring-shaped cartilage in the lower part of the larynx. See illustration at **LUNGS** in Supplement

cri-du-chat syndrome /kri: dʒu: 'ʃu: ,sɪn drəʊm/ *noun* a congenital condition, caused by loss of part of chromosome 5, which is

characterised in babies by a cry suggestive of that of a cat

Crigler-Najjar syndrome /,krɪglə 'nædʒə:n/ /sɪndrəʊm/ *noun* a genetically controlled condition in which bilirubin cannot be formed, leading to jaundice or even brain damage

criminal abortion /,krɪmin(ə)l ə'bɔ:ʃ(ə)n/ *noun* an abortion which is carried out illegally

crisis /'kraɪəsɪs/ *noun* 1. a situation or period of difficultly demanding action ◊ *Is there a crisis in the health service?* 2. a turning point in a disease, after which the person may start to become better or very much worse

COMMENT: Many diseases progress to a crisis and then the patient rapidly gets better. The opposite situation where the patient gets better very slowly is called **lysis**.

crista /'krɪstə/ *noun* 1. a ridge, e.g. the border of a bone 2. a fold in the inner membrane of a mitochondrion (NOTE: The plural is **cristae**.)

crista galli /,krɪstə 'gæləɪ/ *noun* a projection from the ethmoid bone

criterion /kraɪ'tɪriən/ *noun* an accepted standard used in making a decision or judgment about something (NOTE: The plural is **criteria**.)

critical /'kritɪk(ə)l/ *adjective* 1. referring to a crisis 2. extremely serious ◊ *He was taken to hospital in a critical condition* 3. which criticises ◊ *The report was critical of the state of aftercare provision.*

critical list /'kritɪk(ə)l lɪst/ *noun* the list of patients in a hospital whose condition is medically life-threatening

CRNA abbr certified registered nurse anaesthetist

Crohn's disease /'kraʊnz di,zi:z/ *noun* a persistent inflammatory disease, usually of the lower intestinal tract, characterised by thickening and scarring of the intestinal wall and obstruction [Described 1932. After Burrill Bernard Crohn (1884–1983), New York physician.]

COMMENT: No certain cause has been found for Crohn's disease, where only one section of the intestine becomes inflamed and can be blocked.

cromolyn sodium /,kraʊməlin 'səʊdiəm/ *noun* a drug that helps to prevent the release of histamine and other substances which cause many of the symptoms of asthma and hay fever

cross-dresser *noun* someone who wears clothes usually worn by people of the opposite sex, e.g. a transvestite

cross-dressing /'krɒps 'dresɪŋ/ *noun* the practice of wearing clothes usually worn by people of the opposite sex, e.g. by transvestites

cross eye /'krɒps aɪ/ *noun* same as **convergent strabismus** (*informal*)

cross-eyed /,krɒps 'aɪd/ *adjective* having convergent strabismus (*informal*)

cross-infection /krɒs ɪn'fekʃən/ *noun* an infection passed from one patient to another in hospital, either directly or from nurses, visitors or equipment

crossmatch /krɒs'mætʃ/ *verb (in transplant surgery)* to match a donor to a recipient as closely as possible to avoid tissue rejection. ♀ **blood group**

crossmatching /kros'mætʃɪŋ/ *noun* the process of matching a transplant donor to a recipient as closely as possible to avoid tissue rejection

cross-resistance /,krɒs rɪ'zɪstəns/ *noun* the development by a disease agent of resistance to a number of similar drugs or chemicals of the same class

cross-section /'krɒs ,sekʃən/ *noun* 1. a small part of something, taken to be representative of the whole ○ *The team consulted a cross-section of hospital ancillary staff.* 2. a sample cut across a specimen for examination under a microscope ○ *He examined a cross-section of the lung tissue.*

crotamiton /krə'tæmɪt(ə)n/ *noun* a chemical that kills mites, used to treat scabies

crotch /krɒtʃ/ *noun* the point where the legs meet the body, where the genitals are. Also called **crutch**

croup /kru:p/ *noun* acute infection of the upper respiratory passages which blocks the larynx, affecting children

COMMENT: The patient's larynx swells, and he or she breathes with difficulty and has a barking cough. Attacks usually occur at night. They can be fatal if the larynx becomes completely blocked.

crown /kraʊn/ *noun* 1. the top part of a tooth above the level of the gums 2. an artificial top attached to a tooth 3. the top part of the head ■ *verb* to put an artificial crown on a tooth

crowning /'kraʊnɪŋ/ *noun* 1. the act of putting an artificial crown on a tooth 2. a stage in childbirth in which the top of the baby's head becomes visible

cruciate /'kru:sjət/ *adjective* shaped like a cross

cruciate ligament /,kru:sjət 'lɪgəmənt/ *noun* any ligament shaped like a cross, especially either of two ligaments behind the knee which prevent the knee from bending forwards

crude death rate /kru:d 'deθ reɪt/ *noun* the number of deaths in a year, divided by the total population

crura /'kruərə/ plural of **crus**

crural /'kruərəl/ *adjective* referring to the thigh, leg or shin

crura of the diaphragm /,kruərə əv ðə 'daɪəfræm/ *plural noun* the long muscle fibres joining the diaphragm to the lumbar vertebrae

crus /krʌs/ *noun* a long projecting part (NOTE: The plural is **crura**.)

crus cerebri /krʌs 'seribraɪ/ *noun* each of the nerve tracts between the cerebrum and the medulla oblongata (NOTE: The plural is **crura cerebri**.)

crush fracture /'krʌʃ ,frækʃə/ *noun* a fracture by compression of the bone

crush syndrome /'krʌʃ ,sɪnd्रəʊm/ *noun* a condition in which a limb has been crushed, as in an accident, causing kidney failure and shock

crus of penis /,krʌs əv 'pi:nɪs/ *noun* a part of a corpus cavernosum attached to the pubic arch

crust /krʌst/ *noun* a dry layer of blood, pus or other secretion that forms over a cut or sore

crutch /krʌtʃ/ *noun* 1. a strong support for someone with an injured leg, formed of a stick with a T-bar which fits under the armpit, especially formerly, or a holding bar and elbow clasp 2. same as **crotch**

cry- /kraɪ/ *prefix* same as **cryo-** (*used before vowels*)

cryaesthesia /,kraɪə:sɪs'θi:ziə/ *noun* the fact of being sensitive to cold

cryo- /kraɪəʊ/ *prefix* cold

cryobank /kraɪəʊbæŋk/ *noun* a place where biological material such as semen and body tissues can be stored at extremely low temperatures

cryoprecipitate /,kraɪəʊprɪ'sɪpɪtət/ *noun* a precipitate such as from blood plasma, which separates out on freezing and thawing

COMMENT: Cryoprecipitate from blood plasma contains Factor VIII and is used to treat haemophilia.

cryoprobe /'kraɪəʊprəʊb/ *noun* an instrument used in cryosurgery with a tip that is kept very cold to destroy tissue

cryosurgery /,kraɪəʊ'sɜ:dʒərɪ/ *noun* surgery which uses extremely cold instruments to destroy tissue

cryotherapy /,kraɪəʊ'θerəpɪ/ *noun* treatment using extreme cold, as in removing a wart with dry ice

crypt /kript/ *noun* a small cavity in the body

crypto- /kriptəʊ/ *prefix* hidden

cryptococci /,kriptə'kɒki/ plural of **cryptococcus**

cryptococcal meningitis /,kriptəkɒk(ə)l menɪn'dʒaɪtɪs/ *noun* a form of meningitis that is a feature of cryptococcosis

cryptococcosis /,kriptəkɒk'kəʊsɪs/ *noun* an infection mainly affecting the brain or nervous system, caused by the fungus *Cryptococcus neoformans*. It occurs most often in people with HIV infection.

cryptococcus /,kriptə'kɒkəs/ *noun* one of several single-celled yeasts which exist in the soil and can cause disease (NOTE: The plural is **cryptococci**.)

cryptomenorrhoea /kriptəʊmənə'ri:ə/ noun the retention of menstrual flow, usually caused by an obstruction

cryptorchidism /krip'tɔ:kɪdɪz(ə)m/, **cryptorchism** /krip'tɔ:kɪz(ə)m/ noun a condition in a young male in which the testicles do not move down into the scrotum

cryptosporidia /,kriptəʊspə'rɪdiə/ plural of **cryptosporidium**

cryptosporidiosis /,kriptəʊspə'rɪdiə'sɪəs/ noun an infectious condition of humans and domestic animals, spread by an intestinal parasite *Cryptosporidium parvum*. Its symptoms are fever, diarrhoea and stomach cramps.

cryptosporidium /,kriptəʊspə'rɪdiəm/ noun a parasite which contaminates drinking water supplies, causing intestinal infection (NOTE: The plural is **cryptosporidia**.)

crypts of Lieberkühn /,kripts əv 'lɪbəku:n/ plural noun tubular glands found in the mucous membrane of the small and large intestine, especially those between the bases of the villi in the small intestine. Also called **Lieberkühn's glands** [Described 1745. After Johann Nathaniel Lieberkühn (1711–56), Berlin anatomist and physician.]

crystal /'krɪstəl/ noun a chemical formation of hard regular-shaped solids

crystalline /'krɪstəlɪn/ adjective clear like pure crystal

crystal violet /,krɪst(ə)l 'vaɪələt/ noun same as **gentian violet**

CSF abbr cerebrospinal fluid

CT abbr computed tomography

CT scan /,si: 'ti: skæn/ noun a computer picture of a slice of the body or an organ produced by a CT scanner. Also called **CAT scan**

CT scanner /,si: 'ti: ,skænəl/ noun a device which directs a narrow X-ray beam at a thin section of the body from various angles, using a computer to build up a complete picture of the cross-section. Also called **CAT scanner**

cubital /'kju:bit(ə)l/ adjective referring to the ulna

cubital fossa /,kju:bit(ə)l 'fɒsə/ noun a depression in the front of the elbow joint

cubitus /'kju:bitəs/ noun same as **ulna**

cuboid /'kju:bɔɪd/, **cuboid bone** /'kju:bɔɪd bən/ noun one of the tarsal bones in the foot. See illustration at **FOOT** in Supplement

cuboidal cell /'kju:bɔɪd(ə)l sel/ noun a cube-shaped epithelial cell

cuff /kʌf/ noun 1. an inflatable ring put round the arm and inflated when blood pressure is being measured 2. an inflatable ring put round an endotracheal tube to close the passage

cuirass respirator /kwi:ræs 'respirētə/ noun a type of artificial respirator which surrounds only the chest

culdoscope /'kʌldəʊskəp/ noun an instrument used to inspect the interior of a woman's pelvis, introduced through the vagina

culdoscopy /kʌl'dɒpskəpi/ noun an examination of the interior of a woman's pelvis using a culdoscope

culture /'kʌltʃə/ noun 1. the shared values and behaviour of a group 2. microorganisms or tissues grown in a culture medium in a laboratory ■ verb to grow microorganisms or tissues in a culture medium

culture medium /'kʌltʃə ,mi:dɪəm/ noun a substance in which a culture of microorganisms or tissue is grown in a laboratory, e.g. agar

cumulative /'kjū:mjʊlətɪv/ adjective growing by adding

cumulative action /,kjū:mjʊlətɪv 'ækʃən/ noun an effect of a drug which is given more often than it can be excreted and so accumulates in the tissues

cuneiform /'kjū:nɪfɔ:m/, **cuneiform bone** /'kjū:nɪfɔ:m bən/ noun one of the three tarsal bones in the foot. See illustration at **FOOT** in Supplement

cupola /'kjupələ/ noun 1. a dome-shaped structure 2. a piece of cartilage in a semicircular canal which is moved by the fluid in the canal and connects with the vestibular nerve

curable /'kjʊərəb(ə)l/ adjective able to be cured ○ a *curable form of cancer*

curare /'kjʊ'rə:ri/ noun a drug derived from South American plants, antagonist to acetylcholine and used surgically to paralyse muscles during operations without causing unconsciousness (NOTE: Curare is the poison used to make poison arrows.)

curative /'kjʊərətɪv/ adjective able to cure

cure /kjoo:/ noun a particular way of making someone well or of stopping an illness ○ *Scientists are trying to develop a cure for the common cold.* ■ verb to make someone healthy ○ *She was completely cured.* ○ *Can the doctors cure his bad circulation?*

curettage /kjoo'retɪdʒ/ noun the procedure of scraping the inside of a hollow organ, often the uterus, to remove a growth or tissue for examination. Also called **curettement**

curette /kjoo'ret/ noun a surgical instrument like a long thin spoon, used for scraping the inside of an organ (NOTE: The US spelling is **curet**.) ■ verb to scrape an organ with a curette (NOTE: **curettes** – **curetting** – **curetted**. The US spelling is **curet**.)

curettement same as **curettage**

curie /'kjooəri/ noun a former unit of measurement of radioactivity, replaced by the becquerel. Symbol Ci

Curling's ulcer /,kɜ:lɪŋz 'alsə/ noun an ulcer of the duodenum following severe injury to the body

curvature /'kɜ:vətʃə/ *noun* the way in which something bends from a straight line ○ *greater or lesser curvature of the stomach*

curvature of the spine /,kɜ:vətʃəfər əv ðə 'spæn/ *noun* an unusual bending of the spine forwards or sideways

cushingoid /'kuʃɪnɔɪd/ *adjective* showing symptoms of Cushing's disease

Cushing's disease /'kuʃɪnɪz dɪ,zi:z/, **Cushing's syndrome** /'kuʃɪnɪz, 'sɪnd्रəʊm/ *noun* a condition in which the adrenal cortex produces too many corticosteroids [Described 1932. After Harvey Williams Cushing (1869–1939), surgeon, Boston, USA.]

COMMENT: The syndrome is caused either by a tumour in the adrenal gland, by excessive stimulation of the adrenals by the basophil cells of the pituitary gland, or by a corticosteroid-secreting tumour. The syndrome causes swelling of the face and trunk, weakening of the muscles, raised blood pressure and retention of salt and water in the body.

cusp /kʌsp/ *noun* 1. the pointed tip of a tooth 2. a flap of membrane forming a valve in the heart

cuspid /'kʌspɪd/ *noun* same as **canine**

cut /kʌt/ *noun* 1. a reduction in the number or amount of something 2. a place where the skin has been penetrated by a sharp instrument ○ *She had a bad cut on her left leg. ○ The nurse will put a bandage on your cut.* ■ *verb* 1. to make an opening in something using a knife, scissors or other sharp thing ○ *The surgeon cut the diseased tissue away with a scalpel. ○ She cut her finger on the broken glass.* 2. to reduce the number or amount of something ○ *Accidents have been cut by 10%.* (NOTE: **cutting – cut**)

cut- *prefix* referring to the skin

cutaneous /kju:'teɪnɪəs/ *adjective* referring to the skin

cutaneous leishmaniasis /kju,teɪnɪəs li:fɪsm'naɪəsɪs/ *noun* a form of skin disease caused by the tropical parasite *Leishmania*. Also called **Delhi boil**

cutdown /'kʌtdaʊn/ *noun* the procedure of cutting a vein to insert a cannula or administer an intravenous drug

cuticle /'kju:tɪk(ə)l/ *noun* 1. same as **epidermis** 2. a strip of epidermis attached at the base of a nail

cutis /'kju:tɪs/ *noun* the skin

cutis anserina /,kju:tɪs 'ænsərɪnə/ *noun* a reaction of the skin when someone is cold or frightened, the skin being raised into many little bumps by the action of the arrector pili muscles. Also called **goose bumps**

CVA abbr cerebrovascular accident

cyan- /saɪən/ *prefix* same as **cyno-** (used before vowels)

cyanide /'saɪənайд/ *noun* a poison which kills very rapidly when drunk or inhaled

cyno- /saɪənəʊ/ *prefix* blue

cyanocobalamin /,saɪənəʊkəbə'læmɪn/ same as **Vitamin B₁₂**

cyanosed /'saɪənəʊst/ *adjective* with blue skin ○ *The patient was cyanosed round the lips.*

cyanosis /,saɪə'nəʊsɪs/ *noun* a condition characterised by a blue colour of the peripheral skin and mucous membranes, a symptom of lack of oxygen in the blood, e.g. in heart or lung disease

cyanotic /,saɪə'nɒtɪk/ *adjective* referring to or having cyanosis

cyclandelate /sɪ'klændəleɪt/ *noun* a drug used to treat cerebrovascular disease

cycle /'saɪk(ə)l/ *noun* a series of events which recur regularly

cyclic /'sɪklɪk, 'sɪrklik/ *adjective* 1. occurring or repeated in cycles 2. referring to organic compounds composed of a closed ring of atoms

cyclical /'sɪklɪkl(ə)l/ *adjective* referring to cycles

cyclical vomiting /,sɪklɪkl(ə)l 'vɒmɪtɪŋ/ noun repeated attacks of vomiting

-**cycline** /saɪklɪn/ *suffix* used in names of antibiotics ○ **tetracycline**

cyclitis /sɪ'klaitɪs/ *noun* inflammation of the ciliary body in the eye

cyclizine /'saɪklɪzɪn/ *noun* an antihistamine drug that can be used to control nausea and vomiting

cyclo- /saɪkləʊ/ *prefix* cycles

cyclodialysis /,saɪklə'daɪəl'æləsɪs/ *noun* a surgical operation to connect the anterior chamber of the eye and the choroid, as a treatment of glaucoma

cyclopentolate /,saɪkləʊ'pentəleɪt/ *noun* a drug used to paralyse the ciliary muscle

cyclophosphamide /,saɪkləʊ'fɒsfə'maɪd/ *noun* a drug which suppresses immunity, used in the treatment of leukaemia, lymphoma, Hodgkin's disease and tumours

cycloplegia /,saɪkləʊ'plɪdʒɪə/ *noun* paralysis of the ciliary muscle which makes it impossible for the eye to focus properly

cyclopropane /,saɪkləʊ'prəʊpeɪn/ *noun* a flammable hydrocarbon gas used as a general anaesthetic and in organic synthesis

cyclothymia /,saɪkləʊ'θarmiə/ *noun* a mild form of bipolar disorder in which the person experiences alternating depression and excitement

cyclotomy /saɪ'klɒtəmɪ/ *noun* a surgical operation to make a cut in the ciliary body (NOTE: The plural is **cyclotomies**.)

-**cyclovir** /sɑɪkləʊvɪr/ *suffix* used in the names of antiviral drugs

cysis /saɪ'sɪs/ *noun* same as **pregnancy (technical)**

cylinder /'sɪlɪndə/ *noun* ♦ **oxygen cylinder**

cyst /sist/ *noun* an unusual growth in the body shaped like a pouch, containing liquid or semi-liquid substances

cyst- /sist/ *prefix* the bladder

cystadenoma /,sistədə'nəʊmə/ *noun* an adenoma in which fluid-filled cysts form (NOTE: The plural is **cystadomas** or **cystadonomas**.)

cystalgia /si'stældʒə/ *noun* pain in the urinary bladder

cystectomy /si'stektəmɪ/ *noun* a surgical operation to remove all or part of the urinary bladder (NOTE: The plural is **cystectomies**.)

cystic /sistɪk/ *adjective* 1. referring to cysts 2. referring to a bladder

cystic artery /sistɪk 'a:tərɪ/ *noun* an artery leading from the hepatic artery to the gall bladder

cystic duct /sistɪk dʌkt/ *noun* a duct which takes bile from the gall bladder to the common bile duct

cysticercosis /,sistɪsɔ:'kəʊsɪs/ *noun* a disease caused by infestation of tapeworm larvae from pork

cysticercus /sistɪ'sɔ:kəs/ *noun* the larva of a tapeworm of the genus *Taenia*, found in pork, which is enclosed in a cyst (NOTE: The plural is **cysticerci**.)

cystic fibrosis /sistɪk fai'b्रeʊsɪs/ *noun* a hereditary disease in which there is malfunction of the exocrine glands such as the pancreas, in particular those which secrete mucus, causing respiratory difficulties, male infertility and malabsorption of food from the gastrointestinal tract. Also called **fibrocystic disease**, **mucoviscidosis**

COMMENT: The thick mucous secretions cause blockage of ducts and many serious secondary effects in the intestines and lungs. Symptoms include loss of weight, abnormal faeces and bronchitis. If diagnosed early, cystic fibrosis can be controlled with vitamins, physiotherapy and pancreatic enzymes.

cystic vein /sistɪk veɪn/ *noun* a vein which drains the gall bladder

cystine /'sistɪ:n/ *noun* an amino acid. It can cause stones to form in the urinary system of people who have a rare inherited metabolic disorder.

cystinosis /,sistɪ'nəʊsɪs/ *noun* a disorder affecting the absorption of amino acids, resulting in excessive amounts of cystine accumulating in the kidneys

cystinuria /,sistɪ'njuəriə/ *noun* cystine in the urine

cystitis /si'staɪtɪs/ *noun* inflammation of the urinary bladder, which makes someone pass water often and with a burning sensation

cystocele /'sistəsə:l/ *noun* a hernia of the urinary bladder into the vagina

cystogram /sistəgræm/ *noun* an X-ray photograph of the urinary bladder

cystography /si'stɒgrəfi/ *noun* an examination of the urinary bladder by X-rays after radio-opaque dye has been introduced

cystolithiasis /,sistəlɪ'θaɪəsɪs/ *noun* a condition in which stones are formed in the urinary bladder

cystometer /si'stɒmɪtə/ *noun* an apparatus which measures the pressure in the bladder

cystometry /si'stɒmɪtri/ *noun* measurement of the pressure in the bladder

cystopexy /si'stɒpeksi/ *noun* a surgical operation to fix the bladder in a different position. Also called **vesicofixation** (NOTE: The plural is **cystopexies**.)

cystoplasty /sistə,plæsti/ *noun* a surgical operation on the bladder (NOTE: The plural is **cystoplasties**)

cystoscope /'sistəskəʊp/ *noun* an instrument made of a long tube with a light at the end, used to inspect the inside of the bladder

cystoscopy /si'stɒskəpi/ *noun* an examination of the bladder using a cystoscope (NOTE: The plural is **cystoscopies**.)

cystostomy /si'stɒstəmɪ/, **cystotomy** /si'stɒtəmɪ/ *noun* a surgical operation to make an opening between the bladder and the abdominal wall to allow urine to pass without going through the urethra. Also called **vesicostomy** (NOTE: The plurals are **cystostomies** and **cystotomies**.)

cystourethrography /sistəu,jʊərɪ'θrɒgrəfi/ *noun* X-ray examination of the bladder and urethra

cystourethroscope /,sistəu,jʊ'ri:θrəs̩kəʊp/ *noun* an instrument used to inspect the bladder and urethra

cyt- /saɪt/ *prefix* same as **cyto-** (used before vowels)

cyto- /saɪtəʊ/ *prefix* cell

cytochemistry /,saɪtəʊ'kemɪstri/ *noun* the study of the chemical activity of cells

cytodiagnosis /saɪtəudərəg'nəʊsɪs/ *noun* diagnosis after examination of cells

cytogenetics /,saɪtəudʒə'netɪks/ *noun* a branch of genetics which studies the function of cells, especially chromosomes, in heredity

cytokine /'saɪtəkain/ *noun* a protein secreted by cells of the lymph system which is involved in controlling response to inflammation

cytokinesis /,saɪtə'kɪni'sɪs/ *noun* changes in the cytoplasm of a cell during division

cytological smear /,saɪtəlɒdʒɪk(ə)l 'smɪə/ *noun* a sample of tissue taken for examination under a microscope

cytology /saɪ'tɒlədʒɪ/ *noun* the study of the structure and function of cells

cytolysis /saɪ'tɒləsɪs/ *noun* the breaking down of cells

cytomegalovirus /,saɪtəʊ'megələʊ,vairəs/ *noun* one of the herpesviruses which can cause

serious congenital disorders in a fetus if it infects the pregnant mother. Abbr **CMV**

cytometer /saɪ'tɒmɪtə/ *noun* an instrument attached to a microscope, used for measuring and counting the number of cells in a specimen

cytopenia /,saɪtə'pi:nɪə/ *noun* a deficiency of cellular elements in blood or tissue

cytoplasm /'saɪtəplæz(ə)m/ *noun* a substance inside the cell membrane which surrounds the nucleus of a cell

cytoplasmic /,saɪtə'plæzmɪk/ *adjective* referring to the cytoplasm of a cell

cytosine /'saɪtəʊsɪ:n/ *noun* one of the four basic chemicals in DNA

cytosome /'saɪtəsəʊm/ *noun* the body of a cell, not including the nucleus

cytotoxic /,saɪtə'otrɒksɪk/ *adjective* 1. referring to a drug or agent which prevents cell division 2. referring to cells in the immune system which destroy other cells

cytotoxic drug /,saɪtə'otrɒksɪk 'drʌg/ *noun* a drug which reduces the reproduction of cells, used to treat cancer

cytotoxin /,saɪtə'u'trɒksɪn/ *noun* a substance which has a toxic effect on cells

D

d /di:/ *symbol* deci-

da symbol deca-

dab /dæb/ *verb* to touch something lightly ○ *He dabbed around the cut with a piece of cotton wool.*

da Costa's syndrome /də: 'kɒstəz ,sɪn drəʊm/ *noun* same as **disordered action of the heart** [Described 1871. After Jacob Mendes da Costa (1833–1900), Philadelphia surgeon, who described this condition in soldiers in the American Civil War.]

dacryo- /dækriəʊ/ *prefix* tears

dacryoadenitis /,dækriəʊə'nedɪtɪs/ *noun* inflammation of the lacrimal gland

dacryocystitis /,dækriəʊsɪ'taɪtɪs/ *noun* inflammation of the lacrimal sac when the tear duct, which drains into the nose, becomes blocked

dacryocystography /,dækriəʊsɪ'stɒgrəfɪ/ *noun* contrast radiography to determine the site of an obstruction in the tear ducts

dacryocystorhinostomy /,dækriəʊ ,sɪstəraɪn'nostəmɪ/ *noun* a surgical operation to bypass a blockage from the tear duct which takes tears into the nose. Abbr **DCR** (NOTE: The plural is **dacryocystorhinostomies**.)

dacryolith /'dækriəʊlɪθ/ *noun* a stone in the lacrimal sac

dacryoma /,dækri'əʊmə/ *noun* a benign swelling in one of the tear ducts (NOTE: The plural is **dacryomas** or **dacryomata**.)

dactyl /'dæktɪl/ *noun* a finger or toe

dactyl- /'dæktɪl/ *prefix* same as **dactylo-** (used before vowels)

dactylitis /,dæktɪl'laɪtɪs/ *noun* inflammation of the fingers or toes, caused by bone infection or rheumatic disease

dactylo- /'dæktɪləʊ/ *prefix* referring to the fingers or toes

dactylography /,dæktri'ɒplædʒi/ *noun* signs made with the fingers in place of words when talking to a person who is unable to hear, or when a person who is unable to hear or speak wants to communicate

dactylomegaly /,dæktɪləʊ'megəli/ *noun* a condition in which a person has longer fingers than usual

DAH *abbr* disordered action of the heart

daily /'deɪli/ *adverb* every day ○ *Take the medicine twice daily.*

Daltonism /də:ltonɪz(ə)m/ *noun* the commonest form of colour blindness, in which someone cannot see the difference between red and green. Also called **protanopia** [Described 1794. After John Dalton (1766–1844), English chemist and physician. Founder of the atomic theory, he himself was colour-blind.]

damage /'dæmɪdʒ/ *noun* harm done to things ○ *The disease caused damage to the brain cells.* ■ *verb* to harm something ○ *His hearing or his sense of balance was damaged in the accident.*

damp /dæmp/ *adjective* slightly wet ○ *You should put a damp compress on the bruise.*

D & C /di: ən/ *abbr* dilatation and curettage

dander /'dændə/ *noun* very small fragments that fall from the feathers, hair or skin of animals or people

dandruff /'dændrəf/ *noun* pieces of dead skin from the scalp which fall out when the hair is combed. Also called **pityriasis capitis, scurf**

D and V /,di: ən 'vi:/ *abbr* diarrhoea and vomiting

Dandy-Walker syndrome /,dændi 'wɔ:kə ,sɪndrəʊm/ *noun* a congenital condition in which there is no Magendie's foramen in the brain

danger /'deɪndʒər/ *noun* the possibility of harm or death ○ *Unless the glaucoma is treated quickly, there's a danger that the patient will lose his eyesight or a danger of the patient losing his eyesight.* □ **out of danger** no longer likely to die

dangerous /'deɪndʒərəs/ *adjective* causing harm or death

dangerous drug /,deɪndʒərəs 'dræg/ *noun*
1. a drug which is harmful and is not available to the general public, e.g. morphine or heroin
2. a poison which can only be sold to specific persons

dark adaptation /dɑ:k ,ædæp'teɪʃ(ə)n/ noun the reflex changes which enable the eye to continue to see in dim light. For example, the pupil becomes larger and the rods in the retina become more active than the cones.

darkening /'da:kniŋ/ noun the act of becoming darker in colour ◎ *Darkening of the tissue takes place after bruising.*

data /'deɪtə/ plural noun information in words or figures about a particular subject, especially information which is available on computer (NOTE: In scientific usage, **data** is used with a plural verb: *The data are accurate.* In everyday language, **data** is often used with a singular verb: *The recent data supports our case.)*

data bank /'deɪtə bænk/ noun a store of information in a computer ◎ *The hospital keeps a data bank of information about possible kidney donors.*

database noun a structured collection of information in a computer that can be automatically retrieved and manipulated

Data Protection Act /,deɪtə prə'tekʃ(ə)n/ noun a parliamentary act intended to protect information about individuals that is held on computers. It ensures that all information is stored securely and allows people to have access to their entries.

daughter /'dɔ:tə/ noun a female child of a parent ◎ *They have two sons and one daughter.*

daughter cell /'dɔ:tə sel/ noun any of the cells which develop by mitosis from a single parent cell

day blindness /'deɪ ,blaindnəs/ noun same as **hemeralopia**

day care /'deɪ keə/ noun supervised recreation or medical care provided during the day for people who need special help, e.g. some elderly people or small children

day case /'deɪ keɪs/ noun same as **day patient**

day case surgery /'deɪ keɪs ,s3:dʒəri/ noun same as **day surgery**

day centre /'deɪ ,sentə/ noun a place providing day care

day hospital /'deɪ ,hɒspɪt(ə)l/ noun a hospital where people are treated during the day and go home in the evenings

day nursery /'deɪ ,nɜ:s(ə)ri/ noun a place where small children can be looked after during the daytime while their parents or guardians are at work

day patient /'deɪ ,peɪʃ(ə)nt/ noun a patient who is in hospital for treatment for a day and does not stay overnight. Also called **day case**

day patient care /'deɪ peɪʃ(ə)nt keə/ noun care for patients who are resident in a hospital during the daytime only

day recovery ward /'deɪ ri'kʌv(ə)ri wɔ:d/ noun a ward where day patients who have had

minor operations can recover before going home

day surgery /'deɪ ,s3:dʒəri/ noun a surgical operation which does not require the patient to stay overnight in hospital. Also called **day case surgery**

dazed /deɪzd/ adjective confused in the mind ◎ *She was found walking about in a dazed condition.* ◎ *He was dazed after the accident.*

dB abbr decibel

DCR abbr dacryocystorhinostomy

DDS abbr US doctor of dental surgery

DDT abbr dichlorodiphenyltrichloroethane

de- /di:/ prefix removal or loss

dead /ded/ adjective 1. no longer alive ◎ *My grandparents are both dead* ◎ *The woman was rescued from the crash, but was certified dead on arrival at the hospital* 2. not sensitive ◎ *The nerve endings are dead.* ◎ *His fingers went dead.*

deaden /'ded(ə)n/ verb to make something such as pain or noise less strong ◎ *The doctor gave him an injection to deaden the pain.*

dead fingers /'ded fɪŋgəz/ noun same as **Raynaud's disease**

deadly nightshade /,dedli 'naitʃeɪd/ noun same as **belladonna**

dead man's fingers /,ded mænz 'fɪngəz/ noun same as **Raynaud's disease**

dead space /'ded speɪs/ noun a breath in the last part of the process of breathing in air which does not get further than the bronchial tubes

deaf /def/ adjective not able to hear in circumstances where most people would ◎ *You have to speak slowly and clearly when you talk to Mr Jones because he's quite deaf.* ◇ **hearing-impaired** ■ plural noun ◇ **the deaf** people who are deaf

deaf and dumb /,def æn 'dʌm/ noun not able to hear or to speak (NOTE: This term is regarded as offensive.)

deafen /'def(ə)n/ verb to make someone deaf for a time ◎ *He was deafened by the explosion.*

deafness /'defnəs/ noun the fact of being unable to hear in circumstances where most people would ◇ **partial deafness** 1. the condition of being able to hear some tones, but not all 2. a general dulling of the whole range of hearing

COMMENT: Deafness has many degrees and many causes: old age, viruses, exposure to continuous loud noise or intermittent loud explosions, and diseases such as German measles.

deaminiate /di:'æmɪneɪt/ verb to remove an amino group from an amino acid, forming ammonia

deamination /di:,æmɪ'nейʃ(ə)n/ noun the process by which amino acids are broken down in the liver and urea is formed

COMMENT: After deamination, the ammonia which is formed is converted to urea by the liv-

er, while the remaining carbon and hydrogen from the amino acid provide the body with heat and energy.

death /deθ/ *noun* the permanent end of all natural functions

death certificate /'deθ sə,tifikət/ *noun* an official document signed by a doctor stating that a person has died and giving details of the person and the cause of death

death rate /'deθ reɪt/ *noun* the number of deaths per year per thousand of population ○ *The death rate from cancer of the liver has remained stable.*

debilitate /dɪ'bɪlɪteɪt/ *verb* to make someone or something weak ○ *He was debilitated by a long illness.*

debilitating disease /dɪ'bɪlɪteɪtɪŋ dɪ'zɪ:z/ *noun* a disease which makes the person weak

debility /dɪ'bɪlɪtɪ/ *noun* general weakness

debridement /dɪ'bri:dment/ *noun* the removal of dirt or dead tissue from a wound to help healing

deca- /dɛkə/ *prefix* ten. Symbol **da**

Decadron /'dekədrɒn/ a trade name for dexamethasone

decalcification /dɪ:kælsfɪ'tkeɪʃ(ə)n/ *noun* the loss of calcium salts from teeth and bones

decanutation /dɪ:kænjʊ'leɪʃ(ə)n/ *noun* the removal of a tracheostomy tube

decapitation /dɪ:kæpɪ'teɪʃ(ə)n/ *noun* the act or process of cutting off the head of a person or animal

decapsulation /dɪ:kæpsju'leɪʃ(ə)n/ *noun* a surgical operation to remove a capsule from an organ, especially from a kidney

decay /dɪ'keɪ/ *noun* 1. the process by which tissues become rotten, caused by the action of microorganisms and oxygen 2. damage caused to tissue or a tooth by the action of microorganisms, especially bacteria ■ *verb (of tissue)* to rot ○ *The surgeon removed decayed matter from the wound.*

deci- /dɛsi/ *prefix* one tenth (10^{-1}) ○ *decigram* Symbol **d**

decibel /'desɪbel/ *noun* a unit of measurement of the loudness of sound, used to compare different levels of sound. Symbol **dB**

COMMENT: Normal conversation is at about 50dB. Very loud noise with a value of over 120dB, e.g. that of aircraft engines, can cause pain.

decidua /dɪ'sɪdjʊə/ *noun* a membrane which lines the uterus after fertilisation (NOTE: The plural is **deciduas** or **deciduae**.)

COMMENT: The decidua is divided into several parts: the **decidua basalis**, where the embryo is attached, the **decidua capsularis**, which covers the embryo and the **decidua vera** which is the rest of the decidua not touching the embryo. It is expelled after the birth of the baby.

decidual /dɪ'sɪdjʊəl/ *adjective* referring to the decidua

deciduoma /dɪ'sɪdjʊə'mə/ *noun* a mass of decidual tissue remaining in the uterus after birth (NOTE: The plural is **deciduomas** or **deciduomata**.)

deciduous /dɪ'sɪdjʊəs/ *adjective* referring to teeth discarded at a later stage of development

deciduous dentition /dɪ,sɪdjʊəs den'tɪʃ(ə)n/ *noun* the set of twenty teeth which are gradually replaced by the permanent teeth as a child grows older

deciduous tooth /dɪ'sɪdjʊəs tu:θ/ *noun* same as **primary tooth**

decilitre /'desilɪ:tə/ *noun* a unit of measurement of liquid equal to one tenth of a litre. Symbol **dl** (NOTE: The US spelling is **deciliter**.)

decimetre /'desɪmɪ:tə/ *noun* a unit of measurement of length equal to one tenth of a metre. Symbol **dm** (NOTE: The US spelling is **decimeter**.)

decompensation /dɪ:kəmpə'nseɪʃ(ə)n/ *noun* a condition in which an organ such as the heart cannot cope with extra stress placed on it and so is unable to perform its function properly

decompose /,di:kəm'pəʊz/ *verb* to rot or become putrefied (NOTE: **decomposing** – **decomposed**)

decomposition /,di:kəmpə'zɪʃ(ə)n/ *noun* the process where dead matter is rotted by the action of bacteria or fungi

decompression /,di:kəm'preʃ(ə)n/ *noun* 1. reduction of pressure 2. a controlled reduction of atmospheric pressure which occurs as a diver returns to the surface

decompression sickness /,di:kəm',preʃ(ə)n 'sɪknəs/ *noun* same as **caisson disease**

decongest /,di:kən'dʒest/ *verb* to loosen or disperse mucus in the nasal passages, sinuses or bronchi

decongestant /,di:kən'dʒestənt/ *adjective* reducing congestion and swelling ■ *noun* a drug which reduces congestion and swelling, sometimes used to unblock the nasal passages

decontamination /,di:kəntæmə'nɪseɪʃ(ə)n/ *noun* the removal of a contaminating substance such as radioactive material

decortication /dɪ:,kɔ:tɪ'keɪʃ(ə)n/ *noun* the surgical removal of the cortex of an organ □

decortication of a lung a surgical operation to remove part of the pleura which has been thickened or made stiff by chronic empyema

decrudescence /,di:kru:'des(ə)ns/ *noun* a reduction in the symptoms of a disease

decubitus /dr'kjʊ:bɪtəs/ *noun* the position of a person who is lying down

decubitus ulcer /dr,kjʊ:bɪtəs 'ʌlsə/ *noun* same as **bedsores**

decussation /,di:kʌ'seɪʃ(ə)n/ *noun* the crossing of nerve fibres in the central nervous system. Also called **chiasm**

deep /di:p/ *adjective* located, coming from or reaching relatively far inside the body. Opposite **superficial**

deep cervical vein /di:p 'sɜ:vɪk(ə)l vein/ *noun* a vein in the neck which drains into the vertebral vein

deep dermal burn /di:p 'dɜ:m(ə)l bɜ:n/ *noun* a burn which is so severe that a graft will be necessary to repair the skin damage. Also called **full thickness burn**

deep facial vein /di:p 'feɪʃ(ə)l vein/ *noun* a small vein which drains from the pterygoid process behind the cheek into the facial vein

deeply /'di:pli/ *adverb* so as to take in a large amount of air ○ *He was breathing deeply.*

deep plantar arch /di:p 'plæntər ɑ:tʃ/ *noun* a curved artery crossing the sole of the foot

deep vein /di:p 'veɪn/ *noun* a vein which is inside the body near a bone, as opposed to a superficial vein near the skin

deep-vein thrombosis /,di:p veɪn θrɒm 'baʊəsɪs/ *noun* a condition arising when a thrombus formed in the deep veins of a leg or the pelvis travels to a lung where it may cause death. The condition may affect anyone who is inactive for long periods. Also called **phlebothrombosis**. Abbr **DVT**

defecate /'defekeɪt/, **defaecate** *verb* to pass faeces out from the bowels through the anus
(NOTE: **defecating – defecated**)

defecation /,defə'keɪʃ(ə)n/, **defaecation** *noun* the act of passing out faeces from the bowels

defect /'di:fekt/ *noun* 1. an unsatisfactory or imperfect feature of something 2. a lack of something which is necessary

defective /dr'fektɪv/ *adjective* working badly or wrongly formed ○ *The surgeons operated to repair a defective heart valve.* ■ *noun* a person suffering from severe mental impairment
(NOTE: The noun use is regarded as offensive.)

defence /dr'fens/ *noun* 1. resistance against an attack of a disease 2. behaviour of a person which is aimed at protecting him or her from harm (NOTE: The US spelling is **defense**)

defence mechanism /dr'fens ,mekənɪz(ə)m/ *noun* a subconscious reflex by which a person prevents himself or herself from showing emotion

defense /dr'fens/ *noun* US same as **defence**

defensive medicine /di,fɛnsɪv 'med(ə)s(ə)n/ *noun* extensive diagnostic testing before treatment to minimise the likelihood of a patient suing the doctor or hospital for negligence

deferent /'defrənt/ *adjective* 1. going away from the centre 2. referring to the vas deferens

defervescence /,defə'ves(ə)ns/ *noun* a period during which a fever is subsiding

defibrillation /di:fɪbrɪ'leɪʃ(ə)n/ *noun* a procedure to correct an irregular heartbeat by applying a large electrical impulse to the chest wall, especially in potentially life-threatening circumstances. Also called **cardioversion**

defibrillator /di:fɪbrɪleɪtə/ *noun* an apparatus used to apply an electric impulse to the heart to make it beat regularly

defibrination /di:faɪbrɪ'nɛɪʃ(ə)n/ *noun* the removal of fibrin from a blood sample to prevent clotting

deficiency /dr'fɪʃ(ə)nsi/ *noun* a lack of something necessary

deficiency disease /dr'fɪʃ(ə)nsi dr,zi:z/ *noun* a disease caused by lack of an essential element in the diet such as vitamins or essential amino and fatty acids

deficient /dr'fɪʃ(ə)nt/ *adjective* not meeting the required standard □ **deficient in something** not containing the necessary amount of something ○ *His diet is deficient in calcium or he has a calcium-deficient diet.*

deficit /'defɪsɪt/ *noun* the amount by which something is less than it should be

defloration /,di:flo:rə'reɪʃ(ə)n/ *noun* the act of breaking the hymen of a virgin, usually at the first sexual intercourse

deflorescence /,di:flo:'res(ə)ns/ *noun* the disappearance of a rash

deformans /di:'fɔ:mənz/ ♦ **osteitis deformans**

deformation /,di:fɔ:'meɪʃ(ə)n/ *noun* the process of becoming deformed, or the state of being deformed ○ *The later stages of the disease are marked by bone deformation.*

deformed /dr'fɔ:md/ *adjective* not shaped or formed in the expected way

deformity /di:fɔ:miti/ *noun* an unusual shape of part of the body

degenerate /dr'dʒenəreɪt/ *verb* to change so as not to be able to function ○ *His health degenerated so much that he was incapable of looking after himself.*

degeneration /dr,dʒenə'reɪʃ(ə)n/ *noun* a change in the structure of a cell or organ so that it no longer works properly

degenerative disease /di,dʒen(ə)rətɪv di 'zɪz/, **degenerative disorder** /di ,dʒen(ə)rətɪv dɪs'ɔ:də/ *noun* a disease or disorder in which there is progressive loss of function of a part of the body, or in which a part of the body fails to repair itself

degenerative joint disease /di ,dʒen(ə)rətɪv 'dʒoint di,zi:z/ *noun* same as **osteoarthritis**

deglutition /,di:glu:'tɪʃ(ə)n/ *noun* the action of passing food or liquid, and sometimes also air, from the mouth into the oesophagus (technical) Also called **swallowing**

dehisced /di'hɪst/ *adjective* referring to a wound which has split open after being closed

dehiscence /dɪ'his(ə)ns/ *noun* the act of opening wide

dehydrate /,di:haɪ'dreɪt/ *verb* to lose water, or cause someone or something to lose water ○ *During strenuous exercise it's easy to become dehydrated. (NOTE: dehydrating – dehydrated)*

dehydration /,di:haɪ'dreɪʃ(ə)n/ *noun* loss of water

'...an estimated 60–70% of diarrhoeal deaths are caused by dehydration' [Indian Journal of Medical Sciences]

COMMENT: Water is more essential than food for a human being's survival. If someone drinks during the day less liquid than is passed out of the body in urine and sweat, he or she begins to dehydrate.

dehydrogenase /,di:haɪ'drɒndʒeɪnəs/ *noun* an enzyme that transfers hydrogen between chemical compounds

déjà vu /dejɑ:vu:/ *noun* an illusion that a new situation is a previous one being repeated, usually caused by a disease of the brain

Déjerine-Klumpke's syndrome *noun* same as **Klumpke's paralysis**

deleterious /,delɪ'tɪriəs/ *adjective* damaging or harmful

Delhi boil /,dɛli 'bɔɪl/ *noun* same as **cutaneous leishmaniasis**

delicate /'delɪkət/ *adjective* 1. easily broken or harmed ○ *The bones of a baby's skull are very delicate.* ○ *The eye is covered by a delicate membrane.* 2. easily falling ill ○ *His delicate state of health means that he is not able to work long hours.* 3. requiring great care or sensitivity ○ *The surgeons carried out a delicate operation to join the severed nerves.*

delirious /dɪ'lɪriəs/ *adjective* affected by delirium. A person can become delirious because of shock, fear, drugs or fever.

delirium /dɪ'lɪriəm/ *noun* a mental state in which someone is confused, excited and restless and has hallucinations

delirium tremens /dɪ'lɪriəm 'tri:mɛnz/, **delirium alcoholicum** /dɪ'lɪriəm ,ælkə'hɒlkə'məʊn/ *noun* a state of mental illness usually found in long-term alcoholics who attempt to give up alcohol consumption. It includes hallucinations about insects, trembling and excitement. Abbr **DTs**

delivery /drɪ'lɪv(ə)ri/ *noun* the birth of a child

delivery bed /drɪ'lɪv(ə)ri bed/ *noun* a special bed on which a mother lies to give birth

delivery room /drɪ'lɪv(ə)ri ru:m/ *noun* a room in a hospital specially equipped for women to give birth

delta /'deltə/ *noun* the fourth letter of the Greek alphabet

delta hepatitis /,deltə ,hepə'tartɪs/ *noun* a severe form of hepatitis caused by an RNA virus in conjunction with the hepatitis B virus. Also called **hepatitis delta**

delta virus /deltə 'vairəs/ *noun* the RNA virus which causes delta hepatitis

delta wave /'deltə weɪv/ *noun* a slow brain wave which is produced in the front of the brain by adults in deep sleep, registering a frequency of 3.5 hertz

deltoid /'deltɔɪd/, **deltoid muscle** /'deltɔɪd ,mʌs(ə)l/ *noun* a big triangular muscle covering the shoulder joint and attached to the humerus, which lifts the arm sideways

deltoid tuberosity /,deltɔɪd ,tju:bə'rəʊsɪtɪ/ *noun* a raised part of the humerus to which the deltoid muscle is attached

delusion /dɪ'lju:ʒ(ə)n/ *noun* a false belief which a person holds which cannot be changed by reason ○ *He suffered from the delusion that he was wanted by the police.*

dementia /dɪ'menʃə/ *noun* the loss of mental ability and memory due to organic disease of the brain, causing disorientation and personality changes

'AIDS dementia is a major complication of HIV infection, occurring in 70–90% of patients' [British Journal of Nursing]

dementia of the Alzheimer's type /dɪ'menʃə ev ði 'æltʃaiməz ,taɪp/ *noun* a form of mental degeneration probably due to Alzheimer's disease

dementia paralytica /dɪ'menʃə ,pærə'lɪtɪkə/ *noun* mental degeneration due to the tertiary stage of syphilis

dementia praecox /dɪ'menʃə 'pri:kɒks/ *noun* same as **schizophrenia (old)**

dementing /dɪ'mentɪŋ/ *adjective* referring to someone with dementia

demi- /dēmi/ *prefix* half

demographic forecast /,deməgræfɪk 'fɔ:rkəst/ *noun* a forecast of the numbers of people of different ages and sexes in an area at some time in the future

demography /drɪ'mɒgræfi/ *noun* the study of populations and environments or changes affecting populations

demulcent /drɪ'malsənt/ *noun* a soothing substance which relieves irritation in the stomach

demyelinating /di:'maɪəlɪneɪtɪŋ/ *adjective* relating to the destruction of the myelin sheath round nerve fibres

demyelination /di:,maɪəlɪ'nɛf(ə)n/ *noun* the destruction of the myelin sheath round nerve fibres, caused, e.g. by injury to the head, or as the main result of multiple sclerosis

denatured alcohol /di:,neɪtʃəd 'ælkəhɒl/ *noun* ethyl alcohol such as methylated spirit, rubbing alcohol or surgical spirit with an additive, usually methyl alcohol, to make it unpleasant to drink

dendrite /'dendraɪt/ *noun* a branched structure growing out from a nerve cell, which receives impulses from the nerve endings of oth-

er nerve cells at synapses. See illustration at **NEURONE** in Supplement. Also called **dendron**

dendritic /dən'drɪtɪk/ *adjective* referring to a dendrite

dendritic ulcer /dən'drɪtɪk 'alsə/ *noun* a branching ulcer on the cornea, caused by a herpesvirus

dendron /'dendrən/ *noun* same as **dendrite**

denervation /,di:nə'veɪʃ(ə)n/ *noun* the stopping or cutting of the nerve supply to a part of the body

dengue /'dɛŋgwe/ *noun* a tropical disease caused by an arbovirus transmitted by mosquitoes, characterised by high fever, pains in the joints, headache and rash. Also called **break-bone fever**

denial /dɪ'naiəl/ *noun* a person's refusal to accept that he or she has a serious medical problem

Denis Browne splint /,dɛnis braʊn 'splɪnt/ *noun* a metal splint used to correct a club foot [Described 1934. After Sir Denis John Wolko Browne (1892–1967), Australian orthopaedic and general surgeon working in Britain.]

dens /dɛnz/ *noun* a tooth, or something shaped like a tooth

dent- /dent/ *prefix* referring to a tooth or teeth

dental /'dɛnt(ə)l/ *adjective* referring to teeth or to the treatment of teeth ○ **dental caries** ○ **dental surgeon**

dental care /'dɛnt(ə)l keə/ *noun* the examination and treatment of teeth

dental caries /,dɛnt(ə)l 'keərɪz/ *noun* the rotting of a tooth. Also called **dental decay**

dental cyst /,dɛnt(ə)l 'sist/ *noun* a cyst near the root of a tooth

dental decay /,dɛnt(ə)l dɪ'keɪ/ *noun* same as **dental caries**

dental floss /'dɛnt(ə)l flɒs/ *noun* a soft thread which can be pulled between the teeth to help keep them clean

dental hygiene /,dɛnt(ə)l 'haɪdʒi:n/ *noun* procedures to keep the teeth clean and healthy

dental impaction /,dɛnt(ə)l ɪm'pækʃ(ə)n/ *noun* a condition in which a tooth is closely pressed against other teeth and cannot grow normally

dental plaque /,dɛnt(ə)l 'plæk/ *noun* a hard smooth bacterial deposit on teeth, which is the probable cause of caries

dental plate /'dɛnt(ə)l pleɪt/ *noun* a prosthesis made to the shape of the mouth, which holds artificial teeth

dental prosthesis /,dɛnt(ə)l prɒs'thɪ:sɪs/ *noun* one or more false teeth

dental pulp /,dɛnt(ə)l 'pʌlp/ *noun* soft tissue inside a tooth

dental surgeon /'dɛnt(ə)l ,sɜ:dʒən/ *noun* a person who is qualified to practise surgery on teeth

dental surgery /'dɛnt(ə)l ,sɜ:dʒəri/ *noun* 1.

the office and operating room of a dentist 2. surgery carried out on teeth

dentine /'dɛntaɪn/ *noun* a hard substance which surrounds the pulp of teeth, beneath the enamel (NOTE: The US spelling is **dentin**.)

dentist /'dɛntɪst/ *noun* a person who is qualified to look after teeth and gums

dentistry /'dɛntɪstri/ *noun* the profession of a dentist, or the branch of medicine dealing with teeth and gums

dentition /dɛn'tɪʃ(ə)n/ *noun* the number, arrangement and special characteristics of all the teeth in a person's jaws

COMMENT: Children have incisors, canines and molars, which are replaced over a period of years by the permanent teeth: eight incisors, four canines, eight premolars and twelve molars, the last four molars being called the wisdom teeth.

dentoid /'dɛntɔɪd/ *adjective* shaped like a tooth

denture /'dɛntʃə/ *noun* a set of false teeth, fixed to a device which fits inside the mouth

deodorant /di:'əʊd(ə)rənt/ *noun* a substance which hides or prevents unpleasant smells ■ *adjective* hiding or preventing odours

deontology /,di:ən'tɒnlədʒi/ *noun* the ethics of duty and of what is morally right or wrong

deoxygenate /di:'bksɪdʒəneɪt/ *verb* to remove oxygen from something

deoxygenated blood /di:pksɪdʒəneɪt 'blʌd/ *noun* blood from which most of the oxygen has been removed by the tissues. It is darker than arterial oxygenated blood. Also called **venous blood**. Compare **deoxygenated blood**

deoxyribonucleic acid /di:,nksɪ,raɪbənju:kli:k 'æsɪd/ *noun* full form of **DNA**

Department of Health /di:pɑ:tment əv 'heɪlθ/ *noun* in the UK, the government department in charge of health services. Abbr **DH**

dependant /dr'pendənt/ *noun* a person who is looked after or supported by someone else ○ *He has to support a family of six children and several dependants.*

dependence /dr'pendəns/, **dependency** /di'pendənsi/ *noun* the fact of needing the support of something or someone such as a carer, nurse or doctor, or of being addicted to a drug

dependent /dr'pendənt/ *adjective* 1. needing the support of someone or something 2. addicted to a drug 3. referring to a part of the body which is hanging down

dependent relative /dr'pendənt 'relatɪv/ *noun* a person who is looked after by another member of the family

depersonalisation /di:pəzɪs(ə)n(ə)laɪz'zeɪʃ(ə)n/; **depersonalization** *noun* a psychiatric state in which someone does not believe he or she is real

depilation /dɪ'pɪlɪeɪʃ(ə)n/ *noun* the removal of hair

depilatory /dɪ'pɪlət(ə)ri/ *noun* a substance which removes hair ■ *adjective* removing hair

depletion /dɪ'pli:ʃ(ə)n/ *noun* the act or process of something being reduced

Depo-Provera a trademark for a progestrone derivative used in birth control and the treatment of endometriosis which is administered by three-monthly injection

deposit /dɪ'pozɪt/ *noun* a substance which is attached to part of the body ○ *Some foods leave a hard deposit on teeth.* ○ *A deposit of fat forms on the walls of the arteries.* ■ *verb* to attach a substance to part of the body ○ *Fat is deposited on the walls of the arteries.*

depressant /dɪ'pres(ə)nt/ *noun* a drug which reduces the activity of part of the body, e.g. a tranquilliser

depressed /dɪ'prest/ *adjective* 1. experiencing a mental condition that prevents someone from carrying out the normal activities of life in the usual way □ **clinically depressed** Same as **depressed** 2. feeling miserable and worried (*informal*) ○ *He was depressed after his exam results.* 3. referring to something such as a metabolic rate which is below the usual level

depressed fracture /dɪ'prest 'frækɪʃə/ *noun* a fracture of a flat bone such as those in the skull where part of the bone has been pushed down lower than the surrounding parts

depression /dɪ'preʃ(ə)n/ *noun* 1. a mental condition that prevents someone from carrying out the normal activities of life in the usual way 2. a hollow on the surface of a part of the body

depressive /dɪ'presɪv/ *adjective* relating to, causing, or experiencing mental depression ○ *He is in a depressive state.* ■ *noun* 1. a substance which causes depression 2. someone experiencing depression

depressor /dɪ'presər/ *noun* 1. a muscle which pulls part of the body downwards 2. a nerve which reduces the activity of an organ such as the heart and lowers blood pressure

deprivation /dɪpr'veɪʃ(ə)n/ *noun* 1. the fact of not being able to have something that you need or want ○ *sleep deprivation* 2. the lack of basic necessities of life

deradenitis /dɪ'rædɪ'nætɪs/ *noun* inflammation of the lymph nodes in the neck

Dercum's disease /dɜ:kəmz dɪ'zi:z/ *noun* same as **adiposis dolorosa** [Described 1888. After François Xavier Dercum (1856–1931), Professor of Neurology at Jefferson Medical College, Philadelphia, USA.]

derealisation /di:rɪəlɪz'zeɪʃ(ə)n/, **derealization** *noun* a psychological state in which someone feels the world around him or her is not real

derivative /dɪ'rɪvətɪv/ *noun* a substance which is derived from another substance

derm- /dɜ:m/ *prefix* same as **derma-** (*used before vowels*)

-**derm** /dɜ:m/ *suffix* skin

derma- /dɜ:mə/ *prefix* skin

dermal /dɜ:m(ə)l/ *adjective* referring to the skin

dermatitis /dɜ:mə'taitɪs/ *noun* inflammation of the skin

‘...various types of dermal reaction to nail varnish have been noted. Also contact dermatitis caused by cosmetics such as toothpaste, soap, shaving creams.’
[Indian Journal of Medical Sciences]

dermatitis artefacta /dɜ:mətaitɪs ə:tɪ:fæk'tə/ *noun* injuries caused by someone to their own skin

dermatitis herpetiformis /dɜ:mətaitɪs hə:pət'fɔ:mis/ *noun* a type of dermatitis where large itchy blisters form on the skin

dermato- /dɜ:mətəʊ/ *prefix* referring to the skin

dermatochalasis /dɜ:mətəʊkə'læsɪs/ *noun* a condition where a fold of skin moves down over the eyelid, common in older people

dermatographia /dɜ:mətəʊ'græfiə/ *noun* same as **dermographia**

dermatological /dɜ:mətə'lɒdʒɪk(ə)l/ *adjective* referring to dermatology

dermatologist /dɜ:mət'ɒplədʒɪst/ *noun* a doctor who specialises in the study and treatment of the skin and its diseases

dermatology /dɜ:mət'ɒlədʒɪ/ *noun* the study and treatment of the skin and its diseases

dermatome /dɜ:mətəʊm/ *noun* 1. a special knife used for cutting thin sections of skin for grafting 2. an area of skin supplied by one spinal nerve

dermatomycosis /dɜ:mətəʊmar'kəʊsɪs/ *noun* a skin infection caused by a fungus that is not a dermatophyte

dermatomyositis /dɜ:mətəʊmar'ə'sɪtɪs/ *noun* a collagen disease with a wasting inflammation of the skin and muscles

dermatophyte /dɜ:mətə'fəʊtaɪt/ *noun* a fungus belonging to one of three genera which affect the skin or hair, causing tinea

dermatophytosis /dɜ:mətə'fəʊtaɪ'təʊsɪs/ *noun* a fungal infection of the skin caused by a dermatophyte

dermatoplasty /dɜ:mətə'plæsti/ *noun* a skin graft, replacing damaged skin by skin taken from another part of the body or from a donor

dermatosis /dɜ:mətə'əʊsɪs/ *noun* a disease of the skin

dermis /dɜ:mɪs/ *noun* a thick layer of living skin beneath the epidermis. Also called **corium**

dermo- /dɜ:mə/ *prefix* same as **derma-**

dermographia /dɜːmə'græfiə/ *noun* a swelling on the skin produced by pressing with a blunt instrument, usually an allergic reaction. Also called **dermatographia**

dermoid /dɜːmɔɪd/ *adjective* 1. referring to the skin 2. like skin

dermoid cyst /dɜːmɔɪd sɪst/ *noun* a cyst found under the skin, usually in the midline, containing hair, sweat glands and sebaceous glands

Descemet's membrane /deʃe'mets ,membrin/ *noun* one of the deep layers of the cornea [Described 1785. After Jean Descemet (1732–1810), French physician; Professor of Anatomy and Surgery in Paris.]

descending aorta /dɪ,sendɪŋ eɪ'ɔ:tə/ *noun* the second section of the aorta, which turns downwards. Compare **ascending aorta**

descending colon /dɪ,sendɪŋ 'kɔ:lən/ *noun* the third section of the colon which goes down the left side of the body. Compare **ascending colon**. See illustration at **DIGESTIVE SYSTEM** in Supplement

descending tract /dɪ,sendɪŋ 'trækɪt/ *noun* a set of nerves which takes impulses away from the head

desensitisation /dɪ:sensɪta'zeɪʃ(ə)n/, **desensitization** *noun* 1. the act of making someone or something no longer sensitive to something such as an allergen 2. the treatment of an allergy by giving a person injections of small quantities of the substance to which he or she is allergic over a period of time until they become immune to it

desensitise /dɪ:sensətɪz/, **desensitize** *verb* 1. to deaden a nerve and remove sensitivity ○ *The patient was prescribed a course of desensitising injections.* 2. to treat someone suffering from an allergy by giving graduated injections of the substance to which he or she is allergic over a period of time until they become immune to it

designer drug /dɪ'zainə dræg/ *noun* a drug that has been modified to enhance its properties (*informal*)

desogestrel /dɛsə'dʒestrəl/ *noun* a hormone used as an oral contraceptive

desquamate /deskwə'meɪt/ *verb (of skin)* to peel off, or be removed in layers

desquamation /deskwa'meɪʃ(ə)n/ *noun* 1. the continual process of losing the outer layer of dead skin 2. peeling off of the epithelial part of a structure

detach /dɪ'tætʃ/ *verb* to separate one thing from another ○ *an operation to detach the cusps of the mitral valve*

detached retina /dɪ,tætʃt 'retɪnə/ *noun* a condition in which the retina becomes partially separated from the eyeball, causing loss of vision. Also called **retinal detachment**

COMMENT: A detached retina can be caused by a blow to the eye, or simply is a condition

occurring in old age. If left untreated the eye will become blind. A detached retina can sometimes be attached to the choroid again using lasers.

detect /dɪ'tekt/ *verb* to sense or to notice, usually something which is very small or difficult to see ○ *an instrument to detect microscopic changes in cell structure* ○ *The nurses detected a slight improvement in the patient's condition.*

detection /dɪ'tekʃən/ *noun* the action of detecting something ○ *the detection of sounds by nerves in the ears* ○ *the detection of a cyst using an endoscope*

detergent /dɪ:tɜː:dʒənt/ *noun* a cleaning substance which removes grease and bacteria

COMMENT: Most detergents are not allergenic but some biological detergents which contain enzymes to remove protein stains can cause dermatitis.

deteriorate /dɪ:tɪəri'reɪt/ *verb* to become worse ○ *The patient's condition deteriorated rapidly.*

deterioration /dɪ:tɪəriə'reɪʃ(ə)n/ *noun* the fact of becoming worse ○ *The nurses were worried by the deterioration in the patient's reactions.*

determine /dɪ:tɜː'mɪn/ *verb* to find out something by examining the evidence ○ *Health inspectors are trying to determine the cause of the outbreak of Salmonella poisoning.*

detox /dɪ:tɒks/ *noun* same as **detoxification (informal)**

detoxification /dɪ:tɒksi'keɪʃ(ə)n/, **detoxification** /dɪ:tɒksɪfɪ'keɪʃ(ə)n/ *noun* the removal of toxic substances to make a poisonous substance harmless

detrition /dɪ'trɪʃ(ə)n/ *noun* the fact of wearing away by rubbing or use

detritus /dɪ'traɪtəs/ *noun* rubbish produced when something disintegrates

detrusor muscle /dɪ'tru:zə ,mʌs(ə)l/ *noun* the muscular coat of the urinary bladder

Dettol /'detɒl/ *noun* a trade name for a disinfectant containing chloroxylenol

detumescence /,dɪ:tju:mes(ə)n/ *noun* 1. (of the penis or clitoris after an erection or orgasm) the process of becoming limp 2. (of a swelling) the process of disappearing

deuteranopia /,dju:tərə'nəʊpiə/ *noun* a form of colour blindness in which someone cannot see green

develop /dɪ'veləp/ *verb* 1. to become larger and stronger, or more complex ○ *The embryo is developing normally.* ○ *A swelling developed under the armpit.* ○ *The sore throat developed into an attack of meningitis.* 2. to make something start to happen ○ *We're developing a new system for dealing with admission to A & E.* 3. to make something start to grow or become larger, stronger or more complex ○ *He does exercises to develop his muscles.* 4. to start to have an illness ○ *The baby*

may be developing a cold. ○ He developed complications and was rushed to hospital.

‘...rheumatoid arthritis is a chronic inflammatory disease which can affect many systems in the body, but mainly the joints. 70% of sufferers develop the condition in the metacarpophalangeal joints.’ [Nursing Times]

development /dɪ'veləpmənt/ *noun* 1. the process of growing, or of becoming larger and stronger, or more complex ○ *The development of the embryo takes place in the uterus.* 2. something which happens and causes a change in a situation ○ *Report any developments to me at once.*

developmental /dɪ'veləp'ment(ə)l/ *adjective* referring to the development of an embryo

developmental delay /dɪ'veləpmənt(ə)l dɪ'leɪ/ *noun* the fact of being later than usual in developing, either physically or psychologically

deviance /'di:vɪəns/ *noun* sexual behaviour which is considered unusual

deviated nasal septum /,dɪ'veɪtɪd 'neɪz(ə)l 'septəm/, **deviated septum** /,dɪ'veɪtɪd 'septəm/ *noun* an unusual position of the septum of the nose which may block the nose and cause nosebleeds

deviation /,di:vɪ'eɪʃ(ə)n/ *noun* 1. the fact of being different from what is usual or expected or something which is different from what is usual or expected 2. an unusual position of a joint or of the eye, as in strabismus

Devic's disease /də'veɪks dɪ'zi:z/ *noun* same as **neuromyelitis optica** [Described 1894. After Devic, a French physician who died in 1930.]

dexamethasone /,deksə'meθəsəʊn/ *noun* a synthetic steroid drug that is used to treat inflammation and hormonal imbalances

Dexa scan *noun* a technique to assess changes in someone's bone density, as in osteoporosis or in Paget's disease. Full form **Dual Energy X-Ray Absorptiometry**

dextro- /dekstrəʊ/ *prefix* referring to the right, or the right side of the body

dextrocardia /,dekstrəʊ'kɑ:dɪə/ *noun* a congenital condition in which the apex of the heart is towards the right of the body instead of the left. Compare **laevocardia**

dextromoramide /,dekstrə'mɔ:rəmaɪd/ *noun* an opioid drug used to reduce pain

dextrose /'dekstrəʊz/ *noun* same as **glucose**

DH abbr Department of Health

dhobie itch /,dəʊbi 'ɪtʃ/ *noun* same as **tinea cruris**

DI abbr donor insemination

di- /dai/ *prefix* two, double

dia- /daiə/ *prefix* 1. through or throughout 2. across 3. in different or opposite directions 4. apart

diabetes /,daɪə'bɪ:tɪ:z/ *noun* 1. one of a group of diseases which cause the body to pro-

duce large amounts of urine. ○ **gestational diabetes** 2. same as **diabetes mellitus**

diabetes insipidus /daɪə'bɪ:tɪz in'sɪpɪdəs/ *noun* a rare disorder of the pituitary gland causing an inadequate amount of the hormone vasopressin, which controls urine production, to be produced, leading to excessive passing of urine and extreme thirst

diabetes mellitus /daɪə'bɪ:tɪ:z 'melɪtəs/ *noun* a disease where the body cannot control sugar absorption because the pancreas does not secrete enough insulin

COMMENT: Diabetes mellitus has two forms:

Type I may have a viral trigger caused by an infection which affects the cells in the pancreas which produce insulin; Type II is caused by a lower sensitivity to insulin, is common in older people, and is associated with obesity. Symptoms of diabetes mellitus are tiredness, unusual thirst, frequent passing of water and sweet-smelling urine. Blood and urine tests show high levels of sugar. Treatment for Type II diabetes involves keeping to a strict diet and reducing weight, and sometimes the use of oral hypoglycaemic drugs such as glibenclamide. Type II diabetes is treated with regular injections of insulin.

diabetic /,daɪə'bɛtɪk/ *adjective* 1. referring to diabetes mellitus 2. referring to food which contains few carbohydrates and sugar ○ **diabetic chocolate** ■ *noun* a person who has diabetes

diabetic cataract /,daɪə'bɛtɪk 'kætərækt/ *noun* a cataract which develops in people who have diabetes

diabetic coma /,daɪə'bɛtɪk 'kəʊmə/ *noun* a state of unconsciousness caused by untreated diabetes

diabetic diet /,daɪə'bɛtɪk 'daɪət/ *noun* a diet which is low in carbohydrates and sugar

diabetic retinopathy /,daɪə'bɛtɪk retɪ 'nɒpəθɪ/ *noun* a disease of the retina, caused by diabetes

diabetogenic /,daɪə'bɛtə'gjenɪk/ *adjective* which causes diabetes

diabetologist /,daɪə'bɛtə'tɒplədʒɪst/ *noun* a doctor specialising in the treatment of diabetes mellitus

diaclasia /,daɪə'kleɪzɪə/ *noun* a fracture made by a surgeon to repair an earlier fracture which has set badly, or to correct a deformity

diadochokinesis /dai,ædəkəʊkar'i:nɪsɪs/ *noun* the natural ability to make muscles move limbs in opposite directions

diagnose /'daɪəgnəʊz/ *verb* to identify a condition or illness, by examining the person and noting symptoms ○ *The doctor diagnosed appendicitis.* ○ *The patient was diagnosed with rheumatism.*

diagnosis /,daɪə'gəʊsɪs/ *noun* the act of diagnosing a condition or illness ○ *The doctor's diagnosis was a viral infection, but the child's parents asked for a second opinion.* ○ *They*

*found it difficult to make a diagnosis. Compare **prognosis** (NOTE: The plural is **diagnoses**.)*

diagnostic /daiəg'nɒstɪk/ *adjective* referring to diagnosis

diagnostic and treatment centre /daiəgnɒstɪk ən 'tri:tment ,sentə/ *noun* a facility mainly for day surgery or short-term stay, where a range of planned operations such as joint replacements, hernia repair and cataract removal can be undertaken. Abbr **DTC**

diagnostic imaging /daiəgnɒstɪk 'ɪmɪdʒɪŋ/ *noun* scanning for the purpose of diagnosis, e.g. of a pregnant woman to see if the fetus is healthy

diagnostic process /,daiəg,nɒstɪk 'prəses/ *noun* the series of steps taken in making a diagnosis

diagnostic radiographer *noun* ♦ **radiographer**

diagnostic test /daiəgnɒstɪk 'test/ *noun* a test which helps a doctor diagnose an illness

dialysate /dai'ælsɪt/ *noun* material which is subjected to dialysis

dialyse /'daiələɪz/ *verb* to treat someone using a kidney machine

dialyser /'daiəlaɪzəl/ *noun* an apparatus which uses a membrane to separate solids from liquids, e.g. a kidney machine

dialysis /dai'æləsɪs/ *noun* 1. a procedure in which a membrane is used as a filter to separate soluble waste substances from the blood 2. same as **renal dialysis**

diapedesis /,daiəpə'di:sɪs/ *noun* the movement of white blood cells through the walls of the capillaries into tissues in the development of inflammation

diaphoresis /,daiəfə'rɪ:sɪs/ *noun* excessive perspiration

diaphoretic /,daiəfə'retɪk/ *noun* a drug which causes sweating ■ *adjective* causing sweating

diaphragm /'daiəfræm/ *noun* 1. a thin layer of tissue stretched across an opening, especially the flexible sheet of muscle and fibre which separates the chest from the abdomen and moves to pull air into the lungs in respiration 2. same as **vaginal diaphragm**

COMMENT: The diaphragm is a muscle which, in breathing, expands and contracts with the walls of the chest. The average rate of respiration is about 16 times a minute.

diaphragmatic /,daiəfræg'mætɪk/ *adjective* referring to a diaphragm, or like a diaphragm

diaphragmatic hernia /,daiəfrægmætɪk 'hɜ:nɪə/ *noun* a condition in which a membrane and organ in the abdomen pass through an opening in the diaphragm into the chest

diaphragmatic pleura /,daiəfrægmætɪk 'plʊərə/ *noun* part of the pleura which covers the diaphragm

diaphragmatic pleurisy /,daiəfrægmætɪk 'plʊərɪsɪ/ *noun* inflammation of the pleura which covers the diaphragm

diaphyseal /,daiə'fɪzɪəl/ *adjective* referring to a diaphysis

diaphysis /dai'æfɪsɪs/ *noun* the long central part of a long bone. Also called **shaft**. See illustration at **BONE MARROW** in Supplement

diaphysitis /,daiəfə'saitɪs/ *noun* inflammation of the diaphysis, often associated with rheumatic disease

diarrhoea /,daiə'rɪə/ *noun* a condition in which someone frequently passes liquid faeces ○ attack of diarrhoea ○ mild/severe diarrhoea (NOTE: The US spelling is **diarrhea**.)

COMMENT: Diarrhoea can have many causes: types of food or allergy to food; contaminated or poisoned food; infectious diseases, such as dysentery; sometimes worry or other emotions.

diarrhoeal /,daiə'rɪəl/ *adjective* referring to or caused by diarrhoea

diarthrosis /,daiər'θrəʊsɪs/ *noun* same as **synovial joint**

diastase /'daiəstæz/ *noun* an enzyme which breaks down starch and converts it into sugar

diastasis /,daiə'steɪsɪs/ *noun* 1. a condition in which a bone separates into parts 2. dislocation of bones at an immovable joint

diastema /,daiə'sti:mə/ *noun* 1. an unusually wide space between adjacent teeth 2. an unusual gap in any body part or organ

diastole /dai'æstəl/ *noun* the part of the process involved in each beat of the heart when its chambers expand and fill with blood. The period of diastole (usually 95 mmHg) lasts about 0.4 seconds in an average heart rate. Compare **systole**

diastolic /,daiə'stɒlɪk/ *adjective* relating to the diastole

diastolic pressure /,daiəstɒlɪk 'pre:sə/ *noun* blood pressure taken at the diastole (NOTE: Diastolic pressure is always lower than systolic.)

diathermy /,daiə'θɜ:mi/ *noun* the use of high-frequency electric current to produce heat in body tissue

COMMENT: The difference between medical and surgical uses of diathermy is in the size of the electrodes used. Two large electrodes will give a warming effect over a large area (**medical diathermy**); if one of the electrodes is small, the heat will be concentrated enough to coagulate tissue (**surgical diathermy**).

diathermy knife /,daiə'θɜ:mi naɪf/ *noun* a knife used in surgical diathermy

diathermy needle /,daiə'θɜ:mi 'ni:d(ə)l/ *noun* a needle used in surgical diathermy

diathermy snare /,daiə'θɜ:mi sneə/ *noun* a snare which is heated by electrodes and burns away tissue

diathesis /dai'æθəsɪs/ *noun* the general inherited constitution of a person in relation to

their susceptibility to specific diseases or allergies

diazepam /dai'æzəpæm/ *noun* a tranquilliser used in the short term to treat anxiety and as a muscle relaxant. In the long term it is potentially addictive.

diazoxide /dai'zɒksaɪd/ *noun* a drug used as a vasodilator, to reduce hypertension

DIC *abbr* disseminated intravascular coagulation

dicephalus /dai'sefələs/ *noun* a fetus with two heads

dichlorphenamide /,daɪklɔː'fɛnəmaɪd/ *noun* a drug used to treat glaucoma

dichromatism /,daɪkrəʊ'mætɪz(ə)m/ *noun* colour blindness in which only two of the three primary colours can be seen. Compare **monochromatism, trichromatism**

diclofenac sodium /,daɪkləfənæk 'soʊdiəm/ *noun* an anti-inflammatory drug used to treat rheumatic disease

dicrotic pulse /dai,krɒtɪk 'pəls/, **dicrotic wave** /dai,krɒtɪk 'weɪv/ *noun* a pulse which occurs twice with each heartbeat

dicrotism /'daɪkrɒtɪz(ə)m/ *noun* a condition in which the pulse occurs twice with each heartbeat

die /dai/ *verb* to stop living ○ *His father died last year. ○ She died in a car crash. (NOTE: dying – died)*

diencephalon /,daiən'sefələn, ,daien 'kefələn/ *noun* the central part of the forebrain, formed of the thalamus, hypothalamus, pineal gland and third ventricle

diet /'daɪət/ *noun* the amount and type of food eaten ○ *a balanced diet* ■ *verb* to reduce the quantity of food you eat, or to change the type of food you eat, in order to become thinner or healthier ○ *He is dieting to try to lose weight.*

dietary /'daɪət(ə)ri/ *noun* a system of nutrition and energy ○ *The nutritionist supervised the dietaries for the patients.* ■ *adjective* referring to a diet

dietary fibre /'daɪət(ə)ri ,faɪbə/ *noun* fibrous matter in food, which cannot be digested. Also called **roughage**

COMMENT: Dietary fibre is found in cereals, nuts, fruit and some green vegetables. There are two types of fibre in food: insoluble fibre, e.g. in bread and cereals, which is not digested, and soluble fibre, e.g. in vegetables and pulses. Foods with the highest proportion of fibre include wholemeal bread, beans and dried apricots. Fibre is thought to be necessary to help digestion and avoid developing constipation, obesity and appendicitis.

dietetic /daiə'tetɪk/ *adjective* referring to diets

dietetic principles /daiətetɪk 'prɪnsəp(ə)lz/ *noun* rules concerning the body's needs in food, vitamins or trace elements

dietetics /,daɪə'tetɪks/ *noun* the study of food, nutrition and health, especially when applied to people's food intake

dieting /'daɪətɪŋ/ *noun* the act of attempting to reduce weight by reducing the amount of food eaten ○ *Eat sensibly and get plenty of exercise, then there should be no need for dieting.*

dietitian /,daɪə'tɪʃ(ə)n/ *noun* someone who specialises in the study of diet, especially someone in a hospital who supervises dietaries as part of the medical treatment of patients. ○ **nutritionist**

Dietl's crisis /'di:t(ə)lz ,kraɪəsɪs/ *noun* a painful blockage of the ureter, causing back pressure on the kidney which fills with urine and swells [After Joseph Dietl (1804–78), Polish physician]

diet sheet /'daɪət si:t/ *noun* a list of suggestions for quantities and types of food given to someone to follow

differential /,dɪfə'renʃəl/ *adjective* referring to a difference

differential blood count /,dɪfə'renʃəl 'blæd ,kaʊnt/, **differential white cell count** /,dɪfə'renʃəl 'waɪt sel ,kaʊnt/ *noun* a test that shows the amounts of different types of white blood cell in a blood sample

differential diagnosis /,dɪfə'renʃəl dəɪəg'nəʊsɪs/ *noun* the identification of one disease from a number of other similar diseases by comparing the range of symptoms of each

differentiation /,dɪfə'renʃən'etɪf(ə)n/ *noun* the development of specialised cells during the early embryo stage

diffuse *verb* /'dɪfju:z/ to spread through tissue, or cause something to spread ○ *Some substances easily diffuse through the walls of capillaries.* ■ *adjective* /'dɪfju:s/ referring to a disease which is widespread in the body, or which affects many organs or cells

diffusion /'dɪfju:ʒ(ə)n/ *noun* 1. the process of mixing a liquid with another liquid, or a gas with another gas 2. the passing of a liquid or gas through a membrane

digest /'daɪ'dʒest/ *verb* to break down food in the alimentary canal and convert it into components which are absorbed into the body

digestible /daɪ'dʒestib(ə)l/ *adjective* able to be digested ○ *Glucose is an easily digestible form of sugar.*

digestion /daɪ'dʒestʃən/ *noun* the process by which food is broken down in the alimentary canal into components which can be absorbed by the body

digestive /daɪ'dʒestɪv/ *adjective* relating to digestion

digestive enzyme /daɪ,dʒestɪv 'enzaim/ *noun* an enzyme which encourages digestion

digestive juice /dɪ'gɛstɪv ju:s/ *noun* ↗ **gastric juice, intestinal juice (usually plural)**

digestive system /dɪ'gɛstɪv ,sɪstəm/ *noun* the set of organs such as the stomach, liver and pancreas which are associated with the digestion of food. Also called **alimentary system**

digestive tract /dɪ'gɛstɪv trækt/ *noun* same as **alimentary canal**

digestive tube /dɪ'gɛstɪv tju:b/ *adjective* US same as **alimentary canal**

digit /'dɪdʒɪt/ *noun* 1. a finger or a toe 2. a number

digital /'dɪdʒɪtl/ *adjective* 1. referring to fingers or toes 2. representing data or physical quantities in numerical form

digitalin /,dɪdʒɪ'teɪlɪn/, **digitalis** /,dɪdʒɪ'teɪlɪs/ *noun* a drug derived from foxglove leaves, used in small doses to treat heart conditions

digitalise /'dɪdʒɪtəlaɪz/, **digitalize** *verb* to treat someone who has heart failure with digoxin

digital palpation /,dɪdʒɪt(ə)l pæl'peɪʃ(ə)n/ *noun* an examination of part of the body by feeling it with the fingers

digital vein /'dɪdʒɪt(ə)l veɪn/ *noun* a vein draining the fingers or toes

digitoxin /,dɪdʒɪ'tɒksɪn/ *noun* an extract of foxglove leaves, used as a drug to stimulate the heart in cases of heart failure or irregular heartbeat

digoxin /dai'dʒɒksɪn/ *noun* an extract of foxglove leaves, which acts more rapidly than digitoxin when used as a heart stimulant

dihydrocodeine tartrate /dai,haidrəʊ,kɔ:dɪn: 'ta:tret/ *noun* an analgesic used to treat severe pain

dilatation /,daɪleɪt'eɪʃ(ə)n/, **dilation** /dai'leɪʃ(ə)n/ *noun* 1. the act of making a hollow space or a passage in the body bigger or wider ○ *dilatation of the cervix during labour* 2. expansion of the pupil of the eye as a reaction to bad light or to drugs

dilatation and curettage /daɪleɪt,eɪf(ə)n ən kju:a'retɪdʒ/ *noun* a surgical operation to scrape the interior of the uterus to obtain a tissue sample or to remove products of miscarriage. Abbr **D & C**

dilate /dai'leɪt, dr'leɪt/ *verb* to become wider or larger, or make something become wider or larger ○ *The veins in the left leg have become dilated.* ○ *The drug is used to dilate the pupil of the eye.*

dilator /dai'leɪtə/ *noun* 1. an instrument used to widen the entrance to a cavity 2. a drug used to make part of the body expand

dilator pupillae muscle /dai,leɪtə pjū:pili:mas(ə)/ *noun* a muscle in the iris which pulls the iris back and so makes the pupil expand

diltiazem hydrochloride /dil'taɪəzəm,haɪdrə'klɔ:raɪd/ *noun* a calcium channel blocker used to treat hypertension

diluent /'dɪljuənt/ *noun* a substance which is used to dilute a liquid, e.g. water

dilute /dai'lju:t/ *adjective* with water added ■ *verb* to add water to a liquid to make it less concentrated ○ *Dilute the disinfectant in four parts of water.*

dilution /dai'lju:f(ə)n/ *noun* 1. the action of diluting 2. a liquid which has been diluted

dimenhydrinate /,daɪmen'haidrəneɪt/ *noun* an antihistamine drug that relieves travel sickness

dimetria /dai'mi:t्रɪə/ *noun* a condition in which a woman has a double uterus

dioptrē /dai'bɒptə/ *noun* a unit of measurement of the refraction of a lens (NOTE: The US spelling is **dioptrē**)

COMMENT: A one dioptrē lens has a focal length of one metre; the greater the dioptrē, the shorter the focal length.

dioxide /dai'ɒksaɪd/ ↗ **carbon dioxide**

dioxin /dai'ɒksɪn/ *noun* an extremely poisonous gas

DIP abbr distal interphalangeal joint

diphenoxalate /,daɪfen'ɒksileɪt/ *noun* a drug related to pethidine that is used to treat diarrhoea, sometimes mixed with a little atropine in commercial preparations

diphtheria /dɪfθə'rɪə/ *noun* a serious infectious disease of children, caused by the bacillus *Corynebacterium diphtheriae*, characterised by fever and the formation of a fibrous growth like a membrane in the throat which restricts breathing

COMMENT: Symptoms of diphtheria are a sore throat, followed by a slight fever, rapid pulse and swelling of glands in the neck. The 'membrane' which forms can close the air passages, and the disease is often fatal, either because the patient is asphyxiated or because the heart becomes fatally weakened. The disease is also highly infectious, and all contacts of the patient must be tested. The Schick test is used to test if a person is immune or susceptible to diphtheria. In countries where infants are immunised the disease is rare.

diphtheroid /dɪfθə'rɔɪd/ *adjective* referring to a bacterium similar to the diphtheria bacterium

-**dipine** /dɪpɪn/ *suffix* used in the names of calcium channel blockers ○ *nifedipine*

dipi- /dɪpl/ *prefix* same as **diplo-** (used before vowels)

diplacusis /,dɪplə'kju:sɪs/ *noun* a disorder of the cochlea in which a person hears one sound as two sounds of different pitch

diplegia /dai'pli:dʒə/ *noun* paralysis of a similar part on both sides of the body, e.g. paralysis of both arms. Compare **hemiplegia**

diplegic /dai'pli:dʒɪk/ *adjective* referring to diplegia

diplo- /dɪpləʊ/ *prefix double*

diplococcus /dɪpləʊ'kɒkəs/ *noun* a bacterium which usually occurs in pairs as a result of incomplete cell division, e.g. a pneumococcus (NOTE: The plural is **diplococci**.)

diploe /dɪpləʊɪ/ *noun* a layer of spongy bone tissue filled with red bone marrow, between the inner and outer layers of the skull

diploid /dɪplɔɪd/ *adjective* referring to a cell where there are two copies of each chromosome, except the sex chromosome. In humans the diploid number of chromosomes is 46.

diplopia /dɪpləʊpiə/ *noun* a condition in which someone sees single objects as double. Also called **double vision**

dipsomania /dɪpsəʊ'meɪniə/ *noun* an uncontrollable desire to drink alcohol

direct contact /dɪ'rektənt/ *noun* a situation where someone or something physically touches an infected person or object

directions /dɪ'rekʃənz/ *noun* □ **directions for use** (*on a bottle of medicine, etc.*) instructions showing how to use something and how much of it to use

director /dɪ'rektər/ *noun* an instrument used to limit the incision made with a surgical knife

dis- /dɪs/ *prefix 1.* undoing or reversal *2.* removal from *3.* lacking or deprived of

disability /dɪsə'bɪlɪti/ *noun* a condition in which part of the body does not function in the usual way and makes some activities difficult or impossible. ◇ **learning disability**

'...disability – any restriction or lack (resulting from an impairment) of ability to perform an activity in the manner or within the range considered normal for a human being' [WHO]

disable /dɪs'eib(ə)l/ *verb* to make someone unable to do some activity ◇ *He was disabled by a lung disease.*

disabled /dɪs'eib(ə)ld/ *noun* people suffering from a physical or mental condition which makes some activities difficult or impossible

Disabled Living Foundation /dɪs'erb(ə)ld 'lɪvɪŋ faʊn,dेɪʃ(ə)n/ *noun* a charity which aims to help disabled people live independently

disablement /dɪs'erb(ə)lmēnt/ *noun* a condition which makes some activities difficult or impossible

disabling disease /dɪs,eiblɪŋ dr'zɪ:z/ *noun* a disease which makes some activities difficult or impossible

disarticulation /dɪs'a:tɪkju'lēf(ə)n/ *noun* the amputation of a limb at a joint, which does not involve dividing a bone

disc /dɪsk/ *noun* a flat round structure. ◇ **intervertebral disc**

discharge *noun* /dɪstʃə:dʒ/ **1.** the secretion of liquid from an opening **2.** the process of sending a patient away from a hospital because the treatment has ended ■ *verb* /dɪ'stʃə:dʒ/ **1.** to secrete liquid out of an opening ◇ *The*

wound discharged a thin stream of pus. **2.** to send a patient away from hospital because the treatment has ended ◇ *He was discharged from hospital last week.* ◇ **to discharge yourself** to decide to leave hospital and stop taking the treatment provided

discharge planning /dɪstʃə:pλænɪŋ/ *noun* the work of making a plan for when a patient leaves hospital to live at home

discharge rate /dɪstʃə:dʒ reɪt/ *noun* the number of patients with a particular type of disorder who are sent home from hospitals in a particular area (shown as the number per 10,000 of population)

discoloration /dɪs,kʌlə'reɪʃ(ə)n/ *noun* a change in colour

discolour /dɪs'kʌlə/ *verb* to change the colour of something ◇ *His teeth were discoloured from smoking cigarettes.* (NOTE: The US spelling is **discolor**.)

COMMENT: Teeth can be discoloured in fluorosis. If the skin on the lips is discoloured it may indicate that the person has swallowed a poison.

discomfort /dɪs'kʌmfət/ *noun* a feeling of mild pain ◇ *You may experience some discomfort after the operation.*

discrete /dɪ'skrɪ:t/ *adjective* separate, not joined together

discrete rash /dɪ'skrɪ:t 'ræʃ/ *noun* a rash which is formed of many separate spots, which do not join together into one large red patch

disease /dr'i:zɪ:z/ *noun* a condition that stops the body from functioning in the usual way ◇ *an infectious disease* ◇ *She is suffering from a very serious disease of the kidneys or from a serious kidney disease.* ◇ *He is a specialist in occupational diseases.* (NOTE: The term **disease** is applied to all physical and mental reactions which make a person ill. Diseases with distinct characteristics have individual names. For other terms referring to disease, see words beginning with **path-**, **patho-**.)

diseased /dɪ'zɪ:zd/ *adjective* affected by a disease ◇ *The surgeon cut away the diseased tissue.*

disfigure /dɪs'fɪgə/ *verb* to change someone's appearance so as to make it less pleasant to look at ◇ *Her legs were disfigured by scars.*

dish /dɪʃ/ *noun* a shallow open container

disinfect /dɪsɪn'fekt/ *verb* to make the surface of something or somewhere free from microorganisms ◇ *She disinfected the skin with surgical spirit.* ◇ *All the patient's clothes have to be disinfected.*

disinfectant /dɪsɪn'fektənt/ *noun* a substance used to kill microorganisms on the surface of something

disinfection /dɪsɪn'fekʃən/ *noun* the removal of microorganisms on the surface of something

COMMENT: The words **disinfect**, **disinfectant**, and **disinfection** are used for substances which destroy microorganisms on instruments, objects or the skin. Substances used to kill microorganisms inside infected people are **antibiotics**.

disinfest /dɪsɪn'fɛst/ *verb* to free a place, person or animal from insects or other pests
disinfestation /dɪsɪnfə'steɪʃ(ə)n/ *noun* the removal of insects or other pests from a place, person or animal

dislocate /'dɪsləkeɪt/ *verb* to displace a bone from its usual position at a joint, or to become displaced ○ *He fell and dislocated his elbow.* ○ *The shoulder joint dislocates easily.*

dislocation /dɪslə'keɪʃ(ə)n/ *noun* a condition in which a bone is displaced from its usual position at a joint. Also called **luxation**

dismember /dɪs'membər/ *verb* to cut off or pull off someone's arms or legs, often violently or in an accident

dismemberment /dɪs'membəmənt/ *noun* the state of being dismembered

disorder /dɪs'ɔ:də/ *noun* a condition in which part of the body is not functioning correctly ○ *The doctor specialises in disorders of the kidneys or in kidney disorders.*

disordered /dɪs'ɔ:dəd/ *adjective* not functioning correctly

disordered action of the heart /dɪs'ɔ:dəd 'ækʃən əv ði: ha:t/ *noun* a condition in which someone has palpitations, breathlessness and dizziness, caused by effort or worry. Also called **da Costa's syndrome**, **cardiac neurosis**. Abbr **DAH**

disorientated /dɪs'ɔ:riən,tetɪtɪd/ *adjective* referring to someone who is confused and does not know where he or she is

disorientation /dɪsɔ:riən'teɪʃ(ə)n/ *noun* a condition in which someone is confused and does not know where he or she is

dispensary /dɪ'spensəri/ *noun* a place where drugs are prepared or mixed and given out according to a doctor's prescription, e.g. part of a chemist's shop or a department in a hospital

dispense /dɪ'spens/ *verb* to supply medicine according to a prescription

dispenser /dɪ'spensə/ *noun* someone who supplies medicine according to a prescription, especially in a hospital

dispensing optician /dɪ'spensɪŋ ɒp'tɪʃ(ə)n/ *noun* a person who fits and sells glasses but does not test eyes

dispensing practice /dɪ'spensɪŋ ,præktɪs/ *noun* a doctor's practice which dispenses prescribed medicines to its patients

displace /dɪs'pleɪs/ *verb* to put something out of its usual place

displaced intervertebral disc /dɪs'plaɪsd intə,vɜ:tɪbr(ə)l 'disk/ *noun* a disc which has moved slightly, so that the soft interior passes

through the tougher exterior and causes pressure on a nerve

displacement /dɪs'pleɪsmənt/ *noun* the fact of being moved out of the usual position ○ *fracture of the radius together with displacement of the wrist*

disposable /dɪs'poʊzəb(ə)l/ *adjective* designed to be thrown away after use ○ *disposable syringes*

disposition /dɪspə'zɪʃ(ə)n/ *noun* a person's general character or tendency to act in a particular way

disproportion /dɪsprə'pɔ:ʃ(ə)n/ *noun* a lack of proper relationships between two things

dissecans /'dɪsəkænz/ ♀ **osteochondritis dissecans**

dissect /dɪs'ekt/ *verb* to cut and separate tissues in a body to examine them

dissecting aneurysm /,dɪsɛktɪŋ 'ænjə ,rɪz(ə)m/ *noun* an aneurysm which occurs when the inside wall of the aorta is torn and blood enters the membrane

dissection /dɪ'sekʃən/ *noun* the action of cutting and separating parts of a body or an organ as part of a surgical operation, an autopsy or a course of study

'...renal dissection usually takes from 40–60 minutes, while liver and pancreas dissections take from one to three hours. Cardiac dissection takes about 20 minutes and lung dissection takes 60 to 90 minutes.' [Nursing Times]

disseminated /dɪ'semɪneɪtɪd/ *adjective* occurring in every part of an organ or in the whole body

disseminated intravascular coagulation /dɪ,semɪneɪtɪd intrə,væskulə kəʊ ,ægju'leɪʃ(ə)n/ *noun* a disorder that causes extensive clot formation in the blood vessels, followed by severe bleeding. Abbr **DIC**

disseminated lupus erythematosus /dɪ ,semɪneɪtɪd ,lu:pəs ,erɪθɪ:mə'təʊsɪs/ *noun* an inflammatory disease where a skin rash is associated with widespread changes in the central nervous system, the cardiovascular system and many organs. Abbr **DLE**

disseminated sclerosis /dɪ,semɪneɪtɪd sklə'rəʊsɪs/ *noun* same as **multiple sclerosis**

dissemination /dɪ,semɪ'nɛɪʃ(ə)n/ *noun* the fact of being widespread throughout the body

dissociate /dɪ'səʊsiæt/ *verb* 1. to separate parts or functions 2. in psychiatry, to separate part of the conscious mind from the rest

dissociated anaesthesia /dɪ,səʊsi,etɪd ,ænə'seɪθiəzɪə/ *noun* a loss of sensitivity to heat, pain or cold

dissociation /dɪ,səʊfi'eɪʃ(ə)n/ *noun* 1. the separation of parts or functions 2. (in psychiatry) a condition in which part of the consciousness becomes separated from the rest and becomes independent

dissociative disorder /dɪ'səʊsiətɪv dɪsɔːdər/ *noun* a type of hysteria in which someone shows psychological changes such as a split personality or amnesia rather than physical ones

dissolve /dɪ'zɒlv/ *verb* to absorb or disperse something in liquid ◦ *The gut used in sutures slowly dissolves in the body fluids.*

distal /'dɪst(ə)l/ *adjective* further away from the centre of a body

distal convoluted tubule /,dɪst(ə)l ,kɒnvəlju:tɪd tju:bju:l/ *noun* a part of the kidney filtering system before the collecting ducts

Distalgic /,dɪst(ə)l'dʒi:zɪk/ a trade name for the analgesic co-proxamol

distal interphalangeal joint /,dɪst(ə)l ,ɪntəfə'lændʒiəl ,dʒɔɪnt/ *noun* a joint nearest the end of the finger or toe. Abbr DIP

distally /'dɪst(ə)li/ *adverb* placed further away from the centre or point of attachment. Opposite **proximally**. See illustration at ANATOMICAL TERMS in Supplement

distal phalanges /,dɪst(ə)l fə'lændʒi:z/ *noun* bones nearest the ends of the fingers and toes

distended /dɪ'stendɪd/ *adjective* made larger by gas such as air, by liquid such as urine, or by a solid

distended bladder /dɪ,stendɪd 'blædər/ *noun* a bladder which is full of urine

distension /dɪs'tenʃən/ *noun* a condition in which something is swollen ◦ *Distension of the veins in the abdomen is a sign of blocking of the portal vein.*

distichiasis /,dɪstɪ'kaɪəsɪs/ *noun* the presence of extra eyelashes, sometimes growing on the meibomian glands

distil /dɪ'stɪl/ *verb* to separate the component parts of a liquid by boiling and collecting the condensed vapour

distillation /,dɪstɪl'leɪʃ(ə)n/ *noun* the action of distilling a liquid

distilled water /dɪ,stɪld 'wɔ:tə/ *noun* water which has had impurities by distillation

distort /dɪ'stɔ:t/ *verb* to twist something into an unusual shape ◦ *His lower limbs were distorted by the disease.*

distortion /dɪ'stɔ:sʃ(ə)n/ *noun* the act of twisting part of the body out of its usual shape

distraction /dɪ'strækʃən/ *noun* 1. something that takes a person's attention away from something else 2. a state where someone is very emotionally and mentally troubled

distress /dɪ'stres/ *noun* unhappiness caused by pain or worry ◦ *mental distress*

district general hospital /,dɪstrikt ,dʒen(ə)rəl 'hɒspɪt(ə)l/ *noun* a hospital which serves the needs of the population of a specific district

district nurse /,dɪstrikt 'nɜ:s/ *noun* a nurse who visits and treats people in their homes

disturb /dɪ'stɜ:b/ *verb* 1. to interrupt what someone is doing ◦ *Her sleep was disturbed by the other patients in the ward.* 2. to upset or worry someone

disturbed /dɪ'stɜ:bd/ *adjective* affected by a psychiatric disorder ◦ *severely disturbed children*

disulfiram /dɪs'ɔlfɪræm/ *noun* a drug used to treat alcoholism by causing severe nausea if alcohol is consumed with it

dithranol /dɪθrænəl/ *noun* an anti-inflammatory drug used to treat dermatitis and psoriasis

diuresis /,daɪərə'sɪs/ *noun* an increase in the production of urine

diuretic /,daɪərə'tɪk/ *adjective* causing the kidneys to produce more urine ■ *noun* a substance which makes the kidneys produce more urine and, in the treatment of oedema and hypertension

diurnal /dɪ'ɜ:n(ə)l/ *adjective* 1. happening in the daytime 2. happening every day

divarication /dai,væri'keɪʃ(ə)n/ *noun* 1. separation into widely spread branches 2. the point at which a structure forks or divides

divergence /dai've:ʒəns/ *noun* 1. a condition in which one eye points directly at the object of interest but the other does not 2. the process of moving apart to follow different courses 3. the amount of difference between two quantities, especially where the difference is unexpected 4. a deviation from a typical behaviour pattern or expressed wish

divergent strabismus /dai,vɜ:dʒənt strə'bɪzməs/, **divergent squint** /dai,vɜ:dʒənt 'skwɪnt/ *noun* a condition in which a person's eyes both look away from the nose. Opposite **convergent strabismus**

diverticula /,daɪvə'tɪkjʊlə/ plural of **diverticulum**

diverticular disease /,daɪvə'tɪkjʊlə di,zi:z/ *noun* a disease of the large intestine, where the colon thickens and diverticula form in the walls, causing pain in the lower abdomen

diverticulitis /,daɪvə'tɪkjʊ'lætɪs/ *noun* inflammation of diverticula formed in the wall of the colon

diverticulosis /,daɪvə'tɪkjʊ'ləʊsɪs/ *noun* a condition in which diverticula form in the intestine but are not inflamed. In the small intestine, this can lead to blind loop syndrome

diverticulum /,daɪvə'tɪkjʊləm/ *noun* a little sac or pouch which develops in the wall of the intestine or another organ (NOTE: The plural is **diverticula**)

division /dɪ'veɪʒ(ə)n/ *noun* the action of cutting or splitting into parts

divulsa /dɪ'vʌlsə/ *noun* a surgical instrument used to expand a passage in the body

dizygotic /daɪzətɪk/ *adjective* developed from two separately fertilised eggs

dizygotic twins /daɪzægɪptɪk 'twɪnz/ *plural noun* twins who are not identical and not always of the same sex because they come from two different ova fertilised at the same time. Also called **fraternal twins**

dizziness /'dɪzɪnəs/ *noun* the feeling that everything is going round because the sense of balance has been affected

dizzy /'dizi/ *adjective* feeling that everything is going round because the sense of balance has been affected ○ *The ear infection made her feel dizzy for some time afterwards.* ○ *He experiences dizzy spells.*

dl abbr decilitre

DLE abbr disseminated lupus erythematosus
dm abbr decimetre

DMD abbr US doctor of dental medicine

DNA /di: en eɪ/ *noun* one of the nucleic acids, the basic genetic material present in the nucleus of each cell. Full form **deoxyribonucleic acid**

DNA fingerprint /di: en eɪ 'fɪngəprɪnt/ *noun* same as **genetic fingerprint**

DNA fingerprinting /di: en eɪ 'fɪngə,prɪntɪŋ/ *noun* same as **genetic fingerprinting**

DNR abbr do not resuscitate

DOA abbr dead on arrival

dobutamine /dəʊ'bju:təmī:n/ *noun* a drug used to stimulate the heart

doctor /'dɒktə/ *noun* 1. a person who has trained in medicine and is qualified to examine people when they are ill to find out what is wrong with them and to prescribe a course of treatment 2. a title given to a qualified person who is registered with the General Medical Council (NOTE: **Doctor** is shortened to **Dr** when written before a name.)

COMMENT: In the UK surgeons are traditionally not called 'Doctor', but are addressed as 'Mr', 'Mrs', etc. The title 'doctor' is also applied to persons who have a higher degree from a university in a non-medical subject. So 'Dr Jones' may have a degree in music, or in any other subject without a connection with medicine.

doctor-assisted suicide /'dɒktə ə,sɪstɪd/ /su:isaɪd/ *noun* the suicide of someone with an incurable disease carried out with the help of a doctor (NOTE: Doctor-assisted suicide is illegal in most countries.)

Döderlein's bacillus /də:dəlæinz bækɪləs/ *noun* a bacterium usually found in the vagina [After Albert Siegmund Gustav Döderlein (1860–1941), German obstetrician and gynaecologist]

dolicho- /dɒlɪkəʊ/ *prefix* long

dolichocephalic /dɒlɪkəʊs'fælɪk/ *adjective* referring to a person with an unusually long skull

dolichocephaly /dɒlɪkəʊ'sefəlɪ/ *noun* a condition of a person who has a skull which is

longer than usual, the measurement across the skull being less than 75% of the length of the head from front to back

dolor /'dɒlə/ *noun* pain

dolorimetry /dɒlə'rɪmətri/ *noun* the measurement of pain

dolorosa /dɒlə'rəʊsə/ ♀ **adiposis dolorosa**

domiciliary /dɒmɪ'lɪərɪ/ *adjective* at home or in the home

domiciliary care /dɒmɪ'lɪərɪ keə/ *noun* personal, domestic, or nursing care provided at home for people who need it

domiciliary midwife /dɒmɪslɪərɪ 'mɪdwɪft/ *noun* a nurse with special qualification in midwifery, who can assist in childbirth at home

domiciliary services /dɒmɪ'lɪərɪ ,sɜːvɪsɪz/ *plural noun* nursing services which are available to people in their homes

domiciliary visit /dɒmɪslɪərɪ 'vɪzɪt/ *noun* a visit to the patient's home

dominance /dɒmɪnəns/ *noun* the characteristic of a gene form (**allele**) that leads to the trait which it controls being shown in any individual carrying it

dominant /dɒmɪnənt/ *adjective* important or powerful ■ *noun (of an allele)* having the characteristic that leads to the trait which it controls being shown in any individual carrying it. Compare **recessive**

COMMENT: Since each physical trait is governed by two genes, if one is recessive and the other dominant, the resulting trait will be that of the dominant gene.

domino booking /'dɒmɪnəʊ ,bʊkɪŋ/ *noun* an arrangement for the delivery of a baby, where the baby is delivered in hospital by a midwife and the mother and child return home soon afterwards

Donald-Fothergill operation /,dɒnləd 'fʊðəgɪl əpə,reɪʃ(ə)n/ *noun* an operation to close the neck of the vagina

donate /dəʊ'næt/ *verb* to agree to give blood, tissue, organs, or reproductive material to be used to treat another person

donor /'dəʊnər/ *noun* a person who gives blood, tissue, organs or reproductive material to be used to treat another person

donor card /'dəʊnər kɑ:d/ *noun* a card carried by people stating that they give permission for their organs to be transplanted into other people after they have died

donor insemination /,dəʊnər insemɪ'nætɪʃ(ə)n/ *noun* artificial insemination using the sperm of an anonymous donor. Abbr **DI**

dopa /'dəʊpə/ *noun* a chemical related to adrenaline and dopamine. It occurs naturally in the body and in the form levodopa is used to treat Parkinson's disease.

dopamine /'dəʊpəmī:n/ *noun* a substance found in the medulla of the adrenal glands, which also acts as a neurotransmitter. Lack of

dopamine is associated with Parkinson's disease.

dopaminergic /dəʊpəmēn'ɪk/ *adjective* referring to a neurone or receptor stimulated by dopamine

Doppler transducer /'dɒplə trænz,dju:sə/noun a device to measure blood flow, commonly used to monitor fetal heart rate

Doppler ultrasound /'dɒplə 'ʌltrəsaʊnd/noun the use of the Doppler effect in ultrasound to detect red blood cells

Doppler ultrasound flowmeter /,dɒplə ,ʌltrəsaʊnd 'floʊmi:tə/noun a device which measures the flow of blood and detects steady or irregular flow, allowing abnormalities or blockages to be detected

dormant /'dɔ:mənt/ *adjective* inactive for a time ○ *The virus lies dormant in the body for several years.*

dorsa /'dɔ:sə/ plural of **dorsum**

dorsal /'dɔ:s(ə)l/ *adjective* 1. referring to the back. Opposite **ventral** 2. referring to the back of the body

dorsal vertebrae /,dɔ:s(ə)l 'vɜ:tibrəl/ *plural noun* the twelve vertebrae in the back between the cervical vertebrae and the lumbar vertebrae

dorsi- /dɔ:sɪ/ *prefix* referring to the back

dorsiflexion /,dɔ:sɪ'fleksʃən/ *noun* flexion towards the back of part of the body, e.g. raising the foot at the ankle. Compare **plantar flexion**

dorso- /dɔ:səʊ/ *prefix* same as **dorsi-**

dorsoventral /,dɔ:səʊ'ventrəl/ *adjective* 1. referring to both the front and the back of the body 2. extending from the back of the body to the front

dorsum /'dɔ:səm/ *noun* the back of any part of the body (NOTE: The plural is **dorsa**.)

dosage /'dəʊsɪdʒ/ *noun* a measured quantity of a drug calculated to be necessary for someone ○ *a low dosage* ○ *The doctor decided to increase the dosage of antibiotics.* ○ *The dosage for children is half that for adults.*

dose /dəʊs/ *noun* 1. a measured quantity of a drug or radiation which is to be given to someone at one time ○ *It is dangerous to exceed the prescribed dose.* 2. a short period of experiencing a minor illness (*informal*) ○ *a dose of flu* 3. an infection with a sexually transmitted disease (*informal*) ■ *verb* to provide someone with medication (*informal*) ○ *She has been dosing herself with laxatives.*

dosimeter /dəʊ'sɪmɪtə/ *noun* an instrument which measures the amount of X-rays or other radiation received

dosimetry /dəʊ'sɪmətri/ *noun* the act of measuring the amount of X-rays or radiation received, using a dosimeter

double-blind randomised controlled trial /,dʌb(ə)l blænd ,rændəmaɪzd kən,trəʊld

'trɪəl/ *noun* a trial used to test new treatments in which patients are randomly placed in either the treatment or the control group without either the patient or doctor knowing which group any particular patient is in

double blind study /,dʌb(ə)l 'blænd ,stʌdi/ *noun* an investigation to test an intervention in which neither the patient nor the doctor knows if the patient is receiving active medication or a placebo

double-jointed /,dʌb(ə)l 'dʒɔɪntɪd/ *adjective* able to bend joints to an unusual degree (*informal*)

double pneumonia /,dʌb(ə)l nju:'məuniə/noun same as **bilateral pneumonia**

double uterus /,dʌb(ə)l 'ju:t(ə)rəs/ *noun* a condition in which the uterus is divided into two sections by a membrane. Also called **uterus didelphys**. ♀ **dimetria**

double vision /,dʌb(ə)l 'vɪʒ(ə)n/ *noun* same as **diplopia** (*informal*)

douche /du:tʃ/ *noun* a liquid forced into the body to wash out a cavity, or a device used for washing out a cavity

Douglas bag /'dʌgləs bæg/ *noun* a bag used for measuring the volume of air breathed out of the lungs

Douglas' pouch /'dʌgləs pəʊtʃ/ *noun* the rectouterine peritoneal recess

down below /daʊn bɪ'ləʊ/ *adverb* used to refer politely to the genital area (*informal*)

Down's syndrome /'daʊnz ,sɪndrəʊm/noun a condition due to the existence of an extra copy of chromosome 21, in which a baby is born with slanting eyes, a wide face, speech difficulties and usually some degree of learning difficulty [Described 1866. After John Langdon Haydon Down (1828–96), British physician at Normansfield Hospital, Teddington, UK.]

downstairs /daʊn'steəz/ *adverb* used to refer politely to the genital area (*informal*)

down there /daʊn ðeə/ *adverb* used to refer politely to the genital area (*informal*)

doxepin /'dɒksɪpɪn/ *noun* a drug used as a sedative and antidepressant

doxycycline /,dɒksi'saɪklɪn/ *noun* a widely used antibiotic derived from tetracycline

doze /dəʊz/ *verb* to sleep lightly for a short time

dozy /'dəʊzi/ *adjective* sleepy ○ *These anti-histamines can make you feel dozy.*

DPT abbr diphtheria, whooping cough, tetanus

DPT vaccine /,di:pɪ:t'i:væksi:n/, **DPT immunisation** /,di:pɪ:t'i:imjʊnəi,zeɪʃ(ə)n/ *noun* a combined vaccine or immunisation against the three diseases, diphtheria, whooping cough and tetanus

Dr abbr doctor (NOTE: used when writing someone's name: *Dr Smith*)

drachm /dræm/ *noun* a measure used in pharmacy, equal to 3.8g dry weight or 3.7ml liquid measure

dracontiasis /drækən'taɪəsɪs/, **dracunculiasis** /dræk'ʌŋkjʊ'læɪəsɪs/ *noun* a tropical disease caused by the guinea worm *Dracunculus medinensis* which enters the body from infected drinking water and forms blisters on the skin, frequently leading to secondary arthritis, fibrosis and cellulitis

Dracunculus /dræk'ʌŋkjʊləs/ *noun* a parasitic worm which enters the body and rises to the skin to form a blister. The infection frequently leads to secondary arthritis, fibrosis and cellulitis. Also called **guinea worm**

dragee /dræ'ʒeɪ/ *noun* a sugar-coated tablet or pill

drain /dreɪn/ *noun* a tube to remove liquid from the body ■ *verb* to remove liquid from the body ○ *an operation to drain the sinus* ○ *They drained the pus from the abscess.*

drainage /'dreɪnɪdʒ/ *noun* the removal of liquid from the site of an operation or pus from an abscess by means of a tube or wick left in the body for a time

drape /drɛɪp/ *noun* a thin material used to place over someone about to undergo surgery, leaving the operation site uncovered

draw /dro:/ *verb* to drain a liquid such as blood, pus or water from a wound or incision

drawn /drɔ:n/ *adjective* appearing tired and careworn, usually as a result of anxiety, grief or illness

draw-sheet /drɔ: sɪ:t/ *noun* a sheet under a person in bed, folded so that it can be pulled out as it becomes soiled

drepanocyte /'drepənəʊsət/ *noun* same as sickle cell

drepanocytosis /,drepənəʊsət'ɪəsɪs/ *noun* same as **sickle-cell anaemia**

dress /dres/ *verb* 1. to put on clothes, or put clothes on someone 2. to clean a wound and put a covering over it ○ *Nurses dressed the wounds of the accident victims.*

dresser /'dresə/ *noun* someone who assists a surgeon during operations

dressing /'dresɪŋ/ *noun* a covering or bandage applied to a wound to protect it ○ *The patient's dressings need to be changed regularly.*

dribble /'drɪb(ə)l/ *verb* to let liquid flow slowly out of an opening, especially saliva out of the mouth

dribbling /'drɪblɪŋ/ *noun* 1. the act of letting saliva flow out of the mouth 2. same as **incontinence** (*informal*)

drill /drɪl/ *noun* a tool which rotates very rapidly to make a hole, especially a surgical instrument used in dentistry to remove caries ■ *verb* to make a hole with a drill ○ *A small hole is drilled in the skull.* ○ *The dentist drilled one of her molars.*

Drinker respirator /'drɪŋkə ,rɪspɪ'reɪtə/ *noun* a machine which encloses the whole of the body except the head, and in which air pressure is increased and decreased, so forcing the person to breathe in and out. Also called **iron lung**

drip /drɪp/ *noun* a system for introducing liquid slowly and continuously into the body, by which a bottle of liquid is held above a person and the fluid flows slowly down a tube into a needle in a vein or into the stomach ○ *After her operation, the patient was put on a drip.*

drip feed /'drɪp fi:d/ *noun* a drip containing nutrients

drop /drɒp/ *noun* 1. a small quantity of liquid 2. a sudden reduction or fall in the quantity of something ○ *a drop in pressure* ■ *plural noun*

drops liquid medicine for the eye, nose, or ear administered with a dropper ■ *verb* 1. to fall or let something fall ○ *Pressure in the artery dropped suddenly.* 2. to reduce suddenly

drop attack /'drɒp ə,tæk/ *noun* a condition in which a person suddenly falls down, though he or she is not unconscious, caused by sudden weakness of the spine

droperidol /'drɒpərɪdɒl/ *noun* a drug used to keep someone in a calm state before an operation

drop foot /'drɒp fot/ *noun* a condition, caused by a muscular disorder, in which the ankle is not strong and the foot hangs limp

droplet /'drɒplət/ *noun* a very small quantity of liquid

droplet infection /'drɒplət ɪn,fekʃən/ *noun* an infection developed by inhaling droplets containing a virus, e.g. from a sneeze

drop off /'drɒp 'ɒf/ *verb* (*informal*) 1. to fall asleep 2. to get less

dropper /'drɒpə/ *noun* a small glass or plastic tube with a rubber bulb at one end, used to suck up and expel liquid in drops

dropsy /'drɒpsi/ *noun* same as **oedema** (*dated*)

drop wrist /'drɒp 'rist/ *noun* a condition caused by a muscular disorder, in which the wrist is not strong and the hand hangs limp

drown /draʊn/ *verb* to die by inhaling liquid

drowning /'draʊnɪŋ/ *noun* death as a result of inhaling liquid

drowsiness /'drauzinəs/ *noun* sleepiness ○ *The medicine is likely to cause drowsiness.*

drowsy /'drauzi/ *adjective* sleepy ○ *The injection will make you feel drowsy.*

drug /drʌg/ *noun* 1. a natural or synthetic chemical substance which is used in medicine and affects the way in which organs or tissues function ○ *She was prescribed a course of pain-killing drugs.* ○ *The drug is being monitored for possible side-effects.* 2. a substance taken by choice which produces a strong effect

on a person's feelings and state of mind ○ **recreational drug** ○ **controlled drugs**

COMMENT: There are three classes of controlled drugs: **Class 'A'** drugs such as cocaine, heroin, crack and LSD; **Class 'B'** drugs such as amphetamines and codeine; and **Class 'C' drugs** such as cannabis and benzphetamine. The drugs are covered by five schedules under the Misuse of Drugs Regulations: **Schedule 1:** drugs which are not used medicinally, such as cannabis and LSD, for which possession and supply are prohibited. **Schedule 2:** drugs which can be used medicinally such as heroin, morphine, cocaine, and amphetamines; these are fully controlled as regards prescriptions by doctors, safe custody in pharmacies, registering of sales, etc. **Schedule 3:** barbiturates, which are controlled as regards prescriptions, but need not be kept in safe custody; **Schedule 4:** benzodiazepines, which are controlled as regards registers of purchasers; **Schedule 5:** other substances for which invoices showing purchasers; **Schedule 5:** other substances for which invoices showing purchase must be kept.

drug abuse /'dræg ə,bju:s/ *noun* ♦ **substance abuse**

drug abuser /'dræg ə,bju:zə/ *noun* a person who regularly uses drugs for non-medical purposes

drug addict /'dræg ,ædikt/ *noun* a person who is physically and mentally dependent on taking a particular drug regularly ○ *a heroin addict* ○ *a morphine addict*

drug addiction /'dræg ə,dkʃən/ *noun* the fact of being mentally and physically dependent on taking a particular drug regularly. Also called **drug dependence**

drug allergy /'dræg ,ælədʒi/ *noun* a reaction to a particular drug

drug dependence /'dræg drɪ,pendəns/ *noun* same as **drug addiction**

drug-related /'dræg ri,leɪtɪd/ *adjective* associated with the taking of drugs

drug tolerance /'dræg ,tələrəns/ *noun* a condition in which a drug has been given to someone for so long that his or her body no longer reacts to it, and the dosage has to be increased

drunk /dræŋk/ *adjective* intoxicated with too much alcohol

dry /draɪ/ *adjective* 1. not wet ○ *The surface of the wound should be kept dry.* 2. containing only a small amount of moisture ○ *She uses a cream to soften her dry skin.* (NOTE: **drier – driest**) ■ *verb* to remove moisture from something (NOTE: **dries – drying – dried**)

dry beriberi /,draɪ beri'beri/ *noun* beriberi associated with loss of feeling and paralysis

dry burn /,draɪ 'bɜ:n/ *noun* an injury to the skin caused by touching a very hot dry surface

dry drowning /,draɪ 'draʊnɪŋ/ *noun* death in which someone's air passage has been constricted by being under water, though he or she does not inhale any water

dry-eye syndrome /draɪ 'aɪ ,sɪndrəm/ *noun* same as **xerosis**

dry gangrene /,draɪ 'gæŋgrɪ:n/ *noun* a condition in which the blood supply to a limb has been cut off and the tissue becomes black

dry ice /,draɪ 'ais/ *noun* solid carbon dioxide

dryness /'drainəs/ *noun* the state of being dry ○ *dryness in the eyes, accompanied by rheumatoid arthritis* ○ *She complained of dryness in her mouth.*

dry out /,draɪ 'aut/ *verb* 1. same as **dry 2.** to treat someone for alcoholism, or undergo treatment for alcoholism (*informal*)

dry socket /,draɪ 'spəkit/ *noun* inflammation of the socket of a tooth which has just been removed

DTC *abbr* diagnostic and treatment centre

DTs *abbr* delirium tremens

Duchenne muscular dystrophy /du:,ʃen ,mʌskjulə 'distrəfi/, **Duchenne's muscular dystrophy** /du:,ʃenz ,mʌskjulə 'distrəfi/, **Duchenne**/du:,ʃen/ *noun* an inherited form of muscular dystrophy that weakens the muscles of the upper respiratory and pelvic areas. It usually affects boys and causes early death. [Described 1849. After Guillaume Benjamin Arnaud Duchenne (1806–75), French neurologist.]

Ducray's bacillus /du:,kreɪz bæ'siləs/ *noun* a type of bacterium found in the lungs, causing chancroid [Described 1889. After Augusto Ducray (1860–1940), Professor of Dermatology in Pisa, then Rome, Italy.]

duct /dʌkt/ *noun* a tube which carries liquids, especially one which carries secretions

duct gland /dʌkt glænd/ *noun* same as **exocrine gland**

ductless /dʌktləs/ *adjective* without a duct

ductless gland /dʌktləs 'glænd/ *noun* same as **endocrine gland**

ductule /'dʌktju:l/ *noun* a very small duct

ductus /'dʌktəs/ *noun* same as **duct**

ductus arteriosus /,dʌktəs ə:t,teri'əʊsəs/ *noun* in a fetus, the blood vessel connecting the left pulmonary artery to the aorta so that blood does not pass through the lungs

ductus deferens /,dʌktəs 'defərəns/ *noun* one of two tubes along which sperm pass from the epididymus to the seminal vesicles near the prostate gland. Also called **vas deferens**. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement

ductus venosus /,dʌktəs vɪ'nəʊsəs/ *noun* in a fetus, the blood vessel connecting the portal sinus to the inferior vena cava

dull /dʌl/ *adjective* referring to pain which is not strong but which is continuously present ○ *She complained of a dull throbbing pain in her head.* ○ *He felt a dull pain in the chest.* ■ *verb* to make a sensation or awareness of a sensation less sharp ○ *The treatment dulled the pain for a while.* ○ *The drug had dulled her senses.*

dumb /dʌm/ *adjective* not able to speak

dumbness /'dʌməns/ *noun* same as **mutism**

dumping syndrome /'dæmpɪŋ ,sɪndrəʊm/ *noun* same as **postgastrectomy syndrome**

duo- /dju:əʊ/ *prefix* two

duoden- /dju:əʊdən/ *prefix* referring to the duodenum

duodenal /,dju:əʊ'di:n(ə)l/ *adjective* referring to the duodenum

duodenal papillae /dju:əʊ,dɪ:n(ə)l pə'pili:/ *plural noun* small projecting parts in the duodenum where the bile duct and pancreatic duct open

duodenal ulcer /dju:əʊ,dɪ:n(ə)l 'ʌlsə/ *noun* an ulcer in the duodenum

duodenoscope /,dju:əʊ'di:nəʊskəʊp/ *noun* an instrument used to examine the inside of the duodenum

duodenostomy /,dju:əʊdɪ'nɒstəmɪ/ *noun* a permanent opening made between the duodenum and the abdominal wall

duodenum /,dju:ə'di:nəm/ *noun* the first part of the small intestine, going from the stomach to the jejunum. See illustration at **DIGESTIVE SYSTEM** in Supplement

COMMENT: The duodenum is the shortest part of the small intestine, about 250 mm long. It takes bile from the gall bladder and pancreatic juice from the pancreas and continues the digestive processes started in the mouth and stomach.

duplex imaging /,dju:pleks 'ɪmɪdʒɪŋ/ *noun* a type of ultrasonic imaging where the speed of the flow of blood is measured

Dupuytren's contracture /du:,pwɪ:t्रənз kən'træktʃə/ *noun* a condition in which the palmar fascia becomes thicker, causing the fingers, usually the middle and fourth fingers, to bend forwards [Described 1831. After Baron Guillaume Dupuytren (1775–1835), French surgeon.]

dura /'djuərə/ *noun* same as **dura mater**

dural /'djuər(ə)l/ *adjective* referring to the dura mater

dura mater /,djuərə 'meɪtə/ *noun* the thicker outer membrane of the three covering the brain. Also called **dura**, **pachymeninx**. ☞ **arachnoid**

duty /'dju:tɪ/ *noun* the activities which a person has to do as part of their job ☚ *What are the duties of a night sister?* (NOTE: The plural is **duties**). ☚ **to be on duty** to be working ☚ *She's on duty from 2 p.m. till 10 p.m.* ☚ **a duty of care** the requirement to treat a patient in an appropriate way, as part of the work of being a health professional

duty nurse /'dju:tɪ nɜ:s/ *noun* a nurse who is on duty

duty rota /'dju:tɪ ,rəʊtə/ *noun* a list of duties which have to be done and the names of the people who will do them

d.v.t., DVT abbr deep-vein thrombosis

dwarfism /'dwɔ:fɪz(ə)m/ *noun* a condition in which the growth of a person has stopped, leaving him or her much smaller than average

COMMENT: Dwarfism may be caused by achondroplasia, where the long bones in the arms and legs do not develop fully but the trunk and head are of average size. Dwarfism can have other causes such as rickets or deficiency in the pituitary gland.

dynamic splint /dai,næmɪk 'splint/ *noun* a splint which uses springs to help the person move

dynamometer /,dai'nə'mɒmɪtə/ *noun* an instrument for measuring the force of muscular contraction

-dynia /dɪniə/ *suffix* pain

dys- /dɪs/ *prefix* difficult or impaired

dysaesthesia /,dɪsɪs'θi:ziə/ *noun* 1. the impairment of a sense, in particular the sense of touch 2. an unpleasant feeling of pain experienced when the skin is touched lightly

dysarthria /dɪs'ɑ:θriə/, **dysarthrosis** /,dɪsə:θrəʊsɪs/ *noun* difficulty in speaking words clearly, caused by damage to the central nervous system

dysbarism /'dɪsbə:rɪz(ə)m/ *noun* any disorder caused by differences between the atmospheric pressure outside the body and the pressure inside

dysbasia /'dɪs'beɪziə/ *noun* difficulty in walking, especially when caused by a lesion to a nerve

dyschezia /dɪs'keɪziə/ *noun* difficulty in passing faeces

dyschondroplasia /,dɪskɒndrəʊ'pleɪziə/ *noun* a condition in which the long bones are shorter than usual

dyschromatopsia /,dɪskrəʊmə'tɒpsɪə/ *noun* a condition where someone cannot distinguish colours

dyscoria /dɪs'kɔ:riə/ *noun* 1. an unusually shaped pupil of the eye 2. an unusual reaction of the pupil

dyscrasia /dis'kreɪziə/ *noun* any unusual body condition (*dated*)

dysdiadochokinesia /,dɪsdaɪə,ædəkəʊkai'nɪsiə/, **dysdiadochokinesis** /,dɪsdaɪə,ædəkəʊkai'nɪsɪs/ *noun* the inability to carry out rapid movements, caused by a disorder or lesion of the cerebellum

dysenteric /,dɪsən'terɪk/ *adjective* referring to dysentery

dysentery /'dɪs(ə)ntri/ *noun* an infection and inflammation of the colon, causing bleeding and diarrhoea

COMMENT: Dysentery occurs mainly in tropical countries. The symptoms include diarrhoea, discharge of blood and pain in the intestines. There are two main types of dysentery: **bacillary dysentery**, caused by the bacterium *Shigella* in contaminated food, and **amoebic dysentery** or amoebiasis, caused by a para-

sitic amoeba *Entamoeba histolytica* spread through contaminated drinking water.

dysfunction /dɪs'fʌŋkʃən/ *noun* an unusual functioning of an organ

dysfunctional /dɪs'fʌŋkʃən(ə)l/ *adjective* 1. not working properly 2. unable to relate to other people emotionally or socially

dysfunctional uterine bleeding /dɪs'fʌŋkʃən(ə)l ,ju:tərəin 'bli:dɪŋ/ *noun* bleeding in the uterus not caused by a menstrual period

dysgenesis /dɪs'dʒenəsɪs/ *noun* unusual development

dysgerminoma /dɪs,dʒɜ:mɪ'nəʊmə/ *noun* a malignant tumour of the ovary or testicle

dysgraphia /dɪs'græfiə/ *noun* difficulty in writing caused by a brain lesion

dyskariosis /dɪs,kærɪ'əʊsɪs/ *noun* the fact of becoming mature in an unusual way

dyskinesia /,dɪskɪn'ni:ziə/ *noun* the inability to control voluntary movements

dyslalia /dɪs'leɪliə/ *noun* a disorder of speech, caused by an unusual development of the tongue

dyslexia /dɪs'leksiə/ *noun* a disorder of development, where a person is unable to read or write properly and confuses letters

dyslexic /dɪs'leksɪk/ *adjective* referring to dyslexia ■ *noun* a person suffering from dyslexia

dyslipidaemia /,dɪslɪpɪ'di:miə/ *noun* an imbalance of lipids

dyslogia /dɪs'ləʊdʒə/ *noun* difficulty in putting ideas into words

dysmaturity /dɪsmə'tjuəriti/ *noun* a condition affecting newborn babies, shown by wrinkled skin, long fingernails and toenails and relatively little body fat

dysmenorrhoea /,dɪsmenə'rɪ:ə/ *noun* pain experienced at menstruation

dysostosis /,dɪsɒst'stəʊsɪs/ *noun* unusual formation of bones

dyspareunia /,dɪspæ'rū:nɪə/ *noun* difficult or painful sexual intercourse in a woman

dyspepsia /dɪs'pepsiə/ *noun* a condition in which a person feels pains or discomfort in the stomach, caused by indigestion

dyspeptic /dɪs'peptɪk/ *adjective* referring to dyspepsia

dysphagia /dɪs'feɪdʒɪə/ *noun* difficulty in swallowing

dysphasia /dɪs'feɪzɪə/ *noun* difficulty in speaking and putting words into the correct order

dysphemia /dɪs'fi:miə/ *noun* same as **stammering**

dysphonia /dɪs'fəʊniə/ *noun* difficulty in speaking caused by impairment of the vocal cords, or by laryngitis

dysplasia /dɪs'pleɪziə/ *noun* an unusual development of tissue

dyspnoea /dɪsp'nɪ:ə/ *noun* difficulty or pain in breathing

dyspnoeic /dɪsp'nɪ:ik/ *adjective* difficult or painful when breathing

dyspraxia /dɪs'præksɪə/ *noun* difficulty in carrying out coordinated movements

dysrhythmia /dɪs'rɪðmɪə/ *noun* an unusual rhythm, either in speaking or in electrical impulses in the brain

dyssocial /dɪs'səʊʃ(ə)l/ *adjective* same as **antisocial**

dysynergia /dɪs'i:nɜ:dʒɪə/ *noun* same as **asynergia**

dystaxia /dɪs'tæksɪə/ *noun* an inability to co-ordinate the muscles

dystocia /dɪs'təʊsiə/ *noun* difficult childbirth

dystonia /dɪs'təʊniə/ *noun* disordered muscle tone, causing involuntary contractions which make the limbs deformed

dystrophy /dɪs't्रəʊfiə/ *noun* the wasting of an organ, muscle or tissue due to lack of nutrients in that part of the body. Also called **dystrophy**

dystrophy adiposogenitalis /dɪs,trəʊfiə ædɪ,pəʊsədʒenɪ'teɪlɪs/ *noun* same as **Frölich's syndrome**

dystrophy myotonica /dɪs,trəʊfiə,maiəʊ'nɔ:tnɪkə/ *noun* same as **myotonic dystrophy**

dystrophy /'distrəfi/ *noun* same as **dystrophy**

dysuria /dɪs'juəriə/ *noun* difficulty in passing urine

E

ear /ɪə/ *noun* an organ on the side of the head which is used for hearing (NOTE: For other terms referring to ears, see **auricular** and words beginning with **ot-**, **oto-**)

COMMENT: The outer ear is shaped in such a way that it collects sound and channels it to the eardrum. Behind the eardrum, the three ossicles in the middle ear vibrate with sound and transmit the vibrations to the cochlea in the inner ear. From the cochlea, the vibrations are passed by the auditory nerve to the brain.

Ear, Nose & Throat /ɪə , nəʊz ən 'θrəut/ *noun* the study of the ear, nose and throat. Abbr ENT. Also called **otorhinolaryngology**

earache /'iərek/ *noun* pain in the ear. Also called **otalgia**

ear canal /'iə kænəl/ *noun* one of several passages in or connected to the ear, especially the external auditory meatus, the passage from the outer ear to the eardrum

eardrum /'iədrʌm/ *noun* the membrane at the end of the external auditory meatus leading from the outer ear, which vibrates with sound and passes the vibrations on to the ossicles in the middle ear. Also called **myringa**, **tympanum** (NOTE: For other terms referring to the eardrum, see words beginning with **tympan-**, **tympano-**)

early /'ɜːli/ *adjective* 1. happening at the beginning of a period of time □ **early diagnosis** diagnosis made at the onset of an illness □ **early treatment** treatment given almost as soon as the illness has started 2. (of a condition or illness) in its first stage □ *early synovitis* □ **during early pregnancy** within the first months of pregnancy ■ *adverb* at the beginning of a period of time □ *The treatment is usually successful if the condition is diagnosed early.*

early onset pre-eclampsia /,ɜːli ,onset ,pri: tklæmpsɪə/ *noun* pre-eclampsia which appears earlier than the 37th week of the pregnancy

ear ossicle /'ɪə ,ɒsɪk(ə)l/ *noun* ♦ **auditory ossicles**

earwax /'iəwæks/ *noun* same as **cerumen**

ease /iːz/ *verb* to make pain or worry less □ *She had an injection to ease the pain in her leg.*

○ *The surgeon tried to ease the patient's fears about the results of the scan.*

eating disorder /'iːtɪŋ dɪsɔːdə/ *noun* an illness that causes the usual pattern of eating to be disturbed, e.g. anorexia or bulimia

eating habits /'iːtɪŋ ,haebɪts/ *plural noun* the types and quantities of food regularly eaten by a person ○ *The dietitian advised her to change her eating habits.*

Ebola virus /ɪ'bəʊlə ,vaɪrəs/ *noun* a highly contagious virus found in West Africa. Patients who are affected with it vomit, have bloody diarrhoea and blood seeps through their skin.

eburnation /,ɪ:bə'nɛf(ə)n/ *noun* the conversion of cartilage into a hard mass with a shiny surface like bone

ecabolic /ek'bɒlik/ *noun* a substance which produces contraction of the uterus and so induces childbirth or abortion ■ *adjective* causing contraction of the uterus

echondroma /,eɪkəndrəʊmə/ *noun* a benign tumour on the surface of cartilage or bone

echymosis /ek'tɪ'məʊsɪs/ *noun* a dark area on the skin made by blood which has escaped into the tissues after a blow. Also called **bruise**, **contusion**

eccrine /'ekrɪn/ *adjective* referring to a gland, especially a sweat gland, which does not disintegrate and remains intact during secretion. Also called **merocrine**

eccyesis /,eksɪs'ɪ:sɪs/ *noun* same as **ectopic pregnancy**

ecdysis /'ekdɪsɪs/ *noun* same as **desquamation**

ECG abbr electrocardiogram

echinococcosis /i,kainəʊkɒn'kaɪəsɪs/, **echinococcosis** /i,kainəʊkə'kəʊsɪs/ *noun* a disorder caused by a tapeworm *Echinococcus granulosus* which forms hydatid cysts in the lungs, liver, kidneys or brain

Echinococcus granulosus /i,kainəʊkɒkəs ,grænju'laʊsəs/ *noun* a type of tapeworm, usually found in animals, but sometimes transmitted to humans, causing hydatid cysts in the lungs, liver, kidneys or brain
echo- /ekəʊ/ *prefix* referring to sound

echocardiogram /,ekəʊ'kɑ:dɪəgræm/ *noun* a record of heart movements made using ultrasound

echocardiography /,ekəʊkə:di'ngrəfi/ *noun* the use of ultrasound to examine the heart

echoencephalography /,ekəʊen,kefə'lɒgrəfi/ *noun* the use of ultrasound to examine the brain

echography /e'knɒgrəfi/ *noun* same as **ultrasonography**

echokinesis /,ekəʊkə'nɪ:sɪs/ *noun* same as **echopraxia**

echolalia /,ekəʊ'leɪliə/ *noun* the repetition of words spoken by another person

echopraxia /,ekəʊ'prækσiə/ *noun* the meaningless imitation of another person's actions

echovirus /'ekəʊ,vairəs/ *noun* one of a group of viruses which can be isolated from the intestine and which can cause serious illnesses such as aseptic meningitis, gastroenteritis and respiratory infection in small children. Compare **reovirus**

eclabium /'kλεɪbiəm/ *noun* the turning outwards of the lips. ◊ **eversion**

clampsia /'klæmpsɪə/ *noun* a serious condition of pregnant women at the end of pregnancy, caused by toxæmia, in which the woman has high blood pressure and may go into a coma. ◊ **pre-clampsia**

ecnesia /ek'nɪ:ziə/ *noun* a condition in which someone is not able to remember recent events, while remembering clearly events which happened some time ago

E. coli /,i: 'kɔ:lə/ *noun* same as **Escherichia coli**

economy class syndrome /i'kɒnəmɪklə:s ,sɪndrəʊm/ *noun* same as **deep-vein thrombosis** (*informal*)

écraseur /,eɪkra:'zɜ:/ *noun* a surgical instrument, usually with a wire loop, used to cut a part or a growth off at its base

ecstasy /'ekstəsi/ *noun* 1. feeling of extreme happiness 2. a powerful stimulant and hallucinatory illegal drug (*informal*) Also called **methylene dioxyamphetamine**

ECT *abbr* electroconvulsive therapy

ect- /ekt/ *prefix* same as **ecto-** (*used before vowels*)

ectasia /ek'teɪziə/ *noun* the dilatation of a passage

ecthyma /ek'θaimə/ *noun* a skin disorder that is a serious form of impetigo which penetrates deep under the skin and leaves scars

ecto- /ektəʊ/ *prefix* outside

ectoderm /'ektəudz:m/ *noun* the outer layer of an early embryo. Also called **embryonic ectoderm**

ectodermal /,ektəʊ'dz:m(ə)l/ *adjective* referring to the ectoderm

-ectomy /ektə'mi/ *suffix* referring to the removal of a part by surgical operation

ectoparasite /,ektəʊ'pærəsait/ *noun* a parasite which lives on the skin. Compare **endoparasite**

ectopia /ek'təupiə/ *noun* a condition in which an organ or part of the body is not in its usual position

ectopic /ek'tɒpɪk/ *adjective* not in the usual position. Opposite **endoptic**

ectopic heartbeat /ek,tɒpɪk 'ha:tbi:t/ *noun* an unusual extra beat of the heart which originates from a point other than the sinoatrial node. Also called **extrasystole, premature beat**

ectopic pacemaker /ek,tɒpɪk 'peɪsmēkə/ *noun* an unusual focus of the heart muscle which takes the place of the sinoatrial node

ectopic pregnancy /ek,tɒpɪk 'pregnənsi/ *noun* a pregnancy where the fetus develops outside the uterus, often in one of the Fallopian tubes. Also called **extrauterine pregnancy, ecysis**

ectro- /ek't्रəʊ/ *prefix* referring to a usually congenital absence or lack of something

ectrodactyly /,ektrəʊ'dæktɪli/ *noun* a congenital absence of all or part of a finger

ectrogeny /ek'trɒdʒənɪ/ *noun* a congenital absence of a part at birth

ectromelia /,ektrəʊ'mi:liə/ *noun* a congenital absence of one or more limbs

ectropion /ek't्रəpiən/ *noun* a turning of the edge of an eyelid outwards. ◊ **eversion**

eczema /'eksɪmə/ *noun* a non-contagious inflammation of the skin, with an itchy rash and blisters

eczematous /ek'semətəs/ *adjective* referring to eczema

eczematous dermatitis /ek,semətəs ,dɜ:ma:tɪtɪs/ *noun* an itchy inflammation or irritation of the skin due to an allergic reaction to a substance which a person has touched or absorbed

EDD *abbr* expected date of delivery

edema /i:dɪ:mə/ *noun* US same as **oedema**

edentulous /i'dentjʊləs/ *adjective* having lost all teeth

edible /'edɪb(ə)l/ *adjective* able to be eaten without causing harm

EDTA *noun* a colourless chemical that can bind to heavy metals to remove them from the bloodstream. Full form **ethylene diamine tetra-acetate**

Edwards' syndrome /'edwədz ,sɪndrəʊm/ *noun* a severe genetic disorder that results in malformations of the brain, kidney, heart, hands and feet. It is caused by an extra copy of chromosome 18 and those people who have it usually die within six months.

EEG *abbr* electroencephalogram

EFA *abbr* essential fatty acid

effacement /'feɪsmənt/ *noun* the thinning of the cervix before it dilates in childbirth

effect /ɪ'fekt/ *noun* a result of a drug, treatment, disease or action ○ *The antiseptic cream has had no effect on the rash.* ■ *verb* to make something happen (*formal*) ○ *They will have to effect a change in procedures.* ○ *In some circumstances these drugs can effect surprising cures.*

effective /ɪ'fektɪv/ *adjective* having an effect ○ *Embolisation is an effective treatment for severe haemoptysis.*

effective dose /ɪ,fektɪv 'dəʊs/ *noun* a size of dose which will produce the effect required

effector /ɪ'fektə/ *noun* a nerve ending in muscles or glands which is activated to produce contraction or secretion

efferens /'efərəns/ ♦ **vas efferens**

efferent /'efərənt/ *adjective* carrying something away from part of the body or from the centre. Opposite **afferent**

efferent duct /'efərənt dʌkt/ *noun* a duct which carries a secretion away from a gland

efferent nerve /'efərənt nɜːv/ *noun* same as motor nerve

efferent vessel /'efərənt ,ves(ə)l/ *noun* a vessel which drains lymph from a gland

effleurage /,efløːz'ruːz/ *noun* a form of massage where the skin is stroked in one direction to increase blood flow

effort syndrome /'efət ,sɪndrəʊm/ *noun* same as **disordered action of the heart**

effusion /ɪ'fjuːʒ(ə)n/ *noun* 1. a discharge of blood, fluid or pus into or out of an internal cavity 2. fluid, blood or pus which is discharged

egg /eg/ *noun* 1. a reproductive cell produced in the female body by an ovary, and which, if fertilised by the male sperm, becomes an embryo 2. an egg with a hard shell, laid by a hen or other bird, which is used for food

egg cell /'eg sel/ *noun* an immature ovum or female cell

ego /'i:gəʊ, 'eɡəʊ/ *noun* (*in psychology*) the part of the mind which is consciously in contact with the outside world and is influenced by experiences of the world

Egyptian ophthalmia /ɪ,dʒɪpʃ(ə)n əf 'θəɪlmɪə/ *noun* same as **trachoma**

EHO abbr Environmental Health Officer

EIA abbr exercise-induced asthma

eidetic imagery /aɪ,detɪk 'ɪmidʒəri/ *noun* the recall of extremely clear pictures in the mind

Eisenmenger syndrome /aɪzənmɛnɛr ,sɪndrəʊm/ *noun* heart disease caused by a septal defect between the ventricles, with pulmonary hypertension [Described 1897. After Victor Eisenmenger (1864–1932), German physician.]

ejaculate /ɪ'dʒækjʊ,leɪt/ *verb* to send out semen from the penis

ejaculation /ɪ,dʒækjʊ'leɪʃ(ə)n/ *noun* the sending out of semen from the penis

ejaculatio praecox /ɪdʒækjʊ,leɪʃɪəʊ 'pri:kɒks/ *noun* a situation where a man ejaculates too early during sexual intercourse

ejaculatory /ɪ'dʒækjʊlətri/ *adjective* referring to ejaculation

ejaculatory duct /ɪ'dʒækjʊlətri dʌkt/ *noun* one of two ducts leading from the seminal vesicles through the prostate gland to the urethra. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement

eject /ɪ'dʒekt/ *verb* to send out something with force ○ *Blood is ejected from the ventricle during systole.*

ejection /ɪ'dʒekʃən/ *noun* the act of sending out something with force

EKG abbr US electrocardiogram

elastic /ɪ'læstɪk/ *adjective* which can be stretched and compressed and return to its former shape

elastic bandage /ɪ,læstɪk 'bændɪdʒ/ *noun* a stretchy bandage used to support a weak joint or for the treatment of a varicose vein

elastic cartilage /ɪ,læstɪk 'kɑːtɪlɪdʒ/ *noun* flexible cartilage, e.g. in the ear and epiglottis

elastic fibre /ɪ,læstɪk 'faɪbə/ *noun* fibre which can expand easily and is found in elastic cartilage, the skin and the walls of arteries and the lungs. Also called **yellow fibre**

elastic hose /ɪ'læstɪk həʊz/ *noun* same as **surgical hose**

elasticity /ɪ,læ'sɪsɪti/ *noun* the ability to expand and be compressed and to return to the former shape

elastic tissue /ɪ,læstɪk 'tɪʃu:/ *noun* connective tissue which contains elastic fibres, e.g. in the walls of arteries or of the alveoli in the lungs

elastin /ɪ'læstɪn/ *noun* a protein which occurs in elastic fibres

elation /ɪ'leɪʃ(ə)n/ *noun* the state of being happy, stimulated and excited

elbow /'elbəʊ/ *noun* a hinged joint where the upper arm bone (**humerus**) joins the forearm bones (**radius** and **ulna**)

elbow crutch /'elbəʊ krʌtʃ/ *noun* a crutch which surrounds the arms at the elbows and has a handle to hold lower down the shaft

elderly /'eldəlɪ/ *adjective* older than 65 ○ *a home for elderly single women* ○ *She looks after her two elderly parents.* ■ *noun* □ **the elderly** people aged over 65

elective /ɪ'lektɪv/ *adjective* 1. referring to a chemical substance which tends to combine with one substance rather others 2. referring to surgery or treatment which someone can choose to have but is not urgently necessary to save their life

elective care /ɪ'lektɪv 'keə/ *noun* hospital care which is planned in advance, rather than a response to an emergency

Electra complex /ɪ'lektrə ,kɒmpleks/ *noun* (*in psychology*) a condition in which a girl feels sexually attracted to her father and sees her mother as an obstacle

electric shock /ɪ'lektrɪk 'ʃɒk/ *noun* a sudden passage of electricity into the body, causing a nervous spasm or, in severe cases, death

electric shock treatment /ɪ'lektrɪk 'ʃɒk ,trɪ:tment/ *noun* same as **electroconvulsive therapy** (*informal*)

electro- /ɪ'lektrəʊ/ *prefix* referring to electricity

electrocardiogram /ɪ'lektrəʊ'ku:dɪgræm/ *noun* a chart which records the electrical impulses in the heart muscle. Abbr **ECG, EKG**

electrocardiograph /ɪ'lektrəʊ'ku:dɪgrəf/ *noun* an apparatus for measuring and recording the electrical impulses of the muscles of the heart as it beats

electrocardiography /ɪ'lektrəʊku:di'grəfi/ *noun* the process of recording the electrical impulses of the heart

electrocardiophonography /ɪ'lektrəʊ ku:diəʊfə'nŋrəfi/ *noun* the process of electrically recording the sounds of the heartbeats

electrocautery /ɪ'lektrəʊ'kɔ:təri/ *noun* same as **galvanocautery**

electrochemical /ɪ'lektrəʊ'kemɪk(ə)l/ *adjective* referring to electricity and chemicals and their interaction

electrocoagulation /ɪ'lektrəʊkəʊægjʊ'leɪʃ(ə)n/ *noun* the control of haemorrhage in surgery by passing a high-frequency electric current through divided blood vessels

electroconvulsive therapy /ɪ'lektrəʊkən'vel'sɪvθe:rəpi/ *noun* the treatment of severe depression and some mental disorders by giving someone who has been anaesthetised small electric shocks in the brain to make him or her have convulsions. Abbr **ECT**. Also called **electroconvulsions**

electrode /ɪ'lektrəʊd/ *noun* the conductor of an electrical apparatus which touches the body and carries an electric shock

electrodesiccation /ɪ'lektrəʊ'desɪk'seɪʃ(ə)n/ *noun* same as **fulguration**

electroencephalogram /ɪ'lektrəʊ'ɛnsefəl'græm/ *noun* a chart on which the electrical impulses in the brain are recorded. Abbr **EEG**

electroencephalograph /ɪ'lektrəʊ'ɛnsefəl'grɑ:f/ *noun* an apparatus which records the electrical impulses in the brain

electroencephalography /ɪ'lektrəʊ'ɛnsefəl'ɪgrəfi/ *noun* the process of recording the electrical impulses in the brain

electrolysis /ɪ'lektrə'ləsɪs/ *noun* the destruction of tissue such as unwanted hair by applying an electric current

electrolyte /ɪ'lektrə'ləйт/ *noun* a chemical solution which can conduct electricity

electrolyte mixture /ɪ'lektrə'ləlait ,mɪkstʃə/ *noun* a pint (0.56 litres) of boiled water with a teaspoonful of sugar and a generous pinch of table salt used for the prevention of diarrhoea

electrolytic /ɪ'lektrə'lɪtɪk/ *adjective* referring to electrolytes or to electrolysis

electromyogram /ɪ'lektrə'maɪəgræm/ *noun* a chart showing the electric currents in active muscles. Abbr **EMG**

electromyography /ɪ'lektrə'ʊmət̬'ɒgrəfi/ *noun* the study of electric currents in active muscles

electronic stethoscope /ɪ'lektrɒnɪk 'stɪθoskəp/ *noun* a stethoscope with an amplifier which makes sounds louder

electronystagmography /e'lektrəʊ ,nɪstæg'mɒgrəfi/ *noun* measuring of nystagmus

electrooculogram /ɪ'lektrəʊ'ɒkjʊləgræm/ *noun* a record of the electric currents round the eye, induced by eye movements

electrooculography /ɪ'lektrəʊ,ɒkjʊləgrəfi/ *noun* recording the electric currents round the eye, induced by eye movements, especially for use in remote control

electrophoresis /ɪ'lektrəfəsɪs/ *noun* the analysis of a substance by the movement of charged particles towards an electrode in a solution

electroplexy /ɪ'lektrəpleksi/ *noun* same as **electroconvulsive therapy**

electroretinogram /ɪ'kektrəʊ'retɪnəgræm/ *noun* the printed result of electroretinography. Abbr **ERG**

electroretinography /ɪ'lektrəʊ'retɪ'nɒgrəfi/ *noun* the process of recording electrical changes in the retina when stimulated by light

electrosurgery /ɪ'lektrəʊ'sɜ:dʒəri/ *noun* an operation in which the surgeon uses an electrical current to cut or cauterise tissue

electrotherapy /ɪ'lektrəʊ'θerəpi/ *noun* the treatment of a disorder such as some forms of paralysis by using low-frequency electric current to try to revive the muscles

element /'el'mēnt/ *noun* a basic simple chemical substance which cannot be broken down into simpler substances. ◊ **trace element**

elephantiasis /elfɪən'taiəsɪs/ *noun* a condition in which parts of the body swell and the skin becomes hardened, frequently caused by infestation with various species of the parasitic worm *Filaria*

elevate /'el'veɪt/ *verb* to raise something or to lift something up ◊ *To control bleeding, apply pressure and elevate the part.*

elevation /elə'veɪʃ(ə)n/ *noun* a raised part

elevation sling /'elɪ'veɪʃ(ə)n slɪŋ/ *noun* a sling tied round the neck, used to hold an injured hand or arm in a high position to control bleeding

elevator /'elɪvētə/ *noun* 1. a muscle which raises part of the body 2. a surgical instrument used to lift part of a broken bone

eliminate /'lɪmɪneɪt/ *verb* to remove waste matter from the body ◎ *The excess salts are eliminated through the kidneys.*

elimination /lɪ'mɪnɪ'teɪʃ(ə)n/ *noun* the removal of waste matter from the body

elimination diet /lɪ'mɪnɪ'teɪʃ(ə)n 'daɪət/ *noun* a structured diet where different foods are eliminated one at a time in order to see the effect on symptoms, used in conditions such as allergies and attention deficit hyperactivity disorder

ELISA /'elɪzə/ *noun* a process in which an enzyme binds to an antibody or antigen and causes a colour change that shows the presence or amount of protein in a sample of biological material. Full form **enzyme-linked immunosorbent assay**

elixir /'elɪksə/ *noun* a sweet liquid which hides the unpleasant taste of a drug

elliptocytosis /ɪ'lɪptəʊsɪs/ *noun* a condition in which unusual oval-shaped red cells appear in the blood

emaciated /'eɪmɪsi:tɪd/ *adjective* very thin and extremely underweight

emaciation /'eɪmɪsi'eɪʃ(ə)n/ *noun* 1. the fact of being extremely thin and underweight 2. the loss of body tissue

emaculation /ɪ'mækjʊ'l eɪʃ(ə)n/ *noun* the removal of spots from the skin

emasculcation /ɪ'mæskjʊ'l eɪʃ(ə)n/ *noun* 1. the removal of the penis 2. the loss of male characteristics

embalm /'embɔ:m/ *verb* to preserve a dead body by using special antiseptic chemicals to prevent decay

embolectomy /'embə'lektəmɪ/ *noun* a surgical operation to remove a blood clot

emboli /'embəlɪ/ plural of **embolus**

embolisation /'embəlɪzɪ'seɪʃ(ə)n/, **embolization** *noun* the use of emboli inserted down a catheter into a blood vessel to treat internal bleeding

'...once a bleeding site has been located, a catheter is manipulated as near as possible to it, so that embolization can be carried out. Many different materials are used as the embolus.' [British Medical Journal]

embolism /'embəlɪz(ə)m/ *noun* the blocking of an artery by a mass of material, usually a blood clot, preventing the flow of blood

embolus /'embələs/ *noun* 1. a mass of material which blocks a blood vessel, e.g. a blood clot, air bubble or fat globule 2. material inserted into a blood vessel down a catheter to treat internal bleeding (NOTE: The plural is **emboli**.)

embrocation /'embrə'keɪʃ(ə)n/ *noun* same as liniment

embryo /'embriəʊ/ *noun* an unborn baby during the first eight weeks after conception (NOTE: After eight weeks, the unborn baby is called a **fetus**.)

embryological /'embriə'lɒdʒɪk(ə)l/ *adjective* referring to embryology

embryology /'embri'ɒlədʒɪ/ *noun* the study of the early stages of the development of an embryo

embryonic /'embri'ɒnɪk/ *adjective* 1. referring to an embryo 2. in an early stage of development

embryonic ectoderm /'embriɒnɪk 'ektədʒm/ *noun* ♦ **ectoderm**

embryonic membrane /'embriɒnɪk 'membrən/ *noun* one of the two layers around an embryo providing protection and food supply, i.e. the **amnion** and the **chorion**

embryonic mesoderm /'embriɒnɪk 'mesəʊdʒm/ *noun* ♦ **mesoderm**

emergency /'emɜːdʒənsɪ/ *noun* a situation where urgent immediate action has to be taken

emergency medical technician /'emɜːdʒənsi ,medɪk(ə)t ek'teknɪʃ(ə)n/ *noun* US a trained paramedic who gives care to victims at the scene of an accident or in an ambulance. Abbr **EMT**

emergency medicine /'emɜːdʒənsi 'med(ə)s(ə)n/ *noun* the treatment of patients whose condition is serious and requires urgent immediate action

emergency room /'emɜːdʒənsi ru:m/ *noun* US the part of a hospital where people who need urgent immediate treatment are dealt with

emergency ward /'emɜːdʒənsi wɔ:d/ *noun* the part of a hospital where people who need urgent immediate treatment are dealt with

emesis /'emɪsɪs/ *noun* same as **vomiting**

emetic /'etmɪtɪk/ *noun* a substance which causes vomiting ■ *adjective* causing vomiting

EMG abbr electromyogram

eminence /'emɪnənsɪ/ *noun* something which protrudes from a surface, e.g. a lump on a bone or swelling on the skin

emissary vein /'emɪsəri ,veɪn/ *noun* a vein through the skull which connects the venous sinuses with the scalp veins

emission /'emɪʃ(ə)n/ *noun* a discharge or release of fluid

emmenagogue /'emɪnəgɔ:g/ *noun* a drug which will help increase menstrual flow

emmetropia /'emɪ'trəʊpiə/ *noun* the correct focusing of light rays by the eye onto the retina giving normal vision. Compare **metropia**

emollient /'emolɪənt/ *noun* a substance which soothes or smooths the skin, e.g. to prevent the development of eczema ■ *adjective* smoothing

emotion /ɪ'meʊʃ(ə)n/ *noun* a strong feeling

emotional disorder /ɪ'meʊʃ(ə)nəl dɪs'ɔ:də/ *noun* a disorder due to worry, stress, grief or other strong emotion

emotional immaturity /ɪ'meʊʃ(ə)nəl ɪm'etʃu:təti/ *noun* lacking in emotional development

empathy /'empəθi/ *noun* the ability to understand the problems and feelings of another person

emphysema /,emfɪ'si:mə/ *noun* a condition in which the walls of the alveoli of the lungs break down, reducing the surface available for gas exchange and resulting in a lower oxygen level in the blood and shortness of breath. It can be caused by smoking, living in a polluted environment, old age, asthma or whooping cough. ♦ **surgical emphysema**

empirical treatment /ɪm'pɪrɪk(ə)l 'tri:tment/ *noun* treatment which is based on symptoms and clinical experience rather than on a thorough knowledge of the cause of the disorder

empowerment /ɪm'paʊəmənt/ *noun* the act of giving someone authority and power to make decisions that will affect them

empyema /,empə'rɪ:mə/ *noun* the collection of pus in a cavity, especially in the pleural cavity. Also called **pyothorax**

EMS *abbr* Emergency Medical Services

EMT *abbr* US emergency medical technician

emulsion /ɪ'mʌlʃən/ *noun* a combination of liquids such as oil and water which do not usually mix

EN *abbr* enrolled nurse

EN(G) *abbr* enrolled nurse (general)

EN(M) *abbr* enrolled nurse (mental)

EN(MH) *abbr* enrolled nurse (mental handicap)

en- /en/, **in-** /in/ *prefix* 1. **in**, into 2. to provide with 3. to cause to be 4. to put into or cover with 5. to go into

enalapril /e'næləprɪl/ *noun* a drug used for the short-term management of high blood pressure

enamel /ɪ'næm(ə)l/ *noun* the hard white shiny outer covering of the crown of a tooth

enanthema /,enən'θi:mə/ *noun* a rash on a mucous membrane, such as that of the mouth or vagina, produced by the action of toxic substances on small blood vessels

enarthrosis /,enə:'θrəʊsɪs/ *noun* a ball and socket joint, e.g. the hip joint

encapsulated /ɪ'nkæpsjuleɪtɪd/ *adjective* enclosed in a capsule or in a sheath of tissue

encephalin /en'kefəlin/ *noun* another spelling of **encephalin**

encephal- /enkefəl/ *prefix* same as **encephalo-** (used before vowels)

encephalin /en'kefəlin/ *noun* a peptide produced in the brain which acts as a natural pain-

killer. ♦ **endorphin** (NOTE: The US spelling is **enkephalin**)

encephalitis /en,kefə'laitɪs, en,sefə'laitɪs/ *noun* inflammation of the brain

COMMENT: Encephalitis is caused by any of several viruses (**viral encephalitis**) and is also associated with infectious viral diseases such as measles or mumps. The variant **St Louis encephalitis** is transmitted by mosquitoes.

encephalitis lethargica /,enkefə'laitɪs lɪ'θa:dʒɪkə/ *noun* same as **lethargic encephalitis**

encephalo- /enkefələ/ *prefix* referring to the brain

encephalocele /en'kefələsɪ:l/ *noun* a condition in which the brain protrudes through a congenital or traumatic gap in the skull bones

encephalogram /en'kefələgræm/, **encephalograph** /en'kefələgrɑ:f/ *noun* an X-ray photograph of the ventricles and spaces of the brain taken after air has been injected into the cerebrospinal fluid by lumbar puncture

encephalography /en,kefə'lɒgrəfi/ *noun* an X-ray examination of the ventricles and spaces of the brain taken after air has been injected into the cerebrospinal fluid by lumbar puncture

COMMENT: The air takes the place of the cerebrospinal fluid and makes it easier to photograph the ventricles clearly. This technique has been superseded by CT and MRI.

encephaloid /en'kefəlɔɪd/ *adjective* like brain tissue

encephaloma /en,kefə'ləʊmə/ *noun* a tumour of the brain

encephalomalacia /en,kefələʊmə'leɪʃə/ *noun* softening of the brain

encephalomyelitis /en,kefələʊməlɪ'taɪtɪs/ *noun* a group of diseases which cause inflammation of the brain and the spinal cord

encephalomyopathy /en,kefələʊmə'lo:pəθi/ *noun* any condition where the brain and spinal cord are diseased

encephalon /en'kefələn/ *noun* same as **brain** (NOTE: The plural is **encephala**.)

encephalopathy /en,kefə'lɒpəθi/ *noun* any disease of the brain

enchondroma /,enkən'draʊmə/ *noun* a tumour formed of cartilage growing inside a bone

enchondromatosis /,enkəndrəmə'təʊsɪs/ *noun* a condition in which a tumour formed of cartilage grows inside a bone

encopresis /en'kəpu'pri:sɪs/ *noun* faecal incontinence not associated with a physical condition or disease

encounter group /ɪn'kaʊntə gru:p/ *noun* a form of treatment of psychological disorders, where people meet and talk about their problems in a group

encysted /en'sɪstɪd/ *adjective* enclosed in a capsule like a cyst

end- /end/ *prefix* same as **endo-** (*used before vowels*)

endanger /ɪn'deɪndʒə/ *verb* to put someone or something at risk ○ *The operation may endanger the life of the patient.*

endarterectomy /'endə:tə'rektəmɪ/ *noun* the surgical removal of the lining of a blocked artery. Also called **reboare**

endarteritis /'endə:tə'raɪtɪs/ *noun* inflammation of the inner lining of an artery

endarteritis obliterans /'endə:tə,raɪtɪs ə'bli:tərənz/ *noun* a condition where inflammation in an artery is so severe that it blocks the artery

end artery /'end ,a:tərɪ/ *noun* the last section of an artery which does not divide into smaller arteries and does not join to other arteries

endaural /end'ɔ:rəl/ *adjective* inside the ear

endemic /en'demɪk/ *adjective* referring to any disease which is very common in specific places ○ *This disease is endemic to Mediterranean countries.*

endemic haemoptysis /en,demɪk hi:'mɒptɪsɪs/ *noun* same as **paragonimiasis**

endemic syphilis /en,demɪk 'sɪfəlɪs/ *adjective* same as **bejel**

endemic typhus /en,demɪk 'taɪfəs/ *noun* fever transmitted by fleas from rats

endemiology /en,di:mi:bɒlədʒɪ/ *noun* the study of endemic diseases

end-expiratory /'end ɪk'spaɪrətri/ *noun* → **positive end-expiratory pressure**

endo- /endəʊ/ *prefix* inside

endobronchial /endəʊ'b्रɒŋkiəl/ *adjective* inside the bronchi

endocardial /'endəʊ'ka:dɪəl/ *adjective* referring to the endocardium

endocardial pacemaker /'endəʊka:dɪəl 'peɪsmeɪkə/ *noun* a pacemaker attached to the lining of the heart

endocarditis /'endəʊka:tɪs/ *noun* inflammation of the membrane lining of the heart

endocardium /'endəʊ'ka:dɪəm/ *noun* a membrane which lines the heart. See illustration at **HEART** in Supplement

endocervicitis /'endəʊsɪz:vɪ'saɪtɪs/ *noun* inflammation of the membrane in the neck of the uterus

endocervix /'endəʊ'sɜ:vɪks/ *noun* a membrane which lines the neck of the uterus

endochondral /'endəʊ'knɒndrəl/ *adjective* inside a cartilage

endocrine /'endəʊkrain/ *adjective* relating to the endocrine glands or the hormones they secrete

endocrine gland /'endəʊkrain glænd/ *noun* a gland without a duct which produces

hormones which are introduced directly into the bloodstream, e.g. the pituitary gland, thyroid gland, the adrenal gland and the gonads. Also called **ductless gland**. Compare **exocrine gland**

endocrine system /'endəʊkrain ,sɪstəm/ *noun* a system of related ductless glands

endocrinologist /'endəʊkrɪ'nɒlədʒɪst/ *noun* a doctor who specialises in the study of endocrinology

endocrinology /'endəʊkrɪ'nɒlədʒɪ/ *noun* the study of the endocrine system, its function and effects

endoderm /'endəʊdɜ:m/ *noun* the inner of three layers surrounding an embryo. Also called **entoderm**

COMMENT: The endoderm gives rise to most of the epithelium of the respiratory system, the alimentary canal, some of the ductless glands the bladder and part of the urethra.

endodermal /'endəʊ'dɜ:m(ə)l/ *adjective* referring to the endoderm. Also called **entodermal**

endodontia /'endəʊ'ɒdnfɪə/ *noun* treatment of chronic toothache by removing the roots of a tooth

endogenous /en'dɒdʒənəs/ *adjective* developing or being caused by something inside an organism. Compare **exogenous**

endogenous depression /en,dɒdʒənəs dɪ'preʃ(ə)n/ *noun* depression caused by no obvious external factor

endogenous eczema /en,dɒdʒənəs 'ek sɪmə/ *noun* eczema which is caused by no obvious external factor

endolymph /'endəʊlɪmf/ *noun* a fluid inside the membranous labyrinth in the inner ear

endolymphatic duct /'endəʊlɪmfætɪk 'dʌkt/ *noun* a duct which carries the endolymph inside the membranous labyrinth

endolysin /'en'dɒltɪsn/ *noun* a substance present in cells, which kills bacteria

endometria /'endəʊ'mi:ttriə/ plural of **endometrium**

endometrial /'endəʊ'mi:ttriəl/ *adjective* referring to the endometrium

endometrial laser ablation /'endəʊmɪ:ttriəl 'leɪzə əb,leɪf(ə)n/ *noun* a gynaecological surgical procedure using a laser to treat fibroids or other causes of thickening of the lining of the uterus

endometriosis /'endəʊmɪ:ttri'əʊsɪs/ *noun* a condition affecting women, in which tissue similar to the tissue of the uterus is found in other parts of the body

endometritis /'endəʊmɪ'traɪtɪs/ *noun* inflammation of the lining of the uterus

endometrium /'endəʊ'mi:ttriəm/ *noun* the mucous membrane lining the uterus, part of which is shed at each menstruation (NOTE: The plural is **endometria**.)

endomyocarditis /,endəʊmaɪərəkə:'daɪtɪs/ *noun* inflammation of the muscle and inner membrane of the heart

endomysium /,endəʊ'mɪsiəm/ *noun* connective tissue around and between muscle fibres

endoneurium /,endəʊ'njuːriəm/ *noun* fibrous tissue between the individual fibres in a nerve

endoparasite /,endəʊ'pærəsait/ *noun* a parasite which lives inside its host, e.g. in the intestines. Compare **ectoparasite**

endophthalmitis /,endɒfəl'maɪtɪs/ *noun* inflammation of the interior of the eyeball

end organ /'end ,ɔ:gən/ *noun* a nerve ending with encapsulated nerve filaments

endorphin /en'dɔ:fɪn/ *noun* a peptide produced by the brain which acts as a natural painkiller. ☈ **encephalin**

endoscope /'endəsko:p/ *noun* an instrument used to examine the inside of the body, made of a thin tube which is passed into the body down a passage. The tube has a fibre optic light, and may have small surgical instruments attached.

endoscopic retrograde cholangiopancreatology /,endəʊskopɪk ,retrogræd kə'lændʒiəʊpæŋkri:tɔgræfi/ *noun* a method used to examine the pancreatic duct and bile duct for possible obstructions. Abbr **ERCP**

endoscopy /en'dɒskəpi/ *noun* an examination of the inside of the body using an endoscope

endoskeleton /'endəʊ,skelɪt(ə)n/ *noun* the inner structure of bones and cartilage in an animal

endosteum /en'dɒstiəm/ *noun* a membrane lining the bone marrow cavity inside a long bone

endothelial /,endəʊ'θi:lɪəl/ *adjective* referring to the endothelium

endothelioma /,endəʊθi:li'əʊmə/ *noun* a malignant tumour originating inside the endothelium

endothelium /,endəʊ'θi:liəm/ *noun* a membrane of special cells which lines the heart, the lymph vessels, the blood vessels and various body cavities. Compare **epithelium, mesothelium**

endotoxin /,endəʊ'tɒksɪn/ *noun* a toxic substance released after the death of some bacterial cells

endotracheal /,endəʊ'treɪkiəl/ *adjective* same as **intratracheal**

endotracheal tube /,endəʊ'treɪkiəl tju:b/ *noun* a tube passed down the trachea, through either the nose or mouth, in anaesthesia or to help a person breathe

end plate /'end pleɪt/ *noun* the end of a motor nerve, where it joins muscle fibre

end stage renal disease /,end steɪdʒ 'rɪ:n(ə)l dɪ,zɪ:z/ *noun* the stage of kidney disease at which uraemia occurs and dialysis needs to start. Abbr **ESRD**

enema /'enɪmə/ *noun* a liquid substance put into the rectum to introduce a drug into the body, to wash out the colon before an operation or for diagnosis

enema bag /'enəmə bæg/ *noun* a bag containing the liquid for an enema, attached to a tube into the rectum

energy /'enədʒɪ/ *noun* the force or strength to carry out activities ○ *You need to eat certain types of food to give you energy.*

enervation /,enə'veɪʃ(ə)n/ *noun* 1. general nervous weakness 2. a surgical operation to remove a nerve

engagement /ɪn'geɪdʒmənt/ *noun* (in *obstetrics*) the moment where part of the fetus, usually the head, enters the pelvis at the beginning of labour

engorged /ɪn'gɔ:dʒd/ *adjective* excessively filled with liquid, usually blood

engorgement /ɪn'gɔ:dʒmənt/ *noun* the excessive filling of a vessel, usually with blood

enkephalin /en'kefəlm/ *noun* US same as **encephalin**

enophthalmos /,enɒf'θælməs/ *noun* a condition in which the eyes are very deep in their sockets

enostosis /,enə'stəʊsɪs/ *noun* a harmless growth inside a bone, usually in the skull or in a long bone

enrolled /ɪn'rəuld/ *adjective* registered on an official list

Enrolled Nurse /ɪn,rəuld 'nɜ:s/ *noun* ♦ **second-level nurse**

ensiform /'ensɪfɔ:m/ *adjective* shaped like a sword

ensiform cartilage /,ensɪfɔ:m 'kɑ:təlɪdʒ/ *noun* same as **xiphoid process**

ENT abbr Ear, Nose & Throat

Entamoeba coli /,entəmø:bə 'kəʊlaɪ/ *noun* a harmless intestinal parasite

Entamoeba gingivalis /,entəmø:bə ,dʒɪndʒɪ'vælɪs/ *noun* an amoeba that lives in the gums and tonsils, and causes gingivitis

Entamoeba histolytica /,entəmø:bə ,hɪstə'litɪkə/ *noun* an intestinal amoeba which causes amoebic dysentery

ENT department /,i: en 'ti: dɪ,pə:tment/ *noun* a department of otorhinolaryngology

ENT doctor /,i: en 'ti: ,dɒktə/ *noun* same as **otorhinolaryngologist**

enter- /'entə/ *prefix* same as **entero-** (used before vowels)

enteral /'entərəl/ *adjective* 1. referring to the intestine. Compare **parenteral** 2. referring to medication or food which is taken by mouth or through a nasogastric tube

enteral feeding /,entərəl 'fi:dɪŋ/ *noun* the feeding of a person by a nasogastric tube or by the infusion of liquid food directly into the intestine. Also called **enteral nutrition**

'Standard nasogastric tubes are usually sufficient for enteral feeding in critically ill patients' [British Journal of Nursing]

enteralgia /,entə'ræl'dʒeɪə/ *noun* same as **colic**

enteral /'entərəli/ *adverb* referring to a method of feeding a person by nasogastric tube or directly into the intestine

'All patients requiring nutrition are fed enteraly, whether nasogastrically or directly into the small intestine' [British Journal of Nursing]

enteral nutrition /,entərəl nju:t'rɪʃ(ə)n/ *noun* same as **enteral feeding**

enterectomy /,entə'rektəmə/ *noun* the surgical removal of part of the intestine

enteric /en'terɪk/ *adjective* referring to the intestine

enteric-coated /en'terɪk 'kəʊtɪd/ *adjective* referring to a capsule with a coating which prevents it from being digested and releasing the drug until it reaches the intestine

enteric fever /en'terɪk 'fi:və/ *noun* US 1. any one of three fevers (typhoid, paratyphoid A and paratyphoid B) 2. any febrile disease of the intestines

enteritis /,entə'rɪtɪs/ *noun* inflammation of the mucous membrane of the intestine

entero- /-entərəʊ/ *prefix* referring to the intestine

Enterobacteria /,entərəʊbæk'trɪəriə/ *noun* a family of Gram-negative bacteria, including Salmonella, Shigella, Escherichia and Klebsiella

enterobiasis /,entərəʊ'baiəsɪs/ *noun* a common children's disease, caused by threadworms in the large intestine which cause itching round the anus. Also called **oxyuriasis**

Enterobius /,entə'rəʊbiəs/ *noun* a small thin nematode worm, one species of which, *Enterobius vermicularis*, infests the large intestine and causes itching round the anus. Also called **threadworm, pinworm**

enterocele /'entərəʊsɪ:l/, **enterocoele** /'en terəʊsɪ:l/ *noun* a hernia of the intestine

enterocentesis /,entərəʊs'en'ti:sɪs/ *noun* surgical puncturing of the intestines where a hollow needle is pushed through the abdominal wall into the intestine to remove gas or fluid

enterococcus /,entərəʊ'kɒkəs/ *noun* a streptococcal bacterium that lives in the intestine (NOTE: The plural is **enterococci**)

enterocoele /'entərəʊsɪ:l/ *noun* another spelling of **enterocele**

enterocolitis /,entərəʊkə'laitɪs/ *noun* inflammation of the colon and small intestine

enterogastrone /,entərəʊ'gæstrəʊn/ *noun* a hormone released in the duodenum, which controls secretions of the stomach

enterogenous /,entərəʊ'dʒi:nəs/ *adjective* originating in the intestine

enterolith /'entərəʊlɪθ/ *noun* a stone in the intestine

enteron /'entərən/ *noun* the whole intestinal tract

enteropathy /,entə'rɒpəθi/ *noun* any disorder of the intestine. ☈ **gluten-induced enteropathy**

enteropeptidase /,entərəʊ'peptɪdæz/ *noun* an enzyme produced by glands in the small intestine

enteroptosis /,entərɒp'təʊsɪs/ *noun* a condition in which the intestine is lower than usual in the abdominal cavity

enterorrhaphy /,entər'ɔ:rəfɪ/ *noun* a surgical operation to stitch up a perforated intestine

endoscope /'entərəskəʊp/ *noun* an instrument for inspecting the inside of the intestine

enterospasm /'entərəʊ,spæz(ə)m/ *noun* an irregular painful contraction of the intestine

enterostomy /,entə'rɒstəmɪ/ *noun* a surgical operation to make an opening between the small intestine and the abdominal wall

enterotomy /,entə'rɒtəmɪ/ *noun* a surgical incision in the intestine

enterotoxin /,entərəʊ'tɒksɪn/ *noun* a bacterial exotoxin which particularly affects the intestine

enterovirus /,entərəʊ'veɪrʊs/ *noun* a virus which prefers to live in the intestine. Enteroviruses include poliomyelitis virus, Coxsackie viruses and the echoviruses.

enterozoon /,entərəʊ'zæʊn/ *noun* a parasite which infests the intestine (NOTE: The plural is **enterozoa**.)

entoderm /'entəʊdɜ:m/ *noun* same as **endoderm**

entodermal /,entəʊ'dɜ:m(ə)l/ *adjective* same as **endodermal**

Entonox /'entənɒks/ *noun* a gas consisting of 50% oxygen and 50% nitrous oxide that is used as a painkiller during childbirth

entopic /'en'tɒpɪk/ *adjective* located or taking place in the usual position. Opposite **ectopic**

entropion /'en't्रəpiən/ *noun* a turning of the edge of the eyelid towards the inside

enucleate /'en'ju:kli'eɪt/ *verb* to remove something completely

enucleation /,en'ju:kli'eɪʃ(ə)n/ *noun* 1. the surgical removal of all of a tumour 2. the surgical removal of the whole eyeball

enuresis /,enju'rɪ:sɪs/ *noun* the involuntary passing of urine

enuretic /,enju'retɪk/ *adjective* referring to enuresis, or causing enuresis

envenomation /in'venə'meɪʃ(ə)n/ *noun* the use of snake venom as part of a therapeutic treatment

environment /ɪn'vaɪrənmənt/ *noun* the conditions and influences under which an organism lives

environmental /ɪn'veɪrən'ment(ə)l/ *adjective* referring to the environment

Environmental Health Officer /ɪn'veɪrənment(ə)l 'helθ, pfrɪs/ *noun* an official of a local authority who examines the environment and tests for air pollution, bad sanitation, noise pollution and similar threats to public health. Abbr **EHO**

environmental temperature /ɪn'veɪrənment(ə)l 'temprɪtʃə/ *noun* the temperature of the air outside the body

enzymatic /'enzai'mætɪk/ *adjective* referring to enzymes

enzyme /'enzaim/ *noun* a protein substance produced by living cells which aids a biochemical reaction in the body (NOTE: The names of enzymes mostly end with the suffix -ase.)

COMMENT: Many different enzymes exist in the body, working in the digestive system, in the metabolic processes and helping the synthesis of certain compounds.

enzyme-linked immunosorbent assay /'enzi:am lɪŋkt, ɪmju:nəʊ, sɔ:bənt 'æseɪ/ *noun* full form of **ELISA**

eonism /'i:ənɪz(ə)m/ *noun* cross-dressing, when a male wears female dress

eosin /'i:əʊsɪn/ *noun* a red crystalline solid used as a biological staining dye

eosinopenia /,i:əʊsɪnə'pi:nɪə/ *noun* a reduction in the number of eosinophils in the blood

eosinophil /i:əʊ'sɪnəfɪl/ *noun* a type of cell that can be stained with eosin

eosinophilia /,i:əʊsɪnə'fɪliə/ *noun* an excess of eosinophils in the blood

eparterial /,epə:'tɪəriəl/ *adjective* situated over or on an artery

ependyma /'pendɪmə/ *noun* a thin membrane which lines the ventricles of the brain and the central canal of the spinal cord

ependymal /'pendɪm(ə)l/ *adjective* referring to the ependyma

ependymal cell /'pendɪm(ə)l sel/ *noun* one of the cells which form the ependyma

ependymoma /,pendɪ'məʊmə/ *noun* a tumour in the brain originating in the ependyma

ephedrine /'efɪdrɪn/ *noun* a drug that relieves asthma and blocked noses by causing the air passages to widen

ephidrosis /,efɪ'drəʊsɪs/ *noun* an unusual amount of sweat

epi- /epɪ/ *prefix* on or over

epiblepharon /,epɪ'blefərɒn/ *noun* an unusual fold of skin over the eyelid, which may press the eyelashes against the eyeball

epicanthus /,epɪ'kænθəs/, **epicanthic fold** /,epɪkænθɪk 'fəuld/ *noun* a large fold of skin

in the inner corner of the eye, common in babies and also found in adults of some groups such as the Chinese

epicardial /,epɪ'ka:dɪəl/ *adjective* referring to the epicardium

epicardial pacemaker /,epɪkɑ:dɪəl 'peɪs mərkə/ *noun* a pacemaker attached to the surface of the ventricle

epicardium /,epɪ'ka:dɪəm/ *noun* the inner layer of the pericardium which lines the walls of the heart, outside the myocardium. See illustration at **HEART** in Supplement

epicondyle /,epɪ'kɒndɪl/ *noun* a projecting part of the round end of a bone above the condyle

epicondylitis /,epɪkɒndɪ'lætɪs/ *noun* same as **tennis elbow**

epicranium /,epɪ'kreɪniəm/ *noun* the five layers of the scalp, the skin and hair on the head covering the skull

epicranius /,epɪ'kreɪniəs/ *noun* a scalp muscle

epicritic /,epɪ'krɪtɪk/ *adjective* referring to the nerves which govern the fine senses of touch and temperature

epidemic /,epɪ'demɪk/ *adjective* spreading quickly through a large part of the population
○ *The disease rapidly reached epidemic proportions.* ■ *noun* an outbreak of an infectious disease which spreads very quickly and affects a large number of people

epidemic pleurodynia /,epɪdēmɪk, plʊərə'dɪniə/ *noun* a viral disease affecting the intestinal muscles, with symptoms like influenza, such as fever, headaches and pains in the chest. Also called **Bornholm disease**

epidemic typhus /,epɪdēmɪk 'taɪfəs/ *noun* fever with headaches, mental disorder and a rash, caused by lice which come from other humans

epidemiological /,epɪ,di:mɪə'lɒdʒɪk(ə)l/ *adjective* concerning epidemiology

epidemiologist /,epɪ,di:mɪ'lɒdʒɪst/ *noun* a person who specialises in the study of diseases in groups of people

epidemiology /,epɪ,di:mɪ'lɒdʒɪ/ *noun* the study of diseases in the community, in particular how they spread and how they can be controlled

epidermal /,epɪ'dɜ:m(ə)l/ *adjective* referring to the epidermis

epidermis /,epɪ'dɜ:mɪs/ *noun* the outer layer of the skin, including the dead skin on the surface. Also called **cuticle**

epidermoid cyst /,epɪdɜ:mɔɪd 'sɪst/ *noun* same as **sebaceous cyst**

epidermolysis /,epɪdɜ:'mɒləsɪs/ *noun* separation of the epidermis from the tissue underneath, usually forming a blister

epidermolysis bullosa /,epɪdəlɪsɪs, bʊ'ləʊsə/ *noun* a group of disorders where blisters form on the skin

Epidermophyton /,epɪdəlɪt'ɒnfɪtən/ *noun* a fungus which grows on the skin and causes athlete's foot, among other disorders

epidermophytosis /,epɪ'deɪməfətɪsɪs/ *noun* a fungus infection of the skin, e.g. athlete's foot

epididymal /,epɪ'dɪdɪm(ə)l/ *adjective* referring to the epididymis

epididymectomy /,epɪdɪdɪm'ektəmɪ/ *noun* the removal of the epididymis

epididymis /,epɪ'dɪdɪmɪs/ *noun* a long twisting thin tube at the back of the testis, which forms part of the efferent duct of the testis, and in which spermatozoa are stored before ejaculation. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement

epididymitis /,epɪdɪdɪ'maɪtɪs/ *noun* inflammation of the epididymis

epididymo-orchitis /,epɪ'dɪdɪməʊ'ɔ:tɪs/ *noun* inflammation of the epididymis and the testes

epidural /,epɪ'djuərəl/ *adjective* on the outside of the dura mater. Also called **extradural**

■ *noun* same as **epidural anaesthesia**

epidural anaesthesia /,epɪdjuərəl, ænæs'thɪziə/ *noun* a local anaesthesia in which anaesthetic is injected into the space between the vertebral canal and the dura mater

epidural block /,epɪdjuərəl 'blɒk/ *noun* analgesia produced by injecting an analgesic solution into the space between the vertebral canal and the dura mater

epidural space /,epɪdjuərəl 'speɪs/ *noun* a space in the spinal cord between the vertebral canal and the dura mater

epigastric /,epɪ'gæstriκ/ *adjective* referring to the upper abdomen ○ *The patient complained of pains in the epigastric area.*

epigastrium /,epɪ'gæstriəm/ *noun* the part of the upper abdomen between the ribcage and the navel. Also called **the pit of the stomach**

epigastrocele /,epɪ'gæstrəsūl/ *noun* a hernia in the upper abdomen

epiglottis /,epɪ'glɒtɪs/ *noun* a flap of cartilage at the root of the tongue which moves to block the windpipe when food is swallowed, so that the food does not go down the trachea

epiglottitis /,epɪglɒ'taitɪs/ *noun* inflammation and swelling of the epiglottis

epilation /,epɪ'leɪʃ(ə)n/ *noun* the process of removing hair by destroying the hair follicles

epilepsy /'epɪlepsi/ *noun* a disorder of the nervous system in which there are convulsions and loss of consciousness due to a disordered discharge of cerebral neurones

COMMENT: The commonest form of epilepsy is major epilepsy or 'grand mal', where a person loses consciousness and falls to the ground with convulsions. A less severe form is minor

epilepsy or 'petit mal', where attacks last only a few seconds, and the person appears simply to be hesitating or thinking deeply.

epileptic /,epɪ'leptɪk/ *adjective* having epilepsy, or relating to epilepsy ■ *noun* a person with epilepsy (NOTE: The word 'epileptic' to describe a person is now avoided.)

epileptic fit /,epɪleptɪk 'fit/ *noun* an attack of convulsions, and sometimes unconsciousness, due to epilepsy

epileptiform /,epɪ'leptɪfɔ:m/ *adjective* being similar to epilepsy

epileptogenic /,epɪ'leptəʊ'dʒenɪk/ *adjective* causing epilepsy

epiloia /,epɪ'liə/ *noun* a hereditary disease of the brain associated with learning disabilities, epilepsy and tumours on the kidney and heart. Also called **tuberose sclerosis**

epimenorrhagia /,epɪmenə'reɪdʒə/ *noun* very heavy bleeding during menstruation occurring at very short intervals

epimenorrhoea /,epɪmenə'rɪə/ *noun* menstruation at shorter intervals than twenty-eight days

epimysium /,epɪ'maɪsɪəm/ *noun* a connective tissue binding striated muscle fibres

epinephrine /,epɪ'nefrɪn/ *noun* US same as **adrenaline**

epineurium /,epɪ'njuəriəm/ *noun* a sheath of connective tissue round a nerve

epiphénoménon /,epɪfə'nominən/ *noun* an unusual symptom which may not be caused by a disease

epiphora /'e:pɪfərə/ *noun* a condition in which the eye fills with tears either because the lacrimal duct is blocked or because excessive tears are being secreted

epiphyseal /,epɪ'fiziəl/ *adjective* referring to an epiphysis

epiphyseal cartilage /,epɪ'fiziəl 'ka:tɪlɪdʒ/ *noun* a type of cartilage in the bones of children and adolescents which expands and hardens as the bones grow to full size

epiphyseal line /,epɪ'fiziəl laɪn/ *noun* a plate of epiphyseal cartilage separating the epiphysis and the diaphysis of a long bone

epiphysis /'e:pɪfəsɪs/ *noun* the area of growth in a bone which is separated from the main part of the bone by cartilage until bone growth stops. See illustration at **BONE STRUCTURE** in Supplement. Compare **diaphysis, metaphysis**

epiphysis cerebri /,e:pɪfəsɪs sə'ri:bri/ *noun* the pineal gland. See illustration at **BONE STRUCTURE** in Supplement

epiphysitis /,epɪfɪ'saɪtɪs/ *noun* inflammation of an epiphysis

epiplo- /,epɪpləʊ/ *prefix* referring to the omentum

epiplocele /'e:pɪpləsūl/ *noun* a hernia containing part of the omentum

epiploic /epi'pləʊɪk/ *adjective* referring to the omentum

epiploon /e'pipləʊn/ *noun* same as **omentum**

episclera /epɪsklɪərə/ *noun* the outer surface of the sclera of the eyeball

episcleritis /epɪsklə'rātɪs/ *noun* inflammation of the outer surface of the sclera in the eyeball

epi- /ə'pɪzɪə/, **episio-** /ə'pɪzɪ/ *prefix* referring to the vulva

episorrhaphy /ə,pɪzɪ'ɔ:rəfɪ/ *noun* a procedure for stitching torn labia majora

episiotomy /ə,pɪzɪ'ɒtəmɪ/ *noun* a surgical cut of the perineum near the vagina to prevent tearing during childbirth

episode /'epɪsəʊd/ *noun* a separate occurrence of an illness

episodic /epi'sɒdɪk/ *adjective* happening in separate but related incidents, e.g. asthma which occurs in separate attacks

epispadias /epi'speɪdiəs/ *noun* a congenital condition where the urethra opens on the top of the penis and not at the end. Compare **hypospadias**

epispastic /epi'spæstɪk/ *noun* same as **vesicant**

epistaxis /epi'stæksɪs/ *noun* same as **nosebleed**

epithalamus /epi'θæləməs/ *noun* the part of the forebrain containing the pineal body

epithelial /epi'θi:li:lɪəl/ *adjective* referring to the epithelium

epithelialisation /epi,θi:li:lələt'zeɪʃ(ə)n/, **epithelialization** *noun* the growth of skin over a wound

epithelial layer /epi,θi:li:ləl 'leɪəl/ *noun* the epithelium

epithelial tissue /epi,θi:li:ləl 'tɪʃu:/ *noun* epithelial cells arranged as a continuous sheet consisting of one or several layers

epithelioma /epiθi:li:'əʊmə/ *noun* a tumour arising from epithelial cells

epithelium /epi'θi:li:mə/ *noun* the layer or layers of cells covering an organ, including the skin and the lining of all hollow cavities except blood vessels, lymphatics and serous cavities. Compare **endothelium**, **mesothelium**

COMMENT: Epithelium is classified according to the shape of the cells and the number of layers of cells which form it. The types of epithelium according to the number of layers are: **simple epithelium** (epithelium formed of a single layer of cells) and **stratified epithelium** (epithelium formed of several layers of cells). The main types of epithelial cells are:

columnar epithelium (simple epithelium with long narrow cells, forming the lining of the intestines); **ciliated epithelium** (simple epithelium where the cells have little hairs, forming the lining of air passages); **cuboidal epithelium** (with cube-shaped cells, forming the lining of glands and intestines) and **squamous epi-**

thelium

or **pavement epithelium** (with flat cells like scales, forming the lining of the pericardium, peritoneum and pleura).

epituberculosis /,epɪtju:b3:kjʊ'ləʊsɪs/ *noun* swelling of the lymph node in the thorax, due to tuberculosis

eponym /'epənəm/ *noun* a procedure, disease or part of the body which is named after a person

COMMENT: An eponym can refer to a disease or condition such as Dupuytren's contracture, or Guillain-Barré syndrome, a part of the body such as circle of Willis, an organism such as Leishmania, a surgical procedure such as Trendelenburg's operation or an appliance such as Kirschner wire.

Epsom salts /'ɛpsəm 'sɔ:lt̩s/ *noun* same as **magnesium sulphate**

Epstein–Barr virus /epstain 'bə: vairəs/ *noun* a virus which probably causes glandular fever. Also called **EB virus** [Isolated and described 1964. After Michael Anthony Epstein (b. 1921), Bristol pathologist; Murray Llewellyn Barr (1908–95), Canadian anatomist and cytologist, head of the Department of Anatomy at the University of Western Ontario, Canada.]

epulis /'epju:lɪs/ *noun* a small fibrous swelling on a gum

equi- /i:kwɪ/, **ekwi-** *prefix* equal

equilibrium /i:kwɪ'lɪbriəm/ *noun* a state of balance

equinovarus /i,kwainəu'veərəs/ ▶ **talipes**

equipment /ɪ'kwɪpmənt/ *noun* apparatus or tools which are required to do something ○ *The centre urgently needs surgical equipment.* ○ *The surgeons complained about the out-of-date equipment in the hospital.* (NOTE: No plural: for one item say *a piece of equipment*)

ER abbr 1. *US* emergency room 2. endoplasmic reticulum

eradicate /ɪ'rædɪkeɪt/ *verb* to remove something completely ○ *international action to eradicate tuberculosis*

eradication /ɪ,rædɪ'keɪʃ(ə)n/ *noun* the act of removing something completely

Erb's palsy /,ɜ:bz 'pɔ:lzɪ/, **Erb's paralysis** /,ɜ:bz pɔ'rælɪsɪs/ *noun* a condition in which an arm is paralysed because of birth injuries to the brachial plexus. ◊ **Bell's palsy**

ERCP abbr endoscopic retrograde cholangio-pancreatography

erect /ɪ'rekt/ *adjective* stiff and straight

erectile /ɪ'rektəl/ *adjective* able to become erect

erectile dysfunction /ɪ'rektəl dɪs'fʌŋkʃən/ *noun* a condition in which a man finds it difficult or impossible to have or maintain an erection during intercourse

erectile tissue /ɪ'rektəl, tɪʃu:/ *noun* vascular tissue which can become erect and stiff when engorged with blood, e.g. the corpus cavernosum in the penis

erection /'rekʃən/ *noun* a state where a body part such as the penis becomes swollen because of engorgement with blood

erector /'rektər/ *noun* a small muscle which raises a body part

erector spinae /ɪ,rek'tər 'spɪnə:/ *noun* a large muscle starting at the base of the spine, and dividing as it runs up the spine

erepsin /'rep'sin/ *noun* a mixture of enzymes produced by the glands in the intestine, used in the production of amino acids

erethism /'erəθɪz(ə)m/ *noun* unusual irritability

ERG *abbr* electroretinogram

ergograph /'ɜ:gəgrɑ:f/ *noun* apparatus which records the work of one or several muscles

ergometrine maleate /,ɜ:gəmetri:n 'mæli:tɪ/ *noun* a drug used to speed up the delivery of the placenta in childbirth and to control postnatal bleeding

ergonomics /,ɜ:gə'nɒmɪks/ *noun* the study of humans at work

ergot /'ɜ:gət/ *noun* a disease of rye caused by the fungus *Claviceps purpurea*

ergotamine /ɜ:g'təmi:n/ *noun* a drug that causes narrowing of blood vessels and alleviates migraine, derived from the ergot fungus

ergotism /'ɜ:gətɪz(ə)m/ *noun* poisoning caused by eating rye which has been contaminated with the ergot fungus

COMMENT: The symptoms of ergotism are muscle cramps and dry gangrene in the fingers and toes.

erogenous /ɪ'rɒdʒənəs/ *adjective* producing sexual excitement

erogenous zone /ɪ'rɒdʒənəs zəʊn/ *noun* a part of the body which, if stimulated, produces sexual arousal, e.g. the penis, clitoris or nipples

erosion /ɪ'rəʊʒ(ə)n/ *noun* the action of wearing away tissue or breaking down tissue

erotic /'rɒtɪk/ *adjective* relating to or arousing the feeling of sexual desire

ERPC *abbr* evacuation of retained products of conception

eructation /i:rʌk'teɪʃ(ə)n/ *noun* same as belching

erupt /ɪ'rʌpt/ *verb* to break through the skin ○ *The permanent incisors erupt before the premolars.*

eruption /ɪ'rʌpʃən/ *noun* 1. something which breaks through the skin, e.g. a rash or pimple 2. the appearance of a new tooth in a gum

ery- /'erɪ/ *prefix* same as **erythro-**

erysipelas /'erɪ'sɪpələs/ *noun* a contagious skin disease, where the skin on the face becomes hot, red and painful, caused by *Streptococcus pyogenes*

erysipeloid /,erɪ'sɪpəlɔɪd/ *noun* a bacterial skin infection caused by touching infected fish or meat

erythema /,erɪ'θɪ:mə/ *noun* redness on the skin, caused by hyperaemia of the blood vessels near the surface

erythema ab igne /,erɪfɪrmə əb 'igne:/ *noun* a pattern of red lines on the skin caused by exposure to heat

erythema induratum /,erɪθɪ:mə ,ɪndjʊ'retəm/ *noun* a tubercular disease where ulcerating nodules appear on the legs of young women. Also called **Bazin's disease**

erythema multiforme /,erɪθɪ:mə 'mʌltɪfɔ:mɪ/ *noun* the sudden appearance of inflammatory red patches and sometimes blisters on the skin

erythema nodosum /,erɪθɪ:mə nəʊ'dəʊsəm/ *noun* an inflammatory disease where red swellings appear on the front of the legs

erythema pernio /,erɪθɪ:mə 'pɜ:nɪəʊ/ *noun* same as chilblain

erythema serpens /,erɪθɪ:mə 'sɜ:pəns/ *noun* a bacterial skin infection caused by touching infected fish or meat

erythematous /,erɪ'θɪ:mə'teəsɪs/ ♦ **lupus**

erythematous /,erɪ'θɪ:mətəs/ *adjective* referring to erythema

erythr- /'erɪθr/ *prefix* same as **erythro-** (used before vowels)

erythaemia /,erɪ'θrɪ:miə/ *noun* a blood disorder where the number of red blood cells increases sharply, together with an increase in the number of white cells, making the blood thicker and slower to flow. Also called **polycythaemia vera**

erythrasma /,erɪ'θræzmə/ *noun* a persistent bacterial skin infection occurring in a fold in the skin or where two skin surfaces touch, such as between the toes. It is caused by *Corynebacterium*.

erythro- /'erɪθrəʊ/ *prefix* red

erythroblast /ɪ'rɪθrəblæst/ *noun* a cell which forms an erythrocyte or red blood cell

erythroblastosis /ɪ,rɪθrəblæ'stəʊsɪs/ *noun* the presence of erythroblasts in the blood, usually found in haemolytic anaemia

COMMENT: Usually erythroblastosis occurs where the mother is rhesus negative and has developed rhesus positive antibodies, which are passed into the blood of a rhesus positive fetus.

erythroblastosis foetalis /ɪ,rɪθrəblæ'stɪs fi:t'ærɪlis/ *noun* a blood disease affecting newborn babies, caused by a reaction between the rhesus factor of the mother and the fetus

erythrocyanosis /ɪ,rɪθrəsæɪ'nəʊsɪs/ *noun* red and purple patches on the skin of the thighs, often accompanied by chilblains and made worse by cold

erythrocyte /'rɪθrəsait/ *noun* a mature red blood cell

'...anemia may be due to insufficient erythrocyte production, in which case the corrected reticulocyte count will be low, or it may be due to hemorrhage or hemolysis, in which cases there should be reticulocyte response' [Southern Medical Journal]

erythrocyte sedimentation rate /ɪ,rɪθrəsait sedimen'teɪʃ(ə)n reɪt/ *noun* a test that measures how fast erythrocytes settle in a sample of blood plasma, used to confirm whether various blood conditions are present. Abbr ESR

erythrocytosis /ɪ,rɪθrəsai'təʊsis/ *noun* an increase in the number of red blood cells in the blood

erythroderma /ɪ,rɪθrə'dzə:mə/ *noun* a condition in which the skin becomes red and flakes off

erythroedema /ɪ,rɪθrə'di:mə/ *noun* same as acrodynia

erythrogenesis /ɪ,rɪθrə'dʒenəsɪs/, **erythropoiesis** /ɪ,rɪθrə'poɪ'sɪsɪs/ *noun* the formation of red blood cells in red bone marrow

erythromelalgia /ɪ,rɪθrə'mel'ældʒə/ *noun* a painful swelling of blood vessels in the extremities

erythromycin /ɪ,rɪθrə'maɪsɪn/ *noun* an antibacterial drug suitable for people who are sensitive to penicillin

erythropenia /ɪ,rɪθrə'pi:nɪə/ *noun* a condition in which a person has a low number of erythrocytes in their blood

erythroplasia /ɪ,rɪθrə'pleɪzɪə/ *noun* the formation of lesions on the mucous membrane

erythropoiesis /ɪ,rɪθrə'poɪ'sɪsɪs/ *noun* same as erythrogenesis

erythropoietin /ɪ,rɪθrə'poɪətɪn/ *noun* a hormone which regulates the production of red blood cells

COMMENT: Erythropoietin can now be produced by genetic techniques and is being used to increase the production of red blood cells in anaemia.

erythropsia /'erɪθrɒpsɪə/ *noun* a condition in which someone sees things as if coloured red

Esbach's albuminometer /,esbaʊks ,ælbju:mi'nɒmɪtə/ *noun* a glass for measuring albumin in urine, using Esbach's method

eschar /'eska:/ *noun* a dry scab, e.g. one forming on a burn

escharotic /,eskə'rɒtɪk/ *noun* a substance which produces an eschar

Escherichia /,eʃə'rɪkiə/ *noun* a bacterium commonly found in faeces

Escherichia coli /eʃə'rɪkiə 'kəʊləʊɪ/ *noun* a Gram-negative bacterium associated with acute gastroenteritis. Also called **E. coli**

escort nurse /'eskɔ:t ,nɜ:sɪ/ *noun* a nurse who goes with patients to the operating theatre and back again to the ward

Esmarch's bandage /'esma:ks ,bændɪdʒ/ *noun* a rubber band wrapped round a limb as a tourniquet before a surgical operation and left in place during the operation so as to keep the site free of blood [Described 1869. After Johann Friedrich August von Esmarch (1823–1908), Professor of Surgery at Kiel, Germany.]

esophagus /i:'sɒfəgəs/ *noun* US spelling of oesophagus

esotropia /esə't्रəʊpiə/ *noun* a type of squint, where the eyes both look towards the nose. Also called **convergent strabismus**

espundia /i:'spu:ndiə/ ♀ **leishmaniasis**

ESR abbr erythrocyte sedimentation rate

ESRD abbr end-stage renal disease

essence /'es(ə)nsɪ/ *noun* a concentrated oil from a plant, used in cosmetics, and sometimes as analgesics or antiseptics

essential /ɪ'senʃəl/ *adjective* 1. extremely important ○ *It is essential to keep accurate records.* 2. necessary for health ○ **essential nutrients** 3. without obvious cause ○ **essential hypertension** Also called **idiopathic** 4. extracted from a plant ○ **essential oil**

essential amino acid /ɪ,senʃəl ə,mī:nəʊ 'æsɪd/ *noun* an amino acid which is necessary for growth but which cannot be synthesised in the body and has to be obtained from the food supply

COMMENT: The essential amino acids are: isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan and valine.

essential dysmenorrhoea /ɪ,senʃəl dɪs'me:nə'ri:ə/ *noun* same as **primary dysmenorrhoea**

essential element /ɪ,senʃəl 'elɪmənt/ *noun* a chemical element which is necessary to the body's growth or function, e.g. carbon, oxygen, hydrogen and nitrogen

essential fatty acid /ɪ,senʃəl ,fæti 'æsɪd/ *noun* an unsaturated fatty acid which is necessary for growth and health. Abbr **EFA**

COMMENT: The essential fatty acids are linoleic acid, linolenic acid and arachidonic acid.

essential hyperkinesia /ɪ,senʃəl ,haɪpəkɪ 'ni:ziə/ *noun* a condition of children where their movements are excessive and repeated

essential hypertension /ɪ,senʃəl 'haɪpə ,tenʃən/ *noun* high blood pressure without any obvious cause

essential oil /ɪ,senʃəl 'ɔɪl/ *noun* a medicinal or fragrant oil distilled from some part of a plant

essential tremor /ɪ,senʃəl 'tremə/ *noun* an involuntary slow trembling movement of the hands often seen in elderly people

essential uterine haemorrhage /ɪ,senʃəl ,ju:tərɪn 'hem(ə)rɪdʒ/ *noun* heavy uterine bleeding for which there is no obvious cause

estrogen /'estrədʒən/ *noun* US same as **oestrogen**

ethambutol /'θæmbjʊtɒl/ *noun* a drug that is part of the treatment for bacterial infections such as tuberculosis

ethanol /'eθənɒl/ *noun* a colourless liquid, present in alcoholic drinks such as whisky, gin and vodka, and also used in medicines and as a disinfectant. Also called **ethyl alcohol**. ☀ **pure alcohol**

ethene /'i:θi:n/ *noun* same as **ethylene**

ether /'i:θə/ *noun* an anaesthetic substance, now rarely used

ethical /'eθɪk(ə)l/ *adjective* 1. concerning ethics 2. referring to a drug available on prescription only

ethical committee /'eθɪk(ə)l kə,mɪt̬i/ *noun* a group of specialists who monitor experiments involving human beings or who regulate the way in which members of the medical profession conduct themselves

ethinyloestradiol /,eθɪnɪ'ləstrə'daɪɒl/ *noun* an artificial hormone related to oestrogen that is effective in small doses. It forms part of hormone replacement therapy.

ethmoid /eθ'mɔɪd/, **ethmoidal** /eθ'mɔɪd(ə)l/ *adjective* referring to the ethmoid bone or near to the ethmoid bone

ethmoidal sinuses /eθ'mɔɪd(ə)l 'sɪnʊsɪz/ *plural noun* air cells inside the ethmoid bone

ethmoid bone /'eθmɔɪd bəʊn/ *noun* a bone which forms the top of the nasal cavity and part of the orbits

ethmoidectomy /,eθmɔɪ'dektəmɪ/ *noun* an operation to remove the lining between the sinuses

ethmoiditis /,eθmɔɪ'daɪtɪs/ *noun* inflammation of the ethmoid bone or of the ethmoidal sinuses

ethnic /'eθnɪk/ *adjective* relating to a culturally or racially distinctive group of people

ethyl alcohol /iθəlɒl 'ælkəhɒl/ *noun* same as ethanol

ethylene /'eθeli:n/ *noun* a gas used as an anaesthetic

ethylestrenol /,eθ(ə)l'estrənɒl/ *noun* an anabolic steroid

etiology /i:ti'ɒlədʒi/ *noun* US same as **aetiology**

eu- /ju:/ *prefix* good, well

eubacteria /,ju:bæk'tɪriə/ *noun* true bacteria with rigid cell walls

eucalyptol /,ju:kə'lɪptɒl/ *noun* a substance obtained from eucalyptus oil

eucalyptus /,ju:kə'lɪptəs/ *noun* a genus of tree growing mainly in Australia, from which a strongly smelling oil is distilled

eucalyptus oil /,ju:kə'lɪptəs ɔɪl/ *noun* an aromatic medicinal oil distilled from the leaves of various species of tree in the genus *Eucalyptus*

COMMENT: Eucalyptus oil is used in pharmaceutical products especially to relieve congestion in the respiratory passages.

eugenics /ju:'dʒenɪks/ *noun* the study of how to improve the human race by genetic selection

eunuch /'ju:nək/ *noun* a castrated male

eupepsia /ju:'pepsiə/ *noun* good digestion

euphoria /ju:'fɔ:riə/ *noun* a feeling of extreme happiness

euplastic /ju:'plæstɪk/ *adjective* referring to tissue which heals well

Eustachian canal /ju:'steɪʃ(ə)n kə,næl/ *noun* a passage through the porous bone forming the outside part of the Eustachian tube

Eustachian tube /ju:'steɪʃ(ə)n tju:b/ *noun* the tube which connects the pharynx to the middle ear. See illustration at **EAR** in Supplement [Described 1562, but actually named after Eustachio by Valsalva a century later. Bartolomeo Eustachio (1520–74), physician to the Pope and Professor of Anatomy in Rome.]

COMMENT: The Eustachian tubes balance the air pressure on each side of the eardrum. When a person swallows or yawns, air is allowed into the Eustachian tubes and equalises the pressure with the normal atmospheric pressure outside the body. The tubes can be blocked by an infection, as in a cold, or by pressure differences, as inside an aircraft, and if they are blocked, the hearing is impaired.

euthanasia /ju:θə'neɪzɪə/ *noun* the painless killing of an incurably ill person or someone in a permanent coma in order to end their distress. Also called **mercy killing** (NOTE: This practice is illegal in most countries.)

euthanise /'ju:θənaɪz/, **euthanize** *verb* to kill an incurably ill person or someone in a permanent coma

euthyroid /ju:'θaɪrɔɪd/ *noun* a condition where the thyroid is functioning normally

euthyroidism /ju:'θaɪrɔɪdɪz(ə)m/, **euthyroid state** /ju:'θaɪrɔɪd ,steɪt/ *noun* the fact of having a healthy thyroid gland

eutocia /ju:'təʊsɪə/ *noun* a standard childbirth

evacuant /i'vekjuənt/ *noun* a medicine which makes a person have a bowel movement

evacuate /i'vekju:eɪt/ *verb* to discharge faeces from the bowel, or to have a bowel movement

evacuation /i'vekju'eɪʃ(ə)n/ *noun* the act of removing the contents of something, especially discharging faeces from the bowel

evacuation of retained products of conception /i'vekju,eɪʃ(ə)n əv rɪ,teɪnd ,prɒdʌktəs əv kən'sepʃən/ *noun* a D & C operation performed after an abortion or miscarriage to ensure the uterus is left empty. Abbr **ERPC**

evacuator /'vækjueɪtə/ *noun* an instrument used to empty a cavity such as the bladder or bowel

evaluate /'væljueɪt/ *verb* 1. to examine and calculate the quantity or level of something ○ *The laboratory is still evaluating the results of the tests.* 2. to examine someone and calculate the treatment required

'...all patients were evaluated and followed up at the hypertension unit' [British Medical Journal]

evaluation /ɪ,vælju'eɪʃ(ə)n/ *noun* the act of examining and calculating the quantity or level of something ○ *In further evaluation of these patients no side-effects of the treatment were noted.*

'...evaluation of fetal age and weight has proved to be of value in the clinical management of pregnancy, particularly in high-risk gestations' [Southern Medical Journal]

eventration /,eɪ;ven'treɪʃ(ə)n/ *noun* the pushing of the intestine through the wall of the abdomen

eversion /'ɪ'vɜ:sʃ(ə)n/ *noun* the act of turning towards the outside or turning inside out. See illustration at **ANATOMICAL TERMS** in Supplement □ **eversion of the cervix** a condition after laceration during childbirth, where the edges of the cervix sometimes turn outwards

evertor /'ɪ'vɜ:tə/ *noun* a muscle which makes a limb turn outwards

evidence-based /'evidəns bɛɪst/ *adjective* based on the results of well-designed trials of specific types of treatment for specific conditions ○ *evidence-based practice*

evidence-based medicine /'evid(ə)ns bɛɪst ,med(ə)sin/ *noun* medical practice where findings from research are used as the basis for decisions

evisceration /,eɪsɪə'reɪʃ(ə)n/ *noun* 1. the surgical removal of the abdominal viscera. Also called **exenteration** 2. removal of the contents of an organ □ **evisceration of the eye** surgical removal of the contents of an eyeball

evolution /,i:və'lju:s(ə)n/ *noun* a process of change in organisms which takes place over a very long period involving many generations

evulsion /'ɪ'vʌlʃən/ *noun* the act of extracting something by force

Ewing's tumour /'ju:ɪŋz 'tju:mə/, **Ewing's sarcoma** /,ju:ɪŋz sə:'kəʊmə/ *noun* a malignant tumour in the marrow of a long bone [Described 1922. After James Ewing (1866–1943), Professor of Pathology at Cornell University, New York, USA.]

ex- /eks/ prefix same as **exo-** (*used before vowels*)

exacerbate /ɪg'zæsə,bɛɪt/ *verb* to make a condition more severe ○ *The cold damp weather will only exacerbate his chest condition.*

exacerbation /ɪg,zæsə'beɪʃ(ə)n/ *noun* 1. the fact of making a condition worse 2. a period when a condition becomes worse

'...patients were re-examined regularly or when they felt they might be having an exacerbation. Exacerbation rates were calculated from the number of exacerbations during the study' [Lancet]

examination /ɪg,zæmɪ'neɪʃ(ə)n/ *noun* 1. an act of looking at someone or something carefully ○ *From the examination of the X-ray photographs, it seems that the tumour has not spread.* 2. the act of looking at someone to find out what is wrong with him or her ○ *The surgeon carried out a medical examination before operating.* 3. a written or oral test to see if a student is progressing satisfactorily (NOTE: In this sense, often abbreviated to **exam**.)

examine /ɪg'zæmɪn/ *verb* 1. to look at or to investigate someone or something carefully ○ *The tissue samples were examined in the laboratory.* 2. to look at and test someone to find out what is wrong with him or her ○ *The doctor examined the patient's heart.*

exanthem /ɪg'zænθəm/ *noun* a skin rash found with infectious diseases like measles or chickenpox

exanthematicous /,eksæn'θēmətəs/ *adjective* referring to an exanthem or like an exanthem

exanthem subitum /ɪg,zænθəm 'sobɪtəm/ *noun* same as **roseola infantum**

excavator /'ekskə'veɪtə/ *noun* a surgical instrument shaped like a spoon

excavatum /'ekskə'veɪtəm/ ♦ **pectus excavatum**

exception /ɪk'sepʃən/ *noun* 1. something that does not fit into or is excluded from a general rule or pattern 2. the act or condition of being excluded

excess /ɪk'ses/ *noun* too much of a substance ○ *The gland was producing an excess of hormones.* ○ *The body could not cope with an excess of blood sugar.* □ **in excess of** more than ○ *Short men who weigh in excess of 100 kilos are very overweight.*

excessive /ɪk'sesɪv/ *adjective* more than normal ○ *The patient was passing excessive quantities of urine.* ○ *The doctor noted an excessive amount of bile in the patient's blood.*

excessively /ɪk'sesɪvli/ *adverb* too much ○ *She has an excessively high blood pressure.* ○ *If the patient sweats excessively, it may be necessary to cool his body with cold compresses.*

exchange transfusion /ɪks,tʃeɪndʒ træns 'fju:z(ə)n/ *noun* a method of treating leukaemia or erythroblastosis in newborn babies, where almost all the blood is removed from the body and replaced with healthy blood

excipient /ɪk'sipiənt/ *noun* a substance added to a drug so that it can be made into a pill
excise /ɪk'saɪz/ *verb* to cut something out

excision /ɪk'sɪʒ(ə)n/ *noun* an operation by a surgeon to cut and remove part of the body such as a growth. Compare **incision**

excitation /,eksi'teɪʃ(ə)n/ *noun* the state of being mentally or physically aroused

excitatory /ɪk'saɪtəri/ *adjective* tending to excite

excite /ɪk'saɪt/ *verb* 1. to stimulate someone or something 2. to give an impulse to a nerve or muscle

excited /ɪk'saɪtɪd/ *adjective* 1. very lively and happy 2. aroused

excitement /ɪk'saɪtmənt/ *noun* 1. the act of being excited 2. the second stage of anaesthesia

excoriation /ɪkskɔ:rɪ'eɪʃ(ə)n/ *noun* a raw skin surface or mucous membrane after rubbing or burning

excrement /'ekskrɪmənt/ *noun* same as **faeces**

ex crescence /ɪk'skres(ə)ns/ *noun* a growth on the skin

excreta /ɪk'skrɪ:tə/ *plural noun* waste material from the body, especially faeces

excrete /ɪk'skrɪ:t/ *verb* to pass waste matter out of the body, especially to discharge faeces
○ *The urinary system separates waste liquids from the blood and excretes them as urine.*

excretion /ɪk'skrɪ:ʃ(ə)n/ *noun* the act of passing waste matter, e.g. faeces, urine or sweat, out of the body

excruciating /ɪk'skrū:ʃeɪtɪŋ/ *adjective* extremely painful
○ *He had excruciating pains in his head.*

exenteration /ek'sentə'reɪʃ(ə)n/ *noun* same as **evisceration**

exercise /'eksəsaɪz/ *noun* 1. physical or mental activity, especially the active use of the muscles as a way of keeping fit, correcting a deformity or strengthening a part
○ *Regular exercise is good for your heart.* ○ *He doesn't do or take enough exercise.* 2. a particular movement or action designed to use and strengthen the muscles
■ *verb* to take exercise, or exert part of the body in exercise
○ *He exercises twice a day to keep fit.*

exercise cycle /'eksəsaɪz ,saɪk(ə)l/ *noun* a type of cycle which is fixed to the floor, so that someone can pedal on it for exercise

exercise-induced asthma /'eksəsaɪz ɪn ,dʒu:st 'æsmə/ *noun* asthma which is caused by exercise such as running or cycling. Abbr **EIA**

exertion /ɪg'zɪ:ʃ(ə)n/ *noun* physical activity

exfoliation /eks,fəʊli'eɪʃ(ə)n/ *noun* the loss of layers of tissue such as sunburnt skin

exfoliative /eks'fəʊli'eɪtɪv/ *adjective* referring to exfoliation

exfoliative dermatitis /eks,fəʊli'eɪtɪv ,dɜ:ma'taɪtɪs/ *noun* a typical form of dermatiti-

tis where the skin becomes red and comes off in flakes

exhalation /,ekshə'leɪʃ(ə)n/ *noun* 1. the act of breathing out 2. air which is breathed out ► opposite **inhalation**

exhale /eks'hel/ *verb* to breathe out. Opposite **inhale**

exhaust /ɪg'zɔ:st/ *verb* to tire someone out

exhaustion /ɪg'zɔ:stʃən/ *noun* extreme tiredness or fatigue

exhibitionism /,eksɪ'bɪʃ(ə)nɪz(ə)m/ *noun* a desire to show the genitals to a person of the opposite sex

exo- /eksəʊ/ *prefix* out of, outside

exocrine /'eksəkrain/ *adjective* □ **exocrine secretions of the pancreas** enzymes carried from the pancreas to the second part of the duodenum

exocrine gland /'eksəkrain glænd/ *noun* a gland with ducts which channel secretions to particular parts of the body such as the liver, the sweat glands, the pancreas and the salivary glands. Compare **endocrine gland**

exogenous /ek'sɒndʒənəs/ *adjective* developing or caused by something outside the organism. Compare **endogenous**

exomphalos /ek'sɒmfələs/ *noun* same as **umbilical hernia**

exophthalmic goitre /,eksɒfθəlmɪk 'goɪtə/ *noun* a form of hyperthyroidism, in which the neck swells and the eyes protrude. Also called **Graves' disease**

exophthalmos /eksɒf'θəlməs/ *noun* protruding eyeballs

exoskeleton /'eksəʊ,skelɪt(ə)n/ *noun* the outer skeleton of some animals such as insects. Compare **endoskeleton**

exostosis /,eksə'stəʊsɪs/ *noun* a benign growth on the surface of a bone

exotic /ɪg'zotɪk/ *adjective* referring to a disease which occurs in a foreign country

exotoxin /,eksəʊ'tɒksɪn/ *noun* a poison, produced by bacteria, which affects parts of the body away from the place of infection, e.g. the toxins which cause botulism or tetanus

COMMENT: Diphtheria is caused by a bacillus.

The exotoxin released causes the generalised symptoms of the disease such as fever and rapid pulse while the bacillus itself is responsible for the local symptoms in the upper throat.

exotropia /eksəʊ't्रəʊpiə/ *noun* same as **divergent strabismus**

expectant mother /ɪk'spektənt 'mʌðə/ *noun* a pregnant woman

expected date of delivery /ɪk'spektɪd ,deɪt əv dɪ'lɪv(ə)ri/ *noun* the day on which a doctor calculates that the birth of a baby will take place

expectorant /ɪk'spekt(ə)rənt/ *noun* a drug which helps someone to cough up phlegm

expectorate /ɪk'spektəreɪt/ *verb* to cough up phlegm or sputum from the respiratory passages

expectoration /ɪk,spɛktə'reɪʃ(ə)n/ *noun* the act of coughing up fluid or phlegm from the respiratory tract

expel /ɪk'spel/ *verb* to send something out of the body ○ *Air is expelled from the lungs when a person breathes out.*

experiential learning /ɪk,spɪ'reɪəniəl 'ɪz:nɪŋ/ *noun* the process of learning from experience

experiment /ɪk'spərɪmənt/ *noun* a scientific test conducted under set conditions ○ *The scientists did some experiments to try the new drug on a small sample of people.*

expert patient /'ekspɜ:t 'peɪʃ(ə)nt/ *noun* a patient with a long-term illness who has been taught how to manage his or her own medical care

expiration /ekspə'reɪʃ(ə)n/ *noun* 1. the act of breathing out, or pushing air out of the lungs ○ *Expiration takes place when the chest muscles relax and the lungs become smaller.* Opposite **inspiration** 2. death 3. dying

expiratory /ek'spirət(ə)ri/ *adjective* referring to the process of breathing out

expire /ɪk'spaɪə/ *verb* 1. to breathe out 2. to die

explant /eks'pla:nt/ *noun* tissue taken from a body and grown in a culture in a laboratory ■ *verb* 1. to take tissue from a body and grow it in a culture in a laboratory 2. to remove an implant

explantation /eksplæ:n'teɪʃ(ə)n/ *noun* 1. the act of taking tissue from a body and growing it in a culture in a laboratory 2. the removal of an implant

exploration /eksplɔ:r'eɪʃ(ə)n/ *noun* a procedure or surgical operation where the aim is to discover the cause of symptoms or the nature and extent of an illness

exploratory /ɪk'splɔ:rət(ə)ri/ *adjective* referring to an exploration

exploratory surgery /ɪk,splɔ:rət(ə)ri 'sɜ:dʒəri/ *noun* a surgical operation in which the aim is to discover the cause of a person's symptoms or the nature and extent of an illness

explore /ɪk'splɔ:/ *verb* to examine a part of the body in order to make a diagnosis

expose /ɪk'spəʊz/ *verb* 1. to show something which was hidden ○ *The operation exposed a generalised cancer.* ○ *The report exposed a lack of medical care on the part of some of the hospital staff.* 2. to place something or someone under the influence of something ○ *He was exposed to the disease for two days.* ○ *She was exposed to a lethal dose of radiation.*

exposure /ɪk'spəʊzə/ *noun* 1. the fact of being exposed to something ○ *his exposure to radiation* 2. the fact of being damp, cold and with

no protection from the weather ○ *The survivors of the crash were all suffering from exposure after spending a night in the snow.*

express /ɪk'spres/ *verb* to squeeze liquid or air out of something, especially to squeeze out breast milk for a baby to feed on later

expression /ɪk'spreʃ(ə)n/ *noun* 1. the look on a person's face which shows what he or she thinks and feels ○ *His expression showed that he was annoyed.* 2. the act of pushing something out of the body ○ *the expression of the fetus and placenta during childbirth*

exquisitely tender /ɪk,skwɪzɪtlɪ 'tendə/ *adjective* producing a sharp localised pain or tenderness when touched

exsanguinate /ɪk'sænggwineɪt/ *verb* to drain blood from the body

exsanguination /ɪk,sænggwɪ'nɛɪʃ(ə)n/ *noun* the removal of blood from the body

exsufflation /eksə'fleɪʃ(ə)n/ *noun* an act of forcing breath out of the body

extend /ɪk'stend/ *verb* to stretch out, or cause something to stretch out ○ *The patient is unable to extend his arms fully.*

extension /ɪk'stenʃən/ *noun* 1. the stretching or straightening out of a joint 2. the stretching of a joint by traction

extensor /ɪk'stensə/, **extensor muscle** /ɪk 'stensə,ma:s(ə)/ *noun* a muscle which makes a joint become straight. Compare **flexor**

exterior /ɪk'striəriə/ *noun* the outside of something

exteriorisation /ɪk,stɪəriərə'seɪʃ(ə)n/, **exteriorization** *noun* a surgical operation to bring an internal organ to the outside surface of the body

externa /ɪk'stɜ:nə/ ♀ **otitis externa**

external /ɪk'stɜ:n(ə)l/ *adjective* on the outside, especially outside the surface of the body. Opposite **internal** □ **the lotion is for external use only** it should only be used on the outside of the body

external auditory canal /ɪk,stɜ:n(ə)l 'ɔ:dɪt(ə)ri kə,næl/, **external auditory meatus** /ɪk,stɜ:n(ə)l ,ɔ:dɪt(ə)ri m'eɪtəs/ *noun* a tube in the skull leading from the outer ear to the eardrum. See illustration at **EAR** in Supplement

external cardiac massage /ɪk,stɜ:n(ə)l ,ku:diæk 'ma:sə:ʒ/ *noun* a method of making someone's heart start beating again by rhythmic pressing on the breastbone

external ear /ɪk,stɜ:n(ə)l 'ɪə/ *noun* same as **outer ear**

external haemorrhoids /ɪk,stɜ:n(ə)l 'hemərɔɪdz/ *plural noun* haemorrhoids in the skin just outside the anus

external iliac artery /ɪk,stɜ:n(ə)l 'iliæk ,a:təri/ *noun* an artery which branches from the aorta in the abdomen and leads to the leg

external jugular /ɪk'stɜ:n(ə)l 'dʒʌgjʊlə/ *noun* the main jugular vein in the neck, leading from the temporal vein

externally /ɪk'stɜ:n(ə)li/ *adverb* on the outside of the body ○ *The ointment should only be used externally.*

external nares *plural noun* same as **anterior nares**

external oblique /ɪk'stɜ:n(ə)l ə'bli:k/ *noun* an outer muscle covering the abdomen

external otitis /ɪk'stɜ:n(ə)l ə'taɪtɪs/ *noun* same as **otitis externa**

external respiration /ɪk'stɜ:n(ə)l ,rɛspɪ'reɪʃ(ə)n/ *noun* the part of respiration concerned with oxygen in the air being exchanged in the lungs for carbon dioxide from the blood

exteroceptor /ekstə'rəʊ'septə/ *noun* a sensory nerve which is affected by stimuli from outside the body, e.g. in the eye or ear

extinction /ɪk'stɪŋkʃən/ *noun* 1. the destruction or stopping of something 2. the lessening or stopping of a conditioned behavioural response through lack of reinforcement

extirpate /'ekstɜ:t,peɪt/ *verb* to remove something by surgery

extirpation /ekstɜ:t'peɪʃ(ə)n/ *noun* the total removal of a structure, an organ or growth by surgery

extra- /ekstrə/ *prefix* outside

extracapsular /ekstrə'kæpsjʊlə/ *adjective* outside a capsule

extracapsular fracture /ekstrə,kæpsjʊlə'frækʃə/ *noun* a fracture of the upper part of the femur, which does not involve the capsule round the hip joint

extracellular /ekstrə'seljʊlə/ *adjective* outside cells

extracellular fluid /ekstrə'seljʊlə'flu:ɪd/ *noun* a fluid which surrounds cells

extract *noun* /'ekstrækt/ a preparation made by removing water or alcohol from a substance, leaving only the essence □ **liver extract** concentrated essence of liver ■ *verb* /ɪk'strækt/ to take out something ○ *Adrenaline extracted from the animal's adrenal glands is used in the treatment of asthma.*

'...all the staff are RGNs, partly because they do venesection, partly because they work in plasmapheresis units which extract plasma and return red blood cells to the donor' [Nursing Times]

extraction /ɪk'strækʃən/ *noun* 1. the removal of part of the body, especially a tooth 2. in obstetrics, delivery, usually a breech presentation, which needs medical assistance

extradural /ekstrə'djuərəl/ *adjective* same as **epidural**

extradural haematoma /ekstrə,djuərəl hɪ:mə'təʊmə/ *noun* a blood clot which forms in the head outside the dura mater, caused by a blow

extradural haemorrhage /ekstrə,djuərəl 'hem(ə)rɪdʒ/ *noun* a serious condition where

bleeding occurs between the dura mater and the skull

extraembryonic /,ekstra'embri'ɒnɪk/ *adjective* referring to part of a fertilised ovum, such as the amnion, allantois and chorion which is not part of the embryo

extraembryonic membranes /,ekstra'embri'ɒnɪk 'membreɪnз/ *plural noun* membranes which are not part of the embryo

extrapleural /,ekstrə'pluərəl/ *adjective* outside the pleural cavity

extrapyramidal /,ekstrəpɪ'ræmɪd(ə)l/ *adjective* outside the pyramidal tracts

extrapyramidal system /,ekstrəpɪ,ræmɪd(ə)l 'sɪstəm/ *noun* a motor system which carries motor nerves outside the pyramidal system

extrapyramidal tracts /,ekstrəpɪ,ræmɪd(ə)l 'trækts/ *plural noun* same as **extrapyramidal system**

extrasensory /,ekstrə'sensərɪ/ *adjective* involving perception by means other than the usual five senses

extrasystole /,ekstrə'sistəli/ *noun* same as **ectopic heartbeat**

extrauterine /,ekstrə'jʊtərain/ *adjective* occurring or developing outside the uterus

extrauterine pregnancy /,ekstrəjʊ:tərain/ 'pregnənsi/ *noun* same as **ectopic pregnancy**

extravasation /ek,strævə'seɪʃ(ə)n/ *noun* a situation where a bodily fluid, such as blood or secretions, escapes into tissue

extraversion /,ekstrə'verʒ(ə)n/ *noun* same as **extroversion**

extravert /'ekstrəvɜ:t/ *noun* same as **extrovert**

extremities /ɪk'stremətɪz/ *plural noun* the parts of the body at the ends of limbs, e.g. the fingers, toes, nose and ears

extremity /ɪk'streməti/ *noun* 1. a limb 2. the part of a limb farthest away from the body, especially the hand or foot 3. a situation or state of great distress or danger 4. the greatest intensity of something

extrinsic /eks'trɪnsɪk/ *adjective* external, originating outside a structure

extrinsic allergic alveolitis /eks,trɪnsɪk ə,lɜ:dʒɪk ,ælvɪa'laitɪs/ *noun* a condition in which the lungs are allergic to fungus and other allergens

extrinsic factor /eks,trɪnsɪk 'fæktə/ *noun* a former term for vitamin B₁₂, which is necessary for the production of red blood cells

extrinsic ligament /eks,trɪnsɪk 'lɪgəmənt/ *noun* a ligament between the bones in a joint which is separate from the joint capsule

extrinsic muscle /eks,trɪnsɪk 'mæs(ə)l/ *noun* a muscle which is some way away from the part of the body which it operates

extroversion /ekstrə'verʒ(ə)n/ *noun* 1. (in psychology) a condition in which a person is

interested in people and things other than themselves **2.** a congenital turning of an organ inside out

extrovert /'ekstrəvɜ:t/ *noun* a person who is interested in people and things in the external world

extroverted /'ekstrəʊ,vɜ:tɪd/ *adjective* **1.** (of a person) interested in people and things other than oneself **2.** (of an organ) turned inside out

extubation /,ekstju:'beɪʃ(ə)n/ *noun* the removal of a tube after intubation

exudate /'eksjudeɪt/ *noun* fluid which is deposited on the surface of tissue as the result of a condition or disease

exudation /,eksju'deɪʃ(ə)n/ *noun* the escape of material such as fluid or cells into tissue as a defence mechanism

eye /aɪ/ *noun* the part of the body with which a person sees (NOTE: For other terms referring to the eye, see **ocular**, **optic** and words beginning with **oculo-**, **ophth-**, **ophthalm-**, **ophthalo-**)

eyeball /'aɪbɔ:l/ *noun* the round ball of tissue through which light passes, located in the eye socket and controlled by various muscles

COMMENT: Light rays enter the eye through the cornea, pass through the pupil and are refracted through the aqueous humour onto the lens, which then focuses the rays through the vitreous humour onto the retina at the back of the eyeball. Impulses from the retina pass along the optic nerve to the brain.

eye bank /'aɪ bænk/ *noun* a place where parts of eyes given by donors can be kept for use in grafts

eyebath /'aɪba:θ/ *noun* a small dish into which a solution can be put for bathing the eye

eyebrow /'aɪbraʊ/ *noun* an arch of skin with a line of hair above the eye

eye drops /'aɪ dρɒps/ *plural noun* medicine in liquid form which is put into the eye in small amounts

eyeglasses /'aɪ,gla:sɪz/ *plural noun* US glasses or spectacles for correcting vision

eyelash /'aɪlæʃ/ *noun* a small hair which grows out from the edge of the eyelid

eyelid /'aɪlɪd/ *noun* a piece of skin which covers the eye. Also called **blepharon**, **palpebra** (NOTE: For other terms referring to the eyelids, see words beginning with **blephar-**, **blepharo-**.)

eye ointment /'aɪ ,oɪntmənt/ *noun* an ointment in a special tube to be used in eye treatment

eyesight /'aɪsایt/ *noun* the ability to see ○ He has got very good eyesight. ○ Failing eyesight is common in elderly people.

eye socket /'aɪ ,səkɪt/ *noun* same as **orbit**

eye specialist /'aɪ ,speʃəlist/ *noun* same as **ophthalmologist**

eyestrain /'aɪstreɪn/ *noun* tiredness in the muscles of the eye with a headache, which may be caused by an activity such as reading in bad light or working on a computer screen. Also called **asthenopia**

eye surgeon /'aɪ ,sɜ:dʒ(ə)n/ *noun* a surgeon who specialises in operations on eyes

eye test /'aɪ test/ *noun* an examination of the inside of an eye to see if it is working correctly, and if the person needs glasses

eyetooth /'aɪtu:θ/ *noun* a canine tooth, one of two pairs of pointed teeth next to the incisors (NOTE: The plural is **eyeteeth**.)

F

F abbr Fahrenheit

face /feɪs/ *noun* the front part of the head, where the eyes, nose and mouth are placed ■ *verb* to have your face towards or to look towards something ○ *Please face the screen.*

face delivery /'feɪs dɪ,ɪv(ə)rɪ/ *noun* a birth where the baby's face appears first

face lift /'feɪs lɪft/, **face-lifting operation** /'feɪs ,lɪftɪŋ ɒpə,reɪʃ(ə)n/ *noun* a surgical operation to remove wrinkles on the face and neck

face mask /'feɪs mɑ:sk/ *noun* 1. a rubber mask that fits over the nose and mouth and is used to administer an anaesthetic 2. a piece of gauze which fits over the mouth and nose to prevent droplet infection

face presentation /'feɪs prez(ə)n,teɪʃ(ə)n/ *noun* a position of a baby in the uterus where the face will appear first at birth

facet /'fæsɪt/ *noun* a flat surface on a bone

facet syndrome /'fæsɪt ,sɪndrəʊm/ *noun* a condition in which a joint in the vertebrae becomes dislocated

facial /'feɪʃ(ə)l/ *adjective* relating to, or appearing on, the face ○ *The psychiatrist examined the patient's facial expression.*

facial artery /'feɪʃ(ə)l ,a:təri/ *noun* an artery which branches off the external carotid into the face and mouth

facial bone /'feɪʃ(ə)l bəun/ *noun* one of the fourteen bones which form the face

COMMENT: The bones which make up the face are: two maxillae forming the upper jaw; two nasal bones forming the top part of the nose; two lacrimal bones on the inside of the orbit near the nose; two zygomatic or malar bones forming the sides of the cheeks; two palatine bones forming the back part of the top of the mouth; two nasal conchae or turbinate bones which form the sides of the nasal cavity; the mandible or lower jaw; and the vomer in the centre of the nasal septum.

facial nerve /'feɪʃ(ə)l nɜ:v/ *noun* the seventh cranial nerve, which governs the muscles of the face, the taste buds on the front of the tongue and the salivary and lacrimal glands

facial paralysis /,feɪʃ(ə)l pə'ræləsis/ *noun* same as **Bell's palsy**

facial vein /'feɪʃ(ə)l veɪn/ *noun* a vein which drains down the side of the face into the internal jugular vein

-facient /feɪʃənt/ *suffix* making or causing ○ **abortifacient**

facies /'feɪʃi:z/ *noun* someone's facial appearance, used as a guide to diagnosis

facilitation /fə,silɪ'teɪʃ(ə)n/ *noun* an act where several slight stimuli help a neurone to be activated

facilities /fə'sɪlɪtɪz/ *plural noun* something such as equipment, accommodation, treatment or help that is provided for people who need them ○ *the provision of aftercare facilities*

factor /'fækٹə/ *noun* 1. something which has an influence or which makes something else take place 2. a substance, variously numbered, e.g. Factor I, Factor II, in the plasma, which makes the blood coagulate when a blood vessel is injured

Factor II /,fæktə 'tu:/ same as **prothrombin**

Factor IX /,fæktə 'naɪn/ *noun* a protein in plasma which promotes the clotting of blood and is lacking in people with haemophilia B. Also called **Christmas factor**

Factor VIII /,fæktər 'eɪt/ *noun* a protein in plasma which promotes the clotting of blood and is lacking in people with haemophilia A

Factor XI /,fæktər ɪ'lev(ə)n/ *noun* a protein in plasma which promotes the clotting of blood and is lacking in people with haemophilia C

Factor XII /,fæktər 'twelv/ *noun* a protein in plasma which promotes the clotting of blood and is lacking in some people with haemophilia. Also called **Hageman factor**

faculty /'fæk(ə)lti/ *noun* the ability to do something

fade away /feɪd ə'weɪ/ *verb* to be in the process of dying (*informal*)

faecal /'fæ:k(ə)l/ *adjective* referring to faeces

faecal impaction /,fi:k(ə)l ɪm'pækʃən/ *noun* a condition in which a hardened mass of faeces stays in the rectum

faecal incontinence /fi:k(ə)l m'kɒntɪnəns/ *noun* an inability to control the bowel movements

faecalith /fi:kəlɪθ/ *noun* same as **coprolith**

faecal matter /fi:k(ə)l 'mætə/ *noun* solid waste matter from the bowels

faeces /'fi:sɪz/ *plural noun* solid waste matter passed from the bowels through the anus. Also called **stools**, **bowel movement** (NOTE: For other terms referring to faeces, see words beginning with **sterco**-.)

Fahrenheit /'færənhaɪt/, **Fahrenheit scale** /'færənhaɪt skeɪl/ *noun* a scale of temperatures where the freezing and boiling points of water are 32° and 212° under standard atmospheric pressure (NOTE: Used in the US, but less common in the UK. Usually written as an F after the degree sign: 32°F (say: 'thirty-two degrees Fahrenheit').)

COMMENT: To convert degrees Fahrenheit into degrees Celsius, subtract 32 and divide the remainder by 1.8.

false /feɪl/ *verb* 1. not to be successful in doing something ○ *The doctor failed to see the symptoms.* ○ *She has failed her pharmacy exams.* ○ *He failed his medical and was rejected by the police force.* 2. to become weaker and less likely to recover

failing /'feɪlin/ *adjective* weakening, or becoming closer to death

failure to thrive /,feɪljə tə 'θraɪv/ *noun* same as **marasmus**

faint /feɪnt/ *verb* to stop being conscious for a short time and, usually, fall down ■ *noun* a loss of consciousness for a short period, caused by a temporary reduction in the blood flow to the brain

fainting fit /'feɪntɪŋ fit/, **fainting spell** /'feɪntɪŋ spel/ *noun* same as **syncope** ○ *She often had fainting fits when she was dieting.*

Fairbanks' splint /'feəbæŋks splɪnt/ *noun* a special splint used for correcting Erb's palsy

faith healing /'feɪθ ,hi:lɪŋ/ *noun* the treatment of pain or illness by a person who prays and may also lay his or her hands on the patient

falciform /'fælsɪfɔ:m/ *adjective* in the shape of a sickle

falciform ligament /,fælsɪfɔ:m 'lɪgəmənt/ *noun* a piece of tissue which separates the two lobes of the liver and attaches it to the diaphragm

fall /fɔ:l/ *verb* □ **to fall pregnant, to fall for a baby** to become pregnant

fall asleep /,fɔ:l ə'sli:p/ *verb* to go to sleep

fallen arches /,fɔ:lən 'ɑ:tʃɪz/ *plural noun* a condition in which the arches in the sole of the foot are not high

fall ill /,fɔ:l 'ɪl/ *verb* to get ill or to start to have an illness ○ *He fell ill while on holiday and had to be flown home.*

Fallopian tube /fə'laopiən tju:b/ *noun* one of two tubes which connect the ovaries to the

uterus. See illustration at **UROGENITAL SYSTEM (FEMALE)** in Supplement. Also called **oviduct**, **salpinx** (NOTE: For other terms referring to Fallopian tubes, see words beginning with **salping-**, **salpingo-**). [Described 1561. After Gabriele Fallopio (1523–63), Italian man of medicine. He was Professor of Surgery and Anatomy at Padua, where he was also Professor of Botany.]

COMMENT: Once a month, ova (unfertilised eggs) leave the ovaries and move down the Fallopian tubes to the uterus. At the point where the Fallopian tubes join the uterus an ovum may be fertilised by a sperm cell. Sometimes fertilisation and development of the embryo take place in the Fallopian tube itself. This is called an ectopic pregnancy, and can be life-threatening if not detected early.

Fallot's tetralogy /,fæləʊz te'trælodʒi/ *noun* same as **tetralogy of Fallot** [Described 1888. After Etienne-Louis Arthur Fallot (1850–1911), Professor of Hygiene and Legal Medicine at Marseilles, France.]

false /fɔ:ls/ *adjective* not true or not real

false pains /,fɔ:ls 'peɪnz/ *plural noun* pains which appear to be labour pains but are not **false pregnancy** /,fɔ:ls 'pregnənsi/ *noun* a condition in which a woman believes wrongly that she is pregnant and displays symptoms and signs of pregnancy

false rib /,fɔ:ls 'ribz/ *noun* one of the bottom five ribs on each side which are not directly attached to the breastbone

false teeth /,fɔ:ls 'ti:θ/ *plural noun* dentures, artificial teeth made of plastic, which fit in the mouth and take the place of teeth which have been extracted

false vocal cords /,fɔ:ls 'vəʊk(ə)l ,kɔ:dz/ *plural noun* same as **vestibular folds**

falk /fælkəs/, **falk cerebri** /,fælkəs 'serəbri/ *noun* a fold of the dura mater between the two hemispheres of the cerebrum

familial /fə'miliəl/ *adjective* referring to a family

familial adenomatous polyposis /fə,mili ədə,nomətəs pɒli'pəʊsɪs/ *noun* a hereditary disorder where polyps develop in the small intestine. Abbr **FAP**

familial disorder /fə,miliəl dɪs'ɔ:də/ *noun* a hereditary disorder which affects several members of the same family

family /'fæm(ə)li/ *noun* a group of people who are related to each other, especially mother, father and children

family doctor /,fæm(ə)li 'dɒktə/ *noun* a general practitioner

family planning /,fæm(ə)li 'plænɪŋ/ *noun* the use of contraception to control the number of children in a family

family planning clinic /,fæm(ə)li 'plænɪŋ ,klɪnik/ *noun* a clinic which gives advice on contraception

family therapy /,fæm(ə)li 'θerəpi/ *noun* a type of psychotherapy where members of the

family of a person with a disorder meet a therapist to discuss the condition and try to come to terms with it

famotidine /fə'mɒtɪdɪ:n/ *noun* a histamine which reduces the secretion of gastric acid and is used to treat ulcers

Fanconi syndrome /fæn'kəʊni,sɪndrəm/ *noun* a kidney disorder where amino acids are present in the urine [Described 1927. After Guido Fanconi (b.1892), Professor of Paediatrics at the University of Zurich, Switzerland.]

fantasise /'fæntəsaɪz/, **fantasize** *verb* to imagine that things have happened

fantasy /'fæntəsi/ *noun* a series of imaginary events which someone believes really took place

FAP *abbr* familial adenomatous polyposis

farcy /'fa:sɪ/ *noun* a form of glanders which affects the lymph nodes

farinaceous /,færɪ'nɛɪʃəs/ *adjective* referring to flour, or containing starch

farmer's lung /,fa:məz 'lʌŋ/ *noun* a type of asthma caused by an allergy to rotting hay

FAS *abbr* fetal alcohol syndrome

fascia /'feɪʃə/ *noun* fibrous tissue covering a muscle or an organ (NOTE: The plural is **fasciae**)

fascia lata /,feɪʃə 'lætə/ *noun* a wide sheet of tissue covering the thigh muscles

fasciculation /fə,sɪkjʊ'lɪsʃən/ *noun* small muscle movements which appear as trembling skin

fasciculus /fə,sɪkjʊləs/ *noun* a bundle of nerve fibres (NOTE: The plural is **fasciculi**)

fascilitis /,fæsfi'artɪs/ *noun* an inflammation of the connective tissue between muscles or around organs

fascioliasis /fə,sɪə'laiəsɪs/ *noun* a disease caused by parasitic liver flukes

Fasciolopsis /,fæsiəʊ'lɒpsɪs/ *noun* a type of liver fluke, often found in the Far East, which is transmitted to humans through contaminated waterplants

fast /fɑ:st/ *noun* a period of going without food, e.g. to lose weight or for religious reasons ■ *verb* to go without food ○ *The patient should fast from midnight of the night before an operation.*

fastigium /fæ'stɪdʒɪəm/ *noun* the highest temperature during a bout of fever

fat /fæt/ *adjective* big and round in the body ○ *You ought to eat less – you're getting too fat.* (NOTE: **fatter** – **fattest**) ■ *noun* 1. a white oily substance in the body, which stores energy and protects the body against cold 2. a type of food which supplies protein and Vitamins A and D, especially that part of meat which is white, and solid substances like lard or butter produced from animals and used for cooking, or liquid substances like oil ○ *If you don't like the fat on the meat, cut it off.* ○ *Fry the eggs in some fat.*

(NOTE: **Fat** has no plural when it means the substance; the plural **fats** is used to mean different types of fat. For other terms referring to fats, see also **lipid** and words beginning with **steato-**)

COMMENT: Fat is a necessary part of the diet because of the vitamins and energy-giving calories which it contains. Fat in the diet comes from either animal fats or vegetable fats. Animal fats such as butter, fat meat or cream, are saturated fatty acids. It is believed that the intake of unsaturated and polyunsaturated fats, mainly vegetable fats and oils, and fish oil, in the diet, rather than animal fats, helps keep down the level of cholesterol in the blood and so lessens the risk of atherosclerosis. A low-fat diet does not always help to reduce body weight.

fatal /'feɪt(ə)l/ *adjective* causing or resulting in death ○ *He had a fatal accident.* ○ *Cases of bee stings are rarely fatal.*

fatality /fə'tæltɪti/ *noun* a death as the result of something other than natural causes ○ *There were three fatalities during the flooding.*

fatally /'feɪt(ə)li/ *adverb* in a way which causes death ○ *His heart was fatally weakened by the lung disease.*

father /'fa:ðə/ *noun* a biological or adoptive male parent

fatigue /fə'ti:g/ *noun* very great tiredness ■ *verb* to tire someone out ○ *He was fatigued by the hard work.*

fatigue fracture /fə'ti:g ,fræktfʃə/ *noun* ♦ *stress fracture*

fat-soluble /,fæt 'spljub(ə)l/ *adjective* able to dissolve in fat ○ *Vitamin D is fat-soluble.*

fatty /'fæti/ *adjective* containing fat

fatty acid /,fæti 'æsɪd/ *noun* an organic acid belonging to a group that occurs naturally as fats, oils and waxes. ♦ **essential fatty acid**

fatty degeneration /,fæti di,dʒənə'reɪʃən/ *noun* same as **adipose degeneration**

fauces /'fɔ:sɪz/ *noun* an opening between the tonsils at the back of the throat, leading to the pharynx

favism /'feɪvɪz(ə)m/ *noun* a type of inherited anaemia caused by an allergy to beans

favus /'feɪvəs/ *noun* a highly contagious type of ringworm caused by a fungus which attacks the scalp

FDA *abbr* US Food and Drug Administration

fear /fɪ:s/ *noun* a state where a person is afraid of something ○ *fear of flying*

febricula /fe'brikjʊlə/ *noun* a low fever

febrifuge /'febrɪfju:dʒ/ *noun* a drug which prevents or lowers a fever, e.g. aspirin ■ *adjective* preventing or lowering fever

febrile /'fɪ:brail/ *adjective* referring to a fever, or caused by a fever

febrile convulsion /,fi:brail kən'veljən/ *noun* a convulsion in a child, lasting a short time, associated with a fever

febrile disease /'fi:brail dɪ,zi:z/ *noun* a disease which is accompanied by fever

fecal /'fi:k(ə)l/ **adjective** US same as **faecal**

fecundation /,fekən'deɪʃ(ə)n/ **noun** the act of bringing male and female reproductive matter together. Also called **fertilisation**

feeble /'fi:b(ə)l/ **adjective** very weak

feed /fi:d/ **verb** to give food to someone ○ *He has to be fed with a spoon.* ○ *The baby has reached the stage when she can feed herself.* (NOTE: **feeding – fed**)

feed back /fi:d 'bæk/ **verb** to give information or comments on something that has been done ○ *The patients' responses were fed back to the students.*

feedback /'fi:dbæk/ **noun** 1. information or comments about something which has been done ○ *The initial feedback from patients on the new service was encouraging.* 2. the linking of the result of an action back to the action itself

feeding /'fi:dɪŋ/ **noun** the action of giving someone something to eat. ▷ **breast feeding, bottle feeding, intravenous feeding**

feeding cup /'fi:dɪŋ kʌp/ **noun** a special cup with a spout, used for feeding people who cannot feed themselves

feel /fi:l/ **verb** 1. to touch someone or something, usually with your fingers ○ *The midwife felt the abdomen gently.* □ **to feel someone's pulse** to establish someone's pulse rate, usually by holding the inner wrist 2. to give a sensation ○ *My skin feels hot and itchy.* 3. to have a sensation ○ *When she got the results of her test, she felt relieved.* ○ *He felt ill after eating the fish.* 4. to believe or think something ○ *The doctor feels the patient is well enough to be moved out of intensive care.* (NOTE: **feeling – felt**)

feeling /'fi:lin/ **noun** 1. a sensation ○ *a prickling feeling* 2. an emotional state or attitude to something

Fehling's solution /'feɪlinz sə,lju:ʃ(ə)n/ **noun** a solution used in Fehling's test to detect sugar in urine [Described 1848. After Hermann Christian von Fehling (1812–85), Professor of Chemistry at Stuttgart, Germany.]

Fehling's test /'feɪlinz test/ **noun** a test for the presence of aldehydes and sugars in a biological sample by means of Fehling's solution

/'felən/ **noun same as **whitlow****

Felty's syndrome /'feltzi: ,sɪndrəʊm/ **noun** a condition, associated with rheumatoid arthritis, in which the spleen is enlarged and the number of white blood cells increases [Described 1924. After Augustus Roi Felty (1895–1963), physician at Hartford Hospital, Connecticut, USA.]

female condom /,fi:meil 'kɒndom/ **noun** a rubber sheath inserted into the vagina before intercourse, covering the walls of the vagina and the cervix

female sex hormone /,fi:meil 'hɔ:məʊn/ **noun** same as **oestrogen**

feminisation /,femɪnɪza'zeɪʃ(ə)n/, **feminization** **noun** the development of female characteristics in a male

femora /'femərə/ plural of **femur**

femoral /'femərəl/ **adjective** referring to the femur or to the thigh

femoral artery /,femərəl 'a:təri/ **noun** a continuation of the external iliac artery, which runs down the front of the thigh and then crosses to the back of the thigh

femoral canal /,femərəl kə'næl/ **noun** the inner tube of the sheath surrounding the femoral artery and vein

femoral head /,femərəl 'hed/ **noun** the head of the femur, the rounded projecting end part of the thigh bone which joins the acetabulum at the hip

femoral hernia /,femərəl 'hɜ:nɪə/ **noun** a hernia of the bowel at the top of the thigh

femoral neck /,femərəl 'nek/ **noun** the narrow part between the head and the diaphysis of the femur. Also called **neck of the femur**

femoral nerve /'femərəl nɜ:v/ **noun** a nerve which governs the muscle at the front of the thigh

femoral pulse /,femərəl 'pəls/ **noun** a pulse taken in the groin

femoral triangle /,femərəl 'traɪængəl/ **noun** a slight hollow in the groin which contains the femoral vessels and nerve. Also called **Scarpa's triangle**

femoral vein /'femərəl veɪn/ **noun** a vein running up the upper leg, a continuation of the popliteal vein

femoris /'feməris/ **noun** ▷ **rectus femoris**

femur /'fi:mər/ **noun** the bone in the top part of the leg which joins the acetabulum at the hip and the tibia at the knee. Also called **thigh-bone**. See illustration at **PELVIS** in Supplement (NOTE: The plural is **femora**.)

-**fen** /fen/ **suffix** used in names of non-steroidal anti-inflammatory drugs ○ **ibuprofen**

fenestra /'fə,nestrə/ **noun** a small opening in the ear

fenestra ovalis /fə,nestrə əʊ've:lis/ **noun** same as **oval window**

fenestra rotunda /fə,nestrə rəʊ'tʌndə/ **noun** same as **round window**

fenestration /,fənə'streɪʃ(ə)n/ **noun** a surgical operation to relieve deafness by making a small opening in the inner ear

fenoprofen /,fənu'prəʊfen/ **noun** a non-steroidal, anti-inflammatory drug that is used to manage the pain of arthritis

fentanyl /'fentənil/ **noun** a narcotic drug that is a powerful painkiller

fermentation /,fɜ:men'teɪʃ(ə)n/ **noun** a process where carbohydrates are broken down

by enzymes from yeast and produce alcohol.
Also called **zymosis**

ferric /'ferɪk/ *adjective* containing iron with a valency of three

ferritin /'ferɪtɪn/ *noun* a protein found in the liver that binds reversibly to iron and stores it for later use in making haemoglobin in red blood cells

ferrous /'ferəs/ *adjective* containing iron with a valency of two

ferrous sulphate /,ferəs 'sʌlfət/ *noun* a white or pale green iron salt that is used in the treatment of iron-deficient anaemia

ferrule /'feru:l/ *noun* a metal or rubber cap or ring that strengthens and protects the lower end of a crutch or walking stick ▶ *verb* to fit a ferrule onto a crutch or walking stick

fertile /'fɜ:təl/ *adjective* able to produce children. Opposite **sterile**

fertilisation /,fɜ:tɪlɪzə'zeɪʃ(ə)n/, **fertilization** *noun* the joining of an ovum and a sperm to form a zygote and so start the development of an embryo

fertilise /'fɜ:tɪlaɪz/, **fertilize** *verb* (of a sperm) to join with an ovum

fertility /fɜ:t'ɪlɪtɪ/ *noun* the fact of being fertile. Opposite **sterility**

fertility drug /fɜ:t'ɪlɪti dræg/ *noun* a drug that stimulates ovulation, given to women undergoing in vitro fertilisation

fertility rate /fɜ:t'ɪlɪti reɪt/ *noun* the number of births per year calculated per 1000 females aged between 15 and 44

FESS *abbr* functional endoscopic sinus surgery

fester /'festə/ *verb* (of an infected wound) to become inflamed and produce pus ○ *His legs were covered with festering sores.*

festination /,festɪ'nɛʃ(ə)n/ *noun* a way of walking in which a person takes short steps, seen in people who have Parkinson's disease

fetal /'fɪ:t(ə)l/ *adjective* referring to a fetus

fetal alcohol syndrome /,fɪ:t(ə)l 'ælkəhɒl ,sɪndrəʊm/ *noun* damage caused to the fetus by alcohol in the blood of the mother, which affects the growth of the embryo, including its facial and brain development. Abbr **FAS**

fetal distress /,fɪ:t(ə)l dɪ'stre:s/ *noun* a condition, e.g. a heart or respiratory problem, in which a fetus may not survive if the condition is not monitored and corrected

fetal dystocia /,fɪ:t(ə)l dɪs'təsɪə/ *noun* a difficult childbirth caused by a malformation or malpresentation of the fetus

fetal heart /,fɪ:t(ə)l 'ha:t/ *noun* the heart of the fetus

fetalis /'fɪ:təlis/ ♀ **erythroblastosis fetalis**

fetal monitor /,fɪ:t(ə)l 'mɒnɪtər/ *noun* an electronic device which monitors the fetus in the uterus

fetal position /'fɪ:t(ə)l pə,zɪʃ(ə)n/ *noun* a position where a person lies curled up on his or her side, like a fetus in the uterus

fetishism /'fetiʃɪz(ə)m/, **fetichism** *noun* a psychological disorder in which someone gets sexual satisfaction from touching objects

fetishist /'fetiʃɪst/, **fetichist** *noun* a person who has fetishism

feto- /'fɪ:təʊ/ *prefix* fetus

fetoprotein /,fɪ:təʊ'prəʊti:n/ *noun* ♀ **alpha-fetoprotein**

fetor /'fi:tə/ *noun* a bad smell

fetoscope /'fi:təskəʊp/ *noun* a stethoscope used in fetoscopy

fetoscopy /'fi:təskəpi/ *noun* an examination of a fetus inside the uterus, taking blood samples to diagnose blood disorders

fetus /'fi:təs/ *noun* an unborn baby from two months after conception until birth, before which it is called an embryo

FEV *abbr* forced expiratory volume

fever /'fi:və/ *noun* 1. a rise in body temperature ○ *She is running a slight fever.* ○ *You must stay in bed until the fever has gone down.* 2. a condition when the temperature of the body is higher than usual ▶ also called **pyrexia**

COMMENT: Average oral body temperature is about 98.6°F or 37°C and rectal temperature is about 99°F or 37.2°C. A fever often makes the patient feel cold, and is accompanied by pains in the joints. Most fevers are caused by infections. Infections which result in fever include cat-scratch fever, dengue, malaria, meningitis, psittacosis, Q fever, rheumatic fever, Rocky Mountain spotted fever, scarlet fever, septicaemia, typhoid fever, typhus and yellow fever.

fever blister /'fi:və ,blɪstə/ *noun* same as **fever sore**

feverfew /'fi:vəfju:/ *noun* a herb, formerly used to reduce fevers, but now used to relieve migraine

feverish /'fi:vərɪʃ/ *adjective* with a fever ○ *He felt feverish and took an aspirin.* ○ *She is in bed with a feverish chill.*

fever sore /'fi:və sɔ:/ *noun* a cold sore or burning sore, usually on the lips

fiber /'faibəl/ *noun* US same as **fibre**

fibr- /'faibr/ *prefix* referring to fibres, fibrous (used before vowels)

-fibrate /'faibreɪt/ *suffix* used in names of lipid-lowering drugs

fibre /'faibəl/ *noun* 1. a structure in the body shaped like a thread 2. same as **dietary fibre**

fiber optics /'faibər 'ɒptɪks/, **fibroptics** *noun* the use of thin fibres which conduct light and images to examine internal organs

fibrescope /'faibəskəʊp/ *noun* a device made of bundles of optical fibres which is passed into the body, used for examining internal organs

fibril /'faibrɪl/ *noun* a very small fibre

fibrillate /'faɪbrɪleɪt/ *verb* to undergo rapid irregular uncontrolled contractions, or make the heart or muscles undergo this type of contraction

fibrillating /'faɪbrɪleɪtɪŋ/ *adjective* with fluttering of a muscle ○ *They applied a defibrillator to correct a fibrillating heartbeat.*

fibrillation /'faɪbrɪ'læfɪʃ(ə)n/ *noun* the fluttering of a muscle

'Cardiovascular effects may include atrial arrhythmias but at 30°C there is the possibility of spontaneous ventricular fibrillation' [British Journal of Nursing]

fibrin /'fɪbrɪn/ *noun* a protein produced by fibrinogen, which helps make blood coagulate
COMMENT: Removal of fibrin from a blood sample is called defibrination.

fibrin foam /'fɪbrɪn fəʊm/ *noun* a white material made artificially from fibrinogen, used to prevent bleeding

fibrinogen /'fɪbrɪnədʒən/ *noun* a substance in blood plasma which produces fibrin when activated by thrombin

fibrinolysin /'fɪbrɪ'nɒləsɪn/ *noun* an enzyme which digests fibrin. Also called **plasmin**

fibrinolysis /'fɪbrɪ'nɒləsɪs/ *noun* the removal of blood clots from the system by the action of fibrinolysin on fibrin. Also called **thrombolysis**

fibrinolytic /'fɪbrɪnə'lɪtɪk/ *adjective* referring to fibrinolysis ○ *fibrinolytic drugs* Also called **thrombolytic**

fibro- /'faɪbrəʊ/ *prefix* referring to fibres

fibroadenoma /,faɪbrəʊ,ædɪ'nəʊmə/ *noun* a benign tumour formed of fibrous and glandular tissue

fibroblast /'faɪbrəʊblæst/ *noun* a long flat cell found in connective tissue, which develops into collagen

fibrocartilage /,faɪbrəʊ'kə:təlɪdʒ/ *noun* cartilage and fibrous tissue combined
COMMENT: Fibrocartilage is found in the discs of the spine. It is elastic like cartilage and pliable like fibre.

fibochondritis /,faɪbrəʊkɒn'draɪtɪs/ *noun* inflammation of the fibrocartilage

fibrocyst /'faɪbrəʊsɪst/ *noun* a benign tumour of fibrous tissue

fibrocystic /'faɪbrəʊ'sɪstɪk/ *adjective* referring to a fibrocyst

fibrocystic disease /'faɪbrəʊ'sɪstɪk dɪ,zɪ:z/, **fibrocystic disease of the pancreas** /,faɪbrəʊ,sɪstɪk dɪ,zɪ:z əv ðə 'pæŋkriəs/ *noun* same as **cystic fibrosis**

fibrocyte /'faɪbrəʊsait/ *noun* a cell which derives from a fibroblast and is found in connective tissue

fibroelastosis /,faɪbrəʊ,i:læ'stəʊsɪs/ *noun* a deformed growth of the elastic fibres, especially in the ventricles of the heart

fibroid /'faɪbrɔɪd/ *adjective* like fibre ■ *noun* same as **fibroid tumour**

fibroid degeneration /,faɪbrɔɪd dɪ,dʒenə'reɪʃ(ə)n/ *noun* the change of healthy tissue to fibrous tissue, e.g. as in cirrhosis of the liver

fibroid tumour /,faɪbrɔɪd 'tju:mə/ *noun* a benign tumour in the muscle fibres of the uterus. Also called **uterine fibroid, fibromyoma**

fibroma /'faɪ'b्रəʊmə/ *noun* a small benign tumour formed in connective tissue

fibromuscular /,faɪbrəʊ'mʌskjʊlə/ *adjective* referring to fibrous tissue and muscular tissue

fibromyoma /,faɪbrəʊmə'ɪəmə/ *noun* same as **fibroid tumour**

fibroplasia /,faɪbrə'u'pleɪzɪə/ *noun* ▶ **retrolental fibroplasia**

fibrosa /'faɪ'b्रəʊsə/ ▶ **osteitis fibrosa cystica**

fibrosarcoma /,faɪbrəʊsə:'kəʊmə/ *noun* a malignant tumour of the connective tissue, most common in the legs

fibrosis /'faɪ'b्रəʊsɪs/ *noun* the process of replacing damaged tissue by scar tissue

fibrositis /,faɪbrə'saɪtɪs/ *noun* a painful inflammation of the fibrous tissue which surrounds muscles and joints, especially the muscles of the back

fibrous /'faɪbrəs/ *adjective* made of fibres, or like fibre

fibrous capsule /,faɪbrəs 'kæpsjulə/ *noun* fibrous tissue surrounding a kidney. Also called **renal capsule**

fibrous joint /'faɪbrəs dʒɔɪnt/ *noun* a joint where fibrous tissue holds two bones together so that they cannot move, as in the bones of the skull

fibrous pericardium /,faɪbrəs ,peri'ka:dɪəm/ *noun* the outer part of the pericardium which surrounds the heart, and is attached to the main blood vessels

fibrous tissue /,faɪbrəs 'tɪsju:/ *noun* strong white tissue which makes tendons and ligaments and also scar tissue

fibula /'fibjʊlə/ *noun* the thinner of the two bones in the lower leg between the knee and the ankle. Compare **tibia** (NOTE: The plural is **fibulae**)

fibular /'fibjʊlə/ *adjective* referring to the fibula

field /fi:ld/ *noun* an area of interest ○ *He specialises in the field of community medicine.* ○ *Don't see that specialist with your breathing problems – his field is obstetrics.*

field of vision /,fi:ld əv 'vɪz(ə)n/ *noun* same as **visual field**

fight or flight reaction /'faɪt ɔ: 'flaɪt ri,ækʃən/ *noun* the theory that an organism which is faced with a threat reacts either by preparing to fight or to escape

fil- /'fil/ *prefix* referring to a thread

filament /'filəmənt/ *noun* a long thin structure like a thread

filamentous /'filə'mentəs/ *adjective* like a thread

Filaria /'fɪlərɪə/ *noun* a thin parasitic worm which is found especially in the lymph system, and is passed to humans by mosquitoes (NOTE: The plural is **Filariae**.)

COMMENT: Infestation with *Filariae* in the lymph system causes elephantiasis.

filariasis /'filə'rɪəsɪs/ *noun* a tropical disease caused by parasitic threadworms in the lymph system, transmitted by mosquito bites

filiform /'filɪfɔ:m/ *adjective* shaped like a thread

filiform papillae /'filɪfɔ:m pə'pili:/ *plural noun* papillae on the tongue which are shaped like threads, and have no taste buds

filipuncture /'filɪpʌŋktʃə/ *noun* the procedure of putting a wire into an aneurysm to cause blood clotting

fill /fɪl/ *verb* □ **to fill a tooth** to put metal into a hole in a tooth after it has been drilled

filling /'fɪlɪŋ/ *noun* 1. a surgical operation carried out by a dentist to fill a hole in a tooth with amalgam 2. amalgam, metallic mixture put into a hole in a tooth by a dentist

film /'fɪlm/ *noun* a very thin layer of a substance covering a surface

filter /'filtə/ *noun* a piece of paper or cloth through which a liquid is passed to remove any solid substances in it ■ *verb* to pass a liquid through a membrane, piece of paper or cloth to remove solid substances □ *Impurities are filtered from the blood by the kidneys.*

filtrate /'filtreɪt/ *noun* a substance which has passed through a filter

filtration /'fil'treɪʃ(ə)n/ *noun* the action of passing a liquid through a filter

filum /'faɪləm/ *noun* a structure which is shaped like a thread

filum terminale /,faɪlməl, tɜ:mi'nɛli/ *noun* the thin end section of the pia mater in the spinal cord

FIM *abbr* functional independence measure
fimbria /'fimbriə/ *noun* a fringe, especially the fringe of hair-like processes at the end of a Fallopian tube near the ovaries (NOTE: The plural is **fimbriae**.)

final common pathway /,fain(ə)l ,kɒmən 'paʊəθwei/ *noun* linked neurones which take all impulses from the central nervous system to a muscle

fine /fain/ *adjective* 1. healthy □ *He was ill last week, but he's feeling fine now.* 2. referring to something such as hair or thread which is very thin □ *There is a growth of fine hair on the back of her neck.* □ *Fine sutures are used for delicate operations.*

finger /'fɪŋgə/ *noun* one of the five parts at the end of the hand, but usually not including the thumb (NOTE: The names of the fingers are: lit-

tle finger, third finger or ring finger, middle finger, forefinger or index finger.)

COMMENT: Each finger is formed of three finger bones (the **phalanges**), but the thumb has only two.

fingernail /'fɪngəneɪl/ *noun* a hard thin growth covering the end of a finger □ *ridged and damaged fingernails*

finger-nose test /,fɪngə 'nəuz test/ *noun* a test of coordination, where the person is asked to close their eyes, stretch out their arm and then touch their nose with their index finger

fingerprint /'fɪngəprɪnt/ *noun* a mark left by a finger when something is touched. □ **genetic**

fingerstall /'fɪngəstɔ:l/ *noun* a cover for an infected finger, attached to the hand with strings

fireman's lift /,faɪəmənз 'lift/ *noun* a way of carrying an injured person by putting their body over one shoulder

firm /fɜ:m/ *noun* a group of doctors and consultants in a hospital, especially one to which a trainee doctor is attached during clinical studies (*informal*)

first aid /,fɜ:st 'eɪd/ *noun* help given by a non-medical person to someone who is suddenly ill or injured before full-scale medical treatment can be given □ *She gave him first aid in the street until the ambulance arrived.*

first-aider /,fɜ:st 'eɪdə/ *noun* a person who gives first aid to someone who is suddenly ill or injured

first-aid kit /,fɜ:st 'eɪd ,kɪt/ *noun* a box with bandages and dressings kept ready to be used in an emergency

first-aid post /,fɜ:st 'eɪd ,pəʊst/, **first-aid station** /,fɜ:st 'eɪd ,steɪʃ(ə)n/ *noun* a place where injured people can be taken for immediate care

first-degree burn /,fɜ:st dɪ,gri: 'bɜ:n/ *noun* a former classification of the severity of a burn, where the skin turns red

first-degree haemorrhoids /,fɜ:st dɪ,gri: 'hemərɔɪdz/ *plural noun* haemorrhoids which remain in the rectum

first-degree relative /,fɜ:st dɪ,gri: 'relatɪv/ *noun* a relative with whom an individual shares 50% of their genes, e.g. a father, mother, sibling or child

first-ever stroke /,fɜ:st ,eɪv 'strəuk/ *noun* a stroke which someone has for the first time in his or her life

first intention /,fɜ:st in'tenʃən/ *noun* the healing of a clean wound where the tissue forms again rapidly and no prominent scar is left

first-level nurse /,fɜ:st ,lev(ə)l 'nɜ:s/, **first-level Registered Nurse** /,fɜ:st ,lev(ə)l ,redʒɪ 'stəl 'nɜ:s/ *noun* a nurse who has passed qualifying examinations, is registered as such with the Nursing and Midwifery Council and can

act in an independent decision-making role.
Compare **second-level nurse**

fissile /'fɪsəl/ *adjective* able to split or be split

fission /'fɪʃ(ə)n/ *noun* the act of dividing into two or more parts

fissure /'fɪʃə/ *noun* a crack or groove in the skin, tissue or an organ □ **horizontal and oblique fissures** grooves between the lobes of the lungs. See illustration at **LUNGS** in Supplement

fist /fɪst/ *noun* a hand which is tightly closed

fistula /'fɪstjʊlə/ *noun* a passage or opening which has been made unusually between two organs, often near the rectum or anus

fistula in ano /'fɪstjʊlə ɪn 'ænəʊ/ *noun* same as **anal fistula**

fit /fɪt/ *adjective* strong and physically healthy
○ *She exercises every day to keep fit.* ○ *The doctors decided the patient was not fit for surgery.* (NOTE: **fitter** – **fittest**) □ **he isn't fit enough to work** he is still too ill to work ■ *noun* a sudden attack of a disorder, especially convulsions and epilepsy ○ *She had a fit of coughing.* ○ *He had an epileptic fit.* ○ *The baby had a series of fits.* ■ *verb* 1. to attach an appliance correctly ○ *The surgeons fitted the artificial hand to the patient's arm or fitted the patient with an artificial hand.* 2. to provide a piece of equipment for someone to wear ○ *She was fitted with temporary support.* 3. to have convulsions ○ *The patient has fitted twice.* (NOTE: **fitting** – **fitted**. Note also: you fit someone **with** an appliance.)

fitness /'fɪtnəs/ *noun* the fact of being strong and healthy ○ *Being in the football team demands a high level of physical fitness.* ○ *He had to pass a fitness test to join the police force.*

fixated /'fɪk'seɪtɪd/ *adjective* referring to a person who has too close an attachment to another person, often to a parent

fixation /'fɪk'seɪʃ(ə)n/ *noun* a psychological disorder where a person does not develop beyond a particular stage

fixative /'fɪksətɪv/ *noun* a chemical used in the preparation of samples on slides

fixator /'fɪk'seɪtə/ *noun* a metal rod placed through a bone to keep a part of the body rigid

fixed oil /,fɪkst 'ɔɪl/ *noun* 1. an oil which is liquid at 20°C 2. liquid fats, especially those used as food

flab /flæb/ *noun* soft fat flesh (*informal*) ○ *He's doing exercises to try to fight the flab.*

flabby /'flæbi/ *adjective* with soft flesh ○ *She has got flabby from sitting at her desk all day.*

flaccid /'flæksɪd, 'flæsɪd/ *adjective* soft or flabby

flaccidity /'flæk'sɪdɪti, flæ'sɪdɪti/ *noun* the state of being flaccid

flagellate /'flædʒələt/ *noun* a type of parasitic protozoan which uses whip-like hairs to swim, e.g. *Leishmania*

flagellum /flə'dʒeləm/ *noun* a tiny growth on a microorganism, shaped like a whip (NOTE: The plural is **flagella**.)

Flagyl /'flædʒail/ a trade name for metronidazole

flail /'fleɪl/ *verb* to thrash around with uncontrollable or violent movements, particularly of the arms

flail chest /'fleɪl tʃest/ *noun* a condition in which the chest is not stable, because several ribs have been broken

flake /'fleɪk/ *noun* a thin piece of tissue ○ *Dandruff is formed of flakes of dead skin on the scalp.*

flake fracture /'fleɪk ,fræktʃə/ *noun* a fracture where thin pieces of bone come off

flake off /,fleɪk 'ɒf/ *verb* to fall off as flakes

flap /'flæp/ *noun* a flat piece attached to something, especially a piece of skin or tissue still attached to the body at one side and used in grafts

flare /'fleə/ *noun* red colouring of the skin at an infected spot or in urticaria

flashback /'flæʃbæk/ *noun* a repeated and very vivid memory of a traumatic event

flash burn /'flæʃ bɜːn/ *noun* a burn caused when a body part is briefly exposed to a source of intense heat

flat foot /,flæt 'fʊt/, **flat feet** /,flæt 'fɪt/ *noun* a condition in which the soles of the feet lie flat on the ground instead of being arched as usual. Also called **pes planus**

flatline /'flætlайн/ *verb* to fail to show on a monitor any of the electrical currents associated with heart or brain activity ■ *noun* a monitor readout on an EEG or ECG indicating total cessation of brain or cardiac activity, respectively

flatulence /'flætjʊləns/ *noun* gas or air which collects in the stomach or intestines causing discomfort

COMMENT: Flatulence is generally caused by indigestion, but can be made worse if the person swallows air (**aerophagy**).

flatulent /'flætjʊlənt/ *adjective* having flatulence, or caused by flatulence

flatus /'flærətəs/ *noun* air and gas which collects in the intestines and is painful

flatworm /'flætwɜːm/ *noun* any of several types of parasitic worm with a flat body, e.g. a tapeworm. Compare **roundworm**

flea /fli:/ *noun* a tiny insect which sucks blood and is a parasite on animals and humans

COMMENT: Fleas can transmit disease, most especially bubonic plague which is transmitted by infected rat fleas.

flecainide /'fle'keɪnайд/ *noun* a drug that helps to correct an irregular heartbeat

flesh /'fleʃ/ *noun* tissue containing blood, forming the part of the body which is not skin, bone or organs

flesh wound /'fleʃ wu:nd/ *noun* a wound which only affects the fleshy part of the body
○ *She had a flesh wound in her leg.*

fleshy /'fleʃi/ *adjective* 1. made of flesh 2. fat

flex /fleks/ *verb* to bend something □ **to flex a joint** to use a muscle to make a joint bend

flexibilitas cerea /fleksɪ'təbilɪtəs 'sɪəriə/ *noun* a condition in which, if someone's arms or legs are moved, they remain in that set position for some time

flexion /'flekʃən/ *noun* the act of bending a joint

Flexner's bacillus /'fleksnəz bə'siləs/ *noun* a bacterium which causes bacillary dysentery

flexor /'fleksə/, **flexor muscle** /'fleksə'mas(ə)l/ *noun* a muscle which makes a joint bend. Compare **extensor**

flexure /'flekʃə/ *noun* 1. a bend in an organ 2. a fold in the skin

floaters /'fləʊtəz/ *plural noun* same as **muscae volitantes**

floating kidney /'fləʊtiŋ 'kɪdni/ *noun* same as **nephroptosis**

floating rib /'fləʊtiŋ 'rib/ *noun* one of the two lowest ribs on each side, which are not attached to the breastbone

floccillation /'fləksɪ'lɪf(ə)n/ *noun* the action of constantly touching the bedclothes, a sign that someone is approaching death

floccitation /'fləksɪ'teɪf(ə)n/ *noun* same as **carphology**

flooding /'flædɪŋ/ *noun* same as **menorrhagia**

floppy baby syndrome /'flɒpi 'beibi, sɪn drəʊm/ *noun* same as **amyotonia congenita**

flora /'flɔ:rə/ *noun* bacteria which exist in a particular part of the body

florid /'flɒrɪd/ *adjective* with an unhealthily glowing pink or red complexion

floss /flos/ *noun* same as **dental floss** ■ *verb* to clean the teeth with dental floss

flow /fləʊ/ *noun* 1. a movement of liquid or gas ○ *They used a tourniquet to try to stop the flow of blood.* 2. the amount of liquid or gas which is moving ○ *The meter measures the flow of water through the pipe.*

flowmeter /'fləʊmɪ:tə/ *noun* a meter attached to a pipe, e.g. as in anaesthetic equipment, to measure the speed at which a liquid or gas moves in the pipe

flu /flu:/ *noun* 1. same as **influenza** 2. a very bad cold (*informal*) (NOTE: Sometimes written 'flu to show it is a short form of **influenza**.)

flucloxacillin /flu:'klɒksasɪlin/ *noun* a drug related to penicillin and effective against streptococcal infections and pneumonia

fluconazole /flu:'kɒnəzəʊl/ *noun* a drug used to treat fungal infections such as candidiasis

fluctuation /'flʌktʃu'eɪʃ(ə)n/ *noun* the feeling of movement of liquid inside part of the body or inside a cyst when pressed by the fingers

fluid /'flu:ɪd/ *noun* 1. a liquid 2. any gas, liquid or powder which flows

fluid balance /'flu:ɪd ,bæləns/ *noun* the maintenance of the balance of fluids in the body during dialysis or other treatment

fluke /'flu:k/ *noun* a parasitic flatworm which settles inside the liver, in the bloodstream and in other parts of the body

flunitrazepam /'flu:nai'træzɪpæm/ *noun* a tranquilliser that, because of its association with 'date rape' cases, is a controlled drug in the UK

fluorescence /flu:ə'res(ə)ns/ *noun* the sending out of light from a substance which is receiving radiation

fluorescent /flu:ə'res(ə)nt/ *adjective* referring to a substance which sends out light

fluoridate /'flɔ:ri:dæt/ *verb* to add fluoride to a substance, usually to drinking water, in order to help prevent tooth decay

fluoride /'flɔ:raɪd/ *noun* a chemical compound of fluorine and sodium, potassium or tin

○ **fluoride toothpaste**

COMMENT: Fluoride will reduce decay in teeth and is often added to drinking water or to toothpaste. Some people object to fluoridation and it is thought that too high a concentration, such as that achieved by highly fluoridated water and the use of a highly fluoridated toothpaste, may discolour the teeth of children.

fluorine /'flʊərɪn/ *noun* a chemical element found in bones and teeth (NOTE: The chemical symbol is F.)

fluoroscope /'flʊərɒskəp/ *noun* an apparatus which projects an X-ray image of a part of the body onto a screen, so that the part of the body can be examined as it moves

fluoroscopy /'flʊə'rɒskəpi/ *noun* an examination of the body using X-rays projected onto a screen

fluorosis /'fləʊ'rəʊsɪs/ *noun* a condition caused by excessive fluoride in drinking water

COMMENT: At a low level, fluorosis causes discolouration of the teeth, and as the level of fluoride rises, ligaments can become calcified.

fluoxetine /'flu:ə'ksɛtɪn/ *noun* a drug that increases serotonin in the brain and is used to treat anxiety and depression

flush /'flaʃ/ *noun* a red colour in the skin ■ *verb* 1. to wash a wound with liquid 2. (of person) to turn red

flushed /'flaʃt/ *adjective* with red skin, e.g. due to heat, emotion or overeating ○ *Her face was flushed and she was breathing heavily.*

flutter /'flʌtə/, **fluttering** /'flætərɪŋ/ *noun* a rapid movement, especially of the atria of the

heart, which is not controlled by impulses from the sinoatrial node

flux /'flaks/ *noun* an excessive production of liquid from the body

focal /'fəʊk(ə)l/ *adjective* referring to a focus
focal distance /'fəʊk(ə)l 'dɪstəns/, **focal length** /'fəʊk(ə)l 'leŋθ/ *noun* the distance between the lens of the eye and the point behind the lens where light is focused

focal epilepsy /'fəʊk(ə)l 'epilepsi/ *noun* epilepsy arising from a localised area of the brain
focal myopathy /'fəʊk(ə)l maɪ'ɒpəθi/ *noun* destruction of muscle tissue caused by a substance injected in an intramuscular injection

focus /'fəʊkəs/ *noun* 1. the point where light rays converge through a lens 2. the centre of an infection (NOTE: The plural is **foci**). ■ *verb* 1. to adjust a lens until an image is clear and sharp 2. to see clearly ○ *He has difficulty in focusing on the object.*

focus group /'fəʊkəs gru:p/ *noun* a discussion group of lay people brought together under professional guidance to discuss issues such as care

foetal /'fi:t(ə)l/ *adjective* another spelling of **fetal** (NOTE: The spelling **foetal** is common in general use in British English, but the spelling **fetal** is the accepted international spelling for technical use.)

foetor /'fi:tər/ *noun* another spelling of **fetor**

foetoscope /'fi:təskəʊp/ *noun* another spelling of **fetoscope**

foetoscopy /fi:təskəpi/ *noun* another spelling of **fetoscopy**

foetus /'fi:təs/ *noun* another spelling of **fetus** (NOTE: The spelling **foetus** is common in general use in British English, but the spelling **fetus** is the accepted international spelling for technical use.)

folacin /'fəʊləsɪn/ *noun* same as **folic acid**

fold /'fəuld/ *noun* a part of the body which is bent so that it lies on top of another part

folic acid /'fəʊlik 'æsɪd/ *noun* a vitamin in the Vitamin B complex found in milk, liver, yeast and green vegetables such as spinach, which is essential for creating new blood cells

COMMENT: Lack of folic acid can cause anaemia and neural tube disorders in the developing fetus. It can also be caused by alcoholism.

folie à deux /'fɒli ā 'dø:/ *noun* a rare condition where a psychological disorder is communicated between two people who live together

follicle /'fɒlik(ə)l/ *noun* a tiny hole or sac in the body

COMMENT: An ovarian follicle goes through several stages in its development. The first stage is called a primordial follicle, which then develops into a primary follicle and becomes a mature follicle by the sixth day of the period. This follicle secretes oestrogen until the ovum has developed to the point when it can break out, leaving the corpus luteum behind.

follicle-stimulating hormone /'fɒlik(ə)l 'stimjuleɪtɪŋ 'hɔ:məʊn/ *noun* a hormone produced by the pituitary gland which stimulates ova in the ovaries and sperm in the testes. Abbr **FSH**

follicular /fə'lɪkjʊlər/, **folliculate** /fə'lɪkju:lət/ *adjective* referring to follicles

follicular tumour /fə'lɪkjʊlər 'tju:mə/ *noun* a tumour in a follicle

folliculin /fə'lɪkjʊlin/ *noun* an oestrone, a type of oestrogen ○ *She is undergoing folliculin treatment.*

folliculitis /fə'lɪkju'lɪtɪs/ *noun* inflammation of the hair follicles, especially where hair has been shaved

follow /'fɒləʊ/, **follow up** /'fɒləʊ 'ʌp/ *verb* to check on someone who has been examined before in order to assess the progress of a disease or the results of treatment

follow-up /'fɒləʊ 'ʌp/ *noun* a check on someone who has been examined before

‘...length of follow-ups varied from three to 108 months. Thirteen patients were followed for less than one year, but the remainder were seen regularly for periods from one to nine years’ [New Zealand Medical Journal]

folementation /,fəʊmen'teɪʃ(ə)n/ *noun* same as **poultice**

fontites /'fəʊmɪti:z/ *plural noun* objects touched by someone with a communicable disease which can then be the means of passing on the disease to others

fontanelle /,fɒntə'nel/, **fontanel** *noun* the soft cartilage between the bony sections of a baby’s skull

COMMENT: The fontanelles gradually harden over a period of months and by the age of 18 months the bones of the baby’s skull are usually solid.

food allergen /'fu:d ,ælədʒən/ *noun* a substance in food which produces an allergy

food allergy /'fu:d 'ælədʒi/ *noun* an allergy to a specific food such as nuts, which causes a severe reaction that may lead to life-threatening anaphylactic shock

food canal /'fu:d kə,næl/ *noun* the passage from the mouth to the rectum through which food passes and is digested

food intolerance /'fu:d ɪn'tɒlərəns/ *noun* an adverse reaction to some foods such as oranges, eggs, tomatoes and strawberries

food poisoning /'fu:d ,pɔɪz(ə)nɪŋ/ *noun* an illness caused by eating food which is contaminated with bacteria

foot /'fʊt/ *noun* the end part of the leg on which a person stands

COMMENT: The foot is formed of 26 bones: 14 phalanges in the toes, five metatarsals in the main part of the foot and seven tarsals in the heel.

footpump /'fʊtpʌmp/ *noun* a device to reduce the risk of post-operative deep-vein thrombosis by mechanical use of leg muscles

foramen /fə'reɪmən/ *noun* a natural opening inside the body, e.g. the opening in a bone through which veins or nerves pass (NOTE: The plural is **foramina**.)

foramen magnum /fə'reɪmən 'mægnəmən/ *noun* the hole at the bottom of the skull where the brain is joined to the spinal cord

foramen ovale /fə'reɪmən 'əʊ'veɪə'ləʊ/ *noun* an opening between the two parts of the heart in a fetus

COMMENT: The foramen ovale usually closes at birth, but if it stays open the blood from the veins can mix with the blood going to the arteries, causing cyanosis.

foramina /fə'reɪmɪnə/ plural of **foramen**

forced expiratory volume /fɔ:st ek 'spɪrət(ə)ri ,vɒlju:m/ *noun* the maximum amount of air that can be expelled in a given time. Abbr **FEV**

force-feed /fɔ:s 'fi:d/ *verb* to make someone swallow food against their will, e.g. by using a tube to put it directly down their throat

forceps /'fɔ:seps/ *noun* a surgical instrument with handles like a pair of scissors, made in different sizes and with differently shaped ends, used for holding and pulling

forceps delivery /'fɔ:seps dɪ,lɪv(ə)ri/ *noun* childbirth where the doctor uses forceps to help the baby out of the mother's uterus

fore- /fɔ:/ prefix in front

forearm /'fɔ:rəm/ *noun* the lower part of the arm from the elbow to the wrist

forearm bones /'fɔ:rəm bəʊnz/ plural *noun* the ulna and the radius

forebrain /'fɔ:breɪn/ *noun* the front part of the brain in an embryo

forefinger /'fɔ:fɪŋgə/ *noun* the first finger on the hand, next to the thumb

foregut /'fɔ:gat/ *noun* the front part of the gut in an embryo

forehead /'fɔ:hed/ *noun* the part of the face above the eyes

foreign /'fɔ:rɪn/ *adjective* 1. not belonging to your own country □ *foreign visitors* □ *a foreign language* 2. referring to something that is found where it does not naturally belong, especially something found in the human body that comes from a source outside the body □ *a foreign object* □ *foreign matter*

foreign body /'fɔ:rnɪ 'bodi/ *noun* a piece of material which is not part of the surrounding tissue and should not be there, e.g. sand in a cut, dust in the eye or a pin which has been swallowed □ *The X-ray showed the presence of a foreign body.* □ **swallowed foreign bodies** something which should not have been swallowed, e.g. a pin, coin or button

foremilk /'fɔ:mlɪlk/ *noun* the relatively low-fat milk with a high sugar content that is produced by a woman at the beginning of a breast feed

forensic /fə'rensɪk/ *adjective* relating to the use of science in solving criminal investigations or settling legal cases

forensic medicine /fə'rensɪk 'med(ə)sɪn/ *noun* the branch of medical science concerned with finding solutions to crimes against people and which involves procedures such as conducting autopsies on murdered people or taking blood samples from clothes

foreskin /'fɔ:skɪn/ *noun* the skin covering the top of the penis, which can be removed by circumcision. Also called **prepuce**

forewaters /'fɔ:wɔ:təz/ plural *noun* fluid which comes out of the vagina at the beginning of childbirth when the amniotic bursts

forgetful /fə'getf(ə)l/ *adjective* referring to someone who often forgets things □ *She became very forgetful, and had to be looked after by her sister.*

forgetfulness /fə'getf(ə)lnəs/ *noun* a condition in which someone often forgets things □ *Increasing forgetfulness is a sign of old age.*

form /fɔ:m/ *noun* 1. shape 2. a piece of paper with blank spaces which you have to write in □ *You have to fill in a form when you are admitted to hospital.* 3. a state or condition □ *in good form* □ **he's in good form** today he is very amusing, he is doing things well ■ *verb* to make or to be the main part of something □ *Calcium is one the elements which form bones or bones are mainly formed of calcium.* □ *An ulcer formed in his duodenum.* □ *In diphtheria a membrane forms across the larynx.*

formaldehyde /fɔ:mældɪhaɪd/ *noun* a gas with an unpleasant smell that is a strong disinfectant. When dissolved in water to make **formalin**, it is also used to preserve medical specimens.

formalin /'fɔ:məlɪn/ *noun* a solution of formaldehyde in water, used to preserve medical specimens

formation /fɔ:'meɪʃ(ə)n/ *noun* the action of forming something □ *Drinking milk helps the formation of bones.*

formication /fɔ:mi'keɪʃ(ə)n/ *noun* an itching feeling where the skin feels as if it were covered with insects

formula /'fɔ:mjʊlə/ *noun* 1. a way of indicating a chemical compound using letters and numbers, e.g. H₂SO₄. 2. instructions on how to prepare a drug 3. US powdered milk for babies (NOTE: The plural is **formulas** or **formulae**.)

formulary /'fɔ:mjʊləri/ *noun* a book that lists medicines together with their formulae

fornix /'fɔ:nɪks/ *noun* an arch (NOTE: The plural is **fornices**.) □ **fornix of the vagina** space between the cervix of the uterus and the vagina

fornix cerebri /,fɔ:nɪks 'seribrə/ *noun* a section of white matter in the brain between the hippocampus and the hypothalamus. See illustration at **BRAIN** in Supplement

fortification figures /,fɔ:tifi'keɪʃ(ə)n ,frɪgəz/ *plural noun* patterns of coloured light, seen as part of the aura before a migraine attack occurs

foscarnet /'fɒs'kɑ:nɛt/ *noun* an antiviral drug administered by intravenous injection that is effective against herpesviruses that are resistant to acyclovir. It is especially used for people with AIDS.

fossa /'fɒsə/ *noun* a shallow hollow in a bone or the skin

foster children /'fɒstə ,tʃɪldrən/ *plural noun* children brought up by people who are not their own parents

foster parent /'fɒstə ,peərənt/ *noun* a woman or man who brings up a child born to other parents

Fothergill's operation /'fʊðəgɪlz ɒpə,reɪʃ(ə)n/ *noun* a surgical operation to correct prolapse of the uterus [After W. E. Fothergill (1865–1926), British gynaecologist.]

foundation hospital /'faʊn,dेɪʃ(ə)n 'hɒspɪt(ə)l/ *noun* in the UK, a proposed type of hospital that would be independent of its Local Health Authority in financial matters

fourchette /fu'ɔ:ʃet/ *noun* a fold of skin at the back of the vulva

fovea /'fəʊviə/, **fovea centralis** /,fəʊviə sen'tra:lis/ *noun* a depression in the retina which is the point where the eye sees most clearly. See illustration at **EYE** in Supplement

FP10 /ef pi:/ 'ten/ *noun* in the UK, an NHS prescription from a GP

fracture /'frækʃə/ *verb* 1. (of bone) to break ○ *The tibia fractured in two places.* 2. to break a bone ○ *He fractured his wrist.* ■ *noun* a break in a bone ○ *rib fracture* or *fracture of a rib*

fractured /'frækʃəd/ *adjective* broken ○ *He had a fractured skull.* ○ *She went to hospital to have her fractured leg reset.*

fragile /'frædʒaɪl/ *adjective* easily broken ○ *Elderly people's bones are more fragile than those of adolescents.*

fragile-X syndrome /,frædʒaɪl 'eks ,sɪn drəʊm/ *noun* a hereditary condition in which part of an X chromosome is constricted, causing mental impairment

fragilitas /frə'dʒɪlɪtəs/ *noun* fragility or brittleness

fragilitas ossium /frə,dʒɪlɪtəs 'ɔsiəm/ *noun* a hereditary condition where the bones are brittle and break easily, similar to osteogenesis imperfecta

frail /freɪl/ *adjective* weak, easily broken ○ *Grandfather is getting frail, and we have to look after him all the time.* ○ *The baby's bones are still very frail.*

framboesia /fræm'bɪ:ziə/ *noun* same as **yaws**

frame /freɪm/ *noun* 1. the particular size and shape of someone's body 2. a solid support for something. ♦ **walking frame, Zimmer frame**

framework /'freimwɜ:k/ *noun* the main bones which make up the structure of part of the body

framycetin /fræ'maisətɪn/ *noun* an antibiotic

fraternal twins /frə,tən(ə)l 'twɪnz/ *plural noun* same as **dizygotic twins**

freckle /'frek(ə)l/ *noun* a harmless small brownish patch on the skin that becomes more noticeable after exposure to the sun. Freckles are often found in people with fair hair. Also called **lentigo** ■ *verb* to mark something, or become marked with freckles

freckled /'frek(ə)ld/ *adjective* with brown spots on the skin

freeze /fri:z/ *verb* to anaesthetise part of the body (*informal*) ○ *They froze my big toe to remove the nail.*

freeze dry /,fri:z 'draɪ/ *verb* to freeze something rapidly then dry it in a vacuum

freeze drying /'fri:z ,draɪɪŋ/ *noun* a method of preserving food or tissue specimens by freezing rapidly and drying in a vacuum

Freiberg's disease /'fraɪbə:gz dɪ,zɪ:z/ *noun* osteochondritis of the head of the second metatarsus [Described 1914. After Albert Henry Freiberg (1869–1940), US surgeon.]

Frei test /'fraɪ test/ *noun* a test for the venereal disease lymphogranuloma inguinale [Described 1925. After Wilhelm Siegmund Frei (1885–1943), Professor of Dermatology at Berlin, Germany. He settled in New York, USA.]

fremitus /'fremɪtəs/ *noun* vibrations or trembling in part of someone's body, felt by the doctor's hand or heard through a stethoscope

French letter /,frentʃ 'letə/ *noun* ♦ **condom** (*informal*)

frenectomy /frə'nektəmi/ *noun* an operation to remove a frenum

Frenkel's exercises /frenkəlz ,eksəsaɪzɪz/ *plural noun* exercises for people who have locomotor ataxia, to teach coordination of the muscles and limbs

frenotomy /frə'nɒtəmi/ *noun* an operation to split a frenum

frenum /'fri:nəm/, **frenulum** /'frenjuləm/ *noun* a fold of mucous membrane under the tongue or by the clitoris

frequency /'fri:kwənsi/ *noun* 1. the number of times something takes place in a given time ○ *the frequency of micturition* 2. the rate of vibration in oscillations

fresh air /,fres 'eə/ *noun* open air ○ *They came out of the hospital into the fresh air.*

fresh frozen plasma /,fres ,fraz(ə)n 'plæzma/ *noun* plasma made from freshly donated blood, and kept frozen

fretful /'fretf(ə)l/ *adjective* referring to a baby that cries, cannot sleep or seems unhappy

Freudian /'frɔɪdiən/ *adjective* understandable in terms of Freud's theories, especially with regard to human sexuality ■ *noun* someone who is influenced by or follows Freud's theories or methods of psychoanalysis

friable /'fraɪəb(ə)l/ *adjective* easily broken up into small pieces

friar's balsam /'fraɪəz 'bɔ:lsm/ *noun* a mixture of various plant oils, including benzoin and balsam, which can be inhaled as a vapour to relieve bronchitis or congestion

friction /'frɪkʃən/ *noun* the rubbing together of two surfaces

friction fremitus /,frɪkʃən 'fremɪtəs/ *noun* a scratching sensation felt when the hand is placed on the chest of someone who has pericarditis

friction murmur /,frɪkʃən 'mɜ:mə/ *noun* the sound of two serous membranes rubbing together, heard with a stethoscope in someone who has pericarditis or pleurisy

Friedländer's bacillus /'fri:dłendəz bɛ̄,siləs/ *noun* the bacterium *Klebsiella pneumoniae* which can cause pneumonia [Described 1882. After Carl Friedländer (1847–87), pathologist at the Friedrichshain Hospital, Berlin, Germany.]

Friedman's test /'fri:dmanz test/ *noun* a test for pregnancy [After Maurice H. Friedman (b. 1903), US physician.]

Friedreich's ataxia /,fri:draɪks ə'tæksɪə/ *noun* an inherited nervous disease which affects the spinal cord and is associated with club foot, an unsteady walk and speech difficulties. Also called **dystrophy adiposogenitalis** [Described 1863. After Nicholaus Friedreich (1825–82), Professor of Pathological Anatomy at Würzburg, later Professor of Pathology and Therapy at Heidelberg, Germany.]

frigidity /fri'dʒɪdɪti/ *noun* the fact of being unable to experience orgasm, sexual pleasure or sexual desire

fringe medicine /'frɪŋʒ ,med(ə)sɪm/ *noun* types of medical practice which are not usually taught in medical schools, e.g. homeopathy or acupuncture (*informal*)

frog plaster /'frɒg ,pla:stə/ *noun* a plaster cast made to keep the legs in an open position after an operation to correct a dislocated hip

Fröhlich's syndrome /'frɔ:liks ,sɪndrəʊm/ *noun* a condition in which someone becomes obese and the genital system does not develop, caused by an adenoma of the pituitary gland [Described 1901. After Alfred Fröhlich (1871–1953), Professor of Pharmacology at the University of Vienna, Austria.]

frontal /'frænt(ə)l/ *adjective* referring to the forehead or to the front of the head. Opposite **occipital**

frontal bone /'frænt(ə)l bəʊn/ *noun* a bone forming the front of the upper part of the skull behind the forehead

frontal lobe /'frænt(ə)l ləʊb/ *noun* the front lobe of each cerebral hemisphere

frontal lobotomy /,frænt(ə)l ləʊ'bɒtəmɪ/ *noun* formerly, a surgical operation on the brain to treat mental illness by removing part of the frontal lobe

frontal sinus /,frænt(ə)l 'sainəs/ *noun* one of two sinuses in the front of the face above the eyes and near the nose

front passage /frænt 'pæsɪdʒ/ (*informal*) 1. same as **urethra** 2. same as **vagina**

frostbite /'frɒstbait/ *noun* an injury caused by very severe cold which freezes tissue

frostbitten /'frɒstbit(ə)n/ *adjective* having frostbite

COMMENT: In very cold conditions, the outside tissue of the fingers, toes, ears and nose can freeze, becoming white and numb. Thawing of frostbitten tissue can be very painful and must be done very slowly. Severe cases of frostbite may require amputation because the tissue has died and gangrene has set in.

frozen shoulder /,fræuz(ə)n 'ʃəuldə/ *noun* stiffness and pain in the shoulder, caused by inflammation of the membranes of the shoulder joint after injury or a period of immobility, when deposits may form in the tendons

frozen watchfulness /,fræuz(ə)n 'wɒtʃfəlness/ *noun* an expression of petrified fear on a child's face, especially in children who have been abused

fructose /'frʌktəʊs/ *noun* fruit sugar found in honey and some fruit, which together with glucose forms sucrose

fructosuria /,frʌktʊər'sjuəriə/ *noun* the presence of fructose in the urine

frusemide /'fru:səməɪd/ *noun* same as **furosemide**

FSH abbr follicle-stimulating hormone

fugax /'fju:gækəs/ ♦ **amaurosis fugax**

-**fuge** /'fju:dʒ/ suffix driving away

fugue /'fju:g/ *noun* a condition in which someone loses his or her memory and leaves home

fulguration /,fʌlgə'reɪʃ(ə)n/ *noun* the removal of a growth such as a wart by burning with an electric needle. Also called **electrodesiccation**

full term /'fol 'tɜ:m/ *noun* a complete pregnancy of forty weeks ○ *She has had several pregnancies but none has reached full term.*

full thickness burn /'fol 'θɪknəs bɜ:n/ *noun* same as **deep dermal burn**

fulminant /'fʊlmɪnənt/, **fulminating** /'fʊlmɪnɪtɪŋ/ *adjective* referring to a dangerous disease which develops very rapidly

'...the major manifestations of pneumococcal infection in sickle-cell disease are septicaemia, meningitis and pneumonia. The illness is frequently fulminant' [*The Lancet*]

fumes /fju:mz/ plural noun gas or smoke

fumigate /fju:migeɪt/ verb to kill insects in an area by using gas or smoke

fumigation /,fju:mɪ'geɪʃ(ə)n/ noun the process of killing insects in an area with gas or smoke

function /fʌŋkʃən/ noun the particular work done by an organ ○ What is the function of the pancreas? ○ The function of an ovary is to form ova. ■ verb to work in a particular way ○ The heart and lungs were functioning normally. ○ His kidneys suddenly stopped functioning.

...insulin's primary metabolic function is to transport glucose into muscle and fat cells, so that it can be used for energy' [Nursing '87]

...the AIDS virus attacks a person's immune system and damages the ability to fight other disease. Without a functioning immune system to ward off other germs, the patient becomes vulnerable to becoming infected'

[Journal of American Medical Association]

functional /'fʌŋkʃən(ə)l/ adjective referring to a disorder or illness which does not have a physical cause and may have a psychological cause, as opposed to an organic disorder

functional endoscopic sinus surgery /,fʌŋkʃən(ə)l ,endeskopik 'saɪnəs ,sɜ:dzəri/ noun the removal of soft tissue in the sinuses using an endoscope. Abbr **FESS**

functional enuresis /,fʌŋkʃən(ə)l ,enju'ri:sɪs/ noun bedwetting which has a psychological cause

functional independence measure /,fʌŋkʃən(ə)l ,ɪndɪ'pendəns ,meʒə/ noun a measure of disability. Abbr **FIM**

fundus /'fʌndəs/ noun 1. the bottom of a hollow organ such as the uterus 2. the top section of the stomach, above the body of the stomach

fungal /'fʌŋgəl/ adjective relating to, or caused by, fungi ○ a fungal skin infection

fungate /'fʌŋgeɪt/ verb (of some skin cancers) to increase rapidly at a late stage of tumour formation

fungicide /'fʌŋgɪsaɪd/ noun a substance used to kill fungi

fungiform papillae /,fʌŋgɪfɔ:m pa'pili:/ noun rounded papillae on the tip and sides of the tongue, which have taste buds

fungoid /'fʌŋgɔɪd/ adjective like a fungus

fungus /'fʌŋgəs/ noun an organism such as yeast or mould, some of which cause disease (NOTE: The plural is **fungi**. For other terms referring to fungi, see words beginning with **myc-**, **myco-**.)

COMMENT: Some fungi can become parasites of man, and cause diseases such as thrush.

Other fungi, such as yeast, react with sugar to form alcohol. Some antibiotics, such as penicillin, are derived from fungi.

fungus disease /'fʌŋgəs dɪ,zɪ:z/ noun a disease caused by a fungus

fungus poisoning /'fʌŋgəs ,pozi:(ə)nɪŋ/ noun poisoning by eating a poisonous fungus

funiculitis /fju:nɪkjʊ'laitɪs/ noun inflammation of the spermatic cord

funiculus /fju:'nɪkjʊləs/ noun one of the three parts of the white matter in the spinal cord ○ The three parts are called the lateral, anterior and posterior funiculus.

funis /'fju:nɪs/ noun an umbilical cord

funnel chest /,fʌn(ə)l 'tʃest/ noun same as pectus excavatum

funny bone /'fʌni bəʊn/ noun same as olecranon (informal)

funny turn /'fʌni tɜ:n/ noun a dizzy spell (informal)

furfuraceous /,fɜ:rfjə'reɪʃəs/ adjective referring to skin which is scaly

Furley stretcher /'fɜ:li ,stretʃə/ noun a stretcher made of a folding frame with a canvas bed, with carrying poles at each side and small feet underneath

furor /'fjuərəs/ noun an attack of wild violence, especially in someone who is mentally unwell

furosemide a drug which causes an increase in urine production, used to relieve water retention in the body. Also called **frusemide**

furred tongue /fɜ:d 'tʌŋ/ noun a condition when the papillae of the tongue are covered with a whitish coating. Also called **coated tongue**

furuncle /'fjuərənklə/ noun same as boil

furunculosis /fjuə,rʌŋkjʊ'ləʊsɪs/ noun a condition in which several boils appear at the same time

fuse /'fju:z/ verb to join together to form a single structure, or to join two or more things together ○ The bones of the joint fused.

fusidic acid /'fju:,sɪdɪk 'æsɪd/ noun an antibiotic used to prevent protein synthesis

fusiform /'fju:zɪfɔ:m/ adjective referring to muscles which are shaped like a spindle, with a wider middle section which becomes narrower at each end

fusion /'fju:z(ə)n/ noun the act of joining, especially a surgical operation to relieve pain in the joint by joining the bones at the joint permanently so that they cannot move

Fybogel /'faɪbəudʒəl/ a trade name for ispaghula

G

g abbr gram

GABA /'gæbə/ abbr gamma aminobutyric acid

gag /gæg/ noun an instrument placed between the teeth to stop the mouth from closing ■ verb to experience a reaction similar to that of vomiting ○ Every time the doctor tries to examine her throat, she gags. ○ He started gagging on the endotracheal tube.

gain /geɪn/ noun an act of adding or increasing something ○ The baby showed a gain in weight of 25g or showed a weight gain of 25g. ■ verb to obtain something, or to increase ○ to gain in weight or to gain weight

gait /geɪt/ noun a way of walking

galact- /gælækτ-/ prefix same as **galacto-** (used before vowels)

galactagogue /gæ'læktəgɒg/ noun a substance which stimulates the production of milk

galacto- /gælækτəʊ/ prefix referring to milk

galactocele /gæ'læktəsɪl/ noun a breast tumour which contains milk

galactorrhoea /gæ'læktə'rɪə/ noun the excessive production of milk

galactosaemia /gæ'læktə'si:miə/ noun a congenital condition where the liver is incapable of converting galactose into glucose, with the result that a baby's development may be affected (NOTE: The treatment is to remove galactose from the diet.)

galactose /gæ'læktəʊs/ noun a sugar which forms part of milk, and is converted into glucose by the liver

galea /'geiliə/ noun 1. any part of the body shaped like a helmet, especially the loose band of tissue in the scalp (NOTE: The plural is **galeae**.) 2. a type of bandage wrapped round the head

gall /gɔ:l/ noun same as **bile**

gall bladder /'gɔ:l,blædə/ noun a sac situated underneath the liver, in which bile produced by the liver is stored. See illustration at **DIGESTIVE SYSTEM** in Supplement

COMMENT: Bile is stored in the gall bladder until required by the stomach. If fatty food is present in the stomach, bile moves from the gall bladder along the bile duct to the stom-

ach. Since the liver also secretes bile directly into the duodenum, the gall bladder is not an essential organ and can be removed by surgery.

Gallie's operation /'gæliz əpə,reɪʃ(ə)n/ noun a surgical operation where tissues from the thigh are used to hold a hernia in place [Described 1921. After William Edward Gallie (1882–1959), Professor of Surgery at the University of Toronto, Canada.]

gallipot /'gælipɒt/ noun a little container for ointment

gallium /'gæliəm/ noun a metallic element a radioisotope of which is used to detect tumours or other tissue disorders (NOTE: The chemical symbol is **Ga**.)

gallop rhythm /'gæləp, rɪð(ə)m/ noun the rhythm of heart sounds, three to each cycle, when someone is experiencing tachycardia

gallstone /'gɔ:lstəʊn/ noun a small stone formed from insoluble deposits from bile in the gall bladder. ♀ **calculus**

COMMENT: Gallstones can be harmless, but some cause pain and inflammation and a serious condition can develop if a gallstone blocks the bile duct. Sudden pain going from the right side of the stomach towards the back indicates that a gallstone is passing through the bile duct.

galvanism /'gælvənɪz(ə)m/ noun a treatment using low voltage electricity

galvanocautery /,gælvənəʊ'kɔ:təri/ noun the removal of diseased tissue using an electrically heated needle or loop of wire. Also called **electrocautery**

gamete /'gæmɪ:t/ noun a sex cell, either a spermatozoon or an ovum

gamete intrafallopian transfer /,gæmɪ:t intrəfə,læpiən 'trænsfɜ:/ noun a technique to combine eggs and sperm outside the body and then insert them into the Fallopian tubes. Abbr **GIFT**

gametocide /gæ'mi:təʊsaɪd/ noun a drug which kills gametocytes

gametocyte /gæ'mi:təʊsait/ noun a cell which is developing into a gamete

gametogenesis /gæ'mi:təʊ'dʒenəsɪs/ noun the process by which a gamete is formed

gamgee tissue /'gæmdʒi: tɪʃu:/ noun a surgical dressing, formed of a layer of cotton wool between two pieces of gauze

gamma /'gæmə/ noun the third letter of the Greek alphabet

gamma aminobutyric acid /,gæmə ə ,mi:nəʊbju:tɪrɪk 'æsɪd/ noun an amino acid neurotransmitter. Abbr **GABA**

gamma camera /'gæmə ,kæm(ə)rə/ noun a camera for taking photographs of parts of the body into which radioactive isotopes have been introduced

gamma globulin /,gæmə 'globjʊlɪn/ noun a protein found in plasma, forming antibodies as protection against infection

COMMENT: Gamma globulin injections are sometimes useful as a rapid source of protection against a wide range of diseases.

gamma ray /'gæmə reɪ/ noun a ray which is shorter than an X-ray and is given off by radioactive substances

gangli- /'gæŋgli/ prefix referring to ganglia
ganglion /'gæŋgliən/ noun 1. a mass of nerve cell bodies and synapses usually covered in connective tissue, found along the peripheral nerves with the exception of the basal ganglia 2. a cyst of a tendon sheath or joint capsule, usually at the wrist, which results in a painless swelling containing fluid (NOTE: [all senses] The plural is **ganglia**)

ganglionectomy /,gæŋglɪə'nektəmɪ/ noun the surgical removal of a ganglion

ganglionic /,gæŋglɪ'ɒnɪk/ adjective referring to a ganglion. ◊ **postganglionic**

gangrene /'gæŋgrɪ:n/ noun a condition in which tissues die and decay, as a result of bacterial action, because the blood supply has been lost through injury or disease of the artery ◊ After she had frostbite, gangrene set in and her toes had to be amputated.

gangrenous /'gæŋgrɪnəs/ adjective referring to, or affected by, gangrene

Ganser state /'gænsə ,steɪt/ noun same as **pseudodementia** [After Sigbert Joseph Maria Ganser (1853–1931), psychiatrist at Dresden and Munich, Germany]

gargle /'gɑ:g(ə)l/ noun a mildly antiseptic solution used to clean the mouth ■ verb to put some antiseptic liquid solution into the back of the mouth and then breathe out air through it

gargoylism /'gɑ:gɔɪlɪz(ə)m/ noun a congenital condition of the metabolism which causes polysaccharides and fat cells to accumulate in the body, resulting in mental impairment, swollen liver and coarse features. Also called **Hurler's syndrome**

gas /gæs/ noun 1. a substance such as nitrogen, carbon dioxide or air, which is neither solid nor fluid at ordinary temperatures and can expand infinitely (NOTE: The plural **gases** is used only when referring to different types of

gas). 2. gas which accumulates in the stomach or alimentary canal and causes pain

gas and air analgesia /,gæs ənd 'eə æn(ə)l,dʒi:zɪə/ noun a form of analgesia used when giving birth, in which a mixture of air and gas is given

gas chromatography /,gæs ,krəʊmə'tɒgrəfi/ noun a method of separating chemicals by passing them through a gas, used in analysing compounds and mixtures

gas exchange /'gæs ɪks,tfeɪndʒ/ noun the process by which oxygen in the air is exchanged in the lungs for waste carbon dioxide carried by the blood

gas gangrene /gæs 'gæŋgrɪ:n/ noun a complication of severe wounds in which the bacterium *Clostridium welchii* breeds in the wound and then spreads to healthy tissue which is rapidly decomposed with the formation of gas

gash /gæʃ/ noun a long deep cut made accidentally by something sharp ◊ She had to have three stitches in the gash in her thigh. ■ verb to make a long deep cut in something accidentally ◊ She gashed her hand on the broken glass.

gasp /gu:sp/ noun a short breath taken with difficulty ◊ His breath came in short gasps. ■ verb to breathe with difficulty taking quick breaths ◊ She was gasping for breath.

gas pain /'gæs peɪn/ noun a pain caused by excessive formation of gas in the stomach or intestine. ◊ **flatus**

gas poisoning /'gæs ,poɪz(ə)nɪŋ/ noun poisoning by breathing in carbon monoxide or other toxic gas

Gasserian ganglion /gæ:sɪriən 'gæŋglɪən/ noun same as **trigeminal ganglion** [After Johann Laurentius Gasser (1723–65), Professor of Anatomy in Vienna, Austria. He left no writings, and the ganglion was given his name by Anton Hirsch, one of his students, in his thesis of 1765.]

gastr- /'gæstr/ prefix same as **gastro-** (used before vowels)

gastralgia /gæ'strældʒə/ noun pain in the stomach

gastrectomy /gæ'strektəmɪ/ noun the surgical removal of the stomach

gastric /'gæstriκ/ adjective referring to the stomach

gastric acid /,gæstriκ 'æsɪd/ noun hydrochloric acid secreted into the stomach by acid-forming cells

gastric artery /,gæstriκ 'a:təri/ noun an artery leading from the coeliac trunk to the stomach

gastric flu /,gæstriκ 'flu:/ noun any mild stomach disorder (*informal*)

gastric juice /,gæstriκ dʒu:s/ noun the mixture of hydrochloric acid, pepsin, intrinsic factor and mucus secreted by the cells of the lin-

ing membrane of the stomach to help the digestion of food (NOTE: Often used in the plural.)

gastric lavage /,gæstriκ 'lævɪdʒ/ *noun* a lavage of the stomach, usually to remove a poisonous substance which has been absorbed. Also called **stomach washout**

gastric pit /,gæstriκ 'pit/ *noun* a deep hollow in the mucous membrane forming the walls of the stomach

gastric ulcer /,gæstriκ 'ʌlsə/ *noun* an ulcer in the stomach. Abbr **GU**

gastric vein /,gæstriκ 'veɪn/ *noun* a vein which follows the gastric artery

gastrin /'gæstriν/ *noun* a hormone which is released into the bloodstream from cells in the lower end of the stomach, stimulated by the presence of protein, and which in turn stimulates the flow of acid from the upper part of the stomach

gastrinoma /,gæstriν'naʊmə/ *noun* a tumour of the islet cells, leading to excessive gastric acid

gastritis /gæ'straitɪs/ *noun* inflammation of the stomach

gastro- /gæstriəʊ/ *prefix* referring to the stomach

gastrocele /'gæstriəʊsɪl/ *noun* a condition in which part of the stomach wall becomes weak and bulges out. Also called **stomach hernia**

gastrocnemius /,gæstriκ'nɪ:mɪəs/ *noun* a large calf muscle

gastrocolic /,gæstriəʊ'kɒlik/ *adjective* referring to the stomach and colon

gastrocolic reflex /,gæstriəʊkɒlik 'ri:fleks/ *noun* a sudden peristalsis of the colon produced when food is taken into an empty stomach

gastroduodenal /,gæstriəʊ,dju:ən(dɪm(ə))l/ *adjective* referring to the stomach and duodenum

gastroduodenal artery /,gæstriəʊ'dju:ən(dɪm(ə))təri/ *noun* an artery leading from the gastric artery towards the pancreas

gastroduodenoscopy /,gæstriəʊ,dju:ən(dɪm(ə))skəpi/ *noun* an examination of the stomach and duodenum

gastroduodenostomy /,gæstriəʊ,dju:ən(dɪm(ə))stəməti/ *noun* a surgical operation to join the duodenum to the stomach so as to bypass a blockage in the pylorus

gastroenteritis /,gæstriəʊnətə'rایtɪs/ *noun* inflammation of the membrane lining the intestines and the stomach, caused by a viral infection and resulting in diarrhoea and vomiting

gastroenterologist /,gæstriəʊnətə'rɒlədʒɪst/ *noun* a doctor who specialises in the digestive system and its disorders

gastroenterology /,gæstriəʊnətə'rɒlədʒɪ/ *noun* the study of the digestive system and its disorders

gastroenterostomy /,gæstriəʊnətə'rɒstəmɪ/ *noun* a surgical operation to join the small intestine directly to the stomach so as to bypass a peptic ulcer

gastroepiploic /,gæstriəʊepɪ'plɔɪk/ *adjective* referring to the stomach and greater omentum

gastroepiploic artery /,gæstriəʊepɪ'plɔɪk 'a:təri/ *noun* an artery linking the gastroduodenal artery to the splenic artery

Gastrografin /,gæstriəʊ'græfɪn/ a trade name for an enema used in bowel X-rays

gastroileac reflex /,gæstriəʊ,iliæk 'ri:fleks/ *noun* automatic relaxation of the ileocaecal valve when food is present in the stomach

gastrointestinal /,gæstriəʊn'testɪn(ə)l/ *adjective* referring to the stomach and intestine
○ **gastrointestinal bleeding**. Abbr **GI**

gastrojejunostomy /,gæstriəʊdʒɪndʒu:n'stəmɪ/ *noun* a surgical operation to join the jejunum to the stomach

gastrolith /'gæstriəʊlɪθ/ *noun* a calculus in the stomach

gastrology /,gæ'strɒlədʒɪ/ *noun* the study of the stomach and diseases of the stomach

gastro-oesophageal reflux /,gæstriəʊ ɪ,sfədʒɪəl 'ri:fleks/, **gastro-oesophageal reflux disease** /,gæstriəʊ ɪ,sfədʒɪəl 'ri:fleks dɪ:zɪ:z/ *noun* the return of bitter-tasting, partly digested food from the stomach to the oesophagus

gastropexy /'gæstriəʊpeksi/ *noun* a surgical operation to attach the stomach to the wall of the abdomen

gastroplasty /'gæstriəplæsti/ *noun* surgery to correct a deformed stomach

gastroptosis /,gæstriə'taʊsɪs/ *noun* a condition in which the stomach hangs down

gastorrhoea /,gæstri'rɪə/ *noun* an excessive flow of gastric juices

gastroschisis /,gæstriəʊ'saɪsɪs/ *noun* a split in the wall of the abdomen, with viscera passing through it

gastroscope /'gæstriəskəʊp/ *noun* an instrument formed of a tube or bundle of glass fibres with a lens attached, which a doctor can pass down into the stomach through the mouth to examine the inside of the stomach

gastroscopy /gæ'striːskəpi/ *noun* an examination of the stomach using a gastroscope

gastrostomy /gæ'striːstəmɪ/ *noun* a surgical operation to create an opening into the stomach from the wall of the abdomen, so that food can be introduced without passing through the mouth and throat

gastrotomy /gæ'striːtəmɪ/ *noun* a surgical operation to open up the stomach

gastrula /gæ'stru:lə/ *noun* the second stage of the development of an embryo

gathering /'gæðərɪŋ/ *noun* a swelling that is filled with pus

Gaucher's disease /'gəʊʃərz dɪ,zɪ:z/ *noun* an enzyme disease where fatty substances accumulate in the lymph glands, spleen and liver, causing anaemia, a swollen spleen and darkening of the skin. The disease can be fatal in children. [Described 1882. After Philippe Charles Ernest Gaucher (1854–1918), French physician and dermatologist.]

gauze /gɔ:z/ *noun* a thin light material used to make dressings

gauze dressing /gɔ:z 'dresɪŋ/ *noun* a dressing of thin light material

gavage /gæ've:ʒ/ *noun* the forced feeding of someone who cannot eat or who refuses to eat

gay /geɪ/ *adjective* relating to sexual activity among people of the same sex

GDC *abbr* General Dental Council

Gehrig's disease /'geɪrɪgz dɪ,zɪ:z/ *noun* same as **amyotrophic lateral sclerosis**

Geiger counter /'gaɪgə ,kaʊntə/ *noun* an instrument for the detection and measurement of radiation [Described 1908. After Hans Geiger (1882–1945), German physicist who worked with Rutherford at Manchester University, UK.]

gel /dʒel/ *noun* a suspension that sets into a jelly-like solid

gelatin /'dʒelətɪn/ *noun* a protein found in collagen which is soluble in water, used to make capsules for medicines

gelatinous /dʒə'lætɪnəs/ *adjective* referring to gelatin or something with a texture like jelly

gemellus /dʒɪ'meləs/ *noun* either of the two muscles arising from the ischium. Also called

gemellus superior muscle, gemellus inferior muscle

gender /'dʒendə/ *noun* the fact of being of the male or female sex

gender identity disorder /,dʒendə'ærɪ'denɪt̩ tɪdɪs,ɔ:də/ *noun* a condition in which someone experiences strong discomfort with his or her birth gender

gender reassignment surgery /,dʒendə'ri:ə'sainmənt ,sɜ:dzəri/ *noun* surgery to change someone's sex

gender reorientation /,dʒendə'ri:t̩,ɔ:rɪən'teɪʃ(ə)n/ *noun* the alteration of a person's sex through surgical and drug treatment

gene /dʒi:n/ *noun* a unit of DNA on a chromosome which governs the synthesis of a protein sequence and determines a particular characteristic

COMMENT: A gene may be dominant, in which case the characteristic it controls is always passed on to the child, or recessive, in which case the characteristic only appears if both parents have contributed the same form of the gene.

general amnesia /,dʒen(ə)rəl æm'nɪ:ziə/ *noun* a sudden and complete loss of memory, to the extent that a person does not even remember who he or she is

general anaesthesia /,dʒen(ə)rəl ,ænæs'θi:zɪə/ *noun* loss of feeling and loss of sensation throughout the body, after being given an anaesthetic

general anaesthetic /,dʒen(ə)rəl ,ænæs'θetɪk/ *noun* a substance given to make someone lose consciousness so that a major surgical operation can be carried out

General Dental Council /,dʒen(ə)rəl 'dent(ə)l ,kaʊnsəl/ *noun* in the UK, the official body that registers and supervises dentists. *Abbr GDC*

general hospital /,dʒen(ə)rəl 'hospɪt(ə)l/ *noun* a hospital which does not specialise in particular types of illness or particular age groups

generalise /'dʒen(ə)rəlaɪz/, **generalize** *verb* to spread to other parts of the body

generalised /'dʒen(ə)rəlaɪzd/, **generalized** *adjective* 1. spreading throughout the body. Opposite **localised** 2. not having a specific cause

generalised anxiety disorder /,dʒen(ə)rəlaɪzd æn'zaiəti dɪs,ɔ:də/ *noun* a state of continual anxiety for which there is no specific cause

General Medical Council /,dʒen(ə)rəl 'medɪk(ə)l ,kaʊnsəl/ *noun* in the UK, the official body that licenses qualified doctors to practise medicine. *Abbr GMC*

General Optical Council /'dʒenərəl 'ɒptɪk(ə)l ,kaʊnsəl/ *noun* in the UK, the official body that registers and supervises opticians

general practice /,dʒen(ə)rəl 'præktsɪs/ *noun* a medical practice where doctors offer first-line medical care for all types of illness to people who live locally, refer them to hospital if necessary and encourage health promotion

general practitioner /,dʒen(ə)rəl præk'tɪʃ(ə)nə/ *noun* a doctor who provides first-line medical care for all types of illness to people who live locally, refers them to hospital if necessary and encourages health promotion. *Abbr GP*

gene replacement therapy /,dʒi:n rɪ'pleɪsmənt ,θerəpi/ *noun* the replacement of missing genes or damaging gene variations in cells by the insertion of appropriate genes to treat a genetic disorder. Also called **gene therapy**

COMMENT: Gene replacement therapy has been used successfully in animals, and is in the early stages of research in humans, but may be useful in the future treatment of cystic fibrosis, thalassaemia and other genetic disorders.

generic /dʒə'nerɪk/ *adjective* 1. referring to medicine which does not have a special trade-

mark or brand name given to it by its manufacturer **2.** referring to a genus ○ *The generic name of this type of bacterium is Staphylococcus.*

-genesis /dʒenəsɪs/ *suffix* production or origin

gene therapy /'dʒi:nɪ,θerəpi/ *noun* same as **gene replacement therapy**

genetic /dʒet'netɪk/ *adjective* referring to genes

genetic code /dʒet'netɪk 'kə:d/ *noun* the characteristics of the DNA of a cell which are passed on when the cell divides and so are inherited by a child from its parents

genetic counselling /dʒet'netɪk 'kaʊnsəlɪŋ/ *noun* advice and support given to people if they or their children might be affected by inherited genetic disorders

genetic disorder /dʒet'netɪk dɪs'ɔ:də/ *noun* a disorder or disease caused by a damaging gene variation that may be inherited

genetic engineering /dʒet'netɪk endʒɪ'nærɪŋ/ *noun* same as **genetic modification** (*informal*)

genetic fingerprint /dʒet'netɪk 'fɪngəprɪnt/ *noun* the pattern of sequences of genetic material unique to an individual. Also called **DNA fingerprint**

genetic fingerprinting /dʒet'netɪk 'fɪngə,prɪntɪŋ/ *noun* a method of revealing an individual's genetic profile, used in paternity queries and criminal investigations. Also called **DNA fingerprinting**

geneticist /dʒet'netɪsɪst/ *noun* a person who specialises in the study of the way in which characteristics and diseases are inherited through the genes

genetic modification, genetic manipulation *noun* the combination of genetic material from different sources to produce organisms with altered characteristics

genetics /dʒet'netɪks/ *noun* the study of genes, and of the way characteristics and diseases are inherited through the genes

genetic screening /dʒet'netɪk 'skrɪnɪŋ/ *noun* the process of testing large numbers of people to see if anyone has a particular genetic disorder

gene tracking /'dʒi:nɪ,traekɪŋ/ *noun* the method used to trace throughout a family the inheritance of a gene such as those causing cystic fibrosis or Huntington's Chorea, in order to diagnose and predict genetic disorders

-genic /dʒenɪk/ *suffix* referring to a product or something which produces

genicular /dʒe'ni:kjʊlər/ *adjective* referring to the knee

genital /'dʒenɪt(ə)l/ *adjective* referring to the reproductive organs ■ *plural noun* **genitals** same as **genital organs**

genitalia /dʒenɪ'terliə/ *noun* the genital organs

genital organs /,dʒenɪt(ə)l 'ɔ:gɔ:nz/ *plural noun* the external organs for reproduction, i.e. the penis and testicles in males and the vulva in females. Also called **genitals, genitalia**

genital wart /,dʒenɪt(ə)l 'wɔ:t/ *noun* a wart in the genital or anal area, caused by a sexually transmitted virus

genito- /dʒenɪtəʊ/ *prefix* referring to the reproductive system

genitourinary /,dʒenɪtəʊ'ju:rɪnəri/ *adjective* referring to both the reproductive and urinary systems. Abbr **GU**

genitourinary system /,dʒenɪtəʊ'ju:rɪnəri,sɪstəm/ *noun* the organs of reproduction and urination, including the kidneys

genome /'dʒi:nəʊm/ *noun* the set of all the genes of an individual

genotype /'dʒenətaɪp/ *noun* the genetic makeup of an individual. Compare **phenotype**

gentamicin /dʒentə'maɪsɪn/ *noun* an antibiotic that is effective against a variety of different disease-causing organisms. Patients usually receive it by injection and it can cause serious side effects.

gentian violet /,dʒenʃən 'værlət/ *noun* an antiseptic blue dye, used to paint on skin infections and also to stain specimens. Also called **crystal violet**

genu /'dʒenju:/ *noun* the knee

genual /'dʒenju:əl/ *adjective* referring to the knee

genucubital position /,dʒenju:kju:bɪtl/ *noun* the position of someone resting on their knees and elbows

genupectoral position /,dʒenju:pɛktərəl/ *noun* the position of someone resting on their knees and upper chest

genus /'dʒi:nəs/ *noun* a category of related living organisms ○ *A genus is divided into different species.* (NOTE: The plural is **genera**.)

genu valgum /,dʒenju:vælgəm/ *noun* same as **knock-knee**

genu varum /,dʒenju:værəm/ *noun* same as **bow legs**

geri- /dʒeri:/ *prefix* referring to old age

geriatric /,dʒeri'ætrɪk/ *adjective* **1.** referring to old people **2.** specialising in the treatment of old people ○ **geriatric unit**

geriatrician /,dʒeri'ætrɪʃən/ *noun* a doctor who specialises in the treatment or study of diseases of old people

geriatrics /dʒeri'ætriks/ *noun* the study of the diseases and disorders of old people. Compare **paediatrics**

germ /dʒɜ:m/ *noun* **1.** a microorganism which causes a disease, e.g. a virus or bacterium (*informal*) ○ *Germs are not visible to the naked*

eye. 2. a part of an organism capable of developing into a new organism

German measles /dʒɜːmən 'miːz(ə)lz/ noun same as **rubella**

germ cell /dʒɜːm sel/ noun a cell which is capable of developing into a spermatozoon or ovum. Also called **gonocyte**

germinal /dʒɜːmɪn(ə)l/ adjective referring to an embryo

germinal epithelium /dʒɜːmɪn(ə)l epi'θiːliəm/ noun the outer layer of the ovary

germ layer /dʒɜːm leɪə/ noun one of two or three layers of cells in animal embryos which form the organs of the body

gerontologist /dʒerən'tɒlədʒɪst/ noun a specialist in gerontology

gerontology /dʒerən'tɒlədʒɪ/ noun the study of the process of ageing and the diseases of old people

Gerstmann's syndrome /'gɜːstmænз 'sɪndrəʊm/ noun a condition in which someone no longer recognises his or her body image, cannot tell the difference between left and right, cannot recognise his or her different fingers and is unable to write

Gesell's developmental chart /gə'zels dɪ'veləpmənt(ə)l tʃa:t/ noun a chart showing the development of motor reactions and growth patterns in children

gestate /dʒe'steɪt/ verb to carry a baby in the womb from conception to birth

gestation /dʒe'steɪʃ(ə)n/ noun 1. the process of development of a baby from conception to birth in the mother's womb 2. same as **gestation period**

'...evaluation of fetal age and weight has proved to be of value in the clinical management of pregnancy, particularly in high-risk gestations' [Southern Medical Journal]

gestational age /dʒe'steɪʃ(ə)n(ə)l 'eɪrdʒ/ noun the age of a fetus, calculated from the mother's last period to the date of birth

gestational diabetes /dʒe'steɪʃ(ə)n(ə)l 'daɪətɪ:bɪ:tɪz/ noun a form of diabetes mellitus which develops in a pregnant woman

gestation period /dʒe'steɪʃ(ə)n ,prɪəriəd/ noun the period, usually of 266 days, from conception to birth, during which the baby develops in the mother's womb. Also called **pregnancy**

gestodene /'dʒestədi:n/ noun an oral contraceptive

get around /,get ə'raund/ verb to move about ○ Since she had the accident she gets around using crutches.

get better /,get 'betə/ verb 1. to become healthy again after being ill ○ He was seriously ill, but seems to be getting better. 2. (of an illness) to stop or become less severe ○ Her cold has got better.

get dressed /,get 'drest/ verb to put your clothes on ○ This patient still needs help to get dressed.

get on with /,get 'ɒn wið/ verb to continue to do some work ○ I must get on with the blood tests.

get over /,get 'əʊvə/ verb to become better after an illness or a shock ○ He got over his cold. ○ She never got over her mother's death.

getting on /,getɪŋ 'ɒn/ adjective becoming elderly ○ Her parents are getting on.

get up /,get 'ʌp/ verb 1. to stand up ○ Try to get up from your chair slowly and walk across the room. 2. to get out of bed ○ What time did you get up this morning?

get well /,get 'wel/ verb to become healthy again after being ill ○ We hope your mother will get well soon.

GFR abbr glomerular filtration rate

GH abbr growth hormone

Ghon's focus /,gɒnз 'fəʊkəs/ noun a spot on the lung produced by the tuberculosis bacillus [Described 1912. After Anton Ghon (1866–1936), Professor of Pathological Anatomy at Prague, Czech Republic.]

GI abbr gastrointestinal

giant cell /,dʒaɪənt 'sel/ noun a very large cell, e.g. an osteoclast or megakaryocyte

giant-cell arteritis /,dʒaɪənt sel ,a:tɪs'ta:ritis/ noun a disease of old people, which often affects the arteries in the scalp

giant hives /,dʒaɪənt 'haɪvz/ noun a large flat white blister caused by an allergic reaction

Giardia /dʒaɪ'di:ədɪə/ noun a microscopic protozoan parasite which causes giardiasis

giardiasis /,dʒaɪ:dɪs'ærɪsɪs/ noun a disorder of the intestine caused by the parasite *Giardia lamblia*, usually with no symptoms, but in heavy infections the absorption of fat may be affected, causing diarrhoea. Also called **lambliasis**

gibbosity /gɪ'bɒsəti/ noun a sharp angle in the curvature of the spine caused by the weakening of a vertebra as a result of tuberculosis of the backbone

gibbus /'gɪbəs/ noun same as **gibbosity**

giddiness /'gɪdɪnəs/ noun a condition in which someone has difficulty in standing up and keeping their balance because of a feeling that everything is turning around ○ He began to experience attacks of giddiness.

giddy /'gɪdi/ adjective feeling that everything is turning round ○ She has had several giddy spells.

GIFT /gɪft/ noun a procedure in which a surgeon removes eggs from a woman's ovary, mixes them with sperm and places them in one of her Fallopian tubes to help her conceive a child. Full form **gamete intrafallopian transfer**

gigantism /dʒæntɪz(ə)m/ *noun* a condition in which someone grows very tall, caused by excessive production of growth hormone by the pituitary gland

Gilbert's syndrome /'gilbəts ,sɪndrəʊm/ *noun* an inherited disorder where the liver does not deal with bilirubin correctly

Gilles de la Tourette syndrome /,ʒi: də læ tu'ret ,sɪndrəʊm/ *noun* same as **Tourette's syndrome**

Gilliam's operation /'giliəmz ɔ:pə,reɪʃ(ə)n/ *noun* a surgical operation to correct reversion of the uterus [After David Tod Gilliam (1844–1923), physician, Columbus, Ohio, USA]

gingiv- /dʒɪndʒɪv/ *prefix* referring to the gums

gingiva /dʒɪn'dʒaɪvə/ *noun* same as **gum**
(NOTE: The plural is **gingivae**.)

gingival /'dʒɪndʒɪv(ə)l/ *adjective* relating to the gums

gingivectomy /,dʒɪndʒɪ'vektəmɪ/ *noun* the surgical removal of excess gum tissue

gingivitis /,dʒɪndʒɪ'taɪtɪs/ *noun* inflammation of the gums as a result of bacterial infection

ginglymus /'dʒɪnglɪməs/ *noun* a joint which allows movement in two directions only, e.g. the knee or elbow. Also called **hinge joint**. Compare **ball and socket joint**

ginseng /'dʒɪnsɛŋ/ *noun* a plant root widely used as a tonic and a traditional Chinese herbal remedy

gippy tummy /,dʒɪpi 'tʌmi/ *noun* same as **diarrhoea** (*informal*)

girdle /'gɜ:d(ə)l/ *noun* a set of bones making a ring or arch

Girdlestone's operation /'gɜ:dəlstəʊnz ɔ:pə,reɪʃ(ə)n/ *noun* a surgical operation to relieve osteoarthritis of the hip [After Gathorne Robert Girdlestone (1881–1950), Nuffield Professor of Orthopaedics at Oxford, UK]

give up /'gɪv 'ʌp/ *verb* not to do something any more ○ *He was advised to give up smoking.*

glabella /glə'bɛlə/ *noun* a flat area of bone in the forehead between the eyebrows

gladiolus /,glædi'əʊləs/ *noun* the middle section of the sternum

gland /glænd/ *noun* an organ in the body containing cells that secrete substances such as hormones, sweat or saliva which act elsewhere

glanders /'glændəz/ *noun* a bacterial disease of horses, which can be caught by humans, with symptoms of high fever and inflammation of the lymph nodes

glandular /'glændjʊlə/ *adjective* referring to glands

glandular fever /,glændjʊlə 'fi:və/ *noun* same as **infectious mononucleosis**

glans /glænz/ *noun* a rounded part at the end of the penis or clitoris. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement

glare /gleə/ *noun* 1. a long stare that expresses a negative emotion such as anger 2. an uncomfortably or dazzlingly bright light 3. scattered bright light when examining something with a microscope ■ *verb* 1. to stare angrily 2. to shine uncomfortably brightly 3. to be very obvious or conspicuous

Glasgow coma scale /,glæ:səʊ ˈkəʊməskel/, **Glasgow scoring system** /,glæ:səʊ 'skɔ:riŋ,sɪstəm/ *noun* a seven-point scale for evaluating someone's level of consciousness

glass eye /glæ:s 'aɪ/ *noun* an artificial eye made of glass

glaucoma /gləʊ'kəʊmə/ *noun* a condition of the eyes, caused by unusually high pressure of fluid inside the eyeball, resulting in disturbances of vision and blindness

gleet /gli:t/ *noun* a thin discharge from the vagina, penis, a wound or an ulcer

glenohumeral /,glɪ:nəʊ'hu:mərəl/ *adjective* referring to both the glenoid cavity and the humerus

glenohumeral joint /,glɪ:nəʊ'hu:mərəl dʒoint/ *noun* the shoulder joint

glenoid /'glɪ:nɔɪd/ *adjective* shaped like a small shallow cup or socket

glenoid cavity /,glɪ:nɔɪd 'kævɪtɪ/, **glenoid fossa** /,glɪ:nɔɪd 'fɒsə/ *noun* a socket in the shoulder joint into which the head of the humerus fits

glia /'gli:ə/ *noun* connective tissue of the central nervous system, surrounding cell bodies, axons and dendrites. Also called **neuroglia**

glial cell /'gli:əl sel/ *noun* a cell in the glia

glial tissue /,gli:əl 'tɪʃu:/ *noun* same as **glia**

glibenclamide /'glɪ'benkləmaɪd/ *noun* a sulphonylurea drug used to treat Type II diabetes mellitus

glyciazide /'glɪkləzɪd/ *noun* an antibacterial drug used to treat Type II diabetes mellitus

gio- /'glɪərəʊ/ *prefix* referring to brain tissue

glioblastoma /,glɪərəʊblæ'stəʊmə/ *noun* a rapidly developing malignant tumour of the glial tissue in the brain or spinal cord. Also called **spongioblastoma**

glioma /glɪə'əʊmə/ *noun* any tumour of the glial tissue in the brain or spinal cord

gliomyoma /,glɪərəʊmə'əʊmə/ *noun* a tumour of both the nerve and muscle tissue

glipizide /'glɪpɪzɪd/ *noun* a drug used to reduce the glucose level in the blood

Glisson's capsule /,glɪs(ə)nz 'kæpsju:l/ *noun* a tissue sheath in the liver containing the blood vessels [After Francis Glisson (1597–1677), philosopher, physician and anatomist at Cambridge and London, UK]

globin /'gləʊbɪn/ *noun* a protein which combines with other substances to form compounds such as haemoglobin and myoglobin
globule /'glɒbju:l/ *noun* a round drop, especially of fat

globulin /'glɒbjʊlɪn/ *noun* a protein, present in blood, belonging to a group that includes antibodies

globulinuria /,glɒbjʊlɪ'nju:əriə/ *noun* the presence of globulins in the urine

globus /'gləʊbəs/ *noun* any ball-shaped part of the body

globus hystericus /,gləʊbəs hɪ'sterɪkəs/ *noun* a feeling of not being able to swallow, caused by worry or embarrassment

glomangioma /glo'mændʒi'əʊmə/ *noun* a tumour of the skin at the ends of the fingers and toes

glomerular /glə'merulə/ *adjective* referring to a glomerulus

glomerular capsule /glə'merulə'kæpsju:l/ *noun* same as **Bowman's capsule**

glomerular filtration rate /glə'merulər fil'treɪʃ(ə)n reɪt/ *noun* the rate at which the kidneys filter blood and remove waste matter

glomerular tuft /glə'merulər 'tuft/ *noun* a group of blood vessels in the kidney which filter the blood

glomeruli /glə'merulɪ/ plural of **glomerulus**

glomerulitis /glə'merul'ɪtɪs/ *noun* inflammation causing lesions of glomeruli in the kidney

glomerulonephritis /glə'merulə'nəfɪtɪs/ *noun* same as **Bright's disease**

glomerulus /glə'meruləs/ *noun* a group of blood vessels which filter waste matter from the blood in a kidney (NOTE: The plural is **glomeruli**)

gloss- /glɒs/ *prefix* same as **glosso-** (*used before vowels*)

glossa /'glɒsə/ *noun* same as **tongue**

glossal /'glɒs(ə)l/ *adjective* relating to the tongue

glossectomy /glɒ'sektəmi/ *noun* the surgical removal of the tongue

Glossina /glɒ'sɪnə/ *noun* a genus of African flies which cause trypanosomiasis, e.g. the tsetse fly

glossitis /glɒ'sɪtɪs/ *noun* inflammation of the surface of the tongue

glosso- /'glɒsəʊ/ *prefix* referring to the tongue

glossodynia /,glɒsəʊ'dɪniə/ *noun* pain in the tongue

glossopharyngeal /,glɒsəfə'rɛnɪŋ'dʒi:əl/ *adjective* relating to the tongue and pharynx

glossopharyngeal nerve /,glɒsəfə'rɛnɪŋ'dʒi:əl nɜ:v/ *noun* the ninth cranial nerve which controls the pharynx, the salivary glands and part of the tongue

glossoplegia /,glɒsəʊ'pli:dʒə/ *noun* paralysis of the tongue

glossotomy /glɒ'sɒtəmɪ/ *noun* a surgical incision into the tongue

glottis /'glɒtɪs/ *noun* an opening in the larynx between the vocal cords, which forms the entrance to the main airway from the pharynx

gluc- /glu:k/ *prefix* referring to glucose

glucagon /'glu:kægən/ *noun* a hormone secreted by the islets of Langerhans in the pancreas, which increases the level of blood sugar by stimulating the breakdown of glycogen

glucagonoma /,glu:kæg'nəʊmə/ *noun* a tumour of the cells of the pancreas that produces glucagon

glucocorticoid /,glu:kəʊ'kɔ:tɪkɔɪd/ *noun* any corticosteroid which breaks down carbohydrates and fats for use by the body, produced by the adrenal cortex

gluconeogenesis /,glu:kəʊ,nɪ:əsɪs/ *noun* the production of glucose in the liver from protein or fat reserves

glucose /'glu:kəʊz/ *noun* a simple sugar found in some fruit, but also broken down from white sugar or carbohydrate and absorbed into the body or secreted by the kidneys. Also called **dextrose**

COMMENT: Combustion of glucose with oxygen to form carbon dioxide and water is the body's main source of energy.

glucose tolerance test /'glu:kəʊz 'tolərəns test/ *noun* a test for diabetes mellitus, in which someone eats glucose and his or her urine and blood are tested at regular intervals. Abbr **GTT**

glucosuria /,glu:kəʊ'sjʊəriə/ *noun* same as **glycosuria**

glucuronic acid /,glu:kjʊrənɪk 'æsɪd/ *noun* an acid formed by glucose that acts on bilirubin

glue ear /glu: 'ɪə/ *noun* a condition in which fluid forms behind the eardrum and causes deafness. Also called **secretory otitis media**

glue-sniffing /'glu: ,snifɪŋ/ *noun* ♦ solvent abuse

glutamic acid /glu:,tæmɪk 'æsɪd/ *noun* an amino acid

glutamic oxaloacetic transaminase /glu:,tæmɪk oksələʊə,sɪ:tɪk træns'æmīnæz/ *noun* an enzyme used to test for viral hepatitis

glutamic pyruvic transaminase /glu:,tæmɪk pa,rūvɪk træns'æmīnæz/ *noun* an enzyme produced in the liver and released into the blood if the liver is damaged

glutaminase /glu:tæmīneɪz/ *noun* an enzyme in the kidneys that helps to break down glutamine

glutamine /'glu:təmī:n/ *noun* an amino acid

gluteal /'glu:tɪəl/ *adjective* referring to the buttocks

gluteal artery /'glu:tɪəl ,a:təri/ *noun* one of the two arteries supplying the buttocks, the **inferior gluteal artery** or the **superior gluteal artery**

gluteal muscle /'glu:tɪəl ,mʌs(ə)l/ *noun* a muscle in the buttock. ◊ **gluteus**

gluteal vein /'glu:tɪəl veɪn/ *noun* one of two veins draining the buttocks, the **inferior gluteal vein** and the **superior gluteal vein**

gluten /'glu:t(ə)n/ *noun* a protein found in some cereals, which makes the grains form a sticky paste when water is added

gluten-enteropathy same as **gluten-induced enteropathy**

gluten-free diet /'glu:t(ə)n fri: 'daɪət/ *noun* a diet containing only food containing no gluten

gluten-induced enteropathy /'glu:t(ə)n in,dju:st ,entə'rɒpəθi/ *noun* 1. an allergic disease mainly affecting children, in which the lining of the intestine is sensitive to gluten, preventing the small intestine from digesting fat 2. a condition in adults where the villi in the intestine become smaller and so reduce the surface which can absorb nutrients (NOTE: Symptoms include a swollen abdomen, pale diarrhoea, abdominal pains and anaemia.) ▶ also called **coeliac disease**

gluteus /'glu:tiəs/ *noun* one of three muscles in the buttocks, responsible for movements of the hip. The largest is the **gluteus maximus**, while the **gluteus medius** and **gluteus minimus** are smaller.

glyc- /glairk/ *prefix* same as **glyco-** (*used before vowels*)

glycaemia /glai'si:mia/ *noun* the level of glucose found in the blood. ◊ **hypoglycaemia**, **hyperglycaemia**

glycerin /'glɪsərɪn/, **glycerine**, **glycerol** /'glɪsərɒl/ *noun* a colourless viscous sweet-tasting liquid present in all fats (NOTE: Synthetic glycerin is used in various medicinal preparations and also as a lubricant in items such as toothpaste and cough medicines.)

glycine /'glaisi:n/ *noun* an amino acid

glyco- /glairkəʊ/ *prefix* referring to sugar

glycocholic acid /,glairkəʊkɒlik 'æsɪd/ *noun* one of the bile acids

glycogen /'glairkədʒən/ *noun* a type of starch, converted from glucose by the action of insulin, and stored in the liver as a source of energy

glycogenesis /,glairkə'u'dʒenəsɪs/ *noun* the process by which glucose is converted into glycogen in the liver

glycogenolysis /,glairkəudʒə'nɒləsɪs/ *noun* the process by which glycogen is broken down to form glucose

glycolysis /glai'kɒləsɪs/ *noun* the metabolic breakdown of glucose to release energy

glycoside /'glairkəʊsaɪd/ *noun* a chemical compound of a type which is formed from a simple sugar and another compound (NOTE: Many of the drugs produced from plants are glycosides.)

glycosuria /,glairkəʊ'sjʊəriə/ *noun* a high level of sugar in the urine, a symptom of diabetes mellitus

GMC *abbr* General Medical Council

gnathic /'næθɪk/ *adjective* referring to the jaw

gnathoplasty /'næθəʊ,plæsti/ *noun* surgery on the jaw

gnawing /'nɔ:ɪŋ/ *adjective* referring to a physical or emotional feeling that is persistent and uncomfortable ◊ *a gnawing pain* ◊ *gnawing anxiety*

goblet cell /'gɔ:błət sel/ *noun* a tube-shaped cell in the epithelium which secretes mucus

GOC *abbr* General Optical Council

go down /,gəʊn 'daʊn/ *verb* to become smaller ◊ *The swelling has started to go down.* ◊ *The blood sugar level went down.*

goitre /'gɔ:tə/ *noun* an excessive enlargement of the thyroid gland, seen as a swelling round the neck, caused by a lack of iodine (NOTE: The US spelling is **goiter**.)

goitrogen /'gɔ:t्रædʒən/ *noun* a substance which causes goitre

gold /gəʊld/ *noun* a soft yellow-coloured precious metal, used as a compound in various drugs, and sometimes as a filling for teeth (NOTE: The chemical symbol is **Au**.)

golden eye ointment /,gəuld(ə)n 'aɪ ,ɔ:ntmənt/ *noun* a yellow ointment, made of an oxide of mercury, used to treat inflammation of the eyelids

gold injection /'gəuld in,dʒekʃən/ *noun* an injection of a solution containing gold, used to relieve rheumatoid arthritis

golfer's elbow /,gɔlfəz 'elbəʊ/ *noun* inflammation of the tendons of the elbow

Golgi apparatus /'gɔldʒi æpə,rɛtəs/ *noun* a folded membranous structure inside the cell cytoplasm, which stores and transports enzymes and hormones (Described 1898. After Camillo Golgi (1843–1926), Professor of Histology and later Rector of the University of Pavia, Italy. In 1906 he shared the Nobel Prize with Santiago Ramón y Cajal for work on the nervous system.)

Golgi cell /'gɔldʒi ,sel/ *noun* a type of nerve cell in the central nervous system, either with long axons (Golgi Type 1) or without axons (Golgi Type 2)

gomphosis /'gɒm'fəʊsɪs/ *noun* a joint which cannot move, like that between a tooth and the jaw

gonad /'gəʊnæd/ *noun* a sex gland which produces gametes and also sex hormones, e.g. a testicle in males or an ovary in females

gonadotrophic hormone /'gəʊnədəʊθrɒfɪk 'hɔːməʊn/ noun one of two hormones, the follicle-stimulating hormone and the luteinising hormone, produced by the anterior pituitary gland which have an effect on the ovaries in females and on the testes in males

gonadotrophin /'gəʊnədəʊ'trəʊfɪn/ noun any of a group of hormones produced by the pituitary gland which stimulates the sex glands at puberty. ♦ **human chorionic gonadotrophin** (NOTE: The US spelling is **gonadotropin**.)

gonagra /'gɒnəgrə/ noun a form of gout which occurs in the knees

goni- /'gəʊni/ prefix same as **gonio-** (used before a vowel)

gonio- /'gəʊniəʊ/ prefix referring to an angle

gonion /'gəʊniɒn/ noun the outer point at which the lower jawbone angles upwards

goniopuncture /'gəʊniəpʌnktʃə/ noun a surgical operation for draining fluid from the eyes of someone who has glaucoma

gonioscope /'gəʊniəskəʊp/ noun a lens for measuring the angle of the front part of the eye

goniotomy /'gəʊni'ɒtəmɪ/ noun a surgical operation to treat glaucoma by cutting Schlemm's canal

gonococcal /'gɒnə'kɒkəl(ə)l/ adjective referring to gonococcus

gonococcus /'gɒnə'kɒkəs/ noun a type of bacterium, *Neisseria gonorrhoea*, which causes gonorrhoea (NOTE: The plural is **gonococci**.)

gonocyte /'gɒnəsɔɪt/ noun same as **germ cell**

gonorrhoea /'gɒnə'rɪ:ə/ noun a sexually transmitted disease which produces painful irritation of the mucous membrane and a watery discharge from the vagina or penis

gonorrhoeal /'gɒnə'rɪ:əl/ adjective referring to gonorrhoea

Goodpasture's syndrome /'gʊd'pa:stʃəz, 'sɪndrəʊm/ noun a rare lung disease in which someone coughs up blood, is anaemic, and may have kidney failure [Described 1919. After Ernest William Goodpasture (1886–1960), US pathologist.]

goose bumps /'gu:s bʌmps/, **goose flesh** /'gu:s fles/, **goose pimples** /'gu:s ,pimp(ə)lz/ noun a reaction of the skin when someone is cold or frightened, the skin being raised into many little bumps by the action of the arrector pili muscles. Also called **cutis anserina**

Gordh needle /'gɔ:d ,nið(ə)l/ noun a needle with a bag attached, so that several injections can be made one after the other

gorget /'go:dʒɪt/ noun a surgical instrument used to remove stones from the bladder

gouge /'gaʊdʒ/ noun a surgical instrument like a chisel, used to cut bone

goundou /'gʊndu:/ noun a condition caused by yaws, in which growths form on either side of the nose

gout /gaut/ noun a disease in which unusual quantities of uric acid are produced and form crystals in the cartilage round joints. Also called **podagra**

COMMENT: Gout was formerly associated with drinking strong wines such as port, but is now believed to arise in three ways: excess uric acid in the diet, overproduction of uric acid in the body and inadequate excretion of uric acid. It is likely that both overproduction and inadequate excretion are due to inherited biochemical developments. Excess intake of alcohol can provoke an attack by interfering with the excretion of uric acid.

gown /gaʊn/ noun a long robe worn over other clothes to protect them ○ *The surgeons were wearing green gowns.* ○ *The patient was dressed in a theatre gown, ready to go to the operating theatre.*

GP abbr general practitioner

GP co-op /'dʒi:p/ 'pi: kəʊ ,ɒp/ noun a group of GPs who work together to provide out-of-hours care without making any profit

gr symbol grain

Graafian follicle /'græfiən 'fɒlik(ə)l/ noun same as **ovarian follicle** [After Reijnier de Graaf (1641–73), Dutch physician]

gracilis /'greɪsɪlɪs/ noun a thin muscle running down the inside of the leg from the top of the leg down to the top of the tibia

graduated /'gra:dʒueɪtɪd/ adjective with marks showing various degrees or levels ○ *a graduated measuring jar*

Graefe's knife /'grefəz ,naɪf/ noun a sharp knife used in operations on cataracts [After Friedrich Wilhelm Ernst Albrecht von Graefe (1828–70), Professor of Ophthalmology in Berlin, Germany]

graft /'gra:fɪt/ noun 1. the act of transplanting an organ or tissue to replace one which is not functioning or which is diseased ○ *a skin graft* 2. an organ or tissue which is transplanted ○ *The corneal graft was successful.* ○ *The patient was given drugs to prevent the graft being rejected.* ■ verb to take a healthy organ or tissue and transplant it in place of diseased or malfunctioning organ or tissue ○ *The surgeons grafted a new section of bone at the side of the skull.* ♦ **autograft**, **homograft**

graft versus host disease /,gra:fɪt ,vɜ:səs/ 'həʊst ɒt,zi:z/ noun a condition which develops when cells from the grafted tissue react against the person's own tissue, causing skin disorders. Abbr **GVHD**

grain /'greɪn/ noun 1. a very small piece of something hard such as salt 2. a measure of weight equal to 0.0648 grams. Symbol **gr**

-gram /'græm/ suffix a record in the form of a picture

Gram-negative bacterium /'græm 'negatɪv bæk,tɪriəm/ noun a bacterium which takes up the red counterstain, after the alcohol has washed out the first violet dye

Gram-positive bacterium /græm 'pozɪtɪv bæk'trɔriəm/ *noun* a bacterium which retains violet dye and appears blue-black when viewed under the microscope

Gram's stain /græmz 'stein/ *noun* a method of staining bacteria so that they can be identified [Described 1884. After Hans Christian Joachim Gram (1853–1938), Professor of Medicine in Copenhagen, Denmark. He discovered the stain by accident as a student in Berlin, Germany.]

COMMENT: The tissue sample is first stained with a violet dye, treated with alcohol, and then counterstained with a red dye.

grand mal /,græn 'mæl/ *noun* a type of epilepsy, in which someone becomes unconscious and falls down, while the muscles become stiff and twitch violently

grand multiparity /,græn ,mælti'pærɪti/ *noun* the fact of having given birth to more than four children

granular /'grænju:lə/ *adjective* made up of granules

granular cast /,grænju:lə 'kɑ:st/ *noun* a cast composed of cells filled with protein and fatty granules

granular leucocyte /,grænju:lə 'lu:kəsaɪt/ *noun* same as **granulocyte**

granulation /,grænju'lɛɪʃ(ə)n/ *noun* the formation of rough red tissue on the surface of a wound or site of infection, the first stage in the healing process

granulation tissue /,grænju'lɛɪʃ(ə)n ,tɪ'su:/ *noun* soft tissue, consisting mainly of tiny blood vessels and fibres, which forms over a wound

granule /'grænju:l/ *noun* a very small piece of something hard

granulocyte /'grænju:ləsərt/ *noun* a type of leucocyte or white blood cell which contains granules, e.g. a basophil, eosinophil or neutrophil

granulocytopenia /,grænju:lə,saitəu 'pi:nɪə/ *noun* a usually fatal disease caused by the lowering of the number of granulocytes in the blood due to bone marrow malfunction

granuloma /,grænju:lə'ɒmə/ *noun* a mass of granulation tissue which forms at the site of bacterial infections (NOTE: The plural is **granulomas** or **granulomas**.)

granuloma inguinale /grænju:lə'ɒmə ,ɪngwi'neɪli/ *noun* a sexually transmitted disease affecting the anus and genitals in which the skin becomes covered with ulcers, usually occurring in the tropics

granulomatosis /,grænju:ləʊmə'təʊsɪs/ *noun* persistent inflammation leading to the formation of nodules

granulopoiesis /,grænju:ləʊpɔ:i'sɪs/ *noun* the normal production of granulocytes in the bone marrow

graph /gra:f/ *noun* a diagram which shows the relationship between quantities as a line

graph- /græf/ *prefix* writing

-graph /græ:f/ *suffix* a machine which records something as pictures

-grapher /græfə/ *suffix* a technician who operates a machine which records

-graphy /græfi/ *suffix* the technique of study through pictures

grattage /gra:tə:ʒ/ *noun* a procedure that involves scraping the surface of an ulcer which is healing slowly to make it heal more rapidly

gravel /'græv(ə)l/ *noun* small stones which pass from the kidney to the urinary system, causing pain in the ureter

Graves' disease /'greivz di:zi:z/ *noun* same as **exophthalmic goitre** [Described 1835. After Robert James Graves (1796–1853), Irish physician at the Meath Hospital, Dublin, Ireland, where he was responsible for introducing clinical ward work for medical students.]

gravid /'grævid/ *adjective* pregnant

gravides multiparae /,grævidi:z ,mælti 'pu:ri:/ *plural noun* women who have given birth to at least four live babies

gravity /'grævɪti/ *noun* the importance or potential danger of a disease or situation

Grawitz tumour /'grævɪts ,tju:ma/ *noun* a malignant tumour in kidney cells [Described 1883. After Paul Albert Grawitz (1850–1932), Professor of Pathology at Greifswald, Germany.]

gray /greɪ/ *noun* an SI unit of measurement of absorbed radiation equal to 100 rads. Symbol Gy. ☰ rad

graze /greɪz/ *noun* a scrape on the skin surface, making some blood flow ■ *verb* to scrape the skin surface accidentally

great cerebral vein /,greɪt 'serəbrəl veɪn/ *noun* a median vein draining the choroid plexuses of the lateral and third ventricles

greater curvature /,greɪtə 'kɔ:vətʃə/ *noun* a convex line of the stomach

greater vestibular glands /,greɪtə ve'stɪbəl jəldz/ *noun* same as **Bartholin's glands**

great toe /'greɪt təʊ/ *noun* same as **big toe**
green monkey disease /,grɪ:n 'mʌŋki dɪ 'zɪz/ *noun* same as **Marburg disease**

greenstick fracture /'grɪ:nstɪk ,fræktʃə/ *noun* a type of fracture occurring in children, where a long bone bends, but is not completely broken

grey commissure /greɪ 'kɒmɪsʃə/ *noun* part of the grey matter nearest to the central canal of the spinal cord, where axons cross over each other

grey matter /'greɪ ,mætə/ *noun* nerve tissue which is of a dark grey colour and forms part of the central nervous system

COMMENT: In the brain, grey matter encloses the white matter, but in the spinal cord, white matter encloses the grey matter.

grief counsellor /'grɪf ,kaʊns(ə)lə/ noun a person who helps someone to cope with the feelings they have when someone such as a close relative dies

Griffith's types /'grɪfɪθs ,taɪps/ noun various types of haemolytic streptococci, classified according to the antigens present in them

gripe water /'graɪp ,wɔ:tə/ noun a solution of glucose and alcohol, used to relieve abdominal pains in babies

gripping /'graɪpɪŋ/ adjective referring to stomach pains that are sudden, sharp and intense

grocer's itch /,grəʊsəz 'ɪtʃ/ noun a form of dermatitis on the hands caused by handling flour and sugar

groin /'grɔɪn/ noun a junction at each side of the body where the lower abdomen joins the top of the thighs ○ *He had a dull pain in his groin.* (NOTE: For other terms referring to the groin, see **inguinal**.)

grommet /'grɒmɪt/ noun a tube which can be passed from the external auditory meatus into the middle ear, usually to allow fluid to drain off, as in someone who has glue ear

gross anatomy /,grəʊs ə'nætəmɪ/ noun the study of the structure of the body that can be seen without the use of a microscope

ground substance /,graʊnd 'sʌbstəns/ noun same as **matrix**

group /gru:p/ noun several people, animals or things which are all close together ○ *A group of patients were waiting in the surgery.* ■ verb to bring things or people together in a group, or come together in a group ○ *The drugs are grouped under the heading 'antibiotics'.*

group practice /,gru:p 'præktsɪ/ noun a medical practice where several doctors or dentists share the same office building and support services

group therapy /,gru:p 'θerəpi/ noun a type of psychotherapy where a group of people with the same disorder meet together with a therapist to discuss their condition and try to help each other

growing pains /'grəʊɪŋ peɪnz/ plural noun pains associated with adolescence, which can be a form of rheumatic fever

growth /grəʊθ/ noun 1. the process of increasing in size ○ *the growth in the population since 1960* ○ *The disease stunts children's growth.* 2. a cyst or tumour ○ *The doctor found a cancerous growth on the left breast.* ○ *He had an operation to remove a small growth from his chin.*

growth factor /'grəʊθ ,fækٹə/ noun a chemical, especially a polypeptide, produced in the body which encourages particular cells to grow ○ *a nerve growth factor*

growth hormone /'grəʊθ ,hɔ:məʊn/ noun a hormone secreted by the pituitary gland during deep sleep, which stimulates growth of the

long bones and protein synthesis. Also called **somatotropin**

grumbling appendix /,grʌmblɪŋ ə'pendiks/ noun a vermiform appendix that is always slightly inflamed (*informal*) ◊ **chronic appendicitis**

GTT abbr glucose tolerance test

GU abbr 1. gastric ulcer 2. genitourinary **guanine** /'gwa:nɪ:n/ noun one of the four basic chemicals in DNA

guardian ad litem /,gu:dɪən əd 'lɪ:təm/ noun a person who acts on behalf of a minor who is a defendant in a court case

guardian Caldicott /,gu:dɪən 'kɔ:ldɪkɒt/ noun in the UK, a person appointed by a hospital or Health Trust to make sure that information about patients is kept confidential, following the Caldicott Report of 1997

gubernaculum /,gu:bə'nækjʊləm/ noun in a fetus, fibrous tissue connecting the testes (the gonads) to the groin

Guillain-Barré syndrome /,gi:jæn 'bærə ,sɪndrəʊm/ noun a nervous disorder in which, after a non-specific infection, demyelination of the spinal roots and peripheral nerves takes place, leading to generalised weakness and sometimes respiratory paralysis. Also called **Landry's paralysis** [Described 1916. After Georges Guillain (1876–1961), Professor of Neurology in Paris, France, Jean Alexandre Barré (1880–1967), Professor of Neurology in Strasbourg, France.]

guillotine /'giləti:n/ noun a surgical instrument for cutting out tonsils

guinea worm /'gini wɜ:m/ noun same as **Dracunculus**

Gulf War syndrome /gʌlf 'wɔ: ,sɪndrəʊm/ noun a collection of unexplained symptoms, including fatigue, skin disorders, and muscle pains, affecting some soldiers who fought in the Gulf War in 1991

gullet /'gʌlt/ noun same as **oesophagus**

gum /gʌm/ noun the soft tissue covering the part of the jaw which surrounds the teeth ○ *Her gums are red and inflamed.* ○ *A build-up of tartar can lead to gum disease.* Also called **gingiva** (NOTE: For other terms referring to the gums, see words beginning with **gingiv-**.)

gumboil /'gʌmbɔɪl/ noun an abscess on the gum near a tooth

gumma /'gʌmə/ noun an abscess of dead tissue and overgrown scar tissue, which develops in the later stages of syphilis

gustation /gʌ'steɪʃ(ə)n/ noun the act of tasting

gustatory /'gʌstət(ə)ri/ adjective referring to the sense of taste

gut /gʌt/ noun 1. the tubular organ for the digestion and absorption of food. Also called **intestine** 2. a type of thread, made from the intestines of sheep. It is used to sew up internal

incisions and dissolves slowly so does not need to be removed. ◊ **catgut**

Guthrie test /'gʌθri test/ *noun* a test used on babies to detect the presence of phenylketonuria [After R. Guthrie (b. 1916), US paediatrician.]

gutta /'gʌtə/ *noun* a drop of liquid, as used in treatment of the eyes (NOTE: The plural is **guttæ**.)

gutter splint /'gʌtə splint/ *noun* a shaped container in which a broken limb can rest without being completely surrounded

GVHD abbr graft versus host disease

gyn- /'gain/ *prefix* same as **gynae-** (*used before a vowel*)

gynae- /'gaini/ *prefix* referring to women (NOTE: In US English words beginning with **gynae-** are spelled **gyne-**.)

gynaecological /,gai'nɪkə'lɒdʒɪk(ə)l/ *adjective* referring to the treatment of diseases of women

gynaecologist /,gai'nɪk'ɒplədʒɪst/ *noun* a doctor who specialises in the treatment of diseases of women

gynaecology /gai'nɪk'ɒlədʒɪ/ *noun* the study of female sex organs and the treatment of diseases of women in general

gynaecomastia /,gai'nɪkə'mæstiə/ *noun* the unusual development of breasts in a male

gyne /'gaini/ same as **gynaecology**, **gynaecological** (*informal*) ◊ a **gyne appointment**

gypsum /'dʒipsəm/ *noun* calcium sulphate, used as plaster of Paris

gyrus /'dʒarərəs/ *noun* a raised part of the cerebral cortex between the sulci

H

H2-receptor antagonist /'eɪtɪʃ təʊrɪnt/ noun a drug that inhibits the production of stomach acid and so relieves indigestion and gastric ulcers

HA abbr health authority

habit /'hæbit/ noun 1. an action which is an automatic response to a stimulus 2. a regular way of doing something □ *He got into the habit of swimming every day before breakfast.* □ *She's got out of the habit of taking any exercise.* □ from force of habit because you do it regularly □ *I wake up at 6 o'clock from force of habit.*

habit-forming /'hæbɪt fɔ:mɪŋ/ adjective making someone addicted

habit-forming drug /'hæbɪt fɔ:mɪŋ drʌg/ noun a drug which is addictive

habitual /hə'bɪtʃuəl/ adjective done frequently or as a matter of habit

habitual abortion /hə'bɪtʃuəl ə'bɔ:ʃ(ə)n/ noun a condition in which a woman has abortions with successive pregnancies

habituation /hə'bɪtʃu'eɪʃ(ə)n/ noun the fact of being psychologically but not physically addicted to or dependent on a drug, alcohol or other substance

habitus /'hæbɪtəs/ noun the general physical appearance of a person, including build and posture

hacking cough /'hækɪŋ 'kɒf/ noun a continuous short dry cough

haem /hɛm/ noun a molecule containing iron which binds proteins to form haemoproteins such as haemoglobin and myoglobin

haem- /hɛm/ prefix same as **haemo-** (used before vowels) (NOTE: In US English, words beginning with the prefix **haem-** are spelled **hem-**.)

haemagglutination /,hi:mæglju:tɪ'næʃ(ə)n/ noun the clumping of red blood cells, often used to test for the presence of antibodies

haemangioma /,hi:mændʒi'əʊma/ noun a harmless tumour which forms in blood vessels and appears on the skin as a birthmark

haemarthrosis /,hi:mɑ:θrəʊsɪs/ noun pain and swelling caused by blood leaking into a joint

haematemesis /,hi:mæ'teməsɪs/ noun a condition in which someone vomits blood, usually because of internal bleeding

haematic /hi:'mætɪk/ adjective referring to blood

haematin /hi:mætɪn/ noun a substance which forms from haemoglobin when bleeding takes place

haematinic /hi:mæ'tɪnɪk/ noun a drug which increases haemoglobin in blood, used to treat anaemia, e.g. an iron compound

haemato- /hi:mætəʊ/ prefix referring to blood

haematocoele /'hi:mætəʊsɪ:l/, **haematocele** noun a swelling caused by blood leaking into a cavity, especially the scrotum

haematocolpos /,hi:mætəʊ'kɒlpəs/ noun a condition in which the vagina is filled with blood at menstruation because the hymen has no opening

haematocrit /'hi:mætəʊkrɪt/ noun 1. same as **packed cell volume** 2. an instrument for measuring haematocrit

haematocyst /'hi:mætəʊsɪst/ noun a cyst which contains blood

haematogenous /,hi:mæ'tɒdʒənəs/ adjective 1. producing blood 2. produced by blood

haematological /,hi:mætəʊ'lɒdʒɪk(ə)l/ adjective referring to haematology

haematologist /,hi:mætə'lɒdʒɪst/ noun a doctor who specialises in haematology

haematology /,hi:mætɒlɒdʒɪ/ noun the scientific study of blood, its formation and its diseases

haematoma /,hi:mætəʊmə/ noun a mass of blood under the skin caused by a blow or by the effects of an operation

haematometra /,hi:mætə'mɒmɪtrɪə/ noun 1. excessive bleeding in the uterus 2. a swollen uterus, caused by haematocolpos

haematomyelia /,hi:mætəʊ'mæliə/ noun a condition in which blood leaks into the spinal cord

haematopoiesis /,hi:mætəʊpɔɪ'sɪsɪs/ noun same as **haemopoiesis**

haematoxanthin /hi:mætəʊ'pɔ:fərɪn/ noun porphyrin produced from haemoglobin

haematosalpinx /,hi:mætəʊ'sælpɪŋks/ noun same as **haemosalpinx**

haematospermia /,hi:mætəʊ'spɜ:miə/ noun the presence of blood in the sperm

haematozoon /,hi:mætəʊ'zœʊzn/ noun a parasite living in the blood (NOTE: The plural is **haematozoa**)

haematuria /,hi:mætə'juəriə/ noun the unusual presence of blood in the urine, as a result of injury or disease of the kidney or bladder

haemin /hi:min/ noun a salt derived from haemoglobin, used in the treatment of porphyria

haemo- /hi:məʊ/ prefix referring to blood

haemochromatosis /,hi:mæʊkrəʊmə'teʊsɪs/ noun an inherited disease in which the body absorbs and stores too much iron, causing cirrhosis of the liver and giving the skin a dark colour. Also called **bronze diabetes**

haemoconcentration /,hi:mæo,kɒnsən'treɪʃ(ə)n/ noun an increase in the percentage of red blood cells because the volume of plasma is reduced. Compare **haemodilution**

haemocytoblast /,hi:mæu'saɪtəblæst/ noun an embryonic blood cell in the bone marrow from which red and white blood cells and platelets develop

haemocytometer /,hi:mæʊsaɪt'ɒmɪtə/ noun a glass jar in which a sample of blood is diluted and the blood cells counted

haemodialyse /,hi:mæo'daɪəlaɪz/ verb to remove waste matter from the blood using a dialysyer (kidney machine)

haemodialysed patient /,hi:mæo'daɪəlaɪzd'peɪsnt/ noun someone who has undergone haemodialysis

haemodialysis /,hi:mæʊdəlai'æləsɪs/ noun same as **kidney dialysis**

haemodilution /,hi:mæʊdəl'ju:ʃ(ə)n/ noun a decrease in the percentage of red blood cells because the volume of plasma has increased. Compare **haemoconcentration**

haemoglobin /hi:mæo'gləʊbɪn/ noun a red respiratory pigment formed of haem and globin in red blood cells which gives blood its red colour. It absorbs oxygen in the lungs and carries it in the blood to the tissues. Abbr **Hb.** ◊ **oxyhaemoglobin, carboxyhaemoglobin**

haemoglobinaemia /,hi:mæʊgləʊbi'nɪ:miə/ noun a condition in which haemoglobin is found in blood plasma

haemoglobinopathy /,hi:mæʊgləʊbɪ'nɒpəθi/ noun an inherited disease of a group which result from damaging variations in the production of haemoglobin, e.g. sickle-cell anaemia

haemoglobinuria /,hi:mæʊgləʊbɪ'njuəriə/ noun a condition in which haemoglobin is found in the urine

haemogram /'hi:mæʊgræm/ noun the printed result of a blood test

haemolysin /,hi:mæo'laisɪn/ noun a protein which destroys red blood cells

haemolysis /hi:mɒləsɪs/ noun the destruction of red blood cells

haemolytic /,hi:mæo'lɪtɪk/ adjective destroying red blood cells ■ noun a substance which destroys red blood cells, e.g. snake venom

haemolytic anaemia /,hi:mælɪtɪk ə'ni:miə/ noun a condition in which the destruction of red blood cells is about six times the usual rate, and the supply of new cells from the bone marrow cannot meet the demand

haemolytic disease of the newborn /,hi:mæolɪtɪk dɪ,zɪ:z əv ðə 'nju:bə:n/ noun a condition in which the red blood cells of the fetus are destroyed because antibodies in the mother's blood react against them

haemolytic jaundice /,hi:mæolɪtɪk 'dʒɔ:ndɪs/ noun jaundice caused by haemolysis of the red blood cells. Also called **prehepatitic jaundice**

haemolytic uraemic syndrome /,hi:mæolɪtɪk ju'rɪ:mɪk ,sɪndrəʊm/ noun a condition in which haemolytic anaemia damages the kidneys

haemopericardium /,hi:mæoperɪ'kɑ:dɪəm/ noun a condition in which blood is found in the pericardium

haemoperitoneum /,hi:mæoperɪtə'ni:əm/ noun a condition in which blood is found in the peritoneal cavity

haemophilia /,hi:mæ'filiə/ noun a disorder linked to a recessive gene on the X-chromosome in which the blood clots much more slowly than usual, resulting in extensive bleeding from even minor injuries. The gene is passed by women to their male children and the disorder is seen almost exclusively in boys.

haemophilia A /,hi:mæfɪlia 'eɪ/ noun the most common type of haemophilia, in which the inability to synthesise Factor VIII, a protein that promotes blood clotting, means that the blood clots very slowly

haemophilia B /,hi:mæfɪliə 'bi:/ noun a less common type of haemophilia, in which the inability to synthesise Factor IX, a protein that promotes blood clotting, means that the blood clots very slowly. Also called **Christmas disease**

haemophiliac /,hi:mæ'filiæk/ noun a person who has haemophilia

haemophilic /,hi:mæo'filɪk/ adjective referring to haemophilia

Haemophilus /hi:'mɒfiləs/ noun a genus of bacteria which needs specific factors in the blood to grow

Haemophilus influenzae /hi:mɒfiləs ,ɪn'flu'enza:/ noun a bacterium which lives in

healthy throats, but which can cause pneumonia if a person's resistance is lowered by a bout of flu

Haemophilus influenzae type b /hi:məfɪləs inflʊənɛz tایپ 'bi:/ noun a bacterium which causes meningitis. Abbr **Hib**

haemophthalmia /,hi:mɒfθælmɪə/ noun a condition in which blood is found in the vitreous humour of the eye

haemopneumothorax /,hi:məʊ,nju:məʊ 'θɔ:ræks/ noun same as **pneumohaemothorax**

haemopoiesis /,hi:məʊpɔɪ'sɪs/ noun the continual production of blood cells and blood platelets in the bone marrow. Also called **blood formation**

haemopoietic /,hi:məʊpɔɪ'etɪk/ adjective referring to the formation of blood in the bone marrow

haemoptysis /hi:'mɒptəsɪs/ noun a condition in which someone coughs blood from the lungs, caused by a serious illness such as anaemia, pneumonia, tuberculosis or cancer

haemorrhage /'hem(ə)rɪdʒ/ noun the loss of a large quantity of blood, especially from a burst blood vessel ○ *He died of a brain haemorrhage.* ■ verb to bleed heavily ○ *The injured man was haemorrhaging from the mouth.*

haemorrhagic /,hemə'rædʒɪk/ adjective referring to heavy bleeding

haemorrhagic disease of the newborn /,hemərædʒɪk dɪ,zɪ:z əv ðə 'nju:bɔ:n/ noun a disease of newly born babies, which makes them haemorrhage easily, caused by temporary lack of prothrombin

haemorrhagic disorder /hemə,rædʒɪk dɪs'ɔ:də/ noun a disorder in which haemorrhages occur, e.g. haemophilia

haemorrhagic fever /,hemərædʒɪk 'fi:və/ noun a viral infection that results in profuse internal bleeding from the capillaries, e.g. dengue or Ebola

haemorrhagic stroke /,hemərædʒɪk 'strəʊk/ noun a stroke caused by a burst blood vessel

haemorrhoidal /,hemə'rɔɪdəl/ adjective referring to haemorrhoids

haemorrhoidectomy /,hemərɔɪ'dektəmi/ noun the surgical removal of haemorrhoids

haemorrhoids /'hemərɔɪdz/ plural noun swollen veins in the anorectal passage. Also called **piles**

haemosalpinx /hi:məʊ'sælpɪŋks/ noun the accumulation of blood in the Fallopian tubes

haemosiderosis /,hi:məʊsɪdə'rəʊsɪs/ noun a disorder in which iron forms large deposits in the tissue, causing haemorrhaging and destruction of red blood cells

haemostasis /,hi:məʊ'steɪsɪs/ noun the process of stopping bleeding or slowing the movement of blood

haemostat /'hi:məʊstæt/ noun a device which stops bleeding, e.g. a clamp

haemostatic /,hi:məʊ'stætɪk/ adjective stopping bleeding ■ noun a drug which stops bleeding

haemothorax /,hi:məʊ'θəʊ:ræks/ noun a condition in which blood is found in the pleural cavity

Hageman factor /'ha:gəmən ,fæktə/ noun same as **Factor XII**

HAI abbr Hospital Acquired Infection

hair cell /'heə sel/ noun a receptor cell which converts fluid pressure changes into nerve impulses carried in the auditory nerve (NOTE: For other terms referring to hair, see words beginning with **pilo-, trich-, tricho-**)

hair follicle /'heə ,fɒlik(ə)l/ noun the cells and tissue that surround the root of a hair

hairline fracture /'heəlæm ,frækɪʃə/ noun a very slight crack in a bone caused by injury

hair papilla /heə pə'pɪlə/ noun a part of the skin containing capillaries which feed blood to the hair

hairy cell leukaemia /,heəri sel lu:kiəmɪə/ noun a form of leukaemia in which white blood cells have fine projections

half-life /'ha:f laɪf/ noun 1. a measurement of the period of time taken before the concentration of a drug has reached half of what it was when it was administered 2. the time taken for half the atoms in a radioactive isotope to decay

halitosis /,hæltɪ'təʊsɪs/ noun a condition in which a person has breath which smells unpleasant. Also called **bad breath**

COMMENT: Halitosis can have several causes: caries in the teeth, infection of the gums, and indigestion are the most usual. The breath can also have an unpleasant smell during menstruation, or in association with certain diseases such as diabetes mellitus and uremia.

hallucaces /'hælʊsi:z/ plural of **hallux**

hallucinate /'hæ'lʊ:sɪneɪt/ verb to have hallucinations ○ *The patient was hallucinating.*

hallucination /,hæ,lʊ:sɪ'nærɪʃən/ noun an experience of seeing an imaginary scene or hearing an imaginary sound as clearly as if it were really there

hallucinatory /'hæ'lʊ:sɪnət(ə)ri/ adjective referring to a drug which causes hallucinations

hallucinogen /,hælu:'sɪnədʒən/ noun a drug which causes hallucinations, e.g. cannabis or LSD

hallucinogenic /,hæ,lʊ:sɪnə'dʒenɪk/ adjective referring to a substance which produces hallucinations ○ *a hallucinogenic fungus*

hallux /'hælkəs/ noun the big toe (NOTE: The plural is **halluces**)

hallux valgus /,hælkəs 'vælgəs/ noun a condition of the foot, where the big toe turns towards the other toes and a bunion is formed

haloperidol /'hæləʊ'pərɪdɒl/ *noun* a tranquilliser used in the treatment of schizophrenia, mania and psychoses

halo splint /'heɪləʊ splɪnt/ *noun* a device used to keep the head and neck still so that they can recover from injury or an operation

halothane /'hæləʊθeɪn/ *noun* a general anaesthetic that is given by inhalation

hamamelis /,hæmə'lɪs/ ♦ **witch hazel**

hamartoma /,hæmə:tə'ʊmə/ *noun* a benign tumour containing tissue from any organ

hamate /'heɪmeɪt/, **hamate bone** /'heɪmeɪt bəʊn/ *noun* one of the eight small carpal bones in the wrist, shaped like a hook. Also called **unciform bone**. See illustration at **HAND** in Supplement

hammer /'hæmə/ *noun* same as **malleus**

hammer toe /'hæmə təʊ/ *noun* a toe which has the middle joint permanently bent downwards

hamstring /'hæmstrɪŋ/ *noun* one of a group of tendons behind the knee, which link the thigh muscles to the bones in the lower leg

hamstring muscles /'hæmstrɪŋ ,mæs(ə)lz/ *plural noun* a group of muscles at the back of the thigh, which flex the knee and extend the gluteus maximus

hand /hænd/ *noun* the part at the end of the arm, beyond the wrist, which is used for holding things □ *He injured his hand with a saw.* ■ *verb* to pass something to someone

COMMENT: The hand is formed of 27 bones: 14 phalanges in the fingers, 5 metacarpals in the main part of the hand, and 8 carpal in the wrist.

hand, foot and mouth disease /,hænd fət ən 'maʊθ dɪ,zɪ:z/ *noun* a mild viral infection in children, causing small blisters

handicap /'hændɪkæp/ *noun* a physical or mental condition which prevents someone from doing some everyday activities ■ *verb* to prevent someone from doing an everyday activity (NOTE: The word 'handicap' is now usually avoided.)

'...handicap – disadvantage for a given individual, resulting from an impairment or a disability, that limits or prevents the fulfilment of a role that is normal for that individual' [WHO]

handicapped /'hændɪkæpt/ *adjective* referring to a person who has a disability (NOTE: The word 'handicapped' is now usually avoided.)

Hand-Schüller Christian disease /,hænt ,sə'lə k'ri:ʃən dɪ,zɪ:z/ *noun* a disturbance of cholesterol metabolism in young children which causes disorders in membranous bone, mainly in the skull, exophthalmos, diabetes insipidus, and a yellow-brown colour of the skin [First described 1893 then 1915 by Schüller and 1920 by Christian. After Alfred Hand Jr. (1868–1949), US paediatrician; Artur Schüller (1874–1958), Austrian neurologist; Henry Asbury Christian (1876–1951), Professor of Medicine at Harvard, USA.]

hangnail /'hægnɛil/ *noun* a piece of torn skin at the side of a nail

hangover /'hæŋəʊvə/ *noun* a condition occurring after a person has drunk too much alcohol, with dehydration caused by inhibition of the antidiuretic hormone in the kidneys. The symptoms include headache, inability to stand noise and trembling of the hands.

Hansen's bacillus /,hænsənз bə'siləs/ *noun* the bacterium which causes leprosy, *Mycobacterium leprae* [Discovered 1873. After Gerhard Henrik Armauer Hansen (1841–1912), Norwegian physician.]

Hansen's disease /'hænsənз dɪ,zirz/ *noun* same as **leprosy**

haploid /'hæplɔɪd/ *adjective* referring to a cell such as a gamete where each chromosome occurs only once. In humans the haploid number of chromosomes is 23.

hapt- /hæpt/ *prefix* relating to the sense of touch

hapten /'hæpten/ *noun* a substance which causes an allergy, probably by changing a protein so that it becomes antigenic

hardening of the arteries /,hɑ:d(ə)nɪŋ əv ðə 'ɑ:tərɪz/ *noun* same as **atherosclerosis**

hard of hearing /,hɑ:d əv 'hɪərɪŋ/ *adjective* same as **hearing-impaired**

hard palate /,hɑ:d 'pælət/ *noun* the front part of the roof of the mouth between the upper teeth

harelip /'heəlɪp/ *noun* same as **cleft lip**

harm /hɑ:m/ *noun* injury or damage as a result of something that you do □ *Walking to work every day won't do you any harm.* □ **there's no harm in taking the tablets only for one week** there will be no side effects from taking the tablets for a week ■ *verb* to damage or hurt someone or something □ *Walking to work every day won't harm you.*

harmful /'ha:mf(ə)l/ *adjective* causing injury or damage □ *Bright light can be harmful to your eyes.* □ *Sudden violent exercise can be harmful.*

harmless /'ha:mləs/ *adjective* causing no injury or damage □ *These herbal remedies are quite harmless.*

Harrison's sulcus /,hærɪsənз 'sʌlk(ə)s/, **Harrison's groove** /,hærɪs(ə)nз 'gru:v/ *noun* a hollow on either side of the chest which develops in children who have difficulty in breathing, seen especially in cases of rickets

Harris's operation /'hærɪsɪz ɒpə,reɪʃ(ə)n/ *noun* the surgical removal of the prostate gland [After S.H. Harris (1880–1936), Australian surgeon]

Hartmann's solution /'ha:t'mənз sə ,lu:f(ə)n/ *noun* a chemical solution used in drips to replace body fluids lost in dehydration, particularly as a result of infantile gastroenteritis [Described 1932. After Alexis Frank

Hartmann (1898–1964), paediatrician, St Louis, Missouri, USA.]

Hartnup disease /'ha:tnpəd̩ d̩i,zi:z/ *noun* an inherited condition affecting amino acid metabolism and producing thick skin and impaired mental development [After the name of the family in which this hereditary disease was first recorded]

harvest /'ha:vɪst/ *verb* to take something for use elsewhere, e.g. a piece of skin for a graft or eggs for IVF

Hashimoto's disease /hæʃɪ'moʊtəz d̩i,zi:z/ *noun* a type of goitre in middle-aged women, where the woman is sensitive to secretions from her own thyroid gland, and, in extreme cases, the face swells and the skin turns yellow [Described 1912. After Hakuro Hashimoto (1881–1934), Japanese surgeon.]

hashish /'hæʃɪʃ/ *noun* ♦ **cannabis**

hastrum /'hɔ:stri:m/ *noun* a sac on the outside of the colon (NOTE: The plural is **hastra**.)

HAV *abbr* hepatitis A virus

Haversian canal /hə'vezɪ:f̩(ə)n kə,næl/ *noun* a fine canal which runs vertically through the Haversian systems in compact bone, containing blood vessels and lymph ducts [Described 1689. After Clopton Havers (1657–1702), English surgeon.]

Haversian system /hə'vezɪ:f̩(ə)n ,sistəm/ *noun* a unit of compact bone built around a Haversian canal, made of a series of bony layers which form a cylinder. Also called **osteon**

hayfever /'hei,fɪ:və/ *noun* inflammation in the nasal passage and eyes caused by an allergic reaction to plant pollen. ♦ **allergic rhinitis**

HAZ *abbr* health action zone

Hb *abbr* haemoglobin

HBV *abbr* hepatitis B virus

HCG *abbr* human chorionic gonadotrophin

HCHS *abbr* Health and Community Health Services

HDL *abbr* high density lipoprotein

head /hed/ *noun* 1. the round top part of the body, which contains the eyes, nose, mouth, brain, etc (NOTE: For other terms referring to the head, see words beginning with **cephal-**, **cephalo-**.) 2. a rounded top part of a bone which fits into a socket ○ *head of humerus* ○ *head of femur*

headache /'hedeɪk/ *noun* a pain in the head, caused by changes in pressure in the blood vessels feeding the brain which act on the nerves. Also called **cephalgia**

COMMENT: Headaches can be caused by a blow to the head, by lack of sleep or food, by eye strain, sinus infections and many other causes. Mild headaches can be treated with an analgesic and rest. Severe headaches which recur may be caused by serious disorders in the head or nervous system.

head cold /hed kəuld/ *noun* a minor illness, with inflammation of the nasal passages, excess mucus in the nose and sneezing

head louse /'hed laʊs/ *noun* a small insect of the *Pediculus* genus, which lives on the scalp and sucks blood. Also called **Pediculus capitis** (NOTE: The plural is **head lice**.)

Heaf test /'hi:f̩ test/ *noun* a test in which tuberculin is injected into the skin to find out whether a person is immune to tuberculosis. ♦ **Mantoux test**

heal /hi:l/ *verb* 1. (of wound) to return to a healthy state ○ *After six weeks, her wound had still not healed.* ○ *A minor cut will heal faster if it is left without a bandage.* 2. to make someone or something get better

healing /'hi:lin/ *noun* the process of getting better ○ *a substance which will accelerate the healing process*

healing by first intention /,hi:lin baɪ ,f̩ɪrst int'enʃən/ *noun* the healing of a clean wound where the tissue reforms quickly

healing by second intention /,hi:lin baɪ ,sekənd in'tenʃən/ *noun* the healing of an infected wound or ulcer, which takes place slowly and may leave a permanent scar

health /helθ/ *noun* the general condition of the mind or body ○ *He's in good health.* ○ *She had suffered from bad health for some years.* ○ *The council said that fumes from the factory were a danger to public health.* ○ *All cigarette packets carry a government health warning.*

health action zone /,helθ 'ækʃən zən/ *noun* in the UK, an area in which the government has funded specific actions to redress health inequalities. Abbr **HAZ**

Health and Safety at Work Act /,helθ ən 'sefti at 'wɜ:k akt/ *noun* in the UK, an Act of Parliament which rules how the health of workers should be protected by the companies they work for

Health and Safety Executive /,helθ ən 'sefti ɪg,zekjutɪv/ *noun* in the UK, a government organisation responsible for overseeing the health and safety of workers

health authority /helθ ə: 'θrəti/ *noun* ♦ **Strategic Health Authority**

healthcare /'helθkeə/, **health care** *noun* the general treatment of people with medical disorders, especially the use of measures to stop a disease from occurring

healthcare assistant /'helθkeəs̩ ,sɪstənt/ *noun* someone who assists health professionals in looking after a sick or dependent person

healthcare delivery /'helθkeə di,li,v(ə)rɪ/ *noun* the provision of care and treatment by the health service

healthcare professional /'helθkeə pr̩ ,f̩es̩(ə)n(əl)/ *noun* a qualified person who works in an occupation related to health care, e.g. a nurse

healthcare system /'helθkeə ,sistəm/ *noun* any organised set of health services

health centre /'helθ ,sentə/ *noun* a public building in which a group of doctors practise
health education /helθ ,edju'keɪʃ(ə)n/ *noun* the process of teaching people, both school children and adults, to do things to improve their health, e.g. to take more exercise

Health Education Authority /,helθ ,edju'keɪʃ(ə)nɔ:θəriti/ *noun* a government health promotion agency in England designed to help people make aware of how they can improve their health. Abbr **HEA**

health food /'helθ fu:d/ *noun* food that is regarded as good for health, especially containing ingredients such as cereals, dried fruit and nuts and without additives

health inequality /'helθ ,mɪlkwɒl̩tɪ/ *noun* the differences that exist in health across the social classes, with poorer people tending to experience poorer health

health information service /,helθ ɪnfə'meɪʃ(ə)n ,sɜ:vɪs/ *noun* a nation-wide information service delivered via a free telephone helpline. Abbr **HIS**

health insurance /'helθ ɪnʃʊərəns/ *noun* insurance which pays the cost of treatment for illness

Health Ombudsman /'helθ ,ombudzmən/ *noun* same as **Health Service Commissioner**

'...the HA told the Health Ombudsman that nursing staff and students now received full training in the use of the nursing process' [Nursing Times]

health promotion /'helθ prə'moʊʃ(ə)n/ *noun* the act of improving the health of a particular community or of the public generally, e.g. using health education, immunisation and screening

Health Protection Agency /,helθ prə'tekʃ(ə)n ,erɪdʒənsi/ *noun* a national organisation for England and Wales, established in 2003, dedicated to the protection of people's health, especially by reducing the impact of infectious diseases, chemicals, poisons and radiation. It brings together existing sources of expertise in public health, communicable diseases, emergency planning, infection control, poisons and radiation hazards.

health service /'helθ ,sɜ:vɪs/ *noun* an organisation which is in charge of providing health care to a particular community

Health Service Commissioner /,helθ ,sɜ:vɪs kə'mɪʃ(ə)nə/, **Health Service Ombudsman** /'helθ ,sɜ:vɪs ,ombudzmən/ *noun* in the UK, an official who investigates complaints from the public about the National Health Service

health service manager /,helθ ,sɜ:vɪs 'mænɪdʒə/ *noun* someone who is responsible for the provision of local health care, through the management of hospital, GP, and community health services

health service planning /,helθ ,sɜ:vɪs 'plænɪŋ/ *noun* the process of deciding what the health care needs of a community are, with the help of statistics, and what resources can be provided for that community

health visitor /'helθ ,vɪzɪtə/ *noun* a registered nurse with qualifications in midwifery or obstetrics and preventive medicine, who visits mothers and babies and sick people in their homes and advises on treatment

'...in the UK, the main screen is carried out by health visitors at 6–10 months' [Lancet]

healthy /'helθi/ *adjective* 1. in good physical condition 2. helping you to stay in good physical condition ○ *People are healthier than they were fifty years ago.* ○ *This town is the healthiest place in England.* ○ *If you eat a healthy diet and take plenty of exercise there is no reason why you should fall ill.* (NOTE: **healthier – healthiest**)

hear /hɪə/ *verb* to sense sounds with the ears ○ *I can't hear what you're saying.* (NOTE: **hearing – heard**)

hearing /'hɪərɪŋ/ *noun* the ability to hear, or the function performed by the ear of sensing sounds and sending sound impulses to the brain ○ *His hearing is failing.* (NOTE: For other terms referring to hearing, see words beginning with **audi-**, **audio-**)

hearing aid /'hɪərɪŋ eɪd/ *noun* a small electronic device fitted into or near the ear, to improve someone's hearing by making the sounds louder

hearing-impaired /,hɪərɪŋ ɪm'peəd/ *adjective* having a degree of hearing loss

hearing loss /'hɪərɪŋ lɒs/ *noun* partial or complete loss of the ability to hear

heart /hɑ:t/ *noun* the main organ in the body, which maintains the circulation of the blood around the body by its pumping action ○ *The doctor listened to his heart.* ○ *She has heart trouble.* (NOTE: For other terms referring to the heart, see also words beginning with **cardi-**, **cardio-**)

COMMENT: The heart is situated slightly to the left of the central part of the chest, between the lungs. It is divided into two parts by a vertical septum; each half is itself divided into an upper chamber (the atrium) and a lower chamber (the ventricle). The veins bring blood from the body into the right atrium; from there it passes into the right ventricle and is pumped into the pulmonary artery which takes it to the lungs. Oxygenated blood returns from the lungs to the left atrium, passes to the left ventricle and from there is pumped into the aorta for circulation round the arteries. The heart expands and contracts by the force of the heart muscle (the myocardium) under impulses from the sinoatrial node, and an average heart beats about 70 times a minute. The contracting beat as it pumps blood out (the systole) is followed by a weaker diastole, where the muscles relax to allow blood to flow back into the heart. In a heart attack, part of the myocardium is deprived of blood because of a clot in

a coronary artery. This has an effect on the rhythm of the heartbeat and can be fatal. In heart block, impulses from the sinoatrial node fail to reach the ventricles properly.

heart attack /'ha:t ə,tæk/ *noun* a condition in which the heart has a reduced blood supply because one of the arteries becomes blocked by a blood clot, causing myocardial ischaemia and myocardial infarction (*informal*)

heartbeat /'ha:tbi:t/ *noun* the regular noise made by the heart as it pumps blood

heart block /'ha:t blɒk/ *noun* the slowing of the action of the heart because the impulses from the sinoatrial node to the ventricles are delayed or interrupted. There are either longer impulses (first degree block) or missing impulses (second degree block) or no impulses at all (complete heart block), in which case the ventricles continue to beat slowly and independently of the sinoatrial node.

heartburn /'ha:t bɜ:n/ *noun* indigestion which causes a burning feeling in the stomach and oesophagus, and a flow of acid saliva into the mouth (*informal*)

heart bypass /,ha:t 'baɪpɔ:s/, **heart bypass operation** /,ha:t 'baɪpɔ:s ɒpə,reɪʃ(ə)n/ *noun* same as **coronary artery bypass graft**

heart disease /'ha:t dɪ,zi:z/ *noun* any disease of the heart in general

heart failure /'ha:t ,feɪljə/ *noun* the failure of the heart to maintain the output of blood to meet the demands of the body. It may affect the left or right sides of the heart, or both sides.
♦ **congestive heart failure**

heart-lung machine /ha:t 'laŋ mə,fi:n/ *noun* a machine used to pump blood round the body and maintain the supply of oxygen to the blood during heart surgery

heart-lung transplant /ha:t 'laŋ ,træns plɑ:nt/ *noun* an operation to transplant a new heart and lungs into someone

heart massage /'ha:t ,mæsæ:g/ *noun* a treatment which involves pressing on the chest to make a heart which has stopped beating start working again

heart murmur /'ha:t ,mɜ:mə/ *noun* an unusual sound made by turbulent blood flow, sometimes as a result of valve disease

heart rate /'ha:t reɪt/ *noun* the number of times the heart beats per minute

heart sounds /'ha:t saʊndz/ *plural noun* two different sounds made by the heart as it beats.

♦ **lubb-dupp**

heart stoppage /'ha:t ,stɒpidʒ/ *noun* a situation where the heart has stopped beating

heart surgeon /'ha:t ,sɜ:dʒən/ *noun* a surgeon who specialises in operations on the heart

heart surgery /'ha:t ,sɜ:dʒəri/ *noun* a surgical operation to remedy a condition of the heart

heart tamponade /ha:t tæmpə'neɪd/ *noun* same as **cardiac tamponade**

heart transplant /'ha:t ,trænsplɑ:nt/ *noun* a surgical operation to transplant a heart into someone

heat cramp /'ha:t kræmp/ *noun* cramp produced by loss of salt from the body in very hot conditions

heat exhaustion /'ha:t ɪg,zɔ:stʃ(ə)n/ *noun* collapse caused by physical exertion in hot conditions, involving loss of salt and body fluids

heat rash /'ha:t ræʃ/ *noun* same as **miliaria**

heat spots /'ha:t spɒts/ *plural noun* little red spots which develop on the face in very hot weather

heatstroke /'ha:tstrəʊk/ *noun* a condition in which someone becomes too hot and his or her body temperature rises abnormally, leading to headaches, stomach cramps and sometimes loss of consciousness

heat therapy /'ha:t ,θerəpi/, **heat treatment** /'ha:t ,tri:tment/ *noun* same as **thermotherapy**

heavy period /,hevi 'pri:ri:d/ *noun* a monthly period during which a woman loses an unusually large amount of blood. It is often painful and sometimes indicates possible health problems, such as fibroids or hypothyroidism.

hebephrenia /,he:bɪ'bri:nɪə/, **hebephrenic schizophrenia** /,he:bɪ'brefnɪk skɪtsəʊ'fri:nɪə/ *noun* a condition in which someone, usually an adolescent, has hallucinations, delusions and deterioration of personality, talks rapidly and generally acts in a strange manner

Heberden's node /,he:bədənз 'nəud/ *noun* a small bony lump which develops on the end joints of fingers in osteoarthritis [Described 1802. After William Heberden (1767–1845), British physician, specialist in rheumatic diseases.]

hebetude /'hebitju:d/ *noun* dullness of the senses during acute fever, which makes the person uninterested in his or her surroundings and unable to respond to stimuli

hectic /'hektrɪk/ *adjective* recurring regularly
hectic fever /,hektɪk 'fi:və/ *noun* an attack of fever which occurs each day in someone who has tuberculosis

heel /hi:l/ *noun* the back part of the foot

heel bone /'hi:l bəʊn/ *noun* the bone forming the heel, beneath the talus. Also called **calcaneus**

Hegar's sign /'hergəz ,sain/ *noun* a way of detecting pregnancy, by inserting the fingers into the uterus and pressing with the other hand on the pelvic cavity to feel if the neck of the uterus has become soft [After Alfred Hegar (1830–1914), Professor of Obstetrics and Gynaecology at Freiburg, Germany]

Heimlich manoeuvre /'haɪmlɪk mə,nu:və/ *noun* an emergency treatment for choking, in which a strong upward push beneath the

breastbone of a patient clasped from behind forces the blockage out of the windpipe

helco- /helkəʊ/ *prefix* relating to an ulcer

helcoplasty /'helkəoplæsti/ *noun* a skin graft to cover an ulcer to aid healing

Helicobacter pylori /helɪkə'bækٹərɪ'paɪləri/ *noun* a bacterium found in gastric secretions, strongly associated with duodenal ulcers and gastric carcinoma

helicopter-based emergency medical services /helikoptər'beɪsɪt̬ ɪ'medɪkl'sɜːvɪsɪz/ *plural noun* full form of **HEMS**

helio- /hi:lɪəʊ/ *prefix* relating to the sun

heliotherapy /hi:lɪəʊ'θerəpɪ/ *noun* treatment by sunlight or sunbathing

helium /'hi:lɪəm/ *noun* a very light gas used in combination with oxygen, especially to relieve asthma or sickness caused by decompression (NOTE: The chemical symbol is **He**)

helix /'hi:lɪks/ *noun* the curved outer edge of the ear

Heller's operation /'heləz əpə'reɪʃn/ *noun* same as **cardiomotomy** [After E. Heller (1877–1964), German surgeon.]

Heller's test /'heləz test/ *noun* a test for protein in the urine [After Johann Florenz Heller (1813–71), Austrian physician]

Hellin's law /helɪnz 'lɔ:/ *noun* a finding which states that twins should occur naturally once in 90 live births, triplets once in 8,100 live births, quadruplets once in 729, 000 live births, and quintuplets once in 65, 610, 000 live births (NOTE: Since the 1960s the numbers have changed due to fertility treatment. For example, twins now occur once in only 38 births.)

HELLP syndrome /'help ,sɪndrəʊm/ *noun* a serious pre-eclamptic disorder which makes it necessary to terminate a pregnancy. Full form **haemolysis-elevated liver enzymes-low platelet count syndrome**

helminth /'helmɪnθ/ *noun* a parasitic worm, e.g. a tapeworm or fluke

helminthiasis /,helmɪnθ'əraɪsɪs/ *noun* infestation with parasitic worms

heloma /hi'ləʊmə/ *noun* same as **corn**

helper /'helpə/ *noun* a person who helps someone to do something, especially without payment

helper T-cell /'helpə 'ti: sel/ *noun* a type of white blood cell that stimulates the production of cells that destroy antigens

hemeralopia /hemə'rələʊpiə/ *noun* a usually congenital condition in which someone is able to see better in bad light than in ordinary daylight. Also called **day blindness**

hemi- /hemi/ *prefix* half

hemianopia /,hemiə'nəʊpiə/ *noun* a state of partial blindness in which someone has only half the usual field of vision in each eye

hemiarthroplasty /,hemi'a:θrəoplæsti/ *noun* an operation to repair a joint which replaces one of its surfaces with an artificial substance, often metal

hemiatrophy /,hemi'ætrəfɪ/ *noun* a condition in which half of the body or half of an organ or part is atrophied

hemiballismus /,hemibə'lizməs/ *noun* a sudden movement of the limbs on one side of the body, caused by a disease of the basal ganglia

hemicolecotomy /,hemikə'lektəmɪ/ *noun* the surgical removal of part of the colon

hemicrania /,hemi'kreiniə/ *noun* a headache in one side of the head, as in migraine

hemimelia /,hemi'mi:liə/ *noun* a congenital condition in which someone has absent or extremely short arms or legs

hemiparesis /,hemipə'ri:sɪs/ *noun* slight paralysis of the muscles of one side of the body

hemiplegia /,hemi'pli:dʒə/ *noun* severe paralysis affecting one side of the body due to damage of the central nervous system. Compare **diplegia**

hemiplegic /,hemi'pli:dʒɪk/ *adjective* referring to paralysis of one side of the body

hemisphere /'hemisfɪə/ *noun* half of a sphere

hemo- /hi:məʊ/ *prefix* US spelling of **haemo-**

HEMS /hemz/ *plural noun* a system of delivering a paramedic crew to the scene of an accident or medical emergency by helicopter and then transporting patients to the nearest major hospital or specialist unit. Full form **helicopter-based emergency medical services**

Henderson's model /'hendəs(ə)nz ,mɒd(ə)l/ *noun* a model of nurse-patient relationships based on 14 basic principles of nursing. The main idea is that ‘the nurse does for others what they would do for themselves if they had the strength, the will, and the knowledge...but that the nurse makes the patient independent of him or her as soon as possible’.

Henle's loop /,henlɪ:z 'lu:p/ *noun* same as **loop of Henle** [Described 1862. After Friedrich Gustav Jakob Henle (1809–85), Professor of Anatomy at Göttingen, Germany.]

Henoch-Schönlein purpura /,henək ,ʃənlain 'pɜːpjʊrə/, **Henoch's purpura** /,henəks 'pɜːpjʊrə/ *noun* a condition in which blood vessels become inflamed and bleed into the skin, causing a rash called purpura and also pain in the stomach and the joints, vomiting and diarrhoea. It often occurs after an upper respiratory infection, mostly in children aged two to 11. [Described 1832 by Schönlein and 1865 by Henoch. Eduard Heinrich Henoch (1820–1910), Professor of Paediatrics at Berlin, Germany; Johannes Lukas Schönlein (1793–1864), physician and pathologist at Würzburg, Zürich and Berlin.]

hep /hep/ *noun* same as **hepatitis** (*informal*)

heparin /'hepərɪn/ *noun* an anticoagulant substance found in the liver and lungs, and also produced artificially for use in the treatment of thrombosis

hepat- /'hi:pət/ *prefix* same as **hepato-** (*used before vowels*)

hepatalgia /,hepə'tældʒə/ *noun* pain in the liver

hepatectomy /,hepə'tektəmɪ/ *noun* the surgical removal of part of the liver

hepatic /hi'pætɪk/ *adjective* referring to the liver

hepatic artery /hi,pætɪk 'a:təri/ *noun* an artery which takes the blood to the liver

hepatic cell /hi,pætɪk 'sel/ *noun* an epithelial cell of the liver acini

hepatic duct /hi,pætɪk 'dʌkt/ *noun* a duct which links the liver to the bile duct leading to the duodenum

hepatic flexure /hi,pætɪk 'flekʃə/ *noun* a bend in the colon, where the ascending and transverse colons join

hepaticostomy /hi,pætɪk'kɒstəmɪ/ *noun* a surgical operation to make an opening in the hepatic duct taking bile from the liver

hepatic portal system /hi,pætɪk 'pɔ:t(ə)l'sɪstəm/ *noun* a group of veins linking to form the portal vein, which brings blood from the pancreas, spleen, gall bladder and the abdominal part of the alimentary canal to the liver

hepatic vein /hi,pætɪk 'veɪn/ *noun* a vein which takes blood from the liver to the inferior vena cava

hepatitis /'hepətɪs/ ♦ **porta hepatitis**

hepatitis /,hepə'taitɪs/ *noun* inflammation of the liver through disease or drugs

COMMENT: Infectious hepatitis and serum hepatitis are caused by different viruses called A and B, and having had one does not give immunity against an attack of the other. Hepatitis A is less serious than the B form, which can cause severe liver failure and death. Other hepatitis viruses have also been identified.

hepatitis A /,hepətaitɪs 'eɪ/ *noun* a relatively mild form of viral hepatitis that is transmitted through contaminated food and water

hepatitis A virus /,hepətaitɪs 'eɪ ,vairəs/ *noun* a virus which causes hepatitis A. Abbr **HAV**

hepatitis B /,hepətaitɪs 'bi:/ *noun* a severe form of viral hepatitis that is transmitted by contact with infected blood or other body fluids

hepatitis B virus /,hepətaitɪs 'bi: ,vairəs/ *noun* a virus which causes hepatitis B. Abbr **HBV**

hepatitis C *noun* a form of viral hepatitis that is transmitted by contact with infected blood or other body fluids but is often without symptoms (NOTE: It was formerly called non-A, non-B hepatitis.)

hepatitis C virus *noun* a virus which causes hepatitis C. Abbr **HCV**

hepatitis delta /,hepə,taitɪs 'deltə/ *noun* same as **delta hepatitis**

hepato- /'hepətəʊ/ *prefix* referring to the liver

hepatoblastoma /,hepətəbləstə'məʊmə/ *noun* a malignant tumour in the liver, made up of epithelial-type cells often with areas of immature cartilage and embryonic bone

hepatocoele /'hepətəʊsɪl/ *noun* a hernia of the liver through the diaphragm or the abdominal wall

hepatocellular /,hepətəʊ'seljʊlə/ *adjective* referring to liver cells

hepatocellular jaundice /,hepətəʊ ,seljʊlə 'dʒaʊndɪs/ *noun* jaundice caused by injury to or disease of the liver cells

hepatocirrhosis /,hepətəʊsɪ'rəʊsɪs/ *noun* same as **cirrhosis**

hepatocolic ligament /,hepətəʊkɒplɪk 'lɪgəmənt/ *noun* a ligament which links the gall bladder and the right bend of the colon

hepatocyte /'hepətəʊsait, hi'pætəsait/ *noun* a liver cell which synthesises and stores substances, and produces bile

hepatogenous /,hepə'tɒdʒənəs/ *noun* referring to or originating in the liver ○ *hepatogenous jaundice*

hepatolenticular degeneration /,hepətəʊlen,tɪkju:lə dɪ,dʒənə'reɪʃ(ə)n/ *noun* same as **Wilson's disease**

hepatoma /,hepətə'ʊmə/ *noun* a malignant tumour of the liver formed of mature cells, especially found in people with cirrhosis

hepatomegaly /,hepətəʊ'megəli/ *noun* a condition in which the liver becomes very large

hepatosplenomegaly /,hepətəʊ,spli:nəʊ 'megali/ *noun* enlargement of both the liver and the spleen, as occurs in leukaemia or lymphoma

hepatotoxic /,hepətəʊ'tɒksɪk/ *adjective* destroying the liver cells

herald patch /'herald ,pætʃ/ *noun* a small spot of a rash such as pityriasis rosea which appears some time before the main rash

herb /hɜ:b/ *noun* a plant which can be used in preparing medicines

herbal /hɜ:b(ə)l/ *adjective* referring to plants which are used as medicines

herbalism /hɜ:bəlɪz(ə)m/ *noun* ♦ **herbal medicine**

herbalist /hɜ:bəlist/ *noun* a person who treats illnesses or disorders with substances extracted from plants

herbal medicine /,hɜ:b(ə)l 'med(ə)sɪn/ *noun* a system of medical treatment involving the use of substances extracted from plants

herbal remedy /,hɜ:b(ə)l 'remədi/ *noun* a medicine made from plants, e.g. an infusion made from dried leaves or flowers in hot water

herd immunity /'hɜ:d ɪ,mju:nɪti/ *noun* the fact of a group of people being resistant to a specific disease, because many individuals in the group are immune to or immunised against the microorganism which causes it

hereditary /hə'redɪt(ə)rɪ/ *adjective* passed as from parents to children through the genes

hereditary spherocytosis /hə'redit(ə)rɪ ,sferəʊsəsɪ'teəsɪs/ *noun* same as **acholuric jaundice**

heredity /hə'redɪtɪ/ *noun* the process by which genetically controlled characteristics pass from parents to children

Hering-Breuer reflexes /'hərɪŋ 'brɔɪə ,rɪfleksɪz/ *plural noun* the reflexes which maintain the usual rhythmic inflation and deflation of the lungs

hermaphrodite /hɜ:t'mæfrədait/ *noun* a person with both male and female characteristics

hermaphroditism /hɜ:t'mæfrədaitɪz(ə)m/ *noun* a condition in which a person has both male and female characteristics

hernia /'hɜ:nɪə/ *noun* a condition in which an organ bulges through a hole or weakness in the wall which surrounds it. Also called **rupture** □ **reduction of a hernia** putting a hernia back into the correct position

hernial /'hɜ:nɪəl/ *adjective* referring to a hernia

hernial sac /,hɜ:nɪəl 'sæk/ *noun* a sac formed where a membrane has pushed through a cavity in the body

herniated /hɜ:nieɪtɪd/ *adjective* referring to an organ which has developed a hernia

herniated disc /,hɜ:nieɪtɪd 'dɪsk/ *noun* □ **displaced intervertebral disc**

herniation /,hɜ:nɪ'eɪʃ(ə)n/ *noun* the development of a hernia

hernio- /hɜ:nɪəʊ/ *prefix* relating to a hernia

hernioplasty /'hɜ:nɪəʊ,plæsti/ *noun* a surgical operation to reduce a hernia

herniorrhaphy /,hɜ:nɪ'ɔ:rəfi/ *noun* a surgical operation to remove a hernia and repair the organ through which it protruded

herniotomy /,hɜ:nɪ'tɒmɪ/ *noun* a surgical operation to remove a hernial sac

heroin /'herəʊɪn/ *noun* a narcotic drug in the form of a white powder derived from morphine

herpangina /,hɜ:pæŋ'dʒaɪnə/ *noun* an infectious disease of children, where the tonsils and back of the throat become inflamed and ulcerated, caused by a Coxsackie virus

herpes /'hɜ:pi:z/ *noun* inflammation of the skin or mucous membrane, caused by a virus, where small blisters are formed

herpes simplex /,hɜ:pi:z 'simpleks/ *noun*

1. (*Type I*) a virus that produces a painful blister, called a cold sore, usually on the lips 2. (*Type II*) a sexually transmitted disease which

forms blisters in the genital region. Also called **genital herpes**

herpesvirus /'hɜ:pi:z,vairəs/ *noun* one of a group of viruses which cause herpes and chickenpox (herpesvirus Type I), and genital herpes (herpesvirus Type II)

COMMENT: Because the same virus causes herpes and chickenpox, anyone who has had chickenpox as a child carries the dormant herpesvirus in his or her bloodstream and can develop shingles in later life. It is not known what triggers the development of shingles, though it is known that an adult suffering from shingles can infect a child with chickenpox.

herpes zoster /,hɜ:pi:z 'zɔstə/ *noun* inflammation of a sensory nerve, characterised by pain along the nerve and causing a line of blisters to form on the skin, usually found mainly on the abdomen or back, or on the face. Also called **shingles, zona**

herpetic /hɜ:'petɪk/ *adjective* referring to herpes

herpetiformis /hɜ:,petɪ'fɔ:mɪs/ □ **dermatitis herpetiformis**

hetero- /hetərəʊ/ *prefix* different

heterochromia /,hetərəʊ'krəʊmɪə/ *noun* a condition in which the irises of the eyes are different colours

heterogametic /,hetərəʊgə'metɪk/ *adjective* producing gametes with different sex chromosomes, as in the human male

heterogeneous /,hetərəʊ'dʒɪ:nɪəs/ *adjective* having different characteristics or qualities (NOTE: Do not confuse with **heterogenous**.)

heterogenous /,hetə'rɒndʒɪnəs/ *adjective* coming from a different source (NOTE: Do not confuse with **heterogeneous**.)

heterograft /'hetərəʊgrɑ:fɪ/ *noun* tissue taken from one species and grafted onto an individual of another species. Compare **homograft**

heterologous /hetə'rɒləgʊs/ *adjective* of a different type

heterophoria /,hetərəʊ'fɔ:riə/ *noun* a condition in which if an eye is covered it tends to squint

heteroplasty /'hetərəʊplæsti/ *noun* same as **heterograft**

heteropsia /,hetə'rɒpsɪə/ *noun* a condition in which the two eyes see differently

heterosexual /,hetərəʊ'sekshuəl/ *adjective* attracted to people of the opposite sex or relating to relations between males and females ■ *noun* a person who is sexually attracted to people of the opposite sex. Compare **bisexual, homosexual**

heterosexuality /,hetərəʊsekshu'ælɪti/ *noun* sexual attraction towards persons of the opposite sex

heterotopia /,hetərəʊ'təʊpiə/ *noun* 1. a state where an organ is placed in a different position from usual or is malformed or deformed

2. the development of tissue which is not natural to the part in which it is produced

heterotropia /hetərəʊ't्रॉpiə/ *noun* same as strabismus

heterozygous /,hetərəʊ'zaɪgəs/ *adjective* having two or more different versions of a specific gene. Compare **homozygous**

hex- /heks/ *prefix* same as **hexa-** (NOTE: used before vowels)

hexa- /hekṣə/ *prefix* six

HFEA *abbr* Human Fertilization and Embryology Authority

hGH *abbr* human growth hormone

HGPRT *abbr* hypoxanthine guanine phosphoribosyl transferase. ↗ **HPRT**

HI *abbr* hearing-impaired

hiatus /haɪ'etəs/ *noun* an opening or space

hiatus hernia /haɪ,etəs 'hɜːniə/, **hiatal hernia** /haɪ,eɪt(ə)l 'hɜːniə/ *noun* a hernia where the stomach bulges through the opening in the diaphragm muscle through which the oesophagus passes

Hib /hib/ *abbr* *Haemophilus influenzae* type B

Hib vaccine /'hbɪv ,vækseɪn/ *noun* a vaccine used to inoculate against the bacterium *Haemophilus influenzae* that causes meningitis

hiccup /'hɪkʌp/, **hiccough** *noun* a spasm in the diaphragm which causes a sudden inhalation of breath followed by sudden closure of the glottis which makes a characteristic sound
○ *She had an attack of hiccups or had a hiccupping attack or got the hiccups.* Also called **singultus** ■ *verb* to make a hiccup

COMMENT: Many cures have been suggested for hiccups, but the main treatment is to try to get the patient to think about something else. A drink of water, holding the breath and counting, breathing into a paper bag, are all recommended.

Hickman catheter /,hɪkmən 'kæθɪtə/, **Hickman line** /,hɪkmən 'laɪn/ *noun* a plastic tube which is put into the large vein above the heart so that drugs can be given and blood samples can be taken easily

hidr- /haɪdr/ *prefix* referring to sweat

hidradenitis /,haɪdrədə'naitɪs/ *noun* inflammation of the sweat glands

hidrosis /haɪ'drəʊsɪs/ *noun* sweating, especially when it is excessive

hidrotic /haɪ'drɒtɪk/ *adjective* referring to sweating ■ *noun* a substance which makes someone sweat

Higginson's syringe /hɪgɪnsənз sɪ,rɪŋз/ *noun* a syringe with a rubber bulb in the centre that allows flow in one direction only, used mainly to give enemas [After Alfred Higginson (1808–84), British surgeon]

high-altitude sickness /hai 'æltɪtju:d ,sɪknəs/ *noun* same as **altitude sickness**

high blood pressure /hai 'blʌd ,prɛfə/ *noun* same as **hypertension**

high-calorie diet /haɪ ,kæləri 'daɪət/ *noun* a diet containing over 4000 calories per day

high-density lipoprotein /haɪ ,densɪtɪ lɪpəʊ'prəʊtɪn/ *noun* a lipoprotein with a low percentage of cholesterol. Abbr **HDL**

high-energy food /,haɪ ,enədʒɪ 'fu:d/ *noun* food such as fats or carbohydrates which contain a large number of calories and give a lot of energy when they are broken down in the body

high-fibre diet /haɪ ,faɪbə 'daɪət/ *noun* a diet which contains a high percentage of cereals, nuts, fruit and vegetables

high-protein diet /haɪ ,prəʊti:n 'daɪət/ *noun* a diet containing mostly foods high in protein and low in carbohydrates and saturated fat, adopted by people who are trying to lose weight

high-risk /haɪ 'rɪsk/ *adjective* referring to someone who is very likely to catch or develop a disease, develop a cancer or have an accident

high-risk patient /,haɪ rɪsk 'peɪtɪnt/ *noun* a patient who has a high risk of catching an infection or developing a disease

hilari /'haɪlə/ *adjective* referring to a hilum

hilum /'haɪləm/ *noun* a hollow where blood vessels or nerve fibres enter an organ such as a kidney or lung (NOTE: The plural is **hila**.)

hindbrain /'haɪndbreɪn/ *noun* the part of brain of an embryo from which the medulla oblongata, the pons and the cerebellum eventually develop

hindgut /'haɪndgʌt/ *noun* part of an embryo which develops into the colon and rectum

hinge joint /'hɪndʒ dʒɔɪnt/ *noun* same as **ginglymus**

hip /hɪp/ *noun* a ball and socket joint where the thigh bone or femur joins the acetabulum of the hip bone

hip bone /'hip bəʊn/ *noun* a bone made of the ilium, the ischium and the pubis which are fused together, forming part of the pelvic girdle. Also called **innominate bone**

hip fracture /'hip ,frækɪtʃə/ *noun* a fracture of the ball at the top of the femur

hip girdle /'hip ,gɜːd(ə)l/ *noun* same as **pelvic girdle**

hip joint /'hip dʒɔɪnt/ *noun* the place where the hip is joined to the upper leg. See illustration at **PELVIS** in Supplement

Hippel-Lindau /,hɪpəl 'lɪndau/ ↗ **von Hippel-Lindau syndrome**

hippocampal formation /,hɪpəkæmp(ə)l fɔ:'meɪʃ(ə)n/ *noun* curved pieces of cortex inside each part of the cerebrum

hippocampus /,hipəu'kæmpəs/ *noun* a long rounded elevation projecting into the lateral ventricle in the brain

Hippocratic oath /,hipəkrætɪk 'əʊθ/ *noun* an ethical code observed by doctors, by which they will treat patients equally, put patients'

welfare first and not discuss openly the details of a patient's case

hippus /'hipəs/ *noun* alternating rapid contraction and dilatation of the pupil of the eye
hip replacement /'hip rɪ,pleɪsmənt/ *noun* a surgical operation to replace the whole ball and socket joint at the hip with an artificial one

Hirschsprung's disease /'hɪəʃsprʌŋz dɪ'zi:z/ *noun* a congenital condition where parts of the lower colon lack nerve cells, making peristalsis impossible, so that food accumulates in the upper colon which becomes swollen [Described 1888. After Harald Hirschsprung (1830–1916), Professor of Paediatrics in Copenhagen, Denmark.]

hirsute /'hɜ:sju:t/ *adjective* with a lot of hair
hirsutism /'hɜ:sju:tɪz(ə)m/ *noun* the condition of having excessive hair, especially a condition in which a woman grows hair on the body in the same way as a man

hirudin /hɪ'rʊ:dɪn/ *noun* an anticoagulant substance produced by leeches, which is injected into the bloodstream while the leech is feeding on a body

HIS *abbr* Health Information Service

hist- /hɪst/ same as **histo-** (NOTE: used before vowels)

histamine /'hɪstəmī:n/ *noun* a substance released in response to allergens from mast cells throughout the body. Histamines dilate blood vessels, constrict the cells of smooth muscles and cause an increase in acid secretions in the stomach.

histamine headache /'hɪstəmī:n ,hedeɪk/ *noun* ♦ **Horton's syndrome**

histamine receptor /'hɪstəmī:n rɪ,septə/ *noun* a cell which is stimulated by histamine. H1 receptors in blood vessels are involved in allergic reactions, H2 receptors in the stomach are involved in gastric acid secretion.

histamine test /'hɪstəmī:n test/ *noun* a test to determine the acidity of gastric juice

histaminic /,hɪstə'minɪk/ *adjective* referring to histamines

histaminic headache /,hɪstəmīnɪk 'heɪdɛk/ *noun* ♦ **Horton's syndrome**

histidine /'hɪstədī:n/ *noun* an amino acid from which histamine is derived

histiocyte /'hɪstɪəʊsait/ *noun* a macrophage of the connective tissue, involved in tissue defence

histiocytoma /,hɪstɪəʊsər'təʊmə/ *noun* a tumour containing histiocytes

histiocytosis /'hɪstɪəʊsər'təʊsɪs/ *noun* a condition in which histiocytes are present in the blood

histiocytosis X /,hɪstɪəʊsər,təʊsɪs 'eks/ *noun* any form of histiocytosis where the cause is not known, e.g. Hand-Schüller-Christian disease

histo- /hɪstə/ *prefix* relating to the body's tissue ◇ **histology**

histochemistry /,hɪstəʊ'kemɪstri/ *noun* the study of the chemical constituents of cells and tissues and also their function and distribution, using a light or electron microscope to evaluate the stains

histocompatibility /,hɪstəʊkəmpætə'bİLİ̄ti/ *noun* compatibility between the antigens of tissues from two individuals, important in transplants

histocompatible /,hɪstəʊkəm'paṭɪb(ə)l/ *adjective* referring to tissues from two individuals which have compatible antigens

histogenesis /,hɪstəʊ'dʒenəsɪs/ *noun* the formation and development of tissue from the embryological germ layer

histogram /'hɪstəgræm/ *noun* a way of displaying frequency values as columns whose height is proportional to the corresponding frequency ◇ *a histogram showing numbers of patients with the condition in each age group*

histoid /'hɪstɔɪd/ *adjective* 1. made of or developed from a particular tissue 2. like standard tissue

histological /,hɪstə'lɒdʒɪk(ə)l/ *adjective* referring to histology

histological grade /,hɪstəlɒdʒɪk(ə)l 'greɪd/ *noun* a system of classifying tumours according to how malignant they are

histology /hɪ'stɒlədʒɪ/ *noun* the study of the anatomy of tissue cells and minute cellular structure

histolysis /hɪ'stɒləsɪs/ *noun* the disintegration of tissue

histolytica /,hɪstə'lɪtɪkə/ ♦ **Entamoeba histolytica**

histoplasmosis /,hɪstəplæz'məʊsɪs/ *noun* a lung disease caused by infection with the fungus *Histoplasma*

history /'hɪst(ə)rɪ/ *noun* the background information on someone's illness. ♦ **case history, medical history** ◇ **to take a patient's history** to ask someone to tell what has happened to them in their own words on being admitted to hospital

'...these children gave a typical history of exercise-induced asthma' [*Lancet*]

'...the need for evaluation of patients with a history of severe heart disease' [*Southern Medical Journal*]

histotoxic /,hɪstəʊ'tɒksɪk/ *adjective* referring to a substance which is poisonous to tissue

HIV *abbr* human immunodeficiency virus

'HIV-associated dementia is characterized by psychomotor slowing and inattentiveness' [*British Journal of Nursing*]

COMMENT: HIV is the virus which causes AIDS. Three strains of HIV virus have been identified: HIV-1, HIV-2 and HIV-3.

hives /haɪvz/ *noun* same as **urticaria** (NOTE: Takes a singular verb.)

HIV-negative /'eɪtʃ' aɪ ,vi: 'neɡətɪv/ *adjective* referring to someone who has been tested and shown not to have HIV

HIV-positive /'eɪtʃ' aɪ ,vi: 'pozɪtɪv/ *adjective* referring to someone who has been tested and shown to have HIV

HLA *abbr* human leucocyte antigen

HLA system /'eɪtʃ' el 'eɪ ,sistəm/ *noun* a system of HLA antigens on the surface of cells which need to be histocompatible to allow transplants to take place

COMMENT: HLA-A is the most important of the antigens responsible for rejection of transplants.

HMO *abbr US* Health Maintenance Organization

hoarse /hɔ:s/ *adjective* referring to a voice which is harsh and rough

hoarseness /'hɔ:snəs/ *noun* a harsh and rough sound of the voice, often caused by laryngitis

hobnail liver /'hɒbneɪl 'lɪvə/ *noun* same as **atrophic cirrhosis**

Hodgkin's disease /'hɒdʒkɪnз dɪ,zi:z/ *noun* a malignant disease in which the lymph glands are enlarged and there is an increase in the lymphoid tissues in the liver, spleen and bone marrow. It is frequently fatal if not treated early. [Described 1832. After Thomas Hodgkin (1798–1866), British physician.]

hoist /hɔɪst/ *noun* a device with pulleys and wires for raising a bed or a patient

hole in the heart /'həʊl ɪn ðə 'ha:t/ *noun* same as **septal defect (informal)**

Holger-Nielsen method /hɒlѓe 'nilsən ,meθəd/ *noun* a formerly used method of giving artificial respiration by pressing a person's back and raising their arms backwards

holism /'həʊlɪz(ə)m/ *noun* the theory that all of a person's physical, mental and social conditions should be considered in the treatment of his or her illness

holistic /həʊ'lɪstɪk/ *adjective* referring to a method of treatment involving all of someone's mental and family circumstances rather than just dealing with the condition from which he or she is suffering

holistic care /həʊ,lɪstɪk 'keə/ *noun* the care and treatment of a whole person rather than just of his or her medical symptoms

holo- /hɒləʊ/ *prefix* entire, complete

holocrine /'hɒləkrɪn/ *adjective* referring to a gland where the secretions are made up of disintegrated cells of the gland itself

Homans' sign /'həʊmənz sain/ *noun* pain in the calf when the foot is bent back, a sign of deep-vein thrombosis [Described 1941. After John Homans (1877–1954), Professor of Clinical Surgery at Harvard, USA.]

homeo- /həʊmiəʊ/ *prefix* like or similar

homeopathic /,həʊmiə'pæθɪk/, **homoeopathic** /həʊmiə'pæθɪk/ *adjective* 1. referring to homeopathy ○ a **homeopathic clinic** ○ She is having a course of homeopathic treatment. 2. referring to a drug which is given in very small quantities

homeopathist /,həʊmi'ɒpəθɪst/, **homoeopathist** /həʊmi'ɒpəθɪst/ *noun* a person who practises homeopathy

homeopathy /,həʊmi'ɒpəθi/, **homoeopathy** /həʊmi'ɒpəθi/ *noun* the treatment of a condition by giving the person very small quantities of a substance which, when given to a healthy person, would cause symptoms like those of the condition being treated. Compare **allopathy**

homeostasis /,həʊmiəʊ'steɪsɪs/ *noun* the process by which the functions and chemistry of a cell or internal organ are kept stable, even when external conditions vary greatly

homo- /həʊməʊ/ *prefix* the same

homoeo- /həʊmiəʊ/ *prefix* another spelling of **homeo-** (*used before vowels*)

homogenise /hə'mɒndʒənaɪz/, **homogenize** *verb* to give something a uniform nature

homograft /'hɒməgra:f/ *noun* the graft of an organ or tissue from a donor to a recipient of the same species, e.g. from one person to another. Also called **allograft**. Compare **heterograft**

homolateral /,hɒmə'læt(ə)rəl/ *adjective* same as **ipsilateral**

homologous /hɒ'mɒləgəs/ *adjective* 1. of the same type 2. referring to chromosomes which form a pair

homonymous /hə'mɒnɪməs/ *adjective* affecting the two eyes in the same way

homonymous hemianopia /hə,mɒnɪməs hemi'naʊpiə/ *noun* a condition in which the same half of the field of vision is lost in each eye

homoplasty /'həʊməoplæsti/ *noun* surgery to replace lost tissues by grafting similar tissues from another person

homosexual /,həʊməʊ'sekʃuəl/ *adjective* referring to homosexuality ■ *noun* a person who is sexually attracted to people of the same sex. Compare **bisexual**, **heterosexual** (NOTE: Although **homosexual** can apply to both males and females, it is commonly used for males only, and **lesbian** is used for females.)

homosexuality /,həʊməʊsektʃu'æltɪti/ *noun* sexual attraction to people of the same sex or sexual relations with people of the same sex

homozygous /,həʊməʊ'zaɪgəs/ *adjective* having two identical versions of a specific gene. Compare **heterozygous**

hook /huk/ *noun* a surgical instrument with a bent end used for holding structures apart in operations

hookworm /'hukwɜːm/ *noun* a parasitic worm

hookworm disease /'hukwɜːm dɪ,zi:z/ *noun* \blacktriangleright **ancylostomiasis**

hordeolum /hɔː'diːələm/ *noun* an infection of the gland at the base of an eyelash. Also called **sty**

horizontal /'hɔːrɪ'zɒnt(ə)l/ *adjective* lying flat or at a right angle to the vertical

horizontal fissure /,hɔːrɪ,zfɪs(ə)r/ *noun* ANAT a horizontal groove between the superior and middle lobes of a lung. See illustration at **LUNGS** in Supplement

horizontal plane /,hɔːrɪzɒnt(ə)l 'pleɪn/ *adjective* same as **transverse plane**. see illustration at **ANATOMICAL TERMS** in Supplement

hormonal /hɔː'moʊnl(ə)l/ *adjective* referring to hormones

hormone /'hɔːməʊn/ *noun* a substance which is produced by one part of the body, especially the endocrine glands and is carried to another part of the body by the bloodstream where it has particular effects or functions

hormone replacement therapy /,hɔːməʊn ri'pleɪsmənt ,θerəpi/, **hormone therapy** /'hɔːməʊn ,θerəpi/ *noun* 1. treatment for someone whose endocrine glands have been removed 2. treatment to relieve the symptoms of the menopause by supplying oestrogen and reducing the risk of osteoporosis ► Abbr **HRT**

horn /hɔːn/ *noun* 1. (in humans) tissue which grows out of an organ 2. (in humans) one of the H-shaped limbs of grey matter seen in a cross-section of the spinal cord 3. (in humans) an extension of the pulp chamber of a tooth towards the cusp

Horner's syndrome /'hɔːnəz ,sɪnd्रəʊm/ *noun* a condition caused by paralysis of the sympathetic nerve in one side of the neck, making the eyelids hang down and the pupils contract [Described 1869. After Johann Friedrich Horner (1831–86), Professor of Ophthalmology in Zürich, Switzerland.]

horny /'hɔːni/ *adjective* referring to skin which is very hard (NOTE: For terms referring to horny tissue, see words beginning with **kerat-**, **kerato-**.)

horseshoe kidney /,hɔːsʃu: 'kɪdni/ *noun* a congenital condition of the kidney, where sometimes the upper but usually the lower parts of both kidneys are joined together

Horton's syndrome /'hɔːt(ə)nз ,sɪn drəʊm/ *noun* a severe headache, often with constant pain around one eye, which starts usually within a few hours of going to sleep. It is caused by the release of histamine in the body. [After Bayard Taylor Horton (b. 1895), US physician]

hose /həʊz/ *noun* 1. a long rubber or plastic tube 2. \blacktriangleright **support hose**

hospice /'hɒspɪs/ *noun* a hospital which offers palliative care for terminally ill people

hospital /'hɒspɪt(ə)l/ *noun* a place where sick or injured people are looked after ◇ **hospital bed** 1. a special type of bed used in hospitals, usually adjustable in many ways for the comfort of the patient ◇ A hospital bed is needed if the patient has to have traction. 2. a place in a hospital which can be occupied by a patient ◇ There will be no reduction in the number of hospital beds.

hospital-acquired infection /,hɒspɪt(ə)l ə ,kwaɪəd in'fekʃən/ *noun* a disease caught during a stay in hospital

Hospital Activity Analysis /,hɒspɪt(ə)l æk'tɪviti ə,næləsɪs/ *noun* a regular detailed report on patients in hospitals, including information about treatment, length of stay and outcome

hospital care /'hɒspɪt(ə)l keə/ *noun* treatment in a hospital

hospital chaplain /,hɒspɪt(ə)l 'tʃæplɪn/ *noun* a religious minister attached to a hospital, who visits and comforts patients and their families and gives them the sacraments if necessary

hospital corner /,hɒspɪt(ə)l 'kɔːnə/ *noun* a way of folding the overlapping bedding at each corner of a bed that keeps it tight

hospital doctor /,hɒspɪt(ə)l 'dɒktə/ *noun* a doctor who works only in a hospital and does not receive people in his or her own surgery

hospital gangrene /,hɒspɪt(ə)l 'gæŋgrɪ:n/ *noun* gangrene caused by insanitary hospital conditions

hospital infection /'hɒspɪt(ə)l ɪn,fekʃən/ *noun* an infection which someone gets during a hospital visit, or one which develops among hospital staff

COMMENT: Hospital infection is an increasingly common problem due to growing antimicrobial resistance and inappropriate antibiotic use. Strains of bacteria such as MRSA have evolved which seem to be more easily transmitted between patients and are difficult to treat.

hospitalisation /,hɒspɪt(ə)laɪ'zeɪʃ(ə)n/, **hospitalization** *noun* the act of sending someone to hospital ◇ The doctor recommended immediate hospitalisation.

hospitalise /'hɒspɪt(ə)laɪz/, **hospitalize** *verb* to send someone to hospital ◇ He is so ill that he has had to be hospitalised.

hospital orderly /,hɒspɪt(ə)l 'ɔːdɪlɪ/ *noun* a person who does heavy work in a hospital, such as wheeling patients into the operating theatre or moving equipment about

hospital trust /'hɒspɪt(ə)l trаст/ *noun* same as **self-governing hospital**

host /'həʊst/ *noun* a person or animal on which a parasite lives

hot /hɒt/ *adjective* very warm or having a high temperature

hot flush /,hɒt 'flaʃ/ *noun* a condition in menopausal women, in which the woman becomes hot and sweats, and which is often accompanied by redness of the skin

hotpack /'hɒtpæk/ *noun* a cloth bag or a pad filled with gel or grains which can be heated and applied to the skin to relieve pain or stiffness

hot wax treatment /,hɒt 'wæks ,tri:tment/ *noun* a treatment for arthritis in which the joints are painted with hot liquid wax

hourglass contraction /'aʊəglɑ:s kən ,trækʃən/ *noun* a condition in which an organ such as the stomach is constricted in the centre

hourglass stomach /'aʊəglɑ:s ,stʌmæk/ *noun* a condition in which the wall of the stomach is pulled in so that it is divided into two cavities, cardiac and pyloric

hourly /'aʊəli/ *adjective, adverb* happening every hour

houseman /'haʊsmən/ *noun* same as **house officer**

house mite /haʊs mait/, **house dust mite** /'haʊs dʌst ,maɪt/ *noun* a tiny insect living mainly in bedding and soft furnishings, that can cause an allergic reaction

house officer /'haʊs ,oʊfɪsə/ *noun* a doctor who works in a hospital as a house surgeon or house physician during the final year of training before registration by the General Medical Council (NOTE: The US term is **intern**.)

HPRT *noun* an enzyme that is lacking in children, usually boys, who have Lesch-Nyhan disease. Full form **hypoxanthine phosphoribosyl transferase**. Also called **HGPRT (hypoxanthine guanine phosphoribosyl transferase)**

HPV *abbr* human papillomavirus

HRT *abbr* hormone replacement therapy

Huhner's test /'hu:nəz ,test/ *noun* a test carried out several hours after sexual intercourse to determine the number and motility of spermatozoa [After Max Huhner (1873–1947), US urologist]

human /'hju:mən/ *adjective* referring to any man, woman or child ■ *noun* a person ○ *Most animals are afraid of humans.*

human anatomy /,hju:mən ə'nætəmɪ/ *noun* the structure, shape and functions of the human body

human being /,hju:mən 'bi:ɪŋ/ *noun* a person

human chorionic gonadotrophin /,hju:mən kɔ:rɪ,gnɒk ɡəʊnədə't्रəʊfɪn/ *noun* a hormone produced by the placenta, which suppresses the mother's usual menstrual cycle during pregnancy. It is found in the urine during pregnancy, and can be given by

injection to encourage ovulation and help a woman to become pregnant. Abbr **hCG**

human crutch /,hju:mən 'krʌtʃ/ *noun* a method of helping an injured person to walk, where they rest one arm over the shoulders of the person helping

human immunodeficiency virus /,hju:mən ,ɪmju:nədɪfɪ'sjൻ(ə)nsi ,vairəs/ *noun* a virus which causes AIDS. Abbr **HIV**

human leucocyte antigen /,hju:mən 'lu:kəsait ,æntɪdʒ(ə)n/ *noun* any of the system of antigens on the surface of cells which need to be histocompatible to allow transplants to take place. Abbr **HLA**. ♦ **HLA system**

human nature /,hju:mən 'neɪtʃə/ *noun* the general behavioural characteristics of human beings

human papillomavirus /,hju:mən pæpi'ləʊmə ,vairəs/ *noun* a virus that causes genital warts in humans. Abbr **HPV**

humectant /hju:'mektənt/ *adjective* able to absorb or retain moisture ■ *noun* a substance that can absorb or retain moisture, e.g. a skin lotion

humero-ulnar joint /,hju:mərəʊ'ʌlnədʒoint/ *noun* part of the elbow joint, where the trochlea of the humerus and the trochlear notch of the ulna move next to each other

humerus /'hju:mərəs/ *noun* the top bone in the arm, running from the shoulder to the elbow (NOTE: The plural is **humeri**.)

humid /'hju:mid/ *adjective* damp, containing moisture vapour

humoral /'hju:mərəl/ *adjective* relating to human body fluids, in particular blood serum

humour /'hju:mə/, **humor** *noun* a fluid in the body

hunchback /'hʌntʃbæk/ *noun* ♦ **kyphosis**

hunger /'hʌŋgə/ *noun* a need to eat

hunger pains /'hʌŋgə peɪns/ *plural noun* pains in the abdomen when a person feels hungry, sometimes a sign of a duodenal ulcer

Hunter's syndrome /'hʌntəz ,sɪndrəʊm/ *noun* an inherited disorder caused by an enzyme deficiency, which leads to learning difficulties

Huntington's chorea /,hʌntɪntən z kö:ri:ə/ *noun* a progressive hereditary disease which affects adults, where the outer layer of the brain degenerates and the person makes involuntary jerky movements and develops progressive dementia [Described 1872. After George Sumner Huntington (1850–1916), US physician.]

Hurler's syndrome /'hɜ:ləz ,sɪndrəʊm/ *noun* same as **gargoylism** [Described 1920. After Gertrud Hurler, German paediatrician.]

hurt /hɜ:t/ *noun* 1. emotional pain 2. a painful area (used by children) ○ *She has a hurt on her knee.* ■ *verb* 1. to have pain ○ *He's hurt his hand.* 2. to cause someone pain ○ *His arm is*

hurting so much he can't write. ○ She fell down and hurt herself. (NOTE: **hurting – hurt**)

■ **adjective** 1. feeling physical pain ○ *He was slightly hurt in the car crash. ○ Two players got hurt in the football game.* 2. feeling emotional pain ○ *Her parents' divorce hurt her deeply.*

husky /'haʊski/ **adjective** slightly hoarse

Hutchinson's tooth /'hatʃɪnsənθ ,tu:θ/ **noun** a narrow upper incisor tooth, with notches along the cutting edge, a symptom of congenital syphilis but also occurring naturally (NOTE: The plural is **Hutchinson's teeth**.) [After Sir Jonathan Hutchinson (1828–1913), British surgeon]

hyal- /haɪəl/ **prefix** like glass (*used before vowels*)

hyalin /'haɪəlin/ **noun** a transparent substance produced from collagen and deposited around blood vessels and scars when some tissues degenerate

hyaline /'haɪəlin/ **adjective** nearly transparent like glass

hyaline cartilage /'haɪəlin 'ka:tɪlɪdʒ/ **noun** a type of cartilage found in the nose, larynx and joints. It forms most of the skeleton of the fetus. See illustration at **CARTILAGINOUS JOINT** in Supplement

hyaline membrane disease /,haɪəlin 'membreɪn dɪ,zi:z/ **noun** same as **respiratory distress syndrome**

hyalitis /,haɪə'laitɪs/ **noun** inflammation of the vitreous humour or the hyaloid membrane in the eye. Also called **vitreitis**

hyaloid membrane /'haɪəlɔɪd ,membreɪn/ **noun** a transparent membrane round the vitreous humour in the eye

hyaluronic acid /,haɪəlʊrɒnɪk 'æsɪd/ **noun** a substance which binds connective tissue and is found in the eyes

hyaluronidase /,haɪəlu'rɒnɪdaɪz/ **noun** an enzyme which destroys hyaluronic acid

hybrid /'haɪbrɪd/ **noun** an organism that is a result of a cross between individuals that are not genetically the same as each other

HYCOSY *abbr* hysterosalpingo-contrast sonography

hydatid /'haɪdətɪd/ **noun** any cyst-like structure

hydatid cyst /'haɪdətɪd 'sist/ **noun** the larval form of the tapeworms of the genus *Echinococcus*

hydatid disease /'haɪdətɪd di,zi:z/, **hydatidosis** /'haɪdətɪd'ðəʊsɪs/ **noun** an infection, usually in the lungs or liver, caused by expanding hydatid cysts that destroy the tissues of the infected organ

hydatid mole /'haɪdətɪd 'məʊl/ **noun** an abnormal pregnancy from a pathologic ovum, resulting in a mass of cysts shaped like a bunch of grapes

hydr- /haɪdr/ **prefix** same as **hydro-** (*used before vowels*)

hydraemia /haɪ'dri:miə/ **noun** an excess of water in the blood

hydragogue /'haɪdrəgɒg/ **noun** a laxative or substance which produces watery faeces

hydralazine /haɪ'drælæzɪn/ **noun** a drug that lowers blood pressure. People usually receive it in combination with other drugs that increase the output of urine.

hydramnios /haɪ'dræmnɪəs/ **noun** an unusually large amount of amniotic fluid surrounding the fetus

hydrarthrosis /,haɪdra:θrəʊsɪs/ **noun** swelling caused by excess synovial liquid at a joint

hydrate /'haɪdrɪteɪt/ **verb** to give water to someone so as to re-establish or maintain fluid balance ■ **noun** a chemical compound containing water molecules that can usually be driven off by heat without altering the compound's structure

hydro- /haɪdrəʊ/ **prefix** referring to water

hydroa /haɪ'drəʊə/ **noun** an eruption of small itchy blisters, e.g. those caused by sunlight

hydrocalycosis /,haɪdrəʊ,kælɪ'kəʊsɪs/ **noun** same as **caliectasis**

hydrocele /'haɪdrəsɪ:l/ **noun** the collection of watery liquid found in a cavity such as the scrotum

hydrocephalus /,haɪdrəʊ'kefələs/ **noun** an excessive quantity of cerebrospinal fluid in the brain

hydrochloric acid /haɪdrəʊ'klɔ:rɪk 'æsɪd/ **noun** an acid found in the gastric juices which helps to break apart the food

hydrocolloid strip /,haɪdrəʊkɒləɪd 'strip/ **noun** a waterproof gel dressing that seals a wound, retaining moisture and preventing access to germs and dirt

hydrocolpos /,haɪdrəʊ'kɒlpəs/ **noun** a cyst in the vagina containing clear fluid

hydrocortisone /,haɪdrəʊ'kɔ:tɪzən/ **noun** a steroid hormone secreted by the adrenal cortex or produced synthetically, used in the treatment of rheumatoid arthritis and inflammatory and allergic conditions

hydrocyanic acid /,haɪdrəʊsaiənɪk 'æsɪd/ **noun** an acid which forms cyanide. Abbr **HCN**

hydrogen /haɪdrədʒən/ **noun** a chemical element, a gas which combines with oxygen to form water, and with other elements to form acids, and is present in all animal tissue (NOTE: The chemical symbol is H.)

hydrogen peroxide /,haɪdrədʒən pe'rɒk said/ **noun** a solution used as a disinfectant

hydrolysis /haɪ'drɒləsɪs/ **noun** the breaking down of a chemical compound when it reacts with water to produce two or more different compounds, as in the conversion of starch to glucose

hydroma /haɪ'drəʊmə/ *noun* same as **hygroma**

hydrometer /haɪ'dromɪtə/ *noun* an instrument which measures the density of a liquid

hydromyelia /haɪdrəʊmɪ'li:ə/ *noun* a condition in which fluid swells the central canal of the spinal cord

hydronephrosis /haɪdrəʊ'nɛfrəʊsɪs/ *noun* swelling of the pelvis of a kidney caused by accumulation of water due to infection or a kidney stone blocking the ureter

hydropathy /haɪ'dropəθi/ *noun* the treatment of injuries or disease by bathing in water or drinking mineral waters

hydropericarditis /haɪdrəʊ,peɪrɪkɑ:dɪtɪs/, **hydropericardium** /haɪdrəʊ,peɪrɪ'kærdiəm/ *noun* an accumulation of liquid round the heart

hydroperitoneum /haɪdrəʊ,peɪrɪtə'ni:əm/ *noun* a build-up of fluid in the peritoneal cavity
(NOTE: The plural is **hydroperitoneums** or **hydroperitonea**.)

hydrophobia /haɪdrə'fəʊbiə/ *noun* same as **rabies**

COMMENT: Hydrophobia affects the mental balance, and the symptoms include difficulty in breathing or swallowing and a horror of water.

hydropneumoperitoneum /haɪdrəʊ,nju:məʊ,peɪrɪtə'ni:əm/ *noun* a condition in which watery fluid and gas collect in the peritoneal cavity

hydropneumothorax /haɪdrəʊ,nju:məʊ'θɔ:ræks/ *noun* a condition in which watery fluid and gas collect in the pleural cavity
(NOTE: The plural is **hydropneumothoraces** or **hydropneumothorases**.)

hydrops /haɪdrəps/ *noun* same as **oedema**
(NOTE: The plural is **hydropses**.)

hydrorrhoea /haɪdrəʊ'rɪə/ *noun* a discharge of watery fluid (NOTE: The US spelling is **hydrorhea**.)

hydrosalpinx /haɪdrəʊ'sælpɪŋks/ *noun* an occasion when watery fluid collects in one or both of the Fallopian tubes, causing swelling
(NOTE: The plural is **hydrosalpinges**.)

hydrotherapy /haɪdrəʊ'θerəpi/ *noun* a type of physiotherapy involving treatment in water, where people are put in hot baths or are encouraged to swim

hydrothorax /haɪdrəʊ'θɔ:ræks/ *noun* the collection of liquid in the pleural cavity

hydrotubation /haɪdrəʊtju:'beɪʃ(ə)n/ *noun* an act of putting a fluid through the neck of the uterus and the Fallopian tubes under pressure to check whether the tubes are blocked

hydroureter /haɪdrəʊju'rɪ:tə/ *noun* a condition in which water or urine collect in the ureter because it is blocked

hydroxide /haɪ'drɒksaɪd/ *noun* a chemical compound containing a hydroxyl group

hydroxyproline /haɪ'drɒksi'prəʊlɪ:n/ *noun* an amino acid present in some proteins, especially in collagen

hygiene /haɪdʒi:n/ *noun* 1. the procedures and principles designed to keep things clean and to keep conditions healthy ○ *Nurses have to maintain a strict personal hygiene.* 2. the science of health

hygienic /haɪ'dʒi:nɪk/ *adjective* 1. clean ○ *Don't touch the food with dirty hands – it isn't hygienic.* 2. producing healthy conditions

hygienist /haɪdʒi:nɪst/ *noun* a person who specialises in hygiene and its application

hygr- /haɪgr/ *prefix* same as **hygro-** (used before vowels)

hygro- /haɪgrəʊ/ *prefix* relating to moisture

hygroma /haɪ'grəʊmə/ *noun* a kind of cyst which contains a thin fluid

hymen /haɪ'men/ *noun* a membrane which partially covers the vaginal passage in a female who has never had sexual intercourse

hymenectomy /haɪmə'nektaʊmɪ/ *noun* 1. the surgical removal of the hymen, or an operation to increase the size of the opening of the hymen 2. the surgical removal of any membrane

hymenotomy /haɪmə'nɒtəmɪ/ *noun* an incision of the hymen during surgery

hyo- /haɪəʊ/ *prefix* relating to the hyoid bone

hyoglossus /haɪəʊ'glosəs/ *noun* a muscle which is attached to the hyoid bone and depresses the tongue

hyoid /haɪəʊɪd/ *adjective* relating to the hyoid bone

hyoid bone /'haɪəʊɪd bəʊn/ *noun* a small U-shaped bone at the base of the tongue

hyoscine /haɪəʊsi:n/ *noun* a drug used as a sedative, in particular for treatment of motion sickness

hyp- /haɪp/ *prefix* same as **hypo-** (used before vowels)

hypaemia /haɪ'pi:miə/ *noun* an insufficient amount of blood in the body

hypalgesia /haɪpæl'dʒi:ziə/ *noun* low sensitivity to pain

hyper- /haɪpə/ *prefix* higher or too much. Opposite **hypo-**

hyperacidity /haɪpərə'sɪdɪti/ *noun* the production of more acid in the stomach than is usual. Also called **acidity, acid stomach**

hyperacusia /haɪpərə'kjuziə/ *noun* same as **hyperacusis**

hyperactive /haɪpər'æktyv/ *adjective* very or unusually active

hyperactivity /haɪpəræk'tɪvɪtɪ/ *noun* a condition in which something or someone, e.g. a gland or a child, is too active

hyperacusis /haɪpərə'kjusɪs/ *noun* a condition in which someone is very sensitive to sounds

hyperadrenalinism /haɪpərə'dri:n(ə)lɪz(ə)m/ noun a disorder in which too many adrenal hormones are produced, e.g. because of pituitary gland malfunction, a tumour of the adrenal gland or high doses of steroids

hyperaemia /haɪpə'rɪ:miə/ noun excess blood in any part of the body

hyperaesthesia /haɪpə'rei:əs'θi:ziə/ noun an extremely high sensitivity in the skin

hyperalgesia /haɪpə'ræl'dʒi:ziə/ noun an increased sensitivity to pain

hyperalimentation /haɪpə'rælɪmən'teɪʃ(ə)n/ noun the feeding of large amounts of nutrients by mouth or intravenously to someone with serious nutritional deficiency

hyperandrogenism /haɪpəræ'drɒndʒənɪz(ə)m/ noun a condition in which a woman produces too many androgens, associated with many problems such as hirsutism, acne, infertility and polycystic ovarian disease

hyperbaric /haɪpə'bærɪk/ adjective referring to a treatment in which someone is given oxygen at high pressure, used to treat carbon monoxide poisoning

hypercalcaemia /haɪpəkæl'si:miə/ noun an excess of calcium in the blood

hypercalcinuria /haɪpəkælsɪ'njuəriə/ noun a condition in which an unusually high amount of calcium occurs in the urine

hypercapnia /haɪpə'kæpnɪə/ noun an unusually high concentration of carbon dioxide in the bloodstream

hypercatabolism /haɪpəkæ'tæbəlɪz(ə)m/ noun a condition in which the body breaks down its own tissues or a particular substance too much. It causes weight loss and wasting.

hyperchloraemia /haɪpəkłɔ:'ri:miə/ noun a condition in which there is too much chloride in the blood

hyperchlorhydria /haɪpəkłɔ:'haɪdrɪə/ noun an excess of hydrochloric acid in the stomach

hyperdactylysm /haɪpə'dæktrɪlɪz(ə)m/ noun the condition of having more than the usual number of fingers or toes. Also called polydactylysm

hyperemesis /haɪpə'r'emɪsɪs/ noun excessive vomiting (NOTE: The plural is hyperemesis.)

hyperemesis gravidarum /haɪpəremɪsɪs'grævɪ'deərəm/ noun uncontrollable vomiting in pregnancy

hyperextension /haɪpərɪk'stenʃən/ noun the act of stretching an arm or leg beyond its usual limits of movement

hyperflexion /haɪpə'fleksjən/ noun the act of flexing a joint beyond the usual limit ○ a hyperflexion injury

hyperfunction /haɪpə,fʌŋkj(ə)n/ noun excessive activity of a gland or other organ of the body

hypergalactia /haɪpəgæ'læktiə/, **hypergalactosis** /haɪpə,gælkət'əʊsɪs/ noun a condition in which too much milk is secreted

hyperglycaemia /haɪpəglət'si:miə/ noun an excess of glucose in the blood

hyperhidrosis /haɪpəhar'drəʊsɪs/ noun a condition in which too much sweat is produced

hyperinsulinism /haɪpər'ɪnsjʊlɪnɪz(ə)m/ noun the reaction of a diabetic to an excessive dose of insulin or to hypoglycaemia

hyperkalaemia /haɪpəkæ'lɪ:miə/ noun a condition in which too much potassium occurs in the blood, which can result in cardiac arrest. Various possible causes include kidney failure and chemotherapy.

hyperkeratosis /haɪpəkərə'təʊsɪs/ noun a condition in which the outer layer of the skin becomes unusually thickened

hyperkinesia /haɪpəkɪ'ni:ziə/ noun a condition in which there is unusually great strength or movement

hyperkinetic syndrome /haɪpəkɪ'netɪk,sɪndrəʊm/ noun a condition in which someone experiences fatigue, shortness of breath, pain under the heart and palpitation

hyperlipidaemia /haɪpəlɪpɪ'di:miə/ noun the pathological increase of the amount of lipids, or fat, in the blood

hypermenorrhoea /haɪpəmənə'rɪ:ə/ noun menstruation in which the flow is excessive

hypermetropia /haɪpəmə'trəʊpiə/, **hyperopia** /haɪpə'rəʊpiə/ noun a condition in which someone sees more clearly objects which are a long way away, but cannot see objects which are close. Also called longsightedness, hyperopia

hypernatraemia /haɪpənæ'trɪ:miə/ noun a serious condition occurring most often in babies or elderly people, in which too much sodium is present in the blood as a result of loss of water and electrolytes through diarrhoea, excessive sweating, not drinking enough or excessive salt intake

hypernephroma /haɪpənə'frəʊmə/ noun same as Grawitz tumour

hyperopia /haɪpə'rəʊpiə/ noun same as hypermetropia

hyperostosis /haɪpər'stəʊsɪs/ noun excessive overgrowth on the outside surface of a bone, especially the frontal bone

hyperparathyroidism /haɪpə,pærə'θaɪrədɪz(ə)m/ noun an unusually high concentration of parathyroid hormone in the body. It causes various medical problems including damage to the kidneys.

hyperphagia /haɪpə'feɪdʒiə/ noun long-term compulsive overeating

hypertnesia /haɪpəpə'lɪ:ziə/ noun same as hypertension

hyperplesia /haɪpə'pɛliə/ *noun* unusually high pressure, especially of the blood

hyperpituitarism /haɪpə'pɪtju:tərɪz(ə)m/ *noun* a condition in which the pituitary gland is overactive

hyperplasia /haɪpə'pleɪzɪə/ *noun* a condition in which there is an increase in the number of cells in an organ

hyperpnoea /haɪpə'pnɪə/ *noun* unusually deep or fast breathing, e.g. after physical exercise

hyperpyrexia /haɪpə'pærɪk'riksɪə/ *noun* a body temperature of above 41.1°C

hypersecretion /haɪpə'se:kri:ʃ(ə)n/ *noun* a condition in which too much of a substance is secreted

hypersensitive /haɪpə'sensɪtɪv/ *adjective* referring to a person who reacts more strongly than usual to an antigen

hypersensitivity /haɪpə'sensɪ'tɪvɪtɪ/ *noun* a condition in which someone reacts very strongly to something such as an allergic substance ◎ *her hypersensitivity to dust ◯ Anaphylactic shock shows hypersensitivity to an injection.*

hypersplenism /haɪpə'splenɪz(ə)m/ *noun* a condition in which too many red blood cells are destroyed by the spleen, which is often enlarged

hypertelorism /haɪpə'telərɪz(ə)m/ *noun* a condition in which there is too much space between two organs or parts of the body

hypertension /haɪpə'tenʃən/ *noun* arterial blood pressure that is higher than the usual range for gender and age. Also called **high blood pressure, hyperplesia**. Compare **hypotension**

COMMENT: Hypertension is without a specific cause in more than 50% of cases (**essential hypertension**) but may be associated with other diseases. It is treated with drugs such as beta blockers, ACE inhibitors, diuretics and calcium channel blockers.

hypertensive /haɪpə'tensɪv/ *adjective* referring to high blood pressure

hypertensive headache /haɪpə'tensɪv 'hedeɪk/ *noun* a headache caused by high blood pressure

hypertensive retinopathy /haɪpə'tensɪv ,retɪn'ɒpθɪ/ *noun* changes in the retina caused by local bleeding and a restricted blood supply that threaten eyesight, as the condition indicates that the blood pressure is excessively high

hyperthermia /haɪpə'θɜ:mɪə/ *noun* a very high body temperature

hyperthyroidism /haɪpə'θaɪrɔɪdɪz(ə)m/ *noun* a condition in which the thyroid gland is too active and releases unusual amounts of thyroid hormones into the blood, giving rise to a rapid heartbeat, sweating and trembling. It

can be treated with carbimazole. Also called **thyrotoxicosis**

hypertonia /haɪpə'tənɪə/ *noun* an increased rigidity and spasticity of the muscles

hypertonic /haɪpə'tɒnɪk/ *adjective* 1. referring to a solution which has a higher osmotic pressure than another specified solution 2. referring to a muscle which is under unusually high tension

hypertrichosis /haɪpə'trɪk'keəsɪs/ *noun* a condition in which someone has excessive growth of hair on the body or on part of the body

hypertrophic /haɪpə'trɒfɪk/ *adjective* associated with hypertrophy

hypertrophic rhinitis /haɪpətrɒfɪk rai'naitɪs/ *noun* a condition in which the mucous membranes in the nose become thicker

hypertrophy /haɪpə'trɔfi/ *noun* an increase in the number or size of cells in a tissue

hypertropia /haɪpə't्रॉپɪə/ *noun* US same as **hypermetropia**

hyperventilate /haɪpə'ventɪleɪt/ *verb* to breathe very fast ◎ *We hyperventilate as an expression of fear or excitement.*

hyperventilation /haɪpə'ventɪl'eɪʃ(ə)n/ *noun* very fast breathing which can be accompanied by dizziness or tetany

hypervitaminosis /haɪpə,vitə'mɪnəʊsɪs/ *noun* a condition caused by taking too many synthetic vitamins, especially Vitamins A and D

hypervolaemia /haɪpəvɒ'lɪ:miə/ *noun* a condition in which there is too much plasma in the blood

hyphaema /haɪ'fi:miə/ *noun* bleeding into the front chamber of the eye

hypn- /hɪpn/ *prefix* referring to sleep

hypnosis /hɪp'nəʊsɪs/ *noun* a state like sleep, but caused artificially, where a person can remember forgotten events in the past and will do whatever the hypnotist tells him or her to do

hypnotherapist /hɪpnəʊ'θerəpɪst/ *noun* a person who practises hypnotherapy

hypnotherapy /hɪpnəʊ'θerəpɪ/ *noun* treatment by hypnosis, used in treating some addictions

hypnotic /hɪp'nɒtɪk/ *adjective* 1. relating to hypnosis and hypnotism 2. referring to a state which is like sleep but which is caused artificially 3. referring to a drug which causes sleep

hypnotise /hɪpnətaɪz/, **hypnotize** *verb* to make someone go into a state where he or she appears to be asleep, and will do whatever the hypnotist suggests ◎ *He hypnotises his patients, and then persuades them to reveal their hidden problems.*

hypnotism /hɪpnətɪz(ə)m/ *noun* the techniques used to induce hypnosis

hypnotist /'haɪpnətɪst/ *noun* a person who hypnotises other people ◎ *The hypnotist passed his hand in front of her eyes and she went immediately to sleep.*

hypo /'haɪpəʊ/ *noun (informal)* 1. same as **hypodermic syringe** 2. an attack of hypoglycaemia, experienced, e.g., by people who are diabetic

hypo- /haɪpəʊ/ *prefix* less, too little or beneath

hypoaesthesia /,haɪpəʊi:s̩/θi:ziə/ *noun* unusually low acidity, especially in the stomach

hypoaesthesia /,haɪpəʊi:s̩/θi:ziə/ *noun* a condition in which someone has a diminished sense of touch

hypoallergenic /,haɪpəʊlədʒenɪk/ *adjective* not likely to cause an allergic reaction

hypocalcaemia /,haɪpəʊkæl'si:miə/ *noun* an unusually low amount of calcium in the blood, which can cause tetany

hypocapnia /,haɪpə'kæpnɪə/ *noun* a condition in which there is not enough carbon dioxide in the blood

hypochloraemia /,haɪpəʊklɔ:ri:miə/ *noun* a condition in which there are not enough chlorine ions in the blood

hypochlorhydria /,haɪpəʊklɔ:haidriə/ *noun* a condition in which there is not enough hydrochloric acid in the stomach

hypochondria /,haɪpəʊ'kɒndriə/ *noun* a condition in which a person is too worried about his or her own health and believes he or she is ill

hypochondriac /,haɪpəʊ'kɒndriæk/ *noun* a person who worries about his or her health too much

hypochondriac region /,haɪpəʊ'kɒndriæk/ ,ri:dʒən/ *noun* one of two parts of the upper abdomen, on either side of the epigastrium below the floating ribs

hypochondrium /,haɪpəʊ'kɒndriəm/ *noun* one of the two hypochondriac regions in the upper part of the abdomen

hypochromic /,haɪpəʊ'krəʊmɪk/ *adjective* referring to blood cells or body tissue which do not have the usual amount of pigmentation ◎ *hypochromic scars*

hypochromic anaemia /,haɪpəʊkrəʊmɪk ə'ni:miə/ *noun* anaemia where haemoglobin is reduced in proportion to the number of red blood cells, which then appear very pale

hypodermic /,haɪpə'dɛ:mɪk/ *adjective* beneath the skin ■ *noun* a hypodermic syringe, needle or injection (*informal*)

hypodermic injection /,haɪpədɛ:mɪk ɪn'dɛkʃn/ *noun* an injection of a liquid, e.g. a painkilling drug, beneath the skin. Also called **subcutaneous injection**

hypodermic needle /,haɪpədɛ:mɪk 'ni:d(ə)/ *noun* a needle for injecting liquid under the skin

hypodermic syringe /haɪpədɛ:mɪk sɪ'rɪndʒ/ *noun* a syringe fitted with a hypodermic needle for injecting liquid under the skin
hypofibrinogenaemia /,haɪpə,fibrɪnədʒə'ni:miə/ *noun* a condition in which there is not enough fibrinogen in the blood, e.g. because of several blood transfusions or as an inherited condition

hypogammaglobulinaemia /,haɪpəgæmægglɒbjʊln'i:miə/ *noun* an unusually low concentration of gamma globulin in the blood that causes an immune deficiency. It may be present from birth or acquired later in life.

hypogastrum /,haɪpə'gæstriəm/ *noun* the part of the abdomen beneath the stomach

hypoglossal /,haɪpə'glɒsəl/ *adjective* 1. underneath or on the lower side of the tongue 2. relating to the hypoglossal nerve

hypoglossal nerve /haɪpə'glɒs(ə)l nɜ:v/ *noun* the twelfth cranial nerve which governs the muscles of the tongue

hypoglycaemia /,haɪpəʊglər'i:si:miə/ *noun* a low concentration of glucose in the blood

COMMENT: Hypoglycaemia affects diabetics who feel weak from lack of sugar. A hypoglycaemic attack can be prevented by eating glucose or a lump of sugar when feeling faint.

hypoglycaemic /,haɪpəoglər'i:si:mɪk/ *adjective* having hypoglycaemia

hypoglycaemic coma /,haɪpəoglər'i:si:mɪk'kəʊmə/ *noun* a state of unconsciousness affecting diabetics after taking an overdose of insulin

hypohidrosis /,haɪpəuhərɪ'drəʊsɪs/, **hyposudorism** /haɪpərɪ'drəʊsɪs/ *noun* a condition in which someone produces too little sweat

hypoinsulinism /,haɪpə'ɪnsjʊlɪnɪz(ə)m/ *noun* a condition in which the body does not have enough insulin, often because of a problem with the pancreas

hypokalaemia /,haɪpəukæ'lɪ:miə/ *noun* a deficiency of potassium in the blood

hypomania /,haɪpə'meiniə/ *noun* a state of mild mania or overexcitement, especially when part of a manic-depressive cycle

hypomenorrhoea /,haɪpəmənə'ri:ə/ *noun* the production of too little blood at menstruation

hypometropia /,haɪpəʊmɪ'trəʊpiə/ *noun* same as **myopia**

hyponatraemia /,haɪpənæ'trɪ:miə/ *noun* a lack of sodium in the body

hypoparathyroidism /,haɪpəʊ,pærə'θaɪrədɪz(ə)m/ *noun* a condition in which the parathyroid glands do not secrete enough parathyroid hormone, leading to low blood calcium and muscle spasms

hypopharynx /,haɪpə'færiŋks/ *noun* the part of the pharynx between the hyoid bone and the bottom of the cricoid cartilage (NOTE: The plural is **hypopharynxes** or **hypopharynges**.)

hypophyseal /haɪpə'fɪziəl/ *adjective* referring to the pituitary gland

hypophyseal stalk /haɪpəfɪziəl 'stɔ:k/ *noun* a funnel-shaped stem which attaches the pituitary gland to the hypothalamus

hypophsectomy /haɪpə'fektəmɪ/ *noun* the surgical removal of the pituitary gland

hypophysis cerebri /haɪpəfɪzɪs 'serəbri/ *noun* same as pituitary gland

hypopessis /haɪpə'pəsi:zɪs/ *noun* a condition in which the blood pressure is too low

hypopituitarism /haɪpə'pju:tjʊ:tɪrɪzəm/ *noun* a condition in which the pituitary gland is underactive

hypoplasia /haɪpə'plæzɪə/ *noun* a lack of development or incorrect formation of a body tissue or an organ

hypoplastic left heart /haɪpə'plæstɪk left 'ha:t/ *noun* a serious heart disorder in which the left side of the heart does not develop properly, leading to death within six weeks of birth unless surgery is performed

hypopnoea /haɪpə'u:pni:ə/ *noun* unusually shallow and slow breathing

hypoproteinaemia /haɪpə'prəʊtə'nɪ:miə/ *noun* a condition in which there is not enough protein in the blood

hypoprothrombinaemia /haɪpə'prəʊθrɒmbɪ'ni:miə/ *noun* a condition in which there is not enough prothrombin in the blood, so that the person bleeds and bruises easily

hypopyon /haɪpə'paɪən/ *noun* an accumulation of pus in the aqueous humour in the front chamber of the eye

hyposensitise /haɪpə'u:sensɪtaɪz/, **hyposensitize** *verb* to reduce someone's sensitivity to something, e.g. in the treatment of allergies

hyposensitive /haɪpə'u:sensɪtɪv/ *adjective* being less sensitive than usual

hyposensitivity /haɪpə'u:sensi'tɪviti/ *noun* an unusually low sensitivity to stimuli such as allergens

hypospadias /haɪpə'speɪdɪəs/ *noun* a congenital condition of the wall of the male urethra or the vagina, so that the opening occurs on the under side of the penis or in the vagina. Compare **epispadias**

hypostasis /haɪ'pɒstəsɪs/ *noun* a condition in which fluid accumulates in part of the body because of poor circulation

hypostatic /haɪpə'u:stætɪk/ *adjective* referring to hypostasis

hypostatic eczema /haɪpəstætɪk 'eksɪmə/ *noun* same as varicose eczema

hypostatic pneumonia /haɪpəstætɪk nju:'məniə/ *noun* pneumonia caused by fluid accumulating in the lungs of a bedridden person with a weak heart

hypostenia /haɪpsə'θi:nɪə/ *noun* a condition of unusual bodily weakness

hypotension /haɪpə'u:tenʃən/ *noun* a condition in which the pressure of the blood is unusually low. Also called **low blood pressure**. Compare **hypertension**

hypotensive /haɪpə'u:tensɪv/ *adjective* having low blood pressure

hypothalamic /haɪpəθæ'læmɪk/ *adjective* referring to the hypothalamus

hypothalamic hormone /haɪpəθæ'læmɪk 'hɔ:mən/ *noun* same as **releasing hormone**

hypothalamus /haɪpə'u:θæləməs/ *noun* the part of the brain above the pituitary gland, which controls the production of hormones by the pituitary gland and regulates important bodily functions such as hunger, thirst and sleep. See illustration at **BRAIN** in Supplement

hypothalamus /haɪpə'u:θæləməs/ *noun* same as **hypothalamus** (NOTE: The plural is **hypothalmuses** or **hypothalmi**.)

hypothenar /haɪ'pɒθɪnə/ *adjective* referring to the soft fat part of the palm beneath the little finger

hypothenar eminence /haɪ,pɒθɪnə 'eminəns/ *noun* a lump on the palm beneath the little finger. Compare **thenar**

hypothermal /haɪpə'u:θɔ:m(ə)l/ *adjective* referring to hypothermia

hypothermia /haɪpə'u:θɔ:miə/ *noun* a reduction in body temperature below normal, for medical purposes taken to be below 35°C

'...inadvertent hypothermia can readily occur in patients undergoing surgery when there is reduced heat production and a greater potential for heat loss to the environment' [British Journal of Nursing]

hypothermic /haɪpə'u:θɔ:mɪk/ *adjective* suffering from hypothermia ○ *Examination revealed that she was hypothermic, with a rectal temperature of only 29.4°C.*

hypothermic perfusion /haɪpə'u:θɔ:mɪk pə'fju:z(ə)n/ *noun* a method of preserving a donor organ by introducing a preserving solution and storing the organ at a low temperature

hypothesis /haɪ'pɒθəsɪs/ *noun* a suggested explanation for an observation or experimental result, which is then refined or disproved by further investigation

hypothyroidism /haɪpə'u:θaɪrɔɪdɪz(ə)m/ *noun* underactivity of the thyroid gland

hypotonia /haɪpə'u:tənɪə/ *noun* reduced tone of the skeletal muscles

hypotonic /haɪpə'u:tɒnɪk/ *adjective* 1. showing hypotonia 2. referring to a solution with a lower osmotic pressure than plasma

hypotrichosis /haɪpə'u:trɪ'kæsɪs/ *noun* a condition in which less hair develops than usual. Compare **alopecia** (NOTE: The plural is **hypotrichoses**.)

hypotropia /haɪpə'u:t्रəpiə/ *noun* a form of squint where one eye looks downwards

hypoventilation /haɪpə'ventɪl'eɪʃən/ *noun* very slow breathing

hypovitaminosis /haɪpə'vɪtəmɪ'nəʊsɪs/ *noun* a lack of vitamins

hypoxaemia /haɪpɒk'si:mɪə/ *noun* an inadequate supply of oxygen in the arterial blood

hypoxanthine phosphoribosyl transferase *noun* full form of **HPRT**

hypoxia /haɪ'pɒksiə/ *noun* 1. an inadequate supply of oxygen to tissue as a result of a lack of oxygen in the arterial blood 2. same as **hypoxaemia**

hyster- /hɪstə/ *prefix* same as **hystero-** (*used before vowels*)

hysteralgia /hɪstər'ældʒə/ *noun* pain in the uterus

hysterectomy /hɪstə'rektəmɪ/ *noun* the surgical removal of the uterus, often either to treat cancer or because of the presence of fibroids

hysteria /hɪ'stɪəriə/ *noun* a term formerly used in psychiatry, but now informally used for a condition in which the person appears unstable, and may scream and wave their arms about, but also is repressed, and may be slow to react to outside stimuli (*dated*)

hysterical /hɪ'sterɪk(ə)l/ *adjective* referring to a reaction showing hysteria (*informal*)

hysterically /hɪ'sterɪklɪ/ *adverb* in a hysterical way (*informal*)

hysterical personality /hɪ'sterɪk(ə)l pɜ:sə'næltɪ/ *noun* the mental condition of a person who is unstable, lacks usual feelings and is dependent on others (*dated*)

hysterics /hɪ'sterɪks/ *noun* an attack of hysteria (*dated*)

hystericus /hɪ'sterɪkəs/ ▶ **globus hystericus**

hystero- /hɪstərəʊ/ *prefix* referring to the uterus

hysterocele /'hɪstərəsɪl/ *noun* same as **uterocoele**

hystero-oophorectomy /,hɪstərəʊ ,oʊfər'ektəmɪ/ *noun* the surgical removal of the uterus, the uterine tubes and the ovaries

hysteroptosis /,hɪstərɒp'təʊsɪs/ *noun* prolapse of the uterus

hysterosalpingo-contrast sonography /,hɪstərəʊ,sælpɪŋgəʊ ,kɒntrɑ:st sən'bɒgrəfi/ *noun* examination of the uterus and Fallopian tubes by ultrasound. Abbr **HYCOSY**

hysterosalpingography /,hɪstərəʊ,sælpɪŋ 'gɒgrəfi/ *noun* an X-ray examination of the uterus and Fallopian tubes following injection of radio-opaque material. Also called **uterosalpingography**

hysterosalpingostomy /,hɪstərəʊ,sælpɪŋ 'gɒstəmɪ/ *noun* an operation to remake an opening between the uterine tube and the uterus, to help with infertility problems

hysteroscope /'hɪstərəskəʊp/ *noun* a tube for inspecting the inside of the uterus

hysteroscopy /,hɪstə'rɒskəpɪ/ *noun* an examination of the uterine cavity using a hysteroscope or fibrescope

hysterotomy /,hɪstə'rɒtəmɪ/ *noun* a surgical incision into the uterus, as in caesarean section or for some types of abortion

hysterotrachelorrhaphy /,hɪstərəʊ,trækɪə'lɒrəfi/ *noun* an operation to repair a tear in the cervix

-asis /ə'sɪsɪs/ *suffix* disease caused by something
○ *amoebiasis*

iatro- /aɪə'trəʊ/ *prefix* relating to medicine or doctors

iatrogenesis /aɪ,ætrəʊ'dʒenəsɪs/ *noun* any condition caused by the actions of doctors or other healthcare professionals

iatrogenic /aɪ,ætrə'dʒenɪk/ *adjective* referring to a condition which is caused by a doctor's treatment for another disease or condition
○ *an iatrogenic infection*

COMMENT: An iatrogenic condition can be caused by a drug, i.e. a side effect, by infection from the doctor or simply by worry about possible treatment.

IBS *abbr* irritable bowel syndrome

Ibuprofen /'aɪbju:'prəʊfən/ *noun* a nonsteroidal anti-inflammatory drug that relieves pain and swelling, especially in arthritis and rheumatism. It is also widely used as a household painkiller.

ice bag /'aɪs bæg/, **icebag**, **ice pack** /'aɪs pæk/ *noun* a cold compress made of lumps of ice wrapped in a cloth or put in a special bag and held against an injured part of the body to reduce pain or swelling

ichthamol /ɪk'θæmɒl/ *noun* a thick dark red liquid which is a mild antiseptic and analgesic, used in the treatment of skin diseases

ichthyosis /'ɪkθɪ'əʊsɪs/ *noun* a hereditary condition in which the skin does not form properly, resulting in a dry, non-inflammatory and scaly appearance

ICM *abbr* International Confederation of Midwives

ICN *abbr* 1. International Council of Nurses 2. infection control nurse

ICP *abbr* intracranial pressure

ICRC *abbr* International Committee of the Red Cross

ICSH *abbr* interstitial cell stimulating hormone

icteric /ɪk'terɪk/ *adjective* referring to someone with jaundice

icterus /'ɪktərəs/ *noun* same as **jaundice**

icterus gravis neonatorum /,ɪktərəs,grævɪs,nɪə'nə:tɔ:rəm/ *noun* jaundice associated with erythroblastosis fetalis

ictus /'ɪktəs/ *noun* a stroke or fit

ICU *abbr* intensive care unit

id /ɪd/ *noun* (in Freudian psychology) the basic unconscious drives which exist in hidden forms in a person

ideation /,aɪdi'eɪʃ(ə)n/ *noun* the act or process of imagining or forming thoughts and ideas

identical twins /aɪ'dentɪk(ə)l/twinz/ *plural noun* twins who are exactly the same in appearance because they developed from the same ovum. Also called **monozygotic twins**, **uniovular twins**

identification /aɪ,dentɪf'keɪʃ(ə)n/ *noun* the act of discovering or stating who someone is or what something is □ **identification with someone** the act of associating with and unconsciously taking on the viewpoints and behaviours of one or more other people

identity bracelet /aɪ'dentɪtี้,breɪslət/,
identity label /aɪ'dentɪtี้,leɪb(ə)l/ *noun* a label attached to the wrist of a newborn baby or patient in hospital, so that he or she can be identified

ideo- /aɪdiəʊ/ *prefix* involving ideas

idio- /ɪdiəʊ/ *prefix* referring to one particular person

idiopathic /,ɪdiə'pæθɪk/ *adjective* 1. referring to a disease with no obvious cause 2. referring to idiopathy

idiopathic epilepsy /,ɪdiəpæθɪk 'epɪ,lepsi/ *noun* epilepsy not caused by a brain disorder, beginning during childhood or adolescence

idiopathy /,ɪdi'ɒpəθɪ/ *noun* a condition which develops without any known cause

idiosyncrasy /,ɪdiəʊ'sɪŋkrəsɪ/ *noun* a way of behaving which is particular to one person

idiot savant /,ɪdiəʊ 'sævənt/ *noun* a person with learning difficulties who also possesses a single particular mental ability, such as the ability to play music by ear, to draw remembered objects or to do mental calculations, which is very highly developed

edioventricular /'idiəʊven'trikjʊlə/ *adjective* relating to the ventricles of the heart

edioventricular rhythm /'idiəʊven,trikjʊlə'rið(ə)m/ *noun* a slow natural rhythm in the ventricles of the heart, but not in the atria

IDK abbr internal derangement of the knee

Ig abbr immunoglobulin

Ig A antiendomysial antibody /aɪ dʒi: eɪ æntiendəməs,maɪsɪəl 'æntɪbodi/ *noun* a serological screening test for coeliac disease

IHD abbr ischaemic heart disease

IL-1 abbr interleukin-1

IL-2 abbr interleukin-2

ile- /'ili/ *prefix* same as **ileo-** (*used before vowels*)

ilea /'iliə/ plural of **ileum**

ileac /'iliæk/ *adjective* 1. relating to an ileus 2. relating to the ileum

ileal /'iliəl/ *adjective* referring to the ileum

ileal bladder /'iliəl 'blædə/, **ileal conduit** /'iliəl 'kʌndjuɪt/ *noun* an artificial tube formed when the ureters are linked to part of the ileum, and that part is linked to an opening in the abdominal wall

ileal pouch /'iliəl 'pautʃ/ *noun* a part of the small intestine which is made into a new rectum in a surgical operation, freeing someone from the need for an ileostomy after their colon is removed

ileectomy /'iliːktəmɪ/ *noun* the surgical removal of all or part of the ileum

ileitis /'ili'aitɪs/ *noun* inflammation of the ileum

ileo- /'iliəʊ/ *prefix* relating to the ileum

ileocaecal /'iliəʊ'si:k(ə)l/ *adjective* referring to the ileum and the caecum

ileocaecal orifice /'iliəʊsi:k(ə)l 'ɔrɪfɪs/ *noun* an opening where the small intestine joins the large intestine

ileocaecal valve /'iliəʊsi:k(ə)l 'vælv/ *noun* a valve at the end of the ileum, which allows food to pass from the ileum into the caecum

ileocaecostoplasty /'iliəʊ,sɪ:kəʊ'sa:təʊplæsti/ *noun* an operation to reconstruct the bladder using a piece of the combined ileum and caecum

ileocolic /'iliəʊ'kɒlɪk/ *adjective* referring to both the ileum and the colon

ileocolic artery /'ili:əkɒlɪk 'a:tərɪ/ *noun* a branch of the superior mesenteric artery

ileocolitis /'iliəkə'laitɪs/ *noun* inflammation of both the ileum and the colon

ileocolostomy /'iliəkə'lɒstəmɪ/ *noun* a surgical operation to make a link directly between the ileum and the colon

ileoproctostomy /'iliəprɒk'tɒstəmɪ/ *noun* a surgical operation to create a link between the ileum and the rectum

ileorectal /'iliəʊ'rekt(ə)l/ *adjective* referring to both the ileum and the rectum

ileosigmoidostomy /'iliəʊsɪgmɔɪ'dɒstəmɪ/ *noun* a surgical operation to create a link between the ileum and the sigmoid colon

ileostomy /'ili:pstəmɪ/ *noun* a surgical operation to make an opening between the ileum and the abdominal wall to act as an artificial opening for excretion of faeces

ileostomy bag /'ili:pstəmɪ bæg/ *noun* a bag attached to the opening made by an ileostomy, to collect faeces as they are passed out of the body

ileum /'iliəm/ *noun* the lower part of the small intestine, between the jejunum and the caecum. Compare **ilium**. See illustration at **DIGESTIVE SYSTEM** in Supplement (NOTE: The plural is **ilea**.)

COMMENT: The ileum is the longest section of the small intestine, being about 2.5 metres long.

ileus /'iliəs/ *noun* obstruction of the intestine, usually distension caused by loss of muscular action in the bowel. ♦ **paralytic ileus**

ili- /'ili/ *prefix* same as **ilio-** (*used before vowels*)

ilia /'iliə/ plural of **ilium**

iliac /'iliæk/ *adjective* referring to the ilium

iliac crest /'iliæk 'krest/ *noun* a curved top edge of the ilium. See illustration at **PELVIS** in Supplement

iliac fossa /'iliæk 'fɒsə/ *noun* a depression on the inner side of the hip bone

iliac region /'iliæk ,rɪdʒən/ *noun* one of two regions of the lower abdomen, on either side of the hypogastrum

iliac spine /'iliæk spайн/ *noun* a projection at the posterior end of the iliac crest

iliacus /'ili'ækəs/ *noun* a muscle in the groin which flexes the thigh

ilio- /'iliəʊ/ *prefix* relating to the ilium

iliococcygeal /'iliəʊkɒk'si:dʒiəl/ *adjective* referring to both the ilium and the coccyx

iliolumbar /'iliəʊ'lʌmbə/ *adjective* referring to the iliac and lumbar regions

iliopectineal /'iliəʊpek'tɪniəl/ *adjective* referring to both the ilium and the pubis

iliopectineal eminence /'iliəʊpektɪniəl 'eminəns/ *noun* a raised area on the inner surface of the innominate bone

iliopsoas /'iliəʊ'səʊəs/ *noun* a muscle formed from the iliacus and psoas muscles

iliopubic /'iliəʊ'pjʊ:bɪk/ *adjective* same as **iliopectineal**

iliopubic eminence /'iliəʊ,pjʊ:bɪk 'eminəns/ *noun* same as **iliopectineal eminence**

iliotibial tract /'iliəʊ'tibɪəl ,trækt/ *noun* a thick fascia which runs from the ilium to the tibia

ilium /'iliəm/ *noun* the top part of each of the hip bones, which form the pelvis. Compare **ileum**. See illustration at **PELVIS** in Supplement (NOTE: The plural is **ilia**.)

ill /ɪl/ **adjective** not well ○ *If you feel very ill you ought to see a doctor.*

illegal abortion /ɪ'li:g(ə)l ə'bɔ:f(ə)n/ **noun** same as **criminal abortion**

ill health /ɪl 'helθ/ **noun** the fact of not being well ○ *He has been in ill health for some time.* ○ *She has a history of ill health.* ○ *He had to retire early for reasons of ill health.*

illness /'ɪlnəs/ **noun** 1. a state of not being well ○ *Most of the children stayed away from school because of illness.* 2. a type of disease ○ *Scarlet fever is no longer considered to be a very serious illness.* ○ *He is in hospital with an infectious tropical illness.*

illusion /'ɪlu:ʒ(ə)n/ **noun** a condition in which a person has a wrong perception of external objects

i.m., IM *abbr* intramuscular

image /'ɪmɪdʒ/ **noun** a sensation, e.g. a smell, sight or taste, which is remembered clearly

imagery /'ɪmɪdʒəri/ **noun** visual sensations clearly produced in the mind

imaginary /'ɪmædʒɪn(ə)ri/ **adjective** referring to something which does not exist but is imagined

imaginary playmate /ɪ'mædʒɪnəri 'pleɪmet/ **noun** a friend who does not exist but who is imagined by a small child to exist

imagination /ɪ'mædʒɪ'nɛʃ(ə)n/ **noun** the ability to see or invent things in your mind ○ *In her imagination she saw herself sitting on a beach in the sun.*

imagine /ɪ'mædʒɪn/ **verb** to see, hear or feel something in your mind ○ *Imagine yourself sitting on the beach in the sun.* ○ *I thought I heard someone shout, but I must have imagined it because there is no one there.* □ **to imagine things** to have delusions ○ *She keeps imagining things.* ○ *Sometimes he imagines he is swimming in the sea.*

imaging /'ɪmɪdʒɪŋ/ **noun** a technique for creating pictures of sections of the body, using scanners attached to computers

imbalance /ɪm'bæləns/ **noun** a situation in which things are unequal or in the wrong proportions to one another, e.g. in the diet

imipramine /'ɪmɪprəmɪn/ **noun** a drug that is used as a treatment for depression

immature /,ɪmə'tjuər/ **adjective** not mature, lacking insight and emotional stability

immature cell /,ɪmətjuər 'sel/ **noun** a cell which is still developing

immaturity /,ɪmə'tʃʊərti/ **noun** behaviour which is lacking in maturity

immersion foot /ɪm'mɜ:ʃ(ə)n 'fʊt/ **noun** same as **trench foot**

immiscible /'ɪmɪsəb(ə)l/ **adjective** (of liquids) not able to be mixed

immobile /ɪ'məubəl/ **adjective** not moving, which cannot move

immobilisation /ɪmə'bɪlɪzeɪʃ(ə)n/, **immobilization** **noun** the act of preventing somebody or something from being able to move

immobilise /ɪmə'bɪlɪzeɪz/, **immobilize** **verb** 1. to keep someone from moving 2. to attach a splint to a joint or fractured limb to prevent the bones from moving

immovable /ɪ'mu:vəb(ə)l/ **adjective** referring to a joint which cannot be moved

immune /'ɪmju:n/ **adjective** protected against an infection or allergic disease ○ *She seems to be immune to colds.* ○ *The injection should make you immune to yellow fever.*

immune deficiency /,ɪmju:n dr'fɪʃ(ə)nsi/ **noun** a lack of immunity to a disease. □ **AIDS**

immune reaction /,ɪmju:n rɪ'ækʃən/, **immune response** /,ɪmju:n ri'spɒns/ **noun** a reaction of a body to an antigen

immune system /'ɪmju:n ,sɪstəm/ **noun** a complex network of cells and cell products, which protects the body from disease. It includes the thymus, spleen, lymph nodes, white blood cells and antibodies.

'...the reason for this susceptibility is a profound abnormality of the immune system in children with sickle-cell disease' [Lancet]

'...the AIDS virus attacks a person's immune system and damages his or her ability to fight other diseases' [Journal of the American Medical Association]

immunisation /,ɪmju:nətɪ'zeɪʃ(ə)n/, **immunization** **noun** the process of making a person immune to an infection, either by injecting an antiserum, passive immunisation or by inoculation

'...vaccination is the most effective way to prevent children getting the disease. Children up to 6 years old can be vaccinated if they missed earlier immunization' [Health Visitor]

immunise /'ɪmju:nəɪz/, **immunize** **verb** to give someone immunity from an infection. □ **vaccinate** (NOTE: You immunise someone against a disease.)

COMMENT: In the UK, infants are immunised routinely against diphtheria, pertussis, polio, tetanus, Hib, mumps, measles and rubella, unless there are contra-indications or the parents object.

immunity /'ɪmju:nɪti/ **noun** the ability to resist attacks of a disease because antibodies are produced ○ *The vaccine gives immunity to tuberculosis.*

immuno- /ɪm'jʊnəʊ/, **imju:nəʊ/ prefix** immune, immunity

immunoassay /,ɪmju:nəʊə'æ'seɪ/ **noun** a test for the presence and strength of antibodies

immunocompetence /,ɪmju:nəʊ'kɒmpɪtəns/ **noun** the ability to develop an immune response following exposure to an antigen

immunocompromised /,ɪmju:nəʊ'kɒmprəmaɪzd/ **adjective** not able to offer resistance to infection

immunodeficiency /,im'ju:nəʊdɪ'fɪʃ(ə)nsi/ noun a lack of immunity to a disease

immunodeficiency virus /,im'ju:nəʊdɪ'fɪʃ(ə)nsi 'vairəs/ noun a retrovirus which attacks the immune system

immunodeficient /,im'ju:nəʊdɪ'fɪʃ(ə)nt/ adjective lacking immunity to a disease ◎ *This form of meningitis occurs in persons who are immunodeficient.*

immunolectrophoresis /,im'ju:nəʊ'lɛktrəfɔ:rɪ'sɪs/ noun a method of identifying antigens in a laboratory, using electrophoresis

immunogenic /,im'ju:nəʊ'gjenɪk/ adjective producing an immune response

immunogenicity /,im'ju:nəʊdʒə'nɪsɪtɪ/ noun the property which makes a substance able to produce an immune response in an organism

immunoglobulin /,im'ju:nə'glɒbjʊlɪn/ noun an antibody, a protein produced in blood plasma as protection against infection, the commonest being gamma globulin. Abbr Ig
(NOTE: The five main classes are called: **immunoglobulin G, A, D, E and M** or **IgG, IgA, IgD, IgE and IgM**.)

immunological /,im'ju:nə'lɒdʒɪk(ə)l/ adjective referring to immunology

immunological staining /,im'ju:nə'lɒdʒɪk(ə)l 'steɪnɪŋ/ noun the process of checking if cancer is likely to return after someone has been declared free of the disease, by staining cells

immunological tolerance /,im'ju:nə'lɒdʒɪk(ə)l 'tolərəns/ noun tolerance of the lymphoid tissues to an antigen

immunologist /,im'ju:nɒplədʒɪst/ noun a specialist in immunology

immunology /,im'ju:nɒplədʒɪ/ noun the study of immunity and immunisation

immunosuppressant /,im'ju:nəʊ'se:p'res(ə)nt/ noun a drug used to act against the response of the immune system to reject a transplanted organ

immunosuppression /,im'ju:nəʊ'se:p'reʃn/ noun the suppression of the body's natural immune system so that it will not reject a transplanted organ

immunosuppressive /,im'ju:nəʊ'se:p'resɪv/ adjective counteracting the immune system

immunotherapy /,im'ju:nəʊ'θerəpi/ noun ♦ **adoptive immunotherapy**

immunotransfusion /,im'ju:nəʊ'træfən/ noun a transfusion of blood, serum or plasma containing immune bodies

Imodium /'ɪməʊdiəm/ a trade name for Ioperamide hydrochloride

impacted /'ɪmpækɪtɪd/ adjective tightly pressed or firmly lodged against something

impacted faeces /,ɪmpækɪtɪd 'fi:siz/ plural noun extremely hard dry faeces which cannot

pass through the anus and have to be surgically removed

impacted fracture /ɪm'pæktɪd 'fræktʃə/ noun a fracture where the broken parts of the bones are pushed into each other

impacted tooth /ɪm'pæktɪd 'tu:θ/ noun a tooth which is held against another tooth and so cannot grow normally

impacted ureteric calculus /ɪm'pæktɪd ,ju:ərɪtɪk 'kælkjʊləs/ noun a small hard mass of mineral salts which is lodged in a ureter

impaction /ɪm'pækʃən/ noun a condition in which two things are impacted

impair /ɪm'peə/ verb to harm a sense or function so that it does not work properly

impaired hearing /ɪm'peəd 'hɪərɪŋ/ noun hearing which is not clear and sharp

impaired vision /ɪm'peəd 'vɪz(ə)n/ noun eyesight which is not fully clear

impairment /ɪm'peəmənt/ noun a condition in which a sense or function is harmed so that it does not work properly ◎ *His hearing impairment does not affect his work. ◎ The impairment was progressive, but she did not notice that her eyesight was getting worse.*

...impairment – any loss or abnormality of psychological, physical or anatomical structure or function' [WHO]

impalpable /ɪm'pælpəb(ə)l/ adjective not able to be felt when touched

impediment /ɪm'pedɪmənt/ noun an obstruction

imperforate /ɪm'pɜ:f(ə)rət/ adjective without an opening

imperforate anus /ɪm'pɜ:f(ə)rət 'eɪnəs/ noun same as **proctatresia**

imperforate hymen /ɪm'pɜ:f(ə)rət 'haɪmen/ noun a membrane in the vagina which is missing the opening for the menstrual flow

impermeable /ɪm'pɜ:miəb(ə)l/ adjective not allowing liquids or gases to pass through

impetigo /,ɪmpɪ'taɪgəʊ/ noun an irritating and very contagious skin disease caused by staphylococci, which spreads rapidly and is easily passed from one child to another, but can be treated with antibiotics

implant noun /'implænt/ something grafted or inserted into a person, e.g. tissue, a drug, inert material or a device such as a pacemaker ■ **verb** /ɪm'plænt/ 1. to fix into something ◎ *The ovum implants in the wall of the uterus.* 2. to graft or insert tissue, a drug, inert material or a device ◎ *The site was implanted with the biomaterial.*

implantation /,ɪmplæ:n'teɪʃ(ə)n/ noun 1. the act of grafting or inserting tissue, a drug, inert material or a device into a person, or the introduction of one tissue into another surgically 2. same as **nidation**

implant material /'impla:nt mə,tɪəriəl/ *noun* a substance grafted or inserted into a person

implant site /'impla:nt sait/ *noun* a place in or on the body where the implant is positioned

impotence /'impot(ə)ns/ *noun* the inability in a male to have an erection or to ejaculate, and so have sexual intercourse

impotent /'impot(ə)nt/ *adjective* (of a man) unable to have sexual intercourse

impregnate /'impregneɪt/ *verb* 1. to make a female pregnant 2. to soak a cloth with a liquid ◇ *a cloth impregnated with antiseptic*

impregnation /,impreg'nɛɪʃ(ə)n/ *noun* the action of impregnating

impression /im'preʃ(ə)n/ *noun* 1. a mould of a person's jaw made by a dentist before making a denture 2. a depression on an organ or structure into which another organ or structure fits ◇ **cardiac impression** 1. concave area near the centre of the upper surface of the liver under the heart 2. depression on the mediastinal part of the lungs where they touch the pericardium

improve /im'pru:v/ *verb* to get better, or make something better ◇ *She was very ill, but she is improving now.*

improvement /im'pru:vment/ *noun* the act of getting better ◇ *The patient's condition has shown a slight improvement.* ◇ *Doctors have not detected any improvement in her asthma.*

impulse /'impʌls/ *noun* 1. a message transmitted by a nerve 2. a sudden feeling of wanting to act in a specific way

impure /im'pjʊər/ *adjective* not pure

impurity /im'pjʊəriti/ *noun* a substance which is not pure or clean ◇ *The kidneys filter impurities out of the blood.*

in- /in/ *prefix* 1. in, into, towards 2. not

inaccessible /,inæk'sesib(ə)l/ *adjective* 1. physically difficult or impossible to reach 2. very technical and difficult to understand

inactive /m'æktrɪv/ *adjective* 1. not being active, not moving ◇ *Patients must not be allowed to become inactive.* 2. not working ◇ *The serum makes the poison inactive.*

inactivity /,inæk'trɪviti/ *noun* a lack of activity

inanition /,inə'nɪʃ(ə)n/ *noun* a state of exhaustion caused by starvation

inarticulate /,inə:tɪkju:lət/ *adjective* 1. without joints or segments, as in the bones of the skull 2. unable to speak fluently or intelligibly 3. not understandable as speech or language

in articulo mortis /in ə:tɪkju:ləʊ 'mɔ:tɪs/ *adverb* a Latin phrase meaning 'at the onset of death'

inborn /in'bɔ:n/ *adjective* congenital, which is in the body from birth ◇ *A body has an inborn tendency to reject transplanted organs.*

inbreeding /'ɪnbri:dɪŋ/ *noun* a situation where closely related males and females, or those with very similar genetic make-up, have children together, so allowing congenital conditions to be passed on

incapacitated /,ɪnkə'pæsɪteɪtɪd/ *adjective* not able to act or work ◇ *He was incapacitated for three weeks by his accident.*

incarcerated /in'kær:səreɪtɪd/ *adjective* referring to a hernia which cannot be corrected by physical manipulation

incest /'ɪnsest/ *noun* an act of sexual intercourse or other sexual activity with so close a relative, that it is illegal or culturally not allowed

incidence /'ɪnsid(ə)ns/ *noun* the number of times something happens in a specific population over a period of time ◇ *the incidence of drug-related deaths* ◇ *Men have a higher incidence of strokes than women.*

incidence rate /'ɪnsid(ə)ns reɪt/ *noun* the number of new cases of a disease during a given period, per thousand of population

incipient /in'sipiənt/ *adjective* just beginning or in its early stages ◇ *He has an incipient appendicitis.* ◇ *The tests detected incipient diabetes mellitus.*

incise /in'saɪz/ *verb* to cut into something

incised wound /in'saɪzd wu:nd/ *noun* a wound with clean edges, caused by a sharp knife or razor

incision /in'sɪz(ə)n/ *noun* a cut in a person's body made by a surgeon using a scalpel, or any cut made with a sharp knife or razor ◇ *The first incision is made two millimetres below the second rib.* Compare **excision**

incisional /in'sɪz(ə)n(ə)l/ *adjective* referring to an incision

incisional hernia /in,sɪz(ə)n(ə)l 'hɜ:nɪə/ *noun* a hernia which breaks through the abdominal wall at a place where a surgical incision was made during an operation

incisor /in'saɪzə/, **incisor tooth** /in'saɪzə tu:θ/ *noun* one of the front teeth, of which there are four each in the upper and lower jaws, which are used to cut off pieces of food. See illustration at **TEETH** in Supplement

inclusion /in'klu:ʒ(ə)n/ *noun* something enclosed inside something else

inclusion bodies /in'klu:ʒ(ə)n ,bndiz/ *plural noun* very small particles found in cells infected by a virus

inclusive /in'klu:sɪv/ *adjective* (of health services) provided whether or not someone has a disability or special needs

incoherent /,ɪnkə'u'hɪərənt/ *adjective* not able to speak in a way which makes sense

incompatibility /,ɪnkəmpætɪ'biliti/ *noun* the fact of being incompatible ◇ *the incompatibility of the donor's blood with that of the patient*

incompatible /ɪn'kɒməp'tib(ə)l/ *adjective*
 1. referring to something which does not go together with something else 2. referring to drugs which must not be used together because they undergo chemical change and the therapeutic effect is lost or changed to something undesirable 3. referring to tissue which is genetically different from other tissue, making it impossible to transplant into that tissue

incompatible blood /ɪn'kəmɒpətəb(ə)l 'blɒd/ *noun* blood from a donor that does not match the blood of the person receiving the transfusion

incompetence /ɪn'kɒmpit(ə)ns/ *noun* the inability to do a particular act, especially a lack of knowledge or skill which makes a person unable to do particular job

incompetent cervix /ɪn,kɒmpit(ə)nt 'sɜːvɪks/ *noun* a dysfunctional cervix of the uterus which is often the cause of spontaneous abortions and premature births and can be remedied by purse-string stitching

incomplete abortion /ɪn'kəmplɪt ə 'bɔːʃ(ə)n/ *noun* an abortion where part of the contents of the uterus is not expelled

incomplete fracture /ɪn'kəmplɪt 'frækɪtʃə/ *noun* a fracture that does not go all the way through a bone

incontinence /ɪn'kɒntɪnəns/ *noun* the inability to control the discharge of urine or faeces (NOTE: Single incontinence is the inability to control the bladder. Double incontinence is the inability to control both the bladder and the bowels.)

incontinence pad /ɪn'kɒntɪnəns pæd/ *noun* a pad of material to absorb urine

incontinent /ɪn'kɒntɪnənt/ *adjective* unable to control the discharge of urine or faeces

incoordination /ɪn'kɔːdɪnə:dɪ'nɛf(ə)n/ *noun* a situation in which the muscles in various parts of the body do not act together, making it impossible to carry out some actions

incubation /ɪn'kjʊə'bɛf(ə)n/ *noun* 1. the development of an infection inside the body before the symptoms of the disease appear 2. the keeping of an ill or premature baby in a controlled environment in an incubator 3. the process of culturing cells or microorganisms under controlled conditions

incubation period /ɪn'kjʊə'bɛf(ə)n 'piːriəd/ *noun* the time during which a virus or bacterium develops in the body after contamination or infection, before the appearance of the symptoms of the disease. Also called **stadium invasionis**

incubator /ɪn'kjübətə/ *noun* 1. an apparatus for growing bacterial cultures 2. an enclosed container in which a premature baby can be kept, within which conditions such as temperature and oxygen levels can be controlled

includes /ɪn'kjuːdɪz/ plural of **incus**

incus /'ɪŋkəs/ *noun* one of the three ossicles in the middle ear, shaped like an anvil. See illustration at **EAR** in Supplement

independent /ɪn'dɪpɛndənt/ *adjective* not controlled by someone or something else

independent nursing function /ɪn'dɪpendənt 'nɜːsɪng ,fʌŋkʃən/ *noun* any part of the nurse's job for which the nurse takes full responsibility

Inderal /'ɪndəræl/ a trade name for propranolol

index finger /'ɪndeks ,fɪŋgə/ *noun* the first finger next to the thumb

indican /'ɪndɪkæn/ *noun* potassium salt

indication /ɪndɪ'keɪʃ(ə)n/ *noun* a situation or sign which suggests that a specific treatment should be given or that a condition has a particular cause ◇ Sulpha drugs have been replaced by antibiotics in many indications. ◇ **contra-indication**

indicator /'ɪndɪkeɪtə/ *noun* 1. a substance which shows something, e.g. a substance secreted in body fluids which shows which blood group a person belongs to 2. something that serves as a warning or guide

indigenous /ɪn'dɪdʒɪnəs/ *adjective* 1. natural or inborn 2. native to or representative of a country or region

indigestion /ɪn'dɪdʒestʃən/ *noun* a disturbance of the normal process of digestion, where the person experiences pain or discomfort in the stomach ◇ *He is taking tablets to relieve his indigestion* or *He is taking indigestion tablets.* ◇ **dyspepsia**

indigo carmine /,ɪndɪgəʊ 'kuːmaɪn/ *noun* a blue dye which is injected into a person to test how well their kidneys are working

indirect contact /,ɪndɪ'rekt ˈkɒntrækt/ *noun* the fact of catching a disease by inhaling germs or by being in contact with a vector

indisposed /ɪndɪ'spəʊzd/ *adjective* slightly ill ◇ *My mother is indisposed and cannot see any visitors.*

indisposition /,ɪndɪspə'zɪʃ(ə)n/ *noun* a slight illness

individualise /,ɪndɪ'vɪdʒuə,laɪz/, **individualize** *verb* to provide something that matches the needs of a specific person or situation ◇ *individualised care*

individualised nursing care /,ɪndɪ,vɪdjuːləraɪzd 'nɜːsɪng keə/ *noun* care which is designed to provide exactly what one particular patient needs ◇ *The home's staff are specially trained to provide individualised nursing care.*

Indocid /'ɪndəsɪd/ a trade name for indomethacin

indolent /ɪn'dələnt/ *adjective* 1. causing little pain 2. referring to an ulcer which develops slowly and does not heal

indomethacin /ɪndəʊ'meθəsɪn/ *noun* a drug that reduces pain, fever and inflammation, especially that caused by arthritis

indrawing /ɪn'drɔ:ɪŋ/ *noun* the act of pulling towards the inside

indrawn /ɪn'drɔ:n/ *adjective* pulled inside

induce /ɪn'dju:s/ *verb* to make something happen □ **to induce labour** to make a woman go into labour

induced abortion /ɪn,dju:st ə'bɔ:ʃ(ə)n/ *noun* an abortion which is deliberately caused by drugs or by surgery

induction /ɪn'dʌkʃən/ *noun* 1. the process of starting or speeding up the birth of a baby 2. the stimulation of an enzyme's production when the substance on which it acts increases in concentration 3. a process by which one part of an embryo influences another part's development 4. information and support given to new employees in an organisation

induction of labour /ɪn,dʌkʃən əv 'leɪbə/ *noun* the action of starting childbirth artificially

induration /ɪndjʊə'reɪʃ(ə)n/ *noun* the hardening of tissue or of an artery because of pathological change

induratum /ɪndjʊə'reɪtəm/ ♀ **erythema**

industrial disease /ɪn'dʌstriəl dɪ,zɪ:z/ *noun* a disease which is caused by the type of work done by a worker or by the conditions in which he or she works, e.g. by dust produced or chemicals used in the factory

indwelling catheter /ɪn,dwelɪŋ 'kæθətə/ *noun* a catheter left in place for a period of time after its introduction

inebriation /ɪ,ni:bri'eʃ(ə)n/ *noun* a state where a person is drunk, especially habitually drunk

inert /ɪ'nɜ:t/ *adjective* 1. (of person) not moving 2. (of chemical, etc.) not active or not producing a chemical reaction

inertia /ɪ'nɜ:zə/ *noun* a lack of activity in the body or mind

in extremis /ɪn ɪks'tri:mɪs/ *adverb* at the moment of death

infant /ɪnfənt/ *noun* a child under two years of age

infanticide /ɪnfæntɪsaɪd/ *noun* 1. the act of killing an infant 2. a person who kills an infant

infantile /ɪnfəntɪl/ *adjective* 1. referring to small children 2. referring to a disease which affects children

infantile convulsions /ɪnfəntɪl kən 'vælʃənz/, **infantile spasms** /ɪnfəntɪl 'speɪzəmz/ *plural noun* convulsions or minor epileptic fits in small children

infantile paralysis /ɪnfəntɪl pə'ræləsɪs/ *noun* a former name for poliomyelitis

infantilism /ɪnfæntɪlɪz(ə)m/ *noun* a condition in which a person keeps some characteris-

tics of an infant when he or she becomes an adult

infant mortality rate /ɪnfənt mɔ:tæltɪ rεɪt/ *noun* the number of infants who die per thousand births

infant respiratory distress syndrome /ɪnfənt rɪ'spirɪt(ə)rɪ dr'stres ,sɪnd्रəʊm/ *noun* a condition of newborn babies in which the lungs do not function properly. Abbr **IRDS**

infarct /ɪnfəkt/ *noun* an area of tissue which is killed when the blood supply is cut off by the blockage of an artery

infarction /ɪn'fɑ:kʃ(ə)n/ *noun* a condition in which tissue is killed by the cutting off of the blood supply

'...cerebral infarction accounts for about 80% of first-ever strokes' [British Journal of Hospital Medicine]

infect /ɪnfekt/ *verb* to contaminate someone or something with microorganisms that cause disease or toxins □ *The disease infected her liver.* □ *The whole arm soon became infected.*

infected wound /ɪnfektɪd 'wʊ:nd/ *noun* a wound into which bacteria have entered

infection /ɪn'fekʃən/ *noun* 1. the entry or introduction into the body of microorganisms, which then multiply □ *As a carrier he was spreading infection to other people in the office.* 2. an illness which is caused by the entry of microbes into the body □ *She is susceptible to minor infections.*

infectious /ɪn'fekʃəs/ *adjective* referring to a disease which is caused by microorganisms and can be transmitted to other persons by direct means □ *This strain of flu is highly infectious.* □ *Her measles is at the infectious stage.*

infectious disease /ɪn,fekʃəs dɪ'zi:z/ *noun* a disease caused by microorganisms such as bacteria, viruses or fungi. ♀ **communicable disease, contagious disease**

infectious hepatitis /ɪn,fekʃəs ,hepə'taitɪs/ *noun* hepatitis A, transmitted by a carrier through food or drink. Also called **infective hepatitis**

infectious mononucleosis /ɪn,fekʃəs ,mɒnənʊ,nu:kli'əʊsɪs/ *noun* an infectious disease where the body has an excessive number of white blood cells. Also called **glandular fever**

infectious parotitis /ɪn,fekʃəs ,pærə'taitɪs/ *noun* same as **mumps**

infectious virus hepatitis /ɪn,fekʃəs 'vairəs ,hepətaitɪs/ *noun* hepatitis transmitted by a carrier through food or drink

infective /ɪnfektɪv/ *adjective* referring to a disease caused by a microorganism, which can be caught from another person but which may not always be directly transmitted

infective enteritis /ɪn,fekٹɪv ,entə'rætɪs/ *noun* enteritis caused by bacteria

infective hepatitis /ɪn,fekٹɪv ,hepə'taitɪs/ *noun* same as **infectious hepatitis**

infectivity /ɪnfek'tɪvɪtɪ/ *noun* the fact of being infective ○ *The patient's infectivity can last about a week.*

inferior /ɪn'fɪərɪə/ *adjective* referring to a lower part of the body. Opposite **superior**

inferior aspect /ɪn,fɪərɪər 'æspekt/ *noun* a view of the body from below

inferiority /ɪn,fɪərɪ'brɪtɪ/ *noun* the fact of being lower in value or quality, substandard. Opposite **superiority**

inferiority complex /ɪn,fɪərɪ'brɪtɪ kɒmpleks/ *noun* a mental disorder arising from a combination of wanting to be noticed and fear of humiliation. The resulting behaviour may either be aggression or withdrawal from the external world.

inferior mesenteric artery /ɪn,fɪərɪə mesen,terɪk 'a:təri/ *noun* one of the arteries which supply the transverse colon and rectum

inferior vena cava /ɪn,fɪərɪə ,vɪ:nə 'ka:və/ *noun* the main vein carrying blood from the lower part of the body to the heart. See illustration at **HEART** in Supplement, **KIDNEY** in Supplement

infertile /ɪn'fɜ:təl/ *adjective* not fertile, not able to reproduce

infertility /ɪnfə'tɪlɪtɪ/ *noun* the fact of not being fertile, not able to reproduce

infest /ɪn'fest/ *verb* (of parasites) to be present somewhere in large numbers ○ *The child's hair was infested with lice.*

infestation /ɪnf'e'steɪʃ(ə)n/ *noun* the fact of having large numbers of parasites, or an invasion of the body by parasites ○ *The condition is caused by infestation of the hair with lice.*

infiltrate /'ɪnfɪltreɪt/ *verb* (of liquid or waste) to pass from one part of the body to another through a wall or membrane and be deposited in the other part ■ *noun* a substance which has infiltrated a part of the body

'...the chest roentgenogram often discloses interstitial pulmonary infiltrates, but may occasionally be normal' [Southern Medical Journal]

infiltration /ɪnfɪl'treɪʃ(ə)n/ *noun* 1. the process where a liquid passes through the walls of one part of the body into another part 2. a condition in which waste is brought to and deposited around cells

'...the lacrimal and salivary glands become infiltrated with lymphocytes and plasma cells. The infiltration reduces lacrimal and salivary secretions which in turn leads to dry eyes and dry mouth' [American Journal of Nursing]

infirm /ɪn'fɜ:m/ *adjective* old and weak

infirmary /ɪn'fɜ:məri/ *noun* 1. a room in a school or workplace where people can go if they are ill 2. a former name for a hospital (NOTE: **Infirmary** is still used in the names of some hospitals: the **Glasgow Royal Infirmary**.)

infirmity /ɪn'fɜ:mitɪ/ *noun* a lack of strength and energy because of illness or age (*formal*)

inflame /ɪn'fleɪm/ *verb* to make an organ or a tissue react to an infection, an irritation or a blow by becoming sore, red and swollen

inflamed /ɪn'fleɪmd/ *adjective* sore, red and swollen ○ *The skin has become inflamed around the sore.*

inflammation /,ɪnflə'meɪʃ(ə)n/ *noun* the fact of having become sore, red and swollen as a reaction to an infection, an irritation or a blow ○ *She has an inflammation of the bladder or a bladder inflammation.* ○ *The body's reaction to infection took the form of an inflammation of the eyelid.*

inflammatory /ɪn'flæmət(ə)ri/ *adjective* causing an organ or a tissue to become sore, red and swollen

inflammatory bowel disease /ɪn,flæmət(ə)ri 'baʊəl dɪ,zi:z/ *noun* any condition, e.g. Crohn's disease, colitis or ileitis, in which the bowel becomes inflamed

inflammatory response /ɪn,flæmət(ə)ri rɪ 'spɒns/, **inflammatory reaction** /ɪn,flæmət(ə)ri rɪ 'ækʃn/ *noun* any condition where an organ or a tissue reacts to an external stimulus by becoming inflamed ○ *She showed an inflammatory response to the ointment.*

inflate /ɪn'fleɪt/ *verb* to fill something with air, or be filled with air ○ *The abdomen is inflated with air before a coelioscopy.* ○ *In valvuloplasty, a balloon is introduced into the valve and inflated.*

influenza /,ɪflu'enzə/ *noun* an infectious disease of the upper respiratory tract with fever and muscular aches, which is transmitted by a virus and can occur in epidemics. Also called **flu**

COMMENT: The influenza virus is spread by droplets of moisture in the air, so the disease can be spread by coughing or sneezing. Influenza can be quite mild, but virulent strains occur from time to time, such as Spanish influenza or Hong Kong flu, and can weaken the person so much that he or she becomes susceptible to pneumonia and other more serious infections.

informal patient /ɪn,fɔ:ml 'peɪʃ(ə)nt/ *noun* a patient who has admitted himself or herself to a hospital, without being referred by a doctor

information /,ɪnfə'meɪʃ(ə)n/ *noun* facts about something ○ *Have you any information about the treatment of sunburn?* ○ *The police won't give us any information about how the accident happened.* ○ *You haven't given me enough information about when your symptoms started.* ○ *That's a very useful piece or bit of information.* (NOTE: No plural: **some information; a piece of information**)

informed /ɪn'fɔ:md/ *adjective* having the latest information

informed consent /ɪn,fɔ:md kə'n'sent/ *noun* an agreement to allow a procedure to be carried out, given by a patient, or the guardian

of a patient, who has been provided with all the necessary information

infra- /'ɪnf्रə/ prefix below

infracostal /,ɪnf्रə'kɒst(ə)l/ *adjective* lying below the ribs

infraorbital nerve /,ɪnf्रə'ɔ:bɪt(ə)l 'nɜ:v/ *noun* a continuation of the maxillary nerve below the orbit of the eye

infraorbital vein /,ɪnfրə'ɔ:bɪt(ə)l 'veɪn/ *noun* a vessel draining the face through the infraorbital canal to the pterygoid plexus

infrared /,ɪnfրə'red/ *adjective* relating to infrared radiation ■ *noun* invisible electromagnetic radiation between light and radio waves

infrared radiation /,ɪnfրə'red ,reɪdi'eɪʃ(ə)n/ *noun* same as **infrared rays**

infrared rays /,ɪnfրə'red 'reɪz/ *plural noun* long invisible rays, below the visible red end of the colour spectrum, used to produce heat in body tissues in the treatment of traumatic and inflammatory conditions. ♦ **light therapy**

infundibulum /,ɪnfʌn'dibjʊləm/ *noun* any part of the body shaped like a funnel, especially the stem which attaches the pituitary gland to the hypothalamus

infuse /ɪn'fju:z/ *verb* to introduce a solution such as saline, sucrose or glucose using a drip into a vein, body cavity or the intestinal tract in order to treat or feed someone

infusion /ɪn'fju:z(ə)n/ *noun* 1. a drink made by pouring boiling water on a dry substance such as herb tea or a powdered drug 2. the process of putting of liquid into someone's body, using a drip

ingesta /ɪn'dʒestə/ *plural noun* food or liquid that enters the body via the mouth

ingestion /ɪn'dʒestʃən/ *noun* 1. the act of taking in food, drink or medicine by the mouth 2. the process by which a foreign body such as a bacillus is surrounded by a cell

ingredient /ɪn'grɪ:dɪənt/ *noun* a substance which is used with others to make something

ingrowing toenail /,ɪng्रəʊɪŋ 'təʊneɪl/, *ingrowing nail* /,ɪng्रəʊɪŋ 'neɪl/, **ingrown toenail** /,ɪng्रəʊɪŋ 'təʊneɪl/ *noun* a toenail which is growing into the skin at the side of the nail, causing pain and swelling. The toenail cuts into the tissue on either side of it, creating inflammation and sometimes sepsis and ulceration.

inguinal /'ɪngwɪn(ə)l/ *adjective* referring to the groin

inguinal canal /,ɪngwɪn(ə)l kə'næl/ *noun* a passage in the lower abdominal wall, carrying the spermatic cord in the male and the round ligament of the uterus in the female

inguinale /,ɪngwɪ'lneɪl/ ♦ **granuloma inguinale**

inguinal hernia /,ɪngwɪn(ə)l 'hɜ:nɪə/ *noun* a hernia where the intestine bulges through the muscles in the groin

inguinal ligament /,ɪngwɪn(ə)l 'ɪɡmənət/ *noun* a ligament in the groin, running from the spine to the pubis. Also called **Poupart's ligament**

inguinal region /,ɪngwɪn(ə)l 'rɪ:dʒən/ *noun* the part of the body where the lower abdomen joins the top of the thigh. ♦ **groin**

INH abbr isoniazid

inhalant /ɪn'heɪlənt/ *noun* a medicinal substance which is breathed in

inhalation /,ɪnhə'lɛʃ(ə)n/ *noun* 1. the act of breathing in. Opposite **exhalation** 2. the action of breathing in a medicinal substance as part of a treatment

inhale /ɪn'heɪl/ *verb* 1. to breathe in, or breathe something in ○ *She inhaled some toxic gas fumes and was rushed to hospital.* 2. to breathe in a medicinal substance as part of a treatment. Opposite **exhale**

inhaler /ɪn'heɪlə/ *noun* a small device for administering medicinal substances into the mouth or nose so that they can be breathed in

inherent /ɪn'hɪərənt/ *adjective* referring to a thing which is part of the essential character of a person or a permanent characteristic of an organism

inherit /ɪn'herit/ *verb* to receive genetically controlled characteristics from a parent ○ *She inherited her father's red hair.* ○ *Haemophilia is a condition which is inherited through the mother's genes.*

inheritance /ɪn'herit(ə)ns/ *noun* 1. the process by which genetically controlled characteristics pass from parents to offspring ○ *the inheritance of chronic inflammatory bowel disease* 2. all of the qualities and characteristics which are passed down from parents ○ *an unfortunate part of our genetic inheritance*

inherited /ɪn'heritɪd/ *adjective* passed on from a parent through the genes ○ *an inherited disorder of the lungs*

inhibit /ɪn'hibit/ *verb* to prevent an action happening, or stop a functional process ○ *Aspirin inhibits the clotting of blood.* □ **to have an inhibiting effect on something** to block something, to stop something happening

inhibition /,ɪnhi'bɪʃ(ə)n/ *noun* 1. the action of blocking or preventing something happening, especially of preventing a muscle or organ from functioning properly 2. (in psychology) the suppression of a thought which is associated with a sense of guilt 3. (in psychology) the blocking of a spontaneous action by some mental influence

inhibitor /ɪn'hibɪtə/ *noun* a substance which inhibits

inhibitory nerve /ɪn'hibɪtəri ,nɜ:v/ *noun* a nerve which stops a function taking place ○ *The vagus nerve is an inhibitory nerve which slows down the action of the heart.*

inion /'ɪniən/ *noun* a part of the occipital bone that can be felt as a slight lump at the back of the skull just above the neck

inject /ɪn'dʒekt/ *verb* to put a liquid into someone's body under pressure, by using a hollow needle inserted into the tissues ○ *He was injected with morphine. ○ She injected herself with a drug.*

injected /ɪn'dʒektɪd/ *adjective* 1. referring to a liquid or substance introduced into the body 2. referring to surface blood vessels which are swollen

injection /ɪn'dʒekʃən/ *noun* 1. the act of injecting a liquid into the body ○ *He had a penicillin injection.* 2. a liquid introduced into the body

injure /'ɪndʒə/ *verb* to hurt someone or a part of the body ○ *Six people were injured in the accident.*

injured /'ɪndʒəd/ *adjective* referring to someone who has been hurt ■ plural noun □ **the injured** people who have been injured ○ *All the injured were taken to the nearest hospital.*

injury /'ɪndʒəri/ *noun* damage or a wound caused to a person's body ○ *His injuries required hospital treatment. ○ He received severe facial injuries in the accident.*

injury scoring system /,ɪndʒəri 'skɔ:riŋ ,sɪstəm/ *noun* any system used for deciding how severe an injury is ○ *a standard lung injury scoring system* Abbr **ISS**

inlay /'ɪnlæɪ/ *noun* (in dentistry) a type of filling for teeth

inlet /'ɪnlet/ *noun* a passage or opening through which a cavity can be entered

INN abbr international nonproprietary name

innards /'ɪnədz/ *plural noun* the internal organs of the body, especially the intestines

innate /'ɪneɪt/ *adjective* inherited, which is present in a body from birth

inner /'ɪnə/ *adjective* referring to a part which is inside

inner ear /,ɪnər 'ɪə/ *noun* the part of the ear inside the head, behind the eardrum, containing the semicircular canals, the vestibule and the cochlea

inner pleura /,ɪnə 'pluərə/ *noun* same as **visceral pleura**

innervate /'ɪnɜ:vɪt/ *verb* to cause a muscle, organ or other part of the body to act

innervation /,ɪnɜ:'veɪʃ(ə)n/ *noun* the nerve supply to an organ, including both motor nerves and sensory nerves

innocent /'ɪnəs(ə)nt/ *adjective* referring to a growth which is benign, not malignant

innominate /ɪ'nɒmɪnət/ *adjective* with no name

innominate artery /ɪ,nɒmɪnət 'a:təri/ *noun* the largest branch of the arch of the aorta, which continues as the right common carotid and right subclavian arteries

innominate bone /ɪ,nɒmɪnət 'bəʊn/ *noun* same as **hip bone**

innominate vein /ɪ,nɒmɪnət 'veɪn/ *noun* same as **brachiocephalic vein**

inoculant /ɪ'nɒkjʊlənt/ *noun* same as **inoculum**

inoculate /ɪ'nɒkjuleɪt/ *verb* to introduce vaccine into a person's body in order to make the body create its own antibodies, so making the person immune to the disease ○ *The baby was inoculated against diphtheria.* (NOTE: You inoculate someone **with** or **against** a disease.)

inoculation /ɪ,nɒkjʊ'ləʃ(ə)n/ *noun* the action of inoculating someone ○ *Has the baby had a diphtheria inoculation?*

inoculum /ɪ'nɒkjʊləm/ *noun* a substance used for inoculation, e.g. a vaccine (NOTE: The plural is **inocula**.)

inoperable /ɪ'nɒpər(ə)b(ə)l/ *adjective* referring to a condition which cannot be operated on ○ *The surgeon decided that the cancer was inoperable.*

inorganic /,ɪnɔ:gænɪk/ *adjective* referring to a substance which is not made from animal or vegetable sources

inorganic acid /,ɪnɔ:gænɪk 'æsɪd/ *noun* an acid which comes from minerals, used in dilute form to help indigestion

inotropic /,ɪnəʊ'tropɪk/ *adjective* affecting the way muscles contract, especially those of the heart

inpatient /'ɪn,peɪʃ(ə)nt/ *noun* someone who stays overnight or for some time in a hospital for treatment or observation. Compare **outpatient**

inquest /'ɪŋkwɛst/ *noun* an inquiry by a coroner into the cause of a death

COMMENT: An inquest has to take place where death is violent or not expected, where death could be murder or where a prisoner dies and when police are involved.

insane /'ɪnsen/ *adjective* mentally unwell (dated, informal)

insanitary /ɪ'nseɪnɪt(ə)ri/ *adjective* not hygienic ○ *Cholera spread rapidly because of the insanitary conditions in the town.*

insect /'ɪnsekt/ *noun* a small animal with six legs and a body in three parts

insect bite /'ɪnsekt baɪt/ *noun* a sting caused by an insect which punctures the skin to suck blood, and in so doing introduces irritants

COMMENT: Most insect bites are simply irritating. Others can be more serious, as insects can carry the organisms which produce typhus, sleeping sickness, malaria, filariasis and many other diseases.

insecticide /ɪn'sektɪsaɪd/ *noun* a substance which kills insects

insemination /ɪn,semɪ'neɪʃ(ə)n/ *noun* the introduction of sperm into the vagina

insensible /ɪn'sensib(ə)l/ *adjective* 1. lacking feeling or consciousness 2. not aware of or

responding to a stimulus **3.** too slight to be perceived by the senses

insert /ɪn'sɜ:t/ *verb* to put something into something ○ *The catheter is inserted into the passage.*

insertion /ɪn'sɜ:ʃ(ə)n/ *noun* **1.** the point of attachment of a muscle to a bone **2.** the point where an organ is attached to its support **3.** a change in the structure of a chromosome, where a segment of the chromosome is introduced into another member of the complement

insides /ɪn'saɪdz/ *plural noun* internal organs, especially the stomach and intestines (*informal*) ○ *He says he has a pain in his insides.* ○ *You ought to see the doctor if you think there is something wrong with your insides.*

insidious /ɪn'sɪdiəs/ *adjective* causing harm without showing any obvious signs

insidious disease /ɪn'sɪdiəs dɪ'zi:z/ *noun* a disease which causes damage before being detected

insight /'ɪnsaɪt/ *noun* the ability of a person to realise that he or she is ill or has particular problems or characteristics

insipidus /ɪn'sɪpɪdəs/ ♦ **diabetes insipidus**

in situ /ɪn 'sɪtju:/ *adverb* in place

insoluble /ɪn'sɒlju:b(ə)l/ *adjective* not able to be dissolved in liquid

insoluble fibre /ɪn'sɒlju:b(ə)l 'faɪbə/ *noun* the fibre in bread and cereals, which is not digested but which swells inside the intestine

insomnia /ɪn'sɒmniə/ *noun* the inability to sleep ○ *She experiences insomnia.* ○ *What does the doctor give you for your insomnia?*

Also called **sleeplessness**

insomniac /ɪn'sɒmniæk/ *noun* a person who has insomnia

inspiration /'ɪnspɪ'reɪʃ(ə)n/ *noun* the act of taking air into the lungs. Opposite **expiration**

COMMENT: Inspiration takes place when the muscles of the diaphragm contract, allowing the lungs to expand.

inspiratory /ɪn'spaɪrət(ə)ri/ *adjective* referring to breathing in

inspire /ɪn'spaɪə/ *verb* to inhale air or a gas into the lungs

inspissated /ɪn'spɪseɪtɪd/ *adjective* referring to a liquid which is thickened by removing water from it

inspissation /ɪn'spɪ'seɪʃ(ə)n/ *noun* the act of removing water from a solution to make it thicker

instep /'ɪnstep/ *noun* an arched top part of the foot

instil /ɪn'stɪl/, **instill** *verb* to put a liquid in something drop by drop ○ *Instil four drops in each nostril twice a day.*

instillation /ɪn'stɪl'eɪʃ(ə)n/ *noun* **1.** the process of putting a liquid in drop by drop **2.** a liquid put in drop by drop

instinct /'ɪnstɪŋkt/ *noun* a tendency or ability which the body has from birth and does not need to learn ○ *The body has a natural instinct to protect itself from danger.*

instinctive /ɪn'stɪŋktɪv/ *adjective* automatic or unconscious rather than planned ○ *an instinctive reaction*

institution /'ɪnstɪ'tju:s(ə)n/ *noun* a place where people are cared for, e.g. a hospital or clinic, especially a psychiatric hospital or children's home

institutionalisation /,ɪn'stɪ,ti'ju:s(ə)nəlɪzəʃ(ə)n/, **institutionalization**, **institutional**

neurosis /,ɪn'stitju:s(ə)n(ə)l nju'rəʊsɪs/ *noun* a condition in which someone has become so adapted to life in an institution that it is impossible for him or her to live outside it

institutionalise /,ɪn'stɪ'tju:s(ə)nəlaɪz/, **institutionalize** *verb* to put someone into an institution

instructions /ɪn'strʌkʃənz/ *plural noun* spoken or written information which explains how something is used or how to do something ○ *She gave the taxi driver instructions on how to get to the hospital.* ○ *The instructions are written on the medicine bottle.* ○ *We can't use this machine because we have lost the book of instructions.*

instrument /'ɪnstrʊmənt/ *noun* a piece of equipment or a tool ○ *The doctor had a box of surgical instruments.*

instrumental /,ɪnstrʊ'ment(ə)l/ *adjective* □ **instrumental in** helping to do something ○ *She was instrumental in developing the new technique.*

instrumental delivery /,ɪn'strʊment(ə)l dɪ'liv(ə)rɪ/ *noun* childbirth where the doctor uses forceps to help the baby out of the mother's uterus

insufficiency /,ɪn'sa'fɪʃ(ə)nsi/ *noun* **1.** the fact of not being strong or large enough to perform usual functions ○ *The patient is suffering from a renal insufficiency.* **2.** the incompetence of an organ

insufflate /'ɪn'saflɪt/ *verb* to blow gas, vapour or powder into the lungs or another body cavity as a treatment

insufflation /,ɪn'sa'fleɪʃ(ə)n/ *noun* the act of blowing gas, vapour or powder into the lungs or another body cavity as a treatment

insula /'ɪnσjʊlə/ *noun* part of the cerebral cortex which is covered by the folds of the sulcus

insulin /'ɪnσjʊlɪn/ *noun* a hormone produced by the islets of Langerhans in the pancreas

COMMENT: Insulin controls the way in which the body converts sugar into energy and regulates the level of sugar in the blood. A lack of insulin caused by diabetes mellitus makes the level of glucose in the blood rise. Insulin injections are regularly used to treat diabetes mellitus, but care has to be taken not to exceed the dose as this will cause hyperinsulinism and hypoglycaemia.

insulinase /'insjʊlɪnɛz/ *noun* an enzyme which breaks down insulin

insulin dependence /,insjʊlin dɪ'pendəns/ *noun* the fact of being dependent on insulin injections

insulin-dependent diabetes /,insjʊlin di'pendənt daɪə'bɪtɪz/ *noun* same as **Type I diabetes mellitus**

insulinoma /,insjʊlɪ'nəʊmə/ *noun* a tumour in the islets of Langerhans

insulin-resistant /,insjʊlin rɪ'zɪst(ə)nt/ *adjective* referring to a condition in which the muscle and other tissue cells respond inadequately to insulin, as in Type II diabetes

insulin shock /'insjʊlin ʃɒk/ *noun* a serious drop in blood sugar, caused by too much insulin accompanied by sweating, dizziness, trembling and eventually coma

insuloma /,insjʊ'ləʊmə/ *noun* same as **insulinoma**

insult /'insʌlt/ *noun* 1. a physical injury or trauma 2. something that causes a physical injury or trauma

intact /ɪn'teɪkt/ *adjective* having all body parts present and undamaged

intake /'ɪntek/ *noun* 1. the amount of a substance taken in ○ a high intake of alcohol ○ She was advised to reduce her intake of sugar. 2. the process of taking in a substance

Intal /'ɪntæl/ a trade name for a preparation of cromolyn sodium

integrated service /,ɪntɪg'reɪtɪd 'sɜːvɪs/ *noun* a broad care service provided by health and social agencies acting together

integrative medicine /,ɪntɪgr'eɪtɪv 'med(ə)(s)ən/ *noun* the combination of mainstream therapies and those complementary or alternative therapies for which there is scientific evidence of efficacy and safety

integument /ɪn'tegjumənt/ *noun* a covering layer, e.g. the skin

intellect /'ɪntɪlekt/ *noun* a person's ability to think, reason and understand

intelligence /ɪn'telɪdʒəns/ *noun* the ability to learn and understand quickly

intelligence quotient /ɪn'telɪdʒəns 'kwɔːf(ə)nt/ *noun* the ratio of the mental age, as given by an intelligence test, to the chronological age of the person. Abbr **IQ**

intense /ɪn'tens/ *adjective* referring to a very strong pain ○ She is suffering from intense post herpetic neuralgia.

intensity /ɪn'tensiti/ *noun* the strength of e.g. pain

intensive care /ɪn'tensɪv 'keə/ *noun* 1. the continual supervision and treatment of an extremely ill person in a special section of a hospital ○ The patient was put in intensive care. ♀ **residential care** 2. same as **intensive care unit**

intensive care unit /ɪn'tensɪv 'keə ,ju:nɪt/ *noun* a section of a hospital equipped with life-

saving and life-support equipment in which seriously ill people who need constant medical attention are cared for. Abbr **ICU**

intention /ɪn'tenʃən/ *noun* a plan to do something

intention tremor /ɪn'tenʃən ,tremə/ *noun* a trembling of the hands seen when people suffering from particular brain diseases make voluntary movements to try to touch something

inter- /ɪn'tə/ *prefix* between

interaction /,ɪntər'ækʃən/ *noun* an effect which two or more substances such as drugs have on each other

interatrial septum /,ɪntər'eɪtriəl ,septəm/ *noun* a membrane between the right and left atria in the heart

intercalated /ɪn'tɜːkəleɪtɪd/ *adjective* inserted between other tissues

intercalated disc /ɪn,tɜː:kəleɪtɪd 'disk/ *noun* closely applied cell membranes at the end of adjacent cells in cardiac muscle, seen as transverse lines

intercellular /,ɪntə'seljʊlə/ *adjective* between the cells in tissue

intercostal /,ɪntə'kɒst(ə)l/ *adjective* between the ribs ■ *noun* same as **intercostal muscle**

intercostal muscle /ɪntə,kɒst(ə)l 'mæs(ə)l/ *noun* one of the muscles between the ribs

COMMENT: The intercostal muscles expand and contract the thorax, so changing the pressure in the thorax and making the person breathe in or out. There are three layers of intercostal muscle: external, internal and innermost or intercostalis intimis.

intercourse /'ɪntəkɔːs/ *noun* same as **sexual intercourse**

intercurrent disease /,ɪntəkɑːrənt dr'i:zɪz/ , **intercurrent infection** /,ɪntəkɑːrənt ɪn'fekʃən/ *noun* a disease or infection which affects someone who has another disease

interdigital /,ɪntə'dɪdʒɪt(ə)l/ *adjective* referring to the space between the fingers or toes

interdisciplinary /,ɪntə,dɪsɪ'plɪnəri/ *adjective* combining two or more different areas of medical or scientific study

interferon /ɪntə'fɪərən/ *noun* a protein produced by cells, usually in response to a virus, and which then reduces the spread of viruses

COMMENT: Although it is now possible to synthesise interferon outside the body, large-scale production is extremely expensive and the substance has not proved as successful at combating viruses as had been hoped, though it is used in multiple sclerosis with some success.

interior /ɪn'trɪərɪə/ *noun* a part which is inside ■ *adjective* inside

interleukin /,ɪntə'lju:kɪn/ *noun* a protein produced by the body's immune system

interleukin-1 /,ɪntəlu:kɪn 'wʌn/ *noun* a protein which causes high temperature. Abbr **IL-1**

interleukin-2 /,intəlu:kɪn 'tu:/ noun a protein which stimulates T-cell production, used in the treatment of cancer. Abbr **IL-2**

interlobar /,intə'ləʊbər/ adjective between lobes

interlobar artery /,intə'ləʊbər 'a:təri/ noun an artery running towards the cortex on each side of a renal pyramid

interlobular /intə'lɒbjʊlər/ adjective between lobules

interlobular artery /intə'lɒbjʊlər ,a:təri/ noun one of the arteries running to the glomeruli of the kidneys

intermediate care /,intə'mi:dɪət 'keə/ noun care following surgery or illness that can be delivered in special units attached to a hospital or in the person's home by a special multidisciplinary team

intermedius /,intə'mi:diəs/ ♦ **vastus intermedius**

intermenstrual /,intə'menstruəl/ adjective between the menstrual periods

intermittent /,intə'mɪt(ə)nt/ adjective occurring at intervals

intermittent claudication /,intə'mɪt(ə)nt ,kləʊ:di'keɪʃ(ə)n/ noun a condition of the arteries causing severe pain in the legs which makes the person limp after having walked a short distance (NOTE: The symptoms increase with walking, stop after a short rest and recur when the person walks again.)

intermittent fever /,intə'mɪt(ə)nt 'fi:və/ noun fever which rises and falls regularly, as in malaria

intermittent self-catheterisation /,intə'mɪt(ə)nt self,kæθitə'reɪ'zeɪʃ(ə)n/ noun a procedure in which someone puts a catheter through the urethra into their own bladder from time to time to empty out the urine. Abbr **ISC**

intern /'ɪntə:n/ noun US a medical graduate who is working in a hospital before being licensed to practise medicine. ♦ **house officer**

externa /'ɪntə:nə/ ♦ **otitis interna**

internal /'ɪntə:n(ə)l/ adjective inside the body or a body part. Opposite **external** □ **the drug is for internal use only** it should not be used on the outside of the body

internal auditory meatus /ɪn,tɜ:n(ə)l ɔ:dit(ə)ri mi'eɪtəs/ noun a channel which takes the auditory nerve through the temporal bone

internal bleeding /ɪn,tɜ:n(ə)l 'bli:dɪŋ/ noun loss of blood inside the body, e.g. from a wound in the intestine

internal capsule /ɪn,tɜ:n(ə)l 'kæpsju:l/ noun a bundle of fibres linking the cerebral cortex and other parts of the brain

internal cardiac massage /ɪn,tɜ:n(ə)l ,ka:dɪæk 'mæsæ:g/ noun a method of making

the heart start beating again by pressing on the heart itself

internal carotid /ɪn,tɜ:n(ə)l kæ'rɒtid/ noun an artery in the neck, behind the external carotid, which gives off the ophthalmic artery and ends by dividing into the anterior and middle cerebral arteries

internal derangement of the knee /ɪn,tɜ:n(ə)l di'renɡərmənt əv ðə 'ni:/ noun a condition in which the knee cannot function properly because of a torn meniscus. Abbr **IDK**

internal ear /ɪn,tɜ:n(ə)l 'ɪə/ noun the part of the ear inside the head, behind the eardrum, containing the semicircular canals, the vestibule and the cochlea

internal haemorrhage /ɪn,tɜ:n(ə)l 'hem(ə)rɪdʒ/ noun a haemorrhage which takes place inside the body

internal haemorrhoids /ɪn,tɜ:n(ə)l 'hemorroidz/ plural noun swollen veins inside the anus

internal iliac artery /ɪn,tɜ:n(ə)l 'ɪliæk ,a:təri/ noun an artery which branches from the aorta in the abdomen and leads to the pelvis

internal injury /ɪn,tɜ:n(ə)l 'ɪndʒəri/ noun damage to one of the internal organs

internal jugular /ɪn,tɜ:n(ə)l 'dʒʌgjʊlə/ noun the largest jugular vein in the neck, leading to the brachiocephalic veins

internally /ɪn'tɜ:n(ə)lɪ/ adverb inside the body ○ *He was bleeding internally.*

internal medicine /ɪn,tɜ:n(ə)l 'med(ə)s(ə)n/ noun US the treatment of diseases of the internal organs by specialists

internal nares /ɪn,tɜ:n(ə)l 'neərɪz/ plural noun the two openings shaped like funnels leading from the nasal cavity to the pharynx. Also called **posterior nares**

internal oblique /ɪn,tɜ:n(ə)l ə'bli:k/ noun the middle layer of muscle covering the abdomen, beneath the external oblique

internal organ /ɪn,tɜ:n(ə)l 'ɔ:ga:n/ noun an organ situated inside the body

internal respiration /ɪn,tɜ:n(ə)l ,respi'reɪʃ(ə)n/ noun the part of respiration concerned with the passage of oxygen from the blood to the tissues, and the passage of carbon dioxide from the tissues to the blood

International Committee of the Red Cross /ɪntə'næʃ(ə)n(ə)l kæ'mit̬i əv ðə 'red 'krɒs/ noun an international organisation which provides mainly emergency medical help, but also relief to victims of earthquakes, floods and other disasters, or to prisoners of war. Abbr **ICRC**

International Council of Nurses /,intə'næʃ(ə)n(ə)l ,kaʊnsəl əv 'nɜ:siz/ noun an organisation founded in 1899 which now represents nurses in more than 120 countries. Its aims are to bring nurses together, to ad-

vance nursing worldwide and to influence health policies. Abbr **ICN**

international nonproprietary name /ˌintənæʃ(ə)nəl ,nɒnprəpriət(ə)ri 'neɪm/ noun each of 8,000 names selected by the World Health Organization that are the legally required generic names for pharmaceutical product labelling for most countries in the world, including all EU countries. Abbr **INN**

international unit /ˌintənæʃ(ə)nəl 'ju:nɪt/ noun an internationally agreed standard used in pharmacy as a measure of a substance such as a drug or hormone. Abbr **IU**

interneurone /ˌintə'nju:rəʊn/ noun a neurone with short processes which is a link between two other neurones in sensory or motor pathways

internist /'ɪntɜ:nɪst/ noun a specialist who treats diseases of the internal organs by non-surgical means

internodal /,ɪntə'nəʊd(ə)l/ adjective between two nodes

internuncial neurone /ˌintənʌns(ə)l 'nju:rəʊn/ noun a neurone which links two other nerve cells

internus /ɪn'tɜ:nəs/ noun medial rectus muscle in the orbit of the eye

interoceptor /,ɪntərəʊ'u:septə/ noun a nerve cell which reacts to a change taking place inside the body

interosseous /,ɪntə'rɔ:sɪəs/ adjective between bones

interparietal /,ɪntəpə'raɪət(ə)l/ adjective between parietal parts, especially between the parietal bones ■ noun same as **interparietal bone**

interparietal bone /,ɪntəpə'raɪət(ə)l ,baʊn/ noun a triangular bone in the back of the skull, rarely present in humans

interpeduncular cistern /,ɪntəpə'dʌŋkjʊlər ,sistən/ noun subarachnoid space between the two cerebral hemispheres beneath the midbrain and the hypothalamus

interphalangeal joint /,ɪntəfə'lændʒiəl dʒɔɪnt/ noun a joint between the phalanges. Also called **IP joint**

interphase /'ɪntəfeɪz/ noun a stage of a cell between divisions

interpubic joint /,ɪntəpəju:bɪk 'dʒɔɪnt/ noun a piece of cartilage which joins the two sections of the pubic bone. Also called **pubic symphysis**

interruptus /,ɪntə'ræptəs/ ♦ **coitus interruptus**

intersex /'ɪntəsɛks/ noun an organism that has both male and female characteristics

intersexuality /,ɪntəsɛk'su'əlɪti/ noun a condition in which a baby has both male and female characteristics, as in Klinefelter's syndrome and Turner's syndrome

interstice /ɪn'tɪ:sɪs/ noun a small space between body parts or within a tissue

interstitial /,ɪntə'stɪʃ(ə)l/ adjective referring to tissue located in the spaces between parts of something, especially between the active tissues in an organ

interstitial cell /,ɪntə'stɪʃ(ə)l sel/ noun a testosterone-producing cell between the tubules in the testes. Also called **Leydig cell**

interstitial cell stimulating hormone /,ɪntə,s्टɪʃ(ə)l sel 'stimjuleɪtɪŋ ,hɔ:məʊn/ noun a hormone produced by the pituitary gland which stimulates the formation of corpus luteum in females and testosterone in males. Abbr **ICSH**. Also called **luteinising hormone**

interstitial cystitis /,ɪntəstɪʃ(ə)l sɪ'staɪtɪs/ noun a persistent nonbacterial condition in which someone has bladder pain and wants to pass urine frequently. It is often associated with Hunner's ulcer.

intertrigo /,ɪntə'traɪgəʊ/ noun an irritation which occurs when two skin surfaces rub against each other, as in the armpit or between the buttocks

intertubercular plane /,ɪntətju:b3:kjʊlə 'pleɪn/ noun same as **transtubercular plane**

intervention /,ɪntə'venʃən/ noun a treatment

interventional radiology /,ɪntəvenʃən(ə)l ,reidi'blədʒi/ noun the area of medicine which uses X-rays, ultrasound and computer-assisted tomography to guide small instruments into the body for procedures such as biopsies, draining fluids or widening narrow vessels

interventricular /,ɪntə'ven'trɪkjʊlər/ adjective between ventricles in the heart or brain

interventricular foramen /,ɪntə'ven ,trɪkjʊlər fə'remən/ noun an opening in the brain between the lateral ventricle and the third ventricle, through which the cerebrospinal fluid passes

interventricular septum /,ɪntə'ven ,trɪkjʊlər 'sepٹəm/ noun a membrane between the right and left ventricles in the heart

intervertebral /,ɪntə've:z:tibr(ə)l/ adjective between vertebrae

intervertebral disc /,ɪntə,v3:tibrəl 'disk/ noun a round plate of cartilage which separates two vertebrae in the spinal column. See illustration at **CARTILAGINOUS JOINT** in Supplement. Also called **vertebral disc**

intervertebral foramen /,ɪntə,v3:tibrəl fə'remən/ noun a space between two vertebrae

intestinal /ɪn'testɪn(ə)l/ adjective referring to the intestine

intestinal anastomosis /ɪn'testɪn(ə)l ə,næstə'məʊsɪs/ noun a surgical operation to join one part of the intestine to another, after a section has been removed

intestinal flora /ɪn'testɪn(ə)l 'flɔ:rə/ *plural noun* beneficial bacteria which are always present in the intestine

intestinal glands /ɪn'testɪn(ə)l glændz/ *plural noun* tubular glands found in the mucous membrane of the small and large intestine, especially those between the bases of the villi in the small intestine. Also called **Lieberkühn's glands, crypts of Lieberkühn**

intestinal infection /ɪn'testɪn(ə)l ɪn'fekʃ(ə)n/ *noun* an infection in the intestines

intestinal juice /ɪn'testɪn(ə)l dʒu:s/ *noun* alkaline liquid secreted by the small intestine which helps to digest food

intestinal obstruction /ɪn'testɪn(ə)l əb'strʌkʃən/ *noun* a blocking of the intestine

intestinal villi /ɪn'testɪn(ə)l 'vɪləɪ/ *plural noun* projections on the walls of the intestine which help in the digestion of food

intestinal wall /ɪn'testɪn(ə)l 'wɔ:l/ *noun* the layers of tissue which form the intestine

intestine /ɪn'testɪn/ *noun* the part of the digestive system between the stomach and the anus that digests and absorbs food. ☞ **large intestine, small intestine** (NOTE: For other terms referring to the intestines, see words beginning with **entero-**.)

intima /'ɪntɪmə/ ♦ **tunica intima**

intolerance /ɪn'tɒlərəns/ *noun* the fact of being unable to endure something such as pain or to take a medicine without an adverse reaction ☞ *He developed an intolerance to penicillin.*

intoxicant /ɪn'tɒksɪkənt/ *noun* a substance which induces a state of intoxication or poisoning, e.g. an alcoholic drink

intoxicate /ɪn'tɒksɪkeɪt/ *verb* to make someone incapable of controlling his or her actions, because of the influence of alcohol on the nervous system ☞ *He drank six glasses of whisky and became completely intoxicated.*

intoxication /ɪn'tɒksi'keɪʃ(ə)n/ *noun* a condition which results from the absorption and diffusion in the body of a substance such as alcohol ☞ *She was driving in a state of intoxication.*

intra- /ɪntrə/ *prefix* inside

intra-abdominal /ɪntrə əb'domɪn(ə)l/ *adjective* inside the abdomen

intra-articular /ɪntrə ə:tɪkju:lə/ *adjective* inside a joint

intracellular /ɪntrə'selju:lə/ *adjective* inside a cell

intracerebral haematoma /ɪntrə 'serəbrəl ,hɪ:mə'təʊma/ *noun* a blood clot inside a cerebral hemisphere

intracranial /ɪntrə'kreɪniəl/ *adjective* inside the skull

intracranial pressure /ɪntrə'kreɪniəl 'preʃə/ *noun* the pressure of the subarachnoid

fluid, which fills the space between the skull and the brain. Abbr **ICP**

intractable /ɪn'træktəb(ə)l/ *adjective* not able to be controlled ☞ *an operation to relieve intractable pain*

intracutaneous /,intrækju:'teɪniəs/ *adjective* inside layers of skin tissue

intracutaneous injection /,intrækju:,teɪniəs ɪn'dækʃən/ *noun* an injection of a liquid between the layers of skin, as for a test for an allergy

intradermal /,intrə'dɜ:m(ə)l/ *adjective* within or introduced between the layers of the skin
intradermal test /,intrə'dɜ:m(ə)l tɛst/ *noun* a test requiring an injection into the thickness of the skin, e.g. a Mantoux test or an allergy test

intradermic /,intrə'dɜ:mɪk/ *adjective* same as **intradermal**

intradural /,intrə'djʊərəl/ *adjective* inside the dura mater

intramedullary /,intrə'med'lərɪ/ *adjective* inside the bone marrow or spinal cord

intramural /,intrə'mjuərəl/ *adjective* inside the wall of an organ

intramuscular /,intrə'mʌskju:lə/ *adjective* inside a muscle

intramuscular injection /,intrə'mʌskju:lə ɪn'dækʃən/ *noun* an injection of liquid into a muscle, e.g. for a slow release of a drug

intranasal /,intrə'neɪz(ə)l/ *adjective* inside or into the nose

introcular /,intrə'ɒkjʊlə/ *adjective* inside the eye

intraocular lens /,intrə'ɒkjʊlə 'lenz/ *noun* an artificial lens implanted inside the eye. Abbr **IOL**

intracular pressure /,intrə'ɒkjʊlə 'preʃə/ *noun* the pressure inside the eyeball (NOTE: If the pressure is too high, it causes glaucoma.)

intraoperative ultrasound *noun* high-resolution imaging used in surgery. Abbr **IOUS**

intraorbital /,intrə'ɔ:bit(ə)l/ *adjective* within the orbit of the eye

intraosseous /,intrə'ɒsiəs/ *adjective* within a bone

intrathecal /,intrə'θi:k(ə)l/ *adjective* inside a sheath, especially inside the intradural or subarachnoid space

intratracheal /,intrə'træ'ki:l/ *adjective* within the trachea. Also called **endotracheal**

intratubercular plane /,intrə'tju:b3:kju:lə 'pleɪn/ *noun* a plane at right angles to the sagittal plane, passing through the tubercles of the iliac crests

intruterine /,intrə'ju:tərain/ *adjective* inside the uterus

intruterine contraceptive device /,intrə ju:tərain ,kɒntrə'septɪv dɪ'veɪs/, **intruterine device** /,intrəju:tərain dɪ'veɪs/ *noun* a

plastic coil placed inside the uterus to prevent pregnancy. Abbr **IUCD, IUD**

intravascular /,intrə'veæskjʊlə/ *adjective* inside the blood vessels

intravenous /,intrə'venəs/ *adjective* into a vein. Abbr **IV**

intravenous drip /,intrəvi:nəs 'drɪp/ *noun* a thin tube that is inserted into a vein and is used to very gradually give a person fluids, either for rehydration, feeding or medication purposes

intravenous feeding /,intrəvi:nəs 'fi:dɪŋ/ *noun* the procedure of giving someone liquid food by means of a tube inserted into a vein

intravenous injection /,intrəvi:nəs ɪn 'dʒekʃən/ *noun* an injection of liquid into a vein, e.g. for the fast release of a drug

intravenously /,intrə'venəsli/ *adverb* into a vein ○ *a fluid given intravenously*

intravenous pyelogram /,intrəvi:nəs 'paɪələgræm/, **intravenous urogram** /,intrəvi:nəs 'juərəgræm/ *noun* a series of X-ray photographs of the kidneys using pyelography.

Abbr **IVP**

intravenous pyelography /,intrəvi:nəs ,paɪə'lɒgrəfi/, **intravenous urography** /,intrəvi:nəs ju:rɒgrəfi/ *noun* an X-ray examination of the urinary tract after opaque liquid has been injected intravenously into the body and taken by the blood into the kidneys

intraventricular /,intrə'ventrɪkjʊlər/ *adjective* inside or placed into a ventricle in the heart or the brain

intra vitam /,intrə 'vaitəm/ *adverb* during life

intrinsic /in't्रɪnsɪk/ *adjective* belonging to the essential nature of an organism, or entirely within an organ or part

intrinsic factor /in',trɪnsɪk 'fækٹə/ *noun* a protein produced in the gastric glands which reacts with the extrinsic factor, and which, if lacking, causes pernicious anaemia

intrinsic ligament /in',trɪnsɪk 'lɪgəmənt/ *noun* a ligament which forms part of the capsule surrounding a joint

intrinsic muscle /in',trɪnsɪk 'mʌs(ə)l/ *noun* a muscle lying completely inside the part or segment, especially of a limb, which it moves

intro- /,intrəʊ/ *prefix* inward

introduce /,intrə'dju:s/ *verb* 1. to put something into something ○ *He used a syringe to introduce a medicinal substance into the body.* ○ *The nurse introduced the catheter into the vein.* 2. to present two people to one another when they have never met before ○ *Can I introduce my new assistant?* 3. to start a new way of doing something ○ *The hospital has introduced a new screening process for cervical cancer.*

introduction /,intra'dækʃən/ *noun* 1. the act of putting something inside something ○ *the*

introduction of semen into the woman's uterus

○ *the introduction of an endotracheal tube into the patient's mouth* 2. the act of starting a new process

introitus /in't्रूɪtəs/ *noun* an opening into any hollow organ or canal

introduction /,intrə'dʒekʃən/ *noun* a person's unconscious adoption of the attitudes or values of another person whom he or she wants to impress

introspection /,intrə'spekcʃən/ *noun* a detailed and sometimes obsessive mental self-examination of feelings, thoughts and motives

introversion /,intrə'vez:ʃ(ə)n/ *noun* a condition in which a person is excessively interested in himself or herself and his or her own mental state. Compare **extroversion**

introvert /'intrəvɜ:t/ *noun* a person who thinks only about himself or herself and his or her own mental state. Compare **extrovert**

introverted /'intrəvɜ:tɪd/ *adjective* referring to someone who thinks only about himself or herself

intubate /'intju:bət/ *verb* to insert a tube into any organ or part of the body. Also called **catheterise**

intubation /,intju:'beɪʃ(ə)n/ *noun* the therapeutic insertion of a tube into the larynx through the glottis to allow the passage of air. Also called **catheterisation**

intumescence /,intju:'mes(ə)ns/ *noun* the swelling of an organ

intussusception /,intə'sə'sepʃən/ *noun* a condition in which part of the gastrointestinal tract becomes folded down inside the part beneath it, causing an obstruction and strangulation of the folded part

inunction /in'ʌŋkʃən/ *noun* 1. the act of rubbing an ointment into the skin so that the medicine in it is absorbed 2. an ointment which is rubbed into the skin

in utero /in 'ju:tərəʊ/ *adverb, adjective* in, or while still inside, a woman's womb

invade /in'veɪd/ *verb* to enter and spread gradually throughout a part of the body, e.g. the entry of a microorganism that causes disease

invagination /in,vædʒɪ'næʃ(ə)n/ *noun* 1. same as **intussusception** 2. the surgical treatment of hernia, in which a sheath of tissue is made to cover the opening

invalid /'invlɪd/ *(dated) noun* someone who has had an illness and has not fully recovered from it or who has been permanently disabled

■ *adjective* weak or disabled

invalidity /,in'velɪdɪti/ *noun* the condition of being disabled

invasion /in'veɪz(ə)n/ *noun* the entry of bacteria into a body, or the first attack of a disease

invasive /in'veɪsɪv/ *adjective* 1. referring to cancer which tends to spread throughout the

body 2. referring to an inspection or treatment which involves entering the body by making an incision. ◊ **non-invasive**

inverse care law /ɪn'versɪs 'keə ləʊ/ *noun* the idea that the people who most need care and services are least likely or able to access them
inversion /ɪn'versʃ(ə)n/ *noun* the fact of being turned towards the inside ◊ *inversion of the foot* See illustration at **ANATOMICAL TERMS** in Supplement ◊ **inversion of the uterus** a condition in which the top part of the uterus touches the cervix, as if it were inside out, which may happen after childbirth

invertase /ɪn'verteɪz/ *noun* an enzyme in the intestine which splits sucrose

investigation /ɪn'vestɪg'eɪʃ(ə)n/ *noun* an examination to find out the cause of something which has happened ◊ *The Health Authority ordered an investigation into how the drugs were stolen.*

investigative surgery /ɪn'vestɪgætɪv 'sɜːdʒəri/ *noun* surgery to investigate the cause of a condition

in vitro /ɪn 'viːtrəʊ/ *adjective, adverb* a Latin phrase meaning 'in a glass', i.e. in a test tube or similar container used in a laboratory ◊ **in vitro activity, in vitro experiment** experiment which takes place in the laboratory

in vitro fertilisation /ɪn 'viːtrəʊ ,fɜːtəlai 'zeɪʃ(ə)n/ *noun* the fertilisation of an ovum in the laboratory. ◊ **test-tube baby.** Abbr **IVF**

in vivo *adjective, adverb* a Latin phrase meaning 'in living tissue', i.e. referring to an experiment which takes place on the living body

in vivo experiment /ɪn 'viːvəʊ ɪk'sperɪmənt/ *noun* an experiment on a living body, e.g. that of an animal

involutcrum /ɪnvə'lu:k्रəm/ *noun* a covering of new bone which forms over diseased bone

involuntary /ɪn'velənt(ə)ri/ *adjective* done automatically, without any conscious thought or decision-making being involved ◊ *Patients are advised not to eat or drink, to reduce the risk of involuntary vomiting while on the operating table.*

involuntary action /ɪn'velənt(ə)ri 'ækʃən/ *noun* an action which someone does without thinking or making a conscious decision

involuntary muscle /ɪn'velənt(ə)ri 'mʌsl(ə)l/ *noun* a muscle supplied by the autonomic nervous system, and therefore not under voluntary control, e.g. the muscle which activates a vital organ such as the heart

involution /ɪnvə'lu:s(ə)n/ *noun* 1. the return of an organ to its usual size, e.g. the shrinking of the uterus after childbirth 2. a period of decline of organs which sets in after middle age

involutional /ɪnvə'lu:s(ə)n(ə)l/ *adjective* referring to involution

involutional melancholia /ɪnvə'lu:s(ə)n(ə)l melən'kəuliə/ *noun* a depression

which occurs in people, mainly women, after middle age, probably caused by a change of endocrine secretions

iodine /'aɪədɪn/ *noun* a chemical element which is essential to the body, especially to the functioning of the thyroid gland (NOTE: Lack of iodine in the diet can cause goitre. The chemical symbol is I.)

IOL *abbr* intraocular lens

ion /'aɪən/ *noun* an atom that has an electric charge (NOTE: Ions with a positive charge are called cations and those with a negative charge are called anions.)

COMMENT: It is believed that living organisms, including human beings, react to the presence of ionised particles in the atmosphere. Hot dry winds contain a higher proportion of positive ions than usual and these winds cause headaches and other illnesses. If negative ionised air is introduced into an air-conditioning system, the incidence of headaches and nausea among people working in the building may be reduced.

ionise /'aɪənaɪz/, **ionize** *verb* to give an atom an electric charge

ioniser /'aɪənaɪzə/, **ionizer** *noun* a machine that increases the amount of negative ions in the atmosphere of a room, so counteracting the effect of positive ions

ionotherapy /aɪənəθə'rəpɪ/ *noun* treatment by ions introduced into the body via an electric current

iontophoresis /aɪəntəʊfə'rɪ:sɪs/ *noun* the movement of ions through a biological material when an electric current passes through it

Ious *abbr* intraoperative ultrasound

IPAV *abbr* intermittent positive airway ventilation. ◊ **positive pressure ventilation**

ippecacuanha /,ɪpɪkækjʊ'aːnə/ *noun* a drug made from the root of an American plant, used as a treatment for coughs, and also as an emetic (NOTE: The US term is **ippecac**.)

IP joint /,aɪ 'pi: dʒɔɪnt/ *noun* same as **interphalangeal joint**

IPPV *abbr* intermittent positive pressure ventilation. ◊ **positive pressure ventilation**

ipratropium /aɪprə'traʊpiəm/, **ipratropium bromide** /aɪprə,traʊpiəm'brəʊmaɪd/ *noun* a drug which helps to relax muscles in the airways, used in the treatment of conditions such as asthma, bronchitis and emphysema

ipsilateral /,ɪpsɪ'lætərəl/ *adjective* located on or affecting the same side of the body. Also called **homolateral**. Opposite **contralateral**

IQ *abbr* intelligence quotient

IRDS *abbr* infant respiratory distress syndrome

irid- /ɪrid/ *prefix* referring to the iris

iridectomy /,ɪrɪ'dektəmɪ/ *noun* the surgical removal of part of the iris

iridencleisis /,ɪriden'kləsɪs/ *noun* an operation to treat glaucoma, where part of the iris

is used as a drainage channel through a hole in the conjunctiva

iridocyclitis /ɪrɪdəʊsɪ'klraɪtɪs/ *noun* inflammation of the iris and the tissues which surround it

iridodialysis /ɪrɪdəʊdai'læsɪs/ *noun* the separation of the iris from its insertion

iridoplegia /ɪrɪdəʊ'pli:dʒə/ *noun* paralysis of the iris

iridoptosis /ɪrɪdəʊ'təʊsɪs/ *noun* the pushing forward of the iris through a wound in the cornea

iridotomy /ɪrɪ'dɒtəmɪ/ *noun* a surgical incision into the iris

iris /'aɪrɪs/ *noun* a coloured ring in the eye, with the pupil at its centre. See illustration at EYE in Supplement

COMMENT: The iris acts like the aperture in a camera shutter, opening and closing to allow more or less light through the pupil into the eye.

iritis /aɪ'rɪtaɪs/ *noun* inflammation of the iris

iron /'aɪrən/ *noun* 1. a chemical element essential to the body, present in foods such as liver and eggs 2. a common grey metal (NOTE: The chemical symbol is Fe.)

COMMENT: Iron is an essential part of the red pigment in red blood cells. Lack of iron in haemoglobin results in iron-deficiency anaemia. Storage of too much iron in the body results in haemochromatosis.

iron-deficiency anaemia /,aɪrən dɪ'fɪʃ(ə)nseɪ ə,nī:mi:ə/ *noun* anaemia caused by a lack of iron in red blood cells

iron lung /,aɪrən 'laɪŋ/ *noun* same as Drinker respirator

irradiation /ɪ,rɪədɪ'eɪʃ(ə)n/ *noun* 1. the process of spreading from a centre, as e.g., nerve impulses do 2. the use of radiation to treat people or to kill bacteria in food

irreducible hernia /ɪrɪ,dju:səb(ə)l 'hɜ:nɪə/ *noun* a hernia where the organ cannot be returned to its usual position

irregular /ɪ'regjʊlə/ *adjective* not regular or normal ○ *The patient's breathing was irregular.* ○ *The nurse noted that the patient had developed an irregular pulse.* ○ *He has irregular bowel movements.*

irrigate /'ɪrɪgeɪt/ *verb* to wash out a cavity in the body

irrigation /,ɪrɪ'geɪʃ(ə)n/ *noun* the washing out of a cavity in the body

irritability /ɪrɪtə'bilitɪ/ *noun* the state of being irritable

irritable /'ɪrɪtəb(ə)l/ *adjective* 1. easily able to become inflamed and painful 2. feeling annoyed and impatient

irritable bowel syndrome /,ɪrɪtəb(ə)l 'baʊəl ,sɪndrəʊm/ *noun* → mucous colitis. Abbr IBS

irritable colon /,ɪrɪtəb(ə)l 'kəʊlon/ *noun* → mucous colitis

irritable hip /,ɪrɪtəb(ə)l 'hɪp/ *noun* a condition of pain in the hip which is caused by swelling of the synovium. Treatment involves bed rest, traction and anti-inflammatory drugs.

irritant /'ɪrit(ə)nt/ *noun* a substance which can irritate

irritant dermatitis /,ɪrit(ə)nt ,dɜ:mə'taɪtɪs/ *noun* same as contact dermatitis

irritate /'ɪriteɪt/ *verb* to cause a painful reaction in part of the body, especially to make it inflamed ○ *Some types of wool can irritate the skin.*

irritation /,ɪri'teɪʃ(ə)n/ *noun* a feeling of being irritated ○ *an irritation caused by the ointment*

ISC abbr intermittent self-catheterisation

isch- /ɪsk/ *prefix* too little

ischaemia /'ɪski:mɪə/ *noun* a deficient blood supply to a part of the body

ischaemic /'ɪski:mɪk/ *adjective* lacking in blood

...the term stroke does not refer to a single pathological entity. Stroke may be haemorrhagic or ischaemic; the latter is usually caused by thrombosis or embolism' [British Journal of Hospital Medicine]

ischaemic heart disease /,ɪski:mɪk 'ha:t dɪ,zi:z/ *noun* a disease of the heart caused by a failure in the blood supply, as in coronary thrombosis. Abbr IHD

ischio- /ɪskiə/ *prefix* same as ischio- (used before vowels)

ischia /'ɪskiə/ plural of ischium

ischial /'ɪskiəl/ *adjective* referring to the ischium or hip joint

ischial tuberosity /,ɪskiəl ,tju:bə'rɒsɪti/ *noun* a lump of bone forming the ring of the ischium

ischio- /ɪskiə/ *prefix* referring to the ischium

ischiocavernosus muscle /,ɪskiəkəvə'neʊsəs ,mʌs(ə)l/ *noun* a muscle along one side of the perineum

ischiorectal /,ɪskiə'rekta(l)/ *adjective* referring to both the ischium and the rectum

ischiorectal abscess /,ɪskiə'rekta(l) 'æbses/ *noun* an abscess which forms in fat cells between the anus and the ischium

ischiorectal fossa /,ɪskiə'rekta(l) 'fɒsə/ *noun* a space on either side of the lower end of the rectum and anal canal

ischium /'ɪskiəm/ *noun* the lower part of the hip bone in the pelvis. See illustration at PELVIS in Supplement (NOTE: The plural is ischia.)

Ishihara colour charts /,ɪʃi'hā:rə 'kʌlər ,tʃɑ:tɪs/ *plural noun* charts used in a test for colour vision in which numbers or letters are shown in dots of primary colours with dots of other colours around them. People with normal colour vision can see them, but people who are colour-blind cannot.

Ishihara test /,ɪʃi'hā:rə test/ *noun* a test using Ishihara colour charts

islets of Langerhans /aɪləts əv 'læŋəhæns/, **islands of Langerhans** /aɪləndz əv 'læŋəhænz/, **islet cells** /'aɪlət selz/ **plural noun** groups of cells in the pancreas which secrete the hormones glucagon, insulin and gastrin [Described 1869. After Paul Langerhans (1847–88), Professor of Pathological Anatomy at Freiburg, Germany.]

iso- /aɪsəʊ/ **prefix** equal

isoantibody /aɪsəʊ'æntɪbədi/ **noun** an antibody which forms in one person as a reaction to antigens from another person (NOTE: The plural is **isoantibodies**.)

isograft /'aɪsəʊgra:f/ **noun** a graft of tissue from an identical twin. Also called **syngraft**

isoimmunisation /,aɪsəʊ,ɪmju:nɪz'eɪʃ(ə)n/, **isoimmunization** **noun** immunisation of a person with antigens derived from another person

isolate /aɪsəleɪt/ **verb** 1. to keep one person apart from others because he or she has a dangerous infectious disease 2. to identify a single virus, bacterium or other pathogen among many ○ *Scientists have been able to isolate the virus which causes Legionnaires' disease.* ○ *Candida is easily isolated from the mouths of healthy adults.*

isolation /,aɪsə'leɪʃ(ə)n/ **noun** the separation of a person, especially one with an infectious disease, from others

isolation ward /,aɪsə'leɪʃ(ə)n wɔ:d/ **noun** a special ward where people who have dangerous infectious diseases can be kept isolated from others

isolator /'aɪsəleɪtə/ **noun** 1. a large clear plastic bag in which a person can be nursed, or operated on, in a sterile environment 2. a room or piece of equipment which keeps people or substances separated from others which may contaminate them ○ *an isolator stretcher* ○ *an isolator cabinet*

isoleucine /aɪsəʊ'lʊsi:n/ **noun** an essential amino acid

isometric /aɪsəʊ'metrik/ **adjective** 1. involving equal measurement ○ *an isometric view of the system* 2. referring to muscle contraction in which tension occurs with very little shortening of muscle fibres 3. referring to exercises in which the muscles are put under tension but not contracted

isometrics /,aɪsəʊ'metriks/ **plural noun** exercises to strengthen the muscles, in which the muscles contract but do not shorten

isoniazid /,aɪsə'naɪəzɪd/ **noun** a colourless crystalline compound that is used in the treatment of tuberculosis. Abbr INH

isoprenaline /,aɪsəʊ'prenəlɪ:n/, **isoproterenol** **noun** a drug that relieves asthma by widening the bronchial tubes in the lungs

isosorbide dinitrate /,aɪsəʊ,sɔ:baid daɪ'naitrɛt/ **noun** a compound which causes widening or relaxation of the blood vessels, used in the treatment of angina pectoris

isotonic /,aɪsəʊ'tɒnɪk/ **adjective** referring to a solution, e.g. a saline drip, which has the same osmotic pressure as blood serum and which can therefore be passed directly into the body. Compare **hypertonic**, **hypotonic**

isotonicity /,aɪsətɒ'nɪsɪti/ **noun** the equal osmotic pressure of two or more solutions

isotonic solution /,aɪsətɒnɪk sə'l[u:s(ə)n/ **noun** a solution which has the same osmotic pressure as blood serum, or as another liquid it is compared with

isotope /'aɪsətəʊp/ **noun** a form of a chemical element which has the same chemical properties as other forms but a different atomic mass

isotretinoin /,aɪsəʊtre'tɪnɔɪn/ **noun** a drug used in the treatment of severe acne and several other skin diseases

ispaghula /,ɪspə'gu:lə/, **ispaghula husk** /,ɪspa'gu:lə hʌsk/ **noun** a natural dietary fibre used to treat constipation, diverticulitis and irritable bowel syndrome

ISS **abbr** injury scoring system

isthmus /'ɪsməs/ **noun** 1. a short narrow canal or cavity 2. a narrow band of tissue joining two larger masses of similar tissue, e.g. the section in the centre of the thyroid gland, which joins the two lobes (NOTE: The plural is **isthmi** or **isthmuses**.)

itch /ɪtʃ/ **noun** 1. an irritated place on the skin which makes a person want to scratch 2. **the itch** same as **scabies** (*informal*) ■ **verb** to produce an irritating sensation, making someone want to scratch

itching /'ɪtʃɪŋ/ **noun** same as **pruritus**

itchy /'ɪtʃi/ **adjective** making a person want to scratch ○ *The main symptom of the disease is an itchy red rash.*

-itis /aɪtɪs/ **suffix** inflammation

ITU **abbr** intensive therapy unit

IU **abbr** international unit

IUCD **abbr** intrauterine contraceptive device

IUD **abbr** 1. intrauterine death 2. intrauterine device

IUS **abbr** intrauterine system

IV **abbr** intravenous

IVF **abbr** in vitro fertilisation

IVP **abbr** intravenous pyelogram

IVU **abbr** intravenous urography

J

J /dʒeɪ/ *abbr* joule

jab /dʒæb/ *noun* an injection or inoculation (*informal*) ○ *a tetanus jab*

Jacksonian epilepsy /dʒæk,səniən 'epɪlɛpsi/ *noun* a form of epilepsy in which the jerking movements start in one part of the body before spreading to others [Described 1863. After John Hughlings Jackson (1835–1911), British neurologist.]

Jacquemier's sign /'dʒækəmɪəz ,sain/ *noun* a sign of early pregnancy in which the vaginal mucosa becomes slightly blue due to an increased amount of blood in the arteries [After Jean Marie Jacquemier (1806–79), French obstetrician]

jactitation /,dʒæktrɪ'teɪʃ(ə)n/ *noun* the action of constantly moving the body around in a restless way, especially because of mental illness

jag /dʒæg/ *noun* in Scotland, an injection or inoculation (*informal*)

jargon /'dʒa:gɒn/ *noun* 1. the words used by people who have a particular area of knowledge, which are usually only understood by those people ○ *medical jargon* 2. a stream of words that makes no sense, produced by someone with aphasia or a severe mental disorder

jaundice /'dʒɔ:ndɪs/ *noun* a condition in which there is an excess of bile pigment in the blood, and in which the pigment is deposited in the skin and the whites of the eyes, which have a yellow colour. Also called **icterus**

COMMENT: Jaundice can have many causes, usually relating to the liver: the most common are blockage of the bile ducts by gallstones or by disease of the liver and Weil's disease.

jaw /dʒɔ:/ *noun* the bones in the face which hold the teeth and form the mouth ○ *He fell down and broke his jaw.* ○ *The punch on his mouth broke his jaw.*

COMMENT: The jaw has two parts, the upper (the maxillae) being fixed parts of the skull, and the lower (the mandible) being attached to the skull with a hinge so that it can move up and down.

jawbone /'dʒɔ:bəʊn/ *noun* one of the bones which form the jaw, especially the lower jaw or mandible

jejun- /dʒɪdʒu:n/ *prefix* same as **jejuno-** (*used before vowels*)

jejunal /dʒɪ'dʒu:n(ə)l/ *adjective* referring to the jejunum

jejunal ulcer /dʒɪ,dʒu:n(ə)l 'ʌlsə/ *noun* an ulcer in the jejunum

jejunectomy /,dʒɪdʒu:'nektəmɪ/ *noun* a surgical operation to remove all or part of the jejunum (NOTE: The plural is **jejunectomies**.)

jejuno- /dʒɪ:dʒu:nəʊ/ *prefix* referring to the jejunum

jejunoileostomy /dʒɪ,dʒu:nəʊ,ɪlɪ'ɒstəmɪ/ *noun* a surgical operation to make an artificial link between the jejunum and the ileum (NOTE: The plural is **jejunoileostomies**.)

jejunostomy /,dʒɪdʒu'nɒstəmɪ/ *noun* a surgical operation to make an artificial passage to the jejunum through the wall of the abdomen (NOTE: The plural is **jejunostomies**.)

jejunitomy /,dʒɪdʒu'nɒtəmɪ/ *noun* a surgical operation to cut into the jejunum (NOTE: The plural is **jejunitomies**.)

jejunum /dʒɪ'dʒu:nəm/ *noun* the part of the small intestine between the duodenum and the ileum, about 2 metres long. See illustration at **DIGESTIVE SYSTEM** in Supplement

jerk /dʒɜ:k/ *noun* a sudden movement of part of the body which indicates that the local reflex arc is intact ■ *verb* to make sudden movements, or cause something to make sudden movements ○ *In some forms of epilepsy the limbs jerk.*

jet lag /'dʒet læg/ *noun* a condition suffered by people who travel long distances in planes, caused by rapid changes in time zones which affect sleep patterns and meal times and thus interfere with the body's metabolism ○ *We had jet lag when we flew from Australia.*

jet-lagged /'dʒet lægd/ *adjective* experiencing jet lag ○ *jet-lagged travellers* ○ *We were jet-lagged for a week.*

joint /dʒɔɪnt/ *noun* a structure at a point where two or more bones join, especially one which allows movement of the bones ○ *The elbow is a joint in the arm.* ○ *Arthritis is accompanied by stiffness in the joints.* ♦ **Charcot's**

joint (NOTE: For other terms referring to joints, see words beginning with **arthr-**, **arthro-**.)

joint-breaker fever /'dʒɔɪnt ,breɪkə ,fɪ:və/ noun same as **o'nyong-nyong fever**

joint capsule /'dʒɔɪnt ,kæpsju:l/ noun white fibrous tissue which surrounds and holds a joint together. See illustration at **SYNOVIAL JOINT** in Supplement

joint investment plan /,dʒɔɪnt ɪn 'vestmənt plæn/ noun a plan that health and social services draw up together for specific areas of care

joint mouse /'dʒɔɪnt maʊs/ plural noun a loose piece of bone or cartilage in the knee joint, making the joint lock

joule /dʒu:l/ noun the SI unit of measurement of work or energy. 4.184 joules equals one calorie. Symbol J

jugular /'dʒʌgjʊlə/ adjective referring to the throat or neck ■ noun same as **jugular vein**

COMMENT: There are three jugular veins on each side: the **internal jugular** is large and leads to the brachiocephalic vein, the **external jugular** is smaller and leads to the subclavian vein and the **anterior jugular** is the smallest.

jugular nerve /'dʒʌgjʊlə nɜ:v/ noun one of the nerves in the neck

jugular trunk /'dʒʌgjʊlə trʌŋk/ noun a terminal lymph vessel in the neck, draining into the subclavian vein

jugular vein /'dʒʌgjʊlə veɪn/ noun one of the veins which pass down either side of the neck. Also called **jugular**

juice /dʒu:s/ noun 1. liquid from a fruit or vegetable □ a glass of *orange juice* or *tomato juice* 2. a natural fluid of the body. ♦ **gastric juice**

jumper's knee /,dʒʌmpəz 'ni:/ noun a painful condition suffered by athletes and dancers in which inflammation develops in the knee joint

junction /'dʒʌŋkʃən/ noun a joining point

junior doctor /,dʒu:nɪə 'dɒktə/ noun a doctor who is completing his or her training in hospital

junk food /'dʒʌŋk fu:d/ noun food of little nutritional value, e.g. high-fat processed snacks, eaten between or instead of meals

juvenile /'dʒu:vənɪəl/ adjective relating to or affecting children or adolescents

juxta- /dʒʌkstə/ prefix beside or near

juxta-articular /,dʒʌkstə ə:tɪkjʊlə/ adjective occurring near a joint

juxtaposition /,dʒʌkstə'zɪʃ(ə)n/ noun the placing of two or more things side by side so as to make their similarities or differences more obvious

K

k symbol kilo-

Kahn test /kɑ:n/ *test/ noun* a test of blood serum to diagnose syphilis [Described 1922. After Reuben Leon Kahn, Lithuanian-born serologist who worked in the USA.]

kala-azar /,kə:lə ə'zə:/ *noun* an often fatal form of leishmaniasis caused by the infection of the intestines and internal organs by a parasite, *Leishmania*, spread by flies. Symptoms are fever, anaemia, general wasting of the body and swelling of the spleen and liver.

kalium /'keɪliəm/ *noun* same as **potassium**

kaolin /'keɪəlɪn/ *noun* a fine soft clay used in the making of medical preparations, especially for the treatment of diarrhoea

Kaposi's sarcoma /kə,pəʊɪz sə:'kəʊmə/ *noun* a cancer which takes the form of many haemorrhagic nodes affecting the skin, especially on the extremities [Described 1872. After Moritz Kohn Kaposi (1837–1902), Professor of Dermatology at Vienna, Austria.]

COMMENT: Formerly a relatively rare disease, found mainly in tropical countries, Kaposi's sarcoma is now more common as it is one of the diseases associated with AIDS.

Kartagener's syndrome /,kɑ:tɪn'dʒɪ:nəz, sɪndrəʊm/ *noun* a hereditary condition in which all the organs in the chest and abdomen are positioned on the opposite side from the usual one, i.e. the heart and stomach are on the right

karyo- /kærɪəʊ/ *prefix* relating to a cell nucleus

karyotype /'kærɪəʊtaɪp/ *noun* the chromosome complement of a cell, shown as a diagram or as a set of letters and numbers

Kawasaki disease /,kə:wə'sa:kiz dɪ,zɪ:z/ *noun* a retrovirus infection that often occurs in small children and causes a high temperature, rash, reddened eyes, peeling skin and swollen lymph nodes

Kayser-Fleischer ring /,kaɪzə 'flaɪʃə ,rɪŋ/ *noun* a brown ring on the outer edge of the cornea, which is a diagnostic sign of hepatolenticular degeneration [Described 1902 by Kayser, 1903 by Fleischer. Bernard Kayser (1869–

1954), German ophthalmologist; Bruno Richard Fleischer (1848–1904), German physician.]

kcal abbr kilocalorie

Kegel exercises /'keɪg(ə)l ,eksəsərзɪz/ *plural noun* exercises which strengthen the muscles of the pelvic floor in women and help to prevent any accidental leakage of urine when they cough, sneeze or lift things

Keller's operation /'keləz əpə,reɪʃ(ə)n/ *noun* a surgical operation on the big toe to remove a bunion or to correct an ankylosed joint [Described 1904. After William Lordan Keller (1874–1959), US surgeon.]

keloid /'ki:lɔɪd/ *noun* an excessive amount of scar tissue at the site of a skin injury

kerat- /kerət/ *prefix* same as **kerato-** (*used before vowels*)

keratalgia /,kerə'tældʒɪə/ *noun* pain felt in the cornea

keratectasia /,kerətek'terɪzɪə/ *noun* a condition in which the cornea bulges

keratectomy /,kerə'tektəmɪ/ *noun* a surgical operation to remove the whole or part of the cornea (NOTE: The plural is **keratectomies**.)

keratic /kə'rætɪk/ *adjective* 1. relating to horny tissue or to keratin 2. relating to the cornea

keratin /'kerətɪn/ *noun* a protein found in horny tissue such as fingernails, hair or the outer surface of the skin

keratinisation /,kerətɪnəz'ɪʃ(ə)n/, **keratinization** *noun* the appearance of horny characteristics in tissue. Also called **cornification**

keratinise /'kerətɪnaɪz, kə'rætɪnaɪz/, **keratinize** *verb* to convert something into keratin or into horny tissue (NOTE: **keratinising – keratinised**)

keratinocyte /,kerə'tɪnəʊsait/ *noun* a cell which produces keratin

keratitis /,kərə'taɪtɪs/ *noun* inflammation of the cornea

kerato- /kerətəʊ/ *prefix* referring to horn, horny tissue or the cornea

keratoacanthoma /,kerətəʊ,ækən'θəʊmə/ *noun* a type of benign skin tumour which dis-

appears after a few months (NOTE: The plural is **keratoacanthomas** or **keratoacanthomata**.)

keratoconjunctivitis /'kerətəʊkən'dʒʌŋktɪvɪtɪs/ noun inflammation of the cornea with conjunctivitis

keratoconus /'kerətəʊ'kənəs/ noun a cone-shaped lump on the cornea

keratoglobus /'kerətəʊ'gləʊbəs/ noun swelling of the eyeball

keratoma /'kerətəʊmə/ noun a hard thickened growth due to hypertrophy of the horny zone of the skin (NOTE: The plural is **keratomas** or **keratomata**.)

keratomalacia /'kerətəʊmə'leɪʃə/ noun 1. a softening of the cornea frequently caused by Vitamin A deficiency 2. softening of the horny layer of the skin

keratome /'kerətəʊm/ noun a surgical knife used for operations on the cornea

keratometer /'kerətəʊmɪtər/ noun an instrument for measuring the curvature of the cornea

keratometry /'kerətəʊmətri/ noun the process of measuring the curvature of the cornea

keratopathy /'kerətəpəθi/ noun any non-inflammatory disorder of the cornea (NOTE: The plural is **keropathies**.)

keratoplasty /'kerətəplæsti/ noun a surgical operation to graft corneal tissue from a donor in place of diseased tissue (NOTE: The plural is **keratoplasties**.)

keratoprosthesis /'kerətəʊprɒsɪs/ noun 1. a surgical operation to replace the central area of a cornea with clear plastic, when it has become opaque 2. a piece of clear plastic put into the cornea (NOTE: The plural is **keratoprostheses**.)

keratoscope /'kerətəskəʊp/ noun an instrument for examining the cornea to see if it has an unusual curvature. Also called **Placido's disc**

keratosis /'kerətəʊsɪs/ noun a lesion of the skin (NOTE: The plural is **keratoses**.)

keratotomy /'kerətətəmɪ/ noun a surgical operation to make a cut in the cornea, the first step in many intraocular operations (NOTE: The plural is **keratomies**.)

kerion /'kɪəriən/ noun a painful soft mass, usually on the scalp, caused by ringworm

kernicterus /kə'nɪktərəs/ noun yellow pigmentation of the basal ganglia and other nerve cells in the spinal cord and brain, found in children with icterus

Kernig's sign /'kɜ:nɪgz sain/ noun a symptom of meningitis in which the knee cannot be straightened if the person is lying down with the thigh brought up against the abdomen [Described 1882. After Vladimir Mikhailovich Kernig (1840–1917), Russian neurologist.]

ketamine /'ketəmɪn/ noun a white crystalline powder that is a general anaesthetic, used in human and veterinary medicine

ketoacidosis /,ki:təʊ,æsɪ'deʊsɪs/ noun an accumulation of ketone bodies in tissue in diabetes, causing acidosis

ketoconazole /,ki:təʊ'kɒnəzəʊl/ noun a drug which is effective against a wide range of fungal infections such as cryptococcosis and thrush

ketogenesis /,ki:təʊ'dʒenəsɪs/ noun the production of ketone bodies

ketogenic /,ki:təʊ'dʒenɪk/ adjective forming ketone bodies

ketogenic diet /,ki:təʊdʒenɪk 'daɪət/ noun a diet with a high fat content, producing ketosis

ketonaemia /,ki:təʊ'ni:mɪə/ noun a morbid state in which ketone bodies exist in the blood

ketone /'kɪ:təʊn/ noun a chemical compound produced when glucose is unavailable for use as energy, as in untreated diabetes, and fats are used instead, leading to ketosis

ketone bodies /'kɪ:təʊn,bo:bɪz/ plural noun ketone compounds formed from fatty acids

ketone group /'kɪ:təʊn gru:p/ noun a chemical group characteristic of ketones, with carbon atoms doubly bonded to an oxygen atom and to the carbon atoms of two other organic groups

ketonuria /,ki:təʊ'njuəriə/ noun a state in which ketone bodies are excreted in the urine

ketoprofen /,ki:təʊ'prəʊfən/ noun an anti-inflammatory drug used in the treatment of rheumatoid arthritis and osteoarthritis

ketosis /ki:təʊsɪs/ noun a state in which ketone bodies such as acetone and acetic acid accumulate in the tissues, a late complication of Type I diabetes mellitus

ketosteroid /,ki:təʊ'stɪərɔɪd/ noun a steroid such as cortisone which contains a ketone group

keyhole surgery /'ki:həʊl,sɜ:dʒəri/ noun surgery carried out by inserting tiny surgical instruments through an endoscope (*informal*) Also called **laparoscopic surgery**

kg abbr kilogram

kidney /'kɪdnɪ/ noun either of two organs situated in the lower part of the back on either side of the spine behind the abdomen, whose function is to maintain the usual concentrations of the main constituents of blood, passing the waste matter into the urine. See illustration at **KIDNEY** in Supplement

COMMENT: A kidney is formed of an outer cortex and an inner medulla. The nephrons which run from the cortex into the medulla filter the blood and form urine. The urine is passed through the ureters into the bladder. Sudden sharp pain in back of the abdomen, going downwards, is an indication of a kidney stone passing into the ureter.

kidney dialysis /'kɪdnɪ dai,æləsɪs/ noun the process of removing waste matter from blood by passing it through a kidney machine. Also called **haemodialysis**

kidney donor /'kɪdnɪ ,dəʊnər/ *noun* a person who gives one of his or her kidneys as a transplant

kidney failure /'kɪdnɪ ,feɪljə/ *noun* a situation in which the kidneys do not function properly

kidney machine /'kɪdnɪ mæ,ʃɪn/ *noun* an apparatus through which blood is passed to be cleaned by dialysis if the person's kidneys have failed

kidney stone /'kɪdnɪ stəʊn/ *noun* a hard mass of calcium like a little piece of stone which forms in the kidney

kidney transplant /'kɪdnɪ ,trænsplɑ:tnt/ *noun* a surgical operation to give someone with a diseased or damaged kidney a kidney from another person

kill /kɪl/ *verb* to make someone or something die ○ *She was killed in a car crash.* ○ *Heart attacks kill more people every year.* ○ *Antibodies are created to kill bacteria.*

killer /'kɪlə/ *noun* a person or disease which kills ○ *In the winter, bronchitis is the killer of hundreds of senior citizens.* ○ *Virulent typhoid fever can be a killer disease.* ♀ **painkiller**

killer cell /'kɪlə sel/, **killer T cell** *noun* a type of immune cell that recognises and destroys cells that have specific antigens on their surface, e.g. virus-infected or cancerous cells

Killian's operation /'kiliənz ɔ:pə,reɪʃ(ə)n/ *noun* a surgical operation to clear the frontal sinus by curetting in which the incision is made in the eyebrow [After Gustav Killian (1860–1921), German laryngologist]

kilo- /'kɪləʊ/ *prefix* one thousand (10^3). Symbol **k**

kilogram /'kɪləgræm/ *noun* an SI unit of measurement of weight equal to 1000 grams ○ *She weighs 62 kilos (62 kg).* Symbol **kg**

kilojoule /'kɪləʊdʒu:l/ *noun* an SI unit of measurement of energy or heat equal to 1000 joules. Symbol **kJ**

kilopascal /'kɪləʊpæskəl/ *noun* an SI unit of measurement of pressure equal to 1000 pascals. Symbol **kPa**

Kimmelstiel-Wilson disease /,kɪməl'sti:l 'wɪlsən dɪ,zi:z/, **Kimmelstiel-Wilson syndrome** /,kɪməl'sti:l 'wɪlsən ,sɪndrəʊm/ *noun* a form of nephrosclerosis found in people with diabetes [Described 1936. After Paul Kimmelstiel (1900–70), US pathologist; Clifford Wilson (1906–98), Professor of Medicine, London University, UK.]

kin /kɪn/ *noun* relatives or close members of the family

kin- /kɪn/ *prefix* same as **kine-** (used before vowels)

kinaesthesia /,kɪni:s'θi:ziə/ *noun* the fact of being aware of the movement and position of parts of the body (NOTE: The US spelling is **kinesthesia**.)

COMMENT: Kinaesthesia is the result of information from muscles and ligaments which is passed to the brain and which allows the brain to recognise movements, touch and weight.

kinanaesthesia /,kɪnæni:s'θi:ziə/ *noun* the fact of not being able to sense the movement and position of parts of the body (NOTE: The US spelling is **kinanesthesia**.)

kinase /'kaɪneɪz/ *noun* an enzyme belonging to a large family of related substances that bind to the energy-providing molecule ATP and regulate functions such as cell division and signalling between cells

kine- /kɪni/ *prefix* movement

kinematics /,kɪnɪ'mætɪks/ *noun* the science of movement, especially of body movements

kineplasty /'kɪnɪplæsti/ *noun* an amputation in which the muscles of the stump of the amputated limb are used to operate an artificial limb (NOTE: The plural is **kineplasties**.)

kinesi- /kɪni:s'i/ *prefix* movement (NOTE: used before vowels)

kinesiology /,kɪnɪsi'ɒplədʒi/ *noun* the study of human movements, particularly with regard to their use in treatment

kinesis *noun* the movement of a cell in response to a stimulus. Compare **taxis**

-**kinesis** /kɪni:sɪs/ *suffix* 1. activity or motion

2. a change in the movement of a cell, though not in any particular direction. Examples are a change in its speed or in its turning behaviour.

kinesitherapy /,kɪni:s'i'θeərəpi/ *noun* therapy involving movement of parts of the body

kinetic /kɪ'nɛtɪk, kai'nɛtɪk/ *adjective* relating to movement

King's Fund /'kɪŋz fʌnd/ *noun* a major independent health charity in London

King's model /'kɪŋz ,mod(ə)l/ *noun* a model of nurse-patient relationships based on ten principles: interaction, perception, communication, transaction, role, stress, growth and development, time, self and space. Through an exchange of information nurses and patients work together to help individuals and groups attain, maintain and restore health.

kinin /'kainin/ *noun* a polypeptide that makes blood vessels widen and smooth muscles contract

Kirschner wire /,kɜ:ʃfənə 'waɪə/, **Kirschner's wire** *noun* a wire attached to a bone and tightened to provide traction to a fracture [Described 1909. After Martin Kirschner (1879–1942), Professor of Surgery at Heidelberg, Germany.]

kiss of life /,kɪs əv 'laɪf/ *noun* same as **cardiopulmonary resuscitation (informal)**

kJ abbr kilojoule

Klebsiella /,klebsi'elə/ *noun* a Gram-negative bacterium, one form of which, *Klebsiella pneumoniae*, can cause pneumonia

Klebs-Loeffler bacillus /,klebz 'lefle bə,siləs/ *noun* the bacterium which causes diph-

theria, *Corynebacterium diphtheriae* [After Theodor Albrecht Klebs (1834–1913), bacteriologist in Zürich, Switzerland, and Chicago, USA; Friedrich August Loeffler (1852–1915), bacteriologist in Berlin, Germany]

Kleihauer test /'kleɪhaʊə test/, **Kleihauer-Betke test** noun a test used to check whether there has been any blood loss from a fetus to the mother across the placenta. It is usually done immediately after delivery.

klepto- /'kleptəʊ/ prefix stealing or theft

kleptomania /,kleptəʊ'meɪniə/ noun a form of mental disorder in which someone has a compulsive desire to steal things, even things of little value

kleptomaniac /,kleptəʊ'meɪniæk/ noun a person who has a compulsive desire to steal
Klinefelter's syndrome /'klainfɛltəz ,sɪndrəʊm/ noun a genetic disorder in which a male has an extra female chromosome, making an XXY set, giving sterility and partial female characteristics [Described 1942. After Harry Fitch Klinefelter Jr. (b. 1912), Associate Professor of Medicine, John Hopkins Medical School, Baltimore, USA.]

Klumpke's paralysis /,klu:mpkəz pə'reæləsɪs/ noun a form of paralysis due to an injury during birth, affecting the forearm and hand. Also called **Déjerine-Klumpke's syndrome** [Described 1885. After Augusta Klumpke (Madame Déjerine-Klumpke) (1859–1937), French neurologist, one of the first women to qualify in Paris in 1888.]

knee /ni:/ noun a joint in the middle of the leg, joining the femur and the tibia (NOTE: For other terms referring to the knee, see **genu**.)

kneecap /'nɪkæp/ noun same as **patella**

knee jerk /'ni: dʒɜ:k/ noun same as **patellar reflex**

knee joint /ni: dʒɔɪnt/ noun a joint where the femur and the tibia are joined, covered by the kneecap

knit /nit/ verb (of broken bones) to join together again ○ *Broken bones take longer to knit in elderly people than in children.* (NOTE: **knitting – knitted – knit**)

knock-knee /nɒk 'ni:/ noun a state in which the knees touch and the ankles are apart when a person is standing straight. Also called **genu valgum**

knock-kneed /nɒk 'ni:d/ adjective referring to a person whose knees touch when he or she stands straight with feet slightly apart

knock out /nɒk 'aut/ verb to hit someone so hard that he or she is no longer conscious ○ *He was knocked out by a blow on the head.*

knuckle /'nʌk(ə)l/ noun the back of each joint on a person's hand

Kocher manoeuvre /'kɒkə mə,nu:və/ noun a method for realigning a dislocated shoulder in which the arm is raised and a sud-

den change is made between inward and outward rotation of the head of the joint

Koch's bacillus /,kəʊks bə'siləs/ noun the bacterium which causes tuberculosis, *Mycobacterium tuberculosis* [Described 1882. After Robert Koch (1843–1910), Professor of Hygiene in Berlin, Germany, later Director of the Institute for Infectious Diseases. (Nobel Prize 1905).]

Koch-Weeks bacillus /,kəʊk 'wɪks bə'siləs/ noun the bacillus which causes conjunctivitis

Köhler's disease /kɔ:ləz dɪ,sɪz/ noun a degeneration of the navicular bone in children. Also called **scaphoiditis** [Described 1908 and 1926. After Alban Köhler (1874–1947), German radiologist.]

koilonychia /,kɔɪləʊ'nɪkiə/ noun a condition in which the fingernails are brittle and concave, caused by iron-deficiency anaemia

Koplik's spots /'kɒplɪks spɒts/ plural noun small white spots with a blue tinge surrounded by a red areola, found in the mouth in the early stages of measles [Described 1896. After Henry Koplik (1858–1927), US paediatrician.]

Korotkoff's method /'kɔ:rətκɒfs ,mɛθəd/ noun a method of finding a person's blood pressure by inflating a cuff around his or her upper arm to a pressure well above the systolic blood pressure and then gradually decreasing it

Korsakoff's syndrome /'kɔ:səkɒfɪs ,sɪndrəʊm/ noun a condition, caused usually by chronic alcoholism or disorders in which there is a deficiency of vitamin B, in which a person's memory fails and he or she invents things which have not happened and is confused [Described 1887. After Sergei Sergeyevich Korsakoff (1854–1900), Russian psychiatrist.]

kraurosis penis /krɔ:,rəʊsɪs 'pi:nɪs/ noun a condition in which the foreskin becomes dry and shrivelled

kraurosis vulvae /krɔ:,rəʊsɪs 'vʌlvə/ noun a condition in which the vulva becomes thin and dry due to lack of oestrogen, found usually in elderly women

Krause corpuscles /'kraʊzə ,kɔ:pʊs(ə)lz/ plural noun encapsulated nerve endings in the mucous membrane of the mouth, nose, eyes and genitals [Described 1860. After Wilhelm Johann Friedrich Krause (1833–1910), German anatomist.]

Krebs cycle /'krebz ,saɪk(ə)l/ noun same as **citric acid cycle** [Described 1937. After Sir Hans Adolf Krebs (1900–81), German biochemist who emigrated to England in 1934. Shared the Nobel prize for Medicine 1953 with F.A. Lipmann.]

Krukenberg tumour /'kru:kənbə:g ,tju:mə/ noun a malignant tumour in the ovary secondary to a tumour in the stomach [After Friedrich Krukenberg (1871–1946), German gynaecologist.]

Kuntscher nail /'kʌntʃər neɪl/, **Küntscher nail** noun a long steel nail used in operations to pin fractures of long bones, especially the femur, through the bone marrow [Described 1940. After Gerhard Kuntscher (1900–72), German surgeon.]

Kupffer's cells /'kʊpfəz selz/, **Kupffer cells** plural noun large specialised liver cells which break down haemoglobin into bile [Described 1876. After Karl Wilhelm von Kupffer (1829–1902), German anatomist.]

Kveim test /'kvaim test/ noun a skin test to confirm the presence of sarcoidosis [After Morten Ansgar Kveim (b. 1892), Swedish physician]

kwashiorkor /kwaʃi'ɔ:kɔ:/ noun malnutrition of small children, mostly in tropical countries, causing anaemia, wasting of the body and swollen liver

kypho- /kaɪfəʊ/ prefix a hump

kyphoscoliosis /kaɪfəʊ,skɒli'əʊsɪs/ noun a condition in which someone has both backward and lateral curvature of the spine

kyphosis /kaɪ'fəʊsɪs/ noun an excessive backward curvature of the top part of the spine
(NOTE: The plural is **kyphoses**.)

kyphotic /kaɪ'fɒtɪk/ adjective referring to kyphosis

L

I, L symbol **litre**

lab /læb/ *noun* same as **laboratory** (*informal*) ○ *The samples have been returned by the lab.* ○ *We'll send the specimens away for a lab test.*
lab- /leɪb/ *prefix* same as **labio-** (*used before vowels*)

label /'leɪb(ə)l/ *noun* piece of paper or card attached to an object or person for identification ■ *verb* to attach a label to an object ○ *The bottle is labelled 'poison'.* (NOTE: **labelling** – **labelled**. The US spellings are **labeling** – **labelled**.)

labia /'leɪbiə/ plural of **labium**

labial /'leɪbiəl/ *adjective* referring to the lips or to labia

labia majora /,leɪbiə mə'dʒɔ:rə/ *plural noun* two large fleshy folds at the outside edge of the vulva. See illustration at **UROGENITAL SYSTEM (FEMALE)** in Supplement

labia minora /,leɪbiə mi'nɔ:rə/ *plural noun* two small fleshy folds on the inside edge of the vulva. See illustration at **UROGENITAL SYSTEM (FEMALE)** in Supplement. Also called **nymphae**

labile /'leɪbəl/ *adjective* referring to a drug which is unstable and likely to change if heated or cooled

ability of mood /lə'biliti əv 'mu:d/ *noun* a tendency for a person's mood to change suddenly

labio- /leɪbiəʊ/ *prefix* referring to the lips or to labia

labioplasty /'leɪbiəʊ,plæsti/ *noun* a surgical operation to repair damaged or deformed lips (NOTE: The plural is **labioplasties**.)

labium /'leɪbiəm/ *noun* 1. any of the four fleshy folds which surround the female genital organs 2. a structure which looks like a lip (NOTE: The plural is **labia**.)

labor /'leɪbə/ *noun* US spelling of **labour**

laboratory /lə'bɒrət(ə)rɪ/ *noun* a special room or place where scientists can do specialised work such as research, the testing of chemical substances or the growing of tissues in culture ○ *The samples of water from the hospital have been sent to the laboratory for testing.* ○ *The new drug has passed its laboratory tests.* (NOTE: The plural is **laboratories**.)

laboratory officer /lə'bɒrət(ə)ri ,pfɪsə/ *noun* a qualified person in charge of a laboratory

laboratory technician /lə'bɒrət(ə)ri tek'nɪʃ(ə)n/ *noun* a person who does practical work in a laboratory and has particular care of equipment

laboratory techniques /lə'bɒrət(ə)ri tek'nɪkz/ *plural noun* the methods or skills needed to perform experiments in a laboratory

laboratory test /lə'bɒrət(ə)ri test/ *noun* a test carried out in a laboratory

labour /'leɪbə/ *noun* childbirth, especially the contractions in the uterus which take place during childbirth □ **in labour** experiencing the physical changes such as contractions in the uterus which precede the birth of a child ○ *She was in labour for 14 hours.* □ **to go into labour** to start to experience the contractions which indicate the birth of a child is imminent ○ *She went into labour at 6 o'clock.*

COMMENT: Labour usually starts about nine months, or 266 days, after conception. The cervix expands and the muscles in the uterus contract, causing the amion to burst. The muscles continue to contract regularly, pushing the baby into, and then through, the vagina.

laboured breathing /,leɪbəd 'bri:ðɪŋ/ *noun* difficult breathing, which can be due to various causes such as asthma

labour pains /'leɪbə peɪnz/ *plural noun* the pains felt at regular intervals by a woman as the muscles of the uterus contract during childbirth

labrum /'leɪbrəm/ *noun* a ring of cartilage around the rim of a joint (NOTE: The plural is **labra**.)

labyrinth /'læbərɪnθ/ *noun* a series of interconnecting tubes, especially those in the inside of the ear

COMMENT: The labyrinth of the inner ear is in three parts: the three semicircular canals, the vestibule and the cochlea. The osseous labyrinth is filled with a fluid (perilymph) and the membranous labyrinth is a series of ducts and canals inside the osseous labyrinth. The membranous labyrinth contains a fluid (endolymph). As the endolymph moves about in the membranous labyrinth it stimulates the vestib-

ular nerve which communicates the sense of movement of the head to the brain. If a person turns round and round and then stops, the endolymph continues to move and creates the sensation of giddiness.

labyrinthectomy /læbərɪnθ'æk'təmɪ/ *noun* a surgical operation to remove the labyrinth of the inner ear (NOTE: The plural is **labyrinthectomies**.)

labyrinthitis /læbərɪnθ'θaɪtɪs/ *noun* same as **otitis interna**

lacerated /'læsəreɪtɪd/ *adjective* torn or with a rough edge

lacerated wound /'læsəreɪtɪd 'wʊnd/ *noun* a wound where the skin is torn, as by a rough surface or barbed wire

laceration /'læsə'reɪʃ(ə)n/ *noun* 1. a wound which has been cut or torn with rough edges, and is not the result of stabbing or pricking 2. the act of tearing tissue

lacrymal /lækrim(ə)l/ *adjective* same as **lacrimal**

lacrimal /lækrim(ə)l/ *adjective* referring to tears, the tear ducts or the tear glands. ◊ **nasolacrimal**

lacrimal apparatus /lækrim(ə)l ,æpə'reɪtəs/ *noun* the arrangement of glands and ducts which produce and drain tears. Also called **lacrimal system**

lacrimal bone /lækrim(ə)l bəun/ *noun* one of two little bones which join with others to form the orbits

lacrimal canaliculus /lækrim(ə)l kænə'lɪkjʊləs/ *noun* a small canal draining tears into the lacrimal sac

lacrimal caruncle /lækrim(ə)l kə'rʌŋk(ə)l/ *noun* a small red point at the inner corner of each eye

lacrimal duct /lækrim(ə)l dʌkt/ *noun* a small duct leading from the lacrimal gland. Also called **tear duct**

lacrimal gland /lækrim(ə)l glænd/ *noun* a gland beneath the upper eyelid which secretes tears. Also called **tear gland**

lacrimal puncta /lækrim(ə)l 'pʌŋktə/ *plural noun* small openings of the lacrimal canaliculus at the corners of the eyes through which tears drain into the nose

lacrimal sac /lækrim(ə)l 'sæk/ *noun* a sac at the upper end of the nasolacrimal duct, linking it with the lacrimal canaliculus

lacrimal system /lækrim(ə)l ,sɪstəm/ *noun* same as **lacrimal apparatus**

lacrimation /lækri'tmeɪʃ(ə)n/ *noun* the production of tears

lacrimator /lækri'meɪtə/ *noun* a substance which irritates the eyes and makes tears flow

lacrymal /lækriml/, **lachrymal** /lækrim(ə)l/ *adjective* another spelling of **lacrimal**

lact- /lækt/ *prefix* same as **lacto-** (*used before vowels*)

lactase /'lækteɪz/ *noun* an enzyme, secreted in the small intestine, which converts milk sugar into glucose and galactose

lactate /læk'teɪt/ *verb* to produce milk in the body (NOTE: **lactating – lactated**)

lactation /læk'teɪʃ(ə)n/ *noun* 1. the production of milk in the body 2. the period during which a mother is breastfeeding a baby

COMMENT: Lactation is stimulated by the production of the hormone prolactin by the pituitary gland. It starts about three days after childbirth, before which period the breasts secrete colostrum.

lacteal /'læktiəl/ *adjective* referring to milk ■ *noun* a lymph vessel in a villus which helps the digestive process in the small intestine by absorbing fat

lactic /læktɪk/ *adjective* relating to milk

lactic acid /læktɪk 'æsɪd/ *noun* a sugar which forms in cells and tissue, and also in sour milk, cheese and yoghurt

COMMENT: Lactic acid is produced as the body uses up sugar during exercise. Excessive amounts of lactic acid in the body can produce muscle cramp.

lactiferous /læk'tɪfərəs/ *adjective* producing, secreting or carrying milk

lactiferous duct /læk'tɪfərəs 'dʌkt/ *noun* a duct in the breast which carries milk

lactiferous sinus /læk'tɪfərəs 'saɪnəs/ *noun* a dilatation of the lactiferous duct at the base of the nipple

lacto- *prefix* referring to milk

Lactobacillus /læk'təbækə'siləs/ *noun* a genus of Gram-positive bacteria which produces lactic acid from glucose and may be found in the digestive tract and the vagina

lactogenic hormone /læktə'gənɪk 'hɔ:məʊn/ *noun* same as **prolactin**

lactose /læk'təs/ *noun* a type of sugar found in milk

lactose intolerance /'læk'təs ɪn'tələrəns/ *noun* a condition in which a person cannot digest lactose because lactase is absent in the intestine or because of an allergy to milk, causing diarrhoea

lactosuria /,læk'təs'juəriə/ *noun* the excretion of lactose in the urine

lactovegetarian /,læk'təvə'getərɪən/ *noun* a person who does not eat meat, but eats vegetables, fruit, dairy produce and eggs and sometimes fish ◊ *He has been a lactovegetarian for twenty years. Compare vegan, vegetarian*

lactulose /'læk'tjʊləs/ *noun* an artificially produced sugar used as a laxative

lacuna /læ'kjū:nə/ *noun* a small hollow or cavity (NOTE: The plural is **lacunae**.)

lacunar /læ'kjū:nər/ *adjective* relating to hollows or cavities in tissue such as in bone or cartilage, especially ones that are unusual

Laënnec's cirrhosis /leɪnɛks sə'rəʊsɪs/ *noun* the commonest form of alcoholic cirrhosis of the liver [Described 1819. After René Théophile Hyacinthe Laennec (1781–1826), Professor of medicine at the Collège de France, and inventor of the stethoscope.]

laevocardia /li:və'ku:dɪə/ *noun* the condition of having the heart in the usual position, with the apex towards the left side of the body. Compare **dextrocardia**

-lalia /leɪliə/ *suffix* speech or a speech disorder

lambda /'læmðə/ *noun* 1. the 11th letter of the Greek alphabet 2. the point at the back of the skull where the sagittal suture and lambdoidal suture meet

lambdoid /'læmðɔɪd/ *adjective* shaped like the capital Greek letter lambda, like an upside down V or y

lambdoid suture /læm,dɔɪd 'sʊ:tʃə/; **lambdoidal suture** /læm,dɔɪd(ə)l 'sʊ:tʃə/ *noun* a horizontal joint across the back of the skull between the parietal and occipital bones

lamblia /'læmlbiə/ *noun* same as **Giardia**

lambliasis /læm'blaɪəsɪs/ *noun* same as **giardiasis**

lame /leɪm/ *adjective* not able to walk easily because of pain, stiffness or damage in a leg or foot (NOTE: This term is regarded as offensive.)

lamella /lə'melə/ *noun* 1. a thin sheet of tissue 2. a thin disc placed under the eyelid to apply a drug to the eye (NOTE: The plural is **lamellae**.)

lameness /'leɪməns/ *noun* the inability to walk normally because of pain, stiffness or damage in a leg or foot

lamina /'læmɪnə/ *noun* 1. a thin membrane 2. a side part of the posterior arch in a vertebra (NOTE: The plural is **laminae**.)

lamina propria /,læmɪnə 'prəʊprɪə/ *noun* the connective tissue of mucous membranes containing, e.g., blood vessels and lymphatic tissues

laminectomy /,læmɪ'nektəmi/ *noun* a surgical operation to cut through the lamina of a vertebra in the spine to get to the spinal cord. Also called **rachiotomy** (NOTE: The plural is **laminectomies**.)

lamotrigine /lə'mɒtrɪdʒɪn/ *noun* a drug that helps to control petit mal epilepsy

lance /la:n̩s/ *verb* to make a cut in a boil or abscess to remove the pus

lancet /'la:nsit/ *noun* 1. a sharp two-edged pointed knife formerly used in surgery 2. a small pointed implement used to take a small capillary blood sample, e.g. to measure blood glucose levels

lancinate /'la:nsɪneɪt/ *verb* to lacerate or cut something (NOTE: **lancinating – lancinated**)

lancinating /'la:nsɪneɪtɪŋ/ *adjective* referring to pain which is sharp and cutting

Landry's paralysis /lændrɪz pə'ræləsɪs/ *noun* same as **Guillain-Barré syndrome** (see)

[After Jean-Baptiste Octave Landry (1826–65), French physician]

Landsteiner's classification /,lændstainəz ,klæsifi'keɪʃ(ə)n/ *noun* same as **ABO system**

Langerhans' cells /'læŋəhæns selz/ *plural noun* cells on the outer layers of the skin

Langer's lines /'læŋəz laɪnz/ *plural noun* the arrangement of collagen protein fibres which causes the usual skin creases. Cuts made along these lines sever fewer fibres and heal better than other cuts. Also called **cleavage lines**

Lange test /'læŋgə test/ *noun* a method of detecting globulin in the cerebrospinal fluid [Described 1912. After Carl Friedrich August Lange (b. 1883), German physician.]

lanolin /'lænəlɪn/ *noun* grease from sheep's wool which absorbs water and is used to rub on dried skin, or in the preparation of cosmetics

lanugo /lə'nju:gəʊ/ *noun* 1. soft hair on the body of a fetus or newborn baby 2. soft hair on the body of an adult, except on the palms of the hands, the soles of the feet and the parts where long hair grows

laparo- /læpərəʊ/ *prefix* the lower abdomen

laparoscope /'læpərəskəp/ *noun* a surgical instrument which is inserted through a hole in the abdominal wall to allow a surgeon to examine the inside of the abdominal cavity. Also called **peritoneoscope**

laparoscopic /,læpərə'skɒpɪk/ *adjective* using a laparoscope

laparoscopic surgery /,læpərə,skɒpɪk 'sɜ:dʒəri/ *noun* same as **keyhole surgery**

laparoscopy /,læpə'rɒskəpi/ *noun* a procedure in which a laparoscope is used to examine the inside of the abdominal cavity. Also called **peritoneoscopy** (NOTE: The plural is **laparoscopies**.)

laparotomy /,læpə'rɒtəmi/ *noun* a surgical operation to cut open the abdominal cavity (NOTE: The plural is **laparotomies**.)

large intestine /la:dʒ ɪn'testɪn/ *noun* the section of the digestive system from the caecum to the rectum

Lariam /'lærɪəm/ a trade name for mefloquine hydrochloride

larva /'lɑ:rvə/ *noun* a stage in the development of an insect or tapeworm, after the egg has hatched but before the animal becomes adult (NOTE: The plural is **larvae**.)

laryng- /lərɪndʒ/ *prefix* same as **laryng-** (*used before vowels*)

laryngeal /la'rɪndʒɪəl/ *adjective* referring to the larynx

laryngeal inlet /lə,rɪndʒiəl 'ɪnlət/ *noun* the entrance from the laryngopharynx leading through the vocal cords to the trachea

laryngeal prominence /lə,rɪndʒiəl 'prɒmɪnəns/ *noun* same as **Adam's apple**

laryngeal reflex /lə,rɪndʒiəl 'ri:fleks/ *noun* the reflex that makes a person cough

laryngectomy /'lærɪn'dʒɛktəmɪ/ *noun* a surgical operation to remove the larynx, usually as treatment for throat cancer (NOTE: The plural is **laryngectomies**.)

larynges /lə'rɪndʒi:z/ plural of **larynx**

laryngismus /'lærɪn'dʒɪzməs/, **laryngismus stridulus** /'lærɪn,dʒɪzməs 'strɪdʒʊləs/ *noun* a spasm of the throat muscles with a sharp intake of breath which occurs when the larynx is irritated, as in children who have croup

laryngitis /'lærɪn'dʒaɪtɪs/ *noun* inflammation of the larynx

laryngo- /lərɪŋgəʊ/ *prefix* larynx

laryngofissure /lə,rɪŋgəʊ'fɪʃə/ *noun* a surgical operation to make an opening into the larynx through the thyroid cartilage

laryngologist /'lærɪn'gɒlədʒɪst/ *noun* a doctor who specialises in diseases of the larynx, throat and vocal cords

laryngology /'lærɪn'gɒlədʒɪ/ *noun* the study of diseases of the larynx, throat and vocal cords

laryngomalacia /lə,rɪŋgəmə'læfɪə/ *noun* a condition in which breathing is made difficult by softness of the larynx, occurring mainly in children under the age of two

laryngopharyngeal /lə,rɪŋgəfə'rɪn dʒiəl/ *adjective* referring to both the larynx and the pharynx

laryngopharynx /lərɪŋgəʊ'færɪŋks/ *noun* the part of the pharynx below the hyoid bone

laryngoscope /lə'rɪŋgɔskəʊp/ *noun* an instrument for examining the inside of the larynx using a light and mirrors

laryngoscopy /'lærɪn'gɔskəpi/ *noun* an examination of the larynx with a laryngoscope (NOTE: The plural is **laryngoscopies**.)

laryngospasm /lə'rɪŋgəspæzəm/ *noun* a muscular spasm which suddenly closes the larynx

laryngostenosis /lə,rɪŋgəstə'nəʊsɪs/ *noun* narrowing of the lumen of the larynx

laryngostomy /'lærɪn'gɔstəmɪ/ *noun* a surgical operation to make a permanent opening from the neck into the larynx (NOTE: The plural is **laryngostomies**.)

laryngotomy /'lærɪn'gɔtəmɪ/ *noun* a surgical operation to make an opening in the larynx through the membrane, especially in an emergency, when the throat is blocked (NOTE: The plural is **laryngotomies**.)

laryngotracheal /lə,rɪŋgəʊ'treɪkiəl/ *adjective* relating to both the larynx and the trachea ○ *laryngotracheal stenosis*

laryngotracheobronchitis /lə,rɪŋgəʊ',treɪkiəbrɒnθɪtɪs/ *noun* inflammation of the larynx, trachea and bronchi, as in croup

larynx /'lærɪŋks/ *noun* the organ in the throat which produces sounds. Also called **voice box**

(NOTE: The plural is **larynges** or **larynxes**.)

COMMENT: The larynx is a hollow passage made of cartilage, containing the vocal cords, situated behind the Adam's apple. It is closed by the epiglottis when swallowing or before coughing.

laser /'leɪzə/ *noun* an instrument which produces a highly concentrated beam of light which can be used to cut or attach tissue, as in operations for a detached retina

laser laparoscopy /'leɪzə ləpə'rɒskəpi/ *noun* surgery performed through a laparoscope using a laser

laser probe /'leɪzə prəʊb/ *noun* a metal probe which is inserted into the body and through which a laser beam can be passed to remove a blockage in an artery

laser surgery /'leɪzə ,sɜ:dʒəri/ *noun* surgery using lasers, e.g. for the removal of tumours, sealing blood vessels, or the correction of shortsightedness

Lasix /'leɪzɪks/ a trade name for frusemide

Lassa fever /'læsə ,fɪvə/ *noun* a highly infectious and often fatal virus disease found in Central and West Africa, causing high fever, pains, and ulcers in the mouth [After a village in northern Nigeria where the fever was first reported]

Lassar's paste /'læsəz ,peɪst/ *noun* an ointment made of zinc oxide, used to treat eczema [After Oskar Lassar (1849–1907), German dermatologist]

lassitude /'læsɪtju:d/ *noun* a state where a person does not want to do anything, sometimes because he or she is depressed

lata /'lætə/ ♀ **fascia lata**

latent /'leɪt(ə)nt/ *adjective* referring to a disease which is present in the body but does not show any signs ○ *The children were tested for latent viral infection.*

lateral /'læt(ə)rəl/ *adjective* 1. further away from the midline of the body 2. referring to one side of the body

lateral aspect /,læt(ə)rəl 'æspekt/ *noun* a view of the side of part of the body. Also called **lateral view**. See illustration at **ANATOMICAL TERMS** in Supplement

lateral epicondyle /,læt(ə)rəl ,epɪ 'kɒndail/, **lateral epicondyle of the humerus** /,læt(ə)rəl epi,kɒndail əv ðə 'hju:mərəs/ *noun* a lateral projection on the rounded end of the humerus at the elbow joint

lateral epicondylitis /,læt(ə)rəl ,epɪkɒndɪ 'lætɪs/ *noun* same as **tennis elbow**

lateral fissure /,læt(ə)rəl 'fɪʃə/ *noun* a groove along the side of each cerebral hemisphere

laterally /'lætrəli/ *adverb* towards or on the side of the body. See illustration at **ANATOMICAL TERMS** in Supplement

lateral malleolus /'læt(ə)rəl mə'lɪ:ələs/ *noun* the part of the end of the fibula which protrudes on the outside of the ankle

lateral view /'læt(ə)rəl 'vju:/ *noun* same as **lateral aspect**

lateroversion /'læt(ə)rəʊ'vezʃ(ə)n/ *noun* a condition in which an organ is turned to one side

latissimus dorsi /lə,tɪ'sɪməs 'dɔ:si:/ *noun* a large flat triangular muscle covering the lumbar region and the lower part of the chest

laudanum /'lə:d(ə)nəm/ *noun* a solution of opium in alcohol that was formerly in widespread use for pain relief

laughing gas /'la:fɪŋ gæs/ *noun* same as **nitrous oxide (informal)**

lavage /'lævɪdʒ, lə'vɑ:ʒ/ *noun* the act of washing out or irrigating an organ such as the stomach

laxative /'læksətɪv/ *adjective* causing a bowel movement ■ *noun* a medicine which causes a bowel movement, e.g. bisacodyl, which stimulates intestinal motility, or lactulose which alters fluid retention in the bowel ► also called (all senses) **purgative**

COMMENT: Laxatives are very commonly used without prescription to treat constipation, although they should only be used as a short term solution. Change of diet and regular exercise are better ways of treating most types of constipation.

lazy eye /'leɪzi 'aɪ/ *noun* an eye which does not focus properly without an obvious cause (*informal*) ◊ **amblyopia**

LD abbr lethal dose

LDL abbr low-density lipoprotein

L-dopa /el 'daʊpə/ *noun* same as **levodopa**

LE abbr lupus erythematosus

lead /lɛd/ *noun* a very heavy soft metallic element, which is poisonous in compounds (NOTE: The chemical symbol is **Pb**.)

lead-free /'led 'fri:/ *adjective* with no lead in it ◊ **lead-free paint** ◊ **lead-free petrol**

lead line /'led laɪn/ *noun* a blue line seen on the gums in cases of lead poisoning

lead poisoning /'led 'pɔɪz(ə)nɪŋ/ *noun* poisoning caused by taking in lead salts. Also called **plumbism, saturnism**

COMMENT: Lead salts are used externally to treat bruises or eczema, but if taken internally produce lead poisoning. Lead poisoning can also be caused by paint (children's toys must be painted in lead-free paint) or by lead fumes from car engines not using lead-free petrol.

learning /'lɜ:nɪŋ/ *noun* the act of gaining knowledge of something or of how to do something

learning disability /'lɜ:nɪŋ 'dɪsə'biliti/, **learning difficulty** /'lɜ:nɪŋ ,dɪfɪk(ə)'lti/ *noun* a condition that results in someone finding it difficult to learn skills or information at the same rate as others of similar age ◊ *children with learning disabilities*

LE cells /'el 'i: selz/ *plural noun* white blood cells which show that someone has lupus erythematosus

lecithin /'lesɪθɪn/ *noun* a chemical which is a constituent of all animal and plant cells and is involved in the transport and absorption of fats

leech /li:tʃ/ *noun* a blood-sucking parasitic worm which lives in water, occasionally used in specialist procedures

COMMENT: Leeches were formerly commonly used in medicine to remove blood from a patient. Today they are used in special cases, where it is necessary to make sure that blood does not build up in part of the body, e.g. in a severed finger which has been sewn back on.

left-handed /,left 'hændɪd/ *adjective* using the left hand in preference to the right in most everyday tasks

left-handedness /,left 'hændɪdnəs/ *noun* the fact of being left-handed

leg /leg/ *noun* a part of the body with which a person or animal walks and stands

COMMENT: The leg is formed of the thigh, with the thighbone or femur, the knee with the kneecap or patella, and the lower leg, with two bones – the tibia and fibula.

legal abortion /,lɪg(ə)n /'læbə:f(ə)n/ *noun* an abortion which is carried out legally

Legg-Calvé disease /,leg 'kælvər dɪ,zi:z/, **Legg-Calvé-Perthes disease** /,leg 'kælvər 'pɜ:tɪz dɪ,zi:z/ *noun* degeneration of the upper end of the thighbone in young boys, which prevents the bone growing properly and can result in a permanent limp [Described 1910 separately by all three workers. Arthur Thornton Legg (1874–1939), American orthopaedic surgeon; Jacques Calvé (1875–1954), French orthopaedic surgeon; Georg Clemens Perthes (1869–1927), German surgeon.]

Legionnaires' disease /lɪ:dʒə'nɛz dɪ,zi:z/ *noun* a bacterial disease similar to pneumonia

COMMENT: The disease is thought to be transmitted in droplets of moisture in the air, and so the bacterium is found in central air-conditioning systems. It can be fatal to elderly or sick people, and so is especially dangerous if present in a hospital.

leio- /'leɪəʊ/ *prefix* smooth or smoothness

leiomyoma /,laɪəʊ'maɪ'əʊmə/ *noun* a tumour of smooth muscle, especially the smooth muscle coating the uterus (NOTE: The plural is **leiomyomas** or **leiomyomata**.)

leiomyosarcoma /,laɪəʊ'maɪəsəʊ'ma:kəʊmə/ *noun* a sarcoma in which large bundles of smooth muscle are found (NOTE: The plural is **leiomyosarcomas** or **leiomyosarcomata**.)

Leishmania /li:ʃ'meɪniə/ *noun* a tropical parasite which is passed to humans by the bites of sandflies and causes the group of infections known as leishmaniasis

leishmaniasis /li:ʃmə'naiəsɪs/ *noun* a disease caused by the parasite *Leishmania*, one

form of which causes disfiguring ulcers, while another attacks the liver and bone marrow

Lembert's suture /'lə:mbeɪz ,sʊ:tʃə/ noun a suture used to close a wound in the intestine which includes all the coats of the intestine [Described 1826. After Antoine Lembert (1802–51), French surgeon.]

lens /lenz/ noun 1. the part of the eye behind the iris and pupil, which focuses light coming from the cornea onto the retina. See illustration at **EYE** in Supplement 2. a piece of shaped glass or plastic which forms part of a pair of spectacles or microscope 3. same as **contact lens**

COMMENT: The lens in the eye is elastic, and can change its shape under the influence of the ciliary muscle, to allow the eye to focus on objects at different distances.

lens implant /lenz 'implə:nt/ noun an artificial lens implanted in the eye when the natural lens is removed, as in the case of cataract

lenticular /len'tɪkjʊlə/ adjective referring to or like a lens

lentigo /len'tɪgəʊ/ noun a small brown spot on the skin often caused by exposure to sunlight. Also called **freckle** (NOTE: The plural is **lentigines**.)

leontiasis /li:dɒn'taɪəsɪs/ noun a rare disorder in which the skull bones become enlarged and may give the appearance of a lion's head. It occurs if Paget's disease is not treated.

lepidosis /lepi'doʊsɪs/ noun a skin eruption in which pieces of skin fall off in flakes

leroma /le'prəʊmə/ noun a lesion of the skin caused by leprosy (NOTE: The plural is **leromas** or **lepromata**.)

leprosy /'leprəsɪ/ noun an infectious bacterial disease of skin and peripheral nerves caused by *Mycobacterium leprae*, which destroys the tissues and causes severe disfigurement if left untreated. Also called **Hansen's disease**

COMMENT: Leprosy attacks the nerves in the skin, and finally the patient loses all feeling in a limb, and parts such as fingers or toes can drop off.

leptin /'leptɪn/ noun a hormone produced by fat cells that signals the body's level of hunger to the hypothalamus of the brain

lepto- /leptəʊ/ prefix thin

leptocyte /'leptəsait/ noun a thin red blood cell found in anaemia

leptomeninges /leptə'me'nɪndʒi:z/ plural noun the two inner meninges, the pia mater and arachnoid

leptomeningitis /,leptə'menɪnɪdʒaɪtɪs/ noun inflammation of the leptomeninges

Leptospira /leptəʊ'spaɪrə/ noun a genus of bacteria excreted continuously in the urine of rats and many domestic animals. It can infect humans, causing leptospirosis or Weil's disease.

leptospirosis /,leptəʊspɪ'rəʊsɪs/ noun an infectious disease caused by the spirochaete *Leptospira*, transmitted to humans from rat urine, causing jaundice and kidney damage. Also called **Weil's disease**

leresis /lə'rɪ:sɪs/ noun uncoordinated speech, a sign of dementia

lesbian /'lezbɪən/ noun a woman who experiences sexual attraction towards other women

■ **adjective** referring to a lesbian

lesbianism /'lezbɪənɪz(ə)m/ noun sexual attraction in one woman for another. Compare **homosexuality**

Lesch-Nyhan disease /,leʃ 'naɪhən dɪ ,zɪ:z/; **Lesch-Nyhan syndrome** /,leʃ 'naɪhən ,sɪndrəʊm/ noun a rare genetic disorder in boys caused by a lack of the enzyme HPRT. Symptoms include uncontrolled muscle movements and learning disabilities, and life expectancy is 20 – 25.

lesion /'li:ʒ(ə)n/ noun a wound, sore or damage to the body (NOTE: Used to refer to any damage to the body, from the fracture of a bone to a cut on the skin.)

lesser /'lesə/ adjective smaller

lesser circulation /,lesə ,sɜ:kju'leɪʃ(ə)n/ noun same as **pulmonary circulation**

lesser trochanter /,lesə trə'kæntə/ noun a projection on the femur which is the insertion of the psoas major muscle

lesser vestibular gland /,lesə ve'stɪbjʊlə gl̩nd/ noun the more anterior of the vestibular glands

lethal /'li:θ(ə)l/ adjective killing or able to kill ○ *These fumes are lethal if inhaled.*

lethal dose /'li:θəl dəʊs/ noun the amount of a drug or other substance which will kill the person who takes it ○ *She took a lethal dose of aspirin.* Abbreviation **LD**

lethal gene /,li:θ(ə)l 'dʒi:n/, **lethal mutation** /,li:θ(ə)l mju:'teɪʃ(ə)n/ noun a gene, usually recessive, that results in the premature death of an individual who inherits it, e.g. the gene controlling sickle-cell anaemia

lethargic /lɪ'θə:dʒɪk/ adjective showing lethargy

lethargic encephalitis /lə,θə:dʒɪk en ,kefə'laitɪs/ noun a common type of virus encephalitis occurring in epidemics in the 1920s. Also called **encephalitis lethargica, sleepy sickness**

lethargy /'leθə:dʒɪ/ noun a state in which someone is not mentally alert, has slow movements and is almost inactive

Letterer-Siwe disease /,letərə 'si:wei dɪ ,zɪ:z/ noun a usually fatal disease, most common in infants, caused by the overproduction of a specialised type of immune cell

leucine /'lu:si:n/ noun an essential amino acid

leuco- /'lu:kəʊ/, **leuko-** /lu:kəʊ/ prefix white

leucocyte /lu:kə'sait/, **leukocyte** *noun* a white blood cell which contains a nucleus but has no haemoglobin

COMMENT: In average conditions the blood contains far fewer leucocytes than erythrocytes (red blood cells), but their numbers increase rapidly when infection is present in the body. Leucocytes are either granular (with granules in the cytoplasm) or nongranular. The main types of leucocyte are: lymphocytes and monocytes which are nongranular, and neutrophils, eosinophils and basophils which are granular (granulocytes). Granular leucocytes are produced by the bone marrow, and their main function is to remove foreign particles from the blood and fight infection by forming antibodies.

leucocytolysis /lu:kə'saʊt'ɒləsɪs/, **leukocytolysis** /lu:kə'saɪt'ɒləsɪs/ *noun* destruction of leucocytes

leucocytosis /lu:kə'saʊt'ɪsɪs/, **leukocytosis** /lu:kə'saɪt'ɪsɪs/ *noun* an increase in the numbers of leucocytes in the blood above the usual upper limit, in order to fight an infection

leucodeplete /lu:kə'du:t'pli:t/, **leukodeplete** *verb* to remove white cells from the blood (NOTE: **leucodepleting** – **leucodepleted**)

leucoderma /lu:kə'deɪmə/, **leukoderma** *noun* same as **vitiligo**

leucolysin /lu:kə'u'laisɪn/, **leukolysin** *noun* a protein which destroys white blood cells

leucoma /lu:kə'ma/, **leukoma** *noun* a white scar of the cornea (NOTE: The plural is **leucomas** or **leucomata**.)

leuconychia /lu:kə'u'nɪkiə/, **leukonychia** *noun* a condition in which white marks appear on the fingernails

leucopenia /lu:kə'pi:nɪə/, **leukopenia** *noun* a reduction in the number of leucocytes in the blood, usually as the result of a disease

leucoplakia /lu:kə'plækɪə/, **leukoplakia** *noun* a condition in which white patches form on mucous membranes, e.g. on the tongue or inside of the mouth

leucopoiesis /lu:kə'pɔɪt'i:sɪs/, **leukopoiesis** *noun* the production of leucocytes

leucorrhoea /lu:kə'rɪ:ə/, **leukorrhoea** *noun* an excessive discharge of white mucus from the vagina. Also called **whites** (NOTE: The US spelling is **leukorrhea**.)

leukaemia /lu:'kī:miə/ *noun* any of several malignant diseases where an unusual number of leucocytes form in the blood (NOTE: The US spelling is **leukemia**.)

COMMENT: Apart from the increase in the number of leucocytes, the symptoms include swelling of the spleen and the lymph glands. There are several forms of leukaemia: the commonest is acute lymphoblastic leukaemia which is the commonest cancer occurring in children and can be treated by radiotherapy.

leuko- /lu:kəʊ/ *prefix* same as **leuco-**

levator /lə'veɪtə/ *noun* 1. a surgical instrument for lifting pieces of fractured bone 2. a muscle which lifts a limb or a part of the body

level of care /,lev(ə)l əv 'keəl/ *noun* any of the planned divisions within the system of health care which is offered by a particular organisation ◎ *Our care homes offer six different levels of care to allow the greatest independence possible.*

levodopa /,li:və'dəʊpə/ *noun* a natural chemical that stimulates the production of dopamine in the brain and is used to treat Parkinson's disease

levonorgestrel /,li:vənɔ:gə:l'ɛstrəl/ *noun* an artificially produced female sex hormone, used mostly in birth control pills or capsules

Lewy body /'lurwi ,bɒdi/ *noun* an unusual deposit of protein in neurons in the brain

Lewy body dementia /,lu:wɪ ,bɒdɪ dɪ 'menʃəl/ *noun* a disease characterised by the presence of Lewy bodies in the brain, which affects the mental processes. It is similar to Alzheimer's disease, but people with it are more prone to hallucinations and delusions.

Leydig cells /'laɪdɪg selz/ *plural noun* testosterone-producing cells between the tubules in the testes. Also called **interstitial cells** [Described 1850. After Franz von Leydig (1821–1908), Professor of Histology at Würzburg, Tübingen and then Bonn, Germany.]

Leydig tumour /'laɪdɪg ,tju:mə/ *noun* a tumour of the Leydig cells of the testis. It often releases testosterone, which makes young boys show early signs of maturing.

I.g.v. *abbr* lymphogranuloma venereum

LH *abbr* luteinising hormone

libido /'lɪ:bɪ:dəʊ/ *noun* 1. the sexual urge 2. (*in psychology*) a force which drives the unconscious mind

Librium /'lɪbriəm/ a trade name for chlordiazepoxide

lice /laɪs/ *plural* of **louse**

licence /'laɪs(ə)ns/ *noun* an official document which allows someone to do something, e.g. one allowing a doctor to practise, a pharmacist to make and sell drugs or, in the USA, a nurse to practise ◎ *He was practising as a doctor without a licence.* ◎ *She is sitting her registered nurse licence examination.* (NOTE: The US spelling is **license**.)

licensure /'laɪsənʃə/ *noun* *US* the act of licensing a nurse to practise nursing

licentiate /laɪ'senʃɪət/ *noun* a person who has been given a licence to practise as a doctor

lichen /'laɪkən/ *noun* a type of skin disease with thick skin and small lesions

lichenification /laɪ,kɛnɪfɪ'keɪʃ(ə)n/ *noun* a thickening of the skin at the site of a lesion

lichenoid /'laɪkənɔɪd/ *adjective* like lichen

lichen planus /laɪkən 'pleɪnəs/ *noun* a skin disease where itchy purple spots appear on the arms and thighs

lid /lɪd/ *noun* the top which covers a container
○ *a medicine bottle with a child-proof lid*

lidocaine /'laɪdəkeɪn/ *noun* *US* a drug used as a local anaesthetic. Also called **lignocaine**

lie /laɪ/ *noun* same as **lie of fetus** ■ *verb* to be in a flat position ○ *The accident victim was lying on the pavement.* ○ *Make sure the patient lies still and does not move.* (NOTE: **lying – lay – lain**)

Lieberkühn's glands /'li:bəku:nz glændz/ *plural noun* same as **crypts of Lieberkühn**

lien- /laɪən/ *prefix* spleen

lienal /'laɪən(ə)l/ *adjective* relating to or affecting the spleen ○ *the lienal artery*

lienculus /lə'enkjʊləs/ *noun* a small secondary spleen sometimes found in the body (NOTE: The plural is **lienculi**.)

lienorenal /,laɪənərə'lɪ:n(ə)l/ *adjective* relating to or affecting both the spleen and the kidneys

lientery /'laɪəntri/, **lienteric diarrhoea** /,laɪən'terɪk ,daɪ'rə'ri:ə/ *noun* a form of diarrhoea where the food passes through the intestine rapidly without being digested

lie of fetus /,laɪ əv 'fi:təs/ *noun* the position of the fetus in the uterus ○ *Cause of rupture: abnormal lie of fetus.*

life /laɪf/ *noun* the quality that makes a person or thing alive and not dead or inorganic ○ *The surgeons saved the patient's life.* ○ *Her life is in danger because the drugs are not available.* ○ *The victim showed no sign of life.*

life event /'laɪf ɪ'vent/ *noun* a significant event which alters a person's status as regards taxation, insurance or employment benefits, e.g. the birth of a child or the onset of a disability

life expectancy /laɪf ɪk'spektənsi/ *noun* the number of years a person of a particular age is likely to live

life-saving equipment /,laɪf ,sɜ:vɪŋ ɪ 'kwɪpmənt/ *noun* equipment kept ready in case of an emergency, e.g. boats, stretchers or first-aid kits

life-support system /laɪf sə'pɔ:t ,sɪstəm/ *noun* a machine that takes over one or more vital functions such as breathing when someone is unable to survive unaided because of a disease or injury

life-threatening disease /laɪf ,θret(ə)nɪŋ dɪ'zɪ:z/ *noun* a disease which may kill

lift /lɪft/ *noun* 1. a particular way of carrying an injured or unconscious person ○ *a four-handed lift* ○ *a shoulder lift* 2. a cosmetic operation to remove signs of age or to change a body feature ○ *a face lift*

ligament /'lɪgəmənt/ *noun* a thick band of fibrous tissue which connects the bones at a joint and forms the joint capsule

ligate /'laɪgeɪt/ *verb* to tie something with a ligature, e.g. to tie a blood vessel to stop bleeding or to tie the Fallopian tubes as a sterilisation procedure (NOTE: **ligating – ligated**)

ligation /laɪ'geɪʃ(ə)n/ *noun* a surgical operation to tie up a blood vessel

ligature /'lɪgətʃə/ *noun* a thread used to tie vessels or a lumen, e.g. to tie a blood vessel to stop bleeding ■ *verb* same as **ligate** (NOTE: **ligaturing – ligatured**)

light /laɪt/ *adjective* 1. bright so that a person can see ○ *At six o'clock in the morning it was just getting light.* 2. referring to hair or skin which is very pale ○ *She has a very light complexion.* ○ *He has light-coloured hair.* 3. weighing a comparatively small amount ■ *noun* the energy that makes things bright and helps a person to see ○ *There's not enough light in here to take a photo.*

light adaptation /'laɪt ədæp,tetʃ(ə)n/ *noun* changes in the eye to adapt to an unusually bright or dim light or to adapt to light after being in darkness

lightening /'laɪtənɪŋ/ *noun* a late stage in pregnancy where the fetus goes down into the pelvic cavity

lightning pains /'laɪtnɪŋ peɪnz/ *plural noun* sharp pains in the legs in someone who has tabes dorsalis

light reflex /'laɪt ,rɪ:fleks/ *noun* same as **puillary reaction**

light therapy /'laɪt ,θerəpi/, **light treatment** /'laɪt ,trی:tment/ *noun* the treatment of a disorder by exposing the person to light such as sunlight or infrared light

light wave /'laɪt weɪv/ *noun* a wave travelling in all directions from a source of light which stimulates the retina and is visible

lignocaine /'lɪgnəkeɪn/ *noun* same as **lidocaine**

limb /lim/ *noun* one of the legs or arms

limbi /'limbi/ plural of **limbus**

limbic system /'lɪmbɪk ,sɪstəm/ *noun* a system of nerves in the brain, including the hippocampus, the amygdala and the hypothalamus, which are associated with emotions such as fear and anger

limb lead /'lim ลɪ:d/ *noun* an electrode attached to an arm or leg when taking an electrocardiogram

limb lengthening /'lim ,lɛŋθənɪŋ/ *noun* a procedure in which an arm or a leg is made longer. Its bone is divided in two and new bone forms in the gap between the ends.

limbless /'lmbləs/ *adjective* lacking one or more limbs

limbus /'lɪmbəs/ *noun* an edge, especially the edge of the cornea where it joins the sclera (NOTE: The plural is **limbi**.)

liminal /'lɪmɪn(ə)l/ *adjective* referring to a stimulus at the lowest level which can be sensed

limp /lɪmp/ *noun* a way of walking awkwardly because of pain, stiffness or malformation of a leg or foot ○ *She walks with a limp.* ■ *verb* to walk awkwardly because of pain, stiffness or malformation of a leg or foot ○ *He was still limping three weeks after the accident.*

linctus /'lɪŋktəs/ *noun* a sweet cough medicine

line /laɪn/ ♀ **catheter**

linea /'lɪniə/ *noun* a thin line (NOTE: The plural is **lineae**.)

linea alba /,lɪniə 'ælbə/ *noun* a tendon running from the breastbone to the pubic area, to which abdominal muscles are attached (NOTE: The plural is **lineae albae**.)

linea nigra /,lɪniə 'naɪgrə/ *noun* a dark line on the skin from the navel to the pubis which appears during the later months of pregnancy (NOTE: The plural is **lineae nigrae**.)

linear /'lɪniəl/ *adjective* 1. long and narrow in shape 2. able to be represented by a straight line

lingual /'lɪŋgwəl/ *adjective* referring to the tongue

lingual artery /,lɪŋgwəl 'a:təri/ *noun* an artery which supplies blood to the tongue

lingual tonsil /,lɪŋgwəl 'tɒns(ə)l/ *noun* a mass of lymphoid tissue on the top surface of the back of the tongue

lingual vein /,lɪŋgwəl 'veɪn/ *noun* a vein which takes blood away from the tongue

lingula /'lɪŋgjʊlə/ *noun* a long thin piece of bone or other tissue ○ *the lingula of the left lung* (NOTE: The plural is **lingulae**.)

lingular /'lɪŋgjʊlər/ *adjective* relating to a lingula

liniment /'lɪnimənt/ *noun* an oily liquid rubbed on the skin to ease the pain or stiffness of a sprain or bruise by acting as a vasodilator or counterirritant. Also called **embrocation**

lining /'laɪnɪŋ/ *noun* a substance or tissue on the inside of an organ ○ *the thick lining of the aorta*

link /lɪŋk/ *verb* 1. to join things together ○ *The ankle bone links the bones of the lower leg to the calcaneus.* 2. to be related to or associated with something ○ *Health is linked to diet.*

linkage /'lɪŋkɪdʒ/ *noun* (of genes) the fact of being close together on a chromosome, and therefore likely to be inherited together

linoleic acid /,lɪnəoli:k 'æsɪd/ *noun* one of the essential fatty acids, found in grains and seeds

linolenic acid /lɪnəlenɪk 'æsɪd/ *noun* one of the essential fatty acids, found in linseed and other natural oils

lint /lɪnt/ *noun* thick flat cotton wadding, used as part of a surgical dressing

liothyronine /,laɪəʊ'θaɪrəʊnɪ:n/ *noun* a hormone produced by the thyroid gland which can be artificially synthesised for use as a rapid-acting treatment for hypothyroidism

lip /lɪp/ *noun* 1. each of two fleshy muscular parts round the edge of the mouth ○ *Her lips were dry and cracked.* 2. an edge of flesh round an opening 3. same as **labium**

lipaemia /lɪ'pi:mɪə/ *noun* an excessive amount of fat in the blood (NOTE: The US spelling is **lipemia**.)

lipase /'lɪpeɪz/ *noun* an enzyme which breaks down fats in the intestine. Also called **lipolytic enzyme**

lipid /'lɪpɪd/ *noun* an organic compound which is insoluble in water, e.g. a fat, oil or wax

COMMENT: Lipids are not water soluble. They float in the blood and can attach themselves to the walls of arteries causing atherosclerosis.

lipid-lowering drug /'lɪpɪd,ləʊərɪŋ,d्रag/ *noun* a drug which lowers serum triglycerides and low-density lipoprotein cholesterol and raises high-density lipoprotein cholesterol to reduce the progression of coronary atherosclerosis. Lipid-lowering drugs are used in people with, or at high risk of developing coronary heart disease. (NOTE: Lipid-lowering drugs have names ending in **-fibrate**: **bezafibrate**.)

lipid metabolism /,lɪpɪd mæ'tæbəlɪz(ə)m/ *noun* the series of chemical changes by which lipids are broken down into fatty acids

lipidoses /,lɪpri'dəʊsɪs/ *noun* a disorder of lipid metabolism in which subcutaneous fat is not present in some parts of the body

lipochondrolystrophy /,lɪpəʊ,kɒndrəʊ'distrəfi/ *noun* a congenital disorder affecting lipid metabolism, the bones and the main organs, causing learning difficulties and physical deformity

lipodystrophy /,lɪpəʊ'distrəfi/ *noun* a disorder of lipid metabolism

lipogenesis /,lɪpəʊ'dʒenəsɪs/ *noun* the production or making of deposits of fat

lipoid /'lɪpɔɪd/ *noun* a compound lipid, or a fatty substance such as cholesterol which is like a lipid ■ *adjective* like a lipid

lipoidosis /,lɪpɔɪdə'sɪs/ *noun* a group of diseases with reticuloendothelial hyperplasia and unusual deposits of lipoids in the cells

lipolysis /'lɪpəlɪsɪs/ *noun* the process of breaking down fat by lipase

lipolytic enzyme /,lɪpəlɪtɪk 'enzaɪm/ *noun* same as **lipase**

lipoma /lɪ'pəʊmə/ *noun* a benign tumour formed of fatty tissue (NOTE: The plural is **lipomas** or **lipomata**.)

lipomatosis /lɪpəʊmə'təʊsɪs/ *noun* an excessive deposit of fat in the tissues in tumour-like masses

lipoprotein /lɪpə'prəutɪn/ *noun* a protein which combines with lipids and carries them in the bloodstream and lymph system (NOTE: Lipoproteins are classified according to the percentage of protein which they carry.)

liposarcoma /lɪpəsər'kəʊmə/ *noun* a rare malignant tumour found in fatty tissue (NOTE: The plural is **liposarcomas** or **liposarcomata**.)

liposuction /lɪpəʊ'sʌkʃ(ə)n/ *noun* the surgical removal of fatty tissue for cosmetic reasons

lipotropic /lɪpəʊ'trɒfɪk/ *adjective* referring to a substance which increases the amount of fat present in the tissues

Lipps loop /lɪpz 'lu:p/ *noun* a type of intrauterine device

lapping /'lɪpɪŋ/ *noun* a condition in which bone tissue grows over other bones

lip salve /lɪp səlv/ *noun* an ointment, usually sold as a soft stick, used to rub on lips to prevent them cracking

lipuria /lɪ'pjʊəriə/ *noun* the presence of fat or oily emulsion in the urine

liquid diet /lɪk'wɪd 'daɪət/ *noun* a diet consisting only of liquids ◎ *The clear liquid diet is a temporary diet used in preparation for surgery.*

liquid paraffin /lɪk'wɪd 'pærəfɪn/ *noun* an oil used as a laxative

liquor /'lɪkə/ *noun* (*in pharmacy*) a solution, usually aqueous, of a pure substance

lisp /lɪsp/ *noun* a speech condition in which someone replaces 's' sounds with 'th' ■ *verb* to talk with a lisp

Listeria /lɪ'strɪəriə/ *noun* a genus of bacteria found in domestic animals and in unpasteurised milk products which can cause uterine infection or meningitis

listeriosis /lɪ'stɪəriə'sɪsɪs/ *noun* an infectious disease transmitted from animals to humans by the bacterium *Listeria*

listless /'lɪstləs/ *adjective* weak and tired

listlessness /'lɪstləsnəs/ *noun* the fact of being generally weak and tired

liter /'lɪ:tə/ *noun* US spelling of **litre**

lith- /lɪθ/ *prefix* same as **litho-** (*used before vowels*)

lithaemia /lɪ'θi:mɪə/ *noun* an unusual amount of uric acid in the blood. Also called **uricacidæmia** (NOTE: The US spelling is **lithemia**.)

lithagogue /lɪθ'ægɒg/ *noun* a drug which helps to remove stones from the urine

lithiasis /lɪ'lθiəsɪs/ *noun* the formation of stones in an organ

lithium /'lɪθiəm/ *noun* a soft silver-white metallic element that forms compounds, used as a medical treatment for bipolar disorder

litho- *prefix* referring to a calculus

litholapaxy /lɪ'lθələpæksi/ *noun* the evacuation of pieces of a stone in the bladder after crushing it with a lithotrite. Also called **lithotomy**

lithonephrotomy /lɪθənə'frɒtəmɪ/ *noun* a surgical operation to remove a stone in the kidney (NOTE: The plural is **lithonephromies**.)

lithotomy /lɪ'θɒtəmɪ/ *noun* a surgical operation to remove a stone from the bladder (NOTE: The plural is **lithotomies**.)

lithotomy position /lɪ'θɒtəmɪ pə,zɪʃ(ə)n/ *noun* a position for some medical examinations in which the person lies on his or her back with the legs flexed and the thighs against the abdomen

lithotripsy /lɪθətrɪpsi/ *noun* the process of breaking up kidney or gall bladder stones into small fragments that the body can eliminate them unaided

lithotrite /lɪθətrɪt/ *noun* a surgical instrument which crushes a stone in the bladder

lithotrity /lɪ'θɒtrɪti/ *noun* same as **litholapaxy**

lithuresis /lɪθju'rɪ:sɪs/ *noun* the passage of small stones from the bladder during urination

lithuria /lɪ'θjuəriə/ *noun* the presence of excessive amounts of uric acid or urates in the urine

litmus /'lɪtməs/ *noun* a substance which turns red in acid and blue in alkali

litmus paper /'lɪtməs ,peɪpə/ *noun* a small piece of paper impregnated with litmus, used to test for acidity or alkalinity

litre /'lɪ:tə/ *noun* a unit of measurement of liquids equal to 1.76 pints. Abbr **I**, **L** (NOTE: With figures, usually written **I** or **L**: 2.5, but it can be written in full to avoid confusion with the numeral **1**. The US spelling is **liter**.)

little finger /'lɪt(ə)l 'fɪŋgə/ *noun* the smallest finger on the hand

Little's area /'lɪt(ə)lz ,eəriə/ *noun* an area of blood vessels in the nasal septum

Little's disease /'lɪt(ə)lz dɪz,zi:z/ *noun* same as **spastic diplegia** [Described 1843. After William John Little (1810–94), physician at the London Hospital, UK.]

little toe /'lɪt(ə)l 'təʊ/ *noun* the smallest toe on the foot ◎ *Her little toe was crushed by the door.*

live *adjective* /lɪv/ 1. living, not dead ◎ *graft using live tissue* ◊ **birth** 2. carrying electricity ◎ *He was killed when he touched a live wire.*

■ *verb*/lɪv/ to be alive ◎ *She is very ill, and the doctor doesn't think she will live much longer.* (NOTE: **living – lived**)

live birth /'laɪv bɜːθ/ *noun* the birth of a baby which is alive ○ *The number of live births has remained steady.*

livedo /'lɪ'vi:dəʊ/ *noun* discoloured spots on the skin

liver /'lɪvə/ *noun* a large gland in the upper part of the abdomen. See illustration at DIGESTIVE SYSTEM in Supplement (NOTE: For other terms referring to the liver, see words beginning with **hepat-**, **hepato-**.)

COMMENT: The liver is situated in the top part of the abdomen on the right side of the body next to the stomach. It is the largest gland in the body, weighing almost 2 kg. Blood carrying nutrients from the intestines enters the liver by the hepatic portal vein; the nutrients are removed and the blood returned to the heart through the hepatic vein. The liver is the major detoxicating organ in the body; it destroys harmful organisms in the blood, produces clotting agents, secretes bile, stores glycogen and metabolises proteins, carbohydrates and fats. Diseases affecting the liver include hepatitis and cirrhosis; the symptom of liver disease is often jaundice.

liver fluke /'lɪvə flu:k/ *noun* a parasitic flatworm which can infest the liver

liver spot /'lɪvə spɒt/ *noun* a little brown patch on the skin of the backs of the hands, attributed to sun damage (NOTE: Liver spots are unconnected with any liver disorder.)

liver transplant /'lɪvə ,trænsplɑːnt/ *noun* a surgical operation to give a person the liver of another person who has died

livid /'lɪvɪd/ *adjective* referring to skin with a blue colour because of being bruised or because of asphyxiation

living will /'lɪvɪŋ 'wɪl/ *noun* a document signed by a person while in good health to specify the decisions he or she wishes to be taken about medical treatment if he or she becomes incapable of making or communicating them

LMC abbr local medical committee

loa loa /'ləʊə 'ləʊə/ *noun* a tropical disease of the eye caused when the threadworm *Loa loa* enters the eye or the skin around the eye

Loa loa /'ləʊə 'ləʊə/ *noun* a tropical threadworm which digs under the skin, especially around and into the eye, causing loa loa and loiasis

lobar /'ləʊbə/ *adjective* referring to a lobe

lobar bronchi /'ləʊbə 'brɒnki:/ *plural noun* air passages supplying a lobe of a lung. Also called **secondary bronchi**

lobar pneumonia /'ləʊbə nju:'məʊniə/ *noun* pneumonia which affects one or more lobes of the lung

lobe /'ləʊb/ *noun* 1. a rounded section of an organ such as the brain, lung or liver. See illustration at LUNGS in Supplement 2. the soft fleshy part at the bottom of the ear 3. a cusp on the crown of a tooth

lobectomy /ləʊ'bektəmɪ/ *noun* a surgical operation to remove one of the lobes of an organ such as the lung ○ *The plural is lobectomies.*

lobotomy /ləʊ'bɒtəmɪ/ *noun* a surgical operation formerly used to treat mental illness by cutting into a lobe of the brain to cut the nerve fibres (NOTE: The plural is **lobotomies**.)

lobular /'lɒbjʊlə/ *adjective* relating to a lobe ○ *lobular carcinoma*

lobule /'lɒbjʊl:ə/ *noun* a small section of a lobe in the lung, formed of acini

local /'ləʊk(ə)l/ *adjective* 1. referring to a separate place 2. confined to one part ■ *noun* same as **local anaesthetic**

local anaesthesia /,ləʊk(ə)l ænəs'θi:ziə/ *noun* loss of feeling in a single part of the body

local anaesthetic /,ləʊk(ə)l ænəs'θetɪk/ *noun* an anaesthetic such as lignocaine which removes the feeling in a single part of the body only ○ *The surgeon removed the growth under local anaesthetic.*

localise /'ləʊkəlaɪz/, **localize** *verb* 1. to restrict the spread of something to a specific area 2. to find where something is 3. to transfer power from a central authority to local organisations (NOTE: **localising – localised**)

localised /'ləʊkəlaɪzd/, **localized** *adjective* referring to an infection which occurs in one part of the body only. Opposite **generalised**

Local Medical Committee /,ləʊk(ə)l 'medɪk(ə)l kə,miti:/ *noun* a committee responsible for monitoring the interests of providers of primary care such as GPs, dentists and pharmacists in a district. Abbr **LMC**

local supervising authority /,ləʊk(ə)l 'su:pəvaɪzɪŋ ə:t,θəriti/ *noun* an organisation which controls midwife services within its area

lochia /'lkɪə/ *noun* a discharge from the vagina after childbirth or abortion

lochial /'ləʊkiəl/ *adjective* referring to lochia

lochiometra /'lkɪəmɪ:tə/ *noun* a condition in which lochia remains in the uterus after a baby is born, making it swollen

lock /lɒk/ *verb* to fix something in a position

locked-in syndrome /,lɒkt 'ɪn ,sɪndrəʊm/ *noun* a condition in which only the eyes and eyelids can move although the person is fully alert and conscious. It results from severe damage to the brain stem.

locked knee /lɒkt 'ni:/ *noun* a condition in which a piece of the cartilage in the knee slips out of position. The symptom is a sharp pain, and the knee remains permanently bent.

locking joint /,lɒkɪŋ 'dʒɔɪnt/ *noun* a joint which can be locked in an extended position, e.g. the knee or elbow

lockjaw /'lkjkɔ:/ *noun* same as **tetanus** (*dated informal*)

locomotion /ləʊkə'meʊʃ(ə)n/ *noun* the fact of being able to move

locomotor /ləʊkə'moʊtə/ *adjective* relating to locomotion

locomotor ataxia /ləʊkə'moʊtər ə'tæksɪə/ *noun* same as **tabes dorsalis**

loculated /'lɒkjuleɪtɪd/ *adjective* referring to an organ or a growth which is divided into many compartments ◻ *a loculated renal abscess*

locule /'lɒkjʊl/ *noun* same as **loculus**

loculus /'lɒkjʊləs/ *noun* a small space in an organ (NOTE: The plural is **loculi**.)

locum /'ləʊkəm/ *noun* a healthcare professional such as a doctor or pharmacist who takes the place of another for a time. Also called **locum tenens**

locum tenens *noun* same as **locum** (NOTE: The plural is **locum tenentes**.)

locus /'ləʊkəs/ *noun* 1. an area or point where an infection or disease is to be found 2. a position on a chromosome occupied by a gene (NOTE: The plural is **loci**)

lodge /lɒdʒ/ *verb* to stay or stick somewhere, or to stick something somewhere ◻ *The piece of bone lodged in her throat.* ◻ *The larvae of the tapeworm lodge in the walls of the intestine.*

lofepramine /lɒ'feprəmī:n/ *noun* an antidepressant drug

log roll /'lɒg rəʊl/ *noun* a method of turning people in bed onto their side by putting them into a straight position and pulling on the sheet under them

logrolling /'lɒgrəʊlɪŋ/ *noun* the process of moving a person who is lying down into another position using the log roll method

-logy /lədʒi/ *suffix* 1. science or study ◻ *psychology* ◻ *embryology* 2. speech or expression

loiasis /ləʊ'aɪəsɪs/ *noun* a tropical disease of the eye caused when the threadworm *Loa loa* enters the eye or the skin around the eye

loin /lɔɪn/ *noun* the lower back part of the body above the buttocks

Lomotil /ləʊ'məʊtɪl/ a trade name for a preparation containing diphenoxalate

long-acting /lɒŋ 'ækting/ *adjective* referring to a drug or treatment which has an effect that lasts a long time

long bone /'lɒŋ bəʊn/ *noun* any long limb bone that contains marrow and ends in a part that forms a joint with another bone

longitudinal /lɒnggrɪ'tju:dɪn(ə)l/ *adjective* 1. positioned lengthwise 2. in the direction of the long axis of the body

longitudinal arch /lɒnggrɪ'tju:dɪn(ə)l 'a:tʃ/ *noun* same as **plantar arch**

longitudinal fissure /lɒnggrɪ'tju:dɪn(ə)l 'fɪʃə/ *noun* a groove separating the two cerebral hemispheres

longitudinal lie /lɒnggrɪ'tju:dɪn(ə)l 'laɪ/ *noun* the usual position of a fetus, lying along the axis of the mother's body

longitudinal study /lɒnggrɪ'tju:dɪn(ə)l 'stʌdɪ/ *noun* a study of individuals or groups of people and of how some aspect such as their health or education changes over a long time

longsighted /lɒŋ'saɪtɪd/ *adjective* able to see clearly things which are far away but not things which are close

longsightedness /lɒŋ'saɪtɪdnəs/ *noun* the condition of being longsighted. Also called **hypermetropia**

long-stay /lɒŋ stei/ *adjective* referring to staying a long time in hospital ◻ *patients in long-stay units*

long stay patient /lɒŋ stei 'peɪsɪnt/ *noun* a patient who will stay in hospital for a long time

long stay ward /lɒŋ 'steɪ ,wɔ:d/ *noun* a ward for patients who will stay in hospital for a long time

loo /lu:/ *noun* a toilet, or a room containing a toilet (*informal*) ◻ **to go to the loo** to urinate or defecate

look after /lʊk 'a:fɪə/ *verb* to take care of a person and attend to his or her needs ◻ *The nurses looked after him very well* or *He was very well looked after in hospital.* ◻ *She is off work looking after her children who have mumps.*

loop /lu:p/ *noun* 1. a curve or bend in a line, especially one of the particular curves in a fingerprint 2. a curved piece of wire placed in the uterus to prevent contraception

loop of Henle /lʊ:p əv 'henli/ *noun* a curved tube which forms the main part of a nephron in the kidney

loperamide /ləʊ'perəmāɪd/, **loperamide hydrochloride** /ləʊ,perəmāɪd ,haɪdrə'klɔ:raɪd/ *noun* a drug that relieves severe diarrhoea by slowing down the movements of the intestine

loratadine /lɒr'ætɪdɪ:n/ *noun* an antihistamine drug

lorazepam /lɔ:'ræzɪpæm/ *noun* a mild tranquilliser that people often receive before surgery to lessen anxiety

lordosis /lɔ:'dəʊsɪs/ *noun* excessive forward curvature of the lower part of the spine. ◻ **kyphosis**

lordotic /lɔ:'dɒtɪk/ *adjective* referring to lordosis

lotion /'ləʊʃ(ə)n/ *noun* a medicinal liquid used to rub on the skin ◻ *a mild antiseptic lotion*

louse /laʊs/ *noun* a small insect of the *Pediculus* genus, which sucks blood and lives on the skin as a parasite on animals and humans (NOTE: The plural is **lice**.)

COMMENT: There are several forms of louse: the commonest are the body louse, the crab

louse and the head louse. Some diseases can be transmitted by lice.

low /ləʊ/ *adjective* 1. relatively little in height
2. close to the bottom or base of something

low blood pressure /ləʊ 'blæd ,prɛʃə/ *noun* same as **hypotension**

low-calorie diet /ləʊ ,kæləri 'daɪət/ *noun* a diet with few calories, to help a person to lose weight

low-density lipoprotein /ləʊ ,densɪtɪ 'lɪpəoprətɪn/ *noun* a lipoprotein with a large percentage of cholesterol which deposits fats in muscles and arteries. Abbr **LDL**

lower /'laʊə/ *adjective* in a position below another thing

lower jaw /,laʊə 'dʒɔ:/ *noun* same as **mandible**

lower limb /,laʊə 'lim/ *noun* a leg

lower motor neurones /,laʊər 'məʊtə ,njʊərəʊnз/ *plural noun* linked neurones which carry motor impulses from the spinal cord to the muscles

low-fat diet /,laʊ ,fæt 'daɪət/ *noun* a diet with little animal fat, which can help reduce the risk of heart disease and alleviate some skin conditions

low-risk patient /,laʊ rɪsk 'peɪs(ə)nt/ *noun* a person not likely to catch or develop a particular disease

low-salt diet /,laʊ ,sɔ:t 'daɪət/ *noun* a diet with little salt, which has been shown to help reduce high blood pressure

lozenge /'lɒzɪndʒ/ *noun* a sweet medicinal tablet ○ *She was sucking a cough lozenge.*

LPN abbr US licensed practical nurse

LRCP abbr licentiate of the Royal College of Physicians

LSA abbr local supervising authority

LSD abbr lysergic acid diethylamide

lubb-dupp /lʌb'dʌp/ *noun* two sounds made by the heart, which represent each cardiac cycle when heard through a stethoscope

lubricant /'lu:brikiənt/ *noun* a fluid which lubricates

lubricate /'lu:brikeɪt/ *verb* to cover something with a fluid to reduce friction (NOTE: **lubricating – lubricated**)

lubricating jelly /'lu:brikeɪt ,dʒeli/ *noun* a jelly used to make a surface slippery

lucid /'lu:sɪd/ *adjective* with a clearly working mind ○ *In spite of the pain, he was still lucid.*

lucid interval /,lu:sɪd 'ɪntəv(ə)l/ *noun* a period of clear thinking which occurs between two periods of unconsciousness or of mental illness

Ludwig's angina /,lu:dvɪgz æn'dʒaɪnə/ *noun* cellulitis of the mouth and some parts of the neck which causes the neck to swell and may obstruct the airway [Described 1836. After Wilhelm Friedrich von Ludwig (1790–1865), Professor of Surgery and Midwifery at Tübingen,

Germany, and Court Physician to King Frederick II.]

lues /'lu:iz/ *noun* a former name for syphilis or the plague

lumbago /lʌm'bægəʊ/ *noun* pain in the lower back (*informal*) ○ *She has been suffering from lumbago for years. ○ He has had an attack of lumbago.*

lumbar /'lʌmbə/ *adjective* referring to the lower part of the back

lumbar artery /'lʌmbə ,a:təri/ *noun* one of four arteries which supply blood to the back muscles and skin

lumbar cistern /,lʌmbə 'sistən/ *noun* a subarachnoid space in the spinal cord, where the dura mater ends, filled with cerebrospinal fluid

lumbar enlargement /,lʌmbə in 'la:dʒmənt/ *noun* the wider part of the spinal cord in the lower spine, where the nerves of the lower limbs are attached

lumbar plexus /,lʌmbə 'pleksəs/ *noun* the point where several nerves which supply the thighs and abdomen join together, lying in the upper psoas muscle

lumbar puncture /,lʌmbə 'pʌŋktʃə/ *noun* a surgical operation to remove a sample of cerebrospinal fluid by inserting a hollow needle into the lower part of the spinal canal. Also called **spinal puncture** (NOTE: The US term is usually **spinal tap**.)

lumbar region /'lʌmbə ,ri:dʒən/ *noun* the two parts of the abdomen on each side of the umbilical region

lumbar vertebra /,lʌmbə 'vɜ:tib्रə/ *plural noun* each of the five vertebrae between the thoracic vertebrae and the sacrum

lumbo- /lʌmbəʊ/ *prefix* the lumbar region

lumbosacral /,lʌmbəʊ'seɪkrəl/ *adjective* referring to both the lumbar vertebrae and the sacrum

lumbosacral joint /,lʌmbəʊ'seɪkrəl dʒɔ:nt/ *noun* a joint at the bottom of the back between the lumbar vertebrae and the sacrum

lumen /'lu:mɪn/ *noun* 1. an SI unit of light emitted per second 2. the inside width of a passage in the body or of an instrument such as an endoscope 3. a hole at the end of an instrument such as an endoscope

lump /lʌmp/ *noun* a mass of hard tissue which rises on the surface or under the surface of the skin ○ *He has a lump where he hit his head on the low door. ○ She noticed a lump in her right breast and went to see the doctor.*

lumpectomy /lʌm'pektəmi/ *noun* a surgical operation to remove a hard mass of tissue such as a breast tumour, leaving the surrounding tissue intact (NOTE: The plural is **lumpectomies**.)

lunate /'lu:nɪt/, **lunate bone** /'lu:nɪt bən/ *noun* one of the eight small carpal bones in the wrist. See illustration at **HAND** in Supplement

Lund and Browder chart /lʌnd ən 'braudə tʃɑ:t/ noun a chart for calculating the surface area of a burn

lung /lʌŋ/ noun one of two organs of respiration in the body into which air is sucked when a person breathes (NOTE: For other terms referring to the lungs, see words beginning with **bronch-**, **broncho-**, **pneum-**, **pneumo-**, **pneumon-**, **pneumono-**, **pulmo-**.)

COMMENT: The two lungs are situated in the chest cavity, protected by the ribcage. The heart lies between the lungs. The right lung has three lobes, the left lung only two. Air goes down into the lungs through the trachea and bronchi. It passes to the alveoli where its oxygen is deposited in the blood in exchange for waste carbon dioxide which is exhaled (gas exchange). Lung cancer can be caused by smoking tobacco, and is commonest in people who are heavy smokers.

lung cancer /'lʌŋ, kænsə/ noun cancer in the lung

lunula /'lu:njʊlə/ noun a curved white mark at the base of a fingernail (NOTE: The plural is **lunulae**.)

lupus /'lu:pəs/ noun a persistent skin disease, of which there are several unrelated types

lupus erythematosus /'lu:pəs ,erɪθməs 'təʊsəs/ noun an inflammatory disease of connective tissue of which the more serious, systemic, form affects the heart, joints and blood vessels. Abbr **LE**

lupus vulgaris /'lu:pəs vʌl'geərɪs/ noun a form of tuberculosis of the skin in which red spots appear on the face and become infected

lutein /'lu:tɪn/ noun a yellow pigment in the corpus luteum

luteinising hormone /'lu:ti:nɪzɪŋ ,həʊ'moʊn/, **luteinizing hormone** noun a hormone produced by the pituitary gland, which stimulates the formation of the corpus luteum in females and of testosterone in males. Abbr **LH**. Also called **interstitial cell stimulating hormone**

luteo- /lu:tɪəʊ/ prefix 1. yellow 2. corpus luteum

luxation /lʌk'seɪʃ(ə)n/ noun same as **dislocation**

Lyme disease /'laɪm dɪ,zi:z/ noun a viral disease caused by *Borrelia burgdorferi* transmitted by bites from deer ticks. It causes rashes, nervous pains, paralysis and, in extreme cases, death.

lymph /lɪmf/ noun a colourless liquid containing white blood cells which circulates in the lymph system from all body tissues, carrying waste matter away from tissues to the veins. Also called **lymph fluid**

COMMENT: Lymph drains from the tissues through capillaries into lymph vessels. It is formed of water, protein and white blood cells (lymphocytes). Waste matter such as infection in the lymph is filtered out and destroyed as it passes through the lymph nodes, which

then add further lymphocytes to the lymph before it continues in the system. It eventually drains into the brachiocephalic (innominate) veins, and joins the venous bloodstream. Lymph is not pumped round the body like blood but moves by muscle pressure on the lymph vessels and by the negative pressure of the large veins into which the vessels empty. Lymph is an essential part of the body's defence against infection.

lymph- /lɪmf/ prefix meaning same as **lympho-** (used before vowels)

lymphaden- /lɪmfædən/ prefix relating to the lymph nodes

lymphadenectomy /lɪmfædə'nekto:mɪ/ noun the surgical removal of a lymph node (NOTE: The plural is **lymphadenectomies**.)

lymphadenitis /lɪmfædə'naitɪs/ noun inflammation of the lymph nodes

lymphadenoma /lɪmfædə'nəʊmə/ noun same as **lymphoma**

lymphadenopathy /lɪmfædə'nɒpəθɪ/ noun any unusual condition of the lymph nodes (NOTE: The plural is **lymphadenopathies**.)

lymphangi- /lɪmfændʒi:/ prefix lymphatic vessel

lymphangiectasis /lɪmfændʒi'ektəsɪs/ noun swelling of the smaller lymph vessels as a result of obstructions in larger vessels

lymphangiography /lɪmfændʒi'ɒgrəfi/ noun an X-ray examination of the lymph vessels following introduction of radio-opaque material (NOTE: The plural is **lymphangiographies**.)

lymphangioma /lɪmfændʒi'əʊmə/ noun a benign tumour formed of lymph tissues (NOTE: The plural is **lymphangiomas** or **lymphangiomatata**.)

lymphangioplasty /lɪmf'ændʒiəplæstɪ/ noun a surgical operation to make artificial lymph channels (NOTE: The plural is **lymphangioplasties**.)

lymphangiosarcoma /lɪmf,ændʒiəsɔ:kə:mə/ noun a malignant tumour of the endothelial cells lining the lymph vessels (NOTE: The plural is **lymphangiosarcomas** or **lymphangiosarcomata**.)

lymphangitis /lɪmfæn'dʒaɪtɪs/ noun inflammation of the lymph vessels

lymphatic /lɪm'fætɪk/ adjective referring to lymph

lymphatic capillary /lɪm,fætɪk kæ'pɪləri/ plural noun any of the capillaries which lead from tissue and join lymphatic vessels

lymphatic duct /lɪm'fætɪk dʌkt/ noun the main channel for carrying lymph

lymphatic node /lɪm'fætɪk nəd/ noun same as **lymph gland**

lymphatic nodule /lɪm,fætɪk 'nɒdju:l/ noun a small lymph node found in clusters in tissues

lymphatic system /lɪm'fætɪk ,sistəm/ noun a series of vessels which transport lymph

from the tissues through the lymph nodes and into the bloodstream

lymphatic vessel /lɪmf'fætɪk ,ves(ə)l/ *noun* a tube which carries lymph round the body from the tissues to the veins

lymph duct /'lɪmf dʌkt/ *noun* any channel carrying lymph

lymph fluid /'lɪmf ,flu:ɪd/ *noun* same as lymph

lymph gland /'lɪmf glænd/, **lymph node** /'lɪmf nəʊd/ *noun* a mass of lymphoid tissue situated in various points of the lymphatic system, especially under the armpits and in the groin, through which lymph passes and in which lymphocytes are produced. Also called **lymphatic node**

lympho- /lɪmfəʊ/ *prefix meaning lymph*

lymphoblast /'lɪmfəʊblæst/ *noun* an unusual cell which forms in acute lymphoblastic leukaemia as a result of the change which takes place in a lymphocyte on contact with an antigen

lymphoblastic /'lɪmfəʊ'blæstɪk/ *adjective* referring to lymphoblasts, or forming lymphocytes

lymhocele /'lɪmfəsɪ:l/ *noun* a cyst containing lymph from injured or diseased lymph nodes or ducts

lymphocyte /'lɪmfəsait/ *noun* a type of mature leucocyte or white blood cell formed by the lymph nodes and concerned with the production of antibodies

lymphocytopenia /,lɪmfəʊ,saitəʊ'pi:nɪə/ *noun* same as **lymphopenia**

lymphocytosis /,lɪmfəʊsɪ:təʊsɪs/ *noun* an increased number of lymphocytes in the blood

lymphoedema /,lɪmfəʊ'di:mə/ *noun* a swelling caused by obstruction of the lymph vessels or unusual development of lymph vessels (NOTE: The US spelling is **lymphedema**.)

lymphogranuloma inguinale /,lɪmfəʊ grænju:ləʊmə ,ɪngwɪ'nɛli/ *noun* same as **lymphogranuloma venereum**

lymphogranuloma venereum /,lɪmfəʊ ,grænju:ləʊmə və'nɪərəm/ *noun* a sexually transmitted bacterial infection that causes swelling of the genital lymph nodes and, especially in men, a genital ulcer. Abbr **I.g.v.**

lymphography /lɪmf'ɒgrəfi/ *noun* the making of images of the lymphatic system after having introduced a radio-opaque substance

lymphoid /'lɪmfɔɪd/ *adjective* referring to lymph, lymphatic tissue, or the lymphatic system

lymphoid tissue /'lɪmfɔɪd ,tɪʃu:/ *noun* tissue in the lymph nodes, the tonsils and the spleen where masses of lymphocytes are supported by a network of reticular fibres and cells

lymphokine /'lɪmfəʊkain/ *noun* a protein produced by lymphocytes that has an effect on other cells in the immune system. ◇ **cytokine**

lymphoma /'lɪmfəʊmə/ *noun* a malignant tumour arising from lymphoid tissue. Also called **lymphadenoma** (NOTE: The plural is **lymphomas** or **lymphomata**.)

lymphopenia /,lɪmfəʊ'pi:nɪə/ *noun* a reduction in the number of lymphocytes in the blood. Also called **lymphocytopenia**

lymphopoiesis /,lɪmfəʊpɔɪ'sɪsɪs/ *noun* the production of lymphocytes or lymphoid tissue

lymphorrhagia /,lɪmfə'reɪdʒə/, **lymphorrhœa** /,lɪmfə'rɪə/ *noun* escape of lymph from ruptured or severed lymphatic vessels

lymphosarcoma /,lɪmfəsə:kəʊmə/ *noun* a malignant growth arising from lymphocytes and their cells of origin in the lymph nodes (NOTE: The plural is **lymphosarcomas** or **lymphosarcomata**.)

lymphotropic /,lɪmfə'trɒpɪk/ *adjective* affecting the lymphatic system

lymphuria /lɪmf'fjuəriə/ *noun* the presence of lymph in the urine

lymph vessel /'lɪmf ,ves(ə)l/ *noun* one of the tubes which carry lymph round the body from the tissues to the veins

lyophilisation /laɪ'pfiłəz'ɪʃ(ə)n/, **lyophilization** *noun* the act of preserving tissue, plasma or serum by freeze-drying it in a vacuum

lyophilise /laɪ'bfiłəz/, **lyophilize** *verb* to preserve tissue, plasma or serum by freeze-drying in a vacuum (NOTE: **lyophilising** – **lyophilised**)

lysergic acid diethylamide /laɪ'ssə:dʒɪk 'æsɪd daɪ'eθɪləmāɪd/ *noun* a powerful hallucinogenic drug which can cause psychosis. Abbr **LSD**

lysin /'laɪsɪn/ *noun* 1. a protein in the blood which destroys the cell against which it is directed 2. a toxin which causes the lysis of cells

lysine /'laɪsɪn/ *noun* an essential amino acid

lysis /'laɪsɪs/ *noun* 1. the destruction of a cell by a lysin, in which the membrane of the cell is destroyed 2. a reduction in a fever or disease slowly over a period of time. Opposite **crisis**

-lysis /'laɪsɪs/ *suffix* referring to processes which involve breaking up or decaying, or to objects which are doing this ◇ **haemolysis**

lysol /'laɪsəl/ *noun* a strong disinfectant, made of cresol and soap

lysosome /'laɪsəsəmə/ *noun* a particle in a cell which contains enzymes which break down substances such as bacteria which enter the cell

lysozyme /'laɪsəzaim/ *noun* an enzyme found in the whites of eggs and in tears, which destroys specific bacteria

M

m symbol 1. metre 2. milli-

M symbol mega-

MAAG abbr medical audit advisory group

macerate /'mæsə'reɪt/ verb to make something soft by letting it lie in a liquid for a time
(NOTE: **macerating** – **macerated**)

maceration /,mæsə'reɪʃ(ə)n/ noun the process of softening a solid by letting it lie in a liquid so that the soluble matter dissolves

Mackenrodt's ligaments /'mækən'rəʊdz 'lɪgəmənts/ plural noun same as **cardinal ligaments**

Macmillan nurse /mæk'milən nɜːs/ noun a nurse who specialises in cancer care and is employed by the organisation Macmillan Cancer Relief

macro- /mæk'rəʊ/ prefix large. Opposite **micro-**

macrobiotic /,mæk'rəʊbaɪ'tɒtɪk/ adjective referring to food which has been produced naturally without artificial additives or preservatives

COMMENT: Macrobiotic diets are usually vegetarian and are prepared in a special way. They consist of beans, coarse flour, fruit and vegetables. They may not contain enough protein or trace elements, especially to satisfy the needs of children.

macrocephaly /,mæk'rəʊ'kefli/ noun the condition of having an unusually large head

macrocheilia /,mæk'rəʊ'kailiə/ noun the condition of having large lips

macrocyte /'mæk'rəʊsait/ noun an unusually large red blood cell found in people who have pernicious anaemia

macrocythaemia /,mæk'rəʊsai'θi:mia/ noun same as **macrocytosis**

macrocytic /,mæk'rəʊ'sitɪk/ adjective referring to macrocytes

macrocytic anaemia /,mæk'rəʊsítɪk ə 'ni:mia/ noun anaemia in which someone has unusually large red blood cells

macrocytosis /,mæk'rəʊsai'təʊsɪs/ noun the condition of having macrocytes in the blood. Also called **macrocythaemia**

macrodactyly /,mæk'rəʊ'dæktɪli/ noun a condition in which a person has unusually large or long fingers or toes

macrogenitosoma /,mæk'rəʊ,dʒenɪtə 'sɔːmə/ noun premature development of the body with the genitals being of an unusually large size

macroglobulin /,mæk'rəʊ'gləbjʊlɪn/ noun a class of immunoglobulin, a globulin protein of high molecular weight, which serves as an antibody

macroglossia /,mæk'rəʊ'glɒsiə/ noun the condition of having an unusually large tongue

macrognathia /,mæk'rəʊ'neɪθiə/ noun a condition in which the jaw is larger than usual

macrolide drug /'mæk'rələdɪd dræg/ noun a drug used in the treatment of bacterial infection, often in place of penicillin in people sensitive to penicillin (NOTE: Macrolide drugs have names ending in **-omycin**: **erythromycin**.)

macromastia /,mæk'rəʊ'mæstiə/ noun overdevelopment of the breasts

macromelia /,mæk'rəʊ'mi:liə/ noun a condition in which a person has unusually large limbs

macronutrient /'mæk'rəʊ,nju:t्रɪənt/ noun a substance which an organism needs in large amounts for normal growth and development, e.g. nitrogen, carbon or potassium. Compare **micronutrient**

macrophage /'mæk'rəʊfeɪdʒ/ noun any of several large cells which destroy inflammatory tissue, found in connective tissue, wounds, lymph nodes and other parts

macropsia /mæ'krɒpsiə/ noun a condition in which a person sees objects larger than they really are, caused by an unusual development in the retina

macroscopic /,mæk'rəʊ'skɒpɪk/ adjective able to be seen with the naked eye

macrosomia /,mæk'rəʊ'saʊmɪə/ noun a condition in which the body grows too much

macrostomia /,mæk'rəʊ'stəʊmɪə/ noun a condition in which the mouth is too wide because the bones of the upper and lower jaw have not fused, either on one or on both sides

macula /'mækjʊlə/ *noun* 1. same as **macule** 2. a small coloured area, e.g. a macula lutea 3. an area of hair cells inside the utricle and saccule of the ear (NOTE: The plural is **maculae**.)

macula lutea /,mækjʊlə 'lu:tɪə/ *noun* a yellow spot on the retina, surrounding the fovea, the part of the eye which sees most clearly. Also called **yellow spot**

macular /'mækjʊlə/ *adjective* referring to a macula

macular degeneration /,mækjʊlə dɪ ,dʒenə'reɪʃ(ə)n/ *noun* an eye disorder in elderly people in which fluid leaks into the retina and destroys cones and rods, reducing central vision

macular oedema /,mækjʊlə t'di:məl/ *noun* a disorder of the eye in which fluid gathers in the fovea

macule /'mækju:l/ *noun* a small flat coloured spot on the skin. Compare **papule**

maculopapular /,mækjʊlə'pæpjʊlə/ *adjective* made up of both macules and papules ○ *maculopapular rash*

mad cow disease *noun* same as **bovine spongiform encephalopathy (informal)**

maduromycosis /mə,djuərəʊ'ma:kəʊsɪs/,

maduromycetoma /mə,djuərəʊ'maɪsə 'təʊmə/, **Madura foot** /mə,djuərə 'fʊt/ *noun* a tropical fungus infection in the feet which can destroy tissue and infect bones

Magendie's foramen /mə,dʒəndɪz fə'reɪmən/ *noun* an opening in the fourth ventricle of the brain which allows cerebrospinal fluid to flow [Described 1828. After François Magendie (1783–1855), French physician and physiologist.]

magna /'mægnə/ ♦ **cisterna magna**

magnesium /mæg'nɪ:ziəm/ *noun* a chemical element found in green vegetables, which is essential especially for the correct functioning of muscles (NOTE: The chemical symbol is Mg.)

magnesium sulphate /mæg,nɪ:ziəm 'sʌfət/ *noun* a magnesium salt used as a laxative. Also called **Epsom salts**

magnesium trisilicate /mæg,nɪ:ziəm traɪ 'sɪlɪkət/ *noun* a magnesium compound used to treat peptic ulcers

magnetic /mæg'netɪk/ *adjective* able to attract objects, like a magnet

magnetic field /mæg,netɪk 'fi:ld/ *noun* an area round an object which is under the influence of the magnetic force exerted by the object

magnetic resonance imaging /mæg,netɪk 'rezənəns ,ɪmɪdʒɪŋ/ *noun* a scanning technique which exposes the body to a strong magnetic field and uses the electromagnetic signals emitted by the body to form an image of soft tissue and cells. Abbr **MRI**

magnum /'mægnəm/ ♦ **foramen magnum**

maim /meɪm/ *verb* to incapacitate someone with a major injury

main bronchi /meɪn 'brɒŋki:/ *plural noun* the two main air passages which branch from the trachea outside the lung. Also called **primary bronchi**

major /'meɪdʒə/ *adjective* 1. important or serious 2. more important or serious than others of the same type ○ *The operation was a major one.* ► opposite **minor**

major surgery /,meɪdʒə 'sɜ:dʒəri/ *noun* surgical operations involving important organs in the body. Compare **minor surgery**

mal /mæl/ *noun* an illness or disease

mal-/mæl-/ *prefix* bad or unusual

malabsorption /,mælə'bɔ:sə:pʃən/ *noun* a situation where the intestines are unable to absorb the fluids and nutrients in food properly

malabsorption syndrome /,mælə'bɔ:sə:pʃən ,sɪndrəʊm/ *noun* a group of symptoms and signs, including malnutrition, anaemia, oedema and dermatitis, which results from steatorrhoea and malabsorption of vitamins, protein, carbohydrates and water

malacia /mə'lɛʃə/ *noun* the pathological softening of an organ or tissue

maladjusted /,mælə'dʒʌstɪd/ *adjective* referring to a person who has difficulty fitting into society or family

maladjustment /,mælə'dʒʌstmənt/ *noun* difficulty experienced in fitting into society or family

malaise /mə'lɛɪz/ *noun* a feeling of discomfort

malaligned /,mælə'laind/ *adjective* not in the correct position relative to other parts of the body

malalignment /,mælə'lainmənt/ *noun* a condition in which something is malaligned, especially in which a tooth is not in its correct position in the mouth

malar /'meɪlə/ *adjective* referring to the cheek

malar bone /'meɪlə bən/ *noun* same as cheekbone

malaria /mə'lɛəriə/ *noun* a mainly tropical disease caused by a parasite *Plasmodium*, which enters the body after a bite from the female anopheles mosquito

COMMENT: Malaria is a recurrent disease. It produces headaches, shivering, vomiting, sweating and sometimes hallucinations which are caused by toxins coming from the waste of the parasite *Plasmodium* in the blood.

malarial /mə'lɛəriəl/ *adjective* referring to malaria

malarial parasite /mə,lɛəriəl 'pærəsait/ *noun* a parasite transmitted into the human bloodstream by the bite of the female anopheles mosquito

malarial therapy /mə'lɛəriə ,θerəpi/ *noun* a treatment in which a person is given a form of malaria in the belief that the high fevers they

experience can stimulate the immune system to fight off serious diseases such as syphilis and HIV

male menopause /'meɪl 'menəpɔ:z/ *noun* a period in middle age when a man may feel insecure and anxious about the fact that his physical powers are declining (*informal*)

male sex hormone /'meɪl 'seks ,hɔ:məʊn/ *noun* same as **testosterone**

male sex organs /'meɪl 'seks ,ɔ:gənz/ *plural noun* the testes, epididymis, vasa deferentia, seminal vesicles, ejaculatory ducts and penis
malformation /'mælfɔ:r'meɪʃ(ə)n/ *noun* an unusual variation in the shape, structure or development of something

malformed /'mælfɔ:md/ *adjective* unusual in shape, structure or development

malfuction /'mælfʌŋkʃən/ *noun* a situation in which a particular organ does not work in the usual way ○ *Her loss of consciousness was due to a malfunction of the kidneys or to a kidney malfunction.* ■ *verb* to fail to work correctly ○ *During the operation his heart began to malfunction.*

malignancy /mə'lɪgnənsi/ *noun* 1. the state of being malignant ○ *The tests confirmed the malignancy of the growth.* 2. a cancerous growth (NOTE: The plural is **malignancies**.)

malignant /mə'lɪgnənt/ *adjective* likely to cause death or serious disablement if not properly treated

malignant hypertension /mə'lɪgnənt ,haɪpə'tenʃən/ *noun* dangerously high blood pressure

malignant melanoma /mə'lɪgnənt ,melə'nəʊmə/ *noun* a dark tumour which develops on the skin from a mole, caused by exposure to strong sunlight

malignant pustule /mə'lɪgnənt 'pʌstju:l/ *noun* a pus-filled swelling that results from infection of the skin with anthrax

malignant tumour /mə'lɪgnənt 'tju:mər/ *noun* a tumour which is cancerous and can grow again or spread into other parts of the body, even if removed surgically. Opposite **benign tumour**

malingerer /mə'lɪŋgərə/ *noun* a person who pretends to be ill

malingering /mə'lɪŋgəriŋ/ *adjective* the act of pretending to be ill

malleolar /mə'lɪ:ələr/ *adjective* referring to a malleolus

malleolus /mə'lɪ:ələs/ *noun* one of two bony prominences at each side of the ankle (NOTE: The plural is **malleoli**.)

mallet finger /'mæltɪ 'fɪŋgə/ *noun* a finger which cannot be straightened because the tendon attaching the top joint has been torn

malleus /'mæli:s/ *noun* the largest of the three ossicles in the middle ear, shaped like a hammer. See illustration at **EAR** in Supplement

Mallory bodies /'mæləri ,bɒdɪz/ *plural noun* large irregular masses which occur in the cytoplasm of damaged liver cells, often a sign of an alcohol-related disease

Mallory's stain /'mæləriz steɪn/ *noun* trichrome stain, used in histology to distinguish collagen, cytoplasm and nuclei

Mallory-Weiss syndrome /,mæləri 'vais ,sɪndrəʊm/, **Mallory-Weiss tear** /,mæləri 'vais ,teɪ/ *noun* a condition in which there is a tearing in the mucous membrane where the stomach and oesophagus join, e.g. because of strain on them due to vomiting [Described 1929. After G. Kenneth Mallory (b. 1900), Professor of Pathology, Boston University, USA; Konrad Weiss (1898–1942) US physician.]

malnourished /'mæl'nɔ:rɪʃt/ *adjective* not having enough to eat or having only poor-quality food, leading to ill-health

malnutrition /,mælnju't्रɪʃ(ə)n/ *noun* 1. a lack of food or of good-quality food, leading to ill-health 2. the state of not having enough to eat

malocclusion /,mælə'klu:ʒ(ə)n/ *noun* a condition in which the teeth in the upper and lower jaws do not meet properly when the person's mouth is closed

malodorous /'mæl'ədərəs/ *adjective* with a strong unpleasant smell

Malpighian body /mæl'pɪgjən ,bɒdi/, **Malpighian corpuscle** /mæl'pɪgjən ,kɔ:pəs(ə)/ *noun* same as **renal corpuscle** [Described 1666. After Marcello Malpighi (1628–94), anatomist and physiologist in Rome and Bologna, Italy.]

Malpighian glomerulus /mæl,pɪgjən gلو'merولəs/ *noun* same as **Bowman's capsule**

Malpighian layer /mæl'pɪgjən ,leɪə/ *noun* the deepest layer of the epidermis

malposition /,mælpə'zɪʃ(ə)n/ *noun* an unusual or unexpected position of something such as a fetus in the uterus or fractured bones

malpractice /'mæl'præktɪs/ *noun* 1. illegal, unethical, negligent or immoral behaviour by a professional person, especially a healthcare professional ○ *The surgeon was found guilty of malpractice.* 2. wrong treatment of a patient for which a healthcare professional may be tried in court

malpresentation /,mælprez(ə)n'teɪʃ(ə)n/ *noun* an unusual position of a fetus in the uterus just before it is ready to be born

Malta fever /'mɔ:ltə ,fi:və/ *noun* same as **brucellosis**

malтase /'mɔ:ltæs/ *noun* an enzyme in the small intestine which converts maltose into glucose

malтose /'mɔ:ltəʊs/ *noun* a sugar formed by digesting starch or glycogen

malunion /'mæl'ju:njən/ *noun* a bad join of the pieces of a broken bone

mamilla /mæ'mɪlə/ *noun* another spelling of **mammilla**

mamillary /'mæmɪlərɪ/ *adjective* another spelling of **mammillary**

mamm- *prefix* same as **mammo-** (*used before vowels*)

mamma /'mæmə/ *noun* same as **breast** (*NOTE: The plural is **mammæ.***)

mammary /'mæmərɪ/ *adjective* referring to the breast

mammary gland /'mæmərɪ glænd/ *noun* a gland in female mammals which produces milk

mammilla /mæ'mɪlə/, **mamilla** *noun* the protruding part in the centre of the breast, containing the milk ducts through which the milk flows. Also called **nipple**

mammillary /'mæmɪl(ə)rɪ/, **mamillary** *adjective* referring to the nipple

mammillary body /,mæmɪl(ə)ri 'bɒdi/ *noun* one of two little projections on the base of the hypothalamus

mammo- *prefix* referring to breasts

mammogram /'mæməgræm/ *noun* a picture of a breast made using a special X-ray technique

mammography /mæ'mggrəfi/ *noun* examination of the breast using a special X-ray technique

...mammography is the most effective technique available for the detection of occult (non-palpable) breast cancer. It has been estimated that mammography can detect a carcinoma two years before it becomes palpable.' [Southern Medical Journal]

mammoplasty /'mæməplæsti/ *noun* plastic surgery to alter the shape or size of the breasts

mammothermography /,mæməʊθɜː'mo grəfi/ *noun* thermography of a breast

manage /'mænɪdʒ/ *verb* 1. to be in charge or control of something ○ *She manages the ward very efficiently.* ○ *Bleeding can usually be managed, but sometimes an operation may be necessary.* 2. to be able to do something, or to succeed in doing something ○ *Did you manage to phone the doctor?* ○ *Can she manage to feed herself?* (*NOTE: managing – managed*)

management /'mænɪdʒmənt/ *noun* 1. the organising or running of an organisation such as a hospital, clinic or health authority 2. the organisation of a series of different treatments for a person

manager /'mænɪdʒə/ *noun* a person in charge of a department in the health service or in charge of a group of hospitals

Manchester operation /'mæntʃɪstər ɔpə'reɪʃ(ə)n/ *noun* a surgical operation to correct downward movement of the uterus, involving removal of the cervix

mandible /'mændɪb(ə)l/ *noun* the lower bone in the jaw. Also called **lower jaw**

COMMENT: The jaw is formed of two bones, the mandible which is attached to the skull with a

hinge joint and can move up and down, and the maxillæ which are fixed parts of the skull.

mandibular /mæn'dɪbjʊlə/ *adjective* referring to the lower jaw

mandibular fossae /mæn,dɪbjʊlə 'fɒsi/ *plural noun* sockets in the skull into which the ends of the lower jaw fit

mandibular nerve /mæn'dɪbjʊlə nɜːv/ *noun* a sensory nerve which supplies the teeth in the lower jaw, the temple, the floor of the mouth and the back part of the tongue

mane /'meini/ *adverb* (*used on prescriptions*) during the daytime. Opposite **nocte**

'...he was diagnosed as having diabetes mellitus at age 14, and was successfully controlled on insulin 15 units mane and 10 units nocte' [British Journal of Hospital Medicine]

manganese /'mænggəni:z/ *noun* a metallic trace element (*NOTE: The chemical symbol is Mn.*)

mania /'meiniə/ *noun* a state of bipolar disorder in which the person is excited, very sure of his or her own abilities and has increased energy

-mania /meiniə/ *suffix* obsession with something

maniac /'meiniæk/ *noun* a person who behaves in an uncontrolled way or is considered to have an obsession (*NOTE: This term is regarded as offensive.*)

manic /'mænɪk/ *adjective* referring to mania

manic depression /,mænɪk dɪ'pres(ə)n/ *noun* same as **bipolar disorder**

manic-depressive /,mænɪk dɪ'presɪv/ *adjective* relating to bipolar disorder ■ *noun* a person with bipolar disorder

manic-depressive illness /,mænɪk dɪ'presɪv ,ɪlnəs/, **manic-depressive psychosis** /,mænɪk dɪ'presɪv saɪ'kəsɪs/ *noun* same as **bipolar disorder**

manifestation /,mænɪfe'steɪʃ(ə)n/ *noun* a sign, indication or symptom of a disease

'...the reason for this susceptibility is a profound abnormality of the immune system in children with sickle cell disease. The major manifestations of pneumococcal infection in SCD are septicaemia, meningitis and pneumonia.' [Lancet]

manikin /'mænɪkɪn/ *noun* an anatomical model of the human body, used in teaching anatomy

manipulate /mæ'nipjʊ,leɪt/ *verb* to rub or move parts of the body with the hands to treat a joint, a slipped disc or a hernia (*NOTE: manipulating – manipulated*)

manipulation /mæ'nipjʊ'lætʃ(ə)n/ *noun* a form of treatment that involves moving or rubbing parts of the body with the hands, e.g. to treat a disorder of a joint

manner /'mænə/ *noun* a way of doing something or of behaving ○ *He was behaving in a strange manner.* ♦ **bedside manner**

mannitol /'mænɪtlɒl/ *noun* a diuretic drug used in the treatment of oedema of the brain

manometer /mə'nmətər/ *noun* an instrument for comparing pressures

manometry /mə'nmətri/ *noun* the measurement of pressures within organs of the body which contain gases or liquids, e.g. the oesophagus or parts of the brain

Mantoux test /mæntu:/ *test/ noun* a test for tuberculosis, in which a person is given an intracutaneous injection of tuberculin. ◊ **Heaf test** [Described 1908. After Charles Mantoux (1877–1947), French physician.]

manual /'mænjuəl/ *adjective* done by hand

manual examination /,mænjuəl ɪg,zæmɪ'neɪʃ(ə)n/ *noun* an examination using the hands and fingers

manubrium /mə'nū:briəm/ *noun* a handle-shaped anatomical part, e.g. part of the inner ear

manubrium sterni /mə,nu:briəm 'stɜ:nəɪ/ *noun* the upper part of the sternum

MAO abbr monoamine oxidase

MAOI abbr monoamine oxidase inhibitor

MAO inhibitor /,em ei 'ɛu in,hɪbitər/ *noun* same as **monoamine oxidase inhibitor**

maple syrup urine disease /,meip(ə)l ˌsɪrɔ:p 'juərɪn dɪ,zɪ:z/ *noun* an inherited condition caused by not having enough of a particular enzyme which helps the body to deal with amino acid. The urine smells like maple syrup. It can be fatal if not treated.

marasmus /mə'ræzməs/ *noun* a wasting disease which affects small children who have difficulty in absorbing nutrients or who are malnourished. Also called **failure to thrive**

marble bone disease /,ma:b(ə)l 'bəʊn dɪ,zɪ:z/ *noun* same as **osteopetrosis**

Marburg disease /'mɑ:bɔ:g dɪ,zɪ:z/, **Marburg virus disease** /'mɑ:bɔ:g ,vairəs dɪ,zɪ:z/ *noun* a severe viral infection causing high fever, bleeding from mucous membranes, vomiting and often death. Also called **green monkey disease**

COMMENT: The disease is transmitted to humans from green monkeys. Because the monkeys are used in laboratory experiments, the disease mainly affects laboratory workers.

march fracture /mə:tʃ 'fræktsəl/ *noun* a fracture of one of the metatarsal bones in the foot, caused by excessive exercise to which the body is not accustomed

Marfan's syndrome /'mærfə:nz ,sɪnd्रəʊm/, **Marfan syndrome** /'mærfə:n ,sɪnd्रəʊm/ *noun* a hereditary condition in which a person has extremely long fingers and toes, with disorders of the heart, aorta and eyes [Described 1896. After Bernard Jean Antonin Marfan (1858–1942), French paediatrician.]

marijuana /,ma:rɪ'wɑ:nə/ *noun* same as **cannabis**

mark /mɑ:k/ *noun* a spot or small area of a different colour ◊ *There's a red mark where you hit your head.* ◊ *The rash has left marks*

on the chest and back. ■ **verb** to make a mark on something ◊ **the door is marked** 'Supervisor' the door has the word 'Supervisor' written on it

marked /mɑ:kt/ *adjective* obvious or noticeable ◊ *There has been a marked improvement in his condition.*

marker /'mɑ:kə/ *noun* 1. something which acts as an indicator of something else 2. a substance introduced into the body to make internal structures clearer to X-rays

marrow /'mærəʊ/ *noun* soft tissue in cancellous bone. In young animals **red marrow** is concerned with blood formation while in adults it becomes progressively replaced with fat and is known as yellow marrow. Also called **bone marrow**. See illustration at **BONE STRUCTURE** in Supplement

marsupialisation /mə:s,piələt'zeɪʃ(ə)n/, **marsupialization** *noun* a surgical procedure in which the inside of a cyst is opened up so that the cyst can be allowed to shrink gradually, because it cannot be cut out

masculinisation /,mæskjulɪnɪz'zeɪʃ(ə)n/, **masculinization** *noun* the development of male characteristics such as body hair and a deep voice in a woman, caused by hormone deficiency or by treatment with male hormones

mask /mu:sk/ *noun* 1. a metal and rubber frame that fits over the nose and mouth and is used to administer an anaesthetic 2. a piece of gauze which fits over the mouth and nose to prevent droplet infection 3. a cover which fits over the face of a person who has suffered facial damage in an accident

masked /mu:skt/ *adjective* used to describe diseases that are present but not observable

Maslow's hierarchy of human needs /,mæzləʊz ,haɪərəki əv ,hju:mən 'ni:dz/ *noun* a system which explains human behaviour by organising human needs in order of priority, from basic ones such as eating to complex ones such as finding self-fulfilment, a higher level of motivation not being activated until the lesser needs have been satisfied

masochism /'mæsəkɪz(ə)m/ *noun* a sexual condition in which a person takes pleasure in being hurt or badly treated

masochist /'mæsəkɪst/ *noun* a person suffering from masochism

masochistic /,mæsə'kɪstɪk/ *adjective* referring to masochism

mass /mæs/ *noun* 1. a large quantity, e.g. a large number of people ◊ *The patient's back was covered with a mass of red spots.* 2. a body of matter with no clear shape 3. a mixture for making pills 4. the main solid part of bone

massage /'mæsəuz/ *noun* a treatment for muscular conditions which involves rubbing, stroking or pressing the body with the hands ■

verb to rub, stroke or press the body with the hands

massetter /'mæsɪtə/, **massetter muscle** /mæ'sɪtə ,mas(ə)l/ **noun** a muscle in the cheek which clenches the lower jaw making it move up, to allow chewing

massive /'maɪsɪv/ **adjective** very large ○ *He was given a massive injection of penicillin.* ○ *She had a massive heart attack.*

mass radiography /'mæs ,reɪdɪ'ngrəfɪ/ **noun** the practice of taking X-ray photographs of large numbers of people to check for tuberculosis

mass screening /'mæs 'skri:nɪŋ/ **noun** the practice of testing large numbers of people for the presence of a disease

mast- /mæst/ **prefix** same as **masto-** (*used before vowels*)

mastalgia /mæ'stældʒɪə/ **noun** pain in the mammary gland

mastatropy /mæ'stætrəfi/ **noun** atrophy of the mammary gland

mast cell /'mæst sel/ **noun** a large cell in connective tissue, which carries histamine and reacts to allergens

mastectomy /mæ'stektəmi/ **noun** the surgical removal of a breast

masticate /'maestrikeɪt/ **verb** to chew food

mastication /,mæstɪ'keɪʃ(ə)n/ **noun** the act of chewing food

mastitis /mæ'ſtaɪtɪs/ **noun** inflammation of the breast

masto- /mæstəʊ/ **prefix** referring to a breast

mastoid /'mæstɔɪd/ **adjective** 1. shaped like a nipple 2. belonging to the part of the temporal bone which protrudes at the side of the head behind the ear ■ **noun** same as **mastoid process**

mastoid air cell /,mæstɔɪd 'eə ſel/, **mastoid cell** /'mæstɔɪd ſel/ **noun** an air cell in the mastoid process

mastoid antrum /,mæstɔɪd 'æntrəm/ **noun** a cavity linking the air cells of the mastoid process with the middle ear

mastoid bone /'mæstɔɪd bəʊn/ **noun** same as **mastoid process**

mastoidectomy /,mæstɔɪ'dektəmi/ **noun** a surgical operation to remove part of the mastoid process, as a treatment for mastoiditis

mastoiditis /,mæstɔɪ'daɪtɪs/ **noun** inflammation of the mastoid process and air cells. The symptoms are fever and pain in the ears.

COMMENT: The mastoid process can be infected by infection from the middle ear through the mastoid antrum. Mastoiditis can cause deafness and can affect the meninges if not treated.

mastoidotomy /,mæstɔɪ'dɒtəmi/ **noun** a surgical operation to make a cut into the mastoid process to treat infection

mastoid process /,mæstɔɪd 'prəʊses/ **noun** part of the temporal bone which protrudes at the side of the head behind the ear

masturbate /'mæstəbeɪt/ **verb** to excite one's own genitals so as to produce an orgasm

masturbation /,mæstə'bɛrɪʃ(ə)n/ **noun** stimulation of one's own genitals to produce an orgasm. Also called **onanism**

match /mætʃ/ **verb** 1. to examine two things to see if they are similar or fit together ○ *They are trying to match the donor to the recipient.*

2. to fit together in a specific way ○ *The two samples don't match.*

'...bone marrow from donors has to be carefully matched with the recipient or graft-versus-host disease will ensue' [Hospital Update]

mater /'meɪtə/ ♀ **dura mater**

material /mæ'trɪəriəl/ **noun** 1. matter which can be used to make something 2. cloth ○ *The wound should be covered with gauze or other light material.* 3. all that is necessary in surgery

materia medica /mætɪəriə 'medɪkə/ **noun** the study of drugs or dosages as used in treatment (NOTE: It comes from a Latin term meaning 'medical substance'.)

maternal /mæ'təzɪn(ə)l/ **adjective** referring to a mother

maternal death /mæ,təzɪn(ə)l 'deθ/ **noun** the death of a mother during pregnancy, childbirth or up to twelve months after childbirth

maternal deprivation /mæ,təzɪn(ə)l ,deprɪ'veɪʃ(ə)n/ **noun** a psychological condition caused when a child does not have a proper relationship with a mother

maternal dystocia /mæ,təzɪn(ə)l dɪs'təʊsiə/ **noun** difficult childbirth caused by a physical problem in the mother

maternal instincts /mæ,təzɪn(ə)l 'ɪn̩stɪnkt̩s/ **plural noun** instinctive feelings in a woman to look after and protect her child

maternity /mæ'tɪnɪti/ **noun** childbirth, the fact of becoming a mother

maternity case /mæ'tɪnɪti keɪs/ **noun** a woman who is about to give birth

maternity clinic /mæ'tɪnɪti ,klɪnik/ **noun** same as **antenatal clinic**

maternity hospital /mæ'tɪnɪti ,hɒspɪt(ə)l/

maternity ward /mæ'tɪnɪti wɔ:d/, **maternity unit** /mæ'tɪnɪti ,ju:nɪt/ **noun** a hospital, ward or unit which deals only with women giving birth

matrix /'meɪtrɪks/ **noun** an amorphous mass of cells forming the basis of connective tissue. Also called **ground substance**

matron /'meɪtrən/ **noun** a title formerly given to a woman in charge of the nurses in a hospital. ♀ **modern matron**

matter /'mætə/ **noun** a substance

mattress /'ma:t̩rəs/ **noun** the thick soft part of a bed for lying on

mattress suture /'mætrəs ,su:tʃə/ *noun* a suture made with a loop on each side of the incision

maturational /,mætʃu'reɪʃ(ə)n/ *noun* the process of becoming mature or fully developed

mature /mæ'tjuər/ *adjective* fully developed

mature follicle /mætʃuər 'frlik(ə)l/ *noun* a Graafian follicle just before ovulation

maturing /mætʃuərɪŋ/ *adjective* becoming mature

maturing egg /mætʃuərɪŋ 'eg/, **maturing ovum** /'əʊvəm/ *noun* an ovum contained by a Graafian follicle

maturity /mætʃuərɪti/ *noun* 1. being fully developed 2. (in psychology) the state of being a responsible adult

maxilla /mæk'sɪlə/, **maxilla bone** /mæk'sɪlə bən/ *noun* the upper jaw bone (NOTE: The plural is **maxillae**. It is more correct to refer to the upper jaw as the **maxillae**, as it is in fact formed of two bones which are fused together.)

maxillary /mæk'sɪləri/ *adjective* referring to the maxilla

maxillary antrum /mæk'sɪləri 'æntrəm/, **maxillary air sinus** /mæk'sɪləri 'eə ,sainəs/ *noun* one of two sinuses behind the cheekbones in the upper jaw. Also called **antrum of Highmore**

maxillo-facial /mæk'sɪlə'feɪʃ(ə)l/ *adjective* referring to the maxillary bone and the face
○ **maxillo-facial surgery**

MB abbr bachelor of medicine

McBurney's point /mæk,bɜ:nɪz 'poɪnt/ *noun* a point which indicates the usual position of the appendix on the right side of the abdomen, between the hip bone and the navel, which is extremely painful if pressed when the person has appendicitis [Described 1899. After Charles McBurney (1845–1913), US surgeon.]

McNaughten's Rules on Insanity at Law /mæk'nɔ:tənз ,ru:lz ɒn ɪn,sænit̬i ət 'lɔ:z/, **McNaughten's Rules** /mæk'nɔ:tənз ,ru:lz/ *plural noun* a set of principles which explain how people can defend themselves in law by claiming that they committed a murder because they were mentally ill, and therefore not responsible for any of their actions. In 1957 it was adapted to include the idea of knowing that an action is wrong but being unable to stop yourself from committing it because of your mental condition.

MCP joint /'em si: 'pi: ,dʒɔ:nt/ *noun* same as **metacarpophalangeal joint**

MCU, MCUG abbr micturating cysto(-uro-)gram

MD abbr doctor of medicine

ME abbr myalgic encephalomyelitis

meal /mi:l/ *noun* food eaten at a particular time

measles /'mi:z(ə)lz/ *noun* an infectious disease of children, where the body is covered with a red rash ○ *She's in bed with measles.* ○ *He's got measles.* ○ *They caught measles from their friend at school.* ○ *Have you had the measles?* Also called **morbilli, rubella** (NOTE: Takes a singular or plural verb.)

COMMENT: Measles can be a serious disease as it weakens the body's resistance to other diseases, especially bronchitis and ear infections. It can be prevented by immunisation. If caught by an adult it can be very serious.

measure /'meʒə/ *noun* a unit of size, quantity or degree ○ *A metre is a measure of length.* ■ **verb** 1. to find out the size of something ○ *A thermometer measures temperature.* 2. to be a particular size ○ *The room measures 3 metres by 2 metres.*

measurement /'meʒəmənt/ *noun* the size, length, etc. of something which has been measured

meat /mi:t/ *noun* animal flesh which is eaten (NOTE: No plural: *some meat, a piece or a slice of meat; he refuses to eat meat.*)

meat- /mɪ:t-/ *prefix* relating to a meatus

meatus /'mi:etəs/ *noun* an opening leading to an internal passage in the body, e.g. the urethra or the nasal cavity (NOTE: The plural is **meatuses** or **meatus**.)

mechanism /'mekənɪz(ə)m/ *noun* 1. a physical or chemical change by which a function is carried out 2. a system in the body which carries out or controls a particular function ○ *The inner ear is the body's mechanism for the sense of balance.*

mechanism of labour /,mekənɪz(ə)m əv 'lebə/ *noun* all the forces and processes which combine to push a foetus out of the uterus during its birth, together with the ones which oppose it

mechanotherapy /,mekənəʊ'θerəpi/ *noun* the treatment of injuries through mechanical means, such as massage and exercise machines

Meckel's diverticulum /,mekəlз ,daɪvɪk'tru:kjuləm/ *noun* a congenital formation of a diverticulum in the ileum [Described 1809. After Johann Friedrich Meckel II (1781–1833), German surgeon and anatomist.]

meconism /'mekənɪz(ə)m/ *noun* poisoning by opium or morphine

meconium /mɪ'kəʊniəm/ *noun* the first dark green faeces produced by a newborn baby

med. *abbr* 1. medical 2. medicine

media /'mi:diə/ *noun* same as **tunica media**

medial /'mi:diəl/ *adjective* nearer to the central midline of the body or to the centre of an organ. Compare **lateral**

medial arcuate ligament /,mi:diəl 'ɑ:kjut ,lɪgəmənt/ *noun* a fibrous arch to which the diaphragm is attached

medial epicondyle /'mi:dɪəl ,epɪ'kɒndail/ *noun* a medial projection on the condyle of the humerus

medially /'mi:dɪəli/ *adverb* towards or on the sagittal plane of the body. See illustration at ANATOMICAL TERMS in Supplement

medial malleolus /'mi:dɪəl mæ'lɪələs/ *noun* a bone at the end of the tibia which protrudes at the inside of the ankle

medial rectus /'mi:dɪəl 'rektəs/ *noun* a muscle inserted into the sclera of the eyeball

median /'mi:dɪən/ *adjective* towards the central midline of the body, or placed in the middle

median nerve /'mi:dɪən nɜ:v/ *noun* one of the main nerves of the forearm and hand

median plane /'mi:dɪən plen/ *noun* an imaginary flat surface on the midline and at right angles to the coronal plane, which divides the body into right and left halves. See illustration at ANATOMICAL TERMS in Supplement

mediastinal /'mi:dɪə'stɪn(ə)l/ *adjective* referring to the mediastinum ○ the mediastinal surface of pleura or of the lungs

mediastinitis /,mi:dɪəstɪ'naitɪs/ *noun* inflammation of the mediastinum

mediastinoscopy /,mi:dɪəstɪ'nɒskəpi/ *noun* an operation in which a tube is put into the mediastinum so that its organs can be examined

mediastinum /,mi:dɪə'stɪnəm/ *noun* the section of the chest between the lungs, where the heart, oesophagus and phrenic and vagus nerves are situated

medic /'medɪk/ *noun* a doctor or medical student (*informal*)

medical /'medɪk(ə)l/ *adjective* 1. referring to the study of diseases ○ a *medical student* 2. referring to treatment of disease which does not involve surgery ○ *Medical help was provided by the Red Cross.* 3. referring to treatment given by a doctor, as opposed to a surgeon, in a hospital or in his or her surgery ■ *noun* an official examination of a person by a doctor ○ *He wanted to join the army, but failed his medical.* ○ *You will have to have a medical if you take out an insurance policy.*

medical administration /,medɪk(ə)l əd'mɪnɪ'streɪʃ(ə)n/ *noun* the running of hospitals and other health services ○ *She started her career in medical administration.*

medical aid /'medɪk(ə)l eɪd/ *noun* treatment of someone who is ill or injured, given by a doctor. ♦ **first aid**

medical alert bracelet /,medɪk(ə)l ə'lə:t, 'breɪlslet/ *noun* a band or chain worn around the wrist giving information about the wearer's medical needs, allergies or condition

medical assistance /,medɪk(ə)l ə'sist(ə)ns/ *noun* help provided by a nurse, an ambulance or a member of an association

such as the Red Cross, to a person who is ill or injured

medical assistant /'medɪk(ə)l ə,sist(ə)nt/ *noun* someone who performs routine administrative and clinical tasks to help in the offices and clinics of doctors and other medical practitioners

medical audit /,medɪk(ə)l 'a:dɪt/ *noun* a systematic critical analysis of the quality of medical care provided to a person, which examines the procedures used for diagnosis and treatment, the use of resources and the resulting outcome and quality of life for the person

medical audit advisory group /,medɪk(ə)l ,a:dɪt ə'dvaɪz(ə)ri gru:p/ *noun* a body with the responsibility of advising on medical audit in primary care. Abbr **MAAG**

medical centre /'medɪk(ə)l ,sentr/ *noun* a place where several different doctors and specialists practise

medical certificate /'medɪk(ə)l sə,tifikət/ *noun* an official document signed by a doctor, giving someone permission to be away from work or not to do specific types of work

medical committee /'medɪk(ə)l kə,miti/ *noun* a committee of doctors in a hospital who advise the management on medical matters

medical diathermy /,medɪk(ə)l ,daɪə'θɜ:mɪ/ *noun* the use of heat produced by electricity for treatment of muscle and joint disorders such as rheumatism

medical doctor /'medɪk(ə)l ,dɒktə/ *noun* a doctor who practises medicine, but is not usually a surgeon

medical ethics /,medɪk(ə)l 'eθɪks/ *plural noun* the moral and professional principles which govern how doctors and nurses should work, and, in particular, what type of relationship they should have with their patients

medical examination /,medɪk(ə)l ɪg,zæmɪ'nейʃ(ə)n/ *noun* an examination of a person by a doctor

medical history /,medɪk(ə)l 'hɪst(ə)ri/ *noun* the details of a person's medical condition and treatment over a period of time

medical intervention /,medɪk(ə)l ,ɪntə'venʃən/ *noun* the treatment of illness by drugs

medicalisation /,medɪkələ'seɪʃ(ə)n/, **medicalization** *noun* the act of looking at something as a medical issue or problem

medical jurisprudence /,medɪk(ə)l dʒʊərɪs'pru:d(ə)ns/ *noun* the use of the principles of law as they relate to the practice of medicine and the relationship of doctors with each other, their patients and society. ♦ **forensic medicine**

Medical Officer of Health /,medɪk(ə)l ,ɒfɪsər əv 'helθ/ *noun* formerly, a local government official in charge of the health services in an area. Abbr **MOH**

medical practitioner /'medɪk(ə)l præk'tju:nəl/ noun a person qualified in medicine, i.e. a doctor or surgeon

medical profession /'medɪk(ə)l prə'fes(ə)n/ noun all doctors

medical records /'medɪk(ə)l ,reko:dz/ plural noun information about a person's medical history

Medical Register /'medɪk(ə)l 'redʒɪstər/ noun a list of doctors approved by the General Medical Council ○ *The committee ordered his name to be struck off the Medical Register.*

Medical Research Council /'medɪk(ə)l rɪ'sɜ:tʃ ,kaʊnsəl/ noun a government body which organises and pays for medical research. Abbr MRC

medical school /'medɪk(ə)l sku:l/ noun a section of a university which teaches medicine ○ *He is at medical school.*

medical secretary /'medɪk(ə)l 'sekrit(ə)ri/ noun a qualified secretary who specialises in medical documentation, either in a hospital or in a doctor's surgery

medical social worker /'medɪk(ə)l 'səʊʃ(ə)l ,wɜ:kə/ noun someone who helps people with family problems or problems related to their work which may have an effect on their response to treatment

medical ward /'medɪk(ə)l wɔ:d/ noun a ward for people who do not have to undergo surgical operations

Medicare /'medikeə/ noun a system of public health insurance in the US

medicated /'medikeɪtɪd/ adjective containing a medicinal drug ○ *medicated cough sweet*

medicated shampoo /'medikeɪtɪd ſəməp/ noun a shampoo containing a chemical which is supposed to prevent dandruff

medication /'medi'keɪʃ(ə)n/ noun 1. the treatment of illnesses by giving people drugs. ○ *premedication* 2. a drug used to treat a particular illness ○ *What sort of medication has she been taking? ○ 80% of elderly patients admitted to geriatric units are on medication.*

medicinal /mə'dɪs(ə)n(ə)l/ adjective which has healing properties or a beneficial effect on someone's health ○ *He has a drink of whisky before he goes to bed for medicinal purposes.*

medicinal bath /mə'dɪs(ə)n(ə)l 'ba:θ/ noun treatment in which someone lies in a bath of hot water containing particular chemicals, in hot mud or in other substances

medicinal drug /mə'dɪs(ə)n(ə)l 'drʌg/ noun a drug used to treat a disease as opposed to hallucinatory or addictive drugs

medicinal leech /mə'dɪs(ə)n(ə)l 'li:tʃ/ noun a leech which is raised specially for use in medicine

medicinally /mə'dɪs(ə)n(ə)li/ adverb used as a medicine ○ *The herb can be used medicinally.*

medicine /'med(ə)s(ə)n/ noun 1. a preparation taken to treat a disease or condition, especially one in liquid form ○ *Take some cough medicine if your cough is bad. ○ You should take the medicine three times a day.* 2. the study of diseases and how to cure or prevent them ○ *She is studying medicine because she wants to be a doctor.* 3. the study and treatment of diseases which does not involve surgery

medicine bottle /'med(ə)s(ə)n ,bɒtl(ə)l/ noun a special bottle which contains medicine

medicine cabinet /'med(ə)s(ə)n ,kæbɪnət/, **medicine chest** /'med(ə)s(ə)n tʃest/ noun a cupboard where medicines, bandages, thermometers and other pieces of medical equipment can be left locked up, but ready for use in an emergency

medico /'medɪkəʊ/ noun a doctor (informal) ○ *The medico said I was perfectly fit.*

medico- /'medɪkəʊ/ prefix referring to medicine or to doctors

medicochirurgical /'medɪkəʊkərjʊkl/ 'rɜ:dzɪk(ə)l/ adjective referring to both medicine and surgery

medicolegal /'medɪkəʊ'lɪ:g(ə)l/ adjective referring to both medicine and the law

medicosocial /'medɪkəʊ 'səʊʃ(ə)l/ adjective involving both medical and social factors

medium /'mi:dɪəm/ adjective average, in the middle or at the halfway point ■ noun a substance through which something acts

medroxyprogesterone /mə'drɒksɪprəʊ 'dʒɛstərəʊn/ noun a synthetic hormone used to treat menstrual disorders, in oestrogen replacement therapy and as a contraceptive

medulla /me'dʊlə/ noun 1. the soft inner part of an organ, as opposed to the outer cortex. See illustration at **KIDNEY** in Supplement 2. bone marrow 3. any structure similar to bone marrow

medulla oblongata /me,dʊlə ,ɒbləŋ 'geɪtə/ noun a continuation of the spinal cord going through the foramen magnum into the brain

medullary /me'dʊləri/ adjective 1. similar to marrow 2. referring to a medulla

medullary cavity /me,dʊləri 'kævɪtɪ/ noun a hollow centre of a long bone, containing bone marrow. See illustration at **BONE STRUCTURE** in Supplement

medullary cord /me'dʊləri kɔ:d/ noun an epithelial fibre found near the hilum of the fetal ovary

medullated nerve /'medəleɪtɪd nɜ:v/ noun a nerve surrounded by a myelin sheath

medulloblastoma /me,dʊləbla:stə'məʊmə/ noun a tumour which develops in the medulla oblongata and the fourth ventricle of the brain in children

mefenamic acid /mefənæmɪk 'æsɪd/ noun a drug which reduces inflammation and pain,

used in the treatment of rheumatoid arthritis and menstrual problems

mfloquine /'mefləkwi:n/, **mfloquine hydrochloride** /,mefləkwi:n,haidrəʊ'klɔ:raɪd/ noun a drug used in the prevention and treatment of malaria

mega- /megə/ prefix 1. large. Opposite **micro-** 2. one million, or 10⁶

megacolon /,mɛgə'kəʊlən/ noun a condition in which the lower colon is very much larger than normal, because part of the colon above is constricted, making bowel movements impossible

megajoule /'megədʒu:l/ noun a unit of measurement of energy equal to one million joules. Symbol **Mj**

megakaryocyte /,mɛgə'kærɪəsait/ noun a bone marrow cell which produces blood platelets

megalο- /megələʊ/ prefix large

megaloblast /'megələʊblæst/ noun an unusually large blood cell found in the bone marrow of people who have some types of anaemia caused by Vitamin B₁₂ deficiency

megaloblastic /,megələʊ'błæstɪk/ adjective referring to megaloblasts

megalo- /megələʊ/ prefix anaemia /,megələʊ,blæstɪk ə'nɪ:miə/ noun anaemia caused by Vitamin B₁₂ deficiency

megalocephaly /,megələʊ'kefəli/ noun the condition of having an unusually large head

megacytē /'megələʊsait/ noun an unusually large red blood cell, found in pernicious anaemia

megalomania /,megələʊ'meɪniə/ noun a psychiatric disorder in which a person believes they are very powerful and important

megalomaniac /,megələʊ'meɪniæk/ noun someone who has megalomania ■ adjective having megalomania

-megaly /megəli/ suffix enlargement

megaureter /,megə'ju:rɪ:tə/ noun a condition in which a part of the ureter becomes very wide, above the site of a blockage

meibomian cyst /mai,bəʊmɪən 'sist/ noun the swelling of a sebaceous gland in the eyelid. Also called **chalazion**

meibomian gland /mai'bəʊmɪən,glænd/ noun a sebaceous gland on the edge of the eyelid which secretes a liquid to lubricate the eyelid. Also called **tarsal gland**

meibomianitis /mai,bəʊmɪə'naitɪs/ noun a condition in which the meibomian glands become swollen

Meigs' syndrome /'meɪgz,sɪndrəʊm/ noun a condition in which liquid collects in the chest and abdominal cavities. It is associated with pelvic tumours.

meiosis /mai'əʊsɪs/ noun the process of cell division which results in two pairs of haploid cells, i.e. cells with only one set of chromo-

somes. Compare **mitosis** (NOTE: The US spelling is **miosis**.)

Meissner's corpuscle /,maɪsnəz 'kɔ:pəs(ə)l/ noun a receptor cell in the skin which is thought to be sensitive to touch

Meissner's plexus /,maɪsnəz 'pleksəs/ noun a network of nerve fibres in the wall of the alimentary canal [Described 1853. After Georg Meissner (1829–1905), German anatomist and physiologist.]

melaena /'mə:lɪ:nə/ noun black faeces where the colour is caused by bleeding in the intestine

melan- /melən/ prefix same as **melano-** (used before vowels)

melancholia /,melən'kæliə/ noun 1. a severe depressive illness occurring usually between the ages of 45 and 65 2. a clinical syndrome with a tendency to delusion, fixed personality and agitated movements

melanin /'melənɪn/ noun a dark pigment which gives colour to skin and hair, also found in the choroid of the eye and in some tumours

melanism /'melənɪz(ə)m/ noun 1. the unexpected depositing of dark pigment 2. the staining of all body tissue with melanin in a form of carcinoma

melano- /melənəʊ/ prefix black or dark

melanocyte /'melənəʊsait/ noun any cell which carries pigment

melanocyte-stimulating hormone /,melənəʊsait 'stɪmjo:leɪtɪŋ,haʊ:məʊm/ noun a hormone produced by the pituitary gland which causes darkening in the colour of the skin. Abbr **MSH**

melanoderma /,melənəʊ'də:z:mə/ noun 1. a large amount of melanin in the skin 2. discolouration of patches of the skin

melanoma /,melə'nəʊmə/ noun a tumour formed of dark pigmented cells

COMMENT: ABCD is the key to remember if you want to know if there is a risk of developing a melanoma: A = ASYMMETRY, ie. the two sides are not quite the same, and the mole does not have a perfect shape; B = BORDER, the edge becomes irregular; C = COLOUR, there may be a change in colour, with the mole becoming darker; D = DIAMETER, any change in diameter should be considered an important factor. Among other features, pain is rarely an important feature but itching could be one.

melanophore /'melənəʊfɔ:/ noun a cell which contains melanin

melanoplakia /'melənəʊpləkɪə/ noun areas of pigment in the mucous membrane inside the mouth

melanosis /,melə'nəʊsɪs/ noun same as **melanism**

melanuria /,melə'njuəriə/ noun 1. the presence of dark colouring in the urine 2. a condition in which the urine turns black after being

allowed to stand, e.g. in cases of malignant melanoma

melasma /mə'læzmə/ *noun* the presence of little brown, yellow or black spots on the skin

melatonin /'melə'təʊnɪn/ *noun* a hormone produced by the pineal gland during the hours of darkness, which makes animals sleep during the winter months. It is thought to control the body's rhythms.

melena /mə'lē:nə/ *noun* same as **melaena**

melitus /'mɛltɪs/ ♀ **diabetes mellitus**

membrane /'membreɪn/ *noun* a thin layer of tissue which lines or covers an organ

membrane bone /'membreɪn bəʊn/ *noun* a bone which develops from tissue and not from cartilage

membranous /'memb्रənəs/ *adjective* referring to membranes, or like a membrane

membranous labyrinth /,memb्रənəs læbərɪnθ/ *noun* a series of ducts and canals formed of membrane inside the osseous labyrinth

memory /'mem(ə)ri/ *noun* the ability to remember ○ *He has a very good memory for dates.* ○ *He said the whole list from memory.*

menarche /mə'nɑ:kɪ/ *noun* the start of menstrual periods

mend /mend/ *verb* to repair something ○ *The surgeons are trying to mend the damaged heart valves.*

Mendel's laws /'mendəlz ɬɔ:z/ *plural noun* the laws of heredity, that are the basis of the science of genetics [Described 1865. After Gregor Johann Mendel (1822–84), Austrian Augustinian monk and naturalist of Brno, whose work was rediscovered by de Vries in 1900.]

Mendelson's syndrome /'mendəlsənз, sɪndrəʊm/ *noun* a sometimes fatal condition in which acid fluid from the stomach is brought up into the windpipe and passes into the lungs, occurring mainly in obstetric patients [Described 1946. After Curtis L. Mendelson (b. 1913), US obstetrician and gynaecologist.]

Ménière's disease /meni'eэz dɪ,zi:z/, **Ménière's syndrome** /'sɪndrəʊm/ *noun* a disease of the middle ear, in which someone becomes dizzy, hears ringing in the ears and may vomit, and becomes progressively deaf. The causes may include infections or allergies, which increase the fluid contents of the labyrinth in the middle ear. [Described 1861. After Prosper Ménière (1799–1862) and his son, Emile Antoine Ménière (1839–1905), French physicians.]

mening- /menɪndʒ/ *prefix* same as **meningo-** (used before vowels)

meningeal /me'nɪndʒɪəl/ *adjective* referring to the meninges

meningeal haemorrhage /me,nɪndʒɪəl 'hem(ə)rɪdʒ/ *noun* a haemorrhage from a meningeal artery

meningeal sarcoma /me,nɪndʒɪəl sa:'kœmə/ *noun* a malignant tumour in the meninges

meninges /me'nɪndʒɪ:z/ *plural noun* the membranes which surround the brain and spinal cord (NOTE: The singular is **meninx**.)

COMMENT: The meninges are divided into three layers: the tough outer layer (dura mater) which protects the brain and spinal cord; the middle layer (arachnoid mater) and the delicate inner layer (pia mater) which contains the blood vessels. The cerebrospinal fluid flows in the space (subarachnoid space) between the arachnoid mater and pia mater.

meningioma /,menɪndʒɪ'əʊmə/ *noun* a benign tumour in the meninges

meningism /me'nɪndʒɪz(ə)m/ *noun* a condition in which there are signs of meningeal irritation suggesting meningitis, but where there is no pathological change in the cerebrospinal fluid

meningitis /,menɪn'dʒaɪtɪs/ *noun* inflammation of the meninges, causing someone to have violent headaches, fever, and stiff neck muscles, and sometimes to become delirious

COMMENT: Meningitis is a serious viral or bacterial disease which can cause brain damage and even death. The bacterial form can be treated with antibiotics. The most common forms of bacterial meningitis are Hib and meningococcal.

meningo- /mənɪngəʊ/ *prefix* referring to the meninges

meningocele /mə'nɪngəʊsi:l/ *noun* a condition in which the meninges protrude through the vertebral column or skull

meningococcal /mə,nɪngə'ʊ'kɒk(ə)l/ *adjective* referring to meningococci

meningococcal disease /mə,nɪngəʊ'kɒk(ə)l dɪ,zi:z/ *noun* a disease caused by a meningococcus

meningococcal meningitis /mə,nɪngəʊ',kɒk(ə)l ,menɪn'dʒaɪtɪs/ *noun* the commonest epidemic form of meningitis, caused by a bacterium *Neisseria meningitidis*, where the meninges become inflamed causing headaches and fever

meningococcus /mə,nɪngəʊ'kɒkəs/ *noun* the bacterium *Neisseria meningitidis* which causes meningococcal meningitis (NOTE: The plural is **meningococci**.)

meningoencephalitis /mə,nɪngə'en,kɛfə'lætɪs/ *noun* inflammation of the meninges and the brain

meningoencephalocele /mə,nɪngə'en,kɛfə'læsəl/ *noun* a condition in which part of the meninges and the brain push through a gap in the skull

meningomyelocele /mə,nɪngə'o'maɪələsəl/ *noun* the pushing forward of part of the

meninges and spinal cord through a gap in the spine. Also called **myelomeningocele**, **myelocoele**

meningovascular /mə'niŋgəʊ'veæskjʊlə/ *adjective* referring to the meningeal blood vessels

meninx /'menɪŋks/ *noun* ♦ **meninges**

meniscectomy /,menɪ'sektəmɪ/ *noun* the surgical removal of a cartilage from the knee

meniscus /mə'nɪskəs/ *noun* one of two pads of cartilage, the lateral meniscus and medial meniscus, between the femur and tibia in a knee joint. Also called **semilunar cartilage** (NOTE: The plural is **menisci**.)

meno- /'menəʊ/ *prefix* referring to menstruation

menopausal /,menə'pɔ:z(ə)l/ *adjective* referring to the menopause

menopause /'menəpəʊz/ *noun* a period, usually between 45 and 55 years of age, when a woman stops menstruating and can no longer bear children. Also called **climacteric, change of life**

menorrhagia /,menə'reɪdʒɪə/ *noun* very heavy bleeding during menstruation. Also called **flooding**

menorrhoea /,menə'rɪ:ə/ *noun* normal bleeding during menstruation

menses /'mensɪ:z/ *plural noun* same as **menstruation**

menstrual /'menstruəl/ *adjective* referring to menstruation

menstrual cramp /,menstruəl 'kræmp/ *noun* a cramp in the muscles round the uterus during menstruation

menstrual cycle /'menstruəl ,saɪk(ə)l/ *noun* a period, usually of 28 days, during which a woman ovulates, the walls of the uterus swell and bleeding takes place if the ovum has not been fertilised

menstrual flow /'menstruəl fləʊ/ *noun* the discharge of blood from the uterus during menstruation

menstruate /'menstrueɪt/ *verb* to bleed from the uterus during menstruation

menstruation /,menstru'eɪʃ(ə)n/ *noun* bleeding from the uterus which occurs in a woman each month when the lining of the uterus is shed because no fertilised egg is present

menstruum /'menstru:əm/ *noun* a liquid used in the extract of active principles from an unrefined drug

mental /'ment(ə)l/ *adjective* 1. referring to the mind 2. referring to the chin

mental aberration /,ment(ə)l ,ə'bə'reɪʃ(ə)n/ *noun* slight forgetfulness or confusion (often humorous) ◇ I thought the meeting was at 11 – I must have had a mental aberration.

mental age /'ment(ə)l 'eɪdʒ/ *noun* a measurement based on intelligence tests that shows

a person's intellectual development, usually compared to standardised data for a chronological age ◇ he's nine, but he has a **mental age of five** although he is nine years old, his level of intellectual development is the same as that of an average child of five

mental block /,ment(ə)l 'blk/ *noun* a temporary inability to remember something, caused by the effect of nervous stress on the mental processes

mental deficiency /,ment(ə)l dɪ'fɪʃ(ə)nsi/ *noun* a former term for learning disability (NOTE: This term is regarded as offensive.)

mental development /,ment(ə)l dɪ'veləpmənt/ *noun* the development of the mind ◇ Her **mental development is higher than usual for her age**.

mental disorder /,ment(ə)l dɪs'ɔ:də/ *noun* a temporary or permanent change in a person's mental state which makes them function less effectively than they would usually, or than the average person would be expected to function

mental faculties /,ment(ə)l 'fækəlti:z/ *plural noun* abilities such as thinking and decision-making ◇ There has been no impairment of the **mental faculties**.

mental handicap /,ment(ə)l 'hændikæp/ *noun* a former term for learning disability (NOTE: This term is regarded as offensive.)

mental health /'ment(ə)l helθ/ *noun* the condition of someone's mind

Mental Health Acts /,ment(ə)l 'helθ əkts/ *plural noun* laws made by a parliament which lay down rules for the care of people with mental illness

Mental Health Review Tribunal /,ment(ə)l helθ ri'veju: trai, bju:n(ə)l/ *noun* a committee which makes decisions about whether people who have been detained under the Mental Health Acts should be released. It consists of medical members, legal experts and lay members, who include people with experience in social services. Abbr **MHRT**

mental hospital /'ment(ə)l ,hospɪt(ə)l/ *noun* a psychiatric hospital (NOTE: This term is regarded as offensive.)

mental illness /,ment(ə)l 'ilnəs/ *noun* any disorder which affects the mind

mental impairment /,ment(ə)l im'peəmənt/ *noun* a temporary or permanent condition which affects a person's mental state, making them function less effectively than they would usually, or than the average person would be expected to function

mentalis muscle /men'teɪlis 'mas(ə)l/ *noun* a muscle attached to the front of the lower jaw and the skin of the chin

mentally /'ment(ə)li/ *adverb* in the mind ◇ Mentally, she is very advanced for her age.

mentally handicapped /,ment(ə)li 'hændikæpt/ *adjective* a former term for

someone with learning disability (NOTE: This term is usually regarded as offensive.)

mentally ill /'ment(ə)li 'il/ *adjective* experiencing mental illness

mental nerve /'ment(ə)l nɜ:v/ *noun* a nerve which supplies the chin

mental patient /'ment(ə)l ,peɪʃ(ə)nt/ *noun* a former term of a patient who has mental illness (NOTE: This term is regarded as offensive.)

mental retardation /'ment(ə)l ,ri:tə:tə:dɪ'retɪʃ(ə)n/ *noun* a former term for learning disability, a condition that results in someone finding it difficult to learn skills or information at the same rate as others of a similar age (NOTE: This term is regarded as offensive.)

mental subnormality /'ment(ə)l ,sʌbno:mɪ:tɪ/ *noun* a former term for mental impairment (NOTE: This term is usually regarded as offensive.)

menthol /'menθɒl/ *noun* a strongly scented compound, produced from peppermint oil, used in cough medicines and in the treatment of neuralgia

mentholated /'menθəleɪtɪd/ *adjective* impregnated with menthol

mento- /'mentəʊ/ *prefix* relating to the chin

mentor /'mentɔ:/ *noun* somebody who advises and guides a younger, less experienced person ■ *verb* to act as a mentor to somebody

mentum /'mentəm/ *noun* the chin

meralgia /mə'rældʒɪə/; **meralgia paraesthesia** /mə'rældʒɪə,pæərə'sθetɪkə/ *noun* pain in the top of the thigh caused by a pinched nerve

mercurialism /mə'kjuəriəlɪz(ə)m/ *noun* mercury poisoning

mercurochrome /ma'kjʊərəʊkrəʊm/ *noun* a red antiseptic solution

mercury /'mɜ:kjʊri/ *noun* a poisonous liquid metal, used in thermometers (NOTE: The chemical symbol is Hg.)

mercury poisoning /'mɜ:kjʊri,pɔɪzɪŋ/ *noun* poisoning by drinking mercury or mercury compounds or by inhaling mercury vapour

mercy killing /'mɜ:sɪ ,kɪlɪŋ/ *noun* same as euthanasia

meridian /mə'rɪdiən/ *noun* in acupuncture and Chinese medicine, one of the pathways in the body along which its energy is believed to flow

Merkel's cells /'mɜ:kelz selz/, **Merkel's discs** /'mɜ:kelz disks/ *plural noun* epithelial cells in the deeper part of the dermis which form touch receptors [After Friedrich Siegmund Merkel (1845–1919), German anatomist]

merocrine /'merəʊkrain/ *adjective* same as eccrine

mes- /mes/ *prefix* same as **meso-** (*used before vowels*)

mesaortitis /'mesəɔ:tɪ:tɪtɪs/ *noun* inflammation of the media of the aorta

mesarteritis /mes,ɑ:tə'rætɪs/ *noun* inflammation of the media of an artery

mesencephalon /mesen'kefəlon/ *noun* same as **midbrain**

mesenteric /,mesen'terɪk/ *adjective* referring to the mesentery

mesenterica /mesen'terɪkə/ ♦ **tabes mesenterica**

mesenteric artery /,mesenterik 'ɑ:tərɪ/ *noun* one of two arteries, the superior and inferior mesenteric arteries, which supply the small intestine or the transverse colon and rectum

mesenteric ganglion /,mesenterik 'gæŋglɪən/ *noun* a plexus of sympathetic nerve fibres and ganglion cells around the superior mesenteric artery

mesenteric vein /,mesenterik 'veɪn/ *noun* a vein in the portal system running from the intestine to the portal vein

mesentery /'mesent(ə)ri/ *noun* a double-layer peritoneum which attaches the small intestine and other abdominal organs to the abdominal wall

mesial /'mi:sɪəl/ *adjective* 1. in dentistry, relating to the middle of the front of the jaw, or occurring in a place near this 2. relating to or located in the middle part of something

meso- /mesəʊ/ *prefix* middle

mesoappendix /,mesəʊ'pendɪks/ *noun* a fold of peritoneum which links the appendix and the ileum

mesocolon /,mesəʊ'kələn/ *noun* a fold of peritoneum which supports the colon. In an adult it supports the transverse and sigmoid sections only.

mesoderm /'mesəʊdɜ:m/ *noun* the middle layer of an embryo, which develops into muscles, bones, blood, kidneys, cartilages, urinary ducts and the cardiovascular and lymphatic systems

mesodermal /,mesəʊ'dɜ:əm(ə)l/ *adjective* referring to the mesoderm

mesometrium /,mesəʊ'mi:ttriəm/ *noun* a muscle layer of the uterus

mesonephros /,mesəʊ'nefrɒs/ *noun* kidney tissue which exists in a human embryo

mesosalpinx /,mesəʊ'sælpɪŋks/ *noun* the upper part of the broad ligament around the Fallopian tubes

mesotendon /,mesəʊ'tendən/ *noun* synovial membrane connecting the lining of the fibrous sheath to that of a tendon

mesothelioma /,mesəʊti:lɪ'əʊmə/ *noun* a tumour of the serous membrane, which can be benign or malignant

mesothelium /,mesəʊ'ti:liəm/ *noun* a layer of cells lining a serous membrane. Compare **epithelium, endothelium**

mesovarium /,mesəʊ'veəriəm/ *noun* a fold of peritoneum around the ovaries

messenger RNA /'mes(ə)nđzə ,a:r en 'eɪ/ *noun* a type of ribonucleic acid which transmits the genetic code from the DNA to the ribosomes which form the proteins coded on the DNA. Abbr **mRNA**

mestranol /'mi:streñol/ *noun* a synthetically produced oestrogen used in birth control pills

meta- /metə/ *prefix* referring to change

meta analysis /'metə ə,næləsis/ *noun* a statistical procedure to combine the results from many studies to give a single estimate, giving weight to large studies

metabolic /metə'bɒlik/ *adjective* referring to metabolism

metabolic acidosis /metəbɒlik ,æsɪ 'dəʊsɪs/ *noun* acidosis caused by a malfunction of the body's metabolism

metabolic alkalosis /metəbɒlik ælkə 'ləʊsɪs/ *noun* alkalosis caused by a malfunction of the body's metabolism

metabolise /mə'tæbəlaɪz/, **metabolize** *verb* to change the nature of something by metabolism □ *The liver metabolises proteins and carbohydrates.*

metabolism /mə'tæbəlɪz(ə)m/ *noun* the chemical processes which are continually taking place in the human body and which are essential to life, especially the processes that convert food into energy

COMMENT: Metabolism covers all changes which take place in the body: the building of tissue (anabolism); the breaking down of tissue (catabolism); the conversion of nutrients into tissue; the elimination of waste matter and the action of hormones.

metabolite /mə'tæbəlaɪt/ *noun* a substance produced by metabolism, or a substance taken into the body in food and then metabolised

metacarpal bone /,metə'kɑ:p(ə)l bəun/, **metacarpal** /,metə'kɑ:p(ə)l/ *noun* one of the five bones in the metacarpus

metacarpophalangeal /,metə'kɑ:pəfə'lændʒiəl/ *adjective* relating to the part of the hand between the wrist and the fingers

metacarpophalangeal joint /,metə'kɑ:pəfə'lændʒiəl ,dʒɔ:nt/ *noun* a joint between a metacarpal bone and a finger. Also called **MCP joint, MP joint**

'...replacement of the MCP joint is usually undertaken to relieve pain, deformity and immobility due to rheumatoid arthritis' [Nursing Times]

metacarpus /,metə'kɑ:ps/ *noun* the five bones in the hand between the fingers and the wrist. See illustration at **HAND** in Supplement

metal /'met(ə)l/ *noun* material, either an element or a compound, which can carry heat and electricity. Some metals are essential for life.

metallic /me'tælɪk/ *adjective* like a metal, referring to a metal

metallic element /me,tælɪk 'elɪmənt/ *noun* a chemical element which is a metal

metamorphopsia /metəmɔ:'fɒpsɪə/ *noun* a condition in which someone sees objects in distorted form, usually due to inflammation of the choroid

metaphase /'metəfeɪz/ *noun* one of the stages in mitosis or meiosis

metaphysis /me'tæfɪsɪs/ *noun* the end of the central section of a long bone, where the bone grows and where it joins the epiphysis

metaplasia /metə'pleɪzɪə/ *noun* a change of one tissue to another

metastasis /me'tæstəsɪs/ *noun* the spreading of a malignant disease from one part of the body to another through the bloodstream or the lymph system. Also called **secondary growth** (NOTE: The plural is **metastases**.)

'...he suddenly developed problems with his balance and a solitary brain metastasis was diagnosed' [British Journal of Nursing]

metastasise /me'tæstəsaɪz/, **metastasize** *verb* to spread by metastasis

metastatic /metə'stætɪk/ *adjective* relating to, or produced by, metastasis □ *Metastatic growths developed in the liver.*

metatarsal /metə'ta:s(ə)l/ *noun* one of the five bones in the metatarsus ■ *adjective* relating to the metatarsus

metatarsal arch /,metə'ta:s(ə)l a:tʃ/ *noun* an arched part of the sole of the foot, running across the sole of the foot from side to side. Also called **transverse arch**

metatarsalgia /,metəta:lɪ'sældʒɪə/ *noun* pain in the heads of the metatarsal bones

metatarsophalangeal joint /metə,tɑ:səʊfə'lændʒiəl ,dʒɔ:nt/ *noun* a joint between a metatarsal bone and a toe

metatarsus /,metə'ta:səs/ *noun* the five long bones in the foot between the toes and the tarsus. See illustration at **FOOT** in Supplement (NOTE: The plural is **metatarsi**.)

metatarsus adductus /,metəta:səs ə'dʌktəs/ *noun* a condition found in newborn babies or young infants in which the front half of the foot is twisted inwards at an angle to the heel

meteorism /'mi:tɪərɪz(ə)m/ *noun* same as **tympanites**

meter /'mi:tə/ *noun* US same as **metre**

-meter /mi:tə/, mitə/ *suffix* measuring instrument

metformin /met'fɔ:min/ *noun* a drug which reduces the level of the blood sugar levels, used to treat non-insulin dependent diabetes which does not respond to dietary measures

methadone /'meθədəʊn/ *noun* a synthetically produced narcotic drug, used to reduce pain and as a substitute for heroin in the treatment of addiction

methaemoglobin /met,hɪ:məu'gləʊbɪn/ *noun* a dark brown substance formed from haemoglobin which develops during illness, following treatment with some drugs. Methae-

moglobin cannot transport oxygen round the body, and so causes cyanosis.

methaemoglobinæmia /met,hɪməʊ,gloʊbɪ'nɪ:miə/ noun the presence of methaemoglobin in the blood

methane /'mi:θeɪn, 'meθeɪn/ noun a colourless flammable gas with no smell

methanol /'meθənɒl/ noun a colourless poisonous liquid, used as a solvent and a fuel. It changes easily into a gas. Also called **methyl alcohol**

methicillin /,meθɪ'sɪlin/ noun a synthetically produced antibiotic, used in the treatment of infections which are resistant to penicillin

methicillin-resistant Staphylococcus aureus /meθɪ'silin rɪ,zɪstənt stæfɪlkə,kɒkəs 'ɔ:rɪəs/ noun a bacterium resistant to almost all antibiotics and which can cause life-threatening infection in people recovering from surgery. Abbr **MRSA**

methionine /me'θaiəni:n/ noun an essential amino acid

method /'meθəd/ noun a way of doing something

methotrexate /,meθə'trekseɪt/ noun a drug which helps to prevent cells reproducing, used in the treatment of cancer

methyl alcohol /,mi:θaɪl 'ælkəhol/ noun same as **methanol**

methylated spirits /,meθəleɪtɪd 'spirɪts/ plural noun almost pure alcohol, with wood alcohol and colouring added

methylene blue /,meθəli:b/ noun a blue dye, formerly used as a mild urinary antiseptic, now used to treat drug-induced methaemoglobinæmia

methylenedioxymethamphetamine /,meθi:lɛndioks'metfæməti:n/ noun same as **ecstasy**

methylphenidate /,mi:θaɪl'fenɪdeɪt/ noun a drug which stimulates the central nervous system, used in the treatment of narcolepsy and attention deficit disorder

methylprednisolone /,mi:θaɪlpred'nɪsələn/ noun a corticosteroid drug which reduces inflammation, used in the treatment of arthritis, allergies and asthma

metoclopramide /,metəu'kləuprə'maɪd/ noun a drug used to treat nausea, vomiting and indigestion

metoprolol /mi:tɒprɒlɒl/ noun a drug which controls the activity of the heart, used to treat angina and high blood pressure

metr- /metr/ prefix same as **metro-** (used before vowels)

metra /'metrə/ noun the uterus

metralgia /me'trældʒə/ noun pain in the uterus

metre /'mi:tə/ noun an SI unit of length ◎ The room is four metres by three. Symbol **m** (NOTE: The US spelling is **meter**.)

metritis /me'traitɪs/ noun same as **myometritis**

metro- /metrəʊ/ prefix referring to the uterus

metrocolpocele /,metrə'kɒlpəsə:l/ noun a condition in which the uterus protrudes into the vagina

metronidazole /,metrə'nɪdəzəʊl/ noun a yellow antibiotic compound, used especially in the treatment of vaginal infections

metropathia haemorrhagica /,metrəpæθiə'hemə'reɪdʒɪkəl/ noun an essential uterine haemorrhage, where the lining of the uterus swells and there is heavy menstrual bleeding

metroptosis /,metrə'təʊsɪs/ noun a condition in which the uterus has moved downwards out of its usual position. Also called **prolapse of the uterus**

metrorrhagia /,mi:tɪrəʊ'reɪdʒiə/ noun unusual bleeding from the vagina between the menstrual periods

metrostaxis /,mi:tɪrəʊ'stæksɪs/ noun a continual light bleeding from the uterus

-metry /mətri/ suffix relating to the process of measuring, or to instruments which are used for measuring

mg abbr milligram

MI abbr 1. mitral incompetence 2. myocardial infarction

micelle /mi'sel/ noun a tiny particle formed by the digestion of fat in the small intestine

Michel's clips /mɪ,selz 'klɪps/ plural noun metal clips used to suture a wound [After Gaston Michel (1874–1937), Professor of Clinical Surgery at Nancy, France]

miconazole /maɪ'kɒnəzəʊl/ noun a drug used to treat fungal infections of the skin and nails

micro- /maɪkrəʊ/ prefix 1. very small. Opposite **macro-**, **mega-**, **megalo-** 2. one millionth (10⁻⁶)

microaneurysm /,maɪkrəʊ'ænjərɪz(ə)m/ noun a tiny swelling in the wall of a capillary in the retina

microangiopathy /,maɪkrəʊ,ændʒi'ɒpəθi/ noun any disease of the capillaries

microbe /'maɪkrob/ noun a microorganism which may cause disease and which can only be seen with a microscope, e.g. a bacterium

microbial /maɪ'krobiəl/ adjective referring to microbes

microbial disease /maɪ'krobiəl dɪ'zi:z/ noun a disease caused by a microbe

microbiological /,maɪkrəʊ'bɪəl/ adjective referring to microbiology

microbiologist /,maɪkrəʊ'bɪə'lɒdʒɪst/ noun a scientist who specialises in the study of microorganisms

microbiology /,maɪkrəʊ'bɪə'lɒdʒi/ noun the scientific study of microorganisms

microcephalic /'maɪkroʊke'fælɪk/ *adjective* having microcephaly

microcephaly /'maɪkroʊ'kefəli/ *noun* a condition in which a person has an unusually small head, sometimes caused by the mother having had a rubella infection during pregnancy

microcheilia /'maɪkroʊ'karliə/ *noun* the condition of having unusually small lips

Micrococcus /'maɪkroʊ'kɒkəs/ *noun* a genus of bacterium, some species of which cause arthritis, endocarditis and meningitis

microcyte /'maɪkroʊsait/ *noun* an unusually small red blood cell

microcythaemia /,maɪkroʊsaɪ'θi:miə/ *noun* same as **microcytosis**

microcytic /,maɪkroʊ'sɪtɪk/ *adjective* referring to microcytes

microcytosis /,maɪkroʊsaɪ'təʊsɪs/ *noun* the presence of excess microcytes in the blood

microdactylia /,maɪkrədæk'tɪliə/, **microdactyly** /,maɪkroʊ'dæktɪli/ *noun* a condition in which a person has unusually small or short fingers or toes

microdisectomy /,maɪkroʊdɪsk'ektəmɪ/ *noun* a surgical operation to remove all or part of a disc in the spine which is pressing on a nerve

microdontism /,maɪkroʊ'dɒntɪz(ə)m/, **microdontia** /,maɪkroʊ'dɒntiə/ *noun* the condition of having unusually small teeth

microglia /maɪ'kroglɪə/ *noun* tissue in the central nervous system composed of tiny cells which destroy other cells

microglossia /,maɪkroʊ'glɒsiə/ *noun* a condition in which a person has an unusually small tongue

micrognathia /,maɪkroʊ'nɛɪθiə/ *noun* a condition in which one jaw is unusually smaller than the other

microgram /'maɪkrogræm/ *noun* a unit of measurement of weight equal to one millionth of a gram

micromastia /,maɪkroʊ'mæstɪə/ *noun* a condition in which a person has unusually small breasts

micromelia /,maɪkroʊ'mi:liə/ *noun* a condition in which a person has unusually small arms or legs

micrometer /maɪ'krɒmɪtə/ *noun* 1. an instrument for taking very small measurements, such as the width or thickness of very thin pieces of tissue 2. *US* same as **micrometre**

micrometre /'maɪkroʊ,mɪ:tə/ *noun* a unit of measurement of thickness (= one millionth of a metre) (NOTE: With figures, usually written μm)

micromole /'maɪkroʊ,məʊl/ *noun* a unit of measurement of the amount of substance equal to one millionth of a mole. Symbol μ

micron /'maɪkrɒn/ *noun* same as **micrometre**

micronutrient /'maɪkrəʊ,nju:triənt/ *noun* a substance which an organism needs for normal growth and development, but only in very small quantities, e.g. a vitamin or mineral. Compare **macronutrient**

microorganism /,maɪkroʊ'ɔ:gənɪz(ə)m/ *noun* an organism which can only be seen under a microscope and which may cause disease. Viruses, bacteria and protozoa are microorganisms.

microphthalmia /,maɪkrof'θælmɪə/ *noun* a condition in which the eyes are unusually small

micropsia /maɪ'krɒpsiə/ *noun* a condition in which someone sees objects smaller than they really are, caused by an unusual development in the retina

microscope /'maɪkroʊsko:p/ *noun* a scientific instrument with lenses, which makes very small objects appear larger ○ *The tissue was examined under the microscope.* ○ *Under the microscope it was possible to see the cancer cells.*

COMMENT: In an ordinary or light microscope the image is magnified by lenses. In an electron microscope the lenses are electromagnets and a beam of electrons is used instead of light, thereby achieving much greater magnifications.

microscopic /,maɪkroʊ'skɒpɪk/ *adjective* so small that it can only be seen through a microscope

microscopy /maɪ'kroʊsko:pɪ/ *noun* the science of the use of microscopes

microsecond /'maɪkroʊ,sekənd/ *noun* a unit of measurement of time (= one millionth of a second) (NOTE: With figures, usually written μs .)

Microsporum /'maɪkroʊspɔ:rəm/ *noun* a type of fungus which causes ringworm of the hair, skin and sometimes nails

microsurgery /'maɪkroʊ,sɜ:dʒərɪ/ *noun* surgery using tiny instruments and a microscope. Microsurgery is used in operations on eyes and ears, and also to connect severed nerves and blood vessels.

microvillus /,maɪkroʊ'vɪləs/ *noun* a very small process found on the surface of many cells, especially the epithelial cells in the intestine (NOTE: The plural is **microvilli**.)

microwave therapy /'maɪkroʊweɪv,θerəpi/ *noun* treatment using high-frequency radiation

micturate /'mɪktjoreɪt/ *verb* same as **urinate**

micturating cystogram /,mɪktjoreɪtɪŋ,sɪstəʊgræm/, **micturating cysto-urethrogram** /,mɪktjoreɪtɪŋ,sɪstəʊ'ju:ri:θrəgræm/ *noun* an X-ray of the bladder and urethra taken while the bladder is being filled and then emptied. Abbreviations: **MCU**, **MCUG**

micturition /,mɪktjō'rɪʃ(ə)n/ *noun* same as urination

mid-/mɪd/ prefix middle

midazolam /'mɪ'dæzəlæm/ *noun* a drug used to produce sleepiness and to reduce anxiety before surgery or other procedures

midbrain /'mɪdbreɪn/ *noun* the small middle section of the brain stem above the pons and between the cerebrum and the hindbrain. Also called **mesencephalon**

midcarpal /'mɪd'ka:p(ə)l/ *adjective* between the two rows of carpal bones

middle /'mɪd(ə)l/ *noun* 1. the centre or central point of something 2. the waist or stomach area (*informal*)

middle-aged /'mɪd(ə)l 'eɪdʒd/ *adjective* not young and not old, in the middle years of life

○ *a disease which affects middle-aged women*

middle colic /'mɪd(ə)l 'kɒlkɪ/ *noun* an artery which leads from the superior mesenteric artery

middle ear /'mɪd(ə)l 'ɪə/ *noun* a section of the ear between the eardrum and the inner ear

COMMENT: The middle ear contains the three ossicles which receive vibrations from the eardrum and transmit them to the cochlea. The middle ear is connected to the throat by the Eustachian tube.

middle ear infection /'mɪd(ə)l 'ɪər ɪnfek'shən/ *noun* same as **otitis media**

middle finger /'mɪd(ə)l 'fɪŋgə/ *noun* the longest of the five fingers

midgut /'mɪdgʌt/ *noun* the middle part of the gut in an embryo, which develops into the small intestine

mid-life crisis /'mɪd laɪf 'kraɪsɪs/ *noun* a period in early middle age when some people experience feelings of anxiety, insecurity and self-doubt

midline /'mɪdlайн/ *noun* an imaginary line drawn down the middle of the body from the head through the navel to the point between the feet

'...patients admitted with acute abdominal pains were referred for study. Abdominal puncture was carried out in the midline immediately above or below the umbilicus.' [Lancet]

midriff /'mɪdrɪf/ *noun* the diaphragm

midstream specimen /'mɪdstrɪ:m ,spesɪmɪn/, **midstream specimen of urine** /'mɪdstrɪm ,spesɪmɪn əv 'juərɪn/ *noun* a sample of urine collected in a sterile bottle in the middle of a flow of urine, because the first part of the flow may be contaminated with bacteria from the skin. Abbr **MSU**

midtarsal /'mɪd'ta:s(ə)l/ *adjective* between the tarsal bones

midwife /'mɪdwif/ *noun* a professional person who helps a woman give birth to a child, often at home

COMMENT: To become a Registered Midwife (RM), a Registered General Nurse has to take a further 18 month course, or alternatively can follow a full 3 year course.

midwifery /mɪd'wɪfəri/ *noun* 1. the profession of a midwife 2. the study of the practical aspects of obstetrics

midwifery course /mɪd'wɪfəri kɔ:s/ *noun* a training course to teach nurses the techniques of being a midwife

migraine /'mɪ:greɪn, 'maɪgrehɪn/, **migraine headache** /,mɪ:grehɪn 'hedeɪk/ *noun* a very severe throbbing headache which can be accompanied by nausea, vomiting, visual disturbance and vertigo. The cause is not known. Attacks may be preceded by an 'aura', where the patient sees flashing lights, or the eyesight becomes blurred. The pain is usually intense and affects one side of the head only.

migrainous /'maɪgrehɪnəs/ *adjective* referring to someone who is subject to migraine attacks

mild /maɪld/ *adjective* not severe, not cold, gentle ○ *a mild throat infection*

mildly /'maɪldli/ *adverb* slightly, not strongly ○ *a mildly infectious disease* ○ *a mildly anti-septic solution*

milia /'mɪliə/ plural of **milium**

milialia /,mɪli'eəriə/ *noun* itchy red spots which develop on the chest, under the armpits and between the thighs in hot countries, caused by blocked sweat glands. Also called **prickly heat, heat rash**

miliary /'mɪliəri/ *adjective* small in size, like a seed

miliary tuberculosis /,mɪliəri tju:bɔ:kjʊl'əʊsɪs/ *noun* a form of tuberculosis which occurs as little nodes in many parts of the body, including the meninges of the brain and spinal cord

milium /'mɪliəm/ *noun* 1. a white pinhead-sized tumour on the face in adults 2. a retention cyst in infants 3. a cyst on the skin (NOTE: [all senses] The plural is **milia**)

milk /mɪlk/ *noun* 1. a white liquid produced by female mammals to feed their young. Cow's milk and other dairy products are important parts of most diets, especially children's. ○ *The patient can only drink warm milk.* (NOTE: No plural: *some milk, a bottle of milk or a glass of milk.*) 2. the breast milk produced by a woman ○ *The milk will start to flow a few days after childbirth.* (NOTE: For other terms referring to milk, see words beginning with **galact-, galacto-, lact-, lacto-.**)

milk dentition /mɪlk den'tɪʃ(ə)n/ *noun* same as **deciduous dentition**

milk leg /'mɪlk leg/ *noun* acute oedema of the leg, a condition which affects women after childbirth, where a leg becomes pale and inflamed as a result of lymphatic obstruction. Also called **white leg, phlegmasia alba dolens**

milk rash /'mɪlk ræʃ/ *noun* a temporary blotchiness of the skin seen in young babies

milk sugar /'mɪlk 'ʃʊgə/ *noun* same as **lactose**

milk tooth /'mɪlk tu:θ/ *noun* same as **primary tooth**

milky /'mɪlkɪ/ *adjective* referring to liquid which is white like milk

Miller-Abbott tube /,mɪlər 'æbət tju:b/ *noun* a tube with a balloon at the end, used to clear the small intestine. The balloon is inflated after the tip of the tube reaches an obstruction.

milli- /'mɪli/ *prefix* one thousandth (10^{-3}). Symbol **m**

milligram /'mɪlɪgræm/ *noun* a unit of measurement of weight equal to one thousandth of a gram. Symbol **mg**

millilitre /'mɪlɪ,li:tə/ *noun* a unit of measurement of liquid equal to one thousandth of a litre. Abbr **ml** (NOTE: The US spelling is **milliliter**)

millimetre /'mɪlɪmɪ:tə/ *noun* a unit of measurement of length equal to one thousandth of a metre. Abbr **mm** (NOTE: The US spelling is **millimeter**)

millimole /'mɪlɪməʊl/ *noun* a unit of measurement of the amount of a substance equal to one thousandth of a mole. Abbr **mmol**

millisievert /'mɪlɪsievət/ *noun* a unit of measurement of radiation □ **millisievert/year** (mSv/year) number of millisieverts per year

...radiation limits for workers should be cut from 50 to 5 millisieverts, and those for members of the public from 5 to 0.25' [Guardian]

Milroy's disease /'mɪlrɔɪz dɪ,zi:z/ *noun* a hereditary condition where the lymph vessels are blocked and the legs swell [Described 1892. After William Forsyth Milroy (1855–1942), Professor of Clinical Medicine in Nebraska, USA.]

Milwaukee brace /'mɪl,wo:kɪ 'breɪs/ *noun* a support for people with unusually curved spines, consisting of a leather or metal pelvic girdle with two bars at the back and one at the front, which connect into a neck ring

mimesis /'mɪ:mɪ:sɪs/ *noun* the appearance of the symptoms of a disease in someone who does not have the disease

Minamata disease /,mɪnə'ma:tə dɪ,zi:z/ *noun* a form of mercury poisoning from eating polluted fish, found first in Japan

mind /maɪnd/ *noun* the part of the brain which controls memory, consciousness or reasoning □ **he's got something on his mind** he's worrying about something □ **let's try to take her mind off her exams** try to stop her worrying about them

miner /'maɪnə/ *noun* a person who works in a coal mine

mineral /'mɪn(ə)rəl/ *noun* an inorganic substance

COMMENT: The most important minerals required by the body are: calcium (found in cheese, milk and green vegetables) which

helps the growth of bones and encourages blood clotting; iron (found in bread and liver) which helps produce red blood cells; phosphorus (found in bread and fish) which helps in the growth of bones and the metabolism of fats; iodine (found in fish) which is essential to the functioning of the thyroid gland.

mineral water /'mɪn(ə)rəl, wɔ:tə/ *noun* a drinking water containing dissolved mineral salts from the ground the water is piped from. It is bottled and sold.

minim /'mɪnɪm/ *noun* a liquid measure used in pharmacy (one sixtieth of a drachm)

minimal /'mɪnɪm(ə)l/ *adjective* very small

minimally invasive surgery /,mɪnɪm(ə)lɪn'veɪsɪv 'sɜ:dʒəri/ *noun* surgery which involves the least possible disturbance to the body. It often uses lasers and other high-tech devices.

mini mental state examination /,mɪni 'ment(ə)l,steɪt ɪgzəmɪn,neɪʃ(ə)n/ *noun* a test performed mainly by psychiatrists to determine someone's mental ability, used in the diagnosis of dementia

minimum /'mɪnɪməm/ *adjective* smallest possible ■ *noun* the smallest possible amount (NOTE: The plural is **minimums** or **minima**.)

minimum lethal dose /,mɪnɪməm ,li:θ(ə)l'dəʊs/ *noun* the smallest amount of a substance required to kill someone or something. Abbr **MLD**

ministroke /'mɪnistrəʊk/ *noun* same as **transient ischaemic attack**

minitracheostomy /,mɪnɪtræk'ostəmɪ/ *noun* a temporary tracheostomy

minor /'maɪnə/ *adjective* 1. not very serious or life-threatening 2. less important or serious than others of the same type ► opposite **major**

...practice nurses play a major role in the care of patients with chronic disease and they undertake many preventive procedures. They also deal with a substantial amount of minor trauma' [Nursing Times]

minor illness /,maɪnər 'ɪlhəs/ *noun* an illness which is not serious

minor injuries unit /,maɪnər 'ɪndʒərɪz ,ju:nɪt/ *noun* a hospital department which treats most accidents and emergencies. Abbr **MIU**

minor surgery /,maɪnər 'sɜ:dʒəri/ *noun* surgery which can be undertaken even when there are no hospital facilities. Compare **major surgery**

mio- /'maɪəʊ/ *prefix* less

miosis /maɪ'əʊsɪs/ *noun* 1. the contraction of the pupil of the eye, as in bright light 2. *US* same as **meiosis**

miotic /maɪ'ɒtɪk/ *noun* a drug which makes the pupil of the eye become smaller ■ *adjective* causing the pupil of the eye to become smaller

mis- /'mɪs/ *prefix* wrong

miscarriage /'mɪskærɪdʒ/ *noun* a situation in which an unborn baby leaves the uterus before the end of the pregnancy, especially dur-

ing the first seven months of pregnancy ○ *She had two miscarriages before having her first child.* Also called **spontaneous abortion**

miscarry /'mɪs'kærɪ/ *verb* to have a miscarriage ○ *The accident made her miscarry.* ○ *She miscarried after catching the infection.*

misconduct /'mɪs'kɒndʌkt/ *noun* action by a professional person such as a doctor which is considered wrong

misdiagnose /,mɪs'daɪəg,nəʊz/ *verb* to make an incorrect diagnosis of a condition

misdiagnosis /,mɪsdaɪəg'nəʊsɪs/ *noun* an incorrect diagnosis

mismatch /'mɪsmætʃ/ *verb* to match tissues wrongly

'...finding donors of correct histocompatible type is difficult but necessary because results using mismatched bone marrow are disappointing' [Hospital Update]

miso- /'mɪso/ *prefix* indicating hatred of something

missed case /,mɪst 'keɪs/ *noun* someone with an infection or disease which is not identified by a doctor

mist /'mɪst/, **mistura** /mɪs'tjuərə/ ♦ **re. mist.**

misuse *noun* /mɪs'ju:s/ wrong use ○ *He was arrested for misuse of drugs.* ■ *verb* /mɪs'ju:z/ to use something such as a drug wrongly

Misuse of Drugs Act 1971 /mɪs,ju:s əv 'drægz ækt/ *noun* a law relating to all aspects of the supply and possession of dangerous drugs such as morphine, anabolic steroids, LSD and cannabis. In 2002 many new benzodiazepines were added.

mite /maɪt/ *noun* a very small parasite, which causes dermatitis

mitochondrial /,maɪtə'kɒndriəl/ *adjective* referring to mitochondria

mitochondrion /,maɪtə'kɒndriən/ *noun* a tiny rod-shaped part of a cell's cytoplasm responsible for cell respiration (NOTE: The plural is **mitochondria**.)

mitomycin C /,maɪtəʊ'maɪsɪn 'si:/ *noun* an antibiotic which helps to prevent cancer cells from growing, used especially in the chemotherapy treatment of bladder and rectal cancers

mitosis /maɪt'əʊsɪs/ *noun* the process of cell division, where the mother cell divides into two identical daughter cells. Compare **meiosis**

mitral /'maɪtrəl/ *adjective* referring to the mitral valve

mitral incompetence /,maɪtrəl ɪn 'kɒmpit(ə)ns/ *noun* Abbr MI. Now called **mitral regurgitation**

mitral regurgitation /,maɪtrəl rɪ,grɪ:dʒɪ 'teɪʃ(ə)n/ *noun* a situation in which the mitral valve does not close completely so that blood goes back into the atrium

mitral stenosis /,maɪtrəl ste'nəʊsɪs/ *noun* a condition in which the opening in the mitral valve becomes smaller because the cusps have

fused (NOTE: This condition is almost always the result of rheumatic endocarditis.)

mitral valve /'maɪtrəl vælv/ *noun* a valve in the heart which allows blood to flow from the left atrium to the left ventricle but not in the opposite direction. Also called **bicuspid valve**

mitral valvotomy /,maɪtrəl væ'l'vetəmɪ/ *noun* a surgical operation to separate the cusps of the mitral valve in mitral stenosis

mittelschmerz /'mɪtl̩(ə)l̩f'meəts/ *noun* a pain felt by women in the lower abdomen at ovulation

MIU *abbr* minor injuries unit

mix /mɪks/ *verb* to put things together ○ *The pharmacist mixed the chemicals in a bottle.*

mixture /'mɪkstʃə/ *noun* chemical substances mixed together ○ *The doctor gave me an unpleasant mixture to drink.* ○ *Take one spoonful of the mixture every three hours.*

ml *abbr* millilitre

MLD *abbr* minimum lethal dose

MLSO *abbr* medical laboratory scientific officer

mm *abbr* millimetre

mmol *abbr* millimole

MMR /,em em 'a:/, **MMR vaccine** /,em em 'a:/, 'vækseɪn/ *noun* a single vaccine given to small children to protect them against measles, mumps and rubella

Mn *symbol* manganese

MND *abbr* motor neurone disease

MO *abbr* medical officer

mobile /'məʊbəl/ *adjective* able to move about ○ *It is important for elderly patients to remain mobile.*

mobilisation /,məʊbɪlɪət'zeɪʃ(ə)n/, **mobilization** *noun* the act of making something mobile

mobility /məʊ'biliti/ *noun* (of patients) the ability to move about

mobility allowance /məʊ'biliti ə,laʊəns/ *noun* a government benefit to help disabled people pay for transport

modality /məʊ'dælɪti/ *noun* a method used in the treatment of a disorder, e.g. surgery or chemotherapy

moderate /'mɒd(ə)rət/ *adjective* not high or low

moderately /'mɒd(ə)rətlɪ/ *adverb* not at one or other extreme ○ *The patient had a moderately comfortable night.*

modern matron /,mɒd(ə)rən 'meɪtrən/ *noun* a nursing post which supports the ward sister in ensuring that basic care of patients, including cleanliness of the ward and infection control, is carried out to a high standard

modiolus /məʊ'diələs/ *noun* the central stalk in the cochlea

MODS *abbr* multiple organ dysfunction syndrome

MOF abbr 1. male or female 2. multi-organ failure

Mogadon /'mɒgədən/ a trade name for nitrazepam

MOH abbr Medical Officer of Health

moist /'mɔɪst/ adjective slightly wet or damp
○ *The compress should be kept moist.*

moisten /'mɔɪs(ə)n/ verb to make something damp

moist gangrene /,mɔɪst 'gængri:n/ noun a condition in which dead tissue decays and swells with fluid because of infection and the tissues have an unpleasant smell

moisture /'mɔɪstʃə/ noun water or other liquid

moisture content /'mɔɪstʃə ,kɒntent/ noun the amount of water or other liquid which a substance contains

mol /məʊl/ symbol mole noun 2

molar /'mɔːlər/ adjective 1. referring to the large back teeth 2. referring to the mole, the SI unit of amount of a substance ■ noun one of the large back teeth, used for grinding food. In milk teeth there are eight molars and in permanent teeth there are twelve. See illustration at **TEETH** in Supplement

molarity /məʊ'lærɪtɪ/ noun the strength of a solution shown as the number of moles of a substance per litre of solution

molasses /mə'læsɪz/ noun a dark sweet substance made of sugar before it has been refined
mole /məʊl/ noun 1. a dark raised spot on the skin ○ *She has a large mole on her chin.* ♀ 2. an SI unit of measurement of the amount of a substance. Symbol **mol**

molecular /mə'lekjʊlə/ adjective referring to a molecule

molecular biology /mə'lekjʊlə bai'plædʒi/ noun the study of the molecules of living matter

molecular weight /mə'lekjʊlə 'weɪt/ noun the weight of one molecule of a substance

molecule /'mɒlɪkjʊl:/ noun the smallest independent mass of a substance

molluscum /mə'laskəm/ noun a soft round skin tumour

molluscum contagiosum /mə'laskəm kən'teɪdʒi'məʊsəm/ noun a contagious viral skin infection which gives a small soft sore

molluscum fibrosum /mə'laskəm 'fai'b्रəʊsəm/ noun same as **neurofibromatosis**

molluscum sebaceum /mə'laskəm si'bɛsəm/ noun a benign skin tumour which disappears after a short time

molibdenum /mɒ'lɪbdənəm/ noun a metallic trace element (NOTE: The chemical symbol is **Mo**)

monaural /mən'ɔ:rəl/ adjective referring to the use of one ear only

Mönckeberg's arteriosclerosis /,mʌnkn̩kəbɛgz ,a:tɪ:rɪəsklə'rəʊsɪs/ noun a

condition of elderly people, where the media of the arteries in the legs harden, causing limping [Described 1903. After Johann Georg Mönckeberg (1877–1925), German physician and pathologist.]

mongolism /'mɒŋgəlɪz(ə)m/ noun a former name for Down's syndrome (NOTE: This term is regarded as offensive.)

Monilia /mən'ɪliə/ noun same as **Candida**

moniliasis /mənɪ'laiəsɪs/ noun same as **candidiasis**

monitor /'mɒnɪtə/ noun a screen on a computer ■ verb 1. to check something 2. to examine how someone is progressing

monitoring /'mɒnɪt(ə)rɪŋ/ noun the regular examination and recording of a person's temperature, weight, blood pressure and other essential indicators

mono- /mɒnəʊ/ prefix single or one

monoamine oxidase /,mɒnəʊm,æmi:n 'ɒkɪdzeɪz/ noun an enzyme which breaks down the catecholamines to their inactive forms. Abbr **MAO**

monoamine oxidase inhibitor /,mɒnəʊm,æmi:n 'ɒksɪdeɪz ɪn'hɪbitə/ noun a drug which inhibits monoamine oxidase and is used to treat depression, e.g. phenelzine. Its use is limited, because of the potential for drug and dietary interactions and the necessity for slow withdrawal. It can also cause high blood pressure. Abbr **MAOI**. Also called **MAO inhibitor**

monoblast /mɒnəʊblæst/ noun a cell which produces a monocyte

monochromatism /,mɒnəʊ'krəʊmətɪz(ə)m/ noun colour blindness in which all colours appear to be black, grey or white. Compare **dichromatism, trichromatism**

monoclonal /,mɒnəʊ'kləʊn(ə)l/ adjective referring to cells or products of cells which are formed or derived from a single clone

monoclonal antibody /,mɒnəʊkləʊn(ə)'antɪbɒdɪ/ noun an antibody which can be easily made in the laboratory by a single clone of cells. It may be useful in the treatment of cancer.

monocular /mɒ'nɒkjʊlə/ adjective referring to one eye. Compare **binocular**

monocular vision /mə,nɒkjʊlə 'vɪʒ(ə)n/ noun the ability to see with one eye only, so that the sense of distance is impaired

monocyte /'mɒnəʊsait/ noun a white blood cell with a nucleus shaped like a kidney, which destroys bacterial cells

monocytosis /,mɒnəʊsai'təʊsɪs/ noun a condition in which there is an unusually high number of monocytes in the blood. Symptoms include sore throat, swelling of the lymph nodes and fever. It is probably caused by the Epstein-Barr virus. Also called **glandular fever**

monodactylism /mənəʊ'dæktɪlɪz(ə)m/ *noun* a congenital condition in which only one finger or toe is present on the hand or foot

monomania /mənəʊ'meiniə/ *noun* a state of mental disorder in which a person concentrates attention on one idea

mononeuritis /mənəʊ'nju:raɪtɪs/ *noun* a neuritis which affects one nerve

mononuclear /mənəʊ'nju:kliə/ *adjective* referring to a cell such as a monocyte which has one nucleus

mononucleosis /mənəʊ,nju:kli'əʊsɪs/ *noun* same as **monocytosis**

monoplegia /mənəʊ'pli:dʒə/ *noun* the paralysis of one part of the body only, i.e. one muscle or one limb

monorchism /mənɔ:ksɪz(ə)m/ *noun* a condition in which only one testis is visible

monosaccharide /mənəʊ'sækraɪd/ *noun* a simple sugar which cannot be broken down any further, such as glucose or fructose

monosodium glutamate /mənəʊs'ædju:təmɪt/ *noun* a sodium salt of glutamic acid, often used to make food taste better. ♦ **Chinese restaurant syndrome**

monosomy /mənəʊsəʊmɪ/ *noun* a condition in which a person has a chromosome missing from one or more pairs

monosynaptic /mənəʊsɪ'næptɪk/ *adjective* referring to a nervous pathway with only one synapse

monovalent /mənəʊ'veɪlənt/ *adjective* having a valency of one

monoxide /mə'nɒksaɪd/ ♦ **carbon**

monozygotic twins /mənəʊzɪgətɪk 'twɪnz/ *plural noun* same as **identical twins**

mons /mɒnz/ *noun* a fleshy body part which sticks out, especially the one formed by the pad of flesh where the pubic bones join (NOTE: The plural is **montes**.)

mons pubis /mɒnz 'pjʊ:bɪs/ *noun* a cushion of fat covering the pubis

monster /'mɒnstə/ *noun* a former term for a fetus or infant with severe developmental malformations, usually not able to live

mons veneris /mɒnz və'nɪərɪs/ *noun* same as **mons pubis**

Montezuma's revenge /mɒntɪzu:məz ɪ 'vendʒ/ *noun* a diarrhoea which affects people travelling in foreign countries, often due to eating unwashed fruit or drinking water which has not been boiled (*informal*)

Montgomery's glands /mɒnt'gʌmərɪz glændz/ *plural noun* sebaceous glands around the nipple which become more marked in pregnancy [After William Fetherstone Montgomery (1797–1859), Dublin gynaecologist]

mood /mu:d/ *noun* a person's mental state at a particular time □ *a mood of excitement* □ **in a bad mood** feeling angry or irritable □ **in a good mood** feeling happy

moon face /'mu:n feɪs/ *noun* a condition in which someone has a round red face, occurring in Cushing's syndrome and when there are too many steroid hormones in the body

Mooren's ulcer /'məʊrənз , Alsa/ *noun* a persistent ulcer of the cornea, found in elderly people [After Albert Mooren (1828–99), ophthalmologist in Düsseldorf, Germany]

morbid /'mɔ:bɪd/ *adjective* 1. showing symptoms of being diseased □ *The X-ray showed a morbid condition of the kidneys.* 2. referring to disease 3. referring to an unhealthy mental faculty

morbid anatomy /'mɔ:bɪd ə'nætəmɪ/ *noun* same as **pathology**

morbidity /mɔ:bɪ'dɪtɪ/ *noun* the condition of being diseased or sick

...apart from death, coronary heart disease causes considerable morbidity in the form of heart attack, angina and a number of related diseases' [Health Education Journal]

morbidity rate /mɔ:bɪ'dɪtɪ reɪt/ *noun* the number of cases of a disease per hundred thousand of population

morbilli /mɔ:bɪ'lɪ/ *noun* same as **measles**

morbilliform /mɔ:bɪ'lɪfɔ:m/ *adjective* referring to a rash which is similar to measles

morbus /'mɔ:bəs/ *noun* disease

moribund /'mɔ:rɪbʌnd/ *adjective* dying ■ *noun* a dying person

morning /'mɔ:nɪŋ/ *noun* the first part of the day before 12 o'clock noon

morning-after feeling /,mɔ:nɪŋ 'a:fɪlɪŋ/ *noun* ♦ **hangover** (*informal*)

morning-after pill /,mɔ:nɪŋ 'a:fɪl pɪl/ *noun* a contraceptive pill taken after intercourse. Also called **next-day pill**

morning sickness /'mɔ:nɪŋ ,sɪknəs/ *noun* nausea and vomiting experienced by women in the early stages of pregnancy when they get up in the morning

Moro reflex /'mɔ:rəʊ ,rɪ:fleks/ *noun* a reflex of a newborn baby when it hears a loud noise (NOTE: The baby is laid on a table and observed to see if it raises its arms when the table is struck.) [After Ernst Moro (1874–1951), paediatrician in Heidelberg, Germany]

morphea /mɔ:fɪə/ *noun* a form of scleroderma, a disease where the skin is replaced by thick connective tissue

morphia /'mɔ:fɪə/ same as **morphine**

morphine /'mɔ:fɪn/ *noun* an analgesic derived from opium that is used to treat severe pain and may become addictive with prolonged use

morpho- /mɔ:fəʊ/ *prefix* relating to form, shape or structure

morpheoa /mɔ:fɪə/ *noun* same as **morphea**

morphology /mɔ:fɒlədʒɪ/ *noun* the study of the structure and shape of living organisms

-morphous /mɔ:fəs/ *suffix* relating to form or structure of a particular type

mortality rate /'mɔ:tæləti reɪt/ *noun* the number of deaths per year, shown per hundred thousand of population

mortification /,mɔ:tɪfɪ'keɪʃ(ə)n/ *noun* ♦ **necrosis**

mortis /'mɔ:tɪs/ ♦ **rigor**

mortuary /'mɔ:tjʊəri/ *noun* a room in a hospital where dead bodies are kept until removed by an undertaker for burial

morula /'mɔ:rulə/ *noun* an early stage in the development of an embryo, where the cleavage of the ovum creates a mass of cells

mosquito /mɔ:ski:təʊ/ *noun* an insect which sucks human blood, some species of which can pass viruses or parasites into the bloodstream

COMMENT: In northern countries a mosquito bite merely produces an itchy spot. In tropical countries dengue, filariasis, malaria and yellow fever are transmitted by mosquitoes, and are major causes of morbidity and mortality. Mosquitoes breed in water and they spread rapidly in lakes or canals created by dams and other irrigation schemes as well as in containers of water stored for household use.

mother /'mʌðə/ *noun* a biological or adoptive female parent

mother-fixation /'mʌðə fɪk,sɛf(ə)n/ *noun* a condition in which a person's development has been stopped at a stage where he or she remains like a child, dependent on his or her mother

motile /'mɔ:təlɪ/ *adjective* referring to a cell or microorganism which can move spontaneously. *O Sperm cells are extremely motile.*

motility /'mɔ:tɪlɪti/ *noun* 1. (of cells or microbes) the fact of being able to move about 2. (of the gut) the action of peristalsis

motion /'məʊʃ(ə)n/ *noun* 1. movement 2. same as **bowel movement**

motionless /'məʊʃ(ə)n(ə)ləs/ *adjective* not moving. *O Catatonic patients can sit motionless for hours.*

motion sickness /,məʊʃ(ə)n 'sɪknəs/ *noun* illness and nausea felt when travelling. It is caused by the movement of liquid inside the labyrinth of the middle ear and is particularly noticeable in vehicles which are closed, such as planes, coaches or hovercraft. (*informal*)

COMMENT: The movement of liquid inside the labyrinth of the middle ear causes motion sickness, which is particularly noticeable in vehicles which are closed, such as planes, coaches, hovercraft.

motor /'mɔ:tər/ *adjective* referring to movement, which produces movement

motor area /'mɔ:tər ,eəriə/, **motor cortex** /,mɔ:tə 'kɔ:tɛks/ *noun* the part of the cortex in the brain which controls voluntary muscle movement by sending impulses to the motor nerves

motor disorder /'mɔ:tər dɪs,ɔ:də/ *noun* impairment of the nerves or neurons that cause muscles to contract to produce movement

motor end plate /,mɔ:tər 'end plēt/ *noun* the end of a motor nerve where it joins muscle fibre

motor nerve /'mɔ:tə nɜ:v/ *noun* a nerve which carries impulses from the brain and spinal cord to muscles and causes movements. Also called **efferent nerve**

motor neurone /,mɔ:tə 'njʊərən/ *noun* a neurone which is part of a nerve pathway transmitting impulses from the brain to a muscle or gland

motor neurone disease /,mɔ:tə 'njʊərən di,zɪ:z/ *noun* a disease of the nerve cells which control the movement of the muscles. Abbr **MND**

COMMENT: Motor neurone disease has three forms: progressive muscular atrophy (PMA), which affects movements of the hands, lateral sclerosis, and bulbar palsy, which affects the mouth and throat.

motor pathway /,mɔ:tə 'pa:θwei/ *noun* a series of motor neurones leading from the motor cortex to a muscle

mottled /'mɒt(ə)ld/ *adjective* with patches of different colours

mountain fever /'maʊntɪn ,fi:və/ *noun* same as **brucellosis**

mountain sickness /'maʊntɪn ,sɪknəs/ *noun* same as **altitude sickness**

mouth /maʊθ/ *noun* an opening at the head of the alimentary canal, through which food and drink are taken in, and through which a person speaks and can breathe. *O She was sleeping with her mouth open.* (**NOTE:** For other terms referring to the mouth, see **oral** and words beginning with **stomat-**, **stomato-**.)

mouthful /'maʊθfʊl/ *noun* the amount which you can hold in your mouth

mouth-to-mouth /,maʊθ tə 'maʊθ/, **mouth-to-mouth resuscitation** /,maʊθ tə ,maʊθ rɪ'sasɪ'teɪʃ(ə)n/, **mouth-to-mouth ventilation** /,maʊθ tə ,maʊθ ,ventɪ'leɪʃ(ə)n/ *noun* same as **cardiopulmonary resuscitation** (*informal*)

mouth ulcer /'maʊθ ,ʌlsə/ *noun* a small white ulcer that appears in groups in the mouth and on the tongue

mouthwash /'maʊθwɒʃ/ *noun* an antiseptic solution used to treat infection in the mouth

move /mu:v/ *verb* to change from one place to another, or change something from one place to another. *O Try to move your arm.* *O He found he was unable to move.*

movement /'mu:vment/ *noun* 1. the act of changing position or the fact of not being still 2. same as **bowel movement**

moxybustion /,mɒksɪ'bʌstʃ(ə)n/ *noun* a treatment used in the Far East, where dried herbs are placed on the skin and set on fire

MP joint /'em 'pi: ,dʒoint/ *noun* same as metacarpophalangeal joint

MPS *abbr* member of the pharmaceutical society

MRC *abbr* Medical Research Council

MRCGP *abbr* Member of the Royal College of General Practitioners

MRCP *abbr* Member of the Royal College of Physicians

MRCS *abbr* Member of the Royal College of Surgeons

MRI *abbr* magnetic resonance imaging

'...during an MRI scan, the patient lies within a strong magnetic field as selected sections of his body are stimulated with radio frequency waves. Resulting energy changes are measured and used by the MRI computer to generate images.' [Nursing 87]

mRNA *abbr* messenger RNA

MRSA *abbr* methicillin-resistant Staphylococcus aureus

MS *abbr* 1. mitral stenosis 2. multiple sclerosis

MSH *abbr* melanocyte-stimulating hormone

MSU *abbr* midstream specimen of urine

mSv *abbr* millisievert

mucin /'mju:sɪn/ *noun* a compound of sugars and protein which is the main substance in mucus

muco- /'mju:kəʊ/ *prefix* referring to mucus

mucocele /'mju:kəʊsɪ:l/ *noun* a cavity containing an accumulation of mucus

mucociliary transport /'mju:kəʊ,siliəri 'trænsپɔ:t/ *noun* the process in which the cilia, the microscopic structures within the nose, move mucus towards the oesophagus, cleansing the nose of dust and bacteria

mucocoele /'mjur:kəʊsɪ:l/ *noun* 1. a condition in which a cavity or organ becomes swollen because there is too much mucus in it 2. the swelling produced by this condition

mucocutaneous /,mju:kəʊkju:'temiəs/ *adjective* referring to both mucous membrane and the skin

mucocutaneous leishmaniasis /,mju:kəʊkjū,teimias ,li:fma'natəsɪs/ *noun* a disorder affecting the skin and mucous membrane

mucoid /'mju:kɔɪd/ *adjective* similar to mucus

mucolytic /,mju:kəʊ'lɪtɪk/ *noun* a substance which dissolves mucus

mucomembranous colitis /,mju:kəʊ,membrənəs kə'laitɪs/ *noun* same as **mucous colitis**

mucoprotein /,mju:kəʊ'prəuti:n/ *noun* a form of protein found in blood plasma

mucopurulent /,mjur:kəʊ'pjʊərulənt/ *adjective* consisting of a mixture of mucus and pus

mucopus /,mju:kəʊ'pɒs/ *noun* a mixture of mucus and pus

mucormycosis /,mju:kə:maɪ'kəʊsɪs/ *noun* a disease of the ear and throat caused by the fungus *Mucor*

mucosa /'mju:kəʊzə/ *noun* same as **mucous membrane** (NOTE: The plural is **mucosae**)

mucosal /'mju:kəʊz(ə)l/ *adjective* referring to a mucous membrane

mucous /'mju:kəs/ *adjective* referring to mucus, covered in mucus

mucous cell /'mju:kəs sel/ *noun* a cell which contains mucinogen which secretes mucus

mucous colic /,mju:kəs 'kolɪk/ *noun* an inflammation of the colon, with painful spasms in the muscles of the walls of the colon

mucous colitis /,mju:kəs kə'laitɪs/ *noun* an inflammation of the mucous membrane in the intestine, in which the person experiences pain caused by spasms in the muscles of the walls of the colon, accompanied by constipation or diarrhoea or alternating attacks of both. Also called **irritable bowel syndrome**

mucous membrane /,mju:kəs 'membrən/ *noun* a wet membrane which lines internal passages in the body, e.g. the nose, mouth, stomach and throat, and secretes mucus. Also called **mucosa**

mucous plug /'mju:kəs plæg/ *noun* a plug of mucus which blocks the cervical canal during pregnancy

mucoviscidosis /,mju:kəʊvɪsɪ'dəʊsɪs/ *noun* same as **cystic fibrosis**

mucus /'mju:kəs/ *noun* a slippery liquid secreted by mucous membranes inside the body, which protects those membranes (NOTE: For other terms referring to mucus, see words beginning with **blenno-**.)

muddled /'mʌd(ə)ld/ *adjective* referring to someone whose thought processes are confused

Müllerian duct /mʌlɪəriən 'dʌkt/ *noun* same as **paramesonephric duct** [Described 1825. After Johannes Peter Müller (1801–58), Professor of Anatomy at Bonn, later Professor of Anatomy and Physiology at Berlin, Germany.]

multi- /mʌlti/ *prefix* many

multicentric /,mʌlti'sentrɪk/ *adjective* in several centres

multicentric trial /,mʌltisentrɪk 'traɪəl/, **multicentric testing** /,mʌltisentrɪk 'testɪŋ/ *noun* trials carried out in several centres at the same time

multidisciplinary /,mʌlti'dɪsiplɪnəri/ *adjective* using or involving several specialised subjects or skills ◉ a multidisciplinary team

multifactorial /,mʌltifæk'tɔ:rɪəl/ *adjective* 1. involving several different factors or elements 2. referring to inheritance which depends on more than one gene. Height and weight are examples of characteristics determined by multifactorial inheritance.

multifocal lens /,mʌlti,fəʊk(ə)l 'lenz/ *noun* a lens in spectacles whose focus changes from top to bottom so that the person wearing the

spectacles can see objects clearly at different distances

multiforme /'mʌltɪfɔ:m/ ♦ **erythema multiforme**

multigravida /'mʌltɪ'grævɪdə/ *noun* a pregnant woman who has been pregnant two or more times before

multi-infarct dementia /'mʌltɪ 'ɪnfə:kɪt dɪ'menʃə/ *noun* dementia caused by a number of small strokes, when the dementia is not progressive as in Alzheimer's disease but increases in steps as new strokes occur

multilocular /'mʌltɪ'lɒkjʊlə/ *adjective* referring to a body part or growth which has a lot of separate compartments or locules

multinucleated /'mʌltɪ'nju:kliɛtɪd/ *adjective* referring to a cell with several nuclei, such as a megakaryocyte

multi-organ failure /'mʌltɪ 'ɔ:gən ,feɪljur/ *noun* an extremely serious condition in which several of the body's organs stop functioning at the same time. The person may survive, depending on how many organs fail and the length of time that the failure lasts. Abbr **MOF**

multipara /'mʌltɪ'tɪpərə/ *noun* a woman who has given birth to two or more live children

multiple /'mʌltɪp(ə)l/ *adjective* occurring several times or in several places

multiple birth /'mʌltɪp(ə)l 'bɪ:tθ/ *noun* a birth where more than one child is born at the same time

multiple fracture /'mʌltɪp(ə)l 'frækʃə/ *noun* a condition in which a bone is broken in several places

multiple myeloma /'mʌltɪp(ə)l 'maɪə'ləʊmə/ *noun* a malignant tumour in bone marrow, most often affecting flat bones

multiple organ dysfunction syndrome /'mʌltɪp(ə)l ,ɔ:gən dis'fʌŋkʃ(ə)n ,sɪnd्रəʊm/ *noun* a state of continuous disturbances and abnormalities in organ systems, rather than true failure, e.g. following trauma and sepsis. It is often fatal. Abbr **MODS**

multiple pregnancy /'mʌltɪp(ə)l 'pregnənsi/ *noun* a pregnancy where the mother is going to give birth to more than one child

multiple sclerosis /'mʌltɪp(ə)l sklə'rəʊsɪs/ *noun* a nervous disease which gets progressively worse, where patches of the fibres of the central nervous system lose their myelin, causing numbness in the limbs and progressive weakness and paralysis. Abbr **MS**. Also called **disseminated sclerosis**. ♦ **arteriosclerosis, atherosclerosis**

multipolar neurone /'mʌltɪ,peələ 'nju:rəʊn/ *noun* a neurone with several processes. See illustration at **NEURONE** in Supplement. Compare **bipolar neurone**, **unipolar neurone**

multiresistant /'mʌltɪrɪ'zɪstənt/ *adjective* resistant to several types of antibiotic

multivitamin /'mʌltɪ,vɪtəmɪn/ *noun* a preparation containing several vitamins and sometimes minerals, used as a dietary supplement ■ *adjective* referring to a preparation containing several vitamins, and sometimes minerals ○ **multivitamin pills** ○ **multivitamin supplement**

mumps /mʌmps/ *noun* an infectious disease of children, with fever and swellings in the salivary glands, caused by a paramyxovirus ○ *He caught mumps from the children next door.* Also called **infectious parotitis** (NOTE: Takes a singular or a plural verb.)

COMMENT: Mumps is a relatively mild disease in children. In adult males it can have serious complications and cause inflammation of the testicles (mumps orchitis).

Münchhausen's syndrome /'mʌntʃaʊz(ə)nz ,sɪnd्रəʊm/ *noun* a mental disorder in which someone tries to get hospital treatment by claiming symptoms of an illness which he or she does not have. Many people will undergo very painful procedures which they do not need. [Described by Richard Asher in 1951, and named after Baron von Münchhausen, a 16th century traveller and inveterate liar]

Münchhausen's syndrome by proxy /'mʌntʃaʊz(ə)nz ,sɪnd्रəʊm bai 'prɔksɪ/ *noun* a mental disorder in which someone tries to get hospital treatment for someone else such as their child or an elderly relative. It is regarded as a form of child abuse, as the person may cause a child to be ill in order to receive attention.

mural thrombus /'mju:ərəl 'θrəmbəs/ *noun* a thrombus which forms on the wall of a vein or artery

murder /'mɜ:də/ *noun* the crime of killing someone intentionally ■ *verb* to kill someone intentionally

murmur /'mɜ:mə/ *noun* a sound, usually the sound of the heart, heard through a stethoscope

Murphy's sign /'mɜ:fɪz sarn/ *noun* a sign of an inflamed gall bladder, where the person will experience pain if the abdomen is pressed while he or she inhales [Described 1912. After John Benjamin Murphy (1857–1916), US surgeon.]

muscae volitantes /'mʌskəv ,vɒlɪ'tæntɪz/ *plural noun* pieces of cellular or blood debris present in the vitreous of the eye, common in old age but, if a sudden event, can be a symptom of retinal haemorrhage. Also called **floaters**

muscarine /'mʌskə'reɪn/ *noun* a poison found in fungi

muscarinic /'mʌskə'rɪnɪk/ *adjective* referring to a neurone or receptor stimulated by acetylcholine and muscarine

muscle /'mʌs(ə)l/ *noun* 1. an organ in the body, which contracts to make part of the body

move ○ If you do a lot of exercises you develop strong muscles. ○ The muscles in his legs were still weak after he had spent two months in bed. ○ She had muscle cramp after going into the cold water. See illustration at **EYE** in Supplement 2. same as **muscle tissue**

COMMENT: There are two types of muscle: voluntary (striated) muscles, which are attached to bones and move parts of the body when made to do so by the brain, and involuntary (smooth) muscles which move essential organs such as the intestines and bladder automatically. The heart muscle also works automatically.

muscle coat /'mʌs(ə)l kəʊt/ *noun* one of two layers of muscle forming part of the lining of the intestine

muscle fatigue /'mʌs(ə)l fə,tɪ:g/, **muscular fatigue** /,mʌskjʊlə fə'tɪ:g/ *noun* tiredness in the muscles after strenuous exercise

muscle fibre /'mʌs(ə)l ,faɪbə/ *noun* a component fibre of muscles (NOTE: There are two types of fibre which form striated and smooth muscles.)

muscle relaxant /'mʌs(ə)l rɪ,læksənt/ *noun* a drug which reduces contractions in the muscles, e.g. baclofen

muscle spasm /'mʌs(ə)l ,spæz(ə)m/ *noun* a sudden contraction of a muscle

muscle spindle /'mʌs(ə)l ,spind(ə)l/ *noun* one of the sensory receptors which lie along striated muscle fibres

muscle tissue /'mʌs(ə)l ,tɪʃu:/, **muscular tissue** /,mʌskjʊlə tɪʃu:/ *noun* the specialised type of tissue which forms the muscles and which can contract and expand

muscle wasting /'mʌs(ə)l ,weɪstɪŋ/ *noun* a condition in which the muscles lose weight and become thin

muscular /'mʌskjʊlə/ *adjective* referring to muscle

muscular branch /'mʌskjʊlə bræntʃ/ *noun* a branch of a nerve to a muscle carrying efferent impulses to produce contraction

muscular defence /,mʌskjʊlə dɪ'fens/ *noun* a rigidity of muscles associated with inflammation such as peritonitis

muscular disorder /'mʌskjʊlə dɪs,ɔ:də/ *noun* a disorder which affects the muscles, e.g. cramp or strain

muscular dystrophy /,mʌskjʊlə 'dɪstrəfi/ *noun* a type of muscle disease where some muscles become weak and are replaced with fatty tissue. ♦ **Duchenne muscular dystrophy**

muscular fatigue /,mʌskjʊlə fə'tɪ:g/ *noun* same as **muscle fatigue**

muscularis /,mʌskjʊ'lɛrɪs/ *noun* muscular layer of an internal organ

muscular relaxant /,mʌskjʊlə rɪ'læksənt/ *noun* a drug which relaxes the muscles

muscular rheumatism /,mʌskjʊlə 'ru:mə,tɪz(ə)m/ *noun* a disease giving pains in the

back or neck, usually caused by fibrosis or inflammation of the muscles

muscular system /'mʌskjʊlə ,sistəm/ *noun* the muscles in the body, usually applied only to striated muscles

muscular tissue /,mʌskjʊlə 'tɪʃu:/ *noun* same as **muscle tissue**

musculo- /,mʌskjʊləʊ/ *prefix* relating to or affecting muscle

musculocutaneous /,mʌskjʊləʊkju:ti:nəs/ *adjective* referring to muscle and skin

musculocutaneous nerve /,mʌskjʊləʊkjur,teɪniəs 'nɜ:v/ *noun* a nerve in the brachial plexus which supplies the muscles in the arm

musculoskeletal /,mʌskjʊləʊ'skelɪt(ə)l/ *adjective* referring to muscles and bone

musculotendinous /,mʌskjʊləʊ'tendɪnəs/ *adjective* referring to both muscular and tendinous tissue

mutant /'mjʊ:t(ə)nt/ *adjective* in which mutation has occurred ■ *noun* an organism carrying a mutant gene

mutant gene /,mjʊ:t(ə)nt 'dʒi:n/ *noun* a gene which has undergone mutation

mutate /mjʊ:'teɪt/ *verb* to undergo a genetic change ○ Bacteria can mutate suddenly, and become increasingly able to infect.

mutation /mjʊ:'teɪʃ(ə)n/ *noun* a change in DNA which changes the physiological effect of the DNA on the cell

COMMENT: A mutation in the gene for amyloid precursor protein (APP) in some families causes early-onset Alzheimer's disease, when unusual deposits of beta amyloid are formed and dementia occurs.

mute /mjʊ:t/ *adjective* 1. unwilling or unable to speak 2. felt or expressed without speech ■ *noun* somebody who is unable or unwilling to speak (NOTE: This term is sometimes considered offensive.)

mutism /'mjʊ:tɪz(ə)m/ *noun* the condition of being unable to speak. Also called **dumbness**

my- /maɪ/ prefix same as **myo-** (used before vowels)

myalgia /maɪ'ældʒə/ *noun* a muscle pain

myalgic encephalomyelitis /maɪ,ældʒɪk en,kefələʊmætɪs'laɪtɪs/ *noun* a long-term condition affecting the nervous system, in which someone feels tired and depressed and has pain and weakness in the muscles. Abbr **ME**. Also called **chronic fatigue syndrome, postviral fatigue syndrome**

myasthenia /,maɪəs'θi:nɪə/, **myasthenia gravis** /,maɪəs,θi:nɪə 'græ:vɪs/ *noun* a general weakness and dysfunction of the muscles, caused by poor conduction at the motor end plates

myc- /maɪk, maɪs/ *prefix* same as **myco-** (used before vowels)

mycelium /maɪ'si:lɪəm/ *noun* a mass of threads which forms the main part of a fungus

mycetoma /'maɪsɪ:təʊmə/ *noun* same as **maduromycosis**

myco- /markəʊ/ *prefix* referring to fungus

Mycobacterium /'maɪkəbæk'tɪərɪəm/ *noun* one of a group of bacteria including those which cause leprosy and tuberculosis

mycology /maɪ'kɒlədʒɪ/ *noun* the study of fungi

Mycoplasma /'maɪkəplæzma/ *noun* a type of microorganism, similar to a bacterium, associated with diseases such as pneumonia and urethritis

mycosis /maɪ'kəʊsɪs/ *noun* any disease caused by a fungus, e.g. athlete's foot

mycosis fungoides /maɪ,kəʊsɪs fʌŋ'gɔɪdɪz/ *noun* a form of skin cancer, with irritating nodules

mydriasis /maɪ'draɪəsɪs/ *noun* an enlargement of the pupil of the eye

mydriatic /'mɪdrɪ'ætɪk/ *noun* a drug which makes the pupil of the eye become larger

myectomy /maɪ'ektəmi/ *noun* the surgical removal of part or all of a muscle

myel- /maɪəl/ *prefix* same as **myelo-** (*used before vowels*)

myelin /'maɪəlɪn/ *noun* the substance of the cell membrane of Schwann cells that coils into a protective covering around nerve fibres called a myelin sheath

myelinated /'maɪəlɪneɪtɪd/ *adjective* referring to nerve fibre covered by a myelin sheath

myelination /,maɪəl'neɪʃ(ə)n/ *noun* the process by which a myelin sheath forms around nerve fibres

myelin sheath /'maɪəlɪn ſi:θ/ *noun* a layer of myelin that insulates some nerve cells and speeds the conduction of nerve impulses. See illustration at **NEURONE** in Supplement

myelitis /,maɪə'laitɪs/ *noun* 1. inflammation of the spinal cord 2. an inflammation of bone marrow

myelo- /maɪələʊ/ *prefix* 1. referring to bone marrow 2. referring to the spinal cord

myeloblast /'maɪələblæst/ *noun* a precursor of a granulocyte

myelocite /'maɪələſaɪt/ *noun* same as **meningomyelocite**

myelocyte /'maɪələſaɪt/ *noun* a cell in bone marrow which develops into a granulocyte

myelofibrosis /maɪələfaɪ'b्रəʊſɪs/ *noun* fibrosis of bone marrow, associated with anaemia

myelogram /'maɪələgræm/ *noun* a record of the spinal cord taken by myelography

myelography /,maɪə'lɒgrəfi/ *noun* an X-ray examination of the spinal cord and subarachnoid space after a radio-opaque substance has been injected

myeloid /'maɪəlɔɪd/ *adjective* 1. referring to bone marrow, or produced by bone marrow 2. referring to the spinal cord

myeloid leukaemia /,maɪəlɔɪd lu:'ki:mɪə/ *noun* an acute form of leukaemia in adults

myeloid tissue /'maɪəlɔɪd, tɪʃu:/ *noun* red bone marrow

myeloma /,maɪə'ləʊmə/ *noun* a malignant tumour in bone marrow, at the ends of long bones or in the jaw

myelomalacia /,maɪələʊmə'leɪʃə/ *noun* softening of tissue in the spinal cord

myelomatosis /,maɪələʊmə'təʊſɪs/ *noun* a disease where malignant tumours infiltrate the bone marrow

myelomeningocele /,maɪələʊmə'nɪŋgəu ſi:l/ *noun* same as **meningomyelocole**

myelopathy /,maɪə'lɒpəθɪ/ *noun* any disorder of the spinal cord or bone marrow

myelosuppression /,maɪələʊſə'preʃ(ə)n/ *noun* a condition in which the bone marrow does not produce enough blood cells, often occurring after chemotherapy

myenteron /maɪ'entərən/ *noun* a layer of muscles in the small intestine, which produces peristalsis

myiasis /'maɪəſɪs/ *noun* an infestation by larvae of flies

mylohyoid /,maɪlə'haiſɔɪd/ *noun*, *adjective* referring to the molar teeth in the lower jaw and the hyoid bone

mylohyoid line /,maɪlə'haiſɔɪd, laɪn/ *noun* a line running along the outside of the lower jawbone, dividing the upper part of the bone which forms part of the mouth from the lower part which is part of the neck

myo- /maɪəʊ/ *prefix* referring to muscle

myoblast /'maɪəblæſt/ *noun* an embryonic cell which develops into muscle

myoblastic /,maɪəʊ'blæſtɪk/ *adjective* referring to myoblast

myocardial /,maɪəʊ'ku:dɪəl/ *adjective* referring to the myocardium

myocardial infarction /,maɪəʊ,ku:dɪəl ɪn'fɑ:kʃən/ *noun* the death of part of the heart muscle after coronary thrombosis. Abbr **MI**

myocarditis /,maɪəʊku:dɪtɪs/ *noun* inflammation of the heart muscle

myocardium /,maɪəʊ'ku:dɪəm/ *noun* the middle layer of the wall of the heart, formed of heart muscle. See illustration at **HEART** in Supplement

myocele /'maɪəſi:l/ *noun* a condition in which a muscle pushes through a gap in the surrounding membrane

myoclonic /,maɪəʊ'klɒnɪk/ *adjective* referring to myoclonus

myoclonic epilepsy /,maɪəʊklɒnɪk 'epi lepsi/ *noun* a form of epilepsy where the limbs jerk frequently

myoclonus /maɪ'ɒklənəs/ *noun* a muscle spasm which makes a limb give an involuntary jerk

myocyte /'maɪəʊsaɪt/ *noun* a muscle cell

myodynia /,maɪəʊ'dɪniə/ *noun* a pain in the muscles

myofibril /,maɪəʊ'faɪbrɪl/ *noun* a long thread of striated muscle fibre

myofibrosis /,maɪəʊfaɪ'b्रəʊsɪs/ *noun* a condition in which muscle tissue is replaced by fibrous tissue

myogenic /,maɪəʊ'đženɪk/ *adjective* referring to movement which comes from an involuntary muscle

myoglobin /,maɪəʊ'glēoబିନ/ *noun* a muscle haemoglobin, which takes oxygen from blood and passes it to the muscle

myoglobinuria /,maɪəʊ,glēoబି'njuəriə/ *noun* the presence of myoglobin in the urine

myogram /'maɪəʊgræm/ *noun* a record showing how a muscle is functioning

myograph /'maɪəʊgrɑ:f/ *noun* an instrument which records the degree and strength of a muscle contraction

myography /maɪ'ɒgrəfi/ *noun* the process of recording the degree and strength of a muscle contraction with a myograph

myokymia /,maɪəʊ'kīmɪə/ *noun* twitching of a particular muscle

myology /maɪ'ɒlədʒi/ *noun* the study of muscles and associated structures and diseases

myoma /maɪ'əʊmə/ *noun* a benign tumour in a smooth muscle

myomectomy /,maɪəʊ'mektəmɪ/ *noun* 1. the surgical removal of a benign growth from a muscle, especially removal of a fibroid from the uterus 2. same as **myectomy**

myometritis /,maɪəʊmə'traɪtɪs/ *noun* inflammation of the myometrium. Also called **metritis**

myometrium /,maɪəʊ'mɪtrɪəm/ *noun* the muscular tissue in the uterus

myoneural /,maɪəʊ'njuərəl/ *adjective* relating to or involving both the muscles and the nerves

myoneural junction /,maɪəʊnjuər(ə)l 'dʒəʊnl(ə)n/ *noun* same as **neuromuscular junction**

myopathy /maɪ'ɒpəθi/ *noun* a disease of a muscle, especially one in which the muscle wastes away

myopia /maɪ'əʊpiə/ *noun* a condition in which someone can see clearly objects which are close, but not ones which are further away. Also called **shortsightedness**. Opposite **long-sightedness**

myopic /maɪ'ɒpɪk/ *adjective* able to see close objects clearly, but not objects which are further away. Also called **shortsighted**

myoplasm /'maɪəoplæz(ə)m/ *noun* same as **sarcoplasm**

myoplasty /'maɪəoplæstɪ/ *noun* a form of plastic surgery to repair a muscle

myosarcoma /,maɪəʊsə:'kəʊmə/ *noun* 1. a malignant tumour containing unstriated muscle 2. combined myoma and sarcoma

myosis /maɪ'əʊsɪs/ *noun* another spelling of **miosis**

myositis /,maɪəʊ'saitɪs/ *noun* inflammation and degeneration of a muscle

myotatic /,maɪəʊ'tætɪk/ *adjective* referring to the sense of touch in a muscle

myotatic reflex /,maɪəʊtætɪk 'ri:fleks/ *noun* a reflex action in a muscle which contracts after being stretched

myotic /maɪ'ɒtɪk/ *noun* a drug which causes the pupil of the eye to contract

myotomy /maɪ'ɒtəmi/ *noun* a surgical operation to cut a muscle

myotonia /,maɪəʊ'tənɪə/ *noun* difficulty in relaxing a muscle after exercise

myotonic /,maɪəʊ'tonɪk/ *adjective* referring to tone in a muscle

myotonic dystrophy /,maɪəʊtɒnɪk 'distrəfɪ/ *noun* a hereditary disease with muscle stiffness leading to atrophy of the muscles of the face and neck

myotonus /maɪ'ɒtənəs/ *noun* a muscle tone

myringa /mi'ringə/ *noun* same as **ear drum**

myringitis /,mɪrɪŋ'dʒaɪtɪs/ *noun* inflammation of the eardrum

myringoplasty /mi'ringəoplæsti/ *noun* the surgical repair of a perforated eardrum. Also called **tympanoplasty**

myringotome /mi'ringətəmə/ *noun* a sharp knife used in myringotomy

myringotomy /,mɪrɪŋ'gɔ:təmɪ/ *noun* a surgical operation to make an opening in the eardrum to allow fluid to escape

myx- /mɪks/, **myxo-** /mɪksəʊ/ *prefix* referring to mucus

myxoedema /,mɪksə'di:mə/ *noun* a condition caused when the thyroid gland does not produce enough thyroid hormone. The person, often a middle-aged woman, becomes overweight, moves slowly and develops coarse skin. It can be treated with thyroxine. (NOTE: The US spelling is **myxedema**)

myxoedematous /,mɪksə'demətəs/ *adjective* referring to myxoedema

myxoid cyst /,mɪksɔɪd 'sist/ *noun* a cyst which develops at the base of a fingernail or toenail

myxoma /mɪk'saʊmə/ *noun* a benign tumour of mucous tissue, usually found in subcutaneous tissue of the limbs and neck

myxosarcoma /,mɪksəʊsə:'kəʊmə/ *noun* a malignant tumour of mucous tissue

myxovirus /,mɪksəʊ'veɪrəs/ *noun* any virus which has an affinity for the mucoprotein receptors in red blood cells. One of these viruses causes influenza.

N

n symbol nano-

nabothian cyst /nə'baʊθiən 'sist/ **nabothian follicle** /nə'baʊθiən 'folik(ə)l/, **nabothian gland** /nə'baʊθiən 'glænd/ *noun* a cyst which forms in the cervix of the uterus when the ducts in the cervical glands are blocked

Naegele rule /'neɪgələ ru:l/ *noun* a method used to determine when a pregnant woman is likely to go into labour, in which nine months and seven days are added to the date on which her last period started. If the woman does not have a 28-day menstrual cycle, an adjustment is made: e.g., if she has a 26-day cycle you would subtract 2 days from the Naegele's estimated due date.

naevus /'ni:vəs/ *noun* same as **birthmark** (NOTE: The plural is **naevi**.)

Naga sore /'na:gə sɔ:/ *noun* same as **tropical ulcer**

ragging pain /,nægrɪŋ 'peɪn/ *noun* a dull, continuous throbbing pain

NAI abbr non-accidental injury

nail /neɪl/ *noun* a hard growth, made of keratin, which forms on the top surface at the end of each finger and toe. Also called **unguis** (NOTE: For terms referring to nail, see words beginning with **onych-**, **onycho-**.)

nail avulsion /'neɪl ə,vʌlʃən/ *noun* the act of pulling away an ingrowing toenail

nail bed /'neɪl bed/ *noun* the part of the finger which is just under the nail and on which the nail rests

nail biting /'neɪl ,baɪtɪŋ/ *noun* the obsessive chewing of the fingernails, usually a sign of stress

nail matrix /neɪl 'meɪtrɪks/ *noun* the internal structure of the nail, the part of the finger from which the nail grows

naloxone /nə'lɒksən/ *noun* a drug resembling morphine, used in the diagnosis of narcotics addiction and to reverse the effects of narcotics poisoning

named nurse /,neɪmd 'nɜ:s/ *noun* a nurse, midwife or health visitor who is responsible for communicating with a particular person and ensuring that his or her needs for care and information are met

nandrolone /'nændrələn/ *noun* an anabolic steroid which builds muscle. Its use is banned by the International Amateur Athletics Federation.

nano- /nænəʊ/ *prefix* one thousand millionth (10^{-9}). Symbol **n**

nanometre /'nænəʊmɪtəl/ *noun* a unit of measurement of length equal to one thousand millionth of a metre. Symbol **nm**

nanomole /'nænəʊməl/ *noun* a unit of measurement of the amount of a substance equal to one thousand millionth of a mole. Symbol **nmol**

nanosecond /'nænəʊ,sekənd/ *noun* a unit of measurement of time equal to one thousand millionth of a second. Symbol **ns**

nape /neɪp/ *noun* the back of the neck. Also called **nucha**

napkin /'næpkɪn/ *noun* a soft cloth, used for wiping or absorbing

nappy /'næpi/ *noun* a cloth used to wrap round a baby's bottom and groin, to keep clothing clean and dry (NOTE: The US term is **diaper**.)

nappy rash /'næpi ræʃ/ *noun* sore red skin on a baby's buttocks and groin, caused by long contact with ammonia in a wet nappy (NOTE: The US term is **diaper rash**.)

naproxen /næ'prɒksən/ *noun* a drug which reduces inflammation and pain, used in the treatment of arthritis

narcissism /'nɑ:sɪsɪz(ə)m/ *noun* in psychiatry, a personality disorder in which someone has a very confident opinion about their own appearance and abilities, and a great need to be admired by other people. It sometimes involves sexual interest in their own body.

narco- /nɑ:kəʊ/ *prefix* referring to sleep or stupor

narcoanalysis /nɑ:kəʊə'næləsɪs/ *noun* the use of narcotics to induce a comatose state in someone about to undergo psychoanalysis which may be emotionally disturbing

narcolepsy /'nɑ:kəlepsi/ *noun* a condition in which someone has an uncontrollable tendency to fall asleep at any time

narcoleptic /nə:kə'leptɪk/ *adjective* 1. causing narcolepsy 2. having narcolepsy ■ *noun* 1. a substance which causes narcolepsy 2. someone who has narcolepsy

narcosis /nə:kə'sɪsɪs/ *noun* a state of lowered consciousness induced by a drug

narcotic /nə:kɒtɪk/ *noun* a pain-relieving drug which makes someone sleep or become unconscious ○ *The doctor put her to sleep with a powerful narcotic.* ■ *adjective* causing sleep or unconsciousness ○ *the narcotic side-effects of an antihistamine*

COMMENT: Although narcotics are used medicinally as painkillers, they are highly addictive. The main narcotics are barbiturates, cocaine and opium, and drugs derived from opium, such as morphine, codeine and heroin. Addictive narcotics are widely used for the relief of pain in terminally ill patients.

nares /'neərɪ:z/ *plural noun* the nostrils (NOTE: The singular is **naris**.)

narrow /'nærəʊ/ *adjective* not wide ○ *The blood vessel is a narrow channel which takes blood to the tissues.* ○ *The surgeon inserted a narrow tube into the vein.* ■ *verb* to make something narrow, or become narrow ○ *The bronchial tubes are narrowed causing asthma.*

nasal /'neɪz(ə)l/ *adjective* referring to the nose

nasal apertures /,neɪz(ə)l 'æpətʃəz/ *plural noun* the two openings shaped like funnels leading from the nasal cavity to the pharynx. ♀ **choana**

nasal bone /'neɪz(ə)l bəʊn/ *noun* one of two small bones which form the bridge at the top of the nose

nasal cartilage /'neɪz(ə)l ,ka:təlɪdʒ/ *noun* one of two cartilages in the nose. The upper is attached to the nasal bone and the front of the maxilla. The lower is thinner and curls round each nostril to the septum.

nasal cavity /,neɪz(ə)l 'kævɪtɪ/ *noun* the cavity behind the nose between the cribriform plates above and the hard palate below, divided in two by the nasal septum and leading to the nasopharynx

nasal conchae /,neɪz(ə)l 'kɒŋki:/ *plural noun* the three ridges of bone, called the superior, middle and inferior conchae, which project into the nasal cavity from the side walls. Also called **turbinate bones**

nasal congestion /,neɪz(ə)l kən'dʒestʃ(ə)n/ *noun* the blocking of the nose by inflammation as a response to a cold or other infection

nasal drops /'neɪz(ə)l drɔ:ps/ *plural noun* drops of liquid inserted into the nose

nasal septum /,neɪz(ə)l 'septəm/ *noun* a wall of cartilage between the two nostrils and the two parts of the nasal cavity

nasal spray /'neɪz(ə)l spreɪ/ *noun* a spray of liquid into the nose

nascent /'næs(ə)nt, 'neɪs(ə)nt/ *adjective* 1. in the process of coming into existence and starting to develop 2. referring to a substance, especially hydrogen, in the process of being created. At this stage it is often in a highly active form.

Naseptin /næ'sepɪtn/ a trade name for a mixture containing chlorhexidine and neomycin, used to treat nasal infection by organisms such as staphylococci

nasion /'neɪziən/ *noun* the place at which the bridge of the nose meets the forehead

naso- /neɪzəʊ/ *prefix* referring to the nose

nasogastric /,neɪzəʊ'gæstrɪk/ *adjective* referring to the nose and stomach

nasogastrically /,neɪzəʊ'gæstrɪklɪ/ *adverb* referring to a method of feeding someone via a tube passed through the nose into the stomach

‘...all patients requiring nutrition are fed enterally, whether nasogastrically or directly into the small intestine’ [British Journal of Nursing]

nasogastric tube /,neɪzəʊ,gæstrɪk 'tju:b/ *noun* a tube passed through the nose into the stomach

nasolacrimal /,neɪzəʊ'lækrim(ə)l/ *adjective* referring to the nose and the tear glands

nasolacrimal duct /,neɪzəʊ,lækrim(ə)l 'dʌkt/ *noun* a duct which drains tears from the lacrimal sac into the nose

nasopharyngeal /,neɪzəʊ,færɪn'dʒi:əl/ *adjective* referring to the nasopharynx

nasopharyngitis /,neɪzəʊ,færɪn'dʒaɪtɪs/ *noun* inflammation of the mucous membrane of the nasal part of the pharynx

nasopharynx /,neɪzəʊ'færɪŋks/ *noun* the top part of the pharynx which connects with the nose

nasosinusitis /,neɪzəʊ,sainə'saɪtɪs/ *noun* a condition in which the nose and sinuses swell up

nasty /'nɑ:sti/ *adjective* unpleasant ○ *This medicine has a nasty taste.* ○ *This new drug has some nasty side-effects.* (NOTE: **nastier** – **nastiest**)

nates /'neitɪ:z/ *noun* same as **buttock**

National Boards /,næʃ(ə)nəl 'bɔ:rdz/ *plural noun* the National Boards for Nursing, Midwifery, and Health Visiting, which were formerly responsible for the education of professionals in these fields in England, Wales, Scotland and Northern Ireland

National Council for Vocational Qualifications /,næʃ(ə)nəl ,kaʊns(ə)l fə vəʊ ,keɪʃ(ə)nəl ,kwɒlfɪ'keɪʃ(ə)nz/ *noun* full form of **NCVQ**

National Health Service /,næʃ(ə)nəl 'helθ ,sɜ:vɪs/ *noun* a government service in the UK which provides medical services free of charge at the point of delivery, or at reduced cost, to the whole population. The service is paid for out of tax revenue. Abbr **NHS** □ **on the NHS** paid for by the NHS ○ *He had his operation on*

the NHS. ○ *She went to see a specialist on the NHS. Compare privately*

'...figures reveal that 5% more employees in the professional and technical category were working in the NHS compared with three years before' [Nursing Times]

National Institute for Clinical Excellence /næʃ(ə)n(ə)l̩,ɪn'stitjʊt fə,klinɪk(ə)l̩ 'eksələns/ noun an organisation in the UK which produces recommendations for treatments based on clinical evidence and cost-effectiveness. Abbr NICE

National Insurance /næʃ(ə)nəl̩/ in 'juərəns/ noun a weekly payment from a person's wages, with a supplement from the employer, which pays for state assistance and medical treatment, in the UK

natriuretic /neɪtriyo'retɪk/ noun something which helps sodium to be excreted in the urine

natural /'nætʃ(ə)rəl̩/ adjective 1. usual or expected in particular conditions ○ *It's natural for people to be anxious before an operation.*

2. referring to something which comes from nature and is not made by humans ○ *natural products* 3. relaxed and not consciously changed ○ *His behaviour seemed quite natural.*

natural childbirth /,nætʃ(ə)rəl̩ 'tʃaɪldbɪθ/ noun childbirth where the mother is not given any pain-killing drugs or anaesthetic but is encouraged to give birth after having prepared herself through relaxation and breathing exercises and a new psychological outlook

natural immunity /,nætʃ(ə)rəl̩ 'ɪmjū:nɪti/ noun the immunity from disease which a newborn baby has from birth and which is inherited or acquired in the uterus or from the mother's milk

natural killer cell /,nætʃ(ə)rəl̩ 'kilə sel/ noun a white blood cell which can recognise microorganisms and tumour cells as foreign without any previous exposure to them, and destroy them

natural mother /,nætʃ(ə)rəl̩ 'mʌðə/, **natural parent** /,nætʃ(ə)rəl̩ 'peərənt/ noun same as *birth mother, birth parent*

nature /'neɪtʃənəl̩/ noun 1. the essential quality of something 2. kind or sort 3. the genetic make-up which affects personality, behaviour or risk of disease. ○ **nurture** 4. plants and animals

nature nurture debate /,neɪtʃə'nɜːtʃədɛbət/ noun the arguments put forward about whether human beings behave in the way they do because of their genetic make-up and instincts or because of the way they are educated and the influences they are exposed to when they are young

naturopathy /,neɪtʃə'nrɒpəθi/ noun a method of treatment of diseases and disorders which does not use medical or surgical means, but

natural forces such as light, heat, massage, eating natural foods and using herbal remedies

nausea /'nɔːzɪə/ noun a feeling that you want to vomit ○ *She suffered from nausea in the morning.* ○ *He felt slight nausea after getting onto the boat.*

COMMENT: Nausea can be caused by eating habits, such as eating too much rich food or drinking too much alcohol. It can also be caused by sensations such as unpleasant smells or motion sickness. Other causes include stomach disorders, such as gastritis, ulcers and liver infections. Nausea is commonly experienced by women in the early stages of pregnancy, and is called morning sickness.

nauseated /'nɔːzi:tɪd/ adjective feeling as if you are about to vomit ○ *The casualty may feel nauseated.* (NOTE: The US term is **nauseous**.)

nauseous /'nɔːziəs/ adjective having the feeling in the stomach that precedes the urge to vomit

navel /'neɪvəl̩/ noun the scar with a depression in the middle of the abdomen where the umbilical cord was detached after birth. Also called **umbilicus** (NOTE: For other terms referring to the navel, see words beginning with **omphal-**, **omphalo-**.)

navicular /'nə'vekjurəl̩/ adjective relating to a navicular bone ■ noun same as **navicular bone**

navicular bone /'nə'vekjurəl̩ bəʊn/ noun one of the tarsal bones in the foot. See illustration at **FOOT** in Supplement

NCVQ noun a government body in the UK responsible for setting standards of qualification for specific jobs. Full form **National Council for Vocational Qualifications**

NDU abbr Nursing Development Unit

nearsighted /nɪə'saɪtɪd/ adjective same as **myopic**

nearsightedness /,nɪə'saɪtɪdnəs/ noun same as **myopia**

nebula /'nebju:lə/ noun 1. a slightly cloudy spot on the cornea 2. a spray of medicinal solution, applied to the nose or throat using a nebuliser

nebuliser /'nebju:ləɪzəl̩/, **nebulizer** noun same as **atomiser**

Necator /'ne'keɪtə/ noun a genus of hookworm which infests the small intestine

necatoriasis /ne'keɪtəs'ærɪəsɪs/ noun infestation of the small intestine by the parasite **Necator**

neck /nek/ noun 1. the part of the body which joins the head to the body ○ *He is suffering from pains in the neck.* ○ *The front of the neck is swollen with goitre.* ○ *The jugular veins run down the side of the neck.* 2. a narrow part of a bone or organ □ **neck of the femur, femoral**

neck the narrow part between the head and the diaphysis of the femur □ **neck of a tooth** point where a tooth narrows slightly, between the crown and the root

COMMENT: The neck is formed of the seven cervical vertebrae, and is held vertical by strong muscles. Many organs pass through the neck, including the oesophagus, the larynx and the arteries and veins which connect the brain to the bloodstream. The front of the neck is usually referred to as the throat.

neck collar /nek̩ ,kɒlə/ *noun* a strong high collar to support the head of a person with neck injuries or a condition such as cervical spondylosis

necro- /nekroʊ/ *prefix* referring to death

necrobiosis /,nekroʊbaɪ'əsɪs/ *noun* 1. the death of cells surrounded by living tissue 2. the gradual localised death of a part or tissue

necrology /ne'krɒlədʒi/ *noun* the scientific study of mortality statistics

necrophilia /,nekroʊ'fɪliə/, **necrophilism** /ne'krɒfɪlɪz(ə)m/ *noun* 1. unusual pleasure in corpses 2. sexual attraction to dead bodies

necropsy /'nekrɒpsi/ *noun* same as **post mortem**

necrosed /nekroʊsd/ *adjective* referring to dead tissue or bone

necrosis /ne'krəʊsɪs/ *noun* the death of a part of the body such as a bone, tissue or an organ as a result of disease or injury ◎ *Gangrene is a form of necrosis.*

necrospermia /,nekro'spɜ:mɪə/ *noun* a condition in which dead sperm exist in the semen

necrotic /ne'krɒtɪk/ *adjective* referring to, or affected with, necrosis ◎ *necrotic tissue*

necrotising enterocolitis /,nekrə'taɪzɪŋ ,entərəʊkə'laitɪs/ *noun* a disorder in which patches of dead tissue are found in the small or large intestine as a result of severe bacterial infection. It occurs in babies, especially premature ones.

necrotising fasciitis /,nekrə'taɪzɪŋ ,fæʃi'atɪs/ *noun* a severe bacterial infection that causes cell tissue to decay rapidly (NOTE: It is sometimes referred to in the media as the 'flesh-eating bug'.)

necrotomy /ne'krɒtəmɪ/ *noun* the dissection of a dead body (NOTE: The plural is **necrotomies**.)

needle /ni:d(ə)l/ *noun* 1. a thin metal instrument with a sharp point at one end and a hole at the other for attaching a thread, used for sewing up surgical incisions 2. the hollow pointed end of a hypodermic syringe, or the syringe itself

needle myopathy /,ni:d(ə)l maɪ'pəθi/ *noun* destruction of muscle tissue caused by using a large needle for intramuscular injections

needlestick /'ni:d(ə)lstɪk/ *noun* an accidental pricking of your own skin by a needle, as by a nurse picking up a used syringe

needlestick injury /'ni:d(ə)lstɪk ,ɪndʒəri/ *noun* the real or potential harm resulting from

a prick with a needle previously used to take blood or give an injection. The main concern is the risk of HIV or hepatitis B infection.

needling /'ni:dɪŋ/ *noun* the puncture of a cataract with a needle

needs assessment /'ni:dz ə,sesmənt/ *noun* the investigation of what a particular group of people need in terms of health and social care, so that services can be matched to their needs

needs deprivation /'ni:dz deprɪ'veɪʃ(ə)n/ *noun* a state in which someone does not have the opportunity or capacity to fulfil his or her basic needs

negative /'negətɪv/ *adjective* 1. meaning or showing 'no' □ **the answer is in the negative** the answer is 'no' 2. indicating that something being tested for is not present ◎ *The test results were negative.* Opposite **positive**

negative feedback /,negətɪv 'fi:dbæk/ *noun* a situation in which the result of a process represses the process which caused it

negativism /'negətɪvɪz(ə)m/ *noun* the attitude of a person who opposes advice or instructions

COMMENT: There are two types of negativism: active, where someone does the opposite of what a doctor tells him or her, and passive, where someone does not do what he or she has been asked to do.

negligence /'neglɪdʒəns/ *noun* the act of causing injury or harm to another person or to property as the result of doing something wrongly or failing to provide a proper level of care

Negri body /'neɪgri ,bodi/ *noun* a round or oval inclusion in the cytoplasm of nerve cells of people or animals who have rabies [Described 1903. After Adelchi Negri (1876–1912), Professor of Bacteriology at Pavia, Italy.]

Neil Robertson stretcher /,ni:l 'rɒbətsən ,stretʃə/ *noun* a stretcher to which a person can be strapped and moved about in an upright position

Neisseria /nɛ:sɪəriə/ *noun* a genus of bacteria which includes gonococcus, which causes gonorrhoea, and meningococcus, which causes meningitis

nematode /'nemətəud/ *noun* a type of parasitic roundworm, e.g. a hookworm, pinworm or roundworm

neo- /ni:əʊ/ *prefix* new

neoadjuvant chemotherapy /,ni:əʊ ,ædʒʊvənt ,ki:məʊ'θerəpi/ *noun* chemotherapy given to people with tumours instead of immediate surgery or radiotherapy, in the hope of reducing the need for these later

neocerebellum /,ni:əʊ'serə'beləm/ *noun* the middle part of the cerebellum (NOTE: The plural is **neocerebellums** or **neocerebella**.)

neomycin /,ni:əʊ'maɪsɪn/ *noun* a drug used externally to treat bacterial infections

neonatal /ni:əʊ'neɪt(ə)l/ *adjective* referring to the first few weeks after birth

‘...one of the most common routes of neonatal poisoning is percutaneous absorption following topical administration’ [Southern Medical Journal]

neonatal death rate /,ni:əʊneɪt(ə)l 'deθ ,reɪt/ *noun* the number of babies who die soon after birth, shown per thousand babies born

neonatal maceration /,ni:əʊneɪt(ə)l 'mæsə'reɪʃ(ə)n/ *noun* softening or rotting of fetal tissue after the fetus has died in the uterus and has remained in the amniotic fluid

neonatal screening /,ni:əʊ,neɪt(ə)l 'skrɪ:nɪŋ/ *noun* a set of tests performed on babies soon after birth so that any problems can be treated immediately (NOTE: Tests for certain diseases such as hypothyroidism and phenylketonuria are a legal duty.)

neonate /'ni:əʊneɪt/ *noun* a baby which is less than four weeks old

neonatologist /,ni:ənə'tɒlədʒɪst/ *noun* a specialist who looks after babies during the first few weeks of life, or premature babies and babies with some congenital disorders

neonatology /,ni:ənətə'tɒlədʒɪ/ *noun* the branch of medicine dealing with babies in the first few weeks of life

neonatorum /,ni:əʊneɪt'ɔ:tərəm/ ♦ **asphyxia neonatorum**

neoplasia /,ni:əʊ'pleɪzɪə/ *noun* the formation of tumours

neoplasm /'ni:əʊplæz(ə)m/ *noun* any new and morbid formation of tissue

‘...testicular cancer comprises only 1% of all malignant neoplasms in the male, but it is one of the most frequently occurring types of tumours in late adolescence’ [Journal of American College Health]

neoplastic /,ni:əʊ'plæstɪk/ *adjective* referring to neoplasms, neoplasty or neoplasia

neoplasty *noun* the surgical repair or replacement of damaged tissue

neostigmine /,ni:əʊ'stɪgmi:n/ *noun* a white crystalline compound used in the treatment of muscle fatigue myasthenia and to reverse the effects of muscle relaxant drugs

neph- /nefr/ *prefix* kidney

nephralgia /'nef'rældʒɪə/ *noun* pain in the kidney

nephralgic /ne'frældʒɪk/ *adjective* relating to pain in the kidney

nephrectomy /ne'frektəmɪ/ *noun* a surgical operation to remove the whole kidney (NOTE: The plural is **nephrectomies**.)

nephric /'nefrɪk/, **nephritic** /ne'frɪtɪk/ *adjective* referring to the kidneys

nephritis /ne'fraɪtɪs/ *noun* inflammation of the kidney

COMMENT: Acute nephritis can be caused by a streptococcal infection. Symptoms can include headaches, swollen ankles, and fever.

nephroblastoma /,nefrəoblæ'stəʊmə/ *noun* a malignant tumour in the kidneys in

young children, usually under the age of 10, leading to swelling of the abdomen. It is treated by removal of the affected kidney. Also called **Wilms' tumour** (NOTE: The plural is **nephroblastomas** or **nephroblastomata**.)

nephrocalcinosis /,nefrəʊ,kəlsɪ'nəʊsɪs/ *noun* a condition in which calcium deposits are found in the kidney

nephrocapsulectomy /,nefrəʊ,kæpsjʊ'lektəmɪ/ *noun* a surgical operation to remove the capsule round a kidney (NOTE: The plural is **nephrocapsulectomies**.)

nephrogram /'nefrəgræm/ *noun* a radiographic examination of the kidney

nephrolith /'nefrəlɪθ/ *noun* a stone in the kidney

nephrolithiasis /,nefrəlɪθ'ərəsɪs/ *noun* a condition in which stones form in the kidney

nephrolithotomy /,nefrəlɪθ'ɒtəmɪ/ *noun* a surgical operation to remove a stone in the kidney (NOTE: The plural is **nephrolithotomies**.)

nephrologist /ne'frələdʒɪst/ *noun* a doctor who specialises in the study of the kidney and its diseases

nephrology /ne'frələdʒɪ/ *noun* the study of the kidney and its diseases

nephroma /ne'frəʊmə/ *noun* a tumour in the kidney, or a tumour derived from renal substances (NOTE: The plural is **nephromas** or **nephromata**.)

nephron /'nefrən/ *noun* a tiny structure in the kidney through which fluid is filtered

COMMENT: A nephron is formed of a series of tubules, the loop of Henle, Bowman's capsule and a glomerulus. Blood enters the nephron from the renal artery, and waste materials are filtered out by the Bowman's capsule. Some substances return to the bloodstream by reabsorption in the tubules. Urine is collected in the ducts leading from the tubules to the ureters.

nephropathy /ne'frɒpəθɪ/ *noun* a disease or medical disorder of the kidney (NOTE: The plural is **nephropathies**.)

nephropexy /'nefrəʊpeksi/ *noun* a surgical operation to attach a mobile kidney (NOTE: The plural is **nephropexies**.)

nephroptosis /,nefrɒp'təʊsɪs/ *noun* a condition in which a kidney is mobile. Also called floating kidney

nephrosclerosis /,nefrəʊsklə'rəʊsɪs/ *noun* a kidney disease due to vascular change

nephroscope /'nefrəskəʊp/ *noun* a type of endoscope used to examine the kidneys

nephrosis /ne'frəʊsɪs/ *noun* degeneration of the tissue of a kidney

nephrostomy /ne'frəstəmɪ/ *noun* a surgical operation to make a permanent opening into the pelvis of the kidney from the surface (NOTE: The plural is **nephrostomies**.)

nephrotic /ne'frɒtɪk/ *adjective* relating to or caused by nephrosis

nephrotic syndrome /ne'frɒtɪk 'sɪn drəʊm/ *noun* increasing oedema, albuminuria and raised blood pressure resulting from nephrosis

nephrotomy /ne'frɒtəmi/ *noun* a surgical operation to cut into a kidney (NOTE: The plural is **nephrotomies**)

nephrotoxic /,nefrəʊ'tɒksɪk/ *adjective* poisonous or damaging to kidney cells

nephroureterectomy /,nefrəʊ,jʊərɪtə'ektəmɪ/ *noun* a surgical operation to remove all or part of a kidney and the ureter attached to it. Also called **ureteronephrectomy** (NOTE: The plural is **nephroureterectomies**.)

nerve /nɜ:v/ *noun* 1. a bundle of fibres that can transmit electrochemical impulses and that forms part of the network that connects the brain and spinal cord to the body's organs 2. the sensitive tissue in the root of a tooth (NOTE: For other terms referring to nerves, see words beginning with **neur-**, **neuro-**.)

COMMENT: Nerves are the fibres along which impulses are carried. Motor nerves or efferent nerves take messages between the central nervous system and muscles, making the muscles move. Sensory nerves or afferent nerves transmit impulses such as sight or pain from the sense organs to the brain.

nerve block /nɜ:v blk/ *noun* the act of stopping the function of a nerve by injecting an anaesthetic

nerve centre /'nɜ:v sentə/ *noun* the point at which nerves come together

nerve ending /nɜ:v 'endɪŋ/ *noun* same as **sensory receptor**

nerve entrapment syndrome /,nɜ:v ɪn 'træpmənt ,sɪnd्रəʊm/ *noun* pain caused by pressure on a nerve, especially where nerves occur in narrow passages such as the wrist (NOTE: The most common nerve entrapment syndrome in the body is carpal tunnel syndrome.)

nerve fibre /nɜ:v ,faɪbə/ *noun* a thin structure leading from a nerve cell and carrying nerve impulses, e.g. an axon

nerve gas /nɜ:v gæs/ *noun* a gas which attacks the nervous system

nerve impulse /nɜ:v 'impəls/ *noun* an electrochemical impulse which is transmitted by nerve cells

nerve regeneration /,nɜ:v rɪgenə'refɪʃ(ə)n/ *noun* the growth of new nerve tissue after damage has occurred

nerve root /nɜ:v ru:t/ *noun* the first part of a nerve as it leaves or joins the spinal column (NOTE: The dorsal nerve root is the entry for a sensory nerve, and the ventral nerve root is the exit for a motor nerve.)

nerve tissue /nɜ:v ,tɪʃu:/ *noun* tissue which forms nerves, and which is able to transmit the nerve impulses

nervosa /nə'veʊsə/ ♦ **anorexia nervosa**

nervous /'nɜ:vəs/ *adjective* 1. referring to nerves 2. very easily worried ◎ *Don't be nervous – the operation is a very simple one.*

nervous breakdown /,nɜ:vəs 'breɪkdaʊn/ *noun* any sudden mental illness (*informal*)

nervous complaint /,nɜ:vəs kəm'pléint/, **nervous disorder** *noun* an emotional or mental illness (*informal*)

nervousness /'nɜ:vəsnəs/ *noun* the state of being nervous

nervous system /'nɜ:vəs ,sɪstəm/ *noun* the nervous tissues of the body, including the peripheral nerves, spinal cord, ganglia and nerve centres

nervy /'nɜ:vi/ *adjective* worried and nervous (*informal*)

nether parts /'neðə pa:ts/, **nether regions** /,neðə 'ri:dʒ(ə)ns/ *plural noun* the lower part of the body, especially the buttocks or genital area (*informal*)

nettle rash /'net(ə)l ræʃ/ *noun* same as **urticaria**

network /'netwɜ:k/ *noun* an interconnecting system of lines and spaces, like a net ◎ *a network of fine blood vessels*

Neuman's model /'nju:mənз ,mɒd(ə)l/ *noun* a modern model for nursing in which prevention is the primary nursing aim (NOTE: Prevention focuses on keeping both the things which cause stress and the patient's response to stress from having a damaging effect on the body.)

neur- /njuər/ *prefix* same as **neuro-** (*used before vowels*)

neural /'njuərəl/ *adjective* referring to a nerve or the nervous system

neural arch /,njuərəl 'ɑ:tʃ/ *noun* a curved part of a vertebra, which forms the space through which the spinal cord passes

neural crest /'njuərəl krest/ *noun* the ridge of cells in an embryo which forms nerve cells of the sensory and autonomic ganglia

neuralgia /nju'rældʒə/ *noun* a spasm of pain which runs along a nerve

neural groove /'njuərəl gru:v/ *noun* a groove on the back of an embryo formed as the neural plate closes to form the neural tube

neural plate /'njuərəl plēt/ *noun* a thickening of an embryonic disc which folds over to form the neural tube

neural tube /'njuərəl tju:b/ *noun* a tube lined with ectodermal cells running the length of an embryo, which develops into the brain and spinal cord

neural tube defect /,njuərəl 'tju:b dɪ'fekt/ *noun* a congenital anomaly which occurs when the edges of the neural tube do not close up properly while the fetus develops in the uterus, e.g. spina bifida (NOTE: There is less risk of a neural tube defect if the mother takes folic acid during her pregnancy.)

neurapraxia /,njuərə'præksiə/ *noun* a lesion of a nerve which leads to paralysis for a very short time, giving a tingling feeling and loss of function

neurasthenia /,njuərəs'θi:nɪə/ *noun* a type of neurosis in which a person is mentally and physically irritable and extremely fatigued

neurasthenic /,njuərəs'θenɪk/ *noun* a person affected by neurasthenia

neurectasis /nju'rektəsɪs/ *noun* a surgical operation to stretch a peripheral nerve (NOTE: The plural is **neurectases**.)

neurectomy /nju'rektəmɪ/ *noun* a surgical operation to remove all or part of a nerve (NOTE: The plural is **neurectomies**.)

neurilemma /,njuərə'lɪmə/ *noun* the outer sheath, formed of Schwann cells, which covers the myelin sheath around a nerve fibre. Also called **neurolemma**. See illustration at **NEURONE** in Supplement

neurilemmoma /,njuərə'lɛməmə/, **neurinoma** /njuərɪ'nɔmə/ *noun* a benign tumour of a nerve, formed from the neurilemma (NOTE: The plurals are **neurilemmomas** or **neurolemmomata** and **neurinomas** or **neurinomata**.)

neuritis /nju'rɪtɪs/ *noun* inflammation of a nerve, giving a constant pain

neuro- /njuərəʊ/ *prefix* nerve or nervous system

neuroanatomy /,njuərənə'natəmɪ/ *noun* the scientific study of the structure of the nervous system

neuroblast /'njuərəoblæst/ *noun* a cell in the embryonic spinal cord which forms a nerve cell

neuroblastoma /,njuərəublæ'stəmə/ *noun* a malignant tumour formed from the neural crest, found mainly in young children (NOTE: The plural is **neuroblastomas** or **neuroblastomata**.)

neurocranium /,njuərəʊ'keɪniəm/ *noun* a part of the skull which encloses and protects the brain (NOTE: The plural is **neurocranums** or **neurocrania**.)

neurodegenerative /,njuərəʊdɪ'dʒenərətɪv/ *adjective* referring to a disorder such as Alzheimer's disease or Parkinson's disease that causes damage to the nerves

neurodermatitis /,njuərəʊdəz'ma'taɪtɪs/ *noun* inflammation of the skin caused by psychological factors

neurodermatosis /,njuərəʊdəz'mə'təsɪs/ *noun* a nervous condition involving the skin

neuroendocrine system /,njuərəʊ'endəkrɪn ,sistəm/ *noun* a system in which the central nervous system and hormonal systems interact to control the function of organs and tissues

neuroepithelial /,njuərəʊepɪ'thɪəl/ *adjective* referring to the neuroepithelium

neuroepithelioma /,njuərəʊepɪ'thɪ:lɪ'əmə/ *noun* a malignant tumour in the retina (NOTE: The plural is **neuroepitheliomas** or **neuroepitheliomata**.)

neuroepithelium /,njuərəʊepɪ'thɪ:lɪəm/ *noun* the layer of epithelial cells forming part of the lining of the mucous membrane of the nose or the labyrinth of the middle ear

neurofibril /,njuərəʊ'faɪbrɪl/ *noun* a fine thread in the cytoplasm of a neurone

neurofibrilla /,njuərəʊ'fɪbrɪlə/ *noun* same as **neurofibril**. see illustration at **NEURONE** in Supplement (NOTE: The plural is **neurofibrillae**.)

neurofibroma /,njuərəʊfai'b्रəʊmə/ *noun* a benign tumour of a nerve, formed from the neurilemma (NOTE: The plural is **neurofibromas** or **neurofibromata**.)

neurofibromatosis /,njuərəʊ,faibrəʊmə'təsɪs/ *noun* a hereditary condition in which a person has neurofibromata on the nerve trunks, limb plexuses or spinal roots, and pale brown spots appear on the skin. Abbr **NF**. Also called **molluscum fibrosum**, **von Recklinghausen's disease**

neurogenesis /,njuərəʊ'dʒenəsɪs/ *noun* the development and growth of nerves and nervous tissue

neurogenic /,njuərəʊ'dʒenɪk/ *adjective* 1. coming from the nervous system 2. referring to neurogenesis

neurogenic bladder /,njuərəʊdʒenɪk 'bla:də/ *noun* a disturbance of the bladder function caused by lesions in the nerve supply to the bladder

neurogenic shock /,njuərəʊ,dʒenɪk 'ʃɒk/ *noun* a state of shock caused by bad news or an unpleasant surprise

neuroglandular junction /,njuərəʊ,gla:ndjʊlər 'dʒʌŋkʃən/ *noun* the point where a nerve joins the gland which it controls

neuroglia /nju'rɒgliə/ *noun* same as **glia**

neurohormone /,njuərəʊ'hɔ:məʊn/ *noun* a hormone produced in some nerve cells and secreted from the nerve endings

neurohypophysis /,njuərəʊ'ha:t'pɒfəsɪs/ *noun* the lobe at the back of the pituitary gland, which secretes oxytocin and vasopressin (NOTE: The plural is **neurohypophyses**.)

neurolemma /,njuərəʊ'lɪmə/ *noun* same as **neurilemma**

neuroleptic /,njuərəʊ'leptɪk/ *noun* an anti-psychotic drug which calms a person and stops him or her from worrying, e.g. chlorpromazine hydrochloride

neurological /,njuərəl'ɒdʒɪk(ə)l/ *adjective* referring to neurology

neurological assessment /,njuərəlɒndʒɪk(ə)l ə'sesmənt/ *noun* an evaluation of the health of a person with a disorder of the nervous system, using interviews, a

physical examination, and specific diagnostic tests, sometimes with the help of a family member or close friend

neurologist /nju'rpładʒɪst/ *noun* a doctor who specialises in the study of the nervous system and the treatment of its diseases

neurology /nju'rplədʒi/ *noun* the scientific study of the nervous system and its diseases

neuroma /nju'rəʊmə/ *noun* a benign tumour formed of nerve cells and nerve fibres (NOTE: The plural is **neuromas** or **neuromata**.)

neuromuscular /,njuərəʊ'maskjʊlə/ *adjective* referring to both nerves and muscles

neuromuscular junction /,njuərəʊmaskjʊlə 'dʒʌŋkʃən/ *noun* the point where a motor nerve joins muscle fibre. Also called **myoneural junction**

neuromyelitis optica /,njuərəʊmaɪəlaitɪs 'ɒptɪkə/ *noun* a condition, similar to multiple sclerosis, in which a person has acute myelitis and the optic nerve is also affected. Also called **Devic's disease**

neuron /'njuərəʊn/, **neurone** /'njuərən/ *noun* a cell in the nervous system which transmits nerve impulses. Also called **nerve cell**

neuropathic bladder /,njuərəʊpæθɪk 'blædə/ *noun* a condition in which the bladder does not function properly because its nerve supply is damaged, e.g. due to an injury to the spinal cord

neuropathology /,njuərəʊpə'θɒlədʒi/ *noun* the study of diseases of the nervous system

neuropathy /njuə'trɒpəθi/ *noun* a disease involving destruction of the tissues of the nervous system (NOTE: The plural is **neuropathies**.)

neurophysiology /,njuərəʊfɪzi'ɒlədʒi/ *noun* the study of the physiology of nerves

neuroplasty /'njuərəʊplæsti/ *noun* surgery to repair damaged nerves

neuropsychiatric /,njuərəʊsaɪki'ætrɪk/ *adjective* referring to neuropsychiatry

neuropsychiatrist /,njuərəʊsaɪ'kaɪətrɪst/ *noun* a doctor who specialises in the study and treatment of mental and nervous disorders

neuropsychiatry /,njuərəʊsaɪ'karətrɪ/ *noun* the study of mental and nervous disorders

neurorrhaphy /nju'rɔ:rəfɪ/ *noun* a surgical operation to join by suture a nerve which has been cut (NOTE: The plural is **neurorrhaphies**.)

neurosarcoma /,njuərəʊsaɪ'kəʊmə/ *noun* a malignant neuroma (NOTE: The plural is **neurosarcomas** or **neurosarcomata**.)

neurosecretion /,njuərəʊsɪ'skrɪ:ʃ(ə)n/ *noun* 1. a substance secreted by a nerve cell 2. the process of secretion of an active substance by nerve cells

neurosis /nju'reʊsɪs/ *noun* a disorder of the personality in which a person experiences obsessive negative emotions towards someone or

something, e.g. fear of empty spaces or jealousy of a sibling. ◊ **psychoneurosis** (NOTE: The plural is **neuroses**.)

neurosurgeon /'njuərəʊn,sɜ:dʒən/ *noun* a surgeon who operates on the nervous system, including the brain and spinal cord

neurosurgery /'njuərəʊn,sɜ:dʒəri/ *noun* surgery on the nervous system, including the brain and spinal cord

neurosyphilis /,njuərəʊ'nɪsfɪlɪs/ *noun* syphilis which attacks the nervous system

neurotic /nju'rɒtɪk/ *adjective* relating to or having neurosis ■ *noun* a person who is worried about or obsessed with something (*informal*)

neurotically /nju'rɒtɪkli/ *adverb* in a neurotic way ○ *She is neurotically obsessed with keeping herself clean.*

neurotmesis /,njuərɒt'mi:sɪs/ *noun* an act of cutting a nerve completely (NOTE: The plural is **neurotmeses**.)

neurotomy /nju'rɒtəmɪ/ *noun* a surgical operation to cut a nerve (NOTE: The plural is **neurotomies**.)

neurotoxic /,njuərəʊ'tɒksɪk/ *adjective* harmful or poisonous to nerve cells

neurotransmitter /,njuərətrən'smɪtə/ *noun* a chemical substance which transmits nerve impulses from one neurone to another
COMMENT: The main neurotransmitters are the catecholamines (adrenaline, noradrenaline and 5-hydroxytryptamine) and acetylcholine. Other neurotransmitters such as gamma aminobutyric acid, glutamine and substance P are less common.

neurotripsy /'njuərəʊtrɪpsi/ *noun* surgical bruising or crushing of a nerve

neurotrophic /,njuərəʊ't्रəfɪk/ *adjective* relating to the nutrition and maintenance of tissue of the nervous system

neotropic /,njuərəʊ'trɒpɪk/ *adjective* referring to a bacterium which is attracted to and attacks nerves

neuter /'nju:tə/ *adjective* neither male nor female

neutral /'nju:tərl/ *adjective* neither acid nor alkali ○ *A pH factor of 7 is neutral.*

neutralise /'nju:t'rəlaɪz/, **neutralize** *verb* 1. to counteract the effect of something ○ *Alkali poisoning can be neutralised by applying acid solution.* (NOTE: **neutralising** – **neutralised**) 2. to form a salt from an acid

neutropenia /,nju:t'rə'pi:nɪə/ *noun* a condition in which there are fewer neutrophils than usual in the blood

neutrophil /'nju:t'rəfɪl/ *noun* a type of white blood cell with an irregular nucleus, which can attack and destroy bacteria. Also called **polymorph**

newborn /'nju:bɔ:n/ *adjective* born recently. ◊ **neonatal** ■ *noun* a recently born baby. ◊ **neonate**

newton /'nu:jt(ə)n/ *noun* an SI unit of measurement of force. Symbol **N**

COMMENT: One newton is the force required to move one kilogram at the speed of one metre per second

new variant CJD /'nu:n ,veəriənt ,si:dʒeɪd/ *noun* ♦ **variant CJD**

next-day pill /'nekst deɪ 'pil/ *noun* same as **morning-after pill**

next of kin /'nekst əv 'kɪn/ *noun* the person or persons who are most closely related to someone ○ *The hospital has notified the next of kin of the death of the accident victim.* (NOTE: Takes a singular or plural verb.)

nexus /'nek'səs/ *noun* 1. a link (NOTE: The plural is **nexus** or **nexus-es**.) 2. a point where two organs or tissues join

NF *abbr* neurofibromatosis

NHS *abbr* National Health Service

NHS Direct /'en eɪtʃ es drɪkt/ *noun* in the UK, a national telephone helpline run by nurses to provide information about health and health services for the public

niacin /'naɪəsɪn/ *noun* a vitamin of the vitamin B complex found in milk, meat, liver, kidney, yeast, beans, peas and bread, lack of which can cause mental disorders and pellagra. Also called **nicotinic acid**

nicardipine /'nɪ:kɑ:dɪpi:n/ *noun* a drug which slows down the movement of calcium ions into smooth muscle cells, used especially to treat angina

NICE /naɪs/ *abbr* National Institute for Clinical Excellence

nick /nɪk/ *noun* a little cut ○ *She had a nick in her ear lobe which bled.* ■ *verb* to make a little cut in something ○ *He nicked his chin while shaving.*

niclosamide /'nɪkləʊsəmaɪd/ *noun* a drug used for removing tapeworms

nicotine /'nɪkəti:n/ *noun* the main alkaloid substance found in tobacco

nicotine addiction /'nɪkəti:n ə,dɪkʃən/ *noun* an addiction to nicotine, derived from smoking tobacco

nicotine patch /'nɪkəti:n pætʃ/ *noun* a patch containing nicotine which is released slowly into the bloodstream, applied to the skin as a method of curing nicotine addiction

nicotine poisoning /'nɪkəti:n ,poɪz(ə)nɪŋ/ *noun* poisoning of the autonomic nervous system with large quantities of nicotine. Also called **nicotinism**

nicotine receptor /'nɪkəti:n rɪ,septə/ *noun* a cholinergic receptor found at the neuromuscular junction on skeletal muscle and in the autonomic ganglia, which responds to nicotine and nicotine-like drugs. Also called **nicotinic receptor**

nicotine replacement /'nɪkəti:n rɪ,pleɪsmənt/ *noun* the use of nicotine patches

or other products to help during an attempt to give up smoking

nicotinic acid /,nɪkətɪnik 'æsɪd/ same as **ni-acin**

nicotinic receptor /nɪkə,tɪnɪk rɪ'septə/ *noun* same as **nicotine receptor**

nicotinism /'nɪkəti:nɪz(ə)m/ *noun* same as **nicotine poisoning**

nictation /'nɪk'teɪʃ(ə)n/, **nictitation** /'nɪktɪ:t'eɪʃ(ə)n/ *noun* the act of winking

nidation /'nɪd'eɪʃ(ə)n/ *noun* 1. the process of building the endometrial layers of the uterus between menstrual periods 2. the point in the development of an embryo at which the fertilised ovum reaches the uterus and implants in the wall of the uterus. Also called **implantation**

nidus /'naɪdəs/ *noun* a site where bacteria can settle and breed, which becomes a centre of infection (NOTE: The plural is **niduses** or **nidi**)

Niemann-Pick disease /,ni:mən 'pɪk di,zɪ:z/ *noun* a rare inherited disease of a group which affect metabolism. Signs in babies include feeding difficulties, a large abdomen within 3 to 6 months, and progressive loss of early motor skills.

nifedipine /'nɪ:fɪdɪpi:n/ *noun* a drug which stops the heart muscles from taking up calcium, used in the treatment of high blood pressure and angina pectoris

night duty /'nait ,djʊ:tɪ/ *noun* the situation of working at night ○ *Nurse Smith is on night duty this week.*

Nightingale ward *noun* an old-fashioned type of long ward with a row of beds along each wall and a centrally placed point for the nurse in charge to work from

nightmare /'naitmeə/ *noun* a dream which frightens the dreamer ○ *The child had a nightmare and woke up screaming.*

night nurse /'nait nɜ:s/ *noun* a nurse who is on duty at night

night sweat /'nait swet/ *noun* heavy sweating when a person is asleep at night

night terror /'nait 'terə/ *noun* a period of disturbed sleep, which a child does not remember afterwards

nigra /'naɪgrə/ ♦ **linea nigra**

nihilism /'naihɪlɪz(ə)m/ *noun* the rejection of all the usual social conventions and beliefs, especially of morality and religion

nihilistic /,naihɪ'lɪstɪk/ *adjective* relating to or showing a belief in nihilism

ninety-nine,na:n̩ti 'na:n̩/ *number* a number which a doctor asks a person to say so that he or she can inspect the back of the throat ○ *The doctor told him to open his mouth wide and say ninety-nine.*

nipple /'nip(ə)l/ *noun* 1. same as **mammilla** 2. *US* a rubber teat on a baby's feeding bottle

Nissl granule /'nɪsl(ə)l ,grænju:l/, **Nissl body** /'nɪsl(ə)l, bɒdi/ *noun* one of the coarse granules surrounding the nucleus in the cytoplasm of nerve cells. See illustration at NEURONE in Supplement [Described 1894. After Franz Nissl (1860–1919), German psychiatrist.]

nit /nɪt/ *noun* an egg or larva of a louse
nitrate /naɪtrɛt/ *noun* 1. a salt or an ester of nitric acid 2. a drug such as glyceryl trinitrate which dilates the vessels leading to the heart muscle and lowers cardiac work by reducing venous return to the heart, for rapid relief of angina and in heart failure (NOTE: Patients can develop tolerance to these drugs.)

-nitrate /naɪtrɛt/ *suffix* used in names of nitrate drugs

nitrazepam /nai'træzɪpaem/ *noun* a tranquilliser used in some sleeping pills

nitrofurantoin /naitrəʊfju'ræntəʊin/ *noun* a drug which helps to prevent the growth of bacteria, used in the treatment of urinary infections

nitrogen /'naɪtrədʒən/ *noun* a chemical element, which is a gas that is the main component of air and is an essential part of protein (NOTE: The chemical symbol is N.)

COMMENT: Nitrogen is taken into the body by digesting protein-rich foods; excess nitrogen is excreted in urine. When the intake of nitrogen and the excretion rate are equal, the body is in nitrogen balance or protein balance.

nitrogen narcosis /,naɪtrədʒ(ə)n nə:sɪs/ *noun* loss of consciousness due to the formation of nitrogen in the tissues, caused by pressure change

nitroglycerin /,naɪtrəʊ'glɪsərin/ *noun* a drug which helps the veins and coronary arteries to become wider

nitrous oxide /,naɪtrəs 'oksaɪd/ *noun* a colourless gas with a sweet smell, used in combination with other gases as an anaesthetic in dentistry and surgery. Also called **laughing gas**

nm abbr nanometre

NMC abbr Nursing and Midwifery Council

nmol abbr nanomole

NMR abbr nuclear magnetic resonance

Nocardia /nə'ɔ:kə:diə/ *noun* a genus of bacteria found in soil, some species of which cause nocardiosis and maduramycosis

nocardiosis /nəʊ,kɔ:dɪ'əʊsɪs/, **nocardiasis** /,nəʊkɔ:kə:'dæriəsɪs/ *noun* a lung infection which may metastasise to other tissue, caused by *Nocardia*

noci- /nəʊsɪ/ *prefix* pain or injury

nociassociation /,nəʊsɪə,səʊsɪ'eɪʃ(ə)n/ *noun* an unconscious release of nervous energy, e.g. as a result of shock

nociceptive /,nəʊsɪ'septɪv/ *adjective* referring to nerves which carry pain to the brain

nociceptor /'nəʊsɪ,septə/ *noun* a sensory nerve which carries pain to the brain

noct- /nɒkt/ *prefix* night

noctambulation /,nɒktə'mæbjuleɪʃ(ə)n/ *noun* same as **somnambulism**

nocte /'nɒktɪ/ *adverb* at night. Opposite **mane** (NOTE: used on prescriptions)

nocturia /nɒk'tjuəriə/ *noun* the fact of passing an unusually large quantity of urine during the night

nocturnal /nɒk'tɜ:n(ə)l/ *adjective* referring to or taking place at night

nocturnal emission /nɒk,tɜ:n(ə)l ɪ'miʃ(ə)n/ *noun* the production of semen from the penis while a man is asleep

nocturnal enuresis /nɒk,tɜ:n(ə)l enju'ri:sɪs/ *noun* the act of passing urine when asleep in bed at night. Also called **bedwetting**

nodal /'nəʊd(ə)l/ *adjective* referring to nodes

nodal tachycardia /,nəʊd(ə)l tæki'ka:diə/ *noun* a sudden attack of rapid heartbeats. Also called **paroxysmal tachycardia**

node /nəʊd/ *noun* 1. a small mass of tissue 2. a group of nerve cells

node of Ranvier /,nəʊd əv 'rænvɪə/ *noun* one of a series of gaps in the myelin sheath surrounding a nerve fibre. See illustration at NEURONE in Supplement

nod off *verb* to fall asleep (*informal*)

nodosum /nəʊ'deʊsəm/ ♀ **erythema nodosum**

nodular /'nɒdʒʊlə/ *adjective* formed of nodules

nodule /'nɒdju:l/ *noun* 1. a small node or group of cells. ♀ **Bohn's nodules** 2. the anterior or part of the inferior vermis

noma /'nəʊmə/ *noun* same as **cancrum oris**

nomen proprium /,nəʊmən 'prəʊpriəm/ *noun* full form of **n.p.**

non- /nɒn/ *prefix* not

non-A, non-B hepatitis *noun* now called **hepatitis C**

non-absorbable suture /,nɒn əb,zɔ:bəb(ə)l 'su:tʃə/ *noun* a suture made of a substance which cannot be absorbed into the body and which eventually has to be removed

non-accidental injury /,nɒn əkṣɪ,dent(ə)l 'ɪndʒəri/ *noun* an injury which is not caused accidentally

non-allergenic /,nɒn ælə'dʒenɪk/ *adjective* not aggravating an allergy

non-cancerous /,nɒn 'kænsərəs/ *adjective* not malignant

non-clinical /,nɒn 'klinik(ə)l/ *adjective* referring to the wider non-medical aspects of patient care ○ *non-clinical services such as administration and catering* ○ *non-clinical guidelines including confidentiality protocols*

non-compliance /,nɒn kəm'plaɪəns/ *noun* the failure to take drugs at the correct times and in the dosages prescribed, or to take them at all

non compos mentis /,nɒn ,kɒmpəs 'mentɪs/ *adjective* referring to a person who is mentally incapable of managing his or her own affairs (NOTE: From a Latin phrase meaning 'not of sound mind'.)

non-contagious /,nɒn kə'nteɪdʒəs/ *adjective* not contagious

non-drowsy /,nɒn 'draʊzɪ/ *adjective* not causing drowsiness

non-emergency surgery /,nɒn ɪ ,mɜːdʒənsɪ 'sɜːdʒərɪ/ *noun* a surgical operation which does not need to be performed immediately because it is for a condition which is not life-threatening, e.g. joint replacement. Also called **non-urgent surgery**

non-granular leucocyte /,nɒn ,graɪnjuːlə 'lu:kəʊsait/ *noun* a leucocyte which has no granules, e.g. a lymphocyte or monocyte

non-Hodgkins lymphoma /,nɒn ,hɒdʒkɪnz lɪm'fəʊmə/ *noun* a cancer of the lymph nodes which differs from Hodgkin's disease by the absence of a particular type of cell with double nuclei

non-insulin-dependent diabetes /,nɒn ,ɪn'sjʊlɪn dɪ,pendənt ,daɪ'a:bɪ:tɪ:z/ *noun* same as **Type II diabetes mellitus**

non-invasive /,nɒn in'veɪzɪv/ *adjective* referring to treatment which does not involve entering the body by making an incision

non-maleficence /,nɒn mæ'lefɪs(ə)ns/ *noun* the concept that professionals in the health service have a duty to protect the patient from harm (NOTE: Under this principle, professionals' obligations include keeping their knowledge and skills current, realising their own limitations and knowing when to refer a case to a specialist or other professional.)

non-malignant /,nɒn mæ'lɪgnənt/ *adjective* not cancerous, or not life-threatening ○ a *non-malignant growth*

non-medical /,nɒn 'medɪk(ə)l/ *adjective* 1. not relating to medicine ○ **non-medical genetics** 2. not according to medical practice, or not as directed by a doctor ○ **non-medical use of stimulant drugs** 3. not used in specialised medical speech ○ 'Nervous breakdown' is a *non-medical term for a type of sudden mental illness.*

non-nucleated /,nɒn 'nju:kliɪtɪd/ *adjective* referring to a cell with no nucleus

non-official drug /,nɒn ə,fɪʃ(ə)l 'drʌg/ *noun* a drug that is not listed in the national pharmacopoeia

non-palpable /,nɒn 'pælpəb(ə)l/ *adjective* not able to be felt when touched

non-paralytic poliomyelitis /,nɒn ,pærəlɪtɪk ,pələi'meɪtɪs/ *noun* a form of poliomyelitis similar to abortive poliomyelitis but which also affects the muscles to some degree

non-secretor /,nɒn sɪ'krɪ:tə/ *noun* a person who does not secrete substances indicating

ABO blood group into mucous fluids such as semen or saliva

non-smoker /,nɒn 'sməʊkə/ *noun* a person who does not smoke

non-specific /,nɒn spə'sifɪk/ *adjective* not caused by any single identifiable cause

non-specific urethritis /,nɒn spə,sifɪk ,juə'rɪtɪs/ *noun* any sexually transmitted inflammation of the urethra not caused by gonorrhoea (*dated*) Abbr **NSU**

non-sterile /,nɒn 'stɪrəl/ *adjective* not sterile or sterilised

non-steroidal /,nɒn ste'reɪd(ə)l/ *adjective* not containing steroids

non-steroidal anti-inflammatory drug /,nɒnste'reɪd(ə)l ,ænti in'flæmət(ə)rɪ dræg/ *noun* a drug used in the treatment of pain associated with inflammation, including rheumatic disease, post-operative analgesia and dysmenorrhoea, by inhibiting the release of prostaglandins. Abbr **NSAID** (NOTE: Non-steroidal anti-inflammatory drugs have names ending in **-fen**: **ibuprofen**.)

COMMENT: Serious gastro-intestinal side effects can occur, especially in the elderly. Asthma can worsen.

non-union /,nɒn 'ju:njən/ *noun* a condition in which the two parts of a fractured bone do not join together and do not heal

non-urgent surgery /,nɒn ,ɜːdʒənt 'sɜːdʒərɪ/ same as **non-emergency surgery**

noradrenaline /,nɔːrə'drenəlɪn/ *noun* a hormone secreted by the medulla of the adrenal glands which acts as a vasoconstrictor and is used to maintain blood pressure in shock, haemorrhage or hypotension (NOTE: The US term is **norepinephrine**.)

norma /'nɔːmə/ *noun* a view of the skull as seen from a particular angle (NOTE: The plural is **normae**.)

normal /'nɔːm(ə)l/ *adjective* usual, ordinary or conforming to a standard ○ *After he took the tablets, his blood pressure went back to normal.* ○ *Her temperature is two degrees above normal.* ○ *He had an above-normal pulse rate.* ○ *Is it normal for a person with myopia to suffer from headaches?*

normally /'nɔːm(ə)li/ *adverb* in an ordinary way, on most occasions or in most circumstances ○ *The patients are normally worried before the operation.* ○ *He was breathing normally.*

normo- /nɔːməʊ/ *prefix* normal, usual or expected

normoblast /'nɔːməʊblæst/ *noun* an early form of a red blood cell, usually found only in bone marrow but occurring in the blood in some types of leukaemia and anaemia

normocyte /'nɔːməʊsait/ *noun* a red blood cell

normocytic /,nɔːməʊ'saɪtɪk/ *adjective* referring to a normocyte

normocytosis /nɔ:məʊsɪs/ *noun* the condition of having the standard number of red blood cells in the peripheral blood

normotension /nɔ:məʊ'tenʃən/ *noun* blood pressure at the usual level

normotensive /nɔ:məʊ'tensɪv/ *adjective* referring to blood pressure at the usual level

Norton score /nɔ:t(ə)n skɔ:/ *noun* a scale for deciding how likely it is that pressure sores will develop, used mostly in assessing elderly patients

nortriptyline /nɔ:'triptəlɪn/ *noun* a drug used to reduce pain and as an antidepressant and tranquilliser

nose /nəʊz/ *noun* an organ through which a person breathes and smells □ **her nose is running** liquid mucus is dripping from her nose □ **he blew his nose** he blew air through his nose into a handkerchief to get rid of mucus in his nose □ **to speak through your nose** to speak as if your nose is blocked, so that you say 'b' instead of 'm' and 'd' instead of 'n'

COMMENT: The nose is formed of cartilage and small bones making the bridge at the top. It leads into two passages, the nostrils, which in turn lead to the nasal cavity, divided in two by the septum. The nasal passages connect with the sinuses, with the ears through the Eustachian tubes, and with the pharynx. The receptors which detect smell are in the top of the nasal passage.

nosebleed /nəʊzbli:d/ *noun* an incident of bleeding from the nose, usually caused by a blow or by sneezing, by blowing the nose hard or by high blood pressure (*informal*) □ *She had a headache, followed by a violent nosebleed.* Also called **epistaxis**

noso- /nɒsəʊ/ *prefix* disease

nosocomial /nɒsəʊ'lə'keʊmɪəl/ *adjective* referring to hospitals

nosocomial infection /nɒsəʊ'lə'keʊmɪəl ɪn'fekʃən/ *noun* an infection which is passed on to a person being treated in a hospital

nosology /nɒ'sɒlədʒi/ *noun* the classification of diseases

nostril /'nɒstrɪl/ *noun* one of the two passages in the nose through which air is breathed in or out □ *His right nostril is blocked.* (NOTE: The nostrils are also referred to as the **nares**.)

notch /nɒtʃ/ *noun* a depression on a surface, usually on a bone, but sometimes on an organ.

◊ **cardiac notch, occipital notch**

notice /'nəʊtɪs/ *noun* 1. a piece of writing giving information, usually put in a place where everyone can see it 2. a warning □ *They had to leave with ten minutes' notice.* 3. attention □ **to take notice (of something or someone)** to give attention (to something or someone) □ *We need to take notice of this feedback.*

■ **verb** to see or be aware of something □ *No-body noticed that she was sweating.* □ *Did you notice the development of any new symptoms?*

(NOTE: **noticing – noticed**)

noticeable /'nəʊtɪsəb(ə)l/ *adjective* able to be noticed □ *The disease has no easily noticeable symptoms.*

noticeboard /'nəʊtɪsbɔ:d/ *noun* a flat piece of wood, or board fixed on a wall, on which notices can be pinned

notifiable disease /'nəʊtfɪərəb(ə)l dɪ'zi:z/ *noun* a serious infectious disease which, in the UK, has to be reported by a doctor to the Department of Health so that steps can be taken to stop it spreading

COMMENT: The following are notifiable diseases: cholera, diphtheria, dysentery, encephalitis, food poisoning, jaundice, malaria, measles, meningitis, ophthalmia neonatorum, paratyphoid, plague, poliomyelitis, relapsing fever, scarlet fever, smallpox, tuberculosis, typhoid, typhus, whooping cough and yellow fever.

notify /'nəʊtfɪə/ *verb* to inform a person or authority officially □ *The local doctor notified the Health Service of the case of cholera.* (NOTE: **notifies – notifying – notified.** You notify a person of something.)

nourish /'nɔ:rɪʃ/ *verb* to give food or nutrients to a person

nourishment /'nɔ:rɪʃmənt/ *noun* 1. the act of supplying nutrients to a person 2. food and the nutrients in it, e.g. proteins, fats or vitamins

noxious /'nɒkʃəs/ *adjective* harmful □ *a noxious gas*

n.p. *noun* the name of the drug written on the label of its container. Full form **nomen proprium**

NPO *abbreviation* used to refer to patients being kept without food □ *The patient should be kept NPO for five hours before the operation.* Full form **ne per os**

NSAID *abbr* non-steroidal anti-inflammatory drug

NSU *abbr* non-specific urethritis

nucha /'nju:kə/ *noun* same as **nape** (NOTE: The plural is **nuchae**.)

nuchal /'nju:k(ə)l/ *adjective* referring to the back of the neck

nucle- /'nju:kli/ *prefix* same as **nucleo-** (used before vowels)

nuclear /'nju:kliə/ *adjective* referring to nuclei, e.g. of a cell or an atom

nuclear magnetic resonance /,nju:kliə'mæg.nɛtɪk'rezənəns/ *noun* a scanning technique using magnetic fields and radio waves which reveals abnormalities in soft tissue and body fluids. ◊ **magnetic resonance imaging.**

Abbr **NMR**

nuclear medicine /,nju:kliə'med(ə)s(ə)n/ *noun* the use of radioactive substances for detecting and treating disorders

nuclease /'nju:kliəs/ *noun* an enzyme which breaks down nucleic acids

nucleic acid /nju:kli:k 'æsɪd/ *noun* an organic acid of a type found in all living cells,

which consists of complex nucleotide chains which pass on genetic information, e.g. DNA or RNA

nucleo- /nju:kliəʊ/ *prefix* referring to a cell or atomic nucleus

nucleolus /nju'kli:ələs/ *noun* a structure inside a cell nucleus, containing RNA (NOTE: The plural is **nucleoli**.)

nucleoprotein /,nju:kliəʊ'prəuti:n/ *noun* a compound of protein and nucleic acid, e.g. a chromosome or ribosome

nucleus /'nju:kliəs/ *noun* 1. a central part which has others grouped or built around it 2. the central body in a cell, which contains DNA and RNA and controls the function and characteristics of the cell. See illustration at **NEURONE** in Supplement 3. 3. a group of nerve cells in the brain or spinal cord (NOTE: The plural is **nuclei**.)

nucleus pulposus /,nju:kliəs pol'pəʊsəs/ *noun* a soft central part of an intervertebral disc which disappears in old age (NOTE: The plural is **nuclei pulposi**)

nullipara /nʌ'lɪpərə/ *noun* a woman who has never had a child (NOTE: The plural is **nulliparas** or **nulliparae**.) ■ *adjective* referring to a woman who has never had a child

numb /nʌm/ *adjective* 1. referring to a part of the body which has no feeling 2. unable to feel emotion

numbness /'nʌmənəs/ *noun* a loss of feeling

nurse /nɜ:s/ *noun* a person who looks after sick people in a hospital or helps a doctor in a local surgery. Some nurses may be trained to diagnose and treat patients. ○ *She works as a nurse in the local hospital.* ○ *He's training to be a nurse.* ♀ **nurse practitioner** ■ *verb* 1. to look after a sick person, or to be employed as a nurse ○ *When he was ill his mother nursed him until he was better.* 2. to behave so as not to aggravate a condition ○ *nursing a sprained ankle* (NOTE: **nurses** – **nursing** – **nursed**)

nurse executive director /nɜ:s ɪg'zekjutɪv da'rektə/ *noun* in the UK, a senior nurse who sits on the Board of an NHS Trust and has corporate as well as professional responsibilities in the organisation for nursing and sometimes other aspects such as quality or human resources

nurse manager /,nɜ:s 'mænidʒə/ *noun* a nurse who has administrative duties in a hospital or a health service

nurse practitioner /,nɜ:s præk'tɪʃ(ə)nə/ *noun* a nurse with additional clinical training at degree level who often works independently, assessing, diagnosing and treating patients, particularly in primary care

nurse station /'nɜ:s ,steɪʃ(ə)n/, **nurses' station** /'nɜ:sɪz ,steɪʃ(ə)n/ *noun* an area in or near a ward from which nurses work, keep records and control the activities of the ward

nurse tutor /,nɜ:s 'tjur:tə/ *noun* an experienced nurse who teaches student nurses

nursing /'nɜ:sɪŋ/ *noun* 1. the work or profession of being a nurse ○ *He has chosen nursing as his career.* 2. care for sick people provided by a nurse ■ *adjective* providing care as a nurse

'...few would now dispute the need for clear, concise nursing plans to guide nursing practice, provide educational tools and give an accurate legal record' [Nursing Times]

'...all relevant sections of the nurses' care plan and nursing process records had been left blank' [Nursing Times]

Nursing and Midwifery Council /,nɜ:sɪŋ ən ,mɪd'wɪfəri ,kaʊnsəl/ *noun* in the UK, an organisation that sets standards for the education, practice and conduct of nurses, midwives and health visitors. Abbr **NMC**

nursing audit /'nɜ:sɪŋ ,ɔ:dit/ *noun* a formal detailed review of records or observation of nursing actions so that judgments can be made about the quality of nursing care being given (NOTE: The documented evidence is compared with accepted standards and criteria.)

nursing development unit /,nɜ:sɪŋ dɪ'velp'mənt/ *noun* a nurse-led ward or unit that sets out to demonstrate by example innovative high-quality care, to reflect on practice and draw lessons from this experience, and to provide learning opportunities for other nurses. Abbr **NDU**

nursing home /'nɜ:sɪŋ həʊm/ *noun* a house where convalescents or dependent elderly people can live under medical supervision by a qualified nurse

nursing intervention /,nɜ:sɪŋ intə'venʃən/ *noun* the treatment of illness by nursing care, without surgery

nursing model /'nɜ:sɪŋ ,mɒd(ə)l/ *noun* a set of stated principles about nursing which gives professionals a way of formulating a plan of care, assessing its success and addressing any problems which arise from it

nursing mother /,nɜ:sɪŋ 'mʌðə/ *noun* a mother who breast-feeds her baby

Nursing Officer /'nɜ:sɪŋ ,ɒfɪsə/ *noun* in the UK, a nurse employed by the Department of Health to assist the Chief Nursing Officer in providing professional advice to Ministers and policy-makers

nursing practice /'nɜ:sɪŋ ,præk'tɪs/ *noun* treatment given by nurses

nursing process /,nɜ:sɪŋ 'prəʊses/ *noun* a standard method of treatment and documentation of treatment carried out by nurses

nursing sister /,nɜ:sɪŋ 'sistə/ *noun* a hospital sister who has administrative duties

nursing standard /'nɜ:sɪŋ ,stændəd/ *noun* an accepted level of achievement by which nursing care can be assessed or compared

nurture /'nɜ:tʃə/ *noun* care given to a child while it is developing ■ *verb* to bring up and care for children (NOTE: **nurturing – nurtured**)

nutans /'nu:t(ə)ns/ ♀ **spasmus nutans**

nutation /'nu:t'eɪʃ(ə)n/ *noun* involuntary nodding of the head

nutrient /'nju:trɪənt/ *noun* a substance in food which is necessary to provide energy or to help the body grow, e.g. protein, fat or a vitamin

nutrition /'nju:'trɪʃ(ə)n/ *noun* 1. the study of the supply of nutrients to the body from digesting food 2. nourishment or food

nutritional /'nju:'trɪʃ(ə)n(ə)l/ *adjective* referring to nutrition

nutritional anaemia /'nju:,trɪʃ(ə)n(ə)l ə'nɪ:mɪə/ *noun* anaemia caused by an imbalance in the diet

nutritional disorder /'nju:'trɪʃ(ə)n(ə)l dɪs'ɔ:də/ *noun* a disorder related to food and nutrients, e.g. obesity

nutritionist /'nju:'trɪʃ(ə)nɪst/ *noun* a person who specialises in the study of nutrition and advises on diets. ♀ **dietitian**

nyct- /nɪkt/ *prefix* night or darkness

nyctalopia /nɪk'te'ləʊpiə/ *noun* the condition of being unable to see in bad light. Also called **night blindness**

nyctophobia /nɪk'te'fəʊbiə/ *noun* fear of the dark

nymphae /'nɪmfɪ:/ *plural noun* same as **labia minora**

nympho- /'nɪmfəʊ/ *prefix* 1. female sexuality 2. nymphae

nymphomania /'nɪmfə'meɪniə/ *noun* an obsessive sexual urge in a woman (NOTE: A similar condition in a man is called **satyriasis**.)

nymphomaniac /'nɪmfə'meɪniæk/ *noun* a woman who has an unusually obsessive sexual urge (NOTE: This term is regarded as offensive.)

nystagmus /nɪ'steɪgməs/ *noun* a rapid, involuntary movement of the eyes up and down or from side to side

COMMENT: Nystagmus can be horizontal, vertical, torsional or rotary; it can be congenital, but is also a symptom of multiple sclerosis and Ménieré's disease.

nystatin /naɪ'stætɪn/ *noun* an anti-microbial drug used in the treatment of fungal infections, especially thrush

O

oat cell carcinoma /'əʊt sel kɔ:sɪ,nəʊmə/ *noun* a type of cancer of the bronchi, with distinctive small cells

OB *abbr* obstetrics

obese /'əʊ'bɪ:s/ *adjective* so overweight as to be at risk of several serious illnesses, including diabetes and heart disease

obesity /'əʊ'bɪ:sɪti/ *noun* the condition of being seriously overweight

COMMENT: Obesity is caused by excess fat accumulating under the skin and around organs in the body. It is sometimes due to glandular disorders, but it is usually caused by eating or drinking too much. A tendency to obesity can be hereditary.

obey /'ə'beɪ/ *verb* to do what a person, authority or rule says you should do ○ *You ought to obey the doctor's instructions and go to bed.*

objective /'əb'dʒektɪv/ *noun* an aim or goal
■ *adjective* 1. existing independently of any individual person's mind 2. not influenced by any bias or prejudice caused by personal feelings 3. referring to symptoms of illness which can be observed by somebody other than the person who is ill. Compare **subjective**

oblige /'əblɪ:geɪt/ *adjective* referring to an organism which exists and develops in only one way, e.g. a virus which is a parasite only inside cells

oblique /'ə'blɪ:k/ *adjective* lying at an angle ■ *noun* also called **oblique muscle**

...there are four recti muscles and two oblique muscles in each eye, which coordinate the movement of the eyes and enable them to work as a pair' [Nursing Times]

oblique fissure /'ə,blɪ:k 'fɪʃə/ *noun* a groove between the superior and inferior lobes of a lung. See illustration at **LUNGS** in Supplement

oblique fracture /'ə,blɪ:k 'fræktʃə/ *noun* a fracture in which the bone is broken diagonally

oblique muscle /'ə,blɪ:k 'mʌs(ə)l/ *noun* 1. each of two muscles in the wall of the abdomen 2. each of two muscles which control the movement of the eyeball

obliterate /'əblɪ:təreɪt/ *verb* 1. to destroy something completely 2. to block a cavity completely (NOTE: **obliterating – obliterated**)

obliteration /ə,blɪ:tə'reɪʃ(ə)n/ *noun* 1. the complete destruction of something 2. the complete blocking of something such as a cavity

oblongata /'ə,blɒŋgə'teɪʃ(ə)n/ ♫ **medulla oblongata**

observable /'əb'zɜ:vəb(ə)l/ *noun* which can be seen or measured

observation /'ə,bɜ:veɪʃ(ə)n/ *noun* the process of watching and examining a person or thing over a period of time ○ *She was admitted to hospital for observation.*

observation register /'ə,bɜ:veɪʃ(ə)n,redʒɪstə/ *noun* a record of children who have had problems at birth, or soon after their birth, and so need particular follow-up care from a health visitor, general practitioner or social worker

observe /'əb'zɜ:v/ *verb* 1. to see something ○ *The nurses observed signs of improvement in the patient's condition.* ○ *The girl's mother observed symptoms of anorexia.* 2. to watch a person or thing carefully in order to discover something ○ *Observe the way in which the patient is lying.* 3. to take something into account ○ *You're expected to observe the rules of conduct.*

obsessed /'əb'sest/ *adjective* having an obsession ○ *He is obsessed with the idea that someone is trying to kill him.*

obsession /'əb'seʃ(ə)n/ *noun* a mental disorder in which a person has a fixed idea or emotion which he or she cannot get rid of, even if he or she knows it is wrong or unpleasant ○ *She has an obsession about cats.*

obsessional /'əb'seʃ(ə)n(ə)l/ *adjective* referring to or having an obsession ○ *He is suffering from an obsessional disorder.*

obsessive /'əb'sesɪv/ *adjective* having or showing an obsession ○ *He has an obsessive desire to steal little objects.*

obsessive action /'əb,sesɪv 'ækʃən/ *noun* an action such as washing which is repeated over and over again and indicates a mental disorder

obsessive-compulsive disorder /'əb,sesɪv,kəm'pʌlʃɪv,dɪs,ɔ:də/ *noun* a mental disorder characterised by the need to perform re-

peated ritual acts such as checking or cleaning, which can be treated with psychotherapy and antidepressants. Abbr **OCD**

obstetric /'ɒb'stetrɪk(ə)l/, **obstetrical** /'əb'stetrɪkl/ *adjective* referring to obstetrics

obstetrical forceps /'əb'stetrɪkl 'fɔ:sɛps/ *plural noun* a type of large forceps used to hold a baby's head during childbirth

obstetrician /,ɒbstə'trɪʃ(ə)n/ *noun* a doctor who specialises in obstetrics

obstetric patient /'əb'stetrɪk ,peɪʃ(ə)nt/ *noun* a woman who is being treated by an obstetrician

obstetrics /'əb'stetrɪks/ *noun* a branch of medicine and surgery dealing with pregnancy, childbirth and the period immediately after childbirth. Abbr **OB**

obstipation /,ɒbstɪ'peɪʃ(ə)n/ *noun* severe constipation, often caused by a blockage in the intestines

obstruct /'əb'strʌkt/ *verb* to block something
○ *The artery was obstructed by a blood clot.*

obstruction /'əb'strʌkʃən/ *noun* 1. something which blocks a passage or a blood vessel 2. the blocking of a passage or blood vessel

obstructive /'əb'strʌktɪv/ *adjective* caused by an obstruction

obstructive jaundice /'əb,strʌktɪv 'dʒaʊndɪs/ *noun* jaundice caused by an obstruction of the bile ducts. Also called **posthepatitic jaundice**. ◇ **acholuric jaundice, icterus gravis neonatorum**

obstructive lung disease /'əb,strʌktɪv 'lʌŋ dɪ,zi:z/ *noun* bronchitis and emphysema

obstructive sleep apnoea /'əb,strʌktɪv 'slɪ:p ,æpnɪə/ *noun* the stopping of breathing, or difficulty in breathing, during sleep, resulting in loud snoring

obtain /'əb'teɪn/ *verb* to get something
○ *Some amino acids are obtained from food.* ○ *Where did he obtain the drugs?*

obtrusive /'əb'tru:sɪv/ *adjective* 1. forcing your presence on others 2. referring to a scar which is very noticeable

obturation /,ɒbtju:'reɪʃ(ə)n/ *noun* the act of obstructing a body passage, or the state of a body passage when it is obstructed, e.g. by hard faeces

obturator /'ɒbtjʊreɪtə/ *noun* 1. one of two muscles in the pelvis which govern the movement of the hip and thigh 2. a device which closes an opening, e.g. a dental prosthesis which covers a cleft palate 3. a metal bulb which fits into a bronchoscope or sigmoidoscope

obturator foramen /,ɒbtjʊreɪtər fə'reɪmən/ *noun* an opening in the hip bone near the acetabulum. See illustration at **PELVIS** in Supplement (NOTE: The plural is **obturator foramina**)

obtusion /'əb'tju:ʒ(ə)n/ *noun* a condition in which perception and feelings become dulled

OC abbr oral contraceptive

occipita /'ɒk'sɪpɪtə/ *plural of occiput*

occipital /'ɒk'sɪpɪtl/ *adjective* referring to the back of the head ■ *noun* same as **occipital bone**

occipital bone /'ɒk'sɪpɪtl bən/ *noun* the bone at the back of the head. Also called **occipital**

occipital condyle /'ɒk'sɪpɪtl 'kɒndɪl/ *noun* a round part of the occipital bone which joins it to the atlas

occipital lobe /'ɒk'sɪpɪtl 'ləub/ *noun* the lobe at the back of each cerebral hemisphere

occipital notch /'ɒk'sɪpɪtl nɒtʃ/ *noun* a point on the lower edge of the cerebral hemisphere where the surface has a notch

occipito-anterior /'ɒk'sɪpɪtə'æntɪriə/ *adjective* referring to a position of a baby during birth, in which the baby faces the mother's back

occipito-posterior /'ɒk'sɪpɪtə'pɒstɪriə/ *adjective* referring to a position of a baby during birth in which the baby faces the front

occiput /'ɒk'sɪpʊt/ *noun* the lower part of the back of the head or skull (NOTE: The plural is **occiputs** or **occipita**.)

occluded /'əklu:dɪd/ *adjective* closed or blocked

occlusion /'əklu:ʒ(ə)n/ *noun* 1. a thing which blocks a passage or which closes an opening 2. the way in which the teeth in the upper and lower jaws fit together when the jaws are closed (NOTE: A bad fit between the teeth is a **malocclusion**.)

occlusive /'əklu:sɪv/ *adjective* referring to occlusion or blocking

occlusive stroke /ə,klu:sɪv 'strəʊk/ *noun* a stroke caused by a blood clot

occlusive therapy /ə,klu:sɪv 'θerəpi/ *noun* a treatment for a squint in which the good eye is covered up in order to encourage the squinting eye to become straight

occult /'ə'kʌlt/ *adjective* 1. not easy to see with the naked eye. Opposite **overt** 2. referring to a symptom or sign which is hidden

occult blood /ə,kʌlt 'blʌd/ *noun* very small quantities of blood in the faeces, which can only be detected by tests

occupancy rate /'ɒkjkjʊpənsɪ reɪt/ *noun* the number of beds occupied in a hospital, shown as a percentage of all the beds

occupation /'ɒkjkjʊ'peɪʃ(ə)n/ *noun* 1. a job or work
○ *What is his occupation?* ○ *People in sedentary occupations are liable to digestive disorders.* 2. the state or fact of occupying something or of being occupied

occupational /'ɒkjkjʊ'peɪʃ(ə)nəl/ *adjective* referring to work

occupational asthma /,ɒkju'peɪʃ(ə)n(ə)l 'æsmə/ *noun* asthma caused by materials with which people come into contact at work

occupational dermatitis /,ɒkju'peɪʃ(ə)n(ə)l ,dɜːmə'taitɪs/ *noun* dermatitis caused by materials touched at work

occupational disease /ɒkju'peɪʃ(ə)nəl di'zɪz/ *noun* a disease which is caused by the type of work a person does or the conditions in which a person works, e.g. a disease caused by dust or chemicals in a factory

occupational hazard /,ɒkju'peɪʃ(ə)n(ə)l 'hæzəd/ *noun* a dangerous situation related to the working environment

occupational health nurse /,ɒkju'peɪʃ(ə)n(ə)l 'helθ nɜːs/ *noun* a nurse who deals with health problems of people at work. Abbr OH nurse

occupational medicine /,ɒkju'peɪʃ(ə)n(ə)l 'med(ə)sɪs/ *noun* the branch of medicine concerned with accidents and diseases connected with work

occupational therapist /,ɒkju'peɪʃ(ə)n(ə)l 'θerəpɪst/ *noun* a qualified health professional who offers patients occupational therapy

occupational therapy /,ɒkju'peɪʃ(ə)n(ə)l 'θerəpi/ *noun* light work or hobbies used as a means of treatment, especially for physically challenged or mentally ill people, to promote independence during the recovery period after an illness or operation

occur /ə'kɜː/ *verb* 1. to take place ○ *one of the most frequently occurring types of tumour* ○ *Thrombosis occurred in the artery.* ○ *a form of glaucoma which occurs in infants.* 2. to come into a person's mind ○ *It occurred to her that she might be pregnant.* (NOTE: **occurring – occurred**)

occurrence /ə'kʌrəns/ *noun* something that takes place ○ *Neuralgia is a common occurrence after shingles.*

OCD *abbr* obsessive-compulsive disorder

ochronosis /,ɒkrəʊ'nəʊsɪs/ *noun* a condition in which cartilage, ligaments and other fibrous tissue become dark as a result of a metabolic disorder, and in which the urine turns black on exposure to air

ocular /'ɒkjʊlə/ *adjective* referring to the eye ○ *Opticians are trained to detect all kinds of ocular imbalance.*

ocular dominance /,ɒkjʊlə 'dɒmɪnəns/ *noun* a condition in which a person uses one eye more than the other

ocular prosthesis /,ɒkjʊlə prɒs'θɪ:sɪs/ *noun* a false eye

oculi /'ɒkjʊlaɪ/ ♦ **orbicularis oculi**

oculist /'ɒkjʊlist/ *noun* a qualified physician or surgeon who specialises in the treatment of eye disorders

oculo- /'ɒkjʊləʊ/ *prefix* eye

oculogyric /,ɒkjʊləʊ'dʒaɪrɪk/ *adjective* causing eye movements

oculomotor /,ɒkjʊləʊ'məʊtə/ *adjective* referring to movements of the eyeball

oculomotor nerve /,ɒkjʊləʊ'məʊtə nɜːv/ *noun* the third cranial nerve which controls the eyeballs and eyelids

oculonasal /,ɒkjʊləʊ'nɛɪz(ə)l/ *adjective* referring to both the eye and the nose

oculoplethysmography /,ɒkjʊləʊ,plɛθɪz'mɔːgrəfi/ *noun* measurement of the pressure inside the eyeball

OD *abbr* overdose

o.d. *adverb* (*written on a prescription*) every day. Full form **omni die**

ODA *abbr* operating department assistant

odont- /'ɒdɒnt/ *prefix* same as **odonto-** (*used before vowels*)

odontalgia /,ɒdɒn'tældʒə/ *noun* same as toothache

odontitis /,ɒdɒn'taitɪs/ *noun* inflammation of the pulpy interior of a tooth

odonto- /'ɒdɒntə/ *prefix* tooth

odontoid /'ɒdɒntɔɪd/ *adjective* similar to a tooth, especially in shape

odontoid process /'ɒdɒntɔɪd 'prəsəʊs/ *noun* a projecting part of a vertebra, shaped like a tooth

odontology /,ɒdɒn'tɒlədʒɪ/ *noun* the study of teeth and associated structures, and their disorders

odontoma /,ɒdɒn'təʊmə/, **odontome** /'ɒdɒntəmə/ *noun* 1. a structure like a tooth which has an unusual arrangement of its component tissues 2. a solid or cystic tumour derived from cells concerned with the development of a tooth (NOTE: The plural is **odontomas** or **odontomata**)

odourless /'əʊdələs/ *adjective* with no smell

odyn- /'ɒdɪn/ *prefix* same as **odyno-** (*used before vowels*)

odynia /'ɒdɪniə/ *suffix* pain

odyno- /'ɒdɪnəʊ/ *prefix* pain

odynophagia /,ɒdɪnə'feɪdʒə/ *noun* a condition in which pain occurs when food is swallowed

oedema /'i'diːmə/ *noun* the swelling of part of the body caused by accumulation of fluid in the intercellular tissue spaces ○ *Her main problem is oedema of the feet.* Also called **dropsy**. ♦ **tumescence** (NOTE: The US spelling is **edema**.)

oedematous /i'demətəs/ *adjective* referring to oedema (NOTE: The US spelling is **edematous**.)

Oedipus complex /'iːdɪpəs ,kɒmplɛks/ *noun* (*in Freudian psychology*) a condition in which a boy feels sexually attracted to his mother and sees his father as an obstacle

oesophag- /iːsɒfədʒ/ *prefix* same as **oesophago-** (*used before vowels*)

oesophageal /i:sɒfə'dʒi:əl/ *adjective* referring to the oesophagus (NOTE: The US spelling is **esophageal**.)

oesophageal hiatus /i:sɒfə,dʒi:əl hætʃə'seɪtəs/ *noun* the opening in the diaphragm through which the oesophagus passes

oesophageal varices /i:sɒfə,dʒi:əl 'værɪsɪz/ *plural noun* varicose veins in the oesophagus

oesophagectomy /i:sɒfə'dʒektəmɪ/ *noun* a surgical operation to remove part of the oesophagus (NOTE: The plural is **oesophagectomies**.)

oesophagi /i:sɒfəgɪ/ *plural of oesophagus*

oesophagitis /i:sɒfə'dʒartɪs/ *noun* inflammation of the oesophagus, caused by acid juices from the stomach or by infection

oesophago- /i:sɒfəgəʊ/ *prefix* oesophagus (NOTE: The US spelling is **esophago-**)

oesophagocele /i:sɒfəgəsəʊsɪ:l/ *noun* a condition in which the mucous membrane lining the oesophagus protrudes through the wall

oesophagogastroduodenoscopy /i:sɒfəgəʊ,gaest्रəʊ,dju:əʊdə'noskəpɪ/ *noun* a surgical operation in which a tube is put down into the oesophagus so that the doctor can examine it, the stomach and the duodenum. Abbr **OGD** (NOTE: The plural is **oesophagogastroduodenoscopies**.)

oesophagojejunostomy /i:sɒfəgəʊdʒi:ənɔstəmɪ/ *noun* a surgical operation to create a junction between the jejunum and the oesophagus after the stomach has been removed (NOTE: The plural is **oesophagojejunostomies**.)

oesophagoscope /i:sɒfəgəʊskəʊp/ *noun* a thin tube with a light at the end, which is passed down the oesophagus to examine it

oesophagoscopy /i:sɒfə'gɒskəpɪ/ *noun* an examination of the oesophagus with an oesophagoscope (NOTE: The plural is **oesophagoscopies**.)

oesophagostomy /i:sɒfə'gɒstəmɪ/ *noun* a surgical operation to make an opening in the oesophagus to allow the person to be fed, usually after an operation on the pharynx (NOTE: The plural is **oesophagostomies**.)

oesophagotomy /i:sɒfə'gɒtəmɪ/ *noun* a surgical operation to make an opening in the oesophagus to remove something which is blocking it (NOTE: The plural is **oesophagotomies**.)

oesophagus /i:sɒfəgəs/ *noun* a tube down which food passes from the pharynx to the stomach (NOTE: The plural is **oesophagi**. The US spellings are **esophagus** and **esophagi**.)

oestradiol /i:stri:d'aeɪəl/ *noun* a type of oestrogen secreted by an ovarian follicle, which stimulates the development of secondary sexual characteristics in females at puberty (NOTE: A synthetic form of oestradiol is given as treat-

ment for oestrogen deficiency. The US spelling is **estradiol**.)

oestriol /i:stri'l/ *noun* a placental hormone with oestrogenic properties, found in the urine of pregnant women (NOTE: The US spelling is **estriol**.)

oestrogen /i:stri:dʒən/ *noun* any steroid hormone which stimulates the development of secondary sexual characteristics in females at puberty (NOTE: The US spelling is **estrogen**.)

COMMENT: Synthetic oestrogens form most oral contraceptives, and are also used in the treatment of menstrual and menopausal disorders.

oestrogenic hormone /i:stri:dʒenɪk 'həʊ:mən/ *noun* synthetic oestrogen used to treat conditions which develop during menopause (NOTE: The US spelling is **estrogenic hormone**.)

oestrone /i:stri:ən/ *noun* a type of oestrogen produced in the ovaries (NOTE: The US spelling is **estrone**.)

official /ə'fɪʃ(ə)l/ *adjective* 1. accepted or permitted by an authority ○ *We need to undertake a review of the official procedures.* 2. constituting an authority

official drug /ə,fɪʃ(ə)l 'dræg/ *noun* any drug listed in the national pharmacopoeia

officially /ə'fɪʃ(ə)li/ *adverb* in a way that is approved by an authority ○ *officially listed as a dangerous drug*

OGD abbr oesophagogastroduodenoscopy

OH nurse /əʊ 'eɪtʃ nɜ:s/ *abbr* occupational health nurse

-oid /'ɔɪd/ *suffix* like or related to

oil /ɔɪl/ *noun* a liquid which cannot be mixed with water (NOTE: There are three types of oil: fixed vegetable or animal oils, volatile oils and mineral oils.)

oily /'ɔɪli/ *adjective* containing or resembling oil

ointment /'ɔɪntmənt/ *noun* a smooth oily medicinal preparation which can be spread on the skin to soothe or to protect

old age /əuld eɪdʒ/ *noun* a period in a person's life, usually taken to be after the age of sixty-five

oleaginous /,əʊli'æʒinəs/ *adjective* same as **oily**

olecranon /əʊ'lekrənɒn/, **olecranon process** /əʊ'lekrənɒn 'prəses/ *noun* a curved projecting part at the end of the ulna at the elbow, which gives rise to a painful tingling sensation if hit by accident. Also called **funny bone**

oleic /əʊ'li:ik/ *adjective* referring to oil

oleic acid /əʊ'li:ik 'æsɪd/ *noun* a fatty acid which is present in most oils

oleo- /əʊliəʊ/ *prefix* oil

oleum /'əʊliəm/ *noun* oil (used in pharmacy)

olfaction /ɒl'fækʃən/ *noun* 1. the sense of smell 2. the way in which a person's sensory organs detect smells

olfactory /ɒl'fækt(ə)ri/ *adjective* referring to the sense of smell

olfactory area /ɒl,fækt(ə)ri 'eəriə/ *noun* the part of the brain that registers smell

olfactory bulb /ɒl'fækt(ə)ri bɒlb/ *noun* the end of the olfactory tract, where the processes of the sensory cells in the nose are linked to the fibres of the olfactory nerve

olfactory cortex /ɒl,fækt(ə)ri 'kɔ:tɛks/ *noun* the parts of the cerebral cortex which receive information about smell

olfactory nerve /ɒl'fækt(ə)ri nɜ:v/ *noun* the first cranial nerve which controls the sense of smell

olfactory tract /ɒl'fækt(ə)ri trækɪt/ *noun* a nerve tract which takes the olfactory nerve from the nose to the brain

olig- /ɒlɪg/ *prefix* same as **oligo-** (*used before vowels*)

oligaemia /,ɒlɪ'gi:mɪə/ *noun* a condition in which a person has too little blood in his or her circulatory system (NOTE: The US spelling is **oligemia**.)

oligo- /ɒlɪgəʊ/ *prefix* few or little

oligodactylism /,ɒlɪgəʊ'dæktɪlɪz(ə)m/ *noun* a congenital condition in which a baby is born without some fingers or toes

oligodipsia /,ɒlɪgəʊ'dɪpsiə/ *noun* a condition in which a person does not want to drink

oligodontia /,ɒlɪgəʊ'nɒnɪə/ *noun* a state in which most of the teeth are lacking

oligohydramnios /,ɒlɪgohu'draemniəs/ *noun* a condition in which the amniotic fluid surrounding the fetus contains too little amniotic fluid

oligomenorrhoea /,ɒlɪgə'menərɪə/ *noun* a condition in which a person menstruates infrequently (NOTE: The US spelling is **oligomenorrhea**.)

oligo-ovulation /,ɒlɪgəʊ ,ɒvju'lʊɪʃ(ə)n/ *noun* ovulation which does not occur as often as is usual

oligospermia /,ɒlɪgəʊ'spɜ:miə/ *noun* a condition in which there are too few spermatozoa in the semen

oliguria /,ɒlɪ'gjʊəriə/ *noun* a condition in which a person does not produce enough urine

olive /'ɒliv/ *noun* 1. the fruit of a tree, which gives an edible oil 2. a swelling containing grey matter, on the side of the pyramid of the medulla oblongata

-ology /ɒlədʒi/ *suffix* area of study

-olol /ə'lɒl/ *suffix* beta blocker ○ *atenolol* ○ *propranolol hydrochloride*

o.m. *adverb* (*written on a prescription*) every morning. Full form **omni mane**

-oma /əʊmə/ *suffix* tumour

Ombudsman /'ɒmbudzmən/ ♦ **Health Service Commissioner**

oment- /əʊment/ *prefix* omentum

omenta /ə'ʊmentə/ plural of **omentum**

omental /ə'ʊ'ment(ə)l/ *adjective* referring to the omentum

omentectomy /,əʊmen'tektəmɪ/ *noun* a surgical operation to remove part of the omentum (NOTE: The plural is **omentectomies**.)

omentopexy /əʊ'mentəpeksi/ *noun* a surgical operation to attach the omentum to the abdominal wall (NOTE: The plural is **omentopexies**.)

omentum /əʊ'mentəm/ *noun* a double fold of peritoneum hanging down over the intestines. Also called **epiploon** (NOTE: The plural is **omenta**. For other terms referring to the omentum see words beginning with **epiplo-**.)

COMMENT: The omentum is in two sections: the **greater omentum** which covers the intestines, and the **lesser omentum** which hangs between the liver and the stomach and the liver and the duodenum.

omeprazole /əʊ'mepræzəʊl/ *noun* a drug which reduces the amount of acid released in the stomach, used in the treatment of ulcers and heartburn

omphal- /ɒmfəl/ *prefix* same as **omphalo-** (*used before vowels*)

omphali /'ɒmfəli/ plural of **omphalus**

omphalitis /,ɒmfə'laitɪs/ *noun* inflammation of the navel

omphalo- /ɒmfələʊ/ *prefix* navel

omphalocele /'ɒmfələsɪ:l/ *noun* a hernia in which part of the intestine protrudes through the abdominal wall near the navel

omphalus /'ɒmfələs/ *noun* a scar with a depression in the middle of the abdomen where the umbilical cord was detached after birth. Also called **navel**, **umbilicus** (NOTE: The plural is **omphali**.)

-omycin /əʊməsɪn/ *suffix* macrolide drug ○ *erythromycin*

o.n. *adverb* (*written on a prescription*) every night. Full form **omni nocte**

onanism /'əʊnənɪz(ə)m/ *noun* same as **masturbation**

Onchocerca /,ɒnkjəʊ'sɜ:kə/ *noun* a genus of tropical parasitic threadworms

onchocerciasis /,ɒnkjəʊsɪs:'kaɪəsɪs/ *noun* infestation with *Onchocerca* in which the larvae can move into the eye, causing river blindness

onco- /ɒnkjəʊ/ *prefix* tumour

oncogene /'ɒnkjədʒi:n/ *noun* a part of the genetic system which causes malignant tumours to develop

'...all cancers may be reduced to fundamental mechanisms based on cancer risk genes or oncogenes within ourselves. An oncogene is a gene that encodes a protein that contributes to the malignant phenotype of the cell' [British Medical Journal]

oncogenesis /'ɒŋkə'dʒenəsɪs/ *noun* the origin and development of a tumour

oncogenic /'ɒŋkə'dʒenɪk/ *adjective* causing tumours to develop ○ *an oncogenic virus*

oncologist /'ɒŋ'kɒlədʒɪst/ *noun* a doctor who specialises in oncology, especially cancer

oncology /'ɒŋ'kɒlədʒɪ/ *noun* the scientific study of new growths, especially cancers

oncolysis /'ɒŋ'kɒlɪsɪs/ *noun* the destruction of a tumour or of tumour cells

oncometer /'ɒŋ'kɒmɪtə/ *noun* 1. an instrument for measuring swelling in an arm or leg using changes in their blood pressure 2. an instrument for measuring the variations in size of the kidney and other organs of the body

oncotic /'ɒŋ'kɒtɪk/ *adjective* referring to a tumour

ondansetron /'ɒn'dænsɪtron/ *noun* a drug which helps to prevent the production of serotonin, used to control nausea and vomiting caused by drug treatment and radiotherapy for cancer

onset /'ɒnset/ *noun* the beginning of something ○ *The onset of the illness is marked by sudden high temperature.*

ontogeny /'ɒn'tɒdʒəni/ *noun* the origin and development of an individual organism

onych- /'ɒnɪk/ *prefix* same as **onycho-** (*used before vowels*)

onychiaxus /'ɒnɪ'kɔ:kſɪs/ *noun* excessive growth of the nails of the fingers or toes

onychia /'ɒnɪkɪə/ *noun* an irregularity of the nails caused by inflammation of the matrix

onycho- /'ɒnɪkəʊ/ *prefix* nails

onychogryphosis /'ɒnɪkəʊgrɪ'fəʊsɪs/ *noun* a condition in which the nails are bent or curved over the ends of the fingers or toes

onycholysis /'ɒnɪ'kɒlɪsɪs/ *noun* a condition in which a nail becomes separated from its bed, without falling out

onychomadesis /'ɒnɪkəʊməs'di:sɪs/ *noun* a condition in which the nails fall out

onychomycosis /'ɒnɪkəʊmər'kəʊsɪs/ *noun* an infection of a nail with a fungus

onychosis /'ɒnɪ'kəʊsɪs/ *noun* any disease of the nails (NOTE: The plural is **onychooses**.)

o'nyong-nyong fever /'əʊ 'nɪŋgə ,nɪŋgə/ *noun* an infectious virus disease prevalent in East Africa, spread by mosquitoes. The symptoms are high fever, inflammation of the lymph nodes and excruciating pains in the joints. Also called **joint-breaker fever**

oo- /'əʊə/ *prefix* ovum or embryo

oocyesis /'əʊəsɪs'i:sis/ *noun* a pregnancy which develops in the ovary (NOTE: The plural is **oocyteses**.)

oocyte /'əʊəsɪt/ *noun* a cell which forms from an oogonium and becomes an ovum by meiosis

oocyte donation /'əʊəsɪt dəʊ'nɛɪʃ(ə)n/ *noun* the transfer of oocytes from one woman

to another who cannot produce her own, so that she can have a baby. The oocytes are removed in a laparoscopy and fertilised in vitro. **oogenesis** /'əʊə'dʒenəsɪs/ *noun* the formation and development of ova

COMMENT: In oogenesis, an oogonium produces an oocyte, which develops through several stages to produce a mature ovum. Polar bodies are also formed which do not develop into ova.

oogenetic /'əʊədʒə'netɪk/ *adjective* referring to oogenesis

oogonium /'əʊə'gəʊniəm/ *noun* a cell produced at the beginning of the development of an ovum (NOTE: The plural is **oogonia**.)

oophor- /əʊəfəʊr/ *prefix* same as **oophoro-** (*used before vowels*)

oophoralgia /'əʊəfə'rældʒə/ *noun* pain in the ovaries

oophore /'əʊəfə:/ *noun* same as **ovary**

oophorectomy /'əʊəfə'rektəmɪ/ *noun* a surgical operation to remove an ovary. Also called **ovariectomy** (NOTE: The plural is **oophorectomies**.)

oophoritis /'əʊəfə'rætɪs/ *noun* inflammation in an ovary, which can be caused by mumps. Also called **ovaritis**

oophoro- /'əʊəfərəʊ/ *prefix* ovary

oophorocystectomy /'əʊ,ɒfərəʊsɪt'ektəmɪ/ *noun* a surgical operation to remove an ovarian cyst (NOTE: The plural is **oophorocystectomies**.)

oophorocystosis /'əʊ,ɒfərəʊsɪs'təʊsɪs/ *noun* the development of one or more ovarian cysts

oophroma /'əʊəfə'ræʊmə/ *noun* a rare ovarian tumour, occurring in middle age (NOTE: The plural is **oophromas** or **oophromata**.)

oophoron /'əʊ'ɒfərən/ *noun* same as **ovary** (*technical*) (NOTE: The plural is **oophora**.)

oophoropexy /'əʊ'ɒfərəpɛksɪ/ *noun* a surgical operation to attach an ovary (NOTE: The plural is **oophoropexies**.)

oophorosalpingectomy /'əʊ,ɒfərə,sælpɪn'đzektəmɪ/ *noun* a surgical operation to remove an ovary and the Fallopian tube attached to it (NOTE: The plural is **oophorosalpingectomies**.)

ooze /u:z/ *verb* 1. (*of pus, blood or other liquid*) to flow slowly 2. to leak a substance such as pus or blood (NOTE: **oozing – oozed**)

op /ɒp/ *noun* an operation (*informal*)

OP abbr outpatient

opacification /əʊpæsɪfɪ'keɪʃ(ə)n/ *noun* the fact of becoming opaque, as the lens does in a case of cataract

opacity /'əʊ'pæsɪti/ *noun* 1. the fact of not allowing light to pass through 2. an area in the eye which is not clear (NOTE: The plural is **opacities**.)

opaque /'əʊ'peɪk/ *adjective* not allowing light to pass through. Opposite **transparent**

open /'əʊpən/ *adjective* not closed

open-angle glaucoma /,əʊpən ,æŋg(ə)l glo:'kœmə/ *noun* an unusually high pressure of fluid inside the eyeball caused by a blockage in the channel through which the aqueous humour drains. Also called **chronic glaucoma**

open fracture /,əʊpən 'frækʃə/ *noun* same as **compound fracture**

open-heart surgery /,əʊpən 'ha:t ,sɜ:dʒəri/ *noun* surgery to repair part of the heart or one of the coronary arteries performed while the heart has been bypassed and the blood is circulated by a pump

opening /'əʊp(ə)nɪŋ/ *noun* a place where something opens

open visiting /,əʊpən 'vɪzɪtɪŋ/ *noun* an arrangement in a hospital by which visitors can enter the wards at any time

operable /'ɒp(ə)rəb(ə)l/ *adjective* referring to a condition which can be treated by a surgical operation ○ *The cancer is still operable.*

operant conditioning /'ɒpərənt kən ,dɪʃ(ə)nɪŋ/ *noun* a form of learning which takes place when a piece of spontaneous behaviour is either reinforced by a reward or discouraged by punishment

operate /'ɒpəreɪt/ *verb* 1. to function or work, or to make something function or work 2. to treat a person for a condition by cutting open the body and removing a part which is diseased or repairing a part which is not functioning correctly ○ *The patient was operated on yesterday.* ○ *The surgeons decided to operate as the only way of saving the baby's life.* (NOTE: **operating – operated**)

operating department *noun* a hospital department specialising in surgical operations

operating department assistant /,ɒpərel tɪn di,pɔ:tment ə'sistənt/ *noun* a person who works in an operating department. Abbr **ODA**

operating microscope /'ɒpəreɪtɪŋ ,maɪkroskəʊp/ *noun* a special microscope with two eyepieces and a light, used in very delicate surgery

operating room *US* same as **operating theatre**. Abbr **OR**

operating table /'ɒpəreɪtɪŋ ,teib(ə)/ *noun* a special table on which the patient is placed to undergo a surgical operation

operating theatre /'ɒpəreɪtɪŋ θɪətə/ *noun* a special room in a hospital, where surgical operations are carried out (NOTE: The *US* term is **operating room**.)

operation /,ɒpə'reɪʃ(ə)n/ *noun* 1. the way in which something operates 2. a surgical procedure carried out to repair or remove a damaged body part ○ *She's had an operation on her foot.* ○ *The operation to remove the cataract was successful.* ○ *A team of surgeons performed the operation.* ○ *Heart operations are always difficult.* (NOTE: A surgeon **performs** or

carries out an operation **on** a patient.) 3. the way in which a drug acts

operative /'ɒp(ə)rətɪv/ *adjective* taking place during a surgical operation. ○ **peroperative, postoperative, preoperative**

operator /'ɒpəreɪtə/ *noun* 1. someone whose job is to operate a machine or piece of equipment 2. a surgeon who operates on people

operculum /'ɑ:pɜ:kjʊləm/ *noun* 1. a part of the cerebral hemisphere which overlaps the insula 2. a plug of mucus which can block the cervical canal during pregnancy (NOTE: The plural is **opercula** or **operculums**.)

ophth- /ɒfθ, ɒpθ/ *prefix* eye

ophthalm- /ɒfθælm, ɒpθælm/ *prefix* same as **ophthalmo-** (*used before vowels*)

ophthalmectomy /,ɒfθæl'mektəmi/ *noun* a surgical operation to remove an eye (NOTE: The plural is **ophthalmectomies**.)

ophthalmia /'ɒfθælmɪə/ *noun* inflammation of the eye

ophthalmia neonatorum /ɒfθælmɪə ni:əneɪtə'rɔ:m/ *noun* conjunctivitis of a newborn baby, beginning 21 days after birth, caused by infection in the birth canal

ophthalmic /'ɒfθælmɪk/ *adjective* referring to the eye

ophthalmic nerve /'ɒfθælmɪk nɜ:v/ *noun* a branch of the trigeminal nerve, supplying the eyeball, the upper eyelid, the brow and one side of the scalp

ophthalmic optician /'ɒfθælmɪk ɒptɪʃən/, **ophthalmic practitioner** *noun* same as **optician**

ophthalmic surgeon /'ɒfθælmɪk 'sɜ:ʒən/ *noun* a surgeon who specialises in surgery to treat eye disorders

ophthalmitis /,ɒfθæl'maɪtɪs/ *noun* inflammation of the eye

ophthalo- /ɒfθælməʊ, ɒpθælməʊ/ *prefix* eye or eyeball

ophthalmological /'ɒfθælmə'lɒdʒɪk(ə)l/ *adjective* referring to ophthalmology

ophthalmologist /,ɒfθæl'mɒlədʒɪst/ *noun* a doctor who specialises in the study of the eye and its diseases. Also called **eye specialist**

ophthalmology /,ɒfθæl'mɒlədʒɪ/ *noun* the study of the eye and its diseases

ophthalmoplegia /,ɒfθælməpli:dʒə/ *noun* paralysis of the muscles of the eye

ophthalmoscope /'ɒfθælməskəʊp/ *noun* an instrument containing a bright light and small lenses, used by a doctor to examine the inside of an eye

ophthalmoscopy /,ɒfθæl'mɒskəpɪ/ *noun* an examination of the inside of an eye using an ophthalmoscope (NOTE: The plural is **ophthalmoscopies**.)

ophthalmotomy /,ɒfθæl'mɒtəmi/ *noun* a surgical operation to make a cut in the eyeball (NOTE: The plural is **ophthalmotomies**.)

ophthalmometer /'ɒfθælmətər/ noun an instrument which measures pressure inside the eye

-opia /əʊpiə/ suffix eye condition

opiate /'əpiətət/ noun a sedative which is prepared from opium, e.g. morphine or codeine

opinion /ə'pjɪnɪət/ noun what a person thinks about something ○ *What's the surgeon's opinion of the case?* ○ *The doctor asked the consultant for his opinion as to the best method of treatment.*

opioid /'əʊpiəɪd/ adjective based on opium ○ *Cocaine is an opioid analgesic.*

opistho- /'ɒpɪsθəʊ/ prefix backbone

opisthotonus /,ɒpɪs'θɒtənəs/ noun a spasm of the body in which the spine is arched backwards, occurring, e.g., in people with tetanus

opium /'əpiəm/ noun a substance made from poppies which is used in the preparation of codeine and heroin

opponens /'ə'pəʊnənz/ noun one of a group of muscles which control the movements of the fingers, especially one which allows the thumb and little finger to come together

opportunist /,ɒpə'tju:nɪst/, **opportunistic** /,ɒpə'tju:nɪstɪk/ adjective referring to a parasite or microorganism which takes advantage of the host's weakened state to cause infection

opposition /,ɒppə'zɪʃ(ə)n/ noun 1. hostility towards something 2. a movement of the hand muscles in which the tip of the thumb is made to touch the tip of another finger so as to hold something

opsionic index /ɒp'sɔɪnɪk 'ɪndeks/ noun a number which gives the strength of a person's serum reaction to bacteria

opsonin /'ɒpsənɪn/ noun a substance, usually an antibody, in blood which sticks to the surface of bacteria and helps to destroy them

optic /'ɒptɪk/ adjective referring to the eye or to sight

optical /'ɒptɪk(ə)l/ adjective 1. same as **optic** 2. relating to the visible light spectrum

optical fibre /,ɒptɪk(ə)l 'faɪbə/ noun an artificial fibre which can carry light or images

optical illusion /,ɒptɪk(ə)l ɪ'lū:ʒ(ə)n/ noun something which is seen wrongly so that it appears to be something else

optic chiasma /,ɒptɪk kai'æzmə/ noun a structure where some of the optic nerves from each eye partially cross each other in the hypothalamus

optic disc /'ɒptɪk disk/ noun the point on the retina where the optic nerve starts. Also called **optic papilla**

optic fundus /,ɒptɪk 'fʌndəs/ noun the back part of the inside of the eye, opposite the lens

optician /'ɒptɪʃ(ə)n/ noun a qualified person who specialises in making glasses and in testing eyes and prescribing lenses. Also called **ophthalmic optician** (NOTE: In US English, an

optician is a technician who makes lenses and fits glasses, but cannot test patient's eyesight.)

COMMENT: In the UK qualified opticians must be registered by the General Optical Council before they can practise.

optic nerve /'ɒptɪk nɜ:v/ noun the second cranial nerve which transmits the sensation of sight from the eye to the brain. See illustration at **EYE** in Supplement

optic neuritis /,ɒptɪk nju'rætɪs/ noun same as **retrobulbar neuritis**

optic papilla /,ɒptɪk pə'pɪlə/ noun same as **optic disc**

optic radiation /,ɒptɪk ,reɪdi'eɪʃ(ə)n/ noun a nerve tract which takes the optic impulses from the optic tract to the visual cortex

optics /'ɒptɪks/ noun the study of the visible light spectrum and sight

optic tract /,ɒptɪk 'trækt/ noun a nerve tract which takes the optic nerve from the optic chiasma to the optic radiation

proto- /ɒptəʊ/ prefix sight

optometer /'ɒptəmɪtər/ noun same as **refractometer**

optometrist /'ɒptəmətrɪst/ noun mainly US a person who specialises in testing eyes and prescribing lenses

optometry /'ɒptəmətri/ noun the testing of eyes and prescribing of lenses to correct sight

-quine /'əkwɪn/ suffix antimalarial drug ○ *chloroquine*

OR abbr US operating room

ora /'ɔ:rə/ plural noun plural of **os** noun 2

oral /'ɔ:rəl/ adjective 1. referring to the mouth 2. referring to medication that is swallowed ○ *an oral contraceptive* Compare **enteral, parenteral**

oral cavity /,ɔ:rəl 'kævɪtɪ/ noun the mouth

oral contraceptive /,ɔ:rəl ,kɒntrə'septɪv/ noun a contraceptive pill which is swallowed

oral hygiene /,ɔ:rəl 'haɪdʒi:n/ noun the practice of keeping the mouth clean by gargling and mouthwashes

orally /'ɔ:rəlɪ/ adverb by swallowing ○ *not to be taken orally*

oral medication /,ɔ:rəl ,medɪ'keɪʃ(ə)n/ noun medication which is taken by swallowing

oral rehydration solution /,ɔ:rəl ,ri:hæɪ 'dreɪʃ(ə)n sə,lu:s(ə)n/ noun liquid given as a drink to correct the water, mineral and nutritional deficiencies in a person who is affected by dehydration

oral rehydration therapy /,ɔ:rəl ,ri:hæɪ 'dreɪʃ(ə)n ,θeræpɪ/ noun the administration of a simple glucose and electrolyte solution to treat acute diarrhoea, particularly in children, which has greatly reduced the number of deaths from dehydration. Abbr **ORT**

oral thermometer /,ɔ:rəl θə'mətmɪtər/ noun a thermometer which is put into the mouth to take someone's temperature

orbicularis /ɔ:,bɪkju'leərɪs/ *noun* a circular muscle in the face

orbicularis oculi /ɔ:,bɪkju,leərɪs 'ɒkjʊləɪ/ *noun* a muscle which opens and closes the eye

orbicularis oris /ɔ:,bɪkju,leərɪs 'ɔ:ris/ *noun* a muscle which closes the lips tight

orbit /'ɔ:bit/ *noun* the hollow bony depression in the front of the skull in which each eye and lacrimal gland are situated. Also called **eye socket**

orbital /'ɔ:bit(ə)l/ *adjective* referring to the orbit

orchि- /ɔ:kɪ/ *prefix* testis

orchidalgia /,ɔ:kɪ'dældʒɪə/ *noun* a neuralgic-type pain in a testis

orchidectomy /,ɔ:kɪ'dektəmɪ/ *noun* a surgical operation to remove a testis (NOTE: The plural is **orchidectomies**.)

orchidopexy /'ɔ:kɪdəpɛksi/ *noun* a surgical operation to place an undescended testis in the scrotum. Also called **orchiopexy** (NOTE: The plural is **orchidoxies**.)

orchidotomy /,ɔ:kɪ'dɒtəmɪ/ *noun* a surgical operation to make a cut into a testis (NOTE: The plural is **orchidotomies**.)

orchiepididymitis /,ɔ:ki,epɪdɪdɪ'maɪtɪs/ *noun* a condition in which a testicle and its epididymis become swollen

orchiopexy /'ɔ:kiəpɛksi/ *noun* same as **orchidopexy** (NOTE: The plural is **orchiopieses**.)

orchis /'ɔ:kɪs/ *noun* a testis

orchitis /ɔ:kɪ'tɪs/ *noun* inflammation of the testes, characterised by hypertrophy, pain and a sensation of weight

orderly /'ɔ:dəli/ *noun* a person who does general work in a hospital (NOTE: The plural is **orderlies**.)

Orem's model /'ɔ:rəmz ,mɒd(ə)l/ *noun* a modern model for nursing which focuses on a person's ability to perform self-care, defined as activities which individuals initiate and perform on their own behalf to maintain life, health and well-being

organ /'ɔ:gən/ *noun* a part of the body which is distinct from other parts and has a particular function, e.g. the liver, an eye or ovaries

organic /ɔ:'gænɪk/ *adjective* 1. referring to organs in the body 2. coming from an animal, plant or other organism 3. referring to food which has been cultivated naturally, without certain fertilisers or pesticides

organically /ɔ:'gænɪkli/ *adverb* in a natural or apparently natural way

organic disease /ɔ:,gænɪk dɪ'zi:z/, **organic disorder** /ɔ:,gænɪk dɪ'sɔ:ðə/ *noun* a disease or disorder associated with physical changes in one or more organs of the body

organisation /,ɔ:gənɪ'zeɪʃ(ə)n/, **organization** *noun* 1. a group of people set up for a particular purpose 2. the planning or arranging of something ○ *the organisation of the rota* 3. the

way in which the component parts of something are arranged

organism /'ɔ:gənɪz(ə)m/ *noun* any single plant, animal, bacterium, fungus or other living thing

organo- /ɔ:gənəʊ, ɔ:gænəʊ/ *prefix* organ

organ of Corti /,ɔ:gən əv 'kɔ:tɪ/ *noun* a membrane in the cochlea which takes sounds and converts them into impulses sent to the brain along the auditory nerve. Also called **spiral organ** [Described 1851. After Marquis Alfonso Corti (1822–88), Italian anatomist and histologist.]

organotherapy /,ɔ:gənəʊ'θerəpi/ *noun* the treatment of a disease by using an extract from the organ of an animal, e.g. using liver extract to treat anaemia

organ transplant /'ɔ:gən ,trænsplɑ:nt/ *noun* a surgical operation to transplant an organ from one person to another

orgasm /'ɔ:gæz(ə)m/ *noun* the climax of the sexual act, when a person experiences a moment of great excitement

oriental sore /,ɔ:ri'ent(ə)l 'sɔ:/ *noun* a skin disease of tropical countries caused by the parasite *Leishmania*. ○ **leishmaniasis**

orifice /'ɔrifɪs/ *noun* an opening in the body, e.g. the mouth or anus

origin /'ɔ:ri'dʒɪn/ *noun* 1. the source or beginning of something 2. a place where a muscle is attached, or where the branch of a nerve or blood vessel begins

original /'ɔ:ri'dʒən(ə)l/ *adjective* as before a change was made ○ *The surgeon was able to move the organ back to its original position.*

originate /'ɔ:ri'dʒɪneɪt/ *verb* to start in a place, or make something start ○ *drugs which originated in the tropics* ○ *The treatment originated in China.* (NOTE: **originating – originated**)

oris /'ɔ:ri:s/ ○ **cancrum oris, orbicularis oris**

ornithine /'ɔ:nɪθaɪn/ *noun* an amino acid produced by the liver

ornithosis /,ɔ:nɪ'θəʊsɪs/ *noun* a disease of birds which can be passed to humans as a form of pneumonia

oro- /'ɔ:rəʊ/ *prefix* mouth

ogenital /,ɔ:rəʊ'dʒenɪt(ə)l/ *adjective* relating to both the mouth and the genitals

opharynx /,ɔ:rəʊ'færɪŋks/ *noun* a part of the pharynx below the soft palate at the back of the mouth (NOTE: The plural is **opharynxes** or **oropharynges**)

ORT abbr oral rehydration therapy

ortho- /'ɔ:θəʊ/ *prefix* correct or straight

orthodiagraph /,ɔ:θəʊ'daɪəgrɑ:f/ *noun* an X-ray photograph of an organ taken using only a thin stream of X-rays which allows accurate measurements of the organ to be made

orthodontia /,ɔ:θə'dɒntʃə/ *noun* US same as **orthodontics**

orthodontic /,ɔ:θəʊ'dɒntɪk/ *adjective* correcting badly formed or placed teeth ◎ *He had to undergo a course of orthodontic treatment.*

orthodontics /,ɔ:θəʊ'dɒntɪks/ *noun* a branch of dentistry which deals with correcting badly placed teeth (NOTE: The US term is **orthodontia**.)

orthodontist /,ɔ:θəʊ'dɒntɪst/ *noun* a dental surgeon who specialises in correcting badly placed teeth

orthopaedic /,ɔ:θə'pi:dɪk/ *adjective* 1. referring to treatment which corrects badly formed bones or joints 2. referring to or used in orthopaedics (NOTE: The US spelling is **orthopedic**.)

orthopaedic collar /,ɔ:θə,pi:dɪk 'kɒlə/ *noun* a special strong collar to support the head of a person with neck injuries or a condition such as cervical spondylosis

orthopaedic hospital /,ɔ:θəpi:dɪk 'hɒpɪtʃ(ə)l/ *noun* a hospital which specialises in operations to correct badly formed joints or bones

orthopaedics /,ɔ:θə'pi:dɪks/ *noun* a branch of surgery dealing with irregularities, diseases and injuries of the locomotor system (NOTE: The US spelling is **orthopedics**.)

orthopaedic surgeon /,ɔ:θəpi:dɪk 'sɜ:gən/ *noun* a surgeon who specialises in orthopaedics

orthopaedist /,ɔ:θə'pi:dist/ *noun* a surgeon who specialises in orthopaedics (NOTE: The US spelling is **orthopedist**.)

orthopnoea /,ɔ:θəp'nɪ:ə/ *noun* a condition in which a person has great difficulty in breathing while lying down. ◊ **dyspnoea** (NOTE: The US spelling is **orthopnea**.)

orthopnoeic /,ɔ:θəp'nɪ:ɪk/ *adjective* referring to orthopnoea (NOTE: The US spelling is **orthopneic**.)

orthopsychiatry /,ɔ:θəʊsət'kaɪətri/ *noun* the science and treatment of behavioural and personality disorders

orthoptics /,ɔ:'θɒptɪks/ *noun* the study of methods used to treat squints

orthoptist /,ɔ:'θɒptɪst/ *noun* an eye specialist, working in an eye hospital, who treats squints and other disorders of eye movement

orthoscope /,ɔ:'θɒptɪskəp/ *noun* same as **amblyoscope**

orthosis /,ɔ:'θəʊsɪs/ *noun* a device which is fitted to the outside of the body to support a weakness or correct a malformation, e.g. a surgical collar or leg brace (NOTE: The plural is **orthoses**.)

orthostatic /,ɔ:θə'stætɪk/ *adjective* referring to the position of the body when standing up straight

orthostatic hypotension /,ɔ:θəstætɪk haɪpə'u'tenʃən/ *noun* a common condition where the blood pressure drops when a person stands up suddenly, causing dizziness

orthotics /ɔ:'θɒtɪks/ *plural noun* the branch of medical engineering which deals with the design and fitting of devices such as braces in the treatment of orthopaedic disorders

orthotist /'ɔ:θətɪst/ *noun* a qualified person who fits orthoses

Ortolani's sign /,ɔ:tə'læni saɪn/, **Ortolani manoeuvre** /,ɔ:tə'læni mə,nu:və/, **Ortolani's test**, /,ɔ:tə'læ:nɪz tɛst/ *noun* a test for congenital dislocation of the hip in babies aged 6–12, in which the hip makes sharp sounds if the joint is rotated [Described 1937. After Marius Ortolani, Italian orthopaedic surgeon.]

os /ɒs/ *noun (technical)* 1. a bone (NOTE: The plural is **osssa**.) 2. the mouth (NOTE: The plural is **ora**.)

OSA *abbr* obstructive sleep apnoea

oscillation /,ɒsɪ'leɪʃ(ə)n/ *noun* 1. the action of moving backwards and forwards between two points at a regular speed 2. a single movement between two points

oscilloscope /'ɒsɪləskəʊp/ *noun* a device which produces a visual record of an electrical current on a screen using a cathode ray tube. It is used in the testing of electronic equipment and in measuring electrical impulses of the heart or the brain.

osculum /'ɒskjʊləm/ *noun* a small opening or pore (NOTE: The plural is **oscula**.)

-osis /ə'sɪsɪs/ *suffix* disease

Osler's nodes /'ɒsləz nəʊdз/ *plural noun* tender swellings at the ends of fingers and toes in people who have subacute bacterial endocarditis [Described 1885. After Sir William Osler (1849–1919), Professor of Medicine in Montreal, Philadelphia, Baltimore and then Oxford.]

osm- /ɒznm/ *prefix* 1. smell 2. osmosis

osmoreceptor /,ɒzməʊrɪ'septə/ *noun* a cell in the hypothalamus which checks the level of osmotic pressure in the blood by altering the secretion of ADH and regulates the amount of water in the blood

osmosis /bz'meʊsɪs/ *noun* the movement of a solvent from one part of the body through a semipermeable membrane to another part where there is a higher concentration of molecules

osmotic pressure /bz'mɒtɪk 'preʃə/ *noun* the pressure required to stop the flow of a solvent through a membrane

ossa /'ɒsə/ *plural of os noun* 1

osseous /'ɒsiəs/ *adjective* referring to or resembling bone

osseous labyrinth /,ɒsiəs 'læbərɪnθ/ *noun* same as **bony labyrinth**

ossicle /'ɒsɪk(ə)l/ *noun* a small bone

COMMENT: The auditory ossicles pick up the vibrations from the eardrum and transmit them through the oval window to the cochlea in the inner ear. The three bones are articulated together; the stapes is attached to the membrane of the oval window, the malleus to

the eardrum, and the incus lies between the other two.

ossification /'ɒsfɪk'keɪʃ(ə)n/ *noun* the formation of bone. Also called **osteogenesis**

osseum /'ɒsiəm/ ♀ **fragilitas ossium**

ost- /ɒst/ *prefix* same as **oste-** (*used before vowels*)

ostectomy /'ɒstektəmɪ/ *noun* a surgical operation in which a bone, or a piece of bone, is removed (NOTE: The plural is **ostectomies**.)

osteitis /,ɒsti'aitɪs/ *noun* inflammation of a bone due to injury or infection

osteitis deformans /,ɒsti'aitɪs di:f'ɔ:mənz/ *noun* a disease which gradually softens bones in the spine, legs and skull, so that they become curved. Also called **Paget's disease**

osteitis fibrosis cystica /,ɒsti'aitɪs fai'briəʊsis 'sɪstɪkə/ *noun* a generalised weakness of bones, caused by excessive activity of the thyroid gland and associated with formation of cysts, in which bone tissue is replaced by fibrous tissue. Also called **von Recklinghausen's disease** (NOTE: The localised form is **osteitis fibrosis localista**.)

osteo- /ɒstiə/ *prefix* bone

osteoarthritis /,ɒstiəʊəsθ'rætɪs/ *noun* a degenerative disease of middle-aged and elderly people characterised by inflamed joints which become stiff and painful. Also called **osteoarthritis**

osteopathia /,ɒstiəʊəsθ'θræpəθi/ *noun* a disease of the bone and cartilage at a joint, particularly the ankles, knees or wrists, associated with carcinoma of the bronchi

osteopathosis /,ɒstiəʊəsθ'θræsɪs/ *noun* same as **osteoarthritis**

ostearthrotomy /,ɒstiəʊəsθ'rɒtəmɪ/ *noun* a surgical operation to remove the articular end of a bone (NOTE: The plural is **ostearthrotomies**.)

osteoblast /'ɒstiəblæst/ *noun* a cell in an embryo which forms bone

osteochondritis /,ɒstiəʊkən'draɪtɪs/ *noun* degeneration of the epiphyses

osteochondritis dissecans /,ɒstiəʊkɒn'draɪtɪs 'dɪsɛkənz/ *noun* a painful condition where pieces of articular cartilage become detached from the joint surface

osteochondroma /,ɒstiəʊkən'draʊmə/ *noun* a tumour containing both bony and cartilaginous cells (NOTE: The plural is **osteochondromas** or **osteochondromata**.)

osteochondrosis /,ɒstiəʊkɒn'draʊsɪs/ *noun* a disorder of cartilage and bone formation which affects the joints in children, causing pain and a limp, probably due to circulation disturbances to that part of the bone

osteoclasia /,ɒstiəʊ'klɛzɪə/, **osteoclasis** /,ɒsti'ɒkləsɪs/ *noun* 1. destruction of bone tissue by osteoclasts 2. a surgical operation to

fracture or refracture bone to correct a deformity

osteoclast /'ɒstiəuklæst/ *noun* 1. a cell which destroys bone 2. a surgical instrument for breaking bones

osteoclastoma /,ɒstiəuklæ'stəʊmə/ *noun* a usually benign tumour occurring at the ends of long bones (NOTE: The plural is **osteoclastomas** or **osteoclastomata**.)

osteocyte /'ɒstiəʊsait/ *noun* a bone cell

osteodystrophy /,ɒstiəʊ'distrəfɪ/ *noun* a bone disease, especially one caused by disorder of the metabolism

osteogenesis /,ɒstiəʊ'dʒenəsɪs/ *noun* same as **ossification**

osteogenesis imperfecta /,ɒstiəʊ,dʒenəsɪs im'pækfətə/ *noun* a congenital condition in which bones are brittle and break easily due to unusual bone formation. Also called **brittle bone disease**

osteogenic /,ɒstiəʊ'dʒenɪk/ *adjective* made of or originating in bone tissue

osteology /,ɒsti'ɒlədʒi/ *noun* the study of bones and their structure

osteolysis /,ɒsti'ɒlɪsɪs/ *noun* 1. destruction of bone tissue by osteoclasts 2. loss of bone calcium

osteolytic /,ɒstiə'ɒlɪtɪk/ *adjective* referring to osteolysis

osteoma /,ɒsti'əʊmə/ *noun* a benign tumour in a bone (NOTE: The plural is **osteomas** or **osteomata**.)

osteomalacia /,ɒstiəʊməl'æsɪə/ *noun* a condition in adults in which the bones become soft because of lack of calcium and Vitamin D, or limited exposure to sunlight

osteomyelitis /,ɒstiəʊməl'ætɪs/ *noun* inflammation of the interior of bone, especially the marrow spaces

osteon /'ɒstiən/ *noun* same as **Haversian system**

osteopath /'ɒstiəʊ,pæθ/ *noun* a person who practises osteopathy

osteopathy /,ɒsti'ɒpəθi/ *noun* 1. the treatment of disorders by massage and manipulation of joints 2. any disease of bone (NOTE: The plural is **osteopathies**.)

osteopetrosis /,ɒstiəʊpə't्रəʊsɪs/ *noun* a disease of a group in which bones increase in density. Also called **marble bone disease**

osteophony /,ɒsti'ɒfənɪ/ *noun* the conduction of sound by bone, as occurs in the ear. Also called **bone conduction**

osteophyte /'ɒstiəfait/ *noun* a bony growth

osteoplastic necrotomy /,ɒstiəplæstɪk nek'rɒtəmɪ/ *noun* a surgical operation to remove a piece of dead bone tissue

osteoplasty /'ɒstiəplæstɪ/ *noun* plastic surgery on bones

osteoporosis /'ɒstɪəʊpɔ:s'rəʊsɪs/ *noun* a condition in which the bones become thin, porous and brittle, due to low levels of oestrogen, lack of calcium and lack of physical exercise. Also called **brittle bone disease**

COMMENT: Osteoporosis mainly affects post-menopausal women, increasing the risk of fractures. Hormone replacement therapy is the most effective method of preventing osteoporosis though there are other risks to health from long-term use.

osteosarcoma /'ɔ:stiəʊsəmə:'kəʊməs/ *noun* a malignant tumour of bone cells (NOTE: The plural is **osteosarcomas** or **osteosarcomata**.)

osteosclerosis /'ɒstɪəʊsklə'rəʊsɪs/ *noun* a condition in which the bony spaces become hardened as a result of persistent inflammation

osteotome /'ɒstɪətəʊm/ *noun* a type of chisel used by surgeons to cut bone

osteotomy /'ɒstɪ'ɒtəmɪ/ *noun* a surgical operation to cut a bone, especially to relieve pain in a joint (NOTE: The plural is **osteotomies**.)

ostia /'ɒstɪə/ plural of **ostium**

ostium /'ɒstɪəm/ *noun* an opening into a passage (NOTE: The plural is **ostia**.)

ostomy /'ɒstəmɪ/ *noun* a colostomy or ileostomy (*informal*) (NOTE: The plural is **ostomies**.)

-ostomy /'ɒstəmɪ/ *suffix* operation to make an opening

OT *abbr* occupational therapist

ot- /'əʊt/ *prefix* same as **oto-** (*used before vowels*)

otalgia /'əʊ'tældʒə/ *noun* same as **earache**

OTC *abbreviation* referring to medication which can be bought freely at a chemist's shop, and does not need a prescription. Full form **over the counter**

OTC drug /,əʊ tɪ: 'sɪ: dræg/ *noun* same as **over-the-counter drug**

otic /'əʊtɪk/ *adjective* referring to the ear

otic ganglion /'əʊtɪk 'gæŋglɪən/ *noun* a ganglion associated with the mandibular nerve where it leaves the skull

otitis /'əʊ'taɪtɪs/ *noun* inflammation of the ear

otitis externa /'əʊ,tætɪs ɪk'stɜ:nə/ *noun* inflammation of the external auditory meatus to the eardrum

otitis interna /'əʊ,tætɪs ɪn'tɜ:nə/ *noun* inflammation of the inner ear. Also called **labyrinthitis**

otitis media /əʊ,tætɪs 'mi:dɪə/ *noun* an infection of the middle ear, usually accompanied by headaches and fever. Also called **middle ear infection, tympanitis**

oto- /'əʊtəʊ/ *prefix* ear

otolaryngologist /'əʊtəʊlærɪŋ'gɒlədʒɪst/ *noun* a doctor who specialises in treatment of diseases of the ear and throat

otolaryngology /'əʊtəʊlærɪŋ'gɒlədʒɪ/ *noun* the study of diseases of the ear and throat

otolith /'əʊtəlɪθ/ *noun* a tiny piece of calcium carbonate attached to the hair cells in the saccule and utricle of the inner ear

otolith organ /'əʊtəlɪθ 'ɔ:gən/ *noun* one of two pairs of sensory organs in the inner ear, the saccule and the utricle, which pass information to the brain about the position of the head

otologist /'əʊ'tɒlədʒɪst/ *noun* a doctor who specialises in the study of the ear

otology /'əʊ'tɒlədʒɪ/ *noun* the scientific study of the ear and its diseases

-otomy /'ɒtəmɪ/ *suffix* an act of cutting into an organ or part of the body in a surgical operation

otomycosis /'əʊtəmək'əʊsɪs/ *noun* an infection of the external auditory meatus by a fungus

otoplasty /'əʊtəplæsti/ *noun* plastic surgery of the external ear to repair damage or deformity

otorhinolaryngologist /,əʊtənə,rainəʊlærɪŋ'gɒlədʒɪst/ *noun* a doctor who specialises in the study of the ear, nose and throat

otorhinolaryngology /,əʊtənə,rainəʊlærɪŋ'gɒlədʒɪ/ *noun* the study of the ear, nose and throat. Also called **ENT**

otorrhagia /,əʊtə'reɪdʒə/ *noun* bleeding from the external ear

otorrhoea /,əʊtə'rɪ:ə/ *noun* the discharge of pus from the ear (NOTE: The US spelling is **otorrhhea**.)

otosclerosis /,əʊtəʊsklə'rəʊsɪs/ *noun* a condition in which the ossicles in the middle ear become thicker and the stapes becomes fixed to the oval window leading to deafness

otoscope /'əʊtəskəʊp/ *noun* same as **auriscope**

otospongiosis /,əʊtə,spɒŋgɪəz'əʊsɪs/ *noun* the formation of spongy bone in the labyrinth of the ear which occurs in otosclerosis

Otosporin /'əʊtəspɔ:rɪn/ a trade name for ear drops containing hydrocortisone, neomycin and polymyxin

ototoxic /,əʊtə'tɒksɪk/ *adjective* referring to a drug or an effect which is damaging to organs or nerves involved in hearing or balance

outbreak /'aʊtbreɪk/ *noun* a series of cases of a disease which starts suddenly ○ There was an outbreak of typhoid fever or a typhoid outbreak.

outcome /'autkʌm/ *noun* 1. what happens as the result of something 2. a measure of the result of an intervention or treatment, e.g. the mortality rate following different methods of surgery ○ *medical outcomes*

outer /'aʊtə/ *adjective* outside or external

outer ear /'aʊtər 'ɪə/ *noun* the part of the ear which is on the outside of the head, together with the passage leading to the eardrum. Also called **external ear**

outer pleura /'autər 'pluərə/ *noun* same as **parietal pleura**

outlet /'autlət/ *noun* an opening or channel through which something can go out

out-of-body experience /'aut əv 'bɒdɪ ɪk 'spɪəriəns/ *noun* an occasion when a person feels as though they have left their body and, often, travelled along a tunnel towards a bright light (NOTE: It may happen after anaesthesia, perhaps caused by the brain not having enough oxygen.)

outpatient /'autpeɪʃ(ə)nt/ *noun* someone who comes to a hospital for treatment but does not stay overnight ◇ *She goes for treatment as an outpatient.* Abbr OP. Compare **inpatient**

outpatient department /'autpeɪʃ(ə)nt dɪ ,pɔ:tment/, **outpatients' department** /'aut peɪʃ(ə)nts dɪ,pɔ:tment/, **outpatients' clinic** /'autpeɪʃ(ə)nts ,klɪnik/ *noun* a department of a hospital which deals with outpatients

outreach /'aʊtri:tʃ/ *noun* services provided for patients or the public in general, outside a hospital or clinic

ova /'əʊvə/ plural of **ovum**

oval window /'əʊv(ə)l ,wɪndəʊ/ *noun* an oval opening between the middle ear and the inner ear. Also called **fenestra ovalis**. See illustration at **EAR** in Supplement

ovar- /əʊvərəl/ *prefix* same as **ovari-** (*used before vowels*)

ovinalgia /,əʊvə'rældʒiə/ *noun* pain in the ovaries. Also called **ovarialgia**

ovari- /əʊvərəl/ *prefix* ovaries

ovarialgia /,əʊvərə'i'ældʒiə/ *noun* same as **ovaralgia**

ovarian /ə'u'veəriən/ *adjective* referring to the ovaries

ovarian cancer /əʊ,veəriən 'kænsə/ *noun* a malignant tumour of the ovary, which occurs especially after the menopause

ovarian cycle /əʊ,veəriən 'saɪk(ə)l/ *noun* the regular changes in the ovary during a woman's reproductive life

ovarian cyst /əʊ,veəriən 'sist/ *noun* a cyst which develops in the ovaries

ovarian follicle /əʊ,veəriən 'fɒlik(ə)l/ *noun* a cell which contains an ovum. Also called **Graafian follicle**

ovariectomy /,əʊvərə'i'ektəmi/ *noun* same as **oophorectomy** (NOTE: The plural is **ovariectomies**.)

ovariocele /əʊ'veəriəʊsɪ:l/ *noun* a hernia of an ovary

ovariotomy /,əʊvərə'i'ɒtəmi/ *noun* a surgical operation to remove an ovary or a tumour in an ovary (NOTE: The plural is **ovariotomies**.)

ovaritis /,əʊvə'rætɪs/ *noun* same as **oophoritis**

ovary /'əʊv(ə)ri/ *noun* one of two organs in a woman which produce ova or egg cells and secrete the female hormone oestrogen. Also

called **oophoron**. See illustration at **UROGENITAL SYSTEM (FEMALE)** in Supplement (NOTE: The plural is **ovaries**. For other terms referring to ovaries, see words beginning with **oophor-**, **oophoro-**.)

over- /'əʊvərəl/ *prefix* too much

overbite /'əʊvəbait/ *noun* the usual formation of the teeth, in which the top incisors come down over and in front of the bottom incisors when the jaws are closed

overcome /,əʊvə'kʌm/ *verb* 1. to fight something and win 2. to make a person lose consciousness ◇ *Two people were overcome by smoke in the fire.* (NOTE: **overcoming** – **overcame** – **overcome**)

overcompensate /,əʊvə'kɒmpenset/ *verb* to try too hard to cover the effects of a condition or quality (NOTE: **overcompensating** – **overcompensated**)

overcompensation /,əʊvəkɒmpənəsən/ *noun* an attempt by a person to remove the bad effects of a mistake or a fault in their character in which they make too much effort, and so cause some other problem

overdo /,əʊvə'du:/ *verb* ◻ **to overdo it or to overdo things** to work too hard or to do too much exercise (*informal*) ◇ *She overdid it, working until 9 o'clock every evening.* ◇ *He has been overdoing things and has to rest.*

overdose /'əʊvədəʊs/ *noun* a dose of a drug which is larger than the recommended or usual dose

overeating /,əʊvə'rɪti:n/ *noun* eating too much food

overexertion /,əʊvərɪg'zɜ:f(ə)n/ *noun* doing too much physical work or taking too much exercise

overflow incontinence /,əʊvəfləʊ in'kɒntrɪnəns/ *noun* a leakage of urine because the bladder is too full

overgrow /,əʊvə'grəʊ/ *verb* (*of a tissue*) to grow over another tissue (NOTE: **overgrew** – **overgrown**)

overgrowth /'əʊvəgrəʊθ/ *noun* a growth of tissue over another tissue

overjet /'əʊvədʒɛt/ *noun* a space which separates the top incisors from the bottom incisors when the jaws are closed

overlap /,əʊvə'læp/ *verb* (*of bandages, etc.*) to lie partly on top of another (NOTE: **overlapping** – **overlapped**)

overprescribe /əʊvəpri'skraib/ *verb* to issue too many prescriptions for something ◇ *Some doctors seriously overprescribe tranquillisers.* (NOTE: **overprescribing** – **overprescribed**)

overproduction /,əʊvəprə'dʌlkʃən/ *noun* the act of producing too much of something ◇ *The condition is caused by overproduction of thyroxine by the thyroid gland.*

oversew /'əʊvəsəʊ/ *verb* to sew a patch of tissue over a perforation (NOTE: **oversewing** – **oversewed** – **oversewn**)

overt /əʊ'veɜ:t/ *adjective* easily seen with the naked eye. Opposite **occult**

over-the-counter drug /,əʊvə ðə 'kaʊntə dræg/ *noun* a drug which you can buy from a pharmacy without a doctor's prescription. Also called **OTC drug**

overweight /,əʊvə'weɪt/ *adjective* fatter and heavier than is medically advisable ○ *He is several kilos overweight for his age and height.*

overwork /,əʊvə'wɜ:k/ *noun* too much work ○ *He collapsed from overwork.* ■ *verb* to work too much, or make something work too much ○ *He has been overworking his heart.*

overwrought /,əʊvə'rɔ:t/ *adjective* very tense and nervous

ovi- /əʊvɪ/ *prefix* eggs or ova

oviduct /'əʊvidʌkt/ *noun* same as **Fallopian tube**

ovulate /'ɒvjuleɪt/ *verb* to release a mature ovum into a Fallopian tube (NOTE: **ovulating** – **ovulated**)

ovulation /,ɒvju'lɛɪʃ(ə)n/ *noun* the release of an ovum from the mature ovarian follicle into the Fallopian tube

ovum /'əʊvəm/ *noun* a female egg cell which, when fertilised by a spermatozoon, begins to develop into an embryo (NOTE: The plural is **ova**. For other terms referring to ova, see words beginning with **oo-**)

-oxacin /ɒksəsɪn/ *suffix* quinolone drug ○ *ciprofloxacin*

oxidase /'ɒksɪdeɪz/ *noun* an enzyme which encourages oxidation by removing hydrogen. ♀ **monoamine oxidase**

oxidation /'ɒksɪ'deɪʃ(ə)n/ *noun* the action of making oxides by combining with oxygen or removing hydrogen

COMMENT: Carbon compounds form oxides when metabolised with oxygen in the body, producing carbon dioxide.

oxide /'ɒksaɪd/ *noun* a compound formed with oxygen

oximeter /'ɒk'sɪmɪtə/ *noun* an instrument which measures the amount of oxygen in something, especially in blood

oxybutynin /,ɒksi'bju:tənɪn/, **oxybutinin** *noun* a drug which reduces the need to pass urine

oxycephalic /,ɒksɪkə'fælɪk/ *adjective* referring to oxycephaly

oxycephaly /,ɒksi'kefəli/ *noun* a condition in which the skull is shaped into a point, with exophthalmos and poor sight. Also called **turicephaly**

oxygen /'ɒksɪdʒən/ *noun* a chemical element that is a common colourless gas which is

present in the air and essential to human life (NOTE: The chemical symbol is **O**.)

COMMENT: Oxygen is absorbed into the bloodstream through the lungs and is carried to the tissues along the arteries. It is essential to healthy metabolism and given to patients with breathing difficulties.

oxygenate /'ɒksɪdʒəneɪt/ *verb* to combine blood with oxygen (NOTE: **oxygenating** – **oxygenated**)

oxygenated blood /,ɒksɪdʒəneɪtɪd 'blʌd/ *noun* blood which has received oxygen in the lungs and is being carried to the tissues along the arteries. Also called **arterial blood**. Compare **deoxygenated blood** (NOTE: Oxygenated blood is brighter red than venous deoxygenated blood.)

oxygenation /,ɒksɪdʒə'neɪʃ(ə)n/ *noun* the fact of becoming combined or filled with oxygen ○ *Blood is carried along the pulmonary artery to the lungs for oxygenation.*

oxygenator /'ɒksɪdʒə'neɪtə/ *noun* a machine which puts oxygen into the blood, used as an artificial lung in surgery

oxygen cylinder /'ɒksɪdʒən ,sɪlɪndə/ *noun* a heavy metal tube which contains oxygen and is connected to a patient's oxygen mask

oxygen mask /'ɒksɪdʒən mɑ:sk/ *noun* a mask connected to a supply of oxygen, which can be put over the face to help someone with breathing difficulties

oxygen tent /'ɒksɪdʒən tent/ *noun* a type of cover put over a person so that he or she can breathe in oxygen

oxygen therapy /'ɒksɪdʒən θerəpi/ *noun* any treatment involving the administering of oxygen, e.g. in an oxygen tent or in emergency treatment for heart failure

oxyhaemoglobin /,ɒksi,hi:mə'gləubɪn/ *noun* a compound of haemoglobin and oxygen, which is the way oxygen is carried in arterial blood from the lungs to the tissues. ♀ **haemoglobin** (NOTE: The US spelling is **oxyhemoglobin**.)

oxytic /ɒk'sɪtɪk/ *adjective* referring to glands and cells in the stomach which produce acid

oxytic cell /ɒk'sɪtɪk sel/ *noun* a cell in the gastric gland which secretes hydrochloric acid. Also called **parietal cell**

oxytetracycline /,ɒksi,tet्रə'saɪklɪ:n/ *noun* an antibiotic which is effective against a wide range of organisms

oxytocic /,ɒksi'təʊsɪk/ *noun* a drug which helps to start the process of childbirth, or speeds it up ■ *adjective* starting or speeding up childbirth by causing contractions in the muscles of the uterus

oxytocin /,ɒksi'təʊsɪn/ *noun* a hormone secreted by the posterior pituitary gland, which controls the contractions of the uterus and encourages the flow of milk

COMMENT: An extract of oxytocin is used as an injection to start contractions of the uterus and to assist in the third stage of labour.

oxyuriasis /'ɒksɪjʊ'rائیسیس/ *noun* same as **enterobiasis**

Oxyuris /'ɒksi'juəریس/ *noun* same as **Enterobius**

ozaena /əʊ'zi:nə/ *noun* **1.** a disease of the nose in which the nasal passage is blocked and mucus forms, giving off an unpleasant smell **2.** any unpleasant discharge from the nose (NOTE: The US spelling is **ozena**.)

ozone /'əʊzəən/ *noun* a gas present in the atmosphere in small quantities, which is harmful at high levels of concentration

COMMENT: The maximum amount of ozone which is considered safe for humans to breathe is 80 parts per billion. Even in lower concentrations it irritates the throat, makes people cough and gives headaches and asthma attacks similar to hay fever. The ozone layer in the stratosphere acts as a protection against the harmful effects of the sun's radiation, and the destruction or reduction of the layer has the effect of allowing more radiation to pass through the atmosphere with harmful effects such as skin cancer on humans.

ozone sickness /'əʊzəəن ,sɪکنəس/ *noun* a condition experienced by jet travellers, due to levels of ozone in aircraft

P

P ♦ **substance P**

Pa abbr pascal

pacemaker /'peɪsmēkə/ *noun* 1. a node in the heart which regulates the heartbeat. Also called **sinoatrial node**, **SA node** 2. ♦ **cardiac pacemaker**, **epicardial pacemaker**

COMMENT: An electrode is usually attached to the epicardium and linked to the device which can be implanted in various positions in the chest.

pachy- /pækɪ/ *prefix* thickening

pachydactyly /,pækɪ'dæktlɪ/ *noun* a condition in which the fingers and toes become thicker than usual

pachydermia /,pækɪ'dz:miə/, **pachyderma** /,pækɪ'dz:ma/ *noun* a condition in which the skin becomes thicker than normal

pachymeningitis /,pækɪ'menɪn'dʒaɪtɪs/ *noun* inflammation of the dura mater

pachymeninx /,pækɪ'mi:nɪŋks/ *noun* same as **dura mater**

pachyonychia /,pækɪə'nikiə/ *noun* unusual thickness of the nails

pachysomia /,pækɪ'səmɪə/ *noun* a condition in which soft tissues of the body become unusually thick

pacifier /'pæsɪfaɪə/ *noun* US a child's dummy

pacing /'peɪsɪŋ/ *noun* a surgical operation to implant or attach a cardiac pacemaker

Pacinian corpuscle /pə,sinjən 'kɔ:pʌs(ə)l/ *noun* a sensory nerve ending in the skin which is sensitive to touch and vibrations

pack /pæk/ *noun* 1. a tampon of gauze or cotton wool, used to fill an orifice such as the nose or vagina 2. a piece of wet material folded tightly, used to press on the body 3. a treatment in which a blanket or sheet is used to wrap round the body 4. a box or bag of goods for sale ○ *a pack of sticking plaster* ○ *The cough tablets are sold in packs of fifty.* ■ *verb* 1. to fill an orifice with a tampon ○ *The ear was packed with cotton wool to absorb the discharge.* 2. to put things in cases or boxes ○ *The transplant organ arrived at the hospital packed in ice.*

packed cell volume /,pækɪt 'sel ,vɒlju:m/ *noun* the volume of red blood cells in a person's blood shown against the total volume of blood. Also called **haematocrit**

packing /'pækɪŋ/ *noun* absorbent material put into a wound or part of the body to absorb fluids

pack up /,pæk 'ʌp/ *verb* to stop working (informal) ○ *His heart simply packed up under the strain.*

PACT abbr prescribing analyses and cost

pad /pa:d/ *noun* 1. a piece or mass of soft absorbent material, placed on part of the body to protect it ○ *She wrapped a pad of soft cotton wool round the sore.* 2. a thickening of part of the skin

paed- /pi:d/ *prefix* same as **paedo-** (*used before vowels*) (NOTE: The US spelling is **ped-**)

paediatric /,pi:di'ætrɪk/ *adjective* referring to the treatment of the diseases of children ○ *A new paediatric hospital has been opened.* ○ *Parents can visit children in the paediatric wards at any time.*

'Paediatric day surgery minimizes the length of hospital stay and therefore is less traumatic for both child and parents' [British Journal of Nursing]

paediatrician /,pi:diə'trɪʃ(ə)n/ *noun* a doctor who specialises in the treatment of diseases of children

paediatrics /,pi:di'ætriks/ *noun* the study of children, their development and diseases. Compare **geriatrics**

paedo- /pi:dəʊ/ *prefix* referring to children
paedodontia *noun* another spelling of **pedodontia**

Paget's disease /'pædʒəts dɪ,zi:z/ *noun* 1. same as **osteitis deformans** 2. a form of breast cancer which starts as an itchy rash round the nipple [Described 1877. After Sir James Paget (1814–99), British surgeon.]

pain /peɪn/ *noun* the feeling of severe discomfort which a person has when hurt ○ *The doctor gave him an injection to relieve the pain.* ○ *She is suffering from back pain.* (NOTE: Pain can be used in the plural to show that it recurs: **She has pains in her left leg.**) □ **to be in great**

pain to have very sharp pains which are difficult to bear

COMMENT: Pain is carried by the sensory nerves to the central nervous system. From the site it travels up the spinal column to the medulla and through a series of neurones which use Substance P as the neurotransmitter to the sensory cortex. Pain is the method by which a person knows that part of the body is damaged or infected, though the pain is not always felt in the affected part. See synalgia.

pain clinic /'peɪn ,klinik/ *noun* a centre which looks after people with severe persistent pain and whose staff include professionals from many specialist areas of medicine

painful /'peɪnf(ə)l/ *adjective* causing pain ○ *She has a painful skin disease.* ○ *His foot is so painful he can hardly walk.* ○ *Your eye looks very red – is it very painful?*

painkiller /'peɪnkɪlə/ *noun* a drug that reduces pain

painless /'peɪnləs/ *adjective* not causing pain ○ *a painless method of removing warts*

pain pathway /'peɪn ,pa:θwei/ *noun* a series of linking nerve fibres and neurones which carry impulses of pain from the site to the sensory cortex

pain receptor /'peɪn rɪ,septə/ *noun* a nerve ending which is sensitive to pain

pain relief /'peɪn rɪ,li:f/ *noun* the act of easing pain by using analgesics

paint /peɪnt/ *noun* a coloured antiseptic, analgesic or astringent liquid which is put on the surface of the body ■ *verb* to cover a wound with an antiseptic, analgesic or astringent liquid or lotion ○ *She painted the rash with calamine.*

painter's colic /,peɪntəz 'kolɪk/ *noun* a form of lead poisoning caused, especially formerly, by working with paint

pain threshold /'peɪn ,θrefθəuld/ *noun* the point at which a person finds it impossible to bear pain without crying

palatal /'pælət(ə)l/ *adjective* referring to the palate

palate /'pælət/ *noun* the roof of the mouth and floor of the nasal cavity, formed of the hard and soft palates

palate bone /'pælət bəʊn/ *noun* one of two bones which form part of the hard palate, the orbits of the eyes and the cavity behind the nose. Also called **palatine bone**

palatine /'pælətəɪn/ *adjective* referring to the palate

palatine arch /'pælətəɪn ə:tʃ/ *noun* a fold of tissue between the soft palate and the pharynx

palatine bone /'pælətəɪn bəʊn/ *noun* same as **palate bone**

palatine tonsil /,pælətəɪn 'tɒns(ə)l/ *noun* same as **tonsil**

palato- /pælətəʊ/ *prefix* the palate

palatoglossal arch /,pælətəʊ,glos(ə)l ə:tʃ/ *noun* a fold between the soft palate and the tongue, anterior to the tonsil

palatopharyngeal arch /,pælətəʊfærɪn ,dʒɪəl ə:tʃ/ *noun* a fold between the soft palate and the pharynx, posterior to the tonsil

palatoplasty /'pælətəplæstɪ/ *noun* plastic surgery of the roof of the mouth, e.g. to repair a cleft palate

palatoplegia /,pælətə'pli:dʒə/ *noun* paralysis of the soft palate

palorrhaphy /,pælə'tɔ:rəfi/ *noun* a surgical operation to suture and close a cleft palate. Also called **staphylorrhaphy**, **urancorraphy**

pale /peɪl/ *adjective* light coloured or white ○ *After her illness she looked pale and tired.* □ **to turn pale** to become white in the face, because the flow of blood is reduced ○ *Some people turn pale at the sight of blood.*

paleness /'peɪlnəs/ *noun* the fact of being pale

pali- /pæli/ *prefix* same as **palin-**

palilalia /,pælɪ'lɛliə/ *noun* a speech disorder in which the person repeats words

palin- /'pælin/ *prefix* repeating

palindromic /,pælin'drəmɪk/ *adjective* recurring ○ *a palindromic disease*

palliative /'pæli:tɪv/ *noun* a treatment or drug which relieves symptoms but does nothing to cure the disease which causes the symptoms. For example, a painkiller can reduce the pain in a tooth, but will not cure the caries which causes the pain. ■ *adjective* providing relief

‘...coronary artery bypass grafting is a palliative procedure aimed at the relief of persistent angina pectoris’ [British Journal of Hospital Medicine]

palliative care /'pæli:tɪv 'keə/, **palliative treatment** /,pæli:tɪv 'trɪtmənt/ *noun* treatment which helps to reduce the symptoms of a disease, especially a terminal or chronic condition, but does not cure it

COMMENT: Palliative care may involve giving antibiotics, transfusions, pain-killing drugs, low-dose chemotherapy and psychological and social support to help the person and their family adjust to the illness. The treatment is often provided in a hospice.

pallidotomy /,pælɪ'dɒtəmi/ *noun* an operation on the brain which can reduce many of the symptoms of Parkinson’s disease, such as tremor, bradykinesia and bent posture

pallium /'pæliəm/ *noun* the layer of grey matter on the surface of the cerebral cortex

pallor /'pælər/ *noun* the condition of being pale

palm /pɑ:m/ *noun* the inner surface of the hand, extending from the bases of the fingers to the wrist

palmar /'pælma/ *adjective* referring to the palm of the hand

palmar arch /'pælmər ɑ:tʃ/ *noun* one of two arches or joins within the palm formed by two arteries which link together

palmar fascia /,pælma 'feɪʃə/ *noun* the tendons in the palm of the hand

palmar interosseous /,pælmər ,inter 'ɔ:sɪəs/ *noun* a deep muscle between the bones in the hand

palmar region /'pælmə ,ri:dʒ(ə)n/ *noun* an area of skin around the palm

palpable /'pælpəb(ə)l/ *adjective* 1. able to be felt when touched 2. able to be examined with the hand

'...mammography is the most effective technique available for the detection of occult (non-palpable) breast cancer. It has been estimated that mammography can detect a carcinoma two years before it becomes palpable' [Southern Medical Journal]

palpate /pæl'peɪt/ *verb* to examine part of the body by feeling it with the hand

palpation /pæl'peɪʃ(ə)n/ *noun* an examination of part of the body by feeling it with the hand

palpebra /'pælpib्रə/ *noun* same as **eyelid**
(NOTE: The plural is **palpebrae**.)

palpebral /'pælpib्रəl/ *adjective* referring to the eyelids

palpitate /'pælpitət/ *verb* to beat rapidly or irregularly

palpitation /pælpɪ'teɪʃ(ə)n/ *noun* awareness that the heart is beating rapidly or irregularly, possibly caused by stress or by a disease

pan- /pæn/ *prefix* referring to everything

panacea /,pænə'si:ə/ *noun* a medicine which is supposed to cure everything

Panadol /'pænədɒl/ a trade name for paracetamol

panarthritis /,pænəʊ:'θraɪtɪs/ *noun* inflammation of all the tissues of a joint or of all the joints in the body

pancarditis /,pænku:'dɑ:rtɪs/ *noun* inflammation of all the tissues in the heart, i.e. the heart muscle, the endocardium and the pericardium

pancreas /'pæŋkriəs/ *noun* a gland which lies across the back of the body between the kidneys. See illustration at **DIGESTIVE SYSTEM** in Supplement

COMMENT: The pancreas has two functions: the first is to secrete the pancreatic juice which goes into the duodenum and digests proteins and carbohydrates; the second function is to produce the hormone insulin which regulates the use of sugar by the body. This hormone is secreted into the bloodstream by the islets of Langerhans which are in the pancreas.

pancreatectomy /,pæŋkriə'tektəmɪ/ *noun* the surgical removal of all or part of the pancreas

pancreatic /,pæŋkri'ætɪk/ *adjective* referring to the pancreas

pancreatic duct /,pæŋkri'ætɪk dʌkt/ *noun* a duct leading through the pancreas to the duodenum

pancreatic juice /,pæŋkri'ætɪk dʒu:s/, **pancreatic secretion** /,pæŋkri,ætɪk sɪ'kri:ʃ(ə)n/ *noun* a digestive juice, formed of enzymes produced by the pancreas, which digests fats and carbohydrates

pancreatin /'pæŋkristɪn/ *noun* a substance made from enzymes secreted by the pancreas, used to treat someone whose pancreas does not produce pancreatic enzymes

pancreatitis /,pæŋkriə'taɪtɪs/ *noun* inflammation of the pancreas

pancreatotomy /,pæŋkri'ætəmɪ/, **pancreatotomy** /,pæŋkriə'tɒtəmɪ/ *noun* a surgical operation to open the pancreatic duct

pancytopenia /,pænsaɪta'pi:nɪə/ *noun* a condition in which there are too few red and white blood cells and blood platelets

pandemic /'pæn'demɪk/ *noun* an epidemic disease which affects many parts of the world. Compare **endemic**, **epidemic** ■ *adjective* widespread

pang /pæŋ/ *noun* a sudden sharp pain, especially in the intestine ○ *After not eating for a day, she suffered pangs of hunger.*

panhysterectomy /,pænhɪstə'rektmɪ/ *noun* the surgical removal of all the uterus and the cervix

panic /'pæník/ *noun* a feeling of great fear which cannot be stopped and which sometimes results in irrational behaviour ○ *He was in a panic as he sat in the consultant's waiting room.* ■ *verb* to be suddenly afraid ○ *She panicked when the surgeon told her she might need to have an operation.*

panic attack /'pæník ə,tæk/ *noun* a sudden onset of panic

panic disorder /'pæník dɪs,ɔ:də/ *noun* a condition in which somebody has frequent panic attacks

panniculitis /pə,níkju'lartɪs/ *noun* inflammation of the panniculus adiposus, producing tender swellings on the thighs and breasts

panniculus /pə'níkjuləs/ *noun* a layer of membranous tissue

panniculus adiposus /pə,níkjuləs ,ædɪ'pəsəs/ *noun* a layer of fat underneath the skin

pannus /'pænəs/ *noun* a growth on the cornea containing tiny blood vessels

panophthalmia /,pænfθəl'miə/, **panophthalmitis** /,pænfθæl'maɪtɪs/ *noun* inflammation of the whole of the eye

panosteitis /,pænəsti'aitɪs/, **panostitis** /pænə'staɪtɪs/ *noun* inflammation of the whole of a bone

panotitis /,pænəo'taɪtɪs/ *noun* inflammation affecting all of the ear, but especially the middle ear

panproctocolectomy /,pænprɒktəkə'leɪktəmɪ/ *noun* the surgical removal of the whole of the rectum and the colon

pant /paʊnt/ *verb* to take short breaths because of too much exercise, to gasp for breath ○ *He was panting when he reached the top of the stairs.*

pant- /pænt/ *prefix* same as **pan-**

panto- /pæntəʊ/ *prefix* same as **pan-**

pantothenic acid /,pæntə,θenɪk 'æsɪd/ *noun* a vitamin of the vitamin B complex, found in liver, yeast and eggs

pantotropic /,pæntə'trɒpɪk/, **pantropic** /pæn'trɒpɪk/ *adjective* referring to a virus which attacks many different parts of the body

Papanicolaou test /,pæpənɪkə'u:leru:/ *test/noun* a method of staining samples from various body secretions to test for malignancy, e.g. testing a cervical smear sample to see if cancer is present. Also called **Pap test** [Described 1933. After George Nicholas Papanicolaou (1883–1962), Greek anatomist and physician who worked in the USA.]

papaveretum /pə,pævə'rɪ:təm/ *noun* a preparation of opium used to reduce pain

papilla /pə'pɪlə/ *noun* a small swelling which sticks up above the usual surface level ○ *The upper surface of the tongue is covered with papillae.* (NOTE: The plural is **papillae**.)

papillary /pə'pɪlərɪ/ *adjective* referring to papillae

papillitis /,pæpɪ'laitɪs/ *noun* inflammation of the optic disc at the back of the eye

papilloedema /,pæpɪləʊ'di:mə/ *noun* an accumulation of fluid in the optic disc at the back of the eye

papilloma /,pæpɪ'ləʊmə/ *noun* a benign tumour on the skin or mucous membrane (NOTE: The plural is **papillomas** or **papillomata**.)

papillomatosis /,pæpɪləʊmə'təʊsɪs/ *noun* 1. being affected with papillomata 2. the formation of papillomata

papillotomy /,pæpɪ'lɒtəmɪ/ *noun* the operation of cutting into the body at the point where the common bile duct and pancreatic duct meet to go into the duodenum, in order to improve bile drainage and allow any stones to pass out

papovavirus /pə'pəʊvəvairəs/ *noun* a family of viruses which start tumours, some of which are malignant, and some of which, such as warts, are benign

Pap test /'pæp test/, **Pap smear** /'pæp smiə/ *noun* same as **Papanicolaou test**

popular /'pæpjʊlər/ *adjective* referring to a papule

papule /'pæpjʊ:l/ *noun* a small coloured spot raised above the surface of the skin as part of a rash (NOTE: A flat spot is a **macule**.)

patulo- /pæpjʊləʊ/ *prefix* relating to a papule

papulopustular /,pæpjʊləʊ'pʌstjʊlə/ *adjective* referring to a rash with both papules and pustules

papulosquamous /,pæpjʊləʊ'skweməs/ *adjective* referring to a rash with papules and a scaly skin

para- /pærə/ *prefix* 1. similar to or near 2. changed or beyond

parabiosis /,pærəbɪə'əʊsɪs/ *noun* a condition in which two individuals are joined, e.g. conjoined twins

paracentesis /,pærəsēn'ti:sɪs/ *noun* the procedure of draining fluid from a cavity inside the body using a hollow needle, either for diagnostic purposes or because the fluid is harmful. Also called **tapping**

paracetamol /,pærə'si:təməl/ *noun* a common drug used to relieve mild to moderate pain and reduce fever (NOTE: The US name is **acetaminophen**.)

paracolpitis /,pærəkol'paitɪs/ same as **pericolpitis**

paracusis /,pærə'kjū:sɪs/, **paracusia** /,pærə'ku:sɪə/ *noun* a disorder of hearing

paradoxical breathing /,pærədɒksɪk(ə)l'bri:ðɪŋ/, **paradoxical respiration** /,pærədɒkstɪk(ə)l',respi'reɪʃ(ə)n/ *noun* a condition affecting someone with broken ribs, where the chest appears to move in when he or she breathes in, and appears to move out when he or she breathes out

paradoxical sleep /,pærədɒksɪk(ə)l'sli:p/ *noun* same as **REM sleep**

paradoxus /,pærə'dɒksəs/ ♦ **pulsus paradoxus**

paraesthesia /,pærəsɪs'θɛzɪə/ *noun* an unexplained tingling sensation. ♦ **pins and needles** (NOTE: The plural is **paraesthesiae**.)

‘...the sensory symptoms are paraesthesiae which may spread up the arm over the course of about 20 minutes’ [British Journal of Hospital Medicine]

paraffin /'pærəfin/ *noun* an oil produced from petroleum, forming the base of some ointments, and also used for heating and light

paraffin gauze /'pærəfin ɡɔ:z/ *noun* gauze covered with solid paraffin, used as a dressing

parageusia /,pærə'gju:sɪə/ *noun* 1. a disorder of the sense of taste 2. an unpleasant taste in the mouth

paragonimiasis /,pærəgɒnɪ'maiəsɪs/ *noun* a tropical disease in which the lungs are infested with the fluke of the genus *Paragonimus* and the person has bronchitis and coughs up blood. Also called **endemic haemoptysis**

paragraphia /,pærə'græfɪə/ *noun* the writing of different words or letters from the ones intended, as a result of a stroke or disease

paraguard stretcher /'pærəgɔ:d ,stretʃə/ *noun* a type of strong stretcher to which the injured person is attached securely, so that he or she can be carried upright. It is used for rescu-

ing people from mountains or from tall buildings.

para-influenza virus /pærə ,influ'enzə ,vərəs/ *noun* a virus which causes upper respiratory tract infection. In its structure it is identical to paramyxoviruses and the measles virus.

paralyse /'pærəlaɪz/ *verb* to make a part of the body unable to carry out voluntary movements by weakening or damaging muscles or nerves so that they cannot function, or by using a drug ○ *His arm was paralysed after the stroke.* ○ *She is paralysed from the waist down.* (NOTE: The US spelling is **paralyze**.)

paralysis /pə'ræləsɪs/ *noun* a condition in which part of the body cannot be moved because the motor nerves have been damaged or the muscles have been weakened ○ *The condition causes paralysis of the lower limbs.* ○ *He suffered temporary paralysis of the right arm.*

COMMENT: Paralysis can have many causes: the commonest are injuries to or diseases of the brain or the spinal column.

paralysis agitans /pə,ræləsɪs 'ædʒɪtəns/ *noun* same as **Parkinsonism**

paralytic /pærə'lɪtɪk/ *adjective* 1. referring to paralysis 2. referring to a person who is paralysed

paralytica /pærə'lɪtɪkə/ ♦ **dementia paralytica**

paralytic ileus /,pærəlɪtɪk 'ɪliəs/ *noun* an obstruction in the ileum caused by paralysis of the muscles of the intestine. Also called **adynamic ileus**

paralytic poliomyelitis /,pærəlɪtɪk ,pələiəʊ,maɪ'e'laitɪs/ *noun* poliomyelitis which affects the muscles

paramedian /,pærə'mi:dɪən/ *adjective* near the midline of the body

paramedian plane /,pærə'mi:diən plen/ *noun* a plane near the midline of the body, parallel to the sagittal plane and at right angles to the coronal plane. See illustration at **ANATOMICAL TERMS** in Supplement

paramedic /,pærə'medɪk/ *noun* a person whose work involves the restoration of health and normal functioning (NOTE: **Paramedic** is used to refer to all types of services and staff, from therapists and hygienists, to ambulance drivers and radiographers, but does not include doctors, nurses or midwives.)

paramedical /,pærə'medɪk(ə)l/ *adjective* referring to services linked to those given by nurses, doctors and surgeons

paramesonephric duct /,pærəməsə'nefrɪk ,dʌkt/ *noun* one of the two ducts in an embryo which develop into the uterus and Fallopian tubes. Also called **Müllerian duct**

parameter /pə'ræmɪtə/ *noun* a measurement of something such as blood pressure which may be an important consideration in treating the condition which the person has

parametritis /,pærəmɪ'traɪtɪs/ *noun* inflammation of the parametrium

parametrium /,pærə'mɪtriəm/ *noun* the connective tissue around the uterus

paramnesia /,pærəm'ni:ziə/ *noun* a disorder of the memory in which someone remembers events which have not happened

paramyxovirus /,pærəmɪksə'u'veɪrəs/ *noun* one of a group of viruses, which cause mumps, measles and other infectious diseases

paranasal /,pærə'næs(ə)l/ *adjective* by the side of the nose

paranasal sinus /,pærəneɪz(ə)l 'saɪnəs/, **paranasal air sinus** /,pærəneɪz(ə)l 'eə ,saɪnəs/ *noun* one of the four pairs of sinuses in the skull near the nose, which open into the nasal cavity and are lined with sticky mucus (NOTE: They are the frontal, maxillary, ethmoidal and sphenoidal sinuses.)

paranoia /,pærə'nɔɪə/ *noun* a behaviour characterised by mistaken ideas or delusions of persecution or self-importance

paranoiac /,pærə'nɔɪək/ *noun* a person affected by paranoia

paranoid /'pærənɔɪd/ *adjective* having a fixed delusion

paranoid disorder /,pærənɔɪd dɪ'sɔ:də/ *noun* a mental disorder which causes someone experiencing it to believe strongly that something is not right with them, with someone else or with the world generally and to maintain the belief even when given evidence against it (NOTE: The preferred term is delusional disorder.)

paranoid schizophrenia /,pærənɔɪd ,skɪzəʊ'fri:nɪə/ *noun* a form of schizophrenia in which the person believes he or she is being persecuted

paraparesis /,pærəpə'ri:sɪs/ *noun* incomplete paralysis of the legs

paraphasia /,pærə'feɪziə/ *noun* a speech disorder in which the person uses a wrong sound in the place of the correct word or phrase

paraphimosis /,pærəfaɪ'moʊsɪs/ *noun* a condition in which the foreskin around the penis is tight and may have to be removed by circumcision

paraphrenia /,pærə'fri:nɪə/ *noun* a dated term for a mental disorder involving delusions without severe personality deterioration

paraplegia /,pærə'pli:dʒə/ *noun* paralysis which affects the lower part of the body and the legs, usually caused by an injury to the spinal cord

paraplegic /,pærə'pli:dʒɪk/ *noun* someone who has paraplegia ■ *adjective* paralysed in the lower part of the body and legs

paraprofessional /,pærə'prə'feʃ(ə)n(ə)l/ *noun* somebody with training who acts as an assistant to a professional person

parapsoriasis /,pærəsə'sraɪəsis/ noun a group of skin diseases with scales, similar to psoriasis

parapsychology /,pærəsɔɪ'kɒlədʒi/ noun the study of effects of the mind which appear not to be explained by known psychological or scientific principles, e.g. extrasensory perception and telepathy

Paraquat /'pærəkwaɪt/ a trade name for dimethyl dipyridilium used as a weedkiller

parasagittal /,pærə'sædʒɪtl(ə)l/ adjective near the midline of the body

parasagittal plane /,pærə'sædʒɪtl(ə)l plen/ noun a plane near the midline of the body, parallel to the sagittal plane and at right angles to the coronal plane. Also called **paramedian plane**. See illustration at **ANATOMICAL TERMS** in Supplement

parasitaemia /,pærəsɪ'ti:mɪə/ noun the presence of parasites in the blood

parasite /'pærəsait/ noun a plant or animal which lives on or inside another organism and draws nourishment from that organism

COMMENT: The commonest parasites affecting humans are lice on the skin, and various types of worms in the intestines. Many diseases such as malaria and amoebic dysentery are caused by infestation with parasites.

parasitic /,pærə'sitɪk/ adjective referring to parasites

parasitic cyst /,pærəsɪtɪk 'sist/ noun a cyst caused by the growing larvae of a parasite in the body

parasiticide /,pærə'saɪtɪsaɪd/ noun a substance which kills parasites ■ adjective killing parasites

parasitology /,pærəsətɒ'lɒdʒi/ noun the scientific study of parasites

parasuicide /pærə'su:saɪd/ noun an act where someone tries to kill himself or herself, but without really intending to do so, rather as a way of drawing attention to his or her psychological condition

parasympathetic /,pærəsɪmɒ'θetɪk/ adjective referring to the parasympathetic nervous system

parasympathetic nervous system /,pærəsɪmɒ'θetɪk 'nɜ:vəs ,sɪstəm/, **parasympathetic system** /,pærəsɪmɒ'θetɪk ,sɪstəm/ noun one of two parts of the autonomic nervous system. Its messages reach the organs of the body through the cranial and sacral nerves to the eyes, the gastrointestinal system and other organs. ♦ **sympathetic nervous system**

COMMENT: The parasympathetic nervous system acts in opposition to the sympathetic nervous system, slowing down the action of the heart, reducing blood pressure and increasing the rate of digestion.

parasympatholytic /,pærəsɪm,pæθə'lɪtɪk/ noun a drug which reduces the effects of the parasympathetic nervous system by relax-

ing smooth muscle, reducing the amount of sweat and saliva produced and widening the pupil of the eye. An example is atropine. ■ adjective relating to a parasympatholytic drug

parasympathomimetic /,pærəsɪm,pæθə'mimɪtɪk/ noun a drug which stimulates the parasympathetic nervous system by making smooth muscle more tense, widening the blood vessels, slowing the heart rate, increasing the amount of sweat and saliva produced and contracting the pupil of the eye ■ adjective producing effects similar to those of a parasympathomimetic drug

parathormone /pærə'θɔ:məʊn/ noun the hormone secreted by the parathyroid glands which regulates the level of calcium in blood plasma. Also called **parathyroid hormone**

parathyroid /,pærə'θaɪrɔɪd/ noun same as **parathyroid gland** ■ adjective 1. relating to a parathyroid gland 2. located close to the thyroid gland

parathyroidectomy /,pærə'θaɪrɔɪd'ektəmɪ/ noun the surgical removal of a parathyroid gland

parathyroid gland /pærə'θaɪrɔɪd glænd/ noun one of four small glands which are situated in or near the wall of the thyroid gland and secrete a hormone which controls the way in which calcium and phosphorus are deposited in bones

parathyroid hormone /pærə'θaɪrɔɪd hɔ:məʊn/ noun same as **parathormone**

paratyphoid /,pærə'taɪfɔɪd/, **paratyphoid fever** /,pærə'taɪfɔɪd ,fi:və/ noun an infectious disease which has similar symptoms to typhoid and is caused by bacteria transmitted by humans or animals

COMMENT: There are three forms of paratyphoid fever, known by the letters A, B, and C, caused by three types of bacterium, *Salmonella paratyphi* A, B, and C. TAB injections give immunity against paratyphoid A and B, but not against C.

paravertebral /,pærə've:tɪbrəl/ adjective near the vertebrae, beside the spinal column

paravertebral injection /,pærə,vɜ:tɪbrəl ɪn'dʒekʃən/ noun an injection of local anaesthetic into the back near the vertebrae

parenchyma /pə'reŋkɪmə/ noun tissues which contain the working cells of an organ

parenchymal /pə'reŋkɪməl/ adjective relating to parenchyma

parent /'peərənt/ noun a biological or adoptive mother or father ■ verb to carry out the role of a parent

'...in most paediatric wards today open visiting is the norm, with parent care much in evidence. Parents who are resident in the hospital also need time spent with them' [Nursing Times]

parent cell /'peərənt sel/ noun an original cell which divides into daughter cells by mitosis

parenteral /pæ'rentərəl/ *adjective* referring to medication which is not given by mouth but in the form of injections or suppositories. Compare **enteral, oral**

parenteral nutrition /pæ'rentərəl nju:trɪʃn/, **parenteral feeding** /pæ'rentərəl 'fi:dɪŋ/ *noun* the process of feeding someone by means other than the digestive tract, especially by giving injections of glucose to someone critically ill

parenthood /'peərənθʊd/ *noun* the state of being a parent

parenting /'peərəntɪŋ/ *noun* the activities involved in bringing up children □ **parenting skills** the abilities and experience that make someone a good parent

paresis /pə'ri:sɪs/ *noun* partial paralysis

paresthesia /,pærɪθ'zi:zɪə/ *noun* *US* same as **paraesthesia**

paries /'peəri:z/ *noun* 1. a superficial part of a structure of an organ 2. the wall of a cavity (NOTE: [all senses] The plural is **parietes**.)

parietal /pə'rɪət(ə)l/ *adjective* referring to the wall of a cavity or any organ

parietal bone /pə'rɪət(ə)l bəʊn/, **parietal** /pə'rɪət(ə)l/ *noun* one of two bones which form the sides of the skull

parietal cell /pə'rɪət(ə)l sel/ *noun* same as **oxytic cell**

parietal lobe /pə'rɪət(ə)l lob/ *noun* the middle lobe of the cerebral hemisphere, which is associated with language and other mental processes, and also contains the postcentral gyrus

parietal pericardium /pə'rɪət(ə)l ,peri'kɑ:dɪəm/ *noun* the outer layer of the serous pericardium, not in direct contact with the heart muscle, which lies inside and is attached to the fibrous pericardium

parietal peritoneum /pə'rɪət(ə)l ,perɪ'te'ni:əm/ *noun* part of the peritoneum which lines the abdominal cavity and covers the abdominal viscera

parietal pleura /pə'rɪət(ə)l 'plu:rə/ *noun* a membrane attached to the diaphragm and covering the chest cavity. Also called **outer pleura**. See illustration at **LUNGS** in Supplement

-parin /pə'rɪn/ *suffix* used for anticoagulants □ **heparin**

Paris /'pærɪs/ ♀ **plaster of Paris**

parity /'pærɪti/ *noun* 1. equality of status or position, especially in terms of pay or rank 2. the number of children that a woman has given birth to

parkinsonian /,pærɪn'səʊniən/ *adjective* referring to Parkinson's disease □ *parkinsonian tremor*

Parkinsonism /'pærɪnsənɪz(ə)m/ *noun* a progressive nervous disorder, which may be an effect of some drugs, repeated head injuries or brain tumours. The main symptoms are trem-

bling hands and a slow shuffling walk. Also called **paralysis agitans**

Parkinson's disease /'pærɪksənз dɪ,zɪ:z/ *noun* a progressive nervous disorder without a known cause which is a type of Parkinsonism, the main symptoms of which are trembling hands, a slow shuffling walk and difficulty in speaking [Described 1817. After James Parkinson (1755–1824), English physician.]

COMMENT: Parkinson's disease affects the basal ganglia of the brain which control movement, due to the destruction of dopaminergic neurones. Some cases can be improved by treatment with levodopa, which is the precursor of the missing neurotransmitter dopamine, or by drugs which inhibit the breakdown of dopamine.

paronychia /,pærə'nɪkiə/ *noun* inflammation near the nail which forms pus, caused by an infection in the fleshy part of the tip of a finger. ♀ **whitlow**

parosmia /pə'rɒzmiə/ *noun* a disorder of the sense of smell

parotid /pə'rɒtɪd/ *adjective* near the ear

parotid gland /pə'rɒtɪd glænd/, **parotid** /pə'rɒtɪd/ *noun* one of the glands which produces saliva, situated in the neck behind the joint of the jaw and ear

parotitis /,pærə'taɪtɪs/ *noun* inflammation of the parotid glands

COMMENT: Mumps is the commonest form of parotitis, where the parotid gland becomes swollen and the sides of the face appear fat.

parous /'peərəs/ *adjective* referring to a woman who has given birth to one or more children

paroxetine /pə'rɒksɪtɪ:n/ *noun* an antidepressant drug which prolongs the effects of serotonin in the brain

paroxysm /'pærəksɪz(ə)m/ *noun* 1. a sudden movement of the muscles □ *She suffered paroxysms of coughing during the night.* 2. the sudden re-appearance of symptoms of the disease 3. a sudden attack of coughing or sneezing

paroxysmal /pærək'sɪzm(ə)l/ *adjective* referring to a paroxysm, or similar to a paroxysm

paroxysmal dyspnoea /pærək,sɪzm(ə)l disp'nɪ:ə/ *noun* an attack of breathlessness at night, usually caused by congestive heart failure

paroxysmal tachycardia /pærək,sɪzm(ə)l tæk'tɪk'ɑ:diə/ *noun* same as **nodal tachycardia**

parrot disease /'pærət dɪ,zɪ:z/ *noun* same as **psittacosis**

pars /pɑ:z/ *noun* the Latin word for part

part /pɑ:t/ *noun* a piece, one of the sections which make up a whole organ or body

partial /'pɑ:ʃ(ə)l/ *adjective* not complete, affecting only part of something □ *He only made a partial recovery.*

partial amnesia /'pɑ:ʃ(ə)l æm'nɪ:ziə/ *noun* an inability to remember specific facts, such as names of people

partial deafness /'pɑ:ʃ(ə)l 'defnəs/ *noun* the condition of being able to hear some sounds but not all

partial denture /'pɑ:ʃ(ə)l 'dentʃə/ *noun* part of a set of false teeth, replacing only a few teeth

partial gastrectomy /'pɑ:ʃ(ə)l ɡæt'rektəmi/ *noun* an operation to remove part of the stomach

partially /'pɑ:ʃ(ə)li/ *adverb* not completely ○ *He is partially paralysed in his right side.* □ **partially deaf** able to hear some sounds but not all □ **partially sighted** having only partial vision ○ *Large print books are available for people who are partially sighted.*

partially sighted register /'pɑ:ʃ(ə)li'saɪtɪd, redʒɪstər/ *noun* a list of people who have poor sight but are not blind, and may require some special services

partial mastectomy /'pɑ:ʃ(ə)l mæstektəmi/ *noun* an operation to remove part of a breast

partial pancreatectomy /'pɑ:ʃ(ə)l, pænkrɪə'tektəmi/ *noun* an operation to remove part of the pancreas

partial thickness burn /'pɑ:ʃ(ə)l 'θɪkknəs bɜ:n/ *noun* a burn which leaves enough tissue for the skin to grow again. Also called **superficial thickness burn**

partial vision /'pɑ:ʃ(ə)l 'vɪʒ(ə)n/ *noun* the ability to see only a part of the total field of vision, or not being able to see anything very clearly

particle /'pa:tɪk(ə)l/ *noun* a very small piece of matter

particulate /'pa:tɪkjuːlət/ *adjective* 1. referring to or composed of particles 2. made up of separate particles

particulate matter /'pa:tɪkjuːlət, mætə/ *noun* particles of less than a specified size, usually of carbon, which are used as a measure of air pollution and can affect asthma

partly /'pa:tlɪ/ *adverb* not completely ○ *She is partly paralysed.*

parturient /'pɑ:tjuərɪənt/ *adjective* referring to childbirth ■ *noun* a woman who is in labour

parturifacient /'pɑ:tjuəri'feɪʃənt/ *adjective* starting off birth or making it easier to give birth ■ *noun* a drug that starts off birth or makes it easier to give birth

parturition /'pɑ:tju'rɪʃ(ə)n/ *noun* same as childbirth

parulis /pə'rū:lis/ same as **gumboil**

Paschen bodies /'pæʃkən, bɒdɪz/ *plural noun* particles which occur in the skin lesions of people who have smallpox [After Enrique Paschen (1860–1936), German pathologist]

pass /pɑ:s/ *verb* to allow faeces, urine or any other body product to come out of the body ○ *Have you passed anything this morning?* □ **to pass blood** to produce faeces or urine that contain blood □ **to pass water** to urinate (*informal*)

passage /'pæsɪdʒ/ *noun* 1. a long narrow channel inside the body 2. the process of moving from one place to another 3. evacuation of the bowels 4. the introduction of an instrument into a cavity □ **air passage** a tube which takes air to the lungs

pass away /'pɑ:s ə'wei/ *verb* used to avoid saying ‘die’ (*informal*) ○ *Mother passed away during the night.*

passive /'pæsɪv/ *adjective* receiving rather than initiating an action

passive immunity /,pæsɪv ɪ'mju:nɪti/ *noun* immunity which is acquired by a baby in the uterus or by a person through an injection with an antitoxin

passive movement /,pæsɪv 'mu:vment/ *noun* movement of a limb or other body part by a doctor or therapist, not by the person

passive smoking /,pæsɪv 'sməʊkɪŋ/ *noun* the act of breathing in smoke from other people’s cigarettes when you do not smoke yourself

pass on /,pɑ:s 'on/ *verb* 1. to give a disease to someone ○ *Haemophilia is passed on by a woman to her sons.* ○ *The disease was quickly passed on by carriers to the rest of the population.* 2. used to avoid saying ‘die’ ○ *My father passed on two years ago.*

pass out /,pɑ:s 'aut/ *verb* to faint (*informal*) ○ *When we told her that her father was ill, she passed out.*

past /pɑ:st/ *adjective* referring to time which has passed

paste /peɪst/ *noun* a medicinal ointment which is very thick and is spread or rubbed onto the skin

Pasteurella /,pæstərə'relə/ *noun* a genus of parasitic bacteria, one of which causes the plague

pasteurisation /,pɑ:stʃəraɪ'zeɪʃ(ə)n/, **pasteurization** *noun* the process of heating food or food products to destroy bacteria [After Louis Pasteur (1822–95), French chemist and bacteriologist]

COMMENT: Pasteurisation is carried out by heating food for a short time at a lower temperature than that used for sterilisation: the two methods used are heating to 72°C for fifteen seconds (the high-temperature short-time method) or to 65°C for half an hour, and then cooling rapidly. This will kill tuberculosis bacteria that may be present in milk, for example.

pasteurise /'pɑ:stʃəraɪz/, **pasteurize** *verb* to kill bacteria in food by heating it ○ *The government is telling people to drink only pasteurised milk.*

past history /'pɑ:st 'hist(ə)ri/ *noun* records of earlier illnesses ◎ *He has no past history of renal disease.*

pastille /'pæst(ə)l/ *noun* 1. a sweet jelly with medication in it, which can be sucked to relieve a sore throat 2. a small paper disc covered with barium platinocyanide, which changes colour when exposed to radiation

pat /pæt/ *verb* to hit someone or something lightly and gently with the palm of the hand or some other flat surface ◎ *She patted the baby on the back to make it burp.*

patch /pætʃ/ *noun* a piece of sticking plaster with a substance on it, which is stuck to the skin to allow the substance to be gradually absorbed into the system through the skin, e.g. in HRT

COMMENT: Patches are available on prescription for various treatments, especially for administering hormone replacement therapy. They are also used for treating nicotine addiction and can be bought without a prescription.

patch test /'pætʃ tɛst/ *noun* a test for allergies or tuberculosis, where a piece of sticking plaster containing an allergic substance or tuberculin is stuck to the skin to see if there is a reaction

patella /pə'telə/ *noun* the small bone in front of the knee joint. Also called **kneecap**

patellar /pə'telər/ *adjective* referring to the kneecap

patellar reflex /pə,telə 'ri:fleks/ *noun* the jerk made as a reflex action by the knee, when the legs are crossed and the patellar tendon is tapped sharply. Also called **knee jerk**

patellar tendon /pə,telə 'tendən/ *noun* a tendon just below the kneecap

patellectomy /pə:tə'lektəməi/ *noun* a surgical operation to remove the kneecap

patency /'peɪtənsi/ *noun* the condition of being wide open ◎ *A salpingostomy was performed to restore the patency of the Fallopian tube.*

patent /'peɪtənt, 'pætənt/ *adjective* open, exposed ◎ *The presence of a pulse shows that the main blood vessels from the heart to the site of the pulse are patent.*

patent ductus arteriosus /,peɪtənt ,dʌktəs ə:,tɪər'ɪəsəs/ *noun* a congenital condition in which the ductus arteriosus does not close, allowing blood into the circulation without having passed through the lungs

patent medicine /,peɪtənt 'med(ə)sɪn/ *noun* a medicinal preparation which is made and sold under a trade name and is protected by law from being copied or sold by other manufacturers for a certain length of time after its invention. ♦ **proprietary medicine**

paternity /pə'tɜ:nɪti/ *noun* 1. the fact of being or becoming a father ◎ *paternity leave* Compare **maternity** 2. the identity of a father

paternity test /pə'tɜ:nɪti tɛst/ *noun* a test such as blood grouping which makes it possible to determine the identity of the father of a child

COMMENT: DNA fingerprinting may be required in order to identify a man who might be the father according to his blood group and that of the child, but is not in fact the father.

path- /pæθ/, **patho-** /'pæθəʊ/ *prefix* referring to disease

pathogen /'pæθədʒən/ *noun* a microorganism which causes a disease

pathogenesis /,pæθə'dʒenəsɪs/ *noun* the origin, production and development of a morbid or diseased condition

pathogenetic /,pæθədʒə'netɪk/ *adjective* referring to pathogenesis

pathogenic /pæθə'dʒenɪk/ *adjective* causing or producing a disease

pathogenicity /,pæθədʒə'nɪsɪtɪ/ *noun* the ability of a pathogen to cause a disease

pathognomonic /,pæθəgnəʊ'mɒnɪk/ *adjective* referring to a symptom which is typical and characteristic, and which indicates that someone has a particular disease

pathological /,pæθə'lɒdʒɪk(ə)l/, **pathologic** /,pæθə'lɒdʒɪk/ *adjective* 1. referring to a disease, or caused by a disease 2. indicating a disease

pathological depression /,pæθə'lɒdʒɪk(ə)l dɪ'pref(ə)n/ *noun* an unusually severe state of depression, possibly leading to suicide

pathological dislocation /,pæθə'lɒdʒɪk(ə)l ,dɪ'slokj(ə)n/ *noun* the dislocation of a diseased joint

pathological fracture /,pæθə'lɒdʒɪk(ə)l 'frækɪtʃə/ *noun* a fracture of a diseased bone

pathologist /pæ'θɒlədʒɪst/ *noun* 1. a doctor who specialises in the study of diseases and the changes in the body caused by disease, examining tissue specimens from patients and reporting on the presence or absence of disease in them 2. a doctor who examines dead bodies in order to find out the cause of death

pathology /pæ'θɒlədʒɪ/ *noun* the study of diseases and the changes in structure and function which diseases cause in the body. Also called **morbid anatomy**

pathology report /pæ'θɒlədʒɪ rɪ,pɔ:t/ *noun* a report on tests carried out to find the cause of a disease

pathophysiology /,pæθəfɪzi'ɒlədʒɪ/ *noun* the study of unusual or diseased organs

pathway /'pæθweɪ/ *noun* a series of linked neurones along which nerve impulses travel

-**pathy** /pəθi/ *suffix* 1. disease 2. treatment of a disease

patient /'peɪs(ə)nt/ *adjective* being able to wait a long time without becoming annoyed ◎ *You will have to be patient if you are waiting for treatment – the doctor is late with his ap-*

pointments. ■ **noun** a person who is in hospital or who is being treated by a doctor ○ *The patients are all asleep in their beds.* ○ *The doctor is taking the patient's temperature.*

patient allocation /'peɪʃ(ə)nt ,ælə 'keɪʃ(ə)n/ **noun** a system of assigning each patient to a particular nurse for all their care needs

patient identifier /'peɪʃ(ə)nt aɪ'dentɪfɪər/ **noun** a code of letters and numbers attached to the patient's medical records by which all information concerning the patient can be tracked, e.g. cause of death

patulous /'pætjʊləs/ **adjective** stretched open, patent

Paul–Bunnell reaction /,pɔ:l 'bʌn(ə)l ri ,ækʃən/, **Paul–Bunnell test** /,pɔ:l 'bʌn(ə)l ,test/ **noun** a blood test to see if someone has glandular fever, where the person's blood is tested against a solution containing glandular fever bacilli [Described 1932. After John Rodman Paul (b. 1893), US physician; Walls Willard Bunnell (1902–66), US physician.]

Paul's tube /'pɔ:lz tju:b/ **noun** a glass tube used to remove the contents of the bowel after an opening has been made between the intestine and the abdominal wall [Described 1891. After Frank Thomas Paul (1851–1941), British surgeon.]

pavement epithelium /'peɪvmənt epi ,θi:lɪəm/ **noun** same as **squamous epithelium**

Pavlov's method /'pævlɒvz ,meθəd/ **noun** a set of procedures for the study or production of conditioned reflexes

PBI test /,pi: bi: 'aɪ test/ **noun** same as **protein-bound iodine test**

p.c. /,pi: 'si:/ **adverb** (used on prescriptions) after food. Full form **post cibum**

PCC abbr Professional Conduct Committee

PCG abbr primary care group

PCOD abbr polycystic ovary disease

PCOS abbr polycystic ovary syndrome

PCP abbr pneumocystis carinii pneumonia

PCR abbr polymerase chain reaction

PCT abbr primary care trust

p.d.¹ **adverb** (used on prescriptions) per day. Full form **per diem**

p.d.² **abbr** per diem

PE abbr pulmonary embolism

peak /pi:k/ **noun** the highest point

peak expiratory flow rate /,pi:k ɪk ,spærɪ'ret(ə)ri 'fləʊ ,reɪt/ **noun** the rate at which someone can expel air from their lungs when they are full and with no time limit. Abbr **PEFR**

peak period /'pi:k ,pi:riəd/ **noun** the time of the day, days of the month or months of the year, during which something such as a fever, tiredness, infectious disease or cold reaches its highest point or occurs most frequently in a population

peaky /'pi:ki/ **adjective** thin, pale, and sickly in appearance (*informal*)

pearl /pɜ:l/ ♀ **Bohn's nodules**

Pearson bed /'præs(ə)n bed/ **noun** a type of bed with a Balkan frame, a rectangular frame attached to and overhanging the bed, used mainly for people with splints

peau d'orange /,pəʊ du'rɑ:nʒ/ **noun** thickened skin with many little depressions caused by lymphoedema which forms over a breast tumour or in elephantiasis (NOTE: From the French phrase meaning 'orange peel'.)

pecten /'pektən/ **noun** 1. the middle section of the wall of the anal passage 2. a hard ridge on the pubis

pectineal /pek'tɪniəl/ **adjective** 1. referring to the pecten of the pubis 2. referring to a structure with ridges like a comb

pectoral /'pekt(ə)rəl/ **noun** 1. a therapeutic substance which has a good effect on respiratory disease 2. same as **pectoral muscle** ■ **adjective** referring to the chest

pectoral girdle /,pekt(ə)rəl 'gɜ:d(ə)l/ **noun** the shoulder bones, the scapulae and clavicles, to which the upper arm bones are attached. Also called **shoulder girdle**

pectoralis /,pektə'reilɪs/ **noun** a chest muscle

pectoralis major /pektə'reilɪs 'meɪdʒə/ **noun** a large chest muscle which pulls the arm forward or rotates it

pectoralis minor /pektə'reilɪs 'maɪnə/ **noun** a small chest muscle which allows the shoulder to be depressed

pectoral muscle /'pekt(ə)rəl ,məs(ə)l/ **noun** one of two muscles which lie across the chest and control movements of the shoulder and arm. Also called **chest muscle**

pectus /'pektəs/ **noun** the anterior part of the chest

pectus carinatum /,pektəs ,kær'i'nə:təm/ **noun** a condition in which the sternum is unusually prominent. Also called **pigeon breast**

pectus excavatum /,pektəs ,eks'kə'veɪtəm/ **noun** a congenital condition, in which the chest is depressed in the centre because the lower part of the breastbone is curved backwards. Also called **funnel chest**

pedes /'pi:di:z/ plural of **pes**

pediatrics /,pi:di'ætriks/ **noun** US same as **paediatrics**

pedicle /'pedɪk(ə)l/ **noun** 1. a long thin piece of skin which attaches a skin graft to the place where it was growing originally 2. a piece of tissue which connects a tumour to healthy tissue 3. a bridge which connects the lamina of a vertebra to the body

pediculicide /pi'dɪkjʊlɪsaɪd/ **noun** a chemical substance that kills lice

pediculosis /pi'dɪkjʊlə'sɪs/ **noun** a skin disease caused by being infested with lice

Pediculus /pɪ'dɪkju:ləs/ *noun* same as louse
 (NOTE: The plural is **Pediculi**.)

Pediculus capitis /pɪ'dɪkju:ləs kə'paɪtɪs/ *noun* same as head louse

pedo- /pɪ:d/ *prefix* same as paedo-

pedodontia /pɪ:də'dɒntɪə/ *noun* the study of children's teeth

pedodontist /pɪ:də'dɒntɪst/ *noun* a dentist who specialises in the treatment of children's teeth

peduncle /pɪ'dʌŋkəl/ *noun* a stem or stalk

pedunculate /pɪ'dʌŋkjuleɪt/ *adjective* having a stem or stalk. Opposite **sessile**

pee /pi:/ *verb* same as **urinate** (*informal*)

peel /pi:l/ *verb* 1. to take the skin off a fruit or vegetable 2. (of skin) to come off in pieces ○ *After getting sunburnt, his skin began to peel.*

PEEP *abbr* positive end-expiratory pressure

peer review /'pɪə ri,vju:/ *noun* an assessment of a piece of someone's work by people who are experts on the subject

PEFR *abbr* peak expiratory flow rate

Pel-Ebstein fever /'pel 'ebstain ,fɪ:və/ *noun* a fever associated with Hodgkin's disease which recurs regularly [Described 1885. After Pieter Klaases Pel (1852–1919), Professor of Medicine in Amsterdam, Netherlands; Wilhelm Ebstein (1836–1912), Professor of Medicine at Göttingen, Germany.]

pellagra /pə'lægra/ *noun* a disease caused by a deficiency of nicotinic acid, riboflavin and pyridoxine from the vitamin B complex, where patches of skin become inflamed, and the person has anorexia, nausea and diarrhoea

COMMENT: In some cases of pellagra the patient's mental faculties can be affected, with depression, headaches and numbness of the extremities. Treatment is by improving the patient's diet.

Pellegrini–Stieda's disease /pə'lə,gri:nɪ 'stɪ:dəz dɪ,zɪ:z/ *noun* a disease where an injury to the knee causes the ligament to become calcified [Described 1905. After Augusto Pellegrini, surgeon in Florence, Italy; Alfred Stieda (1869–1945), Professor of Surgery at Königsberg, Germany.]

pellet /'pelɪt/ *noun* 1. a small rod- or oval-shaped pill of steroid hormone, usually either oestrogen or testosterone, that is implanted under the skin for slow absorption 2. solid sediment at the base of a container after centrifuging

pellicle /'pelɪk(ə)l/ *noun* a thin layer of skin tissue

pellucida /pɪ'lʊ:sɪdə/ ▶ **zona pellucida**

pelvis /'pelvɪz/ *plural of* **pelvis**

pelvic /'pelvɪk/ *adjective* referring to the pelvis

pelvic brim /'pelvɪk 'brɪm/ *noun* a line on the ilium which separates the false pelvis from the true pelvis

pelvic cavity /,pelvɪk 'kævɪti/ *noun* a space below the abdominal cavity, above the pelvis
pelvic colon /,pelvɪk 'kəʊlən/ *noun* same as sigmoid colon

pelvic diaphragm /,pelvɪk 'daɪəfræm/ *noun* a sheet of muscle between the pelvic cavity and the peritoneum

pelvic floor /,pelvɪk 'flɔ:/ *noun* the lower part of the space beneath the pelvic girdle, formed of muscle

pelvic fracture /,pelvɪk 'frækʃə/ *noun* a fracture of the pelvis

pelvic girdle /,pelvɪk 'gɜ:d(ə)l/ *noun* the ring formed by the two hip bones to which the thigh bones are attached. Also called **hip girdle**

pelvic inflammatory disease /,pelvɪk ɪn 'flæmət(ə)rɪ dɪ,zɪz/ *noun* an inflammation of a woman's reproductive organs in the pelvic area, which can cause infertility

pelvic outlet /,pelvɪk 'aʊtlət/ *noun* an opening at the base of the pelvis

pelvic version /,pelvɪk 'vɜ:ʃ(ə)n/ *noun* turning a fetus around in the uterus by moving the buttocks of the fetus

pelvimeter /pel'vemitə/ *noun* an instrument to measure the diameter and capacity of the pelvis

pelvimetry /pel'vemitrɪ/ *noun* the act of measuring the pelvis, especially to see if the internal ring is wide enough for a baby to pass through in childbirth

pelvis /'pelvɪs/ *noun* 1. the strong basin-shaped ring of bone near the bottom of the spine, formed of the hip bones at the front and sides and the sacrum and coccyx at the back 2. the internal space inside the pelvic girdle
 (NOTE: [all senses] The plural is **pelvises** or **pel·ves**.)

COMMENT: The hip bones are each in three sections: the ilium, the ischium and the pubis and are linked in front by the pubic symphysis.

The pelvic girdle is shaped in a different way in men and women, the internal space being wider in women. The top part of the pelvis, which does not form a complete ring, is called the 'false pelvis'; the lower part is the 'true pelvis'.

pelvis of the kidney /,pelvɪs əv ðə 'kɪdnɪ/ *noun* same as **renal pelvis**. See illustration at **KIDNEY** in Supplement (NOTE: For other terms referring to the pelvis of the kidney, see words beginning with **pyel-**, **pyelo-**.)

pemphigoid /'pemfɪgɔɪd/ *noun* a skin disease which is similar to pemphigus ■ *adjective* referring to a skin disease similar to pemphigus

pemphigus /'pemfɪgʊs/ *noun* a rare disease where large blisters form inside the skin

pendulous /'pendjʊləs/ *adjective* referring to an object or body part which hangs loosely or swings freely

penes /'pi:nɪz/ *plural of* **penis**

penetrate /'penɪtreɪt/ *verb* to go through or into something ○ *The end of the broken bone has penetrated the liver.* ○ *The ulcer burst, penetrating the wall of the duodenum.*

penetration /,penɪ'treɪʃ(ə)n/ *noun* the act of penetrating ○ *the penetration of the vagina by the penis* ○ *penetration of an ovum by a spermatozoon*

-penia /pi:rniə/ *suffix* meaning a deficiency or not enough of something

penicillamine /,penɪ'siləmi:n/ *noun* a chelating agent which is used to help the body get rid of toxic metals

penicillin /,penɪ'silɪn/ *noun* a common antibiotic originally produced from a fungus (NOTE: Penicillin drugs have names ending in **-cillin**: **amoxicillin**.)

COMMENT: Penicillin is effective against many microbial diseases, but some people can be allergic to it, and this fact should be noted on medical record cards.

penicillinase /,penɪ'silinæz/ *noun* an enzyme produced by some bacteria that inactivates penicillin, used to treat adverse reactions to penicillin

penicillin resistance /,penɪsɪlɪn rɪ'zɪstəns/ *noun* the ability of bacteria to resist penicillin

Penicillium /,penɪ'siliəm/ *noun* the fungus from which penicillin is derived

penile /'pi:nail/ *adjective* referring to the penis

penile urethra /,pi:nail ju'rɪ:θrə/ *noun* a tube in the penis through which urine and semen pass

penis /'pi:nɪs/ *noun* the male genital organ, which also passes urine. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement. ♀ **kraurosis penis**

COMMENT: The penis is a mass of tissue containing the urethra. When stimulated the tissue of the penis fills with blood and becomes erect.

pentamidine /pen'tæmɪdi:n/ *noun* an antibiotic used in the treatment of African sleeping sickness and of pneumonia in people with AIDS

pentazocine /pen'tæzəsi:n/ *noun* an artificially produced narcotic drug used to reduce pain

pentose /'pentəuz/ *noun* a sugar containing five carbon atoms

pentosuria /,pentə'sjuəriə/ *noun* a condition in which pentose is present in the urine

Pentothal /'pentəθæl/ a trade name for thiopentone

Peplau's model /'pepləʊz ,mɒd(ə)l/ *noun* a model for nursing which describes the individual as a system with physiological, psychological and social components. The nurse and patient work together to define the patient's problems and to understand their reactions to

one another, and the nurse takes on different roles in each phase of the relationship, such as a teacher, counsellor, leader, and technical expert, until the patient no longer needs their care.

pepsin /'pepsɪn/ *noun* an enzyme in the stomach which breaks down the proteins in food into peptones

pepsinogen /pep'sɪnədʒən/ *noun* a secretion from the gastric gland which is the inactive form of pepsin

peptic /'peptɪk/ *adjective* referring to digestion or to the digestive system

peptic ulcer /,peptɪk 'ʌlsə/ *noun* a benign ulcer in the duodenum or in the stomach

peptidase /'peptɪdɛz/ *noun* an enzyme which breaks down proteins in the intestine into amino acids

peptide /'peptɪd/ *noun* a compound formed of two or more amino acids

peptone /'peptəʊn/ *noun* a substance produced by the action of pepsins on proteins in food

peptonuria /,peptə'njuəriə/ *noun* a condition in which peptones are present in the urine

per /pɜ:/, pə/ *preposition* 1. out of each ○ *ten per thousand* 2. by or through ○ *per rectum*

per cent /pə'sent/ *noun, adjective, adverb* in or for every hundred ○ *Fifty per cent (50%) of the tests were positive.* ○ *Seventy-five per cent (75%) of hospital cases remain in hospital for less than four days.* □ **there has been a five per cent increase in applications** the number of applications has gone up by five in every hundred □ **new cases have decreased twenty per cent this year** the number of new cases has gone down by twenty in every hundred

percentage /pə'sentɪdʒ/ *noun* the proportion rate in every hundred or for every hundred ○ *What is the percentage of long-stay patients in the hospital?*

perception /pə'sepʃən/ *noun* an impression formed in the brain as a result of information about the outside world which is passed back by the senses

perceptive deafness /pe,septɪv 'defnəs/ *noun* same as **sensorineural deafness**

percussion /pə'kʌʃ(ə)n/ *noun* a test, usually on the heart and lungs, in which the doctor taps part of the person's body and listens to the sound produced

percutaneous /,pɜ:kjʊ:tɪ'nɪəs/ *adjective* through the skin

percutaneous absorption /,pɜ:kjʊ:tɪ'əbsər'veɪʃn/ *noun* the process of absorbing a substance through the skin

percutaneous angioplasty /,pɜ:kjʊ:tɪ'ənɪəs 'ændʒɪəplæsti/ *noun* the repair of a narrowed artery by passing a balloon into the artery through a catheter and then inflating it. Also called **balloon angioplasty**

percutaneous epididymal sperm aspiration /,pɜ:kju:təniəs ,epɪdɪdɪm(ə)l 'spɜ:m ,æspɪreɪt(ə)n/ noun the removal of sperm from the epididymis by withdrawing it through the skin, usually as part of fertility treatment. Abbr **PESA**

per diem /pɜ: 'di:em/ adverb (written on prescriptions) per day

perennial /pə'reniəl/ adjective which continues all the time, for a period of years □ *She has perennial bronchial asthma.*

perforate /'pɜ:fəreɪt/ verb to make a hole through something □ *The ulcer perforated the duodenum.*

perforated eardrum /,pɜ:fəreɪtɪd 'eədrʌm/ noun an eardrum with a hole in it

perforated ulcer /,pɜ:fəreɪtɪd 'ʌlsə/ noun an ulcer which has made a hole in the wall of the intestine

perforation /,pɜ:fə'reɪʃ(ə)n/ noun a hole through the whole thickness of a tissue or membrane such as the intestine or eardrum

perform /pə'fɔ:m/ verb 1. to do an operation □ *A team of three surgeons performed the heart transplant operation.* 2. to work □ *The new heart has performed very well.* □ *The kidneys are not performing as well as they should.*

performance /pə'fɔ:məns/ noun a way in which something works □ *The doctors are not satisfied with the performance of the transplanted heart.*

performance indicators /pə'fɔ:məns ,ɪndiketəz/ plural noun statistical information needed for analysis of how effectively health organisations are meeting their objectives, produced by health authorities and sent to the government. Abbr **PIs**

perfuse /pə'fju:z/ verb to introduce a liquid into tissue or an organ, especially by circulating it through blood vessels

perfusion /pə'fju:ʒ(ə)n/ noun the process of passing a liquid through vessels, an organ or tissue, e.g. the flow of blood into lung tissue

perfusion scan /pə'fju:ʒ(ə)n skæn/ noun a procedure in which radioactive or radiopaque substances are introduced into the body so that the blood supply of an organ can be traced

peri- /peri/ prefix near, around or enclosing

periadenitis /,periədɪ'naitɪs/ noun inflammation of tissue around a gland

perianal /,peri'eɪn(ə)l/ adjective around the anus

perianal haematoma /,perieɪn(ə)l ,hi:mə'təʊmə/ noun a small painful swelling outside the anus caused by forcing a bowel movement

periarteritis /,peri:tə'rætɪs/ noun inflammation of the outer coat of an artery and the tissue round it

periarteritis nodosa /,peri:tə'rætɪs nəʊ'dəʊsə/ noun same as **polyarteritis nodosa**

periarthritis /,peri:tə'rɑ:tɪs/ noun inflammation of the tissue round a joint

pericard- /peri:kɑ:d/ prefix referring to the pericardium

pericardectomy /,peri:kɑ:'dektəmɪ/ noun the surgical removal of the pericardium

pericardial /peri'kɑ:diəl/ adjective referring to the pericardium

pericardial effusion /,peri:kɑ:diəl ɪ'fju:ʒ(ə)n/ noun an excess of fluid which forms in the pericardial sac

pericardial friction /,peri:kɑ:diəl 'frɪkʃ(ə)n/ noun the rubbing together of the two parts of the pericardium in pericarditis

pericardial sac /,peri:kɑ:diəl 'sæk/ noun the inner part of the pericardium forming a bag-like structure or sac which contains fluid to prevent the two parts of the pericardium rubbing together

pericardiectomy /,peri:kɑ:di'ektəmɪ/ noun same as **pericardectomy**

pericardiocentesis /,peri:kɑ:diə'se:sɪs/ noun the puncture of the pericardium to remove fluid

pericardiorrhaphy /,peri:kɑ:di'ɔ:rəfi/ noun a surgical operation to repair a wound in the pericardium

pericardiotomy /,peri:kɑ:di'ɒstəmɪ/ noun a surgical operation to open the pericardium through the thoracic wall to drain off fluid

pericardiotomy /,peri:kɑ:di'bɒtəmɪ/ noun same as **pericardotomy**

pericarditis /,peri:kɑ:di'tɪtɪs/ noun inflammation of the pericardium □ **acute pericarditis** a sudden attack of fever and pains in the chest, caused by the two parts of the pericardium rubbing together

pericardium /,peri'kɑ:diəm/ noun a membrane which surrounds and supports the heart

pericardotomy /,peri:kɑ:di'ɒtəmɪ/ noun a surgical operation to open the pericardium

perichondritis /,peri:kɒn'draɪtɪs/ noun inflammation of cartilage, especially in the outer ear

perichondrium /,peri'kɒndriəm/ noun the fibrous connective tissue which covers cartilage

pericolpitis /,peri:kɒl'partɪs/ noun inflammation of the connective tissue round the vagina. Also called **paracolpitis**

pericranium /,peri'kreɪniəm/ noun connective tissue which covers the surface of the skull

pericystitis /,peri'si'staɪtɪs/ noun inflammation of the structures round the bladder, usually caused by infection in the uterus

perifolliculitis /,peri,fɒlikju'lætɪs/ noun inflammation of the skin round hair follicles

perihepatitis /,perihepə'tætɪs/ noun inflammation of the membrane round the liver

perilymph /'perilimf/ noun a fluid found in the labyrinth of the inner ear

perimenopause /peri'menəpə:z/ *noun* the few years before the menopause, in which oestrogen levels start to fall

perimeter /pə'rɪmɪtə/ *noun* 1. an instrument to measure the field of vision 2. the length of the outside line around an enclosed area

perimetritis /peri'mə'trɪtɪs/ *noun* inflammation of the perimetrium

perimetrium /peri'mi:ttriəm/ *noun* a membrane round the uterus

perimetry /pə'rɪmɪtri/ *noun* a measurement of the field of vision

perimysium /peri'maɪsiəm/ *noun* a sheath which surrounds a bundle of muscle fibres

perinatal /peri'neit(ə)l/ *adjective* referring to the period just before and after childbirth

perinatal mortality rate /peri'nætl(ə)mɔ:/ 'taeliti reit/ *noun* the number of babies born dead or who die during the period immediately after childbirth, shown per thousand babies born

perinatal period /peri'neit(ə)l ,pɪəriəd/ *noun* the period of time before and after childbirth, from the 28th week after conception to the first week after delivery

perinatologist /peri'nætɒlədʒɪst/ *noun* an obstetrician who is a specialist in perinatology

perinatology /peri'nætɒlədʒɪ/ *noun* a branch of medicine which studies and treats physiological and pathological conditions affecting the mother and/or infant just before and just after the birth of a baby

perineal /peri'nɪ:əl/ *adjective* referring to the perineum

perineal body /peri'mi:əl 'bɒdi/ *noun* the mass of muscle and fibres between the anus and the vagina or prostate

perineal muscle /peri'mi:əl 'mʌs(ə)l/ *noun* one of the muscles which lie in the perineum

perineoplasty /peri'nɪ:əplæsti/ *noun* a surgical operation to repair the perineum by grafting tissue

perineorrhaphy /peri'nɪ:ərəfɪ/ *noun* a surgical operation to stitch up a perineum which has torn during childbirth

perinephric /peri'nefrɪk/ *adjective* around the kidney

perinephritis /peri'nfraɪtɪs/ *noun* inflammation of tissue round the kidney, which spreads from an infected kidney

perinephrium /peri'nefriəm/ *noun* the fatty tissue that is around a kidney

perineum /peri'nɪ:əm/ *noun* the skin and tissue between the opening of the urethra and the anus

perineurium /peri'njuəriəm/ *noun* connective tissue which surrounds bundles of nerve fibres

periocular /peri'ɒkjʊlə/ *adjective* around the eyeball

period /'pɪəriəd/ *noun* 1. a length of time ○ *The patient regained consciousness after a short period of time.* ○ *She is allowed out of bed for two periods each day.* 2. menstruation or the menses, bleeding from the uterus which occurs in a woman each month when the lining of the uterus is shed because no fertilised egg is present ○ *She always has heavy periods.* ○ *Some women experience abdominal pain during their periods.* ○ *She has bleeding between periods.*

periodic /pɪəri'ɒdɪk/ *adjective* occurring from time to time ○ *He has periodic attacks of migraine.* ○ *She has to go to the clinic for periodic checkups.*

periodic fever /pɪəriɒdɪk 'fi:və/ *noun* a disease of the kidneys, common in Mediterranean countries

periodicity /pɪəriə'dɪsɪti/ *noun* the timing of recurrent attacks of a disease

periodic paralysis /pɪəriɒdɪk pə'ræləsɪs/ *noun* recurrent attacks of weakness where the level of potassium in the blood is low

periodontal /periəd'ɒnt(ə)l/, **periodontic** /periəd'ɒntɪk/ *adjective* referring to the area around the teeth

periodontal membrane /periəʊ,dɒnt(ə)l 'membreɪn/, **periodontal ligament** /periəʊ,dɒnt(ə)l 'lɪgəmənt/ *noun* a ligament which attaches a tooth to the bone of the jaw

periodontics /periəʊ'dɒntɪks/, **periodontia** /periəʊ'dɒnʃə/ *noun* the study of diseases of the periodontal membrane

periodontist /periəʊ'dɒntɪst/ *noun* a dentist who specialises in the treatment of gum diseases

periodontitis /periəʊdɒn'taɪtɪs/ *noun* an infection of the periodontal membrane leading to pyorrhoea, and resulting in the teeth falling out if untreated

periodontium /periəʊ'dɒnʃiəm/ *noun* 1. the gums, bone and periodontal membrane around a tooth 2. same as **periodontal membrane**

perionychia /periəʊ'nɪkɪə/, **peronyxis** /periəʊ'nɪksɪs/ *noun* a painful swelling round a fingernail

perionychium /periəʊ'nɪkɪəm/ *noun* the skin that is round a fingernail or toenail

perioperative /peri'ɒp(ə)rətɪv/ *adjective* before and after a surgical operation

'During the perioperative period little attention is given to thermoregulation.' [British Journal of Nursing]

periorbital /periəʊ'ɔ:bɪt(ə)l/ *adjective* around the eye socket

periosteal /peri'ɒstiəl/ *adjective* referring to, or attached to, the periosteum

periosteotome /peri'ɒstiətəm/ *noun* a surgical instrument used to cut the periosteum

periosteum /peri'ɒstiəm/ *noun* a dense layer of connective tissue around a bone. See illustration at **BONE STRUCTURE** in Supplement

periosteum elevator /,peri'ɒstiəl'elɪvətər/ *noun* a surgical instrument used to remove the periosteum from a bone

periostitis /periə'staɪtɪs/ *noun* inflammation of the periosteum

periotic /peri'ɒtɪk/ *adjective* referring to the area around the ear, especially the bones around the inner ear

peripheral /pə'rɪf(ə)rɪəl/ *adjective* at the edge

peripheral nerves /pə'rɪf(ə)rɪəl nɜ:vz/ *plural noun* the parts of motor and sensory nerves which branch from the brain and spinal cord

peripheral nervous system /pə'rɪf(ə)rɪəl 'nɜ:vəs ,sɪstəm/ *noun* all the nerves in different parts of the body which are linked and governed by the central nervous system. Abbr PNS

peripheral resistance /pə'rɪf(ə)rɪəl rɪ'zɪstəns/ *noun* the ability of the peripheral blood vessels to slow down the flow of blood inside them

peripheral vascular disease /pə'rɪf(ə)rɪəl 'væskjʊlə dɪ,zɪz:z/ *noun* a disease affecting the blood vessels which supply the arms and legs

peripheral vasodilator /pə'rɪf(ə)rɪəl ,veɪzədɪ'leɪtər/ *noun* a chemical substance which acts to widen the blood vessels in the arms and legs and so improves bad circulation

periphery /pə'rɪf(ə)ri/ *noun* 1. the regions of the body where the nerves end, such as the sense organs or the muscles 2. the surface of something

periphlebitis /periflə'baitɪs/ *noun* 1. inflammation of the outer coat of a vein 2. an inflammation of the connective tissue round a vein

periproctitis /periprɒk'taɪtɪs/ *noun* swelling of the tissues around the rectum

perisalpingitis /perɪsælpɪn'dʒaɪtɪs/ *noun* inflammation of the peritoneum and other parts round a Fallopian tube

perisplenitis /perisplə'naitɪs/ *noun* inflammation of the peritoneum and other parts round the spleen

peristalsis /peri'staɪlsɪs/ *noun* the movement, like waves, produced by alternate contraction and relaxation of muscles along an organ such as the intestine or oesophagus, which pushes the contents of the organ along it. Compare **antiperistalsis**

peristaltic /peri'stæltɪk/ *adjective* occurring in waves, as in peristalsis

peritendinitis /perɪtendɪ'naitɪs/ *noun* same as **tenosynovitis**

peritomy /pə'ritəmi/ *noun* 1. a surgical operation on the eye, where the conjunctiva is cut in a circle round the cornea 2. circumcision

peritoneal /peri'tə'ni:l/ *adjective* referring to, or belonging to, the peritoneum

peritoneal cavity /,periτə,nɪ:əl 'kævɪtɪ/ *noun* a space between the layers of the peritoneum, containing the major organs of the abdomen

peritoneal dialysis /,periτə,nɪ:əl dai'æləsɪs/ *noun* removing waste matter from someone's blood by introducing fluid into the peritoneum which then acts as a filter, as opposed to haemodialysis

peritoneoscope /,periτə'nɪəskəp/ *noun* same as **laparoscope**

peritoneoscopy /,periτə'nɪəs'kɔpi/ *noun* same as **laparoscopy**

peritoneum /,periτə'nɪ:əm/ *noun* a membrane which lines the abdominal cavity and covers the organs in it

peritonitis /,periτə'naitɪs/ *noun* inflammation of the peritoneum as a result of bacterial infection

COMMENT: Peritonitis is a serious condition and can have many causes. One of its effects is to stop the peristalsis of the intestine so making it impossible for a person to eat and digest.

peritonsillar /,periτən'sɪlər/ *adjective* around the tonsils

peritonsillar abscess /,periτən'sɪlər 'æbsɛs/ *noun* same as **quinsy**

peritrichous /pə'ritrɪkəs/ *adjective* referring to bacteria where the surface of the cell is covered with flagella

perityphlitis /periτɪ'flaɪtɪs/ *noun* swelling of the tissues around the caecum

perumbilical /,periʌm'bilik(ə)l/ *adjective* around the navel

perireteritis /peri'juərɪtɪs/ *noun* inflammation of the tissue round a ureter, usually caused by inflammation of the ureter itself

periurethral /,peri'juərɪθrəl/ *adjective* around the urethra

PERLA *abbreviation* Pupils Equal and Reactive to Light and Accommodation

perle /pɜ:l/ *noun* a soft capsule of medicine

perleche /pɜ:l'leʃ/ *noun* 1. inflammation, with small cracks, at the corners of the mouth, caused by infection, poor diet, or producing too much saliva 2. candidiasis

permanent /'pɜ:mənənt/ *adjective* always existing ○ *The accident left him with a permanent disability.*

permanently /'pɜ:mənəntli/ *adverb* always, forever ○ *He was permanently disabled by the accident.*

permanent teeth /'pɜ:mənənt tɪ:θ/ *noun* the teeth in an adult, which replace the child's milk teeth during childhood

COMMENT: The permanent teeth consist of eight incisors, four canines, eight premolars and twelve molars, the last four molars (one on each side of the upper and lower jaw) being called the wisdom teeth.

permeability /pɜːmɪə'bɪlɪti/ *noun* (of a membrane) the ability to allow some substances to pass through

permeable membrane /pɜːmɪəb(ə)l 'membreɪn/ *noun* a membrane which allows some substances to pass through it

pernicious /pɜːnɪʃəs/ *adjective* harmful or dangerous, or unusually severe and likely to end in death

pernicious anaemia /pɜːnɪʃəs ə'nīːmɪə/ *noun* a disease where an inability to absorb vitamin B₁₂ prevents the production of red blood cells and damages the spinal cord. Also called **Addison's anaemia**

perniosis /pɜːni'əʊsɪs/ *noun* any condition caused by cold which affects blood vessels in the skin

pero- /pərəʊ/ *prefix* malformed or impaired

peromelia /pərəʊ'miːliə/ *noun* a congenital condition in which the limbs have developed unusually

peroneal /pərəʊ'nīːəl/ *adjective* referring to the outside of the leg

peroneal muscle /pərəʊ'nīːəl ,mæs(ə)l/ ,
peroneus /pərəʊ'nīːəs/ *noun* one of three muscles, the peroneus brevis, longus and tertius, on the outside of the lower leg which make the leg turn outwards

peroperative /pə'rɒp(ə)rətɪv/ *adjective* taking place during a surgical operation

peroral /pə'rɔːrəl/ *adjective* through the mouth

per os /pər 'ɒs/ *adverb* referring to a drug or other substance to be taken through the mouth

persecute /pɜːsɪkjuːt/ *verb* to make someone suffer all the time ○ *In paranoia, the patient feels he is being persecuted.*

persecution /pɜːsɪ'tkjʊːʃ(ə)n/ *noun* the act of being made to suffer

perseveration /pɜː'seːvə'ref(ə)n/ *noun* the act of repeating actions or words without any stimulus

persist /pə'sist/ *verb* to continue for some time ○ *The weakness in the right arm persisted for two weeks.*

persistent /pə'sistənt/ *adjective* continuing for some time ○ *treatment aimed at the relief of persistent angina* ○ *She had a persistent cough.*

persistent vegetative state /pə,sɪstənt 'vedʒɪtætɪv stet/ *noun* a condition in which someone is alive and breathes, but shows no brain activity, and will never recover consciousness. Abbr **PVS**

person /'pɜːs(ə)n/ *noun* a man or woman

personal /pɜːs(ə)n(ə)l/ *adjective* referring or belonging to a person ○ *Only certain senior*

members of staff can consult the personal records of the patients.

personal care /'pɜːs(ə)nəl keə/ *noun* the act of washing, toileting and dressing someone who cannot do these things for themselves

personal hygiene /,pɜːs(ə)n(ə)l 'haɪdʒɪːnɪ/ *noun* the standards someone has of looking after parts of their body such as hair, skin, teeth and breath, hands and nails, and keeping them clean

personality /,pɜːsə'næltɪ/ *noun* all the characteristics which are typical of one particular person and the way he or she thinks and behaves, and which make him or her different from other people

'Alzheimer's disease is a progressive disorder which sees a gradual decline in intellectual functioning and deterioration of personality and physical coordination and activity' [Nursing Times]

personality disorder /,pɜːsə'næltɪ dɪs'ɔːdə/ *noun* a disorder which affects the way a person behaves, especially in relation to other people

personnel /,pɜːsə'næl/ *noun* members of staff ○ *All hospital personnel must be immunised against hepatitis.* ○ *Only senior personnel can inspect the patients' medical records.* (NOTE: **Personnel** is singular.)

perspiration /,pɜːspa'ref(ə)n/ *noun* sweat or the action of sweating ○ *Perspiration broke out on her forehead.*

COMMENT: Perspiration is formed in the sweat glands under the epidermis and cools the body as the moisture evaporates from the skin. Sweat contains salt, and in hot countries it may be necessary to take salt tablets to replace the salt lost through perspiration.

perspire /pə'spaɪə/ *verb* to produce moisture through the sweat glands

Perthes' disease /'pɜːtɪz dɪ.ziːz/, **Perthes' hip** /,pɜːtɪz 'hip/ *noun* a disease found in young boys, in which the upper end of the femur degenerates and does not develop as expected, sometimes resulting in a permanent limp

pertussis /pə'tʌsɪs/ *noun* same as **whooping cough**

perversion /pə'verʃ(ə)n/ *noun* a form of behaviour which is thought to be unnatural, dangerous or disgusting ○ *He is suffering from a form of sexual perversion.*

pes /pɛs/ *noun* a foot

PESA abbr percutaneous epididymal sperm aspiration

pes cavus /pes 'keɪvəs/ *noun* same as **claw foot**

pes planus /pes 'pleinəs/ *noun* same as **flat foot**

pessary /'pɛsəri/ *noun* 1. a drug in soluble material which is pushed into the vagina and absorbed into the blood there. Also called **vaginal suppository** 2. a contraceptive device worn inside the vagina to prevent spermatozoa

entering 3. a device like a ring, which is put into the vagina as treatment for prolapse of the uterus

pest /pest/ *noun* an animal which carries disease, attacks plants and animals and harms or kills them ○ a spray to remove insect pests

pesticide /'pestɪsaɪd/ *noun* a substance which kills pests

PET *abbr* positron-emission tomography

petechia /pe'ti:kɪə/ *noun* a small red spot which does not go white when pressed, caused by bleeding under the skin (NOTE: The plural is petechiae.)

petidine /'peθɪdi:n/ *noun* a synthetically produced narcotic drug, used to reduce pain and as a sedative

petit mal /,peti'mæl/ *noun* a less severe form of epilepsy, where loss of consciousness attacks last only a few seconds and the person appears simply to be thinking deeply. Compare **grand mal**

Petri dish /'pɪtri dɪʃ/ *noun* a small glass or plastic dish with a lid, in which a culture is grown

petrissage /,petri'sa:ʒ/ *noun* an action used in massaging the muscles

petrosal /pə't्रəʊs(ə)l/ *adjective* referring to the petrous part of the temporal bone

petrositis /,petrə'o'saitɪs/ *noun* inflammation of the petrous part of the temporal bone

petrous /'petrəs/ *adjective* 1. like stone 2. petrosal

petrous bone /'petrəs bən/ *noun* the part of the temporal bone which forms the base of the skull and the inner and middle ears

PET scan /pet skæn/ *noun* an image of a cross-section, usually of the brain, that shows metabolic processes

-pexy /peksi/ *suffix* referring to fixation of an organ by surgery

Peyer's patches /,paɪəz 'pætʃɪz/ *plural noun* patches of lymphoid tissue on the mucous membrane of the small intestine [Described 1677. After Johann Conrad Peyer (1653–1712), Swiss anatomist.]

Peyronie's disease /'perəni:z di,ziz:/ *noun* a condition associated with Dupuytren's contracture in which hard fibre develops in the penis which becomes painful when erect [Described 1743. After François de la Peyronie (1678–1747), Surgeon to Louis XV in Paris, France.]

PGEA *abbr* postgraduate education allowance

pH /,pi: 'eɪtʃ/ *noun* the concentration of hydrogen ions in a solution, which determines its acidity

COMMENT: The pH factor is shown as a number: pH 7 is neutral, pH 8 and above show that the solution is alkaline and pH 6 and below show that the solution is acid.

phaco- /fækəʊ/ *prefix* referring to the lens of the eye

phacoemulsification /,fækəʊɪ,mlsɪfɪ'keɪʃ(ə)n/ *noun* an ultrasonic technique which turns a cataract in the eye into liquid. It is then removed by suction and a plastic lens is put into the eye.

phaeochromocytoma /,fi:əʊ,k्रəʊməʊsət'əʊmə/ *noun* a tumour of the adrenal glands which affects the secretion of hormones such as adrenaline, which in turn results in hypertension and hyperglycaemia

phag- /fæg/ *prefix* same as **phago-** (used before vowels)

phage /feɪdʒ/ *noun* same as **bacteriophage**

-phage /feɪdʒ/ *suffix* referring to something which eats

phagedaena /,fædʒə'di:nə/ *noun* an ulcer that spreads rapidly

-phagia /feɪdʒə/ *suffix* referring to eating

phago- /fægəʊ/ *prefix* referring to eating

phagocyte /'fægəʊ,sait/ *noun* a cell, especially a white blood cell, which can surround and destroy other cells such as bacteria cells

phagocytic /,fægə'sitɪk/ *adjective* 1. referring to phagocytes ○ Monocytes become phagocytic during infection. 2. destroying cells

phagocytosis /,fægəʊsət'əʊsɪs/ *noun* destruction of bacteria cells and foreign bodies by phagocytes

phakic /fækɪk/ *adjective* referring to an eye which has its natural lens

phako- /fækəʊ/ *prefix* same as **phaco-**

phalangeal /fə'lændʒiəl/ *adjective* referring to the phalanges

phalanges /fə'lændʒi:z/ plural of **phalanx**

phalangitis /fælən'dʒaɪtɪs/ *noun* inflammation of the fingers or toes caused by infection of tissue

phalanx /fælæŋks/ *noun* a bone in a finger or toe. See illustration at **HAND** in Supplement, **FOOT** in Supplement

COMMENT: The fingers and toes have three phalanges each, except the thumb and big toe, which have only two.

phalloplasty /'fæləplæstɪ/ *noun* a surgical operation to repair a damaged or deformed penis

phantom /'fæntəm/ *noun* 1. a model of the whole body or part of the body, used to practise or demonstrate surgical operations 2. an image not brought about by actual stimuli, something which is not there but seems to be there

phantom limb /,fæntəm 'lɪm/ *noun* a condition in which someone seems to feel sensations in a limb which has been amputated

phantom pregnancy /,fæntəm 'pregnənsɪ/ *noun* same as **pseudocyesis**

phantom tumour /,fæntəm 'tju:ma/ *noun* a condition in which a swelling occurs which imitates a swelling caused by a tumour

Pharm. *abbr* 1. pharmacopoeia 2. pharmacy
3. pharmaceutical

pharmaceutical /,fə:mə'sju:tɪk(ə)l/ *adjective* referring to pharmacy or drugs

pharmaceutical products /,fə:mə'sju:tɪk(ə)l 'prɒdʌktɪs/ *plural noun* medicines, pills, lozenges or creams which are sold in chemists' shops

pharmaceuticals /,fə:mə'sju:tɪk(ə)lz/ *plural noun* drugs prescribed as medicines

Pharmaceutical Society /,fə:mə'sju:tɪk(ə)l sə,saiətɪ/ *noun* a professional association for pharmacists

pharmaceutics /,fə:mə'sju:tɪks/ *noun* the science of the preparation and dispensing of prescribed drugs ■ *plural noun* drugs prescribed as medicines

pharmacist /,fə:məsɪst/ *noun* a trained person who is qualified to prepare medicines according to the instructions on a doctor's prescription

COMMENT: In the UK, qualified pharmacists must be registered by the Royal Pharmaceutical Society of Great Britain before they can practise.

pharmaco- /fə:məkəʊ/ *prefix* referring to drugs

pharmacodynamic /,fə:məkəʊdæmɪk/ *adjective* referring to a property of a drug which affects the part where it is applied

pharmacodynamics /,fə:məkəʊdæmɪks/ *plural noun* the study of the effects of drugs on living organisms, and especially of how much the body's response changes when you increase the dose of a drug. Compare **pharmacokinetics** (NOTE: Takes a singular verb.)

pharmacogenomics /,fə:məkəʊdʒɪ'nɒmɪks/ *plural noun* the study of the relationship between a person's genetic makeup and response to drug treatments (NOTE: Takes a singular verb.)

pharmacokinetic /,fə:məkəʊkə'nɛtɪk/ *adjective* referring to a property of a drug which has an effect over a period of time

pharmacokinetics /,fə:məkəʊkə'nɛtɪks/ *plural noun* 1. the study of how the body reacts to drugs over a period of time. Compare **pharmacodynamics** (NOTE: Takes a singular verb.) 2. the way in which a drug interacts with the body

pharmacological /,fə:məkə'lɒdʒɪk(ə)l/ *adjective* referring to pharmacology

pharmacologist /,fə:mə'kɒlədʒɪst/ *noun* a scientist who specialises in the study of drugs

pharmacology /,fə:mə'kɒlədʒɪ/ *noun* the study of drugs or medicines, and their actions, properties and characteristics

pharmacopoeia /,fə:məkə'pi:ə/ *noun* an official list of drugs, their methods of preparation, dosages and the ways in which they should be used

COMMENT: The British Pharmacopoeia is the official list of drugs used in the UK. The drugs listed in it have the letters BP after their name. In the US the official list is the United States Pharmacopoeia or USP.

pharmacotherapy /,fə:məkə'θerəpi/ *noun* the use of drugs to treat conditions, especially psychiatric disorders

pharmacy /'fə:məsi/ *noun* 1. the study of the making and dispensing of drugs ○ *He has a qualification in pharmacy.* 2. a shop or department in a hospital where drugs are prepared

Pharmacy Act /'fə:məsi ækt/ *noun* in the UK, one of several Acts of Parliament which regulate the making, prescribing and selling of drugs, e.g. the Pharmacy and Poisons Act 1933, the Misuse of Drugs Act 1971 and the Poisons Act 1972

pharyng- /færɪndʒ/ *prefix* same as **pharyngo-** (used before vowels)

pharyngeal /,færɪn'dʒi:əl/ *adjective* referring to the pharynx

pharyngeal pouch /,færɪndʒi:əl 'paʊtʃ/ *noun* one of the pouches on each side of the throat of an embryo. Also called **visceral pouch**

pharyngeal tonsils /,færɪndʒi:əl 'tɔns(ə)lz/ *plural noun* same as **adenoids**

pharyngectomy /,færɪn'dʒektəmi/ *noun* the surgical removal of part of the pharynx, especially in cases of cancer of the pharynx

pharynges /fə'rɪndʒi:z/ *plural* of **pharynx**

pharyngismus /,færɪn'dʒizməs/, **pharyngism** /'færɪndʒɪz(ə)m/ *noun* a spasm which contracts the muscles of the pharynx

pharyngitis /,færɪn'dʒaɪtɪs/ *noun* inflammation of the pharynx

pharyngo- /fə'rɪngəʊ/ *prefix* referring to the pharynx

pharyngocèle /fə'rɪngəʊsɪ:l/ *noun* 1. a cyst which opens off the pharynx 2. a hernia of part of the pharynx

pharyngolaryngeal /,fə'rɪngələrɪndʒi:əl/ *adjective* referring to the pharynx and the larynx

pharyngology /,færɪn'gɒlədʒɪ/ *noun* the specialty in medicine that deals with the throat, its diseases and their treatment

pharyngoscope /fə'rɪngəʊskəp/ *noun* an instrument with a light attached, used by a doctor to examine the pharynx

pharyngotympanic tube /fə'rɪngətɪməpɪnik 'tju:b/ *noun* one of two tubes which connect the back of the throat to the middle ear. Also called **Eustachian tube**

pharynx /'færɪŋks/ *noun* a muscular passage leading from the back of the mouth to the oesophagus (NOTE: The plural is **pharynges** or **pharynxes**.)

COMMENT: The nasal cavity (or nasopharynx) leads to the back of the mouth (or oropharynx) and then into the pharynx itself, which in turn

becomes the oesophagus when it reaches the sixth cervical vertebra. The pharynx is the channel both for air and food; the trachea (or windpipe) leads off it before it joins the oesophagus. The upper part of the pharynx (the nasopharynx) connects with the middle ear through the Eustachian tubes. When air pressure in the middle ear is not equal to that outside, as when going up or down in an aeroplane, the tube becomes blocked and pressure can be reduced by swallowing.

phase /feɪz/ *noun* a stage or period of development ○ *If the cancer is diagnosed in its early phase, the chances of complete cure are much greater.*

phenazopyridine /fə,næzəʊ'pɪrɪdɪ:n/ *noun* a drug used to reduce pain in conditions of the urinary tract, such as cystitis

phenobarbitone /fi:nəʊ'bə:bɪtən/ *noun* a barbiturate drug which is used as a sedative, a hypnotic and an anticonvulsant

phenol /fi:nɒpl/ *noun* a strong disinfectant used for external use. Also called **carbolic acid**

phenomenon /fə'nɒmɪnən/ *noun* 1. a fact or situation which can be observed 2. someone or something that is considered to be extraordinary and marvellous

phenotype /'fɪnəʊtaɪp/ *noun* the particular characteristics of an organism. Compare **genotype**

...all cancers may be reduced to fundamental mechanisms based on cancer risk genes or oncogenes within ourselves. An oncogene is a gene that encodes a protein that contributes to the malignant phenotype of the cell.' [British Medical Journal]

phenylalanine /fi:nail'æləni:n/ *noun* an essential amino acid

phenylketonuria /fi:nail,kɪ:təu'njʊəriə/ *noun* a hereditary condition which affects the way in which the body breaks down phenylalanine, which in turn concentrates toxic metabolites in the nervous system causing brain damage

COMMENT: To have phenylketonuria, a child has to inherit the gene from both parents. The condition can be treated by giving the child a special diet but early diagnosis is essential to avoid brain damage.

phenytoin /'fenɪtɔɪn/ *noun* a drug which helps to prevent convulsions, used in the treatment of epilepsy

pH factor /pi:/ 'eɪtʃ ,fæktə/ *noun* a factor which indicates acidity or alkalinity

phial /'feɪəl/ *noun* a small medicine bottle

-philia /fɪliə/ *suffix* attraction to or liking for something

philtrum /'filtrəm/ *noun* 1. a groove in the centre of the top lip 2. a drug believed to stimulate sexual desire

phimosis /fɪ'moʊsɪs/ *noun* a condition in which the foreskin is tight and has to be removed by circumcision

phleb- /fleb/ *prefix* same as **phlebo-** (used before vowels)

phlebectomy /fɪ'lɪ'bektəmɪ/ *noun* the surgical removal of a vein or part of a vein

phlebitis /fɪ'lɪ'baitɪs/ *noun* inflammation of a vein

phlebo- /flebəʊ/ *prefix* referring to a vein

phlebogram /'flebəgræm/ *noun* an X-ray picture of a vein or system of veins. Also called **venogram**

phlebography /fɪ'lɪ'bɒgræfi/ *noun* an X-ray examination of a vein using a radio-opaque dye so that the vein will show up on the film. Also called **venography**

phlebolith /'flebəlɪθ/ *noun* a stone which forms in a vein as a result of an old thrombus becoming calcified

phlebothrombosis /,flebəʊθrɒm'bəsɪs/ *noun* a blood clot in a deep vein in the legs or pelvis, which can easily detach and form an embolus in a lung

phlebotomise /fɪ'lɪ'bɒtəmaɪz/, **phlebotomize** *verb* to make a cut in a person's vein to take blood for testing

phlebotomy /fɪ'lɪ'bɒtəmɪ/ *noun* an operation where a vein or an artery is cut so that blood can be removed, as when taking blood from a donor

phlegm /flem/ *noun* same as **sputum** ○ *She was coughing up phlegm into her handkerchief.*

phlegmasia alba dolens /fleg,meɪziə ,ælbə 'dəʊləns/ *noun* same as **milk leg**

phyctena /flik'ti:nə/, **phycten** /'flɪktən/ *noun* 1. a small blister caused by a burn 2. a small vesicle on the conjunctiva

phyctenule /flik'tenju:l/ *noun* 1. a tiny blister on the cornea or conjunctiva 2. any small blister

phobia /'fəʊbiə/ *noun* an unusually strong and irrational fear ○ *She has a phobia about or of dogs.* ○ *Fear of snakes is one of the commonest phobias.*

-phobia /fəʊbiə/ *suffix* neurotic fear of something ○ *agoraphobia* ○ *claustrophobia*

phobic /fəʊbɪk/ *adjective* referring to a phobia

-phobic /fəʊbɪk/ *suffix* a person who has a phobia of something

phobic anxiety /,fəʊbɪk æŋ'zaiəti/ *noun* state of worry caused by a phobia

phocomelia /,fəʊkə'miəliə/, **phocomely** /fəʊ'kɒməli/ *noun* 1. a congenital condition in which the upper parts of the limbs are missing or poorly developed, leaving the hands or feet directly attached to the body 2. a congenital condition in which the legs develop as usual, but the arms are absent or underdeveloped

phon- /fəʊn/ *prefix* same as **phono-** (used before vowels)

phonation /fəʊ'nейʃ(ə)n/ *noun* the production of vocal sounds, especially speech

phoniatrics /fəʊni'ɛtriks/ *noun* the study of speech and disorders related to it

phono- /fəʊnəʊ/ *prefix* referring to sound or voice

phonocardiogram /fəʊnəʊ'ku:diəgræm/ *noun* a chart of the sounds made by the heart

phonocardiograph /fəʊnəʊ'ku:diəgræf/ *noun* an instrument that amplifies heart sounds and converts them into a visual display

phonocardiography /fəʊnəʊ'ku:di'ngrəfi/ *noun* the process of recording the sounds made by the heart

phonology /fə'nɒlədʒi/ *noun* the study of the system of speech sounds used in a particular language or in human speech generally

phonosurgery /fəʊnəʊ,sɜ:dʒəri/ *noun* surgery performed to alter the quality of the voice

phosphataemia /fɒsfə'ti:miə/ *noun* the presence of excess phosphates in the blood

phosphatase /fɒsfə'teɪz/ *noun* a group of enzymes which are important in the cycle of muscle contraction and in the calcification of bones

phosphate /fɒsfait/ *noun* a salt of phosphoric acid

phosphaturia /fɒsfə'tjuəriə/ *noun* the presence of excess phosphates in the urine

COMMENT: In phosphaturia the urine becomes cloudy, which can indicate stones in the bladder or kidney.

phospholipid /fɒsfə'u'lipɪd/ *noun* a compound with fatty acids, which is one of the main components of membranous tissue

phoshonecrosis /fɒsfə'ne'krəʊsɪs/ *noun* a necrotic condition affecting the kidneys, liver and bones, usually seen in people who work with phosphorus

phosphorescent /fɒsfə'res(ə)nt/ *adjective* shining without producing heat

phosphoric acid /fɒs,fɔɪrɪk 'æsɪd/ *noun* an acid which is very soluble in water and gives rise to acid, neutral and alkali salts

phosphorus /fɒsf(ə)rəs/ *noun* a toxic chemical element which is present in very small quantities in bones and nerve tissue. It causes burns if it touches the skin, and can poison if swallowed. (NOTE: The chemical symbol is P.)

phosphorylase /fɒs'fɔɪrlaɪz/ *noun* an enzyme that aids the process of carbohydrate metabolism

phossy jaw /fɔsi 'dʒɔ:/ *noun* a type of phosphonecrosis, caused by inhaling phosphorus fumes, which results in disintegration of the bones of the lower jaw. The disease was once common among workers in match factories.

phot- /fət, fəʊt/ *prefix* same as **photo-** (used before vowels)

photalgia /fəʊ'tældʒə/ *noun* 1. pain in the eye caused by bright light 2. severe photophobia

photo- /fəʊtəʊ/ *prefix* referring to light

photoablation /fəʊtəʊə'bлеɪʃ(ə)n/ *noun* the removal of tissue using lasers

photocoagulation /fəʊtəʊkəʊəgjʊ'leɪʃ(ə)n/ *noun* the process in which tissue coagulates from the heat caused by light, used to treat a detached retina

photodermatoses /fəʊtəʊ,dɜ:ma'təʊsɪs/ *noun* a lesion of the skin after exposure to bright light

photogenic /fəʊtə'dʒenɪk/ *adjective* 1. produced by the action of light 2. producing light

photograph /fəʊtəgra:f/ *noun* a picture taken with a camera, which uses the chemical action of light on sensitive film ■ *verb* to take a picture of something with a camera

photography /fə'tɒŋgrəfi/ *noun* the act of taking pictures with a camera ○ *The development of X-ray photography has meant that internal disorders can be more easily diagnosed.*

photophobia /fəʊtəʊ'fəʊbiə/ *noun* 1. a condition in which the eyes become sensitive to light and conjunctivitis may be caused (NOTE: It can be associated with measles and some other infectious diseases.) 2. a morbid fear of light

photophobic /fəʊtəʊ'fəʊbɪk/ *adjective* having an unusual fear of light

photophthalmia /fəʊtɒf'θælmɪə/ *noun* inflammation of the eye caused by bright light, as in snow blindness

photopic vision /fəʊ,tɒpɪk 'viʒ(ə)n/ *noun* vision which is adapted to bright light such as daylight, using the cones in the retina instead of the rods, which are used in scotopic vision. ◊ *light adaptation*

photopsia /fəʊ'tɒpsɪə/ *noun* a condition of the eye in which someone sees flashes of light

photoreceptor neurone /fəʊtəʊrəʊtɪ,septə'ni:jərəʊn/ *noun* a rod or cone in the retina, which is sensitive to light or colour

photoretinitis /fəʊtəʊreti'naitɪs/ *noun* damage to a retina caused by looking directly at the sun. Also called **sun blindness**

photosensitive /fəʊtəʊ'sensɪtɪv/ *adjective* sensitive to light, or stimulated by light

photosensitivity /fəʊtəʊsensɪt'ɪviti/ *noun* the fact of being sensitive to light

phototherapy /fəʊtəʊ'θerəpi/ *noun* a treatment for jaundice and vitamin D deficiency, which involves exposing the person to ultraviolet rays

phototoxic /fəʊtəʊ'tɒksɪk/ *adjective* making the skin unusually sensitive to damage by light, as in sunburn

phototoxicity /fəʊtəʊtɒk'sisiti/ *noun* a cause of damage to the retina of the eye due to exposure to too much ultraviolet light or radi-

ation ○ Children's retinas are more likely to experience damage as a result of phototoxicity from excess ultraviolet light than those of adults. ◊ **retinopathy**

photuria /fəʊ'tjuəriə/ *noun* phosphorescent urine

phren- /fren/ *prefix* same as **phreno-** (*used before vowels*)

phrenemphraxis /,frenem'fræksɪs/ *noun* a surgical operation to crush the phrenic nerve in order to paralyse the diaphragm

-**phrenia** /fri:nɪə/ *suffix* disorder of the mind

phrenic /'frenɪk/ *adjective* 1. referring to the diaphragm 2. referring to the mind or intellect

phrenic avulsion /,frenɪk ə'velʃn(ə)n/ *noun* the surgical removal of part of the phrenic nerve in order to paralyse the diaphragm

phrenicectomy /,frenɪ'sektəmɪ/ *noun* the surgical removal of all or part of the phrenic nerve

phreniclasia /,frenɪ'kleɪziə/ *noun* an operation to clamp the phrenic nerve

phrenic nerve /'frenɪk nɜ:vɪ/ *noun* a pair of nerves which controls the muscles in the diaphragm

phrenicotomy /,frenɪ'kɒtəmɪ/ *noun* an operation to divide the phrenic nerve

phreno- /frenəʊ/ *prefix* 1. referring to the brain 2. referring to the phrenic nerve

pH test /pi: 'eɪtʃ test/ *noun* a test to see how acid or alkaline a solution is

phthiriasis /θɪ'rɪəsɪs/ *noun* infestation with the crab louse

Phthirus pubis /,θaɪrɪəs 'pjʊ:bɪs/ *noun* a louse which infests the pubic region. Also called **pubic louse, crab**

phthisis /θaɪsɪs/ *noun* an old term for tuberculosis

phycomycosis /,faɪkə'moʊsɪk'keʊsɪs/ *noun* an acute infection of the lungs, central nervous system and other organs by a fungus

physi- /fɪzɪ/ *prefix* same as **physio-** (*used before vowels*)

physical /'fɪzɪk(ə)l/ *adjective* referring to the body, as opposed to the mind ■ *noun* a physical examination ○ He has to pass a physical before being accepted by the police force.

physical dependence /,fɪzɪk(ə)l dɪ'pendəns/, **physical drug dependence** /,fɪzɪk(ə)l 'drag dɪ'pendəns/ *noun* a state where a person is addicted to a drug such as heroin and suffers physical effects if he or she stops taking the drug

physical education /,fɪzɪk(ə)l ,edju'keɪʃn(ə)n/ *noun* the teaching of sports and exercises in school

physical examination /,fɪzɪk(ə)l ɪg,zæmɪ'nɛɪʃn(ə)n/ *noun* an examination of someone's body to see if he or she is healthy

physical genetic trait /,fɪzɪk(ə)l dʒe'netɪk trɛt/ *noun* a characteristic of the body of a

person, e.g. red hair or big feet, which is inherited

physically /'fɪzɪklɪ/ *adverb* referring to the body ○ Physically he is very weak, but his mind is still alert.

physically challenged /,fɪzɪklɪ 'tʃælɪndʒd/ *adjective* describing someone whose condition makes it difficult to perform some or all of the basic activities of daily life

physical medicine /,fɪzɪk(ə)l 'med(ə)sɪn/ *noun* a branch of medicine which deals with physical disabilities or with treatment of disorders after they have been diagnosed

physical sign /,fɪzɪk(ə)l 'saɪn/ *noun* a symptom which can be seen on someone's body or which can be produced by percussion and palpitation

physical therapy /,fɪzɪk(ə)l 'θerəpi/ *noun* the treatment of disorders by heat, by massage, by exercise and other physical means

physician /fi'zɪʃn(ə)n/ *noun* a registered doctor who is not a surgeon (NOTE: In British English, physician refers to a specialist doctor, though not usually a surgeon, while in US English it is used for any qualified doctor.)

physio /'fɪzɪə/ *noun (informal)* 1. a session of physiotherapy treatment 2. a physiotherapist

physio- /fɪzɪəʊ/ *prefix* 1. referring to physiology 2. physical

physiological /,fɪzɪə'lɒdʒɪk(ə)l/ *adjective* referring to physiology and the regular functions of the body

physiological saline /,fɪzɪə'lɒdʒɪk(ə)l 'sei laɪn/, **physiological solution** /,fɪzɪə'lɒdʒɪk(ə)l sə'lju:s(ə)n/ *noun* any solution used to keep cells or tissue alive

physiological tremor /,fɪzɪə'lɒdʒɪk(ə)l 'tremə/ *noun* a small movement of the limbs which takes place when a person tries to remain still

physiologist /,fɪzɪ'ɒlədʒɪst/ *noun* a scientist who specialises in the study of the functions of living organisms

physiology /,fɪzɪ'ɒlədʒɪ/ *noun* the study of regular body functions

physiotherapist /,fɪzɪəʊ'θerəpɪst/ *noun* a trained specialist who gives physiotherapy

physiotherapy /,fɪzɪəʊ'θerəpi/ *noun* the treatment of a disorder or condition by exercise, massage, heat treatment, infrared lamps or other external means, e.g. to restore strength or function after a disease or injury

physiotherapy clinic /,fɪzɪəʊ'θerəpi ,klinɪk/ *noun* a clinic where people can have physiotherapy

physique /fɪ'zi:k/ *noun* the shape and size of a person's body

physo- /faisəʊ/ *prefix* 1. tending to swell 2. relating to air or gas

physostigmine /,faisəʊ'stɪgmi:n/ *noun* an extract of the dried leaves of the vine that pro-

duces Calabar bean, which is toxic but may be used in the treatment of glaucoma and to counter the effects of anticholinergic drugs on the central nervous system

phyt- /faɪt/, **phyto-** /faɪtəʊ/ *prefix* referring to plants or coming from plants

phytooestrogen /,faɪtəʊ'ɪstrədʒən/ *noun* a substance obtained from cereals, legumes and seeds which has a similar effect on the body as oestrogen, used increasingly as an alternative to hormone replacement therapy

phyto-photo dermatitis /,faɪtəʊ ,fəʊtəʊ ,dʒə'moʊ'taɪtɪs/ *noun* an acute skin reaction due to the combination of plant irritation and sunlight

PI *abbr* pressure index

pia /'paɪə/, **pia mater** /,paɪə 'mɛtə/ *noun* the delicate innermost membrane of the three which cover the brain. ☐ **arachnoid**, **dura mater**

pian /pi'ə:n/ *noun* same as **yaws**

pica /'paɪkə/ *noun* a desire to eat things which are not food, e.g. wood or paper, often found in pregnant women and small children

pick /pɪk/ *verb* to take away small pieces of something with the fingers or with a tool ☐ *She picked the pieces of glass out of the wound with tweezers.*

Pick's disease /'pɪks di,zi:z/ *noun* a rare form of presenile dementia, in which a disorder of the lipid metabolism causes mental impairment, anaemia, loss of weight and swelling of the spleen and liver

pick up /,pɪk 'ʌp/ *verb (informal)* 1. to catch a disease ☐ *She must have picked up the disease when she was travelling in Africa.* 2. to get stronger or better ☐ *He was ill for months, but he's picking up now.*

pico- /pi:kəʊ/ *prefix* one million millionth (10^{-12}). Symbol **p**

picomole /'pi:kəʊməʊl/ *noun* a unit of measurement of the amount of substance equal to one million millionth of a mole. Symbol **pmol**

picornavirus /pi:'kɔ:nə,vairəs/ *noun* a virus containing RNA, e.g. enteroviruses and rhinoviruses

PID *abbr* prolapsed intervertebral disc

PIDS *abbr* primary immune deficiency syndrome

Pierre Robin syndrome /,pjərə rɒ'bæn ,sɪndrəʊm/ *noun* a combination of facial features including a small lower jaw and a cleft palate that exist at birth, causing breathing and feeding problems early in a child's life

pigeon breast /'pɪdʒɪn brest/, **pigeon chest** /'pɪdʒɪn tʃest/ *noun* same as **pectus carinatum**

pigeon toes /'pɪdʒɪn təʊz/ *plural noun* a condition in which the feet turn towards the inside when a person is standing upright

pigment /'pɪgmənt/ *noun* 1. a substance which gives colour to part of the body such as blood, the skin or hair 2. (in *pharmacy*) a paint

COMMENT: The body contains several substances which control colour: melanin gives dark colour to the skin and hair; bilirubin gives yellow colour to bile and urine; haemoglobin in the blood gives the skin a pink colour; carotene can give a reddish-yellow colour to the skin if the patient eats too many tomatoes or carrots. Some pigment cells can carry oxygen and are called 'respiratory pigments'.

pigmentation /,pɪg'meɪtɪʃən/ *noun* the colouring of the body, especially that produced by deposits of pigment

pigmented /pɪg'mentɪd/ *adjective* 1. coloured 2. showing an unusual colour

pigmented epithelium /,pɪg'məntɪd ,epɪ'θi:lɪəm/, **pigmented layer** /,pɪg'məntɪd 'leɪə/ *noun* coloured tissue at the back of the retina

PIH *abbr* pregnancy-induced hypertension

Pilates /'pɪlə:tɪz/ *noun* a holistic form of exercise and postural therapy that develops the deep abdominal muscles to control body movement and protect the back

piles /'pailz/ *plural noun* same as **haemorrhoids**

pili /'pailɪ/ ☐ **arrector pili**

pill /pɪl/ *noun* a small hard round ball of medication that is taken by swallowing ☐ *He has to take the pills twice a day.* ☐ **the pill** an oral contraceptive. ☐ **morning-after pill** ☐ **on the pill** taking a regular course of contraceptive pills

pillar /'pɪlə/ *noun* a part that is long and thin

pillow /'pɪləʊ/ *noun* a soft cushion on a bed which the head lies on when the person is lying down ☐ *The nurse gave her an extra pillow to keep her head raised.*

pill-rolling /'pɪl ,rəʊlɪŋ/ *noun* nervous action of the fingers, in which the person seems to be rolling a very small object, associated with Parkinson's disease

pilo- /'pailəʊ/ *prefix* referring to hair

pilocarpine /,pailəʊ'ku:pɪ:n/ *noun* an organic compound of plant origin which is used in eye drops to treat glaucoma

pilomotor /,pailəʊ'məʊtə/ *adjective* referring to something that moves the hairs of the skin

pilomotor nerve /,pailəʊ'məʊtə nɜ:v/ *noun* a nerve which supplies the arrector pili muscles attached to hair follicles

pilomotor reflex /,pailəʊ'məʊtə ,ri:fleks/ *noun* a reaction of the dermal papillae of the skin to cold and fear which causes the hairs on the skin to become erect

pilonidal /,pailə'naid(ə)l/ *adjective* relating to a cyst or cavity which has a growth of hair

pilonidal cyst /,pailə,naid(ə)l 'sist/ *noun* a cyst containing hair, usually found at the bottom of the spine near the buttocks

pilonidal sinus /,paɪlən,dɪəs/ noun a small depression with hairs at the base of the spine

pilosebaceous /,paɪləʊsə'bɛsɪəs/ adjective referring to the hair follicles and the glands attached to them

pillosity /paɪ'ləsɪsɪs/, **pillosism** /'paɪləsɪz(ə)m/ noun a condition in which someone has an unusual amount of hair or where hair is present in an unusual place

pilot study /'paɪlət ,stʌdi/ noun a small version of a project which is carried out first, in order to discover how well it works and to solve any problems, before going ahead with the full version

pillus /'paɪləs/ noun 1. one hair (NOTE: The plural is *pili*.) 2. hair-like process on the surface of a bacterium

pimple /'pɪmpl/ noun a small swelling on the skin, containing pus ◇ *He had pimples on his neck.*

pimply /'pɪmpli/ adjective covered with pimples

pin /pɪn/ noun 1. a small sharp piece of metal for attaching things together ◇ *The nurse fastened the bandage with a pin.* 2. a metal nail used to attach broken bones ◇ *He has had a pin inserted in his hip.* ■ verb to attach something with a pin ◇ *She pinned the bandages carefully to stop them slipping.* ◇ *The bone had fractured in several places and needed pinning.*

pinch /pɪntʃ/ noun 1. an act of squeezing the thumb and first finger together 2. a quantity of something which can be held between the thumb and first finger ◇ *She put a pinch of salt into the water.* ■ verb 1. to squeeze something tightly between the thumb and first finger 2. to squeeze something ◇ *She developed a sore on her ankle where her shoe pinched.*

pineal /'piːiəl/ adjective relating to or released by the pineal gland

pineal body /'piːiəl ,bɒdi/, **pineal gland** /'piːiəl glænd/ noun a small cone-shaped gland situated below the corpus callosum in the brain, which produces melatonin and is believed to be associated with the circadian rhythm. See illustration at **BRAIN** in Supplement

pinguecula /pɪŋ'gwekju:lə/, **pinguicula** /pɪŋ'gwɪkju:lə/ noun a condition affecting elderly people, in which the conjunctiva in the eyes has small yellow growths near the edge of the cornea, usually on the nasal side

pink disease /'pɪŋk dɪ,zi:z/ noun same as **acrodynia**

pinna /'pɪnə/ noun the outer ear, the part of the ear which is outside the head, connected by a passage to the eardrum. See illustration at **EAR** in Supplement

pinnaplasty /'pɪnəplæsti/ noun a cosmetic surgical procedure to correct the shape of the ear

pinocytosis /,pi:nəʊsəsɪ'təʊsɪs/ noun the process by which a cell surrounds and takes in fluid

pins and needles /,pɪnz ən 'ni:d(ə)lz/ noun an unpleasant tingling sensation, usually occurring after a temporarily restricted blood supply returns to an arm or leg (*informal*) ◇ **par-aesthesia**

paint /paɪnt/ noun a unit of measurement of liquids (= about 0.56 of a litre) ◇ *He lost two pints of blood during the operation.*

pinta /'pɪntə/ noun a skin disease of the tropical regions of America, in which the skin on the hands and feet swells and loses colour, caused by a spirochaete *Treponema*

pinworm /'pɪnwɜ:m/ noun US same as **threadworm**

PIP abbr proximal interphalangeal joint

pipette /'pi:pɪt/ noun a thin glass tube used in the laboratory for taking or measuring samples of liquid

piriform fossae /,pɪrɪfɔ:m 'fɔ:sə/ plural noun the two hollows at the sides of the upper end of the larynx

Piriton /'pɪritɒn/ a trade name for chlorphenamine

piroxicam /pi'rɒksɪkæm/ noun a non-steroidal anti-inflammatory drug used in the treatment of rheumatoid arthritis and osteoarthritis

Pis abbr performance indicators

pisiform /'pɪsɪfɔ:m/, **pisiform bone** /'pɪsɪfɔ:m bəʊn/ noun one of the eight small carpal bones in the wrist. See illustration at **HAND** in Supplement

pit /pɪt/ noun a hollow place on a surface ◇ **the pit of the stomach** the epigastrium, the part of the upper abdomen between the ribcage above the navel. ◇ **armpit**

pithiatism /pi'θaɪətɪz(ə)m/ noun a way of influencing someone's mind by persuading him or her of something, as when a doctor treats a condition by telling the person that he or she is in fact well

pitted /'pitɪd/ adjective covered with small hollows ◇ *His skin was pitted by acne.*

pitting /'pitɪŋ/ noun the formation of hollows in the skin

pituitary /pi'tju:it(ə)ri/ adjective 1. relating to or produced by the pituitary gland 2. caused by a disturbance of the pituitary gland ■ noun same as **pituitary gland**

pituitary body /pi'tju:it(ə)ri ,bɒdi/ noun same as **pituitary gland**

pituitary fossa /pi'tju:it(ə)ri 'fɒsə/ noun same as **sella turcica**

pituitary gland /pi'tju:it(ə)ri ,glænd/ noun the main endocrine gland in the body which secretes hormones that stimulate other glands.

Also called **pituitary body, hypophysis cerebri**. See illustration at BRAIN in Supplement

COMMENT: The pituitary gland is about the size of a pea and hangs down from the base of the brain, inside the sphenoid bone, on a stalk which attaches it to the hypothalamus. The front lobe of the gland (the adenohypophysis) secretes several hormones (TSH, ACTH) which stimulate the adrenal and thyroid glands, or which stimulate the production of sex hormones, melanin and milk. The posterior lobe of the pituitary gland (the neurohypophysis) secretes the antidiuretic hormone (ADH) and oxytocin.

pituitrin /pi'tju:ɪtrɪn/ *noun* a hormone secreted by the pituitary gland

pityriasis /'pɪtɪ'ræsɪs/ *noun* any skin disease in which the skin develops thin scales

pityriasis alba /'pɪtɪ,ræsɪs 'ælba/ *noun* a disease affecting children which results in flat white patches on the cheeks that usually heal naturally

pityriasis capititis /'pɪtɪ,ræsɪs kə'partɪs/ *noun* ♦ dandruff

pityriasis rosea /'pɪtɪ,ræsɪs 'rəʊzɪə/ *noun* a mild irritating rash affecting young people, which appears especially in the early part of the year and has no known cause

pityriasis rubra /'pɪtɪ,ræsɪs 'ru:bɪə/ *noun* a serious, sometimes fatal, skin disease, a type of exfoliative dermatitis in which the skin turns dark red and is covered with white scales

pivot /'pɪvət/ *noun* a stem used to attach an artificial crown to the root of a tooth ■ *verb* to rest and turn on a point ○ *The atlas bone pivots on the second vertebra.*

pivot joint /'pivot dʒɔɪnt/ *noun* same as **trochoid joint**

PKD abbr polycystic kidney disease

PKU abbr phenylketonuria

placebo /pla'si:bəʊ/ *noun* a tablet which appears to be a drug, but has no medicinal substance in it

COMMENT: Placebos may be given to patients who have imaginary illnesses. Placebos can also help in treating real disorders by stimulating the patient's psychological will to be cured. Placebos are also used on control groups in tests of new drugs (a placebo-controlled study).

placebo effect /plə'si:bəʊ ɪ,fekt/ *noun* the apparently beneficial effect of telling someone that he or she is having a treatment, even if this is not true, caused by the hope that the treatment will be effective

placenta /plə'sentə/ *noun* the tissue which grows inside the uterus during pregnancy and links the baby to the mother

COMMENT: The vascular system of the fetus is not directly connected to that of the mother. The placenta allows an exchange of oxygen and nutrients to be passed from the mother to the fetus to which she is linked by the umbilical cord. It stops functioning when the baby

breathes for the first time and is then passed out of the uterus as the afterbirth.

placental /plə'sent(ə)l/ *adjective* referring to the placenta

placental barrier /plə,sent(ə)l 'bæriə/ *noun* a barrier which prevents the blood of a fetus and that of the mother from mixing, but allows water, oxygen and hormones to pass from mother to fetus

placental insufficiency /plə,sent(ə)l ,ɪnsə'fɪʃ(ə)nſɪ/ *noun* a condition in which the placenta does not provide the fetus with the necessary oxygen and nutrients

placenta praevia /plə,sentə 'pri:vɪə/ *noun* a condition in which the fertilised egg becomes implanted in the lower part of the uterus, which means that the placenta lies across the cervix and may become detached during childbirth and cause brain damage to the baby

placentography /,plæsən'tɒgrəfi/ *noun* an X-ray examination of the placenta of a pregnant woman after a radiopaque dye has been injected

Placido's disc /plə'saɪdəʊz dɪsk/ *noun* same as **keratoscope** [After A. Placido, Portuguese oculist.]

plagiocephaly /,pleɪdʒiə'kefəli/ *noun* a condition in which a person has a distorted head shape, from irregular closure of the cranial sutures

plague /'pleɪg/ *noun* an infectious disease which occurs in epidemics where many people are killed

COMMENT: Bubonic plague was the Black Death of the Middle Ages; its symptoms are fever, delirium, prostration, rigor and swellings on the lymph nodes.

plan /plæn/ *noun* arrangement of how something should be done ■ *verb* to arrange how something is going to be done □ **they are planning to have a family** they expect to have children and so are not taking contraceptives

'...one issue has arisen – the amount of time and effort which nurses need to put into the writing of detailed care plans. Few would now dispute the need for clear, concise nursing plans to guide nursing practice, provide educational tools and give an accurate legal record' [Nursing Times]

plane /pleɪn/ *noun* a flat surface, especially that of the body seen from a specific angle

planned **parenthood** /,plænd 'peərənθod/ *noun* a situation in which two people plan to have a specific number of children, and take contraceptives to control the number of children in the family

planning /'plænɪŋ/ *noun* the work of deciding and arranging how something should be done

planta /'plæntə/ *noun* the sole of the foot

plantar /'plæntə/ *adjective* referring to the sole of the foot

plantar arch /,plæntər 'a:tʃ/ *noun* the curved part of the sole of the foot running

along the length of the foot. Also called **longitudinal arch**

plantar flexion /'plæntər 'fleksʃən/ *noun* the bending of the toes downwards

plantar reflex /'plæntər 'ri:fleks/, **plantar response** /'plæntər rɪ'spɒns/ *noun* the usual downward movement of the toes when the sole of the foot is stroked in the Babinski test

plantar region /'plæntər ,rɪ:dʒən/ *noun* the sole of the foot

plantar surface /'plæntər ,sɜːfɪs/ *noun* the skin of the sole of the foot

plantar wart /'plæntər wɔ:t/ *noun* a wart on the sole of the foot

planus /'pleɪnəs/ ♦ **lichen planus**

plaque /plæk/, plāk/ *noun* 1. a flat area 2. a film of saliva, mucus, bacteria and food residues that builds up on the surface of teeth and can cause gum damage

-plasia /plɛzɪə/ *suffix* referring to something which develops or grows

plasm- /plæz(ə)m/ *prefix* same as **plasmo-** (*used before vowels*)

plasma /'plæzmə/ *noun* 1. a yellow watery liquid which makes up the main part of blood 2. lymph with no corpuscles 3. cytoplasm

COMMENT: If blood does not clot it separates into blood corpuscles and plasma, which is formed of water and proteins, including the clotting agent fibrinogen. If blood clots, the corpuscles separate from serum, which is a watery liquid similar to plasma, but not containing fibrinogen. Dried plasma can be kept for a long time, and is used, after water has been added, for transfusions.

plasma cell /'plæzmə sel/ *noun* a lymphocyte which produces a particular type of antibody

plasmacytoma /plæzməsai'təʊmə/ *noun* a malignant tumour of plasma cells, usually found in lymph nodes or bone marrow

plasmapheresis /,plæzməfə'ri:sɪs/ *noun* an operation to take blood from someone, then to separate the red blood cells from the plasma, and to return the red blood cells suspended in a saline solution to the patient through a transfusion

plasma protein /'plæzmə ,prəuti:n/ *noun* a protein in plasma, e.g. albumin, gamma globulin or fibrinogen

plasmin /'plæzmɪn/ *noun* same as **fibrinolysin**

plasminogen /plæz'mɪnədʒən/ *noun* a substance in blood plasma which becomes activated and forms plasmin

plasmo- /plæzməʊ/ *prefix* referring to blood plasma

Plasmodium /plæz'məudiəm/ *noun* a type of parasite which infests red blood cells and causes malaria

plasmolysis /plæz'mɒlɪsɪs/ *noun* the contraction of a cell protoplasm by dehydration,

where the surrounding cell wall becomes smaller

plaster /'pla:stə/ *noun* a white powder which is mixed with water and used to make a solid support to cover a broken limb ○ *After his accident he had his leg in plaster for two months.*

plaster cast /'pla:stə kɑ:st/ *noun* a hard support made of bandage soaked in liquid plaster of Paris, which is allowed to harden after being wrapped round a broken limb and which prevents the limb moving while the bone heals

plaster of Paris /,pla:stər əv 'pærɪs/ *noun* a fine white plaster used to make plaster casts

plastic /'plæstɪk/ *noun* an artificial material made from petroleum, and used to make many objects, including replacement organs ■ *adjective* able to change shape or develop in different shapes

plastic lymph /'plæstɪk lɪmf/ *noun* a yellow liquid produced by an inflamed wound which helps the healing process

plastic surgeon /,plæstɪk 'sɜː:dʒən/ *noun* a surgeon who specialises in plastic surgery

plastic surgery /,plæstɪk 'sɜː:dʒəri/ *noun* surgery to repair damaged or malformed parts of the body (*informal*) ♦ **reconstructive surgery**

COMMENT: Plastic surgery is especially important in treating accident victims or people who have suffered burns. It is also used to correct congenital disorders such as a cleft palate. When the aim is simply to improve the patient's appearance, it is usually referred to as 'cosmetic surgery'.

plastin /'plæstɪn/ *noun* same as **fibrinolysin**

-plasty /plæsti/ *suffix* referring to plastic surgery

plate /'pleɪt/ *noun* 1. a flat sheet of metal or bone ○ *The surgeon inserted a plate in her skull.* 2. a flat piece of metal attached to a fractured bone to hold the broken parts together

platelet /'pleɪtlet/ *noun* a small blood cell which releases thromboplastin and which multiplies rapidly after an injury, encouraging the coagulation of blood. Also called **thrombocyte**

platelet count /'pleɪt(ə)lət kaʊnt/ *noun* a test to count the number of platelets in a specific quantity of blood

platy- /plæti/ *prefix* flat

platysma /plætɪzma/ *noun* a flat muscle running from the collarbone to the lower jaw

pledget /'pledʒɪt/ *noun* a small piece of gauze or cotton wool used to protect or apply medication to a small enclosed space, such as the ear passage

-plegia /pli:dʒə/ *suffix* paralysis

pleio- /plaɪəʊ/ *prefix* same as **pleo-**

pleo- /pli:əʊ/ *prefix* too many

pleocytosis /pli:əʊsɪs/ *noun* a condition in which there are an unusual number of leucocytes in the cerebrospinal fluid

pleoptics /pli:'ɒptɪks/ *noun* treatment to help the partially sighted

pressor /'plesə/ *noun* a little hammer with a rubber tip, used by doctors to tap tendons to test for reflexes or for percussion of the chest. Also called **plexor**

plethora /'pleθərə/ *noun* too much blood in a part of the body

plethoric /ple'θɒrik/ *adjective* referring to an appearance that is due to dilatation of superficial blood vessels, e.g. a red complexion

plethysmography /,pleθɪz'mɒgrəfi/ *noun* a method of recording the changes in the volume of organs, mainly used to measure blood flow in the limbs

pleur- /pluər/ *prefix* same as **pleuro-** (*used before vowels*)

pleura /'pluərə/ *noun* one of two membranes lining the chest cavity and covering each lung (NOTE: The plural is **pleuras** or **pleurae**.)

pleurocentesis /,pluərəsɛn'ti:sɪs/ *noun* same as **pleurocentesis**

pleural /'pluərəl/ *adjective* referring to the pleura

pleural cavity /,pluərəl 'kævɪtɪ/ *noun* a space between the inner and outer pleura of the chest. See illustration at **LUNGS** in Supplement

pleural effusion /,pluərəl 'fju:ʒ(ə)n/ *noun* an excess of fluid formed in the pleural sac

pleural fluid /,pluərəl 'flu:ɪd/ *noun* a fluid which forms between the layers of the pleura in pleurisy

pleural membrane /,pluərəl 'membrən/ *noun* same as **pleura**

pleural mesothelioma /,pluərəl ,mesəʊθelɪ'əʊmə/ *noun* a tumour of the pleura, caused by inhaling asbestos dust

pleurectomy /pluə'rektəmi/ *noun* the surgical removal of part of the pleura which has been thickened or made stiff by chronic empyema

pleurisy /'pluərɪsɪ/ *noun* inflammation of the pleura, usually caused by pneumonia

COMMENT: The symptoms of pleurisy are coughing, fever, and sharp pains when breathing, caused by the two layers of pleura rubbing together.

pleuritis /pluə'rɪtɪs/ *noun* same as **pleurisy**

pleuro- /pluərəu/ *prefix* referring to the pleura

pleurocele /pluərəsɪ:l/ *noun* 1. a condition in which part of the lung or pleura is herniated 2. fluid in the pleural cavity

pleurocentesis /,pluərəsɛn'ti:sɪs/ *noun* an operation in which a hollow needle is put into the pleura to drain liquid. Also called **pleuracentesis**

pleurodesis /,pluərəu'di:sɪs/ *noun* treatment for a collapsed lung, in which the inner and outer pleura are stuck together

pleurodynia /,pluərəu'dɪniə/ *noun* pain in the muscles between the ribs, due to rheumatic inflammation

pleuron /'pluərən/ *noun* a membrane that encases the lung

pleuropneumonia /,pluərəʊnju'məʊniə/ *noun* acute lobar pneumonia, the classic type of pneumonia

plexor /'pleksə/ *noun* same as **pressor**

plexus /'pleksəs/ *noun* a network of nerves, blood vessels or lymphatics

pliable /'plaɪəb(ə)l/ *adjective* able to be bent easily

plica /'plaɪkə/ *noun* a fold

plicate /'plakɪt/ *adjective* folded

plication /plai'keɪʃ(ə)n/ *noun* 1. a surgical operation to reduce the size of a muscle or a hollow organ by making folds in its walls and attaching them 2. the action of folding 3. a fold

ploidy /'plɔɪdi/ *noun* the number of sets of chromosomes within a cell

plombage /plɒm'bæ:ʒ/ *noun* 1. the act of packing bone cavities with antiseptic material 2. the act of packing of the lung or pleural cavities with inert material

PLSS *abbr* portable life-support system

plumbing /'plʌmɪŋ/ *noun* any system of tubes or vessels in the body, but especially the urinary system (*informal humorous*)

plumbism /'plʌmbɪz(ə)m/ *noun* same as **lead poisoning**

Plummer–Vinson syndrome /,plʌmər'veɪnsən/ *noun* a type of iron-deficiency anaemia, in which the tongue and mouth become inflamed and the person cannot swallow [Described 1912 by Plummer, 1919 by Vinson (also described in 1919 by Patterson and Brown Kelly, whose names are frequently associated with the syndrome). Henry Stanley Plummer (1874–1937), US physician; Porter Paisley Vinson (1890–1959), physician at the Mayo Clinic, Minnesota, USA.]

plunger /'plʌndʒə/ *noun* the part of a hypodermic syringe which slides up and down inside the tube, either sucking liquid into the syringe or forcing the contents out

pluri- /pluəri/ *prefix* indicating more than one of something

PM *abbr* 1. particulate matter 2. post mortem

PMA *abbr* progressive muscular atrophy

pmol *symbol* picomole

PMR *abbr* polymyalgia rheumatica

PMS *abbr* premenstrual syndrome

PMT *abbr* premenstrual tension

-pnea /pnɪə/ *suffix* same as **-pnoea**

pneo- /ni:əu/ *prefix* relating to breathing

pneum- /nju:m/ *prefix same as pneumo- (used before vowels)*

pneumat- /nju:mət/ *prefix same as pneumato- (used before vowels)*

pneumato- /nju:mətəʊ/ *prefix relating to air, gas or breath*

pneumatocele /nju:mætəʊsɪ:l/ *noun 1. a sac or tumour filled with gas 2. herniation of the lung*

pneumatonometer /,nju:mətə'nɒmɪtə/ *noun an instrument which measures the air pressure in the eye, used in testing for glaucoma. It blows a puff of air onto the cornea.*

pneumatosis /,nju:mə'tɔːsɪs/ *noun the occurrence of gas in an unusual place in the body*

pneumaturia /,nju:mə'tjʊəriə/ *noun the act of passing air or gas in the urine*

pneumo- /nju:məʊ/ *prefix referring to air, to the lungs or to breathing*

pneumocephalus /,nju:məʊ'kefələs/ *noun the presence of air or gas in the brain*

pneumococcal /,nju:məʊ'kɒk(ə)l/ *adjective referring to pneumococci*

pneumococcus /,nju:məʊ'kɒkəs/ *noun a bacterium which causes respiratory tract infections including pneumonia (NOTE: The plural is pneumococci.)*

pneumoconiosis /,nju:məʊkəni'əʊsɪs/ *noun a lung disease in which fibrous tissue forms in the lungs because the person has inhaled particles of stone or dust over a long period of time*

pneumocystis carinii pneumonia /,nju:məʊsɪstɪs kə,ri:nii nju:'məʊniə/ *noun a form of pneumonia found in people with impaired immune systems after radiotherapy or with AIDS. Abbr PCP*

pneumocyte /'nju:məʊsət/ *noun a cell of the walls between the air sacs in the lung*

pneumoencephalography /,nju:məʊen,kefə'lɒgrəfi/ *noun same as encephalogram*

pneumogastric /,nju:məʊ'gæstriκ/ *adjective referring to the lungs and the stomach*

pneumograph /'nju:məgra:f/ *noun an instrument which records chest movements during breathing*

pneumohaemothorax /,nju:məʊ,hɪ:məʊ'θə:ræks/ *noun blood or air in the pleural cavity. Also called haemopneumothorax*

pneumomycosis /,nju:məʊmət'kəʊsɪs/ *noun an infection of the lungs caused by a fungus*

pneumon- /nju:mən/ *prefix same as pneumo- (used before vowels)*

pneumonectomy /,nju:mə'nekτəmə/ *noun the surgical removal of all or part of a lung. Also called pulmonectomy*

pneumonia /nju:'məʊniə/ *noun inflammation of a lung, where the tiny alveoli of the lung become filled with fluid ○ He developed*

pneumonia and had to be hospitalised. ○ She died of pneumonia.

COMMENT: The symptoms of pneumonia are shivering, pains in the chest, high temperature and sputum brought up by coughing.

pneumonic /nju'mɒnɪk/ *adjective 1. referring to the lungs 2. referring to pneumonia*

pneumonic plague /nju,mɒnɪk 'pleɪg/ *noun a form of bubonic plague which mainly affects the lungs*

pneumonitis /,nju:məʊ'naitɪs/ *noun inflammation of the lungs*

pneumono- /nju:mənəʊ/ *prefix referring to the lungs*

pneumoperitoneum /,nju:mə'perɪtə'ni:əm/ *noun air in the peritoneal cavity*

pneumoradiography /,nju:məʊ,reidi'bɒgrəfi/ *noun an X-ray examination of part of the body after air or a gas has been inserted to make the organs show more clearly*

pneumothorax /,nju:məʊ'θə:ræks/ *noun a condition in which air or gas is in the thorax. Also called collapsed lung*

-pnoea /pni:ə/ *suffix referring to breathing*

PNS abbr *peripheral nervous system*

pock /pɒk/ *noun a localised lesion on the skin, due to smallpox or chickenpox*

pocket /'pɒkit/ *noun a cavity in the body □ pocket of infection place where an infection remains*

pockmark /'pɒkma:k/ *noun a scar left by a pustule, as in smallpox*

pockmarked /'pɒkma:kɪt/ *adjective referring to a face with scars from smallpox*

pod- /'pɒd/ *prefix referring to the foot*

podagra /'pɒd'ɒgrə/ *same as gout*

podalic /pəʊ'dælɪk/ *adjective relating to the feet*

podalic version /pəʊ,dælɪk 'vɜ:ʃən/ *noun the procedure of turning a fetus in the uterus by its feet*

podarthritis /,pəʊdə:tɪs/ *noun the swelling of one or more joints of the foot*

podiatrist /pəʊ'dæztrɪst/ *noun US a person who specialises in the care of the foot and its diseases*

podiatry /pəʊ'dæztri/ *noun US the study of minor diseases and disorders of the feet*

-poiesis /pə'i:sɪs/ *suffix referring to something which forms*

poikilo- /pəɪkɪləʊ/ *prefix irregular or varied*

poikilocyte /pəɪkɪləʊsait/ *noun an unusually large red blood cell with an irregular shape*

poikilocytosis /,pəɪkɪləʊsɪs/ *noun a condition in which poikilocytes exist in the blood*

point /pɔɪnt/ *noun 1. a sharp end ○ Surgical needles have to have very sharp points. 2. the dot used to show the division between whole numbers and parts of numbers (NOTE: 3.256: say 'three point two five six'; his temperature*

was 38.7: say 'thirty-eight point seven') **3.** a mark in a series of numbers ○ *the freezing point of water*

pointed /'pɔɪntɪd/ *adjective* with a sharp point

poison /'pɔɪz(ə)n/ *noun* a substance which can kill or harm body tissues if eaten or drunk

■ **verb** to harm or kill someone with a poison

COMMENT: The commonest poisons, of which even a small amount can kill, are arsenic, cyanide and strichnine. Many common foods and drugs can be poisonous if taken in large doses. Common household materials such as bleach, glue and insecticides can also be poisonous. Some types of poisoning, such as Salmonella, can be passed to other people through lack of hygienic conditions.

poisoning /'pɔɪz(ə)nɪŋ/ *noun* a condition in which a person is made ill or is killed by a poisonous substance

poison ivy /'pɔɪz(ə)n 'aɪvɪ/, **poison oak** /'pɔɪz(ə)n 'oʊk/ *noun* American plants whose leaves can cause a painful rash if touched

poisonous /'pɔɪz(ə)nəs/ *adjective* referring to a substance which is full of poison or which can kill or harm

poisonous gas /,pɔɪz(ə)nəs 'gæs/ *noun* a gas which can kill or can make someone ill

Poisons Act /'pɔɪz(ə)nz ækt/ *noun* in the UK, one of several Acts of Parliament which regulate the making, prescribing and selling of drugs, e.g. the Pharmacy and Poisons Act 1933, Misuse of Drugs Act 1971, or Poisons Act 1972

polar /'pəʊlə/ *adjective* with a pole

polar body /,pəʊlə 'bɒdi/ *noun* a small cell which is produced from an oocyte but does not develop into an ovum

pole /pəʊl/ *noun* **1.** the end of an axis **2.** the end of a rounded organ, e.g. the end of a lobe in the cerebral hemisphere

pole and canvas stretcher /,pəʊl ən 'kænvəs ,stretʃə/ *noun* a simple stretcher made of a piece of canvas and two poles which slide into tubes at the side of the canvas

poli- /'poli/ *prefix* same as **polio-** (*used before vowels*)

polio /'pəʊliəʊ/ *noun* same as **poliomyelitis** (*informal*)

polio- /'pəʊliəʊ/ *prefix* grey matter in the nervous system

polioencephalitis /,pəʊli'ensəfəl'aitɪs/ *noun* a type of viral encephalitis, an inflammation of the grey matter in the brain caused by the same virus as poliomyelitis

polioencephalomyelitis /,pəʊli'ensəfəl'maiə'laitɪs/ *noun* polioencephalitis which also affects the spinal cord

poliomyelitis /,pəʊliəʊ,maiə'laitɪs/ *noun* an infection of the anterior horn cells of the spinal cord caused by a virus which attacks the

motor neurones and can lead to paralysis. Also called **polio, infantile paralysis**

COMMENT: Symptoms of poliomyelitis are paralysis of the limbs, fever and stiffness in the neck. The bulbar form may start with difficulty in swallowing. Poliomyelitis can be prevented by immunisation and two vaccines are used: Sabin vaccine is formed of live polio virus and is taken orally on a piece of sugar; Salk vaccine is given as an injection of dead virus.

poliovirus /'pəʊliəʊ,vairəs/ *noun* a virus which causes poliomyelitis

Politzer bag /'pɒlɪtsə bæg/ *noun* a rubber bag which is used to blow air into the middle ear to unblock a Eustachian tube [Described 1863. After Adam Politzer (1835–1920), Professor of Otology in Vienna, Austria.]

pollen /'pɒlən/ *noun* a powdery substance consisting of male gametes from plants, produced by the flower stamens, which floats in the air in spring and summer, and which causes hay fever

pollen count /'pɒlən kaʊnt/ *noun* a figure which shows the amount of pollen in a sample of air

pollex /'pɒleks/ *noun* the thumb (*technical*) (NOTE: The plural is **pollices**)

pollutant /pə'lju:t(ə)nt/ *noun* a substance which causes pollution

pollute /pə'lju:t/ *verb* to make e.g. the air, a river or the sea dirty, especially with industrial waste (NOTE: **polluting – polluted**)

pollution /pə'lju:ʃ(ə)n/ *noun* the act of making dirty, or substances which make e.g. air or water impure

poly- /'poli/ *prefix* **1.** many or much **2.** touching many organs

polyarteritis /,pɒliə:tə'rætɪs/ *noun* a condition in which a lot of arteries swell up at the same time

polyarteritis nodosa /,pɒliə:tə,rætɪs nə'dəʊsə/ *noun* a collagen disease in which the walls of the arteries in various parts of the body become inflamed, leading to asthma, high blood pressure and kidney failure. Also called **periarteritis nodosa**

polyarthritis /,pɒliə:tɪs'θrætɪs/ *noun* inflammation of several joints, as in rheumatoid arthritis

polycystic /,poli'sistɪk/ *adjective* referring to an organ which has developed more than one cyst, or to a disease caused by the development of cysts

polycystic kidney disease /,poli'sistɪk 'kɪdnɪ di,zɪ:z/ *noun* a condition in which there are multiple cysts on each kidney which grow and multiply over time. Abbr **PKD**

COMMENT: The diseased kidney finally shuts down in over 60% of cases, and dialysis and transplantation are the only forms of treatment.

polycystic ovary disease /,polisistik 'əʊvəri di,zi:z/ *noun* same as **polycystic ovarian syndrome**. Abbr **PCOD**

polycystic ovarian syndrome /,polisistik 'əʊvəri ,sɪndrəm/, **polycystic ovarian syndrome** /,polisistik əʊ'veəriən ,sɪndrəm/ *noun* a hormonal disorder in which a woman's ovaries are enlarged and contain many small painless cysts, hair growth is excessive, acne develops and infertility may occur. Also called **Stein Leventhal syndrome**. Abbr **PCOS**

polycystitis /,polist'aitis/ *noun* a congenital disease in which several cysts form in the kidney at the same time

polycythaemia /,polisat'θi:miə/ *noun* a condition in which the number of red blood cells increases (NOTE: The US spelling is **polycythemia**)

polycythaemia vera /,polisaɪθi:miə 'vɪərə/ *noun* a blood disease in which the number of red blood cells increases, together with an increase in the number of white blood cells, making the blood thicker and slowing its flow. Also called **erythaemia**, **Vaquez-Osler disease**

polydactyl /,poli'dæktɪl/ *adjective* having more than the usual number of fingers or toes

polydactylism /,poli'dæktɪlɪz(ə)m/ *noun* same as **hyperdactylism**

polydipsia /,poli'dipsiə/ *noun* a condition, often caused by diabetes insipidus, in which a person is unusually thirsty

polygraph /'plɪgrɑ:f/ *noun* an instrument which records the pulse in several parts of the body at the same time

polymenorrhoea /,polimēnə'ri:a/ *noun* unusually frequent menstruations (NOTE: The US spelling is **polymenorrhea**.)

polymerase chain reaction /,polimērēz ,tʃeɪn ri'ækʃ(ə)n/ *noun* the technique used to amplify genetic material in order to analyse it for genetic disorders, e.g. material from a single cell in an embryo. Abbr **PCR**

polymorph /'polimo:f/ *noun* same as **neutrophil**

polymyalgia rheumatica /,polimai,ældʒəru:'mætikə/ *noun* a disease of elderly people characterised by pain and stiffness in the shoulder and hip muscles making them weak and sensitive

polymyositis /,polimaiəu'saitis/ *noun* a condition in which a lot of muscles swell up at the same time, especially the ones in the trunk of the body, causing weakness. It is treated with steroid drugs or immunosuppressants, and also exercise.

polyneuritis /,polinju'raɪtis/ *noun* inflammation of many nerves

polyneuropathy /,polinju'rɒpəθi/ *noun* any disease which affects several nerves (NOTE: The plural is **polyneuropathies**.)

polyopia /,polpi'əupiə/, **polyopia** /,polpi'ɒpɪsiə/, **polyopia** /'poliəupi/ *noun* a condition in which a person sees several images of one object at the same time. Compare **diplopia**

polyp /'polip/ *noun* a tumour growing on a stalk in mucous membrane, which can be cauterised. Polyps are often found in the nose, mouth or throat. Also called **polypus**

polypectomy /,poli'pektomɪ/ *noun* a surgical operation to remove a polyp (NOTE: The plural is **polpectomies**.)

polypeptide /,poli'peptaid/ *noun* a type of protein formed of linked amino acids

polyphagia /,poli'feɪdʒə/ *noun* 1. a condition in which a person eats too much 2. a compulsive desire for every kind of food

polypharmacy /,poli'fæ:məsi/ *noun* the practice of prescribing several drugs to be taken at the same time

polyploid /'poliplɔɪd/ *adjective* referring to a cell where there are more than two copies of each chromosome, which is not viable in humans

polypoid /'polipɔɪd/ *adjective* looking like a polyp

polyposis /,poli'pəsɪs/ *noun* a condition in which many polyps form in the mucous membrane of the colon. ☺ **familial adenomatous polyposis**

polypus /'polipəs/ *noun* same as **polyp** (NOTE: The plural is **polypi**.)

polyradiculitis /,poliræ,dɪkju'laitɪs/ *noun* a disease of the nervous system which affects the roots of the nerves

polysaccharide /,poli'sækəraɪd/ *noun* a type of carbohydrate made up of a lot of monosaccharides joined together in chains. They include starch and cellulose, are insoluble in water and do not form crystals.

polyserositis /,polisərəu'saitis/ *noun* inflammation of the membranes lining the abdomen, chest and joints and exudation of serous fluid

polysomnograph /,poli'sɒmnəgrɑ:f/ *noun* a record of bodily activity during sleep to identify possible causes of sleep disorders

polyspermia /,poli'spɜ:miə/, **polyspermism** /,poli'spɜ:mi:z(ə)m/, **polyspermy** /,poli'spɜ:mi/ *noun* 1. excessive seminal secretion 2. fertilisation of one ovum by several spermatozoa

polyunsaturated fat /,poliʌnsætʃəreɪtɪd 'fæt/ *noun* a fatty acid capable of absorbing more hydrogen than most others, typical of vegetable and fish oils

polyuria /,poli'juəriə/ *noun* a condition in which a person passes a large quantity of urine, usually as a result of diabetes insipidus

polyvalent /,poli'veɪlənt/ *adjective* having more than one valency

POM abbr prescription-only medicine

pompholyx /'pɒmfəlɪks/ *noun* 1. a type of eczema with many irritating little blisters on the hands and feet 2. a skin condition with bulbous swellings

pons /'pɒnz/ *noun* a bridge of tissue joining parts of an organ. See illustration at **BRAIN** in Supplement (NOTE: The plural is **pontes**)

pons Varolii /,pɒnz və'rəʊliə/ *noun* part of the hindbrain, formed of fibres which continue the medulla oblongata. See illustration at **BRAIN** in Supplement (NOTE: The plural is **pon tes Varolii**). [After Constantino Varolius (1543–75), Italian physician and anatomist, doctor to Pope Gregory XIII]

pon tes /'pɒntɪz/ plural of **pons**

Pontine /'pɒntɪn/ *adjective* referring to a pons

Pontine cistern /,pɒntɪn 'sɪstən/ *noun* a subarachnoid space in front of the pons, containing the basilar artery

poor /pʊə/ *adjective* not very good ○ *He's in poor health.* ○ *She's always had poor circulation.*

poorly /'pɔːli/ *adjective* not very well (*informal*) ○ *Her mother has been quite poorly recently.* ○ *He felt poorly and stayed in bed.*

POP abbr progesterone only pill

popeyes /'pɒpəɪz/ *plural noun* US protruding eyes

popliteal /,pɒplɪ'tiːəl/ *adjective* referring to the back of the knee

popliteal artery /,pɒplɪtiːəl 'aːtəri/ *noun* an artery which branches from the femoral artery behind the knee and leads into the tibial arteries

popliteal fossa /,pɒplɪtiːəl 'fɒsə/ *noun* a space behind the knee between the hamstring and the calf muscle. Also called **popliteal space**

popliteal muscle /,pɒplɪ'tiːəl ,mʌsl(ə)s/ *noun* same as **popliteus**

popliteal space /,pɒplɪtiːəl 'speɪs/ *noun* same as **popliteal fossa**

popliteus /pɒ'lɪtiːəs/ *noun* a muscle at the back of the knee. Also called **popliteal muscle**

population /,pɒpjʊ'leɪʃ(ə)n/ *noun* 1. the number of people living in a country or town ○ *Population statistics show that the birth rate is slowing down.* ○ *The government has decided to screen the whole population of the area.* 2. the number of patients in hospital ○ *The hospital population in the area has fallen below 10,000.*

pore /pɔː/ *noun* 1. a tiny hole in the skin through which the sweat passes 2. a small communicating passage between cavities

porencephaly /,pɔː'ren'kefəli/, **porencephalia** /,pɔː'renkefəliə/, **porencephalus** /,pɔː'ren'kefələs/ *noun* a condition in which there are cysts in the cerebral cortex, as a result of unusual development

porous /'pɔːrəs/ *adjective* 1. containing pores

○ *Porous bone surrounds the Eustachian tubes.* 2. referring to tissue which allows fluid to pass through it

porphyria /pɔː'fɪrɪə/ *noun* a hereditary disease affecting the metabolism of porphyrin pigments

COMMENT: Porphyria causes abdominal pains and attacks of mental confusion. The skin becomes sensitive to light and the urine becomes coloured and turns dark brown when exposed to the light.

porphyrin /'pɔːfərɪn/ *noun* a member of a family of metal-containing biological pigments, the commonest of which is protoporphyrin IX

porphyrinuria /,pɔːfɪrɪ'njuːrɪə/ *noun* the presence of excess porphyrins in the urine, a sign of porphyria or of metal poisoning

porta /'pɔːtə/ *noun* an opening which allows blood vessels to pass into an organ (NOTE: The plural is **portae**)

portable /'pɔːtəb(ə)l/ *adjective* referring to something which can be carried ○ *He keeps a portable first aid kit in his car.* ○ *The ambulance team carried a portable blood testing unit.*

Portacath /'pɔːtəkæθ/ *noun* a type of catheter put in place under a person's skin to make it easier to have chemotherapy, transfusions and blood tests. It is accessed by the use of a special needle and flushed regularly with sterile saline.

portacaval /,pɔːtə'keɪvəl/ *adjective* another spelling of **portocaval**

portae /'pɔːtəi/ plural of **porta**

porta hepatis /,pɔːtə 'heptəs/ *noun* an opening in the liver through which the hepatic artery, hepatic duct and portal vein pass (NOTE: The plural is **portae hepatitis**.)

portal /'pɔːt(ə)l/ *adjective* referring to a porta, especially the portal system or the portal vein

portal hypertension /,pɔːt(ə)l ,haɪpərə 'tenʃən/ *noun* high pressure in the portal vein, caused by cirrhosis of the liver or a clot in the vein and causing internal bleeding

portal pyaemia /,pɔːt(ə)l paɪ'əmiə/ *noun* an infection of the portal vein in the liver, giving abscesses

portal system /'pɔːt(ə)l ,sɪstəm/ *noun* a group of veins which have capillaries at both ends and do not go to the heart

portal vein /'pɔːt(ə)l veɪn/ *noun* a vein which takes blood from the stomach, pancreas, gall bladder, intestines and spleen to the liver (NOTE: For other terms referring to the portal vein, see words beginning with **pyl-**, **pyle-**)

porter /'pɔːtə/ *noun* a hospital worker who does general work such as wheeling a patient's trolley into the operating theatre or moving heavy equipment

portocaval /pɔ:təʊ'veɪv(ə)l/ *adjective* linking the portal vein to the inferior vena cava

portocaval anastomosis /pɔ:təʊ'veɪv(ə)l ənæstə'moʊsɪs/ *noun* a surgical operation to join the portal vein to the inferior vena cava and divert blood past the liver

portocaval shunt /pɔ:təʊ'veɪv(ə)l 'ʃʌnt/ *noun* an artificial passage made between the portal vein and the inferior vena cava to relieve portal hypertension

proto-systemic encephalopathy /pɔ:təʊ'veɪsɪs,ti:mɪk ,enkefə'lɒpəθɪ/ *noun* a mental disorder and coma caused by liver disorder due to portal hypertension

port wine stain /pɔ:t 'wain steɪn/ *noun* a purple birthmark

position /pə'zɪʃ(ə)n/ *noun* 1. the place where something is ○ *The exact position of the tumour is located by an X-ray.* 2. the way a person's body is arranged ○ *in a sitting position* ○ *The accident victim had been placed in the recovery position.* ■ *verb* to place something in a particular position ○ *The fetus is correctly positioned in the uterus.*

positive /'pozɪtɪv/ *adjective* 1. indicating the answer 'yes' 2. indicating the presence of something being tested for ○ *Her cervical smear was positive.* Opposite **negative**

positive end-expiratory pressure /'pozɪtɪv ,end ɪk'spirɪət(ə)rɪ 'preʃə/ *noun* the procedure of forcing a person to breathe through a mask in cases where fluid has collected in the lungs. Abbr **PEEP**

positive feedback /'pozɪtɪv 'fi:dbæk/ *noun* a situation in which the result of a process stimulates the process which caused it

positively /'pozɪtɪvlɪ/ *adverb* in a positive way ○ *She reacted positively to the test.*

positive pressure respirator /'pozɪtɪv 'preʃə ,respirətə/ *noun* a machine which forces air into the lungs through a tube inserted in the mouth

positive pressure ventilation /'pozɪtɪv 'preʃə ventɪ,leɪʃ(ə)n/ *noun* the act of forcing air into the lungs to encourage the lungs to expand. Abbr **PPV**

positron-emission tomography /'pozɪtrən 'ɪmɪʃ(ə)n tə,mɔ:gɒfɪ/ *noun* a method of scanning the tissues of the brain, chest and abdomen for unusual metabolic activity after injecting a radioactive substance into the body. Abbr **PET**

posology /pə'sɒlədʒɪ/ *noun* the study of doses of medicine

posseting /'pɒsɪtɪŋ/ *noun* (in babies) the act of bringing up small quantities of curdled milk into the mouth after feeding

Possum /'pɒsəm/ *noun* a device using electronic switches which helps a person who is severely paralysed to work a machine such as a telephone (NOTE: The name is derived from the

first letters of patient-operated selector mechanism.)

post-/pəʊst/ *prefix* after or later

postcentral gyrus /pəʊst,sentrəl 'dʒɜ:zɪəs/ *noun* a sensory area of the cerebral cortex which receives impulses from receptor cells and registers sensations such as pain, heat and touch

post-cibal /pəʊst 'saib(ə)l/ *adjective* after having eaten food

post cibum *adverb* full form of **p.c.**

post-coital /pəʊst 'kɔ:ɪt(ə)l/ *adjective* taking place after sexual intercourse

postconcussion syndrome /,pəʊstkən'kaʃ(ə)n(ə)l ,sɪndrəʊm/ *noun* a set of symptoms which sometimes follow a head injury in which a person lost consciousness, including headache, loss of concentration, memory loss, depression and irritability

post-epileptic /,pəʊst epi'leptɪk/ *adjective* taking place after an epileptic fit

posterior /pə'stɪərɪəl/ *adjective* at the back. Opposite **anterior** □ **posterior to** behind ○ *The cerebellum is posterior to the medulla oblongata.* ■ *noun* same as **buttock** (*informal*)

posterior approach /pə'stɪəriər ə,prəʊtʃ/ *noun* an operation carried out from the back

posterior aspect /pə'stɪəriər ,æspekt/ *noun* a view of the back of the body, or of the back of part of the body. See illustration at **ANATOMICAL TERMS** in Supplement

posterior chamber /pə'stɪəriər 'tʃeimbə/ *noun* a part of the aqueous chamber which is behind the iris. Compare **anterior chamber**

posterior fontanelle /pə'stɪəriər fɔ:ntə'nel/ *noun* a cartilage at the back of the head where the parietal bones join the occipital. ♀ **bregma**

posterior lobe *noun* same as **caudate lobe**

posteriorly /pə'stɪəriəli/ *adverb* in or from a position behind ○ *An artery leads to a posteriorly placed organ.* ○ *Rectal biopsy specimens are best taken posteriorly.*

posterior nares /pə'stɪəriər 'neəri:z/ *plural noun* same as **internal nares**

posterior synechia /pə'stɪəriər sɪ'neksiə/ *noun* a condition of the eye in which the iris sticks to the anterior surface of the lens

postero-/pəstərəʊ/ *prefix* back or behind

posteroanterior /,pəstərəʊən'tɪəriə/ *adjective* lying from the back to the front

post-exposure prophylaxis /,pəʊst ɪk ,spəʊzə ,prəfə'læksɪs/ *noun* a treatment given to a person who has been exposed to a harmful agent, in an effort to prevent or reduce injury or infection

postganglionic /,pəʊstgæŋgli'ɒnɪk/ *adjective* placed after a ganglion

postganglionic fibre /,pəʊstgæŋgli,ɒnɪk 'faɪbə/ *noun* an axon of a nerve cell which starts in a ganglion and extends beyond the ganglion

COMMENT: Postganglionic fibres go to the nose, palate, pharynx and lacrimal glands.

postganglionic neurone /,pəʊstgænggli'nrnɪk 'nju:reən/ *noun* a neurone which starts in a ganglion and ends in a gland or unstriated muscle

postgastrectomy syndrome /,pəʊst gæ'strektəmɪ, sɪndrəʊm/ *noun* a group of symptoms which can occur after eating in people who have had stomach operations. It is caused by a lot of food passing into the small intestine too fast and can cause dizziness, nausea, sweating and weakness. Also called **dumping syndrome**

postgraduate education allowance /'pəʊst'grædjuət edju'keɪʃ(ə)n 'ə'lauəns/ *noun* a payment made to GPs to reward continued education. Abbr **PGEA**

posthepatic /,pəʊsthɪ'pætɪk/ *adjective* positioned behind or coming into effect after the liver

posthepatic bilirubin /,pəʊsthɪ,pætɪk 'bili'rū:bɪn/ *noun* bilirubin which enters the plasma after being treated by the liver

posthepatic jaundice /,pəʊsthɪ,pætɪk 'dʒɔ:nɪdʒ/ *noun* same as **obstructive jaundice**

post herpetic neuralgia /,pəʊst hə'petɪk nju:rældʒə/ *noun* pains felt after an attack of shingles

posthitis /'pɒsθaɪtɪs/ *noun* inflammation of the foreskin

posthumous /'pɒstjuməs/ *adjective* occurring after death ◇ **posthumous birth** 1. the birth of a baby after the death of the father 2. the birth of a baby by caesarean section after the mother has died

post-irradiation /,pəʊst ɪ,ri'eɪdi'eɪʃ(ə)n/ *adjective* referring to pain or disorder caused by X-rays

post-irradiation enteritis /,pəʊst ɪ,reɪdi'eɪʃ(ə)n ,entə'reɪtɪs/ *noun* enteritis caused by X-rays

postmature /,pəʊst'ma:tʃuər/ *adjective* referring to a baby born after the usual gestation period of 42 weeks

postmaturity /,pəʊstmə'tʃuərɪti/ *noun* a pregnancy which lasts longer than the usual gestation period of 42 weeks

postmenopausal /,pəʊst'menəʊ'pɔ:z(ə)l/ *adjective* happening or existing after the menopause ◇ *She experienced some postmenopausal bleeding.*

post mortem /pəʊst 'mɔ:təm/, **post mortem examination** /pəʊst 'mɔ:təm ɪg'zæmɪ,nju:ʃ(ə)n/ *noun* an examination of a dead body by a pathologist to find out the cause of death ◇ *The post mortem showed that he had been poisoned.* Abbr **PM**. Also called **autopsy**

postnasal /pəʊst'nɛɪz(ə)l/ *adjective* situated or happening behind the nose

postnasal drip /pəʊst,nɛɪz(ə)l 'drɪp/ *noun* a condition in which mucus from the nose runs down into the throat and is swallowed

postnatal /,pəʊst'neɪt(ə)l/ *adjective* referring to the period after the birth of a child

postnatal care /pəʊst,neɪt(ə)l 'keɪə/ *noun* the care given to a woman after the birth of her child

postnatal depression /pəʊst,neɪt(ə)l dɪ'preʃ(ə)n/ *noun* depression which sometimes affects a woman after childbirth

postnecrotic cirrhosis /,pəʊstnekrotɪk sɪ'rəʊsɪs/ *noun* cirrhosis of the liver caused by viral hepatitis

post-op /pəʊst 'ɒp/ (*informal*) *adjective* same as **postoperative** ■ *adverb* same as **postoperatively**

postoperative /,pəʊst'ɒp(ə)rətɪv/ *adjective* referring to the period after a surgical operation ◇ *The patient has suffered postoperative nausea and vomiting.* ◇ *Occlusion may appear as postoperative angina pectoris.*

'...the nurse will help ensure that the parent is physically fit to cope with the postoperative child' [British Journal of Nursing]

postoperatively /pəʊst'ɒp(ə)rətɪvli/ *adverb* after a surgical operation

postoperative pain /pəʊst,ɒp(ə)rətɪv 'peɪn/ *noun* pain felt after a surgical operation

postorbital /,pəʊst'ɔ:bɪtl(ə)l/ *adjective* situated behind the eye or the eye socket

postpartum /pəʊst'pa:təm/ *adjective* referring to the period after the birth of a child

postpartum fever /pəʊst,pa:təm 'fi:və/ *noun* same as **puerperal infection**

postpartum haemorrhage /pəʊst,pa:təm 'hem(ə)rɪdʒ/ *noun* heavy bleeding after childbirth. Abbr **PPH**

post-primary tuberculosis /pəʊst,præ'məri tju:,bɜ:kjʊ'ləʊsɪs/ *noun* the reappearance of tuberculosis in a person who has been infected with it before

post-registration education and practice /,pəʊst redʒɪ'streɪʃ(ə)n edju'keɪʃ(ə)n ənd 'præktyk/ *noun* in the UK, the requirement for all registered nurses and midwives to undertake educational activities and keep up with contemporary practice, and also for their employers to address the learning needs of staff. It was started by the UKCC in 1993. Abbr **PREP**

postsynaptic /,pəʊst'sɪ'næptɪk/ *adjective* situated behind a synapse

postsynaptic axon /,pəʊst'sɪ'næptɪk 'æk'sən/ *noun* an axon of the nerves on either side of a synapse

post-traumatic /,pəʊst trɔ:'mætɪk/ *adjective* appearing after a trauma, e.g. after an accident, rape or fire

post-traumatic amnesia /,pəʊst trɔ:'mætɪk əm'nɪ:ziə/ *noun* amnesia which follows a trauma

post-traumatic stress disorder /,pəʊst trɔː, mætɪk 'stres dis,ɔ:də/ *noun* a psychological condition affecting people who have suffered severe emotional trauma, e.g. occasioned by war or natural disaster. Its symptoms include chest pain, dizziness, sleep disturbances, flashbacks, anxiety, tiredness, and depression. Abbr **PTSD**

postural /'pɒstʃərəl/ *adjective* referring to posture ○ *a study of postural disorders*

postural drainage /,pɒstʃərəl 'dreɪnɪdʒ/ *noun* a procedure for removing matter from infected lungs by making the person lie down with the head lower than the feet, so that he or she can cough more easily

postural hypotension /,pɒstʃərəl haɪpəʊn 'tenʃən/ *noun* low blood pressure when standing up suddenly, causing dizziness

posture /'pɒstʃər/ *noun* the position in which a body is arranged, or the way a person usually holds his or her body when standing ○ *Bad posture can cause pain in the back.* ○ *She has to do exercises to correct her bad posture.*

postviral /pəʊst'veɪrəl/ *adjective* occurring after a viral infection

postviral fatigue syndrome /pəʊst,veɪrəl fe'ti:g, sɪndrəʊm/ *noun* same as **myalgic encephalomyelitis**

potassium /pə'tæsiəm/ *noun* a metallic element (NOTE: The chemical symbol is **K**)

potassium permanganate /pə,tæsiəm pə'mæŋgənət/ *noun* a purple-coloured poisonous salt, used as a disinfectant

potentiate /pə'tenʃieɪt/ *verb* to improve the effectiveness of a drug or treatment, especially by adding another drug or agent (NOTE: **potentiating – potentiated**)

Pott's disease /'pɔts di,zi:z/, **Pott's caries** /'pɔts ,keəriz/ *noun* tuberculosis of the spine, causing paralysis [Described 1779. After Sir Percivall Pott (1714–88), London surgeon.]

Pott's fracture /'pɔts ,frækʃə/ *noun* a fracture of the lower end of the fibula together with displacement of the ankle and foot outwards [Described 1765. After Sir Percivall Pott (1714–88), London surgeon.]

pouch /paʊtʃ/ *noun* a small sac or pocket attached to an organ

poultice /'pəʊltɪs/ *noun* a compress made of hot water and flour paste or other substances which is pressed onto an infected part to draw out pus, to relieve pain or to encourage the circulation. Also called **fomentation**

pound /paʊnd/ *noun* a measure of weight equal to about 450 grams ○ *The baby weighed only four pounds at birth.* Abbr **lb** (NOTE: With figures, usually written **lb**: **The baby weighs 6lb.**)

Poupart's ligament /pu:pərts ,lɪgəmənt/ *noun* same as **inguinal ligament** [Described

1705. After François Poupart (1616–1708), French surgeon and anatomist.]

powder /'paʊdə/ *noun* a medicine in the form of a fine dry dust made from particles of drugs ○ *He took a powder to help his indigestion* or *He took an indigestion powder.*

powdered /'paʊdəd/ *adjective* crushed so that it forms a fine dry dust ○ *The medicine is available in tablets or in powdered form.*

pox /pɒks/ *noun* 1. a disease with eruption of vesicles or pustules 2. same as **syphilis (old)**

poxvirus /'pɒks,vairəs/ *noun* any of a group of viruses which cause cowpox, smallpox and related diseases

'Molluscum contagiosum is a harmless skin infection caused by a poxvirus that affects mainly children and young adults' [British Medical Journal]

p.p. *abbreviation* after a meal. Full form **post prandium**. Compare **a.p.**

PPD *abbr* purified protein derivative

PPH *abbr* postpartum haemorrhage

PPV *abbr* positive pressure ventilation

PQRST complex *noun* the set of deflections on an electrocardiogram, labelled P to T, which show ventricular contraction

p.r. *adverb (of an examination)* by the rectum. Full form **per rectum**

practice /'præktɪs/ *noun* 1. the business, or the premises occupied by, a doctor, dentist, or a group of doctors or dentists working together ○ *After qualifying she joined her father's practice.* □ **in practice** doing the work of a doctor or dentist ○ *He has been in practice for six years.* 2. the fact of doing something, as opposed to thinking or talking about it ○ *theory and practice* 3. a usual way of doing something ○ *Such practices are now regarded as unsafe.*

practice nurse /'præktɪs nɜ:s/ *noun* a nurse employed by a GP or primary care trust to work in a GP's practice providing treatment, health promotion, screening and other services to patients of the practice

'...practice nurses play a major role in the care of patients with chronic disease and they undertake many preventative procedures' [Nursing Times]

practise /'præktɪs/ *verb* 1. to work as a doctor ○ *He practises in North London.* ○ *She practises homeopathy.* 2. to work in a particular branch of medicine (NOTE: **practising – practised**. The US spelling is **practice**.)

practitioner /præk'tɪʃ(ə)nə/ *noun* a qualified person who works in the medical profession ◇ **nurse practitioner** US 1. a nurse employed by a clinic or doctor's practice who can give advice to patients 2. a trained nurse who has not been licensed

praecox /'pri:kɒks/ *noun* ♦ **ejaculatio praecox**

praevia /'pri:vɪə/ *noun* ♦ **placenta praevia**

pravastatin /prævə'stætɪn/ *noun* a drug used to reduce unusually high levels of blood cholesterol

prazosin /'præzəsɪn/ *noun* a drug which relaxes or widens the blood vessels, used to treat hypertension

pre- /pri:/ *prefix* before or in front of

preadmission information /,pri:əd'mɪʃ(ə)n ɪnfə'mɪʃ(ə)n/ *noun* information given to a person before he or she is admitted to hospital

pre-anaesthetic round /,pri:ənæsɪθetɪk raʊnd/ *noun* an examination of patients by the surgeon before they are anaesthetised

precancer /pri:'kænsər/ *noun* a growth or cell which is not malignant but which may become cancerous

precancerous /pri:'kænsərəs/ *adjective* referring to a growth which is not malignant now, but which can become cancerous later

precaution /pri:'kɔ:sf(ə)n/ *noun* an action taken before something happens ○ *She took the tablets as a precaution against seasickness.*

precede /pri'si:d/ *verb* to happen before or earlier than something ○ *The attack was preceded by a sudden rise in body temperature.* (NOTE: preceding – preceded)

precentral gyrus /pri:sentr(ə)l 'dʒaɪrəs/ *noun* a motor area of the cerebral cortex

preceptor /pri'septər/ *noun* a specialist who gives practical training to a student

preceptorship /pri'septəʃɪp/ *noun* a period of time during which a recently trained nurse, midwife or health visitor can gain practical experience working with a specialist who advises and guides them

precipitate /pri'sipɪtət/ *noun* a substance which is precipitated during a chemical reaction ■ *verb* 1. to make a substance separate from a chemical compound and fall to the bottom of a liquid during a chemical reaction ○ *Casein is precipitated when milk comes into contact with an acid.* 2. to make something start suddenly (NOTE: [all verb senses] **precipitating** – **precipitated**)

...it has been established that myocardial infarction and sudden coronary death are precipitated in the majority of patients by thrombus formation in the coronary arteries' [British Journal of Hospital Medicine]

precipitate labour /pri,sipɪtət 'leɪbər/ *noun* unusually fast labour, lasting two hours or less. It can be dangerous both to the mother and to the child.

precipitation /pri,sɪpɪ'teɪʃ(ə)n/ *noun* the action of forming a precipitate

precipitin /pri'sipɪtɪn/ *noun* an antibody which reacts to an antigen and forms a precipitate, used in many diagnostic tests

precise /pri'saɪz/ *adjective* very exact or correct ○ *The instrument can give precise measurements of changes in heartbeat.*

preclinical /pri:'klɪnik(ə)l/ *adjective* 1. taking place before diagnosis ○ *the preclinical stage of an infection* 2. referring to the first part of a medical course, before the students are allowed to examine real patients

precocious /pri'kɔʊʃəs/ *adjective* more physically or mentally developed than is usual for a specific age

precocious puberty /pri,kɔʊʃəs'pʌbəti/ *noun* the development of signs of puberty in girls before the age of seven, and in boys before the age of nine. If untreated, affected boys typically grow no taller than 1.6 metres and girls rarely reach 1.5 metres.

precocity /pri'kɒsɪtɪ/ *noun* the state or fact of being precocious

precordia /pri:'kɔ:diə/ *plural noun* plural of **precordium**

precordial /pri:'kɔ:diəl/ *adjective* referring to the precordium

precordium /pri:'kɔ:diəm/ *noun* the part of the thorax over the heart (NOTE: The plural is **precordia**.)

precursor /pri'kɔ:səsə/ *noun* a substance or cell from which another substance or cell is developed, e.g. dopa, the precursor for dopamine, which is converted to dopamine by the enzyme dopa decarboxylase

predict /pri'dikt/ *verb* to say what will happen in the future ○ *Doctors are predicting a rise in cases of whooping cough.*

prediction /pri'dɪkʃn/ *noun* an act of saying what you expect will happen in the future, or what is said ○ *the Health Ministry's prediction of a rise in cases of hepatitis B*

predictive /pri'dɪktɪv/ *adjective* referring to prediction ○ *The predictive value of the test is high.*

predigest /,pri:dat'dʒest/ *verb* to treat food with chemicals or enzymes so that it is more easily digested by people with digestion problems

predigested food /,pri:daɪdʒestɪd 'fu:d/ *noun* food which has undergone predigestion

predigestion /,pri:dat'dʒestʃ(ə)n/ *noun* the artificial starting of the digestive process before food is eaten

predisposed to /,pri:drɪ'spəuzd tō/ *adjective* having a tendency or susceptibility to a condition ○ *All the members of the family are predisposed to vascular diseases.*

predisposing factor /,pri:dispə'zɪf(ə)r/ *noun* a factor which will increase the risk of disease

predisposition /,pri:dispə'zɪʃ(ə)n/ *noun* a tendency or susceptibility ○ *She has a predisposition to obesity.*

prednisolone /pred'nɪsələʊn/ *noun* a synthetically produced steroid hormone, similar to cortisone, used especially to control inflammatory diseases such as rheumatoid arthritis

prednisone /pred'nɪsəʊn/ *noun* a synthetically produced steroid hormone produced from cortisone, used to treat allergies and rheumatoid arthritis

predominant /pri'domɪnənt/ *adjective* more powerful than others

pre-eclampsia /,pri: t'klæmpsɪə/ *noun* a condition in pregnant women towards the end of the pregnancy which may lead to eclampsia. Symptoms are high blood pressure, oedema and protein in the urine. Also called **pregnancy-induced hypertension**

preemie /'pri:mi:ɪ/ *noun* US a premature baby (*informal*)

prefrontal /pri: 'frənt(ə)l/ *adjective* situated in or affecting the front part of the frontal lobe

prefrontal leucotomy /pri:;frənt(ə)l lui: 'kɒtəmi/ *noun* a surgical operation to divide some of the white matter in the prefrontal lobe, formerly used as a treatment for schizophrenia

prefrontal lobe /pri: 'frənt(ə)l ləʊb/ *noun* an area of the brain in the front part of each hemisphere, in front of the frontal lobe, which is concerned with memory and learning

preganglionic /,pri:gæŋglɪ'ɒnɪk/ *adjective* near to and in front of a ganglion

preganglionic fibre /,pri:gæŋglonɪk 'faɪbə/ *noun* a nerve fibre which ends in a ganglion where it is linked in a synapse to a post-ganglionic fibre

preganglionic neurone /,pri:gængglɪ,ɒnɪk 'nju:ərəʊn/ *noun* a neurone which ends in a ganglion

pregnancy /'pregnənsɪ/ *noun* 1. same as **gestation period** 2. the condition of being pregnant. Also called **cyesis**

pregnancy-associated hypertension /,pregnənsɪ ə,səʊsietɪd̩,haɪpə'tenʃən/ *noun* high blood pressure which is associated with pregnancy

pregnancy-induced hypertension /,pregnənsɪ in'dju:sd̩,haɪpə'tenʃən/ *noun* Abbr PIH. same as **pre-eclampsia**

pregnancy test /'pregnənsɪ test/ *noun* a test to see if a woman is pregnant or not

pregnant /'pregnənt/ *adjective* with an unborn child in the uterus ○ *She is six months pregnant.*

prehepatic /pri:hɪ'pætɪk/ *adjective* in front of or before the liver

prehepatic bilirubin /pri:hɪ,pætɪk bili'rū:bɪn/ *noun* bilirubin in plasma before it passes through the liver

prehepatic jaundice /,pri:hɪ,pætɪk 'dʒɔ:ndɪs/ *noun* same as **haemolytic jaundice**

prem /prem/ (*informal*) *adjective* same as **pre-mature** ■ *noun* a premature baby

premature /'premətʃə/ *adjective* before the expected or desirable time ○ *The baby was five weeks premature.*

COMMENT: Babies can survive even if born several weeks premature. Even babies weighing less than one kilo at birth can survive in an incubator, and develop healthily.

premature baby /,premətʃə 'beɪbɪ/ *noun* a baby born earlier than 37 weeks from conception, or weighing less than 2.5kg, but capable of independent life

premature birth /,premətʃə 'bɜ:θ/ *noun* the birth of a baby earlier than 37 weeks from conception

premature ejaculation /,premətʃə ɪ,dʒækjʊ'lɛɪʃ(ə)n/ *noun* a situation in which a man ejaculates too early during sexual intercourse

premature labour /,premətʃə 'leɪbə/ *noun* the condition of starting to give birth earlier than 37 weeks from conception ○ *After the accident she went into premature labour.*

prematurely /'premətʃuərlɪ/ *adverb* before the expected or desirable time ○ *The baby was born two weeks prematurely.* ○ *A large number of people die prematurely from ischaemic heart disease.*

prematurity /,premətʃuəritɪ/ *noun* a situation in which something occurs before the expected or desirable time

premed /'pri:med/ *noun* a stage of being given premedication (*informal*) ○ *The patient is in premed.*

premedical /pri:'medɪk(ə)l/ *adjective* referring to the studies that a person must complete before entering medical school

premedication /,pri:medɪ'keɪʃ(ə)n/, **pre-medicant drug** /pri:,medɪkənt 'drʌg/ *noun* a drug given before an operation in order to block the parasympathetic nervous system and prevent vomiting during the operation, e.g. a sedative

premenopausal /,pri:menə'pɔ:z(ə)l/ *adjective* referring to the stage in a woman's life just before the start of the menopause

premenstrual /pri:'menstruəl/ *adjective* happening before menstruation

premenstrual syndrome /pri:,menstruəl 'sɪnd्रəʊm/, **premenstrual tension** /pri:,menstruəl 'tenʃən/ *noun* nervous stress experienced by a woman for one or two weeks before a menstrual period starts. Abbr **PMS, PMT**

premolar /pri:'məʊlə/ *noun* a tooth with two points, situated between the canines and the first proper molar. See illustration at **TEETH** in Supplement

prenatal /pri:'neɪt(ə)l/ *adjective* during the period between conception and childbirth

prenatal diagnosis /pri:,neɪt(ə)l ,daɪəg 'nəʊzɪs/ *noun* same as **antenatal diagnosis**

pre-op /pri: 'ɒp/ *adjective* same as **preoperative** (*informal*)

preoperative /pri:'ɒp(ə)rətɪv/ *adjective* during the period before a surgical operation

preoperatively /pri:'ɒp(ə)rətɪvlɪ/ *adverb* before a surgical operation

preoperative medication /pri:,ɒp(ə)rətɪv,medɪ'keɪʃn/ *noun* a drug given before an operation, e.g. a sedative

preovulatory /pri'ɒv(j)ələt(ə)ri/ *adjective* referring to the 6 to 13 days in the menstrual cycle between menstruation and ovulation

prep /prep/ (*informal*) *noun* same as **preparation** ○ *The prep is finished, so the patient can be taken to the operating theatre.* ■ *verb* same as **prepare** ○ *Has the patient been prepped?* (NOTE: **prepping – prepped**)

PREP *abbr* post-registration education and practice

preparation /,prepo'reɪʃ(ə)n/ *noun* 1. the act of getting a person ready for a surgical operation. Also called **prep** 2. a medicine or liquid containing a drug ○ *He was given a preparation containing an antihistamine.*

prepare /pri'peə/ *verb* 1. to get something or someone ready ○ *Six rooms in the hospital were prepared for the accident victims.* ○ *The nurses were preparing him for the operation.* 2. to make something ○ *He prepared a soothing linctus.*

prepatellar bursitis /,pri:pə,telə bɜːs'taɪtɪs/ *noun* a condition in which the fluid sac at the knee becomes inflamed, caused by kneeling on hard surfaces. Also called **housemaid's knee**

prepubertal /pri:'pjju:bət(ə)l/ *adjective* referring to the period before puberty

prepuberty /pri'pjju:bətɪ/ *noun* the period before puberty

prepubescent /,pri:pju:'bɛsənt/ *adjective* referring to a person at the stage of life just before puberty

prepuce /'pri:pju:s/ *noun* same as **foreskin**

presby- /prezbi/ *prefix* same as **presbyo-** (*used before vowels*)

presbyacusis /,prezbi'ku:sɪs/ *noun* a condition in which an elderly person's hearing fails gradually, through degeneration of the internal ear

presbyo- /prezbiəʊ/ *prefix* referring to the last stages of the natural life span

presbyopia /,prezbi'ɔpiə/ *noun* a condition in which an elderly person's sight fails gradually, through hardening of the lens

prescribe /pri'skraɪb/ *verb* to give instructions for a person to get a specific dosage of a drug or a specific form of therapeutic treatment ○ *The doctor prescribed a course of antibiotics.* (NOTE: **prescribing – prescribed**)

prescribed disease /pri:,skraɪbd dt'zi:z/ *noun* an illness caused by the type of work a person does which is on an annually reviewed official list, entitling the person to claim bene-

fit. Examples are deafness, pneumoconiosis and RSI.

prescribed illness /pri:,skraɪbd 'ilnəs/ *noun* an illness developing in the workplace from exposure to chemicals, e.g. mercury poisoning, or to dangerous activities, e.g. decompression sickness

prescribing analyses and cost /pri:,skraɪbɪŋ ə,nælɪsɪz ənd 'kɒst/ *plural noun* data on the prescribing of drugs in primary care. Abbr **FACT**

prescription /pri'skrɪpfən/ *noun* an order written by a doctor to a pharmacist asking for a drug to be prepared and given or sold to a person

prescription drug /pri'skrɪpfən dræg/ *noun* a drug which can only be obtained by having a legally valid prescription

presence /'prez(ə)ns/ *noun* the act or fact of being there ○ *Tests showed the presence of sugar in the urine.*

presenile /pri:s'nail/ *adjective* 1. prematurely showing the effects of advanced age 2. referring to a condition which affects people of early or middle age but has characteristics of a more advanced age

presenile dementia /pri:s'nail dɪ'menʃə/ *noun* mental degeneration affecting adults of around 40–60 years of age (*dated*)

COMMENT: Patients used to be diagnosed with presenile dementia if they showed symptoms of dementia and were under the age of 65, and senile dementia if over 65. However, the terms are no longer often used and instead the type of dementia is used for diagnostic purposes, e.g. Alzheimer's disease, multi-infarct or vascular

presenility /,pri:sə'nɪlɪtɪ/ *noun* the ageing of the body or brain before the expected time, with a person showing symptoms which are usually associated with people of very advanced years

present *verb* /pri'zənt/ 1. (of a patient) to show particular symptoms ○ *The patient presented with severe chest pains.* 2. (of a symptom) to be present ○ *The doctors' first task is to relieve the presenting symptoms.* ○ *The condition may also present in a baby.* 3. (of a baby) to appear in the vaginal channel ■ *adjective* /'prez(ə)nt/ currently existing in a place ○ *All the symptoms of the disease are present.*

'...chlamydia in the male commonly presents a urethritis characterized by dysuria' [Journal of American College Health]

'26 patients were selected from the outpatient department on grounds of disabling breathlessness present for at least five years' [Lancet]

'...sickle cell chest syndrome is a common complication of sickle cell disease, presenting with chest pain, fever and leucocytosis' [British Medical Journal]

'...a 24 year-old woman presents with an influenza-like illness of five days' duration' [British Journal of Hospital Medicine]

'...the presenting symptoms of Crohn's disease may be extremely variable' [New Zealand Medical Journal]

presentation /,prez(ə)n'teɪʃ(ə)n/ *noun* the way in which a baby will be born, in respect of the part of the baby's body which will appear first in the vaginal channel

presenting part /pri'zentɪŋ pa:t/ *noun* the part of a baby which appears first during birth

preservation /,prezə'veɪʃ(ə)n/ *noun* the keeping of a tissue sample or donor organ in good condition

preserve /pri'zɜ:v/ *verb* to keep something from rotting (NOTE: **preserving – preserved**)

press /pres/ *verb* to push or squeeze something ○ *The tumour is pressing against a nerve.*

pressor /'pre:sə/ *adjective* 1. referring to a nerve which increases the action of part of the body 2. raising blood pressure

pressure /'pre:sə/ *noun* 1. the action of squeezing or forcing something 2. the force of something on its surroundings 3. mental or physical stress caused by external events

pressure area /'pre:sə,_eəriə/ *noun* an area of the body where a bone is near the surface of the skin, so that if the skin is pressed the circulation will be cut off

pressure bandage /'pre:sə,_bændɪdʒ/ *noun* a bandage which presses on a part of the body
pressure index /'pre:sə,_ɪndeks/ *noun* a method for determining the extent of obstruction to the artery in the leg by measuring the blood pressure in the arms and legs and then dividing the systolic pressure in the leg by that in the arm. Abbr **PI**

pressure point /'pre:sə pɔɪnt/ *noun* a place where an artery crosses over a bone, so that the blood can be cut off by pressing with the finger

presynaptic /,pri:sɪ'næptɪk/ *adjective* situated in front of a synapse

presynaptic axon /,prɪsɪnæptɪk 'nɜ:v/ *noun* a nerve leading to one side of a synapse

presystole /pri:'sistəli/ *noun* the period before systole in the cycle of heartbeats

preterm birth /,pri:'tɜ:m bɜ:θ/ *noun* the birth of a baby before 37 completed weeks of pregnancy, which presents a greater risk of serious health problems (NOTE: About 12 per cent of births in the UK are preterm births.)

prevalence /'prevələns/ *noun* the number of cases of a disease in a specific place at a specific time ○ *the prevalence of malaria in some tropical countries* ○ *the prevalence of cases of malnutrition in large towns* ○ *a high prevalence of renal disease*

prevalent /'prevələnt/ *adjective* common in comparison to something else ○ *The disease is prevalent in some African countries.* ○ *The condition is more prevalent in the cold winter months.*

prevent /pri'vent/ *verb* to stop something from happening, or a person from doing something ○ *The treatment is given to prevent the patient's condition from getting worse.* ○ *Doctors are trying to prevent the spread of the outbreak of Legionnaires' disease.*

preventative /pri'ventətɪv/ *adjective* same as **preventive**

prevention /pri'venʃən/ *noun* action to stop something happening

preventive /pri'ventɪv/ *adjective* referring to an action taken to stop something happening, especially to stop a disease or infection from spreading ○ *preventive treatment* ○ *preventive action*

preventive measure /pri'ventɪv 'meʒə/ *noun* an action taken to prevent a disease from occurring or spreading

COMMENT: Preventive measures include immunisation, vaccination, sterilisation, quarantine and improving standards of housing and sanitation. Health education also has an important role to play in the prevention of disease.

preventive medicine /pri'ventɪv 'med(ə)s(ə)n/ *noun* action carried out to stop disease from occurring, e.g. by education in health-related issues, immunisation and screening for known diseases

prevertebral /pri:'vɜ:tɪbr(ə)l/ *adjective* situated in front of the spinal column or a vertebra

Priadel /'prə:dɛl/ a trade name for lithium

priapism /'priəpɪz(ə)m/ *noun* an erection of the penis without sexual stimulus, caused by a blood clot in the tissue of the penis, injury to the spinal cord or stone in the urinary bladder

prick /prɪk/ *verb* to make a small hole in something with a sharp point ○ *The nurse pricked the patient's finger to take a blood sample.*

prickle cell /'prɪk(ə)l sel/ *noun* a cell with many processes connecting it to other cells, found in the inner layer of the epidermis

prickly heat /'prɪkli hi:t/ *noun* same as **miliaria**

-pril /prɪl/ *suffix* used for ACE inhibitors ○ *Captopril*

prilocaine /'prɪləkeɪn/ *noun* a local anaesthetic used especially in dentistry

primaquine /'praɪməkwi:n/ *noun* a synthetically produced drug used in the treatment of malaria

primary /'praiməri/ *adjective* 1. happening first, and leading to something else 2. most important 3. referring to a condition which comes first and is followed by another. Compare **secondary**

primary amenorrhoea /,praiməri,_eimənə'ri:/ *noun* a condition in which a woman has never had menstrual periods

primary biliary cirrhosis /,praɪməri 'biliəri sɪ'rəʊsɪs/ *noun* cirrhosis of the liver caused by autoimmune disease

primary bronchi /,praɪməri 'brɒŋki:/ *plural noun* same as **main bronchi**

primary care /,praɪməri 'keə/ *noun* in the UK, health services offered directly to individuals by GPs, dentists, opticians and other health professionals who may also refer a patient on to specialists for further treatment. Also called **primary health care**, **primary medical care**. Compare **secondary care**, **tertiary care**

'...primary care is largely concerned with clinical management of individual patients, while community medicine tends to view the whole population as its patient' [Journal of the Royal College of General Practitioners]

primary care group /,praɪməri 'keə gru:p/ *noun* an organisation responsible for overseeing the provision of primary healthcare and the commissioning of secondary care in a district. Key members include GPs, community nurses, social services and lay members. Abbr **PCG**

primary care team /,praɪməri 'keə ti:m/ *noun* same as **primary health care team**

primary care trust /,praɪməri 'keə trəst/ *noun* in the UK, the top level of the primary care group with extra responsibilities such as direct employment of community staff. Abbr **PCT**

primary cartilaginous joint /,praɪməri 'ka:tə'lædʒɪnəs dʒɔɪnt/ *noun* a temporary joint where the intervening cartilage is converted into adult bone

primary complex /,praɪməri 'kɒmplɛks/ *noun* the first lymph node to be infected by tuberculosis

primary dysmenorrhoea /,praɪməri 'dis meno'ri:ə/ *noun* dysmenorrhoea which occurs at the first menstrual period. Also called **essential dysmenorrhoea**

primary haemorrhage /,praɪməri 'hem(ə)rɪdʒ/ *noun* bleeding which occurs immediately after an injury has taken place

primary health care /,praɪməri 'helθ keə/ *noun* same as **primary care**

'...among primary health care services, 1.5% of all GP consultations are due to coronary heart disease' [Health Services Journal]

primary health care team /,praɪməri 'helθ keə,ti:m/ *noun* a group of professional medical workers who have first contact with someone needing medical attention and are responsible for delivering a range of health care services. Abbr **PHCT**

primary medical care /,praɪməri 'medɪk(ə)l keə/ *noun* same as **primary care**

primary nurse /,praɪməri 'nɜ:s/ *noun* a nurse who is responsible for planning a person's nursing care in consultation with that person and his or her family. In the absence of

the primary nurse, associate nurses provide care based on the plan designed by the primary nurse.

primary nursing /,praɪməri 'nɜ:sɪŋ/ *noun* a model of nursing that involves the delivery of comprehensive, continuous, co-ordinated and individualised patient care through a primary nurse, who has autonomy, accountability and authority in relation to his or her patient's care

primary peritonitis /,praɪməri 'perɪtə'nɪtɪs/ *noun* peritonitis caused by direct infection from the blood or the lymph

primary tooth /'praɪməri tu:θ/ *noun* any one of the first twenty teeth which develop in children between about six months and two-and-a-half years of age, and are replaced by the permanent teeth at around the age of six. Also called **milk tooth**, **deciduous tooth**

primary tubercle /,praɪməri 'tju:bæk(ə)l/ *noun* the first infected spot where tuberculosis starts to infect a lung

primary tuberculosis /,praɪməri tju:bək'yūlʊsɪs/ *noun* a person's first infection with tuberculosis

primary tumour /,praɪməri 'tju:mə/ *noun* a site of the original malignant growth from which cancer spreads

prime /praɪm/ *adjective* 1. of the greatest importance or the highest rank 2. of the highest quality ■ *noun* the best state or period of something, especially the most active and enjoyable period in adult life ■ *verb* to make something ready for use, or to become ready for use (NOTE: **priming** – **primed**)

prime mover /praɪm 'mu:və/ *noun* 1. same as **agonist** 2. somebody or something which has the most influence over the starting of a process or activity

primigravida /,praɪmɪ'grævɪdə/, **primigravid patient** /praɪmɪ'grævɪd 'pefɪ(ə)nt/ *noun* a woman who is pregnant for the first time (NOTE: The plural is **primigravidas** or **primigravidæ**)

primipara /praɪ'mɪpərə/ *noun* a woman who has given birth to one child. Also called **uni-parae** (NOTE: The plural is **primiparas** or **primiparæ**)

primordial /prər'mɔ:dɪəl/ *adjective* in the very first stage of development

primordial follicle /prər'mɔ:dɪəl 'fɒlik(ə)l/ *noun* the first stage of development of an ovarian follicle

principle /'prɪnsɪp(ə)l/ *noun* 1. a rule or theory 2. a standard of ethical behaviour

P-R interval /,pi:r 'ɑ:r ,ɪntəv(ə)l/ *noun* the time recorded on an electrocardiogram between the start of atrial activity and ventricular activity

prion /'pri:dn/ *noun* a particle of protein which contains no nucleic acid, does not trigger an immune response and is not destroyed

by extreme heat or cold. Prions are considered to be the agents responsible for scrapie, BSE, and Creutzfeldt-Jakob disease.

priority despatch /pri'ɔrəti dɪ'spætʃ/ *noun* the process of talking to people who need medical help on the telephone in order to make sure that ambulances are sent to the most urgent cases first

priority matrix /pri'ɔrəti 'meitriks/ *noun* a way of trying to make sure that each community has a fair number of services for its particular health needs

private /'praɪvət/ *adjective* not supported by government or paid for by the National Health Service ◎ *He runs a private clinic for alcoholics.*

private hospital /'praɪvət 'hɒspɪt(ə)l/ *noun* a hospital which takes only paying patients

privately /'praɪvətlɪ/ *adverb* by a private practitioner or company, not by the National Health Service ◎ *She decided to have the operation done privately.*

private parts /'praɪvət pɑ:ts/ *plural noun* the genital area (*informal*) Also called **privates**

private patient /'praɪvət 'peɪs(ə)nɪt/ *noun* a patient who is paying for treatment and who is not being treated under the National Health Service

private practice /'praɪvət 'præktsɪs/ *noun* the services of a doctor, surgeon or dentist which are paid for by the patients themselves or by a medical insurance company, but not by the National Health Service

privates /'praɪvəts/ *plural noun* same as **private parts** (*informal*)

p.r.n. *adverb* (*written on a prescription*) as and when required. Full form **pro re nata**

pro- /prəʊ/ *prefix* before or in front of

probang /'prəʊbæŋ/ *noun* a surgical instrument like a long rod with a brush at one end, formerly used to test and find strictures in the oesophagus and to push foreign bodies into the stomach

probe /'prəʊb/ *noun* 1. an instrument used to explore inside a cavity or wound 2. a device inserted into a medium to obtain information ■ *verb* to investigate the inside of something ◎ *The surgeon probed the wound with a scalpel.* (NOTE: **probing – probed**)

problem /'prɒbləm/ *noun* 1. something which is difficult to find an answer to ◎ *Scientists are trying to find a solution to the problem of drug-related disease.* 2. a medical disorder ◎ *heart problems* 3. an addiction to something ◎ *has a drug problem*

problem child /'prɒbləm tʃaɪld/ *noun* a child who is difficult to control

problem drinking /'prɒbləm 'drɪŋkɪŋ/ *noun* alcoholism or heavy drinking which has a bad effect on a person's behaviour or work

problem-oriented record /,prɒbləm ,ɔ:rɪen'tɪd 'rekɔ:d/ *noun* a record of patient care which links patients' clinical data with their problems, so that all aspects of the care process are focused on resolving those problems

problem-solving approach /'prɒbləm ,sɒlvɪŋ ə,prəʊfəs/ *noun* the provision of nursing care based on assessment, problem identification (nursing diagnosis), planning implementation (nursing intervention) and evaluation

procedure /prə'si:dʒə/ *noun* 1. a standard way of doing something 2. a type of treatment ◎ *The hospital has developed some new procedures for treating Parkinson's disease.* 3. a treatment given at one time ◎ *We are hoping to increase the number of procedures carried out per day.*

'...disposable items now available for medical and nursing procedures range from cheap syringes to expensive cardiac pacemakers' [Nursing Times]

'...the electromyograms and CT scans were done as outpatient procedures' [Southern Medical Journal]

process /prə'u'ses/ *noun* 1. a technical or scientific action ◎ *A new process for testing serum samples has been developed in the research laboratory.* 2. a projecting part of the body ■ *verb* 1. to deal with a person or thing according to a standard procedure 2. to examine or test samples ◎ *The blood samples are being processed by the laboratory.*

'...the nursing process serves to divide overall patient care into that part performed by nurses and that performed by the other professions' [Nursing Times]

prochlorperazine /,prəuklɔ:z'peraɪzɪn/ *noun* a drug used to control nausea and vomiting, and to reduce the symptoms of Ménière's disease, migraine and anxiety

procidentia /,prəʊsi:d'ensɪə/ *noun* movement of an organ downwards

proct- /prɒkt/ *prefix* same as **procto-** (*used before vowels*)

proctalgia /prɒk'tældʒə/ *noun* pain in the lower rectum or anus, caused by neuralgia

proctalgia fugax /prɒk'tældʒə 'fju:gæks/ *noun* a condition in which a person has sudden pains in the rectum during the night, usually relieved by eating or drinking

proctoresis /,prɒktə'strɪzɪə/ *noun* a condition in which the anus does not have an opening. Also called **imperforate anus**

proctectasia /prɒktɛk'teɪzɪə/ *noun* a condition in which the rectum or anus is dilated because of continued constipation

proctectomy /prɒk'tektəmɪ/ *noun* a surgical operation to remove the rectum (NOTE: The plural is **proctectomies**.)

proctitis /prɒk'taɪtɪs/ *noun* inflammation of the rectum

procto- /prɒktəʊ/ *prefix* the anus or rectum

proctocoele /'prɒktəsɪ:l/ *noun* same as **rectocele**

proctoclysis /prɒk'tɒklɪsɪs/ *noun* the introduction of a lot of fluid into the rectum slowly
proctocolectomy /,prɒktəʊkɔːlɛktəmɪ/ *noun* a surgical operation to remove the rectum and the colon (NOTE: The plural is **proctocolectomies**.)

proctocolitis /,prɒktəkɔː'laitɪs/ *noun* inflammation of the rectum and part of the colon

proctodynia /,prɒktɒdɪniə/ *noun* a sensation of pain in the anus

proctogram /'prɒktəgræm/ *noun* an X-ray photograph of the rectum taken after a contrast agent is introduced

proctologist /prɒk'tɒlədʒɪst/ *noun* a specialist in proctology

proctology /prɒk'tɒlədʒɪ/ *noun* the scientific study of the rectum and anus and their associated diseases

proctorrhaphy /prɒk'tɔːræfi/ *noun* a surgical operation to stitch up a tear in the rectum or anus (NOTE: The plural is **proctorrhaphies**.)

proctoscope /'prɒktəskoʊp/ *noun* a surgical instrument consisting of a long tube with a light in the end, used to examine the rectum

proctoscopy /prɒk'tɒskəpi/ *noun* an examination of the rectum using a proctoscope (NOTE: The plural is **proctoscopies**.)

proctosigmoiditis /,prɒktəʊ,siɡmoɪd'aitɪs/ *noun* inflammation of the rectum and the sigmoid colon

proctotomy /prɒk'tɒtəmɪ/ *noun* 1. a surgical operation to divide a structure of the rectum or anus 2. an opening of an imperforate anus (NOTE: [all senses] The plural is **proctotomies**.)

prodromal /prəʊ'drəʊml/ *adjective* occurring between the appearance of the first symptoms of a disease and the major effect, e.g. a fever or rash

prodromal rash /prəʊ,drəʊm(ə)l 'ræʃ/ *noun* a rash which appears as a symptom of a disease before the major rash

prodrome /'prəʊdrəʊm/, **prodroma** /prəʊ'drəʊmə/ *noun* an early symptom of an attack of a disease

'...in classic migraine a prodrome is followed by an aura, then a headache, and finally a recovery phase. The prodrome may not be recognised' [British Journal of Hospital Medicine]

produce /prə'dju:s/ *verb* to make or cause something ○ *The drug produces a sensation of dizziness.* ○ *Doctors are worried by the side-effects produced by the new painkiller.* (NOTE: **producing – produced**)

product /'prɒdʌkt/ *noun* 1. something which is produced 2. a result or effect of a process

productive cough /prə,daktɪv 'kɒf/ *noun* a cough where phlegm is produced

proenzyme /prə'enzaim/ *noun* the first mature form of an enzyme, before it develops into an active enzyme. Also called **zymogen**

profession /prə'feʃ(ə)n/ *noun* 1. a type of job for which special training is needed 2. all

people working in a specialised type of employment for which they have been trained ○ *They are both doctors by profession.*

professional /prə'feʃ(ə)n(ə)l/ *adjective* referring to a profession

professional body /prə,feʃ(ə)n(ə)l 'bɒdi/ *noun* an organisation which acts for all the members of a profession

Professional Conduct Committee /prə,feʃ(ə)n(ə)l 'kɒndʌkt kə,mɪti/ *noun* a committee of the General Medical Council which decides on cases of professional misconduct. Abbr **PCC**

professional misconduct /prə,feʃ(ə)n(ə)l mis'kɒndʌkt/ *noun* actions which are considered to be wrong by the body which regulates a profession, e.g. an action by a doctor which is considered wrong by the Professional Conduct Committee of the General Medical Council

profile /'prəʊfaɪl/ *noun* 1. a brief description of the characteristics of a person or thing 2. a set of data, usually in graph or table form, which indicates to what extent something has the same characteristics as a group tested or considered standard 3. the amount that other people notice somebody or something ■ *verb* to give a short description or assessment of somebody or something (NOTE: **profiling – profiled**)

profound /prə'faʊnd/ *adjective* very great or serious ○ *a profound impairment of the immune system*

profunda /prə'fʌndə/ *adjective* referring to blood vessels which lie deep in tissues

profundoplasty /prə'fʌndəplæsti/ *noun* a surgical operation to widen a junction of the femoral artery, in order to relieve narrowing by atherosclerosis (NOTE: The plural is **profundoplasties**.)

profuse /prə'fju:s/ *adjective* existing in very large quantities ○ *fever accompanied by profuse sweating* ○ *pains with profuse internal bleeding*

progeny /'prɒdʒenɪ/ *noun* a person's child or children (NOTE: Takes a singular or plural verb.)

progeria /prə'ðʒɪəriə/ *noun* a condition of premature ageing. Also called **Hutchinson-Gilford syndrome**

progestational /prəʊ,dʒes'teɪʃ(ə)nəl/ *adjective* referring to the stage of the menstrual cycle after ovulation when progesterone is produced

progesterone /prəʊ'dʒestərəʊn/ *noun* a hormone which is produced in the second part of the menstrual cycle by the corpus luteum and which stimulates the formation of the placenta if an ovum is fertilised (NOTE: Progesterone is also produced by the placenta itself.)

progesterogen /prə'dʒestədʒən/ *noun* any substance which has the same effect as progesterone

COMMENT: Because natural progesterones prevent ovulation during pregnancy, synthetically produced progestogens are used to make contraceptive pills.

prognathic jaw /prɒg,næθɪk 'dʒɔ:/ *noun* a jaw which protrudes further than the other

prognathism /prɒnəθɪz(ə)m/ *noun* a condition in which one jaw, especially the lower jaw, or both jaws protrude

prognosis /prɒg'nəʊsɪs/ *noun* an opinion of how a disease or disorder will develop ○ *This cancer has a prognosis of about two years. ○ The prognosis is not good.* (NOTE: The plural is **prognoses**.)

prognostic /prɒg'nɒstɪk/ *adjective* referring to a prognosis

prognostic test /prɒg,nɒstɪk 'test/ *noun* a test to suggest how a disease will develop or how long a person will survive after an operation

programme /'prəʊgræm/ *noun* a series of medical treatments given in a set way at set times ○ *The doctor prescribed a programme of injections. ○ She took a programme of steroid treatment.* (NOTE: The US spelling is **program**.)

progress *noun* /'prəʊgres/ 1. development and improvement ○ *Progress has been made in cutting waiting times.* 2. the way in which a person is becoming well ○ *The doctors seem pleased that she has made such good progress since her operation.* ■ *verb* /prə'gres/ 1. to develop and improve, or to continue to do well ○ *The patient is progressing well.* 2. to move to a more advanced stage ○ *As the disease progressed, he spent more and more time sleeping.*

progression /prəʊ'greʃ(ə)n/ *noun* development ○ *The progression of the disease was swift.*

progressive /prə'gresɪv/ *adjective* developing all the time ○ *Alzheimer's disease is a progressive disorder which sees a gradual decline in intellectual functioning.*

progressive deafness /prə,gresɪv 'defnəs/ *noun* a condition, common in people as they get older, in which a person gradually becomes more and more deaf

progressively /prəʊ'gresɪvli/ *adverb* more and more ○ *He became progressively more disabled.*

progressive muscular atrophy /prə,gresɪv ,maskjʊlə 'ætrəfi/ *noun* muscular dystrophy, with progressive weakening of the muscles, particularly in the pelvic and shoulder girdles

proguanil /prəʊ'gwænɪl/ *noun* a drug used in the prevention and treatment of malaria

proinsulin /prəʊ'u'insulin/ *noun* a substance produced by the pancreas, then converted to insulin

project /prə'dʒekt/ *verb* to protrude or stick out

projection /prə'dʒekʃən/ *noun* 1. a part of the body which sticks out or stands out. Also called **prominence**. Compare **promontory** 2. (in psychology) mental action in which a person blames another person for his or her own faults

projection tract /prə'dʒekʃ(ə)n trækٹ/ *noun* fibres connecting the cerebral cortex with the lower parts of the brain and spinal cord

prolactin /prəʊ'læktɪn/ *noun* a hormone secreted by the pituitary gland which stimulates the production of milk. Also called **lactogenic hormone**

prolapse /'prəʊlæps/ *noun* a condition in which an organ has moved downwards out of its usual position ■ *verb* to move downwards out of the usual position (NOTE: **prolapsing – prolapsed**)

prolapsed intervertebral disc /prəʊ ,læpsɪd intə,vɪz̬təbrəl 'disk/ *noun* a condition in which an intervertebral disc becomes displaced or where the soft centre of a disc passes through the hard cartilage of the exterior and presses onto a nerve. Abbr **PID**. Also called **slipped disc**

prolapse of the rectum /,prəʊlæps əv ðə 'rekٹəm/ *noun* a condition in which mucous membrane of the rectum moves downwards and passes through the anus

prolapse of the uterus /,prəʊlæps əv ðə 'jʊtərəs/, **prolapse of the womb** /,prəʊlæps əv ðə 'wʊm/ *noun* a movement of the uterus downwards due to weakening of the structures of the pelvic floor, e.g. because of age or a difficult childbirth. Also called **metroptosis, prolapsed uterus, uterine prolapse**

proliferate /prə'lifəreɪt/ *verb* to produce many similar cells or parts, and so grow (NOTE: **proliferating – proliferated**)

proliferation /prə,lifə'reɪʃ(ə)n/ *noun* the process of proliferating

proliferative /prə'lifərətɪv/ *adjective* multiplying

proliferative phase /prə'lifərətɪv feɪz/ *noun* a period when a disease is spreading fast

proline /prəʊlɪn/ *noun* an amino acid found in proteins, especially in collagen

prolong /prə'lɒŋ/ *verb* to make something last longer ○ *The treatment prolonged her life by three years.*

prolonged /prə'lɒnd/ *adjective* very long ○ *She had to undergo a prolonged course of radiation treatment.*

promethazine /prəʊ'meθəzi:n/ *noun* an antihistamine drug used in the treatment of allergies and motion sickness

prominence /'prəmɪnəns/ *noun* a part of the body which sticks out or stands out. Also called **projection**. Compare **promontory**

prominent /'prəmɪnənt/ *adjective* standing out, very visible ○ *She had a prominent scar*

on her neck which she wanted to have removed.

promontory /'prɒmənt(ə)ri/ *noun* a section of an organ, especially the middle ear and sacrum which stands out above the rest. Compare **projection, prominence**

promote /prə'moʊt/ *verb* 1. to help something to take place □ *The drug is used to promote blood clotting.* 2. to raise a person to a more senior job or a higher position (NOTE: **promoting – promoted**)

pronate /'prəʊneɪt/ *verb* 1. to lie face downwards 2. to turn the hand so that palm faces downwards (NOTE: **pronating – pronated**)

pronation /'prəʊ'neɪʃ(ə)n/ *noun* the act of turning the hand round so that the palm faces downwards. Opposite **supination**. See illustration at **ANATOMICAL TERMS** in Supplement

pronator /prəʊ'nætər/ *noun* a muscle which makes the hand turn face downwards

prone /prəʊn/ *adjective* 1. lying face downwards. Opposite **supine** 2. referring to the arm with the palm facing downwards

pronounced /prə'naʊnst/ *adjective* very obvious or marked □ *She has a pronounced limp.*

propagate /'prɒpəgeɪt/ *verb* to multiply something, or cause something to multiply (NOTE: **propagating – propagated**)

propagation /'prɒpə'geɪʃ(ə)n/ *noun* an act of causing something to spread or multiply

properdin /'prəʊpədɪn/ *noun* protein in blood plasma which can destroy Gram-negative bacteria and neutralise viruses when acting together with magnesium

prophase /'prəʊfeɪz/ *noun* the first stage of mitosis when the chromosomes are visible as long thin double threads

prophylactic /'prɒfə'læktɪk/ *noun* a substance which helps to prevent the development of a disease ■ *adjective* preventive

prophylaxis /'prɒfə'læksɪs/ *noun* 1. the prevention of disease 2. a preventive treatment (NOTE: [all senses] The plural is **prophylaxes**.)

proportion /prə'pɔ:ʃ(ə)n/ *noun* a quantity of something, especially as compared to the whole □ *A high proportion of cancers can be treated by surgery.* □ *The proportion of outpatients to inpatients is increasing.*

...the target cells for adult myeloid leukaemia are located in the bone marrow, and there is now evidence that a substantial proportion of childhood leukaemias also arise in the bone marrow' [British Medical Journal]

propranolol /prə'u'pænəlɒl/ *noun* a drug that slows heart rate and heart output, used in the treatment of angina pectoris, irregular heart rhythms, migraine and high blood pressure

proprietary /prə'priət(ə)ri/ *adjective* belonging to a commercial company

proprietary medicine /prə,prɪət(ə)ri 'med(ə)s(ə)n/, **proprietary drug** /prə

,prɪət(ə)ri 'dræg/ *noun* a drug which is sold under a trade name. □ **patent medicine**

proprietary name /prə,prɪət(ə)ri 'neɪm/ *noun* a trade name for a drug

proprioception /,prəʊprio'septʃən/ *noun* the reaction of nerves to body movements and the relaying of information about movements to the brain

proprioceptive /,prəʊprio'septɪv/ *adjective* referring to sensory impulses from the joints, muscles and tendons, which relay information about body movements to the brain

proprioceptor /,prəʊprio'septə/ *noun* the end of a sensory nerve which reacts to stimuli from muscles and tendons as they move

proptosis /prɒp'təʊsɪs/ *noun* forward displacement of the eyeball

prop up /,prɒp 'ʌp/ *verb* to support a person, e.g. with pillows (NOTE: **propping up – propped up**)

prospective /prə'spektɪv/ *adjective* 1. applying to the future. □ **retrospective** 2. following what happens to selected patients

prostaglandin /,prɒstə'glændɪn/ *noun* any of a class of unsaturated fatty acids found in all mammals which control smooth muscle contraction, inflammation and body temperature, are associated with the sensation of pain and have an effect on the nervous system, blood pressure and in particular the uterus at menstruation

prostate /'prɒstɪt/ *noun* same as **prostate gland** (NOTE: Do not confuse with **prostrate**.) □ **prostate trouble** inflammation or enlargement of the prostate gland (*informal*)

prostate cancer /'prɒstɪt, kænsə/ *noun* a malignant tumour of the prostate gland, found especially in men over 55

prostatectomy /,prɒstə'tektəmɪ/ *noun* a surgical operation to remove all or part of the prostate gland (NOTE: The plural is **prostatectomies**.)

prostate gland /'prɒstɪt glænd/ *noun* an O-shaped gland in males which surrounds the urethra below the bladder and secretes a fluid containing enzymes into the sperm. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement. Also called **prostate**

COMMENT: As a man grows older, the prostate gland tends to enlarge and constrict the point at which the urethra leaves the bladder, making it difficult to pass urine.

prostatic /prɒ'stætɪk/ *adjective* referring to or belonging to the prostate gland

prostatic hypertrophy /prɒ,stætɪk haɪ'pɜ:t̬rəfi/ *noun* an enlargement of the prostate gland

prostatic massage /prɒ,stætɪk 'mæsɪ:ʒ/ *noun* the removal of fluid from the prostate gland through the rectum

prostatic urethra /prə,stætɪk ju'rɪ:θrə/ *noun* a section of the urethra which passes through the prostate gland

prostatic utricle /prə,stætɪk 'ju:t्रɪklə/ *noun* a sac branching off the urethra as it passes through the prostate gland

prostatism /'prɒstɪtɪz(ə)m/ *noun* a disorder of the prostate gland, especially enlargement which blocks or inhibits urine flow

prostatitis /,prɒstə'taɪtɪs/ *noun* inflammation of the prostate gland

prostatocystitis /,prɒstætə'staɪtɪs/ *noun* inflammation of the prostatic urethra and the bladder

prostatorrhoea /,prɒstətə'rɪ:ə/ *noun* discharge of fluid from the prostate gland (NOTE: The US spelling is **prostorrhœa**.)

prosthesis /prɒs'θi:sɪs/ *noun* a device which is attached to the body to take the place of a part which is missing, e.g. an artificial leg or glass eye (NOTE: The plural is **prostheses**.)

'The average life span of a joint prosthesis is 10–15 years' [British Journal of Nursing]

prosthetic /prɒs'θetɪk/ *adjective* replacing a part of the body which has been amputated or removed ○ *He was fitted with a prosthetic hand.*

prosthetic dentistry /prɒs'θetɪk 'dentɪstri/ *noun* the branch of dentistry which deals with replacing missing teeth parts of the jaw, and fitting dentures, bridges and crowns. Also called **prosthodontics**

prosthetics /prɒs'θetɪks/ *noun* the study and making of prostheses

prosthetist /'prɒsθətɪst/ *noun* a qualified person who fits prostheses

prosthodontics /,prɒsθə'dɒntɪks/ *noun* same as **prosthetic dentistry** (NOTE: Takes a singular verb.)

prostrate /'prɒstreɪt/ *adjective* lying face down (NOTE: Do not confuse with **prostate**.)

prostration /prɒ'streɪʃ(ə)n/ *noun* extreme tiredness of body or mind

protamine /'prəʊtəmɪn/ *noun* a simple protein found in fish, used with insulin to slow down the insulin absorption rate

protanopia /,prəʊtə'nəʊpiə/ *noun* same as **Daltonism**

protease /'prəutierz/ *noun* a digestive enzyme which breaks down protein in food by splitting the peptide link. Also called **proteolytic enzyme**

protect /prə'tekt/ *verb* to keep a person or thing safe from harm ○ *The population must be protected against the spread of the virus.*

protection /prə'tekʃən/ *noun* 1. the act of keeping a person or thing safe from harm 2. something which protects ○ *Children are vaccinated as a protection against disease.*

Protection of Children Act 1999 /prə,tekʃən əv 'tʃildrən ækt/ *noun* in the UK, an

Act of Parliament to protect children by restricting the employment of certain nurses, teachers or other workers whose jobs bring them into contact with children, on grounds such as misconduct or health

protective /prə'tektɪv/ *adjective* providing protection

protective isolation /prə'tektɪv ,aisə'leɪʃ(ə)n/ *noun* a set of procedures used to protect people who have impaired resistance to infectious disease, e.g. those with leukaemia and lymphoma, Aids and graft patients. Also called **reverse isolation**

protein /'prəuti:n/ *noun* a nitrogen compound which is present in and is an essential part of all living cells in the body, formed by the linking of amino acids

COMMENT: Proteins are necessary for growth and repair of the body's tissue. They are mainly formed of carbon, nitrogen and oxygen in various combinations as amino acids. Foods such as beans, meat, eggs, fish and milk are rich in protein.

protein balance /'prəuti:n ,bæləns/ *noun* a situation when the nitrogen intake in protein is equal to the excretion rate in the urine

protein-bound iodine /,prəuti:n baund 'aɪdi:n/ *noun* a compound of thyroxine and iodine

protein-bound iodine test /,prəuti:n baund 'aɪdi:n test/ *noun* a test to measure if the thyroid gland is producing adequate quantities of thyroxine. Abbr **PBI test**

protein deficiency /'prəuti:n dɪ,fɪʃ(ə)nsi/ *noun* a lack of enough proteins in the diet

proteinuria /,prəuti'njuəriə/ *noun* a condition in which there are proteins in the urine

proteolysis /,prəuti'lɒsɪs/ *noun* the breaking down of proteins in food into amino acids by enzymes

proteolytic /,prəutiə'lɪtɪk/ *adjective* referring to proteolysis

proteolytic enzyme /,prəutiəlɪtɪk 'enzaɪm/ *noun* same as **protease**

proteose /'prəutiəs/ *noun* a water-soluble compound formed during hydrolytic processes such as digestion

Proteus /'prəutiəs/ *noun* a genus of bacteria commonly found in the intestines

prothrombin /prə'u'θrɒmbɪn/ *noun* a protein in blood which helps blood to coagulate and which needs Vitamin K to be effective. Also called **Factor II**

prothrombin time /prə'u'θrɒmbɪn taɪm/ *noun* the time taken in Quick test for clotting to take place

proto- /prəutəʊ/ *prefix* first or at the beginning

protocol /'prəutəkɒl/ *noun* the set of instructions for the clinical management of a particular condition, including tests, surgery and drug treatments

proton pump /'prəʊtɒn pʌmp/ *noun* an enzyme system within the gastric mucosa that secretes gastric acids ○ *The drug acts on the proton pump mechanism.*

proton-pump inhibitor /'prəʊtɒn pʌmp in'hɪbɪtə/ *noun* a drug which suppresses the final stage of gastric acid secretion by the proton pump in the gastric mucosa

protopathic /,prəʊtəʊ'pæθɪk/ *adjective* 1. referring to nerves which are able to sense only strong sensations 2. referring to a first symptom or lesion 3. referring to the first sign of partially restored function in an injured nerve
► compare **epicritic**

protoplasm /'prəʊtəʊ,plæz(ə)m/ *noun* a substance like a jelly which makes up the largest part of each cell

protoplasmic /,prəʊtəʊ'plæzmɪk/ *adjective* referring to protoplasm

protoporphyrin IX /,prəʊtəʊ,pɔ:fərɪn 'naɪn/ *noun* the commonest form of porphyrin, found in haemoglobin and chlorophyll

protozoa /,prəʊtə'zəʊə/ plural of **protozoon**

protozoan /,prəʊtə'zəʊən/ *adjective* referring to protozoa

protozoon *noun* a tiny simple organism with a single cell (NOTE: The plural is **protozoa** or **protozoons**.)

COMMENT: Parasitic protozoa can cause several diseases, including amoebiasis, malaria and other tropical diseases.

protract /prə'u'trækət/ *verb* 1. to make something last a long time 2. to extend or lengthen a body part

protractor /prə'træktsə/ *noun* a muscle with the function of extending a body part

protrude /prə'tru:d/ *verb* to stick out ○ *She wears a brace to correct her protruding teeth.* ○ *Protruding eyes are associated with some forms of goitre.* (NOTE: **protruding** – **protruded**)

protuberance /prə'tju:b(ə)rəns/ *noun* a rounded part of the body which projects above the rest

proud flesh /,prəud 'fleʃ/ *noun* new vessels and young fibrous tissue which form when a wound, incision or lesion is healing

provide /prə'veɪd/ *verb* to supply something ○ *A balanced diet should provide the necessary proteins required by the body.* ○ *The hospital provides an ambulance service to the whole area.* (NOTE: **providing** – **provided**)

provider /prə'veɪdə/ *noun* a hospital which provides secondary care which is paid for by another body such as a PCG or social services.

◊ **purchaser**

provision /prə'veɪʒ(ə)n/ *noun* 1. the act of providing something ○ *the provision of after-care facilities for patients recently discharged from hospital* 2. something provided

provisional /prə'veɪʒ(ə)n(ə)l/ *adjective* temporary and which may be changed ○ *The hos-*

pital has given me a provisional date for the operation. ○ *The paramedical team attached sticks to the broken leg to act as provisional splints.*

provisionally /prə'veɪʒ(ə)nəli/ *adverb* in a temporary way, not certainly ○ *She has provisionally accepted the offer of a bed in the hospital.*

provitamin /prəʊ'vɪtəmɪn/ *noun* a chemical compound which is converted to a vitamin during usual biochemical processes, e.g. the amino acid tryptophan, which is converted to niacin, and beta carotene, which is converted into vitamin A

provoke /prə'veʊk/ *verb* 1. to make a person angry 2. to make something happen ○ *The medication provoked a sudden rise in body temperature.* ○ *The fit was provoked by the shock of the accident.* 3. to make something be felt ○ *His lack of visitors provoked the nurses' sympathy.* (NOTE: **provokes** – **provoking** – **provoked**)

proximal /'prɒksɪm(ə)l/ *adjective* near the midline, the central part of the body

proximal convoluted tubule /,prɒksɪm(ə)l ,kɒnvɒlʊ:tɪd 'tjʊ:bjʊ:l/ *noun* a part of the kidney filtering system between the loop of Henle and the glomerulus

proximal interphalangeal joint /,prɒksɪm(ə)l intfə'lændʒiəl dʒɔɪnt/ *noun* a joint nearest the point of attachment of a finger or toe. Abbr **PIP**

proximally /'prɒksɪmli/ *adverb* further towards the centre or point of attachment. Opposite **distally**. See illustration at **ANATOMICAL TERMS** in Supplement

Prozac /'prəʊzæk/ a trade name for fluoxetine

prurigo /pruə'rɑ:gəʊ/ *noun* an itchy eruption of papules

pruritus /pruə'rætəs/ *noun* an irritation of the skin which makes a person want to scratch. Also called **itching**

pruritus ani /pruə,rætɪs 'eɪnai/ *noun* itching round the anal orifice

pruritus vulvae /pruə,rætɪs 'vʌlvɪ:/ *noun* itching round the vulva

prussic acid /,prʌsɪk 'æsɪd/ *noun* same as cyanide

PSA test /pi: es 'eɪ test/ *noun* a blood test for prostate cancer which detects a protein produced by prostate cells. Full form **prostatic specific antigen test**

pseudo- /sjʊ:d/ *prefix* same as **pseudo-** (used before vowels)

pseudarthrosis /sju:da:θrəʊsɪs/ *noun* a false joint, as when the two broken ends of a fractured bone do not bind together but heal separately (NOTE: The plural is **pseudarthroses**.)

pseudo- /sju:dəʊ/ *prefix* similar to something but not the same

pseudoangina /,sju:dəʊən'ænɪnə/ *noun* pain in the chest, caused by worry but not indicating heart disease

pseudocoxalgia /,sju:dəʊkɒk'sældʒə/ *noun* the degeneration of the upper end of the femur in young boys which prevents the femur from growing properly and can result in a permanent limp. Also called **Legg-Calvé-Perthes disease**

pseudocrisis /'sju:dəʊ,kraɪəsɪs/ *noun* a sudden fall in the temperature of a person with fever which does not mark the end of the fever

pseudocroup /,sju:dəʊ'kru:p/ *noun* 1. same as **laryngismus** 2. a form of asthma in which contractions take place in the larynx

pseudocyesis /,sju:dəʊsər'i:sɪs/ *noun* a condition in which a woman has the physical symptoms of pregnancy but is not pregnant. Also called **phantom pregnancy**, **pseudo-pregnancy**

pseudocyst /'sju:dəʊsɪst/ *noun* a space which fills with fluid in an organ but without the walls which would form a cyst, as a result of softening or necrosis of the tissue

pseudodementia /,sju:dəʊdə'menʃə/ *noun* a condition of extreme apathy found in hysterical people in which their behaviour corresponds to what they imagine to be insanity, though they show no signs of true dementia

pseudogynaecomastia /,sju:dəʊ,gɪnɪk'əʊ'mæstɪə/ *noun* enlargement of the male breast because of extra fatty tissue (NOTE: The US spelling is **pseudogynecomastia**)

pseudohermaphroditism /,sju:dəʊhæfro'dɪtɪz/ 'mæfrədæɪtɪz(ə)m/ *noun* a condition in which a person has either ovaries or testes but external genitalia that are not clearly of either sex

pseudohypertrophic muscular dystrophy /,sju:dəʊhaɪp'trofɪk, trɔ:fɪk, məskjʊlə'dɪs'trɔ:fɪ/ *noun* a hereditary disease affecting the muscles, which swell and become weak, beginning in early childhood. Also called **Duchenne muscular dystrophy**

pseudohypertrophy /,sju:dəuhɑ:r/p:z:t'ræfɪ/ *noun* an overgrowth of fatty or fibrous tissue in a part or organ, which results in the part or organ being enlarged

pseudomonad /,sju:dəʊ'mæʊnæd/ *noun* a rod-shaped bacterium which lives in soil or decomposing organic material and can cause disease in plants and sometimes in humans

pseudomyxoma /,sju:dəʊmɪk'səʊmə/ *noun* a tumour rich in mucus (NOTE: The plural is **pseudomyxomas** or **pseudomyxomatata**)

pseudo-obstruction /,sju:dəʊ əb'strækʃən/ *noun* a condition in which symptoms such as stomach cramps, nausea and bloating indicate a blockage in the intestines although no blockage exists

pseudoplegia /,sju:dəʊ'pli:dʒə/, **pseudoparalysis** /,sju:dəʊpə'ræləsɪs/ *noun* 1. loss of muscular power in the limbs without true paralysis 2. paralysis caused by hysteria

pseudopolyposis /,sju:dəʊpɒli'pəʊsɪs/ *noun* a condition in which polyps are found in many places in the intestine, usually resulting from an earlier infection

pseudopregnancy /,sju:dəʊ'pregnənsi/ *noun* also called **pseudocyesis**

psilosis /saɪ'ləʊsɪs/ *noun* a disease of the small intestine which prevents a person from absorbing food properly. Also called **sprue**

COMMENT: The condition is often found in the tropics, and results in diarrhoea and loss of weight.

psittacosis /sɪtə'kəʊsɪs/ *noun* a disease of parrots which can be transmitted to humans. It is similar to typhoid fever, but atypical pneumonia is present. Symptoms include fever, diarrhoea and distension of the abdomen. Also called **parrot disease**

psoas /'səʊəs/ *noun* either of two pairs of muscles in the groin, psoas major and psoas minor, which help to move the hip joint

psoas major /'səʊəs 'meɪrɪdʒə/ *noun* a muscle in the groin which flexes the hip

psoas minor /'səʊəs 'maɪnə/ *noun* a small muscle similar to the psoas major but not always present

psoriasis /sə'raɪəsɪs/ *noun* a common inflammatory skin disease where red patches of skin are covered with white scales

psoriatic /,sɔ:ri'ætɪk/ *adjective* referring to psoriasis

psoriatic arthritis /,sɔ:riætɪk ə:'θrætɪs/ *noun* a form of psoriasis which is associated with arthritis

psych- /sɑ:k/ *prefix* same as **psycho-** (*used before vowels*)

psychasthenia /,saɪkæs'θi:nɪə/ *noun* 1. any psychoneurosis other than hysteria 2. psychoneurosis characterised by fears and phobias

psyche /'saɪki/ *noun* the mind

psychedelic /,saɪkə'delɪk/ *adjective* referring to drugs such as LSD which expand a person's consciousness

psychiatric /,saɪkɪ'ætrɪk/ *adjective* referring to psychiatry ○ *He is undergoing psychiatric treatment.*

psychiatric hospital /,saɪkɪ'ætrɪk ,hɒpit(ə)l/ *noun* a hospital which specialises in the treatment of patients with mental disorders

psychiatrist /saɪ'kærətrɪst/ *noun* a doctor who specialises in the diagnosis and treatment of mental and behavioural disorders

psychiatry /saɪ'kærətri/ *noun* a branch of medicine concerned with the diagnosis and treatment of mental and behavioural disorders

psychic /'saɪkɪk/, **psychical** /'saɪkɪk(ə)l/ *adjective* 1. referring to a person who is supposedly able to guess thoughts which people have not expressed, or to foresee the future 2. relating to or originating in the human mind

psycho- /saɪkəʊ/ *prefix* referring to the mind

psychoanalysis /,saɪkəʊə'neələsɪs/ *noun* a form of treatment for mental disorders in which a specialist and patient talk and together analyse the patient's condition and past events which may have contributed to it

psychoanalyst /,saɪkəʊ'æn(ə)list/ *noun* a person who is trained in psychoanalysis

psychodrama /'saɪkəʊ,d्रə:mə/ *noun* a type of psychotherapy in which patients act out roles in dramas illustrating their emotional problems, in front of other patients

psychodynamics /,saɪkəʊdæm'naɪmɪks/ *noun* the study of how the forces which affect human behaviour and mental states work, especially on a subconscious level

psychogenic /,saɪkə'dʒenɪk/, **psychogenetic** /,saɪkəʊdʒə'nɛtɪk/, **psychogenous** /saɪ'kɒdʒənəs/ *adjective* referring to an illness which starts in the mind, rather than in a physical state

psychogeriatrics /,saɪkəʊdʒeri'ætriks/ *noun* the study of the mental disorders of the late stages of the natural life span

psychological /,saɪkə'lɒdʒɪk(ə)l/ *adjective* referring to psychology, or caused by a mental state

psychological dependence /,saɪkə'lɒdʒɪk(ə)l dɪ'pendəns/, **psychological drug dependence** /,saɪkə'lɒdʒɪk(ə)l 'dræg dɪ'pendəns/ *noun* a state in which a person is addicted to a drug such as cannabis or alcohol but does not suffer physical effects if he or she stops taking it

psychologically /,saɪkə'lɒdʒɪkli/ *adverb* in a way which is caused by a mental state ○ *He is psychologically addicted to tobacco.*

psychologist /saɪ'kɒlədʒɪst/ *noun* a person who specialises in the study of the mind and mental processes

psychology /saɪ'kɒlədʒɪ/ *noun* the study of the mind and mental processes

psychometrics /,saɪkə'metriks/ *noun* a way of measuring intelligence and personality in which the result is shown as a number on a scale

psychomotor /,saɪkə'məutə/ *adjective* referring to muscle movements caused by mental activity

psychomotor disturbance /,saɪkəməutə dr'stɔ:bəns/ *noun* muscle movements caused by a mental disorder, e.g. twitching

psychomotor epilepsy /,saɪkəməutə 'epi lepsi/ *noun* epilepsy in which fits are characterised by blurring of consciousness and ac-

companied by coordinated but wrong movements

psychomotor retardation /,saɪkəməutə ,rɪ:tɪə'deɪʃ(ə)n/ *noun* the slowing of movement and speech, caused by depression

psychoneuroimmunology /,saɪkəʊ ,njuərəʊ,ɪmju'ndlodʒɪ/ *noun* a branch of medicine which deals with how emotions affect the immune system

psychoneurosis /,saɪkənju'rəʊsɪs/ *noun* any of a group of mental disorders in which a person has a faulty response to the stresses of life. ○ **neurosis** (NOTE: The plural is **psychoneuroses**)

psychopath /'saɪkəpæθ/ *noun* a person with a long-term mental disorder characterised by antisocial and often violent behaviour

psychopathic /,saɪkə'pæθɪk/ *adjective* referring to psychopaths or psychopathy

psychopathological /,saɪkəpæθə'lɒdʒɪk(ə)l/ *adjective* referring to psychopathology

psychopathology /,saɪkəpæ'θɒlədʒɪ/ *noun* a branch of medicine concerned with the pathology of mental disorders and diseases

psychopathy /saɪ'kɒpəθi/ *noun* any disease of the mind (NOTE: The plural is **psychopathies**)

psychopharmacology /,saɪkəʊ,fu:mə 'kɒlədʒɪ/ *noun* the study of the actions and applications of drugs which have a powerful effect on the mind and behaviour

psychophysiological /,saɪkəʊ,fizi'ə'lɒdʒɪk(ə)l/ *adjective* referring to psychophysiology

psychophysiology /,saɪkəʊ,fizi'ɒlədʒɪ/ *noun* the physiology of the mind and its functions

psychoses /saɪ'kəʊsi:z/ plural of **psychosis**

psychosexual /,saɪkəʊ'sekʃuəl/ *adjective* relating to the mental and emotional aspects of sexuality and sexual development

psychosexual development /,saɪkəʊ ,sekʃuəl dɪ'veləpmənt/ *noun* the development of human personality in stages based upon the ability to experience sexual pleasure, and the way in which sexuality plays a role in a person's life

psychosis /saɪ'kəʊsɪs/ *noun* any serious mental disorder in which a person has a distorted perception of reality (NOTE: The plural is **psychoses**.)

psychosocial /,saɪkəʊ'səʊʃ(ə)l/ *adjective* relating to the interaction of psychological and social factors

'...recent efforts to redefine nursing have moved away from the traditional medically dominated approach towards psychosocial care and forming relationships with patients' [British Journal of Nursing]

psychosomatic /saɪkəʊsə'mætɪk/ *adjective* referring to the relationship between body and mind

COMMENT: Many physical disorders, including duodenal ulcers and high blood pressure, can be caused by mental conditions like worry or stress, and are then termed psychosomatic in order to distinguish them from the same conditions having physical or hereditary causes.

psychosurgery /saɪkəʊ'sɜːdʒərɪ/ *noun* brain surgery, used as a treatment for psychological disorders

psychosurgical /saɪkəʊ'sɜːdʒɪk(ə)l/ *adjective* referring to psychosurgery

psychotherapeutic /saɪkəʊθεրə'pjū:tɪk/ *adjective* referring to psychotherapy

psychotherapist /saɪkəʊ'θerəpɪst/ *noun* a person trained to give psychotherapy

psychotherapy /saɪkəʊ'θerəpɪ/ *noun* the treatment of mental disorders by psychological methods, as when a psychotherapist encourages a person to talk about his or her problems. ♦ **therapy**

psychotic /saɪ'kɒtɪk/ *adjective* 1. referring to psychosis 2. characterised by mental disorder

psychotropic /saɪkə'trɒpɪk/ *adjective* referring to a drug such as a stimulant or sedative which affects a person's mood

pt abbr pint

pterion /'tɪərɪən/ *noun* the point on the side of the skull where the frontal, temporal parietal and sphenoid bones meet

pteroylglutamic acid /,terəʊarlglu:tæmɪk 'æsɪd/ *noun* same as **folic acid**

pterygium /tə'rɪdʒiəm/ *noun* a degenerative condition in which a triangular growth of conjunctiva covers part of the cornea, with its apex towards the pupil

pterygo- /terɪgəʊ/ *suffix* the pterygoid process

pterygoid plate /terɪgɔɪd 'pleɪt/ *noun* a small flat bony projection on the pterygoid process

pterygoid plexus /terɪgɔɪd 'pleksəs/ *noun* a group of veins and sinuses which join together behind the cheek

pterygoid process /terɪgɔɪd ,præsəs/ *noun* one of two projecting parts on the sphenoid bone

pterygomandibular /terɪgəʊmæn'dibjʊlə/ *adjective* referring to the pterygoid process and the mandible

pterygopalatine fossa /terɪgəʊpælətæn'fəsə/ *noun* the space between the pterygoid process and the upper jaw

pterygopalatine ganglion /terɪgəʊpælətæn 'gæŋglɪən/ *noun* a ganglion in the pterygopalatine fossa associated with the maxillary nerve. Also called **sphenopalatine ganglion**

ptomaine /təʊmeɪn/ *noun* a group of nitrogenous substances produced in rotting food, which gives the food a special smell (NOTE: **Ptomaine poisoning** was the term formerly used to refer to any form of food poisoning.)

ptosis /təʊsɪs/ *noun* 1. prolapse of an organ 2. drooping of the upper eyelid, which makes the eye stay half closed

-**ptosis** /təʊsɪs/ *suffix* prolapse

PTSD abbr post-traumatic stress disorder

ptyal- /taɪəl/ *prefix* same as **ptyalo-** (*used before vowels*)

ptyalin /'taɪəlɪn/ *noun* an enzyme in saliva which cleanses the mouth and converts starch into sugar

ptyalism /'taɪəlɪz(ə)m/ *noun* the production of an excessive amount of saliva

ptyalith /'taɪəlɪθ/ *noun* same as **sialolith**

ptyalo- /taɪələʊ/ *prefix* referring to saliva

ptyalography /,taɪə'lɒgrəfi/ *noun* same as **sialography**

pubertal /'pju:bət(ə)l/, **puberal** /'pju:bərəl/ *adjective* referring to puberty

puberty /'pju:bəti/ *noun* 1. the physical and psychological changes which take place when childhood ends and adolescence and sexual maturity begin and the sex glands become active 2. the time when these changes take place

COMMENT: Puberty starts at about the age of 10 in girls, and slightly later in boys.

pubes¹ /'pju:bɪz/ *noun* the part of the body just above the groin, where the pubic bones are found

pubes² /'pju:bɪz/ plural of **pubis**

pubescent /'pju:'besənt/ *adjective* reaching or having reached puberty

pubic /'pju:bɪk/ *adjective* referring to the area near the genitals

pubic bone /,pju:bɪk 'bəʊn/ *noun* the bone in front of the pelvis. Also called **pubis**. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement

pubic hair /,pju:bɪk 'hɛə/ *noun* tough hair growing in the genital region

pubic louse /,pju:bɪk 'laus/ *noun* also called **Pediculus pubis**

pubic symphysis /,pju:bɪk 'sɪmfəsɪs/ *noun* a piece of cartilage which joins the two sections of the pubic bone. Also called **symphysis pubis**

COMMENT: In a pregnant woman, the pubic symphysis stretches to allow the pelvic girdle to expand so that there is room for the baby to pass through.

pubiotomy /,pju:bi'ɒtəmi/ *noun* a surgical operation to divide the pubic bone during labour, in order to make the pelvis wide enough for the child to be born safely (NOTE: The plural is **pubiotomies**.)

pubis /'pju:bɪs/ *noun* a bone forming the front part of the pelvis. See illustration at **PELVIS** in Supplement (NOTE: The plural is **pubes**.)

public health /'pʌblɪk 'helθ/ *noun* the study of illness, health and disease in the community

public health laboratory service /,pʌblɪk ,helθ lə'bɒrət(ə)ri ,sɜ:vɪs/ *noun* in the UK, a former service of the NHS which detected, diagnosed and monitored suspected cases of infectious disease in a countrywide network of laboratories. Abbr PHLS

public health medicine /,pʌblɪk ,helθ 'med(ə)s(ə)n/ *noun* the branch of medicine concerned with health and disease in populations, with the responsibilities of monitoring health, identification of health needs, development of policies which promote health and evaluation of health services

public health nurse /,pʌblɪk ,helθ 'nɜ:s/ *noun* a nurse such as a school nurse, health visitor or other community nurse who monitors health and works to prevent illness in community situations

public health physician /,pʌblɪk ,helθ fɪ 'zɪl(ə)n/ *noun* a consultant who has special training in public health medicine

pudenda /pju:'dendə/ plural of **pudendum**
pudendal /pju:'dend(ə)l/ *adjective* referring to the pudendum

pudendal block /pju:,dend(ə)l 'blk/ *noun* an operation to anaesthetise the pudendum during childbirth

pudendum /pju:'dendəm/ *noun* an external genital organ of a woman (NOTE: The plural is **pudenda**.)

puerpera /pju:'z:p(ə)rə/ *noun* a woman who has recently given birth, or is giving birth, and whose uterus is still distended (NOTE: The plural is **puerperae**.)

puerperal /pju:'z:p(ə)rəl/ *adjective* 1. referring to the puerperium 2. referring to childbirth
3. occurring after childbirth

puerperal infection /pju,z:p(ə)rəl ɪn 'fekʃən/, **puerperal fever** /pju,z:p(ə)rəl 'fi:və/ *noun* an infection of the uterus and genital tract after the birth of a baby, which is more common in women who have had a caesarean section. It causes a high fever, and occasionally sepsis, which can be fatal and was commonly so in the past. Also called **postpartum fever**
puerperalism /pju:'z:p(ə)rəlɪz(ə)m/ *noun* an illness of a baby or its mother resulting from or associated with childbirth

puerperal psychosis /pju,z:p(ə)rəl saɪ 'kəʊsɪs/ *noun* a psychiatric disorder that some women may experience in the first two weeks after giving birth

puerperal sepsis /pju,z:p(ə)rəl 'sepsɪs/ *noun* blood poisoning following childbirth, caused by infection of the placental site

puerperium /,pju:ə'pɪəriəm/ *noun* a period of about six weeks which follows immediately after the birth of a child, during which the mother's sexual organs recover from childbirth

puerperous /pju'z:pəs/ *adjective* same as **puerperal**

puke /pju:k/ *verb* same as **vomit** (*informal*)

Pulex /'pju:leks/ *noun* a genus of human fleas

pull /pol/ *verb* to make a muscle move in a wrong direction ○ *He pulled a muscle in his back.* □ **to pull the plug** to switch off life support (*informal*) ■ □ **to pull yourself together** to become calmer ○ *Although he was very angry he soon pulled himself together.*

pulley /'poli/ *noun* a device with rings through which wires or cords pass, used in traction to make wires tense

pull through /,pol 'θru:/ *verb* to recover from a serious illness (*informal*) ○ *The doctor says she is strong and should pull through.*

pulmo- /'palməu/, **pulmon-** /'palmən/ *prefix* referring to the lungs

pulmonale /,palmə'næli/ ♀ **cor pulmonale**

pulmonary /'palmən(ə)rɪ/ *adjective* referring to the lungs

pulmonary artery /,palmən(ə)ri 'a:təri/ *noun* one of the two arteries which take deoxygenated blood from the heart to the lungs for oxygenation. See illustration at **HEART** in Supplement

pulmonary circulation /,palmən(ə)ri ,sɜ:kju'leʃ(ə)n/ *noun* the circulation of blood from the heart through the pulmonary arteries to the lungs for oxygenation and back to the heart through the pulmonary veins. Also called **lesser circulation**

pulmonary embolism /,palmən(ə)ri 'embəlɪz(ə)m/ *noun* a blockage of a pulmonary artery by a blood clot. Abbr **PE**

pulmonary hypertension /,palmən(ə)ri ,haɪpə'tenʃən/ *noun* high blood pressure in the blood vessels supplying blood to the lungs

pulmonary insufficiency /,palmən(ə)ri ,ɪnsə'fɪʃ(ə)nsi/, **pulmonary incompetence** /,palmən(ə)ri in'kɒmpɪt(ə)ns/ *noun* a condition characterised by dilatation of the main pulmonary artery and stretching of the valve ring, due to pulmonary hypertension

pulmonary oedema /,palmən(ə)ri ɪ'di:mə/ *noun* the collection of fluid in the lungs, as occurs in left-sided heart failure

pulmonary stenosis /,palmən(ə)ri ste'neəsɪs/ *noun* a condition in which the opening to the pulmonary artery in the right ventricle becomes narrow

pulmonary tuberculosis /,palmən(ə)ri tju:bɜ:kjʊ'ləʊsɪs/ *noun* tuberculosis in the lungs, which makes the person lose weight, cough blood and have a fever

pulmonary valve /'palmən(ə)ri vælv/ *noun* a valve at the opening of the pulmonary artery

pulmonary vein /'palmən(ə)ri veɪn/ *noun* one of the four veins which carry oxygenated blood from the lungs back to the left atrium of

the heart. See illustration at **HEART** in Supplement (NOTE: The pulmonary veins are the only veins which carry oxygenated blood.)

pulmonectomy /'pʌlmə'nektəmɪ/ *noun* same as **pneumonectomy** (NOTE: The plural is **pulmonectomies**.)

pulmonology /'pʌlmən'ɒlədʒi/ *noun* the branch of medicine that deals with the structure, physiology and diseases of the lungs

pulp /pʌlp/ *noun* soft tissue, especially when surrounded by hard tissue as in the inside of a tooth

pulp cavity /'pʌlp ,kævətɪ/ *noun* the central part of a tooth containing soft tissue

pulpy /'pʌplɪ/ *adjective* made of pulp ○ *the pulpy tissue inside a tooth*

pulsate /'pʌl'seɪt/ *verb* to expand and contract with a strong regular beat (NOTE: **pulsating – pulsated**)

pulsation /'pʌl'seɪʃ(ə)n/ *noun* the action of beating regularly, e.g. the visible pulse which can be seen under the skin in some parts of the body

pulse /pʌls/ *noun* the regular expansion and contraction of an artery caused by the heart pumping blood through the body, which can be felt with the fingers especially where an artery is near the surface of the body, as in the wrist or neck ○ *Her pulse is very irregular.* □ **to take or feel a person's pulse** to measure a person's pulse rate by pressing on the skin above an artery with the fingers ○ *Has the patient's pulse been taken?*

COMMENT: The standard adult pulse is about 72 beats per minute, but it is higher in children. The pulse is usually taken by placing the fingers on the patient's wrist, at the point where the radial artery passes through the depression just below the thumb.

pulseless /'pʌlsləs/ *adjective* referring to a person who has no pulse because the heart is beating very weakly

pulse oximetry /'pʌls ɒks'metri/ *noun* a method of measuring the oxygen content of arterial blood

pulse point /'pʌls pɔɪnt/ *noun* a place on the body where the pulse can be taken

pulse pressure /'pʌls ,preʃə/ *noun* the difference between the diastolic and systolic pressure. ♫ *Corrigan's pulse*

pulse rate /'pʌls reɪt/ *noun* the number of times the pulse beats per minute

pulsus /'pʌlsəs/ *noun* same as **pulse**

pulsus alternans /,pʌlsəs 'ɔ:ltənænz/ *noun* a pulse with a beat which is alternately strong and weak

pulsus bigeminus /,pʌlsəs baɪ'gɛmɪnəs/ *noun* a double pulse, with an extra ectopic beat

pulsus paradoxus /,pʌlsəs pærə'dɒksəs/ *noun* a condition in which there is a sharp fall in the pulse when the person breathes in

pulvis /'pʌlvɪs/ *noun* powder

pump /pʌmp/ *noun* a machine which forces liquids or air into or out of something ■ *verb* to force liquid or air along a tube ○ *The heart pumps blood round the body.* ○ *The nurses tried to pump the poison out of the stomach.*

pumping chamber /'pʌmpɪŋ ,tʃembə/ *noun* one of the sections of the heart where blood is pumped

punch drunk syndrome /pʌntʃ 'drʌŋk ,sɪnd्रəʊm/ *noun* a condition affecting a person, usually a boxer, who has been hit on the head many times and develops impaired mental faculties, trembling limbs and speech disorders

puncta /'pʌŋktə/ plural of **punctum**

puncta lacrimalia /,pʌŋktə lækrɪ'melɪə/ *plural noun* small openings at the corners of the eyes through which tears drain into the nose

punctate /'pʌŋktet/ *adjective* referring to tissue or a surface which has tiny spots, holes or dents in it

punctum /'pʌŋktəm/ *noun* a point (NOTE: The plural is **puncta**)

puncture /'pʌŋktʃə/ *noun* 1. a neat hole made by a sharp instrument 2. the making of a hole in an organ or swelling to take a sample of the contents or to remove fluid ■ *verb* to make a hole in tissue with a sharp instrument (NOTE: **puncturing – punctured**)

puncture wound /'pʌŋktʃə wu:nd/ *noun* a wound made by a sharp instrument which makes a hole in the tissue

pupil /'pjʊ:p(ə)l/ *noun* the central opening in the iris of the eye, through which light enters the eye. See illustration at **EYE** in Supplement

pupillary /'pjʊ:pɪləri/ *adjective* referring to the pupil

pupillary reaction /,pjʊ:pɪləri ri'ækʃən/ *noun* a reflex of the pupil of the eye which contracts when exposed to bright light. Also called **light reflex**

purchaser /'pɜ:tʃəsə/ *noun* a body, usually a PCG, which commissions health care and manages the budget to pay for the service. ♫ **provider**

pure /pjʊə/ *adjective* 1. not mixed with other substances 2. very clean

pure alcohol /,pjʊə 'ælkəhɒl/ *noun* alcohol BP, alcohol with 5% water

purgation /pɜ:g'eɪʃ(ə)n/ *noun* the use of a drug to cause a bowel movement

purgative /'pɜ:gətɪv/ *noun* a drug used to empty the bowels. ♫ **laxative**

purge /pɜ:dʒ/ *verb* to induce evacuation of the bowels (NOTE: **purging – purged**)

purified protein derivative /,pjʊərifaid 'prætɪn dɪ,rɪvətɪv/ *noun* a pure form of tuberculin, used in tuberculin tests. Abbr **PPD**

purify /'pjʊərfai/ *verb* to make something pure (NOTE: **purifies – purifying – purified**)

purine /'pjʊərɪn/ *noun* 1. a nitrogen-containing substance derived from uric acid which is the parent compound of several biologically important substances 2. a derivative of purine, especially either of the bases adenine and guanine, which are found in RNA and DNA

Purkinje cells /pʊ'kɪndʒi selz/ *plural noun* neurones in the cerebellar cortex [Described 1837. After Johannes Evangelista Purkinje (1787–1869), Professor of Physiology at Breslau, now in Poland, and then Prague, Czech Republic.]

Purkinje fibres /pʊ'kɪndʒi ,faɪbəz/ *plural noun* a bundle of fibres which form the atrioventricular bundle and pass from the atrioventricular node to the septum [Described 1839. After Johannes Evangelista Purkinje (1787–1869), Professor of Physiology at Breslau, now in Poland, and then Prague, Czech Republic.]

Purkinje shift /pʊ'kɪndʒi ſɪft/ *noun* the change in colour sensitivity which takes place in the eye in low light when the eye starts using the rods in the retina because the light is too weak to stimulate the cones

purpura /'pɜ:pjʊrə/ *noun* a purple colouring on the skin, similar to a bruise, caused by blood disease and not by trauma

pursestring operation /,pɜ:sſtrɪŋ ,ɒpɛ'reɪʃ(ə)n/ same as **Shirodkar's operation**

pursestring stitch /'pɜ:sſtrɪŋ ſtɪtʃ/ *noun* same as **Shirodkar suture**

purulent /'pjʊərulənt/ *adjective* containing or producing pus

pus /pʌs/ *noun* a yellow liquid composed of blood serum, pieces of dead tissue, white blood cells and the remains of bacteria, formed by the body in reaction to infection (NOTE: For other terms referring to pus, see words beginning with **py-** or **pyo-**)

pustular /'pʌſtju:lə/ *adjective* 1. covered with or composed of pustules 2. referring to pustules

pustulate /'pʌſtju:leɪt/ *verb* to become covered with pustules, or cause pustules to appear on the skin (NOTE: **pustulating – pustulated**) ■ *adjective* covered with pustules

pustule /'pʌſtju:l/ *noun* a small pimple filled with pus

putrefaction /,pjʊ:tɪtrɪ'fækʃən/ *noun* the decomposition of organic substances by bacteria, making an unpleasant smell

putrefy /'pjʊ:tɪtrɪfai/ *verb* to rot or decompose (NOTE: **putrefies – putrefying – putrefied**)

put up /,put 'ʌp/ *verb* to arrange something such as a drip (NOTE: **putting up – put up**)

p.v. *adverb* by way of the vagina. Full form **per vaginam**

PVS *abbr* persistent vegetative state

PWA /pi: dəbljoo: 'eɪ/ *noun* a person with AIDS

py- /paɪ/ **pyo-** /paɪəʊ/ *prefix* same as **pyo-** (*used before vowels*)

pyaemia /paɪ'i:miə/ *noun* invasion of blood with bacteria which then multiply and form many little abscesses in various parts of the body (NOTE: The US spelling is **pyemia**.)

pyarthrosis /,paɪəθrəʊsɪs/ *noun* a condition in which a joint becomes infected with pyogenic organisms and fills with pus. Also called **acute suppurative arthritis**

pyel- /,paɪəl/ *prefix* same as **pyelo-** (*used before vowels*)

pyelitis /,paɪə'laitɪs/ *noun* inflammation of the central part of the kidney

pyelo- /,paɪələʊ/ *prefix* referring to the pelvis of the kidney

pyelocystitis /,paɪələʊsɪ'taɪtɪs/ *noun* inflammation of the pelvis of the kidney and the urinary bladder

pyelogram /'paɪələgræm/ *noun* an X-ray photograph of a kidney and the urinary tract

pyelography /,paɪə'lɒgrəfi/ *noun* X-ray examination of a kidney after introduction of a contrast medium

pyelolithotomy /,paɪələʊlɪ'lɒθətəmɪ/ *noun* a surgical operation to remove a stone from the pelvis of the kidney (NOTE: The plural is **pyelolithotomies**)

pyelonephritis /,paɪələʊnɪ'fraɪtɪs/ *noun* inflammation of the kidney and the pelvis of the kidney

pyeloplasty /'paɪələplæsti/ *noun* any surgical operation on the pelvis of the kidney (NOTE: The plural is **pyeloplasties**)

pyelotomy /,paɪə'lɒtəmɪ/ *noun* a surgical operation to make an opening in the pelvis of the kidney (NOTE: The plural is **pyelotomies**)

pyemia /paɪ'i:miə/ *noun* US same as **pyaemia**

pykno- /pɪknəʊ/ *prefix* indicating thickness or density

pyknolepsy /'pɪknə,lepsi/ *noun* a former name for a type of frequent attack of petit mal epilepsy affecting children

pyl- /pail/, **pyle-** /'parli/ *prefix* referring to the portal vein

pylephlebitis /,paɪlfɪlə'baitɪs/ *noun* thrombosis of the portal vein

pylethrombosis /,paɪliθrɒm'bæʊsɪs/ *noun* a condition in which blood clots are present in the portal vein or any of its branches

pylor- /paɪ'lɔ:r/ *prefix* same as **pyloro-** (*used before vowels*)

pylorectomy /,paɪlə'rektəmɪ/ *noun* a surgical operation to remove the pylorus and the antrum of the stomach (NOTE: The plural is **pylorectomies**)

pylori /paɪ'lɔ:ri/ plural of **pylorus**

pyloric /paɪ'lɒbrɪk/ *adjective* referring to the pylorus

pyloric antrum /paɪ,lrɪk 'æntrəm/ *noun* a space at the bottom of the stomach, before the pyloric sphincter

pyloric orifice /paɪ,lrɪk 'ɔrifɪs/ *noun* an opening where the stomach joins the duodenum

pyloric sphincter /paɪ,lrɪk 'sfɪŋktə/ *noun* a muscle which surrounds the pylorus, makes it contract and separates it from the duodenum

pyloric stenosis /paɪ,lrɪk ste'nəʊsɪs/ *noun* a blockage of the pylorus, which prevents food from passing from the stomach into the duodenum

pyloro- /paɪ'lɔ:rəʊ/ *prefix* the pylorus

pyloroplasty /paɪ'lɔ:rəplæsti/ *noun* a surgical operation to make the pylorus larger, sometimes combined with treatment for peptic ulcers (NOTE: The plural is **pyloroplasties**.)

pylorospasm /paɪ'lɔ:rəspæz(ə)m/ *noun* a muscle spasm which closes the pylorus so that food cannot pass through into the duodenum

pylorotomy /paɪ'lɔ:rɒtəmɪ/ *noun* a surgical operation to cut into the muscle surrounding the pylorus to relieve pyloric stenosis. Also called **Ramstedt's operation** (NOTE: The plural is **pylorotomies**.)

pylorus /paɪ'lɔ:rəs/ *noun* an opening at the bottom of the stomach leading into the duodenum (NOTE: The plural is **pylori**.)

pyo- /paɪəʊ/ *prefix* referring to pus

pyocoele /'paɪəsəl/ *noun* an enlargement of a tube or cavity due to accumulation of pus

pyocolpos /,paɪə'kɒlpəs/ *noun* an accumulation of pus in the vagina

pyoderma /,paɪə'dɜ:mə/ *noun* an eruption of pus in the skin

pyoderma gangrenosum /,paɪədɛrə'mə,gaɪ̯ngrɪ'nəʊsəm/ *noun* a serious ulcerating disease of the skin, especially the legs, usually treated with steroid drugs

pyogenesis /,paɪə'dʒenɪsɪs/ *noun* the production or formation of pus

pyogenic /,paɪə'dʒenɪk/ *adjective* producing or forming pus

pyometra /,paɪə'mi:tə/ *noun* an accumulation of pus in the uterus

pyomyositis /,paɪəʊmaɪ'saitɪs/ *noun* inflammation of a muscle caused by staphylococci or streptococci

pyonephrosis /,paɪəʊnə'f्रəʊsɪs/ *noun* the distension of the kidney with pus

pyopericarditis /,paɪəʊperɪku:daitɪs/ *noun* an inflammation of the pericardium due to infection with staphylococci, streptococci or pneumococci

pyopneumothorax /,paɪəʊ,nju:məʊ'θɔ:ræks/ *noun* an accumulation of pus and gas or air in the pleural cavity

pyorrhoea /,paɪə'rɪə/ *noun* discharge of pus (NOTE: The US spelling is **pyorrhea**.)

pyorrhoea alveolaris /,paɪərɪə,ælvɪərɪ'laɪrɪs/ *noun* suppuration from the supporting tissues round the teeth

pyosalpinx /,paɪə'sælpɪnks/ *noun* inflammation and formation of pus in a Fallopian tube

pyothorax /,paɪə'θɔ:ræks/ *noun* same as **empyema**

pyr- /paɪr/ *prefix* same as **pyro-** (*used before vowels*)

pyramid /'pɪrəmid/ *noun* a cone-shaped part of the body, especially a cone-shaped projection on the surface of the medulla oblongata or in the medulla of the kidney. See illustration at **KIDNEY** in Supplement

pyramidal /pɪ'ræmɪd(ə)l/ *adjective* referring to a pyramid

pyramidal cell /pɪ'ræmɪd(ə)l sel/ *noun* a cone-shaped cell in the cerebral cortex

pyramidal system /pɪ'ræmɪd(ə)l'sɪstəm/, **pyramidal tract** /pɪ'ræmɪd(ə)l trækt/ *noun* a group of nerve fibres within the pyramid of the medulla oblongata in the brain. It is thought to be vital in controlling movement and speech.

pyretic /paɪ'retɪk/ *adjective* referring to fever
■ *noun* an agent that causes fever

pyrexia /paɪ'reksiə/ *noun* same as **fever**

pyrexic /paɪ'reksɪk/ *adjective* having fever

pyridostigmine /,pɪrɪdəʊ'stɪgmi:n/ *noun* a drug which stops or delays the action of the enzyme cholinesterase, used to treat myasthenia gravis

pyridoxine /,pɪrɪ'dɒksɪn/ *noun* same as **Vitamin B₆**

pyrimidine /pɪ'rɪmɪdi:n/ *noun* 1. a strong-smelling nitrogenous based compound with a six-sided ring structure that is the parent compound of several biologically important substances 2. a derivative of pyrimidine, especially any of the bases cytosine, thymine, and uracil which are found in RNA and DNA

pyro- /paɪrəʊ/ *prefix* burning or fever

pyrogen /'paɪrədʒən/ *noun* a substance which causes a fever

pyrogenic /,paɪrə'dʒenɪk/ *adjective* causing a fever

pyromania /,paɪrə'meɪniə/ *noun* an uncontrollable desire to start fires

pyrophobia /,paɪrə'fəʊbiə/ *noun* an unusual fear of fire

pyruvic acid /paɪ,ru:vɪk 'æsɪd/ *noun* a substance formed from glycogen in the muscles when it is broken down to release energy

pyuria /paɪ'juəriə/ *noun* pus in the urine

Q

q.d.s. *adverb (written on prescriptions)* to be taken four times a day. Full form **quater in die sumendum**

Q fever /'kju: ,fi:və/ *noun* an infectious rickettsial disease of sheep and cows caused by *Coxiella burnetti* transmitted to humans

COMMENT: Q fever mainly affects farm workers and workers in the meat industry. The symptoms are fever, cough and headaches.

q.i.d. *adverb (written on prescriptions)* four times a day. Full form **quater in die**

q.l. *adverb (written on prescriptions)* as much as you like. Full form **quantum libet**

q.m. *adverb (written on prescriptions)* every morning. Full form **quaque mane**

q.n. *adverb (written on prescriptions)* every night. Full form **quaque nocte**

QRS complex /,kju: ar 'es ,kɒmpleks/ *noun* the deflections on an electrocardiogram, labelled Q, R, and S, which show ventricular contraction. ☞ **PQRST complex**

q.s. *adverb (written on prescriptions)* as much as necessary. Full form **quantum sufficiat**

Q-T interval /,kju: 'ti: ,ɪntəv(ə)l/, **Q-S2 interval** /,kju: es 'tu: ,ɪntəv(ə)l/ *noun* the length of the QRS complex in an electrocardiogram. ☞ **PQRST complex**

quad /kwɒd/ *noun* same as **quadruplet** (*informal*)

quadrant /'kwɒdrənt/ *noun* one of four sectors of the body thought of as being divided by the sagittal plane and the intertubercular plane ☜ *tenderness in the right lower quadrant*

quadrantanopia /,kwɒdræntə'nəʊpiə/ *noun* blindness in a quarter of the field of vision

quadrate lobe /'kwɒdrit̩ laʊb/ *noun* a lobe on the lower side of the liver

quadratus /kwo'dreɪtəs/ *noun* any muscle with four sides

quadratus femoris /kwo'dreɪtəs 'femɔris/ *noun* a muscle at the top of the femur which rotates the thigh

quadri- /kwɒdri/ *prefix* four

quadriceps /'kwɒdrɪseps/, **quadriceps femoris** /,kwɒdrɪseps 'femɔris/ *noun* a large

muscle in the front of the thigh, which extends to the leg

COMMENT: The quadriceps femoris is divided into four parts: the rectus femoris, vastus lateralis, vastus medialis and vastus intermedius. It is the sensory receptors in the quadriceps which react to give a knee jerk when the patellar tendon is tapped.

quadriplegia /,kwɒdri'pli:dʒə/ *noun* paralysis of all four limbs, both arms and both legs

quadriplegic /,kwɒdri'pli:dʒɪk/ *adjective* paralysed in both arms and both legs ■ *noun* a person paralysed in both arms and both legs

quadruple /'kwɒdrop(ə)l/ *adjective* 1. consisting of four times as much 2. having four parts

quadruplet /'kwɒdruplət/ *noun* one of four babies born to a mother at the same time. Also called **quad**

quadruple vaccine /,kwɒdrop(ə)l 'veɪksɪn/ *noun* a vaccine which immunises against four diseases, diphtheria, whooping cough, poliomyelitis and tetanus

quadrupod /'kwɒdropɒd/ *noun* a walking stick which ends in four little legs

qualification /,kwɒlfɪə'keɪʃ(ə)n/ *noun* 1. a quality which makes a person suitable to do something 2. an official recognition of a standard of achievement, e.g. a degree or diploma ☜ *She has a qualification in pharmacy.* ☜ *Are his qualifications recognised in Great Britain?*

qualify /'kwɒlɪfaɪ/ *verb* 1. to make a person suitable to do something 2. to pass a course of study and be accepted as being able to practise ☜ *He qualified as a doctor two years ago.* (NOTE: [all senses] **qualifies** – **qualifying** – **qualified**)

qualitative /'kwɒlitətɪv/ *adjective* referring to a study in which descriptive information is collected. Compare **quantitative**

quality /'kwɒlɪti/ *noun* 1. a characteristic of somebody or something 2. the general standard or grade of something 3. the highest or finest standard

quality assurance /'kwɒlɪti ə,ʃʊərəns/ *noun* a set of criteria which are designed to check that people in an organisation maintain

a high standard in the products or services they supply

quality circle /'kwɒləti ,sɜ:k(ə)t/ noun a group of employees from different levels of an organisation who meet regularly to discuss ways of improving the quality of its products or services

Qualpacs /'kwɒlpæks/, **Quality Patient Care Scale** /,kwɒltɪ ,peɪs(ə)nt 'keə skeɪl/ noun a method which guides nurses to evaluate their activity in terms of efficiency of cost, time, use of skill level and workload

quantitative /'kwɒntɪtətɪv/ adjective referring to a study in which numerical information is collected. Compare **qualitative**

quantitative digital radiography /,kwɒn tɪtətɪv ,dɪdʒɪt(ə)l rɛɪdɪ'græfɪ/ noun the use of digital X-ray scans to find out whether a person has a bone disease such as osteoporosis. The levels of calcium in the bones are measured, usually in the spine and hip.

quarantine /'kwɔ:rantɪn/ noun 1. the situation in which a person, animal or ship just arrived in a country is kept isolated in case it carries a serious disease, to allow the disease time to develop and be detected 2. the period of such isolation to prevent the spread of disease ◇ six months' quarantine ■ verb to put a person or animal in quarantine (NOTE: **quarantining – quarantined**)

COMMENT: People who are suspected of having an infectious disease can be kept in quarantine for a period which varies according to the incubation period of the disease. The main diseases concerned are cholera, yellow fever and typhus.

quartan /'kwo:t(ə)n/ adjective referring to a fever which occurs every fourth day, e.g. in some types of malaria

quartan fever /'kwo:t(ə)n ,fi:və/ noun a form of malaria caused by *Plasmodium malariae* in which the fever returns every four days.

◊ **tertian fever**

queasiness /'kwi:zɪnəs/ noun the feeling of being about to vomit

queasy /'kwi:zi/ adjective feeling as though about to vomit

Queckenstedt test /'kwekənstɛt test/ noun a test done during a lumbar puncture in which pressure is applied to the jugular veins to see if the cerebrospinal fluid is flowing correctly [Described 1916. After Hans Heinrich George Queckenstedt (1876–1918), German physician.]

quickening /'kwɪknɪŋ/ noun the first sign of life in an unborn baby, usually after about four months of pregnancy, when the mother can feel it moving in her uterus

Quick test /'kwɪk test/, **Quick's test** noun a test to identify the clotting factors in a blood sample [Described 1932. After Armand James Quick (1894–1978), Professor of Biochemistry, Marquette University, USA.]

quiescent /'kwi'es(ə)nt/ adjective referring to a disease with symptoms reduced either by treatment or in the usual course of the disease **quin** /kwin/ noun same as **quintuplet** (informal) (NOTE: The US term is **quint**.)

quinine /'kwi:nɪ:n/ noun an alkaloid drug made from the bark of cinchona, a South American tree

COMMENT: Quinine was formerly used to treat the fever symptoms of malaria, but is not often used now because of its side-effects. Small amounts of quinine have a tonic effect and are used in tonic water.

quinine poisoning /'kwi'nɪ:nɪŋ/, **quininism** /'kwɪnɪ:nɪz(ə)m/, **quinism** /'kwɪnɪz(ə)m/ noun an illness caused by taking too much quinine, leading to dizziness and noises in the head

quinolone /'kwɪnə'ləʊn/ noun a drug used to treat Gram-negative and Gram-positive bacterial infections of the respiratory and urinary tracts and of the gastro-intestinal system (NOTE: Quinolone drugs have names ending in -oxacin: **ciprofloxacin**)

COMMENT: Contraindications include use in pregnancy, renal disease and for use in children.

quinsy /'kwɪnzi/ noun acute throat inflammation with an abscess round a tonsil. Also called **peritonsillar abscess**

quint /'kwɪnt/ noun US same as **quintuplet**

quintan /'kwɪntən/ adjective referring to a fever that occurs every fifth day

quintuplet /'kwɪntjʊplət/ noun one of five babies born to a mother at the same time. Also called **quin, quint**

quotidian /'kwaʊ'tɪdiən/ adjective recurring daily

quotidian fever /'kwaʊ'tɪdiən 'fi:və/ noun a violent form of malaria in which the fever returns at daily or even shorter intervals

quotient /'kwaʊʃ(ə)nt/ noun the result when one number is divided by another

Q wave /'kju: wɛv/ noun a negative deflection at the start of the QRS complex on an electrocardiogram, going downwards

R

R symbol roentgen

R/ abbreviation prescription. Full form **recipe**

rabbit fever /'ræbit ,fi:və/ noun same as **tularaemia**

rabid /'ræbɪd/ adjective referring to rabies, or affected by rabies ○ *She was bitten by a rabid dog.*

rabid encephalitis /,ræbɪd en,kefə'laitɪs/ noun a fatal form of encephalitis resulting from the bite of a rabid animal

rabies /'reɪbɪz/ noun a frequently fatal viral disease transmitted to humans by infected animals ○ *The hospital ordered a batch of rabies vaccine.* Also called **hydrophobia**

COMMENT: Rabies affects the mental balance, and the symptoms include difficulty in breathing or swallowing and an intense fear of water (hydrophobia) to the point of causing convulsions at the sight of water.

racemose /'ræsɪməʊs/ adjective referring to glands which look like a bunch of grapes

rachi- /reɪki/ prefix same as **rachio-** (used before vowels)

rachianaesthesia /,reɪkiænəs'θi:ziə/ same as **spinal anaesthesia** (NOTE: The US spelling is **rachianesthesia**.)

rachio- /reɪkiəʊ/ prefix referring to the spine

rachiotomy /,reɪki'ɒtəmɪ/ noun same as laminectomy (NOTE: The plural is **rachiotomies**.)

rachis /'reɪkɪs/ noun same as **backbone** (NOTE: The plural is **rachises** or **rachides**.)

rachischisis /'reɪ'kɪskɪsɪs/ noun same as **spina bifida**

rachitic /rə'kitɪk/ adjective referring to rickets

rachitis /rə'kaitɪs/ noun same as **rickets**

rad /red/ noun a unit of measurement of absorbed radiation dose. ♀ **becquerel**, **gray** (NOTE: **Gray** is now used to mean one hundred rads.)

radial /'reɪdiəl/ adjective 1. referring to something which branches 2. referring to the radius bone in the arm

radial artery /'reɪdiəl ə:təri/ noun an artery which branches from the brachial artery, run-

ning near the radius, from the elbow to the palm of the hand

radial nerve /'reɪdiəl nɜ:v/ noun the main motor nerve in the arm, running down the back of the upper arm and the outer side of the forearm

radial pulse /'reɪdiəl pəls/ noun the main pulse in the wrist, taken near the outer edge of the forearm just above the wrist

radial recurrent /,reɪdiəl rɪ'kʌrənt/ noun an artery in the arm which forms a loop beside the brachial artery

radial reflex /,reɪdiəl 'ri:fleks/ noun a jerk made by the forearm when the insertion in the radius of one of the muscles, the brachioradialis, is hit

radiate /'reɪdɪeɪt/ verb 1. to spread out in all directions from a central point ○ *The pain radiates from the site of the infection.* 2. to send out rays ○ *Heat radiates from the body.* (NOTE: **radiating – radiated**)

radiation /,reɪdi'eɪʃ(ə)n/ noun waves of energy which are given off by some substances, especially radioactive substances

COMMENT: Prolonged exposure to many types of radiation can be harmful. Nuclear radiation is the most obvious, but exposure to X-rays, either as a patient being treated or as a radiographer, can cause radiation sickness. First symptoms of the sickness are diarrhoea and vomiting, but radiation exposure can also be followed by skin burns and loss of hair. Massive exposure to radiation can kill quickly, and any person exposed to radiation is more likely to develop certain types of cancer than other members of the population.

radiation burn /,reɪdi'eɪʃ(ə)n bɜ:n/ noun a burn on the skin caused by exposure to large amounts of radiation

radiation enteritis /,reɪdi'eɪʃ(ə)n ,entə'rætɪs/ noun enteritis caused by X-rays

radiation sickness /,reɪdi'eɪʃ(ə)n ,sɪknəs/ noun an illness caused by exposure to radiation from radioactive substances

radiation treatment /,reɪdi'eɪʃ(ə)n ,tri:tment/ noun same as **radiotherapy**

radical /'rædɪk(ə)l/ adjective 1. aiming to deal with the root of a problem, taking thorough action to remove the source of a disease

rather than treat its symptoms **2.** referring to an operation which removes the whole of a part or of an organ, together with its lymph system and other tissue

radical mastectomy /,rædɪk(ə)l mæ'stektəmɪ/ *noun* a surgical operation to remove a breast and the lymph nodes and muscles associated with it

radical mastoidectomy /,rædɪk(ə)l mæstɔ:dɛktəmɪ/ *noun* a surgical operation to remove all of the mastoid process

radical treatment /,rædɪk(ə)l 'trیtmənt/ *noun* treatment which aims at complete eradication of a disease

radicle /'rædɪk(ə)l/ *noun* **1.** a small root or vein **2.** a tiny fibre which forms the root of a nerve

radicular /rə'dɪkju:lə/ *adjective* referring to a radicle

radiculitis /rə'dɪkju'lایtɪs/ *noun* inflammation of a radicle of a cranial or spinal nerve

radio- /reɪdiəʊ/ *prefix* **1.** referring to radiation **2.** referring to radioactive substances **3.** referring to the radius in the arm

radioactive /,reɪdiəʊ'æktyv/ *adjective* with a nucleus which disintegrates and gives off energy in the form of radiation which can pass through other substances

COMMENT: The commonest naturally radioactive substances are radium and uranium. Other substances can be made radioactive for medical purposes by making their nuclei unstable, so forming radioactive isotopes. Radioactive iodine is used to treat conditions such as thyrotoxicosis. Radioactive isotopes of various chemicals are used to check the functioning of, or disease in, internal organs.

radioactive isotope /,reɪdiəʊ'æktyv 'aɪsətəʊp/ *noun* an isotope which sends out radiation, used in radiotherapy and scanning

radioactivity /,reɪdiəʊ'æk'trیvɪtɪ/ *noun* energy in the form of radiation emitted by a radioactive substance

radiobiologist /,reɪdiəʊba'lɒdʒɪst/ *noun* a doctor who specialises in radiobiology

radiobiology /,reɪdiəʊba'lɒdʒɪ/ *noun* the scientific study of radiation and its effects on living things

radiocarpal joint /reɪdiəʊ'ka:p(ə)l dʒɔ:nt/ *noun* the joint where the radius articulates with the scaphoid, one of the carpal bones. Also called **wrist joint**

radiodermatitis /,reɪdiəʊ,dz:mə'taɪtɪs/ *noun* inflammation of the skin caused by exposure to radiation

radiodiagnosis /,reɪdiəʊdaɪəg'nəʊsɪs/ *noun* an X-ray diagnosis

radiograph /'reɪdiəgrɑ:f/ *noun* an image produced on film or another sensitive surface when radiation such as X-rays or gamma rays passes through an object ■ *verb* to make a radiograph of something, especially a part of the body

radiographer /,reɪdi'ɒgrəfə/ *noun* **1.** a person specially trained to operate a machine to take X-ray photographs or radiographs. Also called **diagnostic radiographer** **2.** a person specially trained to use X-rays or radioactive isotopes in the treatment of patients. Also called **therapeutic radiographer**

radiography /,reɪdi'ɒgrəfi/ *noun* the work of examining the internal parts of the body by taking X-ray photographs

radioimmunoassay /,reɪdiəʊ,ɪmju:nəʊ 'æsei/ *noun* the use of radioactive tracers to investigate the presence of antibodies in blood samples, in order to measure the antibodies themselves or the amount of particular substances, such as hormones, in the blood

radioisotope /,reɪdiəʊ'aɪsətəʊp/ *noun* an isotope of a chemical element which is radioactive

COMMENT: Radioisotopes are used in medicine to provide radiation for radiation treatment. Radioactive isotopes of various chemicals are used to check the way organs function or if they are diseased: for example, radioisotopes of iodine are used to investigate thyroid activity.

radiologist /,reɪdi'ɒlədʒɪst/ *noun* a doctor who specialises in radiology

radiology /,reɪdi'ɒlədʒɪ/ *noun* the use of radiation to diagnose disorders, e.g. through the use of X-rays or radioactive tracers, or to treat diseases such as cancer

radiomimetic /,reɪdiəʊ'metɪk/ *adjective* referring to a drug or chemical which produces similar effects to those of radiation, e.g. the nitrogen mustard group of chemicals used in chemotherapy

radionuclide /,reɪdiəʊ'nju:klaɪd/ *noun* an element which gives out radiation

radionuclide scan /,reɪdiəʊ'nju:klaɪd skæn/ *noun* a scan, especially of the brain, where radionuclides are put in compounds which are concentrated in particular parts of the body

radio-opaque /,reɪdiəʊ əʊ'peɪk/ *adjective* absorbing and blocking radiant energy, e.g. X-rays

COMMENT: Radio-opaque substances appear light or white on X-rays and are used to make it easier to have clear radiographs of certain organs.

radio-opaque dye /,reɪdiəʊ əʊ'peɪk 'daɪ/ *noun* a liquid which appears on an X-ray, and which is introduced into soft organs such as the kidney so that they show up clearly on an X-ray photograph

radioopaque /,reɪdiəʊ'peɪk/ *adjective* same as **radio-opaque**

radiopharmaceutical /,reɪdiəʊ,fa:mə'su:tɪk(ə)l/ *noun* a radioisotope used in medical diagnosis or treatment

radio pill /'reɪdiəʊ pil/ *noun* a tablet with a tiny radio transmitter

COMMENT: The person swallows the pill and as it passes through the body it gives off information about the digestive system.

radioscopy /'reɪdɪɒpskəpi/ *noun* an examination of an X-ray photograph on a fluorescent screen

radiosensitive /'reɪdiəʊ'sensɪtɪv/ *adjective* referring to a cancer cell which is sensitive to radiation and can be treated by radiotherapy

radiosensitivity /'reɪdiəʊsensɪ'tɪvɪtɪ/ *noun* sensitivity of a cell to radiation

radiotherapist /'reɪdiəʊ'θerəpɪst/ *noun* a doctor who specialises in radiotherapy

radiotherapy /'reɪdiəʊ'θerəpɪ/ *noun* the treatment of diseases by exposing the affected part to radioactive rays such as X-rays or gamma rays

COMMENT: Many forms of cancer can be treated by directing radiation at the diseased part of the body.

radium /'reɪdiəm/ *noun* a radioactive metallic element (NOTE: The chemical symbol is Ra.)

radius /'reɪdiəs/ *noun* the shorter and outer of the two bones in the forearm between the elbow and the wrist. See illustration at **HAND** in Supplement (NOTE: The plural is **radii**. The other bone in the forearm is the **ulna**.)

radix /'reɪdɪks/ *noun* same as **root** (NOTE: The plural is **radices** or **radixes**.)

radon /'reɪdɒn/ *noun* a radioactive gas, formed from the radioactive decay of radium, and used in capsules called radon seeds to treat cancers inside the body (NOTE: The chemical symbol is Rn.)

COMMENT: Radon occurs naturally in soil, in construction materials and even in ground water. It can seep into houses and causes radiation sickness.

raise /reɪz/ *verb* 1. to lift something ○ *Lie with your legs raised above the level of your head.* 2. to increase something ○ *Anaemia causes a raised level of white blood cells in the body.*

rale /rə:l/ *noun* same as **crepitation**

rally /'relɪ/ *verb* to recover after a period of illness ■ *noun* a sudden recovery after a period of illness

Ramstedt's operation /'rə:mstɛts ɔ:pə, 'reɪf(ə)n/ *noun* same as **pylorotomy** [Described 1912. After Wilhelm Conrad Ramstedt (1867–1963), German surgeon.]

ramus /'reɪməs/ *noun* 1. a branch of a nerve, artery or vein 2. the ascending part on each side of the mandible (NOTE: The plural is **rami**.)

R & D /'a:r ə:n 'di:/ *abbr* research and development

randomised /'rændəmaɪzd/, **randomized** *adjective* involving subjects which have been selected without a prearranged plan and in no particular pattern or order

range /reɪndʒ/ *noun* 1. a series of different but similar things ○ *The drug offers protection against a wide range of diseases.* ○ *Doctors*

have a range of drugs which can be used to treat arthritis. 2. the difference between lowest and highest values in a series of data

ranitidine /ræ'nɪtɪdɪ:n/ *noun* a drug which reduces the amount of acid released by the stomach. It is used to treat peptic ulcers and gastritis.

ranula /'rænjʊlə/ *noun* a small cyst under the tongue, on the floor of the mouth, which forms when a salivary duct is blocked

Ranvier /'rænvɪ,et/ ♦ **node of Ranvier**

rape /reɪp/ *noun* the crime of forcing somebody to have sexual intercourse ■ *verb* to force somebody to have sexual intercourse

raphe /'ræfi/ *noun* a long thin fold which looks like a seam, along a midline such as on the dorsal face of the tongue

rapid /'ræpid/ *adjective* fast

rapid-acting /,ræpid 'ækting/ *adjective* referring to a drug or treatment which has an effect very quickly

rapid eye movement sleep /,ræpid aɪ 'mu:vɪmənt sli:p/ *noun* same as **REM sleep**

rapport /ræ'pɔ:t/ *noun* an emotional bond or friendly relationship between people ○ *a psychiatrist who quickly establishes a rapport with his patients*

rare /reɪə/ *adjective* referring to something such as a disease of which there are very few cases ○ *He is suffering from a rare blood disorder.*

rarefaction /,reərɪ'fækʃən/ *noun* a condition in which bone tissue becomes more porous and less dense because of a lack of calcium

rarefy /'reərifai/ *verb* 1. (of bones) to become less dense 2. to make something less dense

rash /ræʃ/ *noun* a mass of small spots which stays on the skin for a period of time, and then disappears □ **to break out in a rash** to have a rash which starts suddenly ○ *She had a high temperature and then broke out in a rash.*

COMMENT: Many common diseases such as chickenpox and measles have a characteristic rash as their main symptom. Rashes can be very irritating, but the itching can be relieved by applying calamine lotion.

raspatory /'respət(ə)rɪ/ *noun* a surgical instrument like a file, which is used to scrape the surface of a bone

ratbite fever /'rætbait fi:və/, **ratbite disease** /'rætbait dɪ,zɪ:z/ *noun* fever caused by either of two bacteria *Spirillum minor* or *Streptobacillus moniliformis* and transmitted to humans by rats

rate /reɪt/ *noun* 1. the amount or proportion of something compared with something else 2. the number of times something happens in a set time ○ *The heart was beating at a rate of only 59 per minute.*

ratio /'reɪʃiə/ *noun* a number which shows a proportion or which is the result of one number divided by another ○ *An IQ is the ratio*

of the person's mental age to his or her chronological age.

rattle /'ræt(ə)l/ *noun* a harsh noise made in the throat, caused by a blockage to breathing and heard especially near death

Rauwolfia /rɔ:'wʊlfɪə/ *noun* a tranquillising drug extracted from the plant *Rauwolfia serpentine*, sometimes used to treat high blood pressure

raw /rəʊ:/ *adjective* 1. not cooked 2. sensitive ○ *The scab came off leaving the raw wound exposed to the air.* 3. referring to skin scraped or partly removed

ray /reɪ/ *noun* a line of light, radiation or heat

Raynaud's disease /'reɪnəʊz dɪ,zi:z/, **Raynaud's phenomenon** /'reɪnəʊz fi,nomɪnən/ *noun* a condition with various possible causes in which the blood supply to the fingers and toes is restricted and they become cold, white and numb. Also called **dead man's fingers, vasospasm** [Described 1862. After Maurice Raynaud (1834–81), French physician.]

RBC *abbr* red blood cell

RCGP *abbr* Royal College of General Practitioners

RCN *abbr* Royal College of Nursing

RCOG *abbr* Royal College of Obstetricians and Gynaecologists

RCP *abbr* Royal College of Physicians

RCPsych /,a: si: 'sa:k/ *abbr* Royal College of Psychiatrists

RCS *abbr* Royal College of Surgeons

RCT *abbr* randomised controlled trial

reabsorb /,ri:ə'b'zɔ:b/ *verb* to absorb or take up something again ○ *Glucose is reabsorbed by the tubules in the kidney.*

reabsorption /,ri:ə'b'zɔ:pʃ(ə)n/ *noun* the process of being reabsorbed ○ *Some substances which are filtered into the tubules of the kidney, then pass into the bloodstream by tubular reabsorption.*

reach /ri:tʃ/ *noun* 1. the distance which one can stretch to get hold of or touch something ○ *Medicines should be kept out of the reach of children.* 2. the distance which one can travel easily ○ *The hospital is in easy reach of the railway station.* ■ *verb* to arrive at a point ○ *The infection has reached the lungs.*

react /ri'ækt/ *verb* 1. □ **to react to something** to act because of something else, to act in response to something ○ *The tissues reacted to the cortisone injection.* ○ *The patient reacted badly to the penicillin.* ○ *She reacted positively to the Widal test.* 2. □ **to react with something** (of a chemical substance) to change because of the presence of another substance

reaction /ri'ækʃən/ *noun* 1. an action which takes place as a direct result of something which has happened earlier ○ *A rash appeared as a reaction to the penicillin injection.* 2. an effect produced by a stimulus ○ *The patient*

experienced an allergic reaction to oranges. 3. the particular response of someone to a test

reactionary /ri'ækʃən(ə)rɪ/ *adjective* same as **reactive**

reactionary haemorrhage /ri'ækʃən(ə)rɪ 'hem(ə)rɪdʒ/ *noun* bleeding which follows an operation

reactivate /ri'æktrɪveɪt/ *verb* to make something active again ○ *His general physical weakness has reactivated the dormant virus.*

reactive /ri'ækтив/ *adjective* taking place as a reaction to something else

reactive arthritis /ri'ækтив ə:'θraɪtɪs/ *noun* arthritis caused by a reaction to something

reactive hyperaemia /ri'ækтив ,haɪpər 'i:miə/ *noun* congestion of blood vessels after an occlusion has been removed

reading /'ri:dɪŋ/ *noun* a note taken of figures, especially of degrees on a scale ○ *The sphygmomanometer gave a diastolic reading of 70.*

reagent /'ri:ɪdʒənt/ *noun* a chemical substance which reacts with another substance, especially one which is used to detect the presence of the second substance

reagin /'ri:ədʒɪn/ *noun* an antibody which reacts against an allergen

real-time imaging /,rɪəl taim 'ɪmɪdʒɪŋ/ *noun* the use of ultrasound information to produce a series of images of a process or changing object almost instantly

reappear /,ri:ə'piər/ *verb* to appear again

rear /riə/, **rear end** /riə end/ *noun* same as **buttock** (*informal*)

reason /'ri:z(ə)n/ *noun* 1. something which explains why something happens ○ *What was the reason for the sudden drop in the patient's pulse rate?* 2. the fact of being mentally stable ○ *Her reason was beginning to fail.*

reassurance /,ri:ə'suərəns/ *noun* an act of reassuring

reassure /,ri:ə'ʃʊər/ *verb* to calm someone who is worried and give them hope ○ *The doctor reassured her that the drug had no unpleasant side-effects.* ○ *He reassured the old lady that she should be able to walk again in a few weeks.*

Reaven's Syndrome /'ri:vənz ,sɪnd्रəʊm/ *noun* a clinical syndrome characterised by Type 2 diabetes, abdominal obesity, hypertension and dyslipidaemia. Insulin resistance may be a key factor. [Described 1988. After Gerald Reaven, US physician.]

rebore /'ri:bɔ:/ *noun* same as **endarterectomy** (*informal*)

rebuild /ri:'brɪld/ *verb* to make good again a damaged structure or part of the body ○ *After the accident, she had several operations to rebuild her pelvis.*

recalcitrant /ri'kælsɪtrənt/ *adjective* not responding to treatment ○ *a recalcitrant condition*

recall /rɪ'kɔ:l/ *noun* the act of remembering something from the past ■ *verb* to remember something which happened in the past

recanalisation /ri:kænələ'seɪʃ(ə)n/, **recanalization** *noun* surgery to unblock a vessel within the body or reconnect a tube or duct

receive /rɪ'siv/ *verb* to get something, especially a transplanted organ ○ *She received six pints of blood in a transfusion.* ○ *He received a new kidney from his brother.*

receptaculum /ri:sep'tækjʊləm/ *noun* part of a tube which is expanded to form a sac

receptor /rɪ'septə/, **receptor cell** /rɪ'septə sel/ *noun* a nerve ending or cell which senses a change such as cold or heat in the surrounding environment or in the body and reacts to it by sending an impulse to the central nervous system

recess /rɪ'ses/ *noun* a hollow part in an organ

recessive /rɪ'sesɪv/ *adjective* (of an allele) having the characteristic that leads to the trait which it controls being suppressed by the presence of the corresponding dominant allele. Compare **dominant**

COMMENT: Since each physical characteristic is governed by two genes, if one is dominant and the other recessive, the resulting trait will be that of the dominant gene. Traits governed by recessive genes will appear if both genes are recessive.

recipient /rɪ'sipiənt/ *noun* a person who receives something such as a transplant or a blood transfusion from a donor

'...bone marrow from donors has to be carefully matched with the recipient or graft-versus-host disease will ensue' [Hospital Update]

recognise /rekə'nایz/, **recognize** *verb* 1. to see or sense something or someone and remember it from an earlier occasion ○ *She did not recognise her mother.* 2. to approve of something officially ○ *The diploma is recognised by the Department of Health.*

recombinant DNA /rɪ:kɒmbɪnənt di:en'eɪ/ *noun* DNA extracted from two or more different sources and joined together to form a single molecule or fragment. This technology is used to produce molecules and organisms with new properties.

recommend /,rekə'mend/ *verb* to suggest that it would be a good thing if someone did something ○ *The doctor recommended that she should stay in bed.* ○ *I would recommend following a diet to try to lose some weight.*

reconstruct /,ri:kən'strʌkt/ *verb* to repair and rebuild a damaged part of the body

reconstruction /,ri:kən'strʌkʃən/ *noun* the process of repairing and rebuilding a damaged part of the body

reconstructive surgery /,ri:kənstrʌktɪv 'sɜ:dʒəri/ *noun* surgery which rebuilds a damaged part of the body. ♦ **plastic surgery**

record /'rekɔ:d/ *verb* /rɪ'kɔ:d/ to note information ○ *The chart records the variations in the patient's blood pressure.* ○ *You must take the patient's temperature every hour and record it in this book.* ■ *noun* a piece of information about something

COMMENT: Patients now have a legal right to have access to their medical records.

recover /rɪ'kʌvə/ *verb* 1. to get better after an illness, operation or accident ○ *She recovered from her concussion in a few days.* ○ *It will take him weeks to recover from the accident.* (NOTE: You recover **from** an illness.) 2. to get back something which has been lost ○ *Will he ever recover the use of his legs?* ○ *She recovered her eyesight even though the doctors had thought she would be permanently blind.*

recovery /rɪ'kʌvəri/ *noun* the process of returning to health after being ill or injured □ **he is well on the way to recovery** he is getting better □ **she made only a partial recovery** she is better, but is not completely well □ **she has made a complete or splendid recovery** she is completely well

recovery position /rɪ'kʌvəri pə,zɪʃ(ə)n/ *noun* a position in which someone is lying face downwards, with one knee and one arm bent forwards and the face turned to one side

COMMENT: It is called the recovery position because it is recommended for accident victims or for people who are suddenly ill, while waiting for an ambulance to arrive. The position prevents the person from swallowing and choking on blood or vomit.

recovery room /rɪ'kʌvəri ru:m/ *noun* a room in a hospital where patients are cared for after they have had a surgical operation and are recovering from the effects of the anaesthetic. Abbr **RR**

recreational drug /,rekri'eɪʃ(ə)n(ə)l drʌg/ *noun* a drug that is taken for pleasure rather than because of medical need

recrudescence /,ri:kru:'des(ə)ns/ *noun* the reappearance of symptoms of a disease which seemed to have got better

recrudescient /,ri:kru:'des(ə)nt/ *adjective* referring to a symptom which has reappeared

recruit /'rɪkrʊt/ *verb* to get people to join the staff or a group ○ *We are trying to recruit more nursing staff.*

'...patients presenting with symptoms of urinary tract infection were recruited in a general practice surgery' [Journal of the Royal College of General Practitioners]

rect- /rekt/ *prefix* same as **recto-** (used before vowels)

recta /'rektə/ *plural* of **rectum**

rectal /'rekt(ə)l/ *adjective* referring to the rectum

rectal fissure /,rekt(ə)l 'fɪʃə/ *noun* a crack in the wall of the anal canal

rectally /'rekt(ə)li/ *adverb* through the rectum ○ *The temperature was taken rectally.*

rectal prolapse /,rekt(ə)l 'prəʊlæps/ *noun* a condition in which part of the rectum moves downwards and passes through the anus

rectal temperature /,rekt(ə)l 'temprɪtʃə/ *noun* the temperature in the rectum, taken with a rectal thermometer

rectal thermometer /,rekt(ə)l θə'mɒmətə/ *noun* a thermometer which is inserted into the rectum to take the person's temperature

rectal triangle /,rekt(ə)l 'traɪæŋg(ə)l/ *noun* same as **anal triangle**

recti /'rektɪ/ plural of **rectus**

recto- /'rektəʊ/ *prefix* referring to the rectum

rectocoele /'rektəʊsɪ:l/ *noun* a condition associated with prolapse of the uterus, in which the rectum protrudes into the vagina. Also called **proctocele**

rectopexy /'rektəpeksi/ *noun* a surgical operation to attach a rectum which has prolapsed

rectoscope /'rektəskəʊp/ *noun* an instrument for looking into the rectum

rectosigmoid /,rektəʊ'sɪgmɔɪd/ *noun* the part of the large intestine where the sigmoid colon joins the rectum

rectosigmoidectomy /,rektəʊ'sɪgmɔɪ'dektəmɪ/ *noun* the surgical removal of the sigmoid colon and the rectum

rectovaginal /,rektəʊ'veɪdʒaɪn(ə)l/ *adjective* relating to both the rectum and the vagina

rectovaginal examination /,rektəʊ'veɪ,ðzain(ə)l/ *noun* an examination of the rectum and vagina

rectovesical /,rektəʊ'vesɪk(ə)l/ *adjective* referring to the rectum and the bladder

rectum /'rektəm/ *noun* the end part of the large intestine leading from the sigmoid colon to the anus. See illustration at **DIGESTIVE SYSTEM** in Supplement, **UROGENITAL SYSTEM (MALE)** in Supplement (NOTE: For other terms referring to the rectum, see words beginning with **proct-**, **proto-**.)

rectus /'rektəs/ *noun* a straight muscle (NOTE: The plural is **recti**.)

'...there are four recti muscles and two oblique muscles in each eye, which coordinate the movement of the eyes and enable them to work as a pair' [Nursing Times]

rectus abdominis /,rektəs æb'dɒmɪnɪs/ *noun* a long straight muscle which runs down the front of the abdomen

rectus femoris /,rektəs 'femərɪs/ *noun* a flexor muscle in the front of the thigh, one of the four parts of the quadriceps femoris. ☈ **medial**

recumbent /'ri'kʌmbənt/ *adjective* lying down

recuperate /'ri'ku:pə'reɪt/ *verb* to recover, to get better after an illness or accident ○ *He is recuperating after an attack of flu.* ○ *She is going to stay with her mother while she recuperates.*

recuperation /'ri'ku:pə'reɪʃ(ə)n/ *noun* the process of getting better after an illness ○ *His recuperation will take several months.*

recur /'ri'kɜ:/ *verb* to return ○ *The headaches recurred frequently, but usually after the patient had eaten chocolate.*

recurrence /'ri'kʌrəns/ *noun* an act of returning ○ *He had a recurrence of a fever which he had caught in the tropics.*

recurrent /'ri'kʌrənt/ *adjective* 1. occurring in the same way many times 2. referring to a vein, artery or nerve which forms a loop

recurrent abortion /'ri'kʌrənt ə'bɔ:ʃ(ə)n/ *noun* a condition in which a woman has abortions with one pregnancy after another

recurrent fever /'ri'kʌrənt 'fi:və/ *noun* a fever like malaria which returns at regular intervals

red /red/ *adjective* 1. of a similar colour to blood ○ *Blood in an artery is bright red, but venous blood is darker.* 2. (of an area of skin) with an increased blood flow because of heat or infection ■ *noun* a colour similar to that of blood

red blood cell /red bləd sel/ *noun* a blood cell which contains haemoglobin and carries oxygen to the tissues and takes carbon dioxide from them. Abbr **RBC**. Also called **erythrocyte**

red corpuscle /,red 'kɔ:pʊs(ə)l/ *noun* same as **red blood cell**

Red Crescent /red 'kreɪs(ə)nt/ *noun* in Islamic countries, an international organisation dedicated to the medical care of the sick and wounded in wars and natural disasters (NOTE: It is known as the Red Cross elsewhere.)

Red Cross /red 'krɒs/ *noun* an international organisation dedicated to the medical care of the sick and wounded in wars and natural disasters (NOTE: It is known as the Red Crescent in Islamic countries.)

red-green colourblindness /,red gri:n 'kʌlə,blaindնəs/ *noun* same as **deuteranopia**

ReDivac drain /'redɪvæk dreɪn/, **ReDivac drainage tube** /,redɪvæk 'dreɪnɪdʒ tju:b/ trademark a tube which drains fluid away from the inside of a wound into a bottle, used mainly after operations on the abdomen

red marrow /,red 'mærəʊ/ *noun* the type of bone marrow where red blood cells and some white blood cells are formed

redness /'rednəs/ *noun* 1. an area of skin to which the blood flow is increased because of heat or infection ○ *The redness showed where the skin had reacted to the injection.* 2. a red colour

reduce /'ri'dju:s/ *verb* 1. to make something smaller or lower ○ *They used ice packs to try to reduce the patient's temperature.* 2. to put something such as a dislocated or fractured

bone, a displaced organ or part or a hernia back into its proper position so that it can heal

...blood pressure control reduces the incidence of first stroke and aspirin appears to reduce the risk of stroke after transient ischaemic attacks by some 15% [British Journal of Hospital Medicine]

reducible /rɪ'dju:sɪb(ə)l/ *adjective* capable of being reduced

reducible hernia /rɪ,dju:sɪb(ə)l 'hɜ:nɪə/ *noun* a hernia where the organ can be pushed back into place without an operation

reduction /rɪ'dʌkʃn/ *noun* 1. the lessening of something, the process of becoming less ○ *They noted a reduction in body temperature.* 2. the action of putting a hernia, a dislocated joint or a broken bone back into the correct position

reduction division /rɪ'dʌkʃn dɪ,vɪz(ə)n/ *noun* same as *meiosis*

re-emerge /rɪ: ɪ'mɜ:dʒ/ *verb* to come out again

re-emergence /rɪ: ɪ'mɜ:dʒəns/ *noun* an act of coming out again

refer /rɪ'fɜ:/ *verb* 1. to mention or to talk about something ○ *The doctor referred to the patient's history of sinus problems.* 2. to suggest that someone should consult something ○ *For method of use, please refer to the manufacturer's instructions.* ○ *The user is referred to the page giving the results of the tests.* 3. to pass on information about a patient to someone else ○ *They referred her case to a gynaecologist.* 4. to send someone to another doctor, usually a specialist, for advice or treatment ○ *She was referred to a cardiologist.* □ **the GP referred the patient to a consultant** he or she passed details about the patient's case to the consultant so that the consultant could examine them

'27 adult patients admitted to hospital with acute abdominal pains were referred for study because their attending clinicians were uncertain whether to advise an urgent laparotomy' [Lancet]

...many patients from outside districts were referred to London hospitals by their GPs' [Nursing Times]

referral /rɪ'fɜ:rəl/ *noun* the act of sending someone to a specialist ○ *She asked for a referral to a gynaecologist.*

...he subsequently developed colicky abdominal pain and tenderness which caused his referral' [British Journal of Hospital Medicine]

referred pain /rɪ,fɜ:d 'peɪn/ *noun* same as *sympathetic pain*

reflection /rɪ'fleksʃn/ *noun* 1. the image of somebody or something which is seen in a mirror or still water 2. the process of reflecting something, especially light, sound or heat 3. careful thought 4. a situation in which an anatomical structure bends back upon itself

reflective practice /rɪ'flektɪv 'præktɪs/ *noun* the process of improving professional skills by monitoring your own actions while they are being carried out, and by then later evaluating them by talking or writing about

them and asking other professionals to give their assessments of you

reflex /'ri:fleks/, **reflex action** /'ri:fleks ,ækʃn/ *noun* a physiological reaction without any conscious thought involved, e.g. a knee jerk or a sneeze, which happens in response to a particular stimulus □ **light reflex, pupillary reflex to light** reaction of the pupil of the eye which changes size according to the amount of light going into the eye

reflex arc /'ri:fleks ,ɑ:k/ *noun* the basic system of a reflex action, where a receptor is linked to a motor neurone which in turn is linked to an effector muscle

reflexologist /,rɪflɛk'sɒblədʒɪst/ *noun* a person specialising in reflexology

reflexology /,rɪ:fle:k'splædʒɪ/ *noun* a treatment to relieve tension by massaging the soles of the feet and thereby stimulating the nerves and increasing the blood supply

reflux /'ri:fli:k/s/ *noun* a situation where a fluid flows in the opposite direction to its usual flow ○ *The valves in the veins prevent blood reflux.* □ **vesicoureteric reflux**

reflux oesophagitis /,rɪ:fli:k/s i:,sɒfə'dʒaɪtɪs/ *noun* inflammation of the oesophagus caused by regurgitation of acid juices from the stomach

refract /rɪ'frækt/ *verb* to make light rays change direction as they go from one medium such as air to another such as water at an angle ○ *The refracting media in the eye are the cornea, the aqueous humour, the vitreous humour and the lens.*

refraction /rɪ'frækʃn/ *noun* 1. a change of direction of light rays as they enter a medium such as the eye 2. the measurement of the angle at which the light rays bend, as a test to see if someone needs to wear glasses

refractive /rɪ'fræktɪv/ *adjective* referring to refraction

refractometer /,rɪ:fra:k'tɒmɪtə/ *noun* an instrument which measures the refraction of the eye. Also called *optometer*

refractory /rɪ'frækt(ə)rɪ/ *adjective* difficult or impossible to treat, or not responding to treatment

refractory period /rɪ'frækt(ə)rɪ 'pɪəriəd/ *noun* a short space of time after the ventricles of the heart have contracted, when they cannot contract again

refrigerate /rɪ'frɪdʒəreɪt/ *verb* to make something cold ○ *The serum should be kept refrigerated.*

refrigeration /rɪ,frɪdʒə'reɪʃn/ *noun* 1. the process of making something cold 2. the process of making part of the body very cold, to give the effect of an anaesthetic

refrigerator /rɪ'frɪdʒəreɪtə/ *noun* a machine which cools and keeps things cold

regain /rɪ'geɪn/ **verb** to get back something which was lost □ *He has regained the use of his left arm.* □ *She went into a coma and never regained consciousness.*

regenerate /rɪ'dʒenəreɪt/ **verb** to grow again, or grow something again

regeneration /rɪ,dʒenə'reɪʃ(ə)n/ **noun** the process where tissue that has been destroyed grows again

regenerative medicine /rɪ,dʒenərætɪv 'med(ə)s(ə)n/ **noun** the branch of medicine that deals with the repair or replacement of tissues and organs by using advanced materials and methods such as cloning

regimen /redʒɪmən/ **noun** a fixed course of treatment, e.g. a course of drugs or a special diet

region /'rɪ:dʒən/ **noun** an area or part which is around something □ *She experienced itching in the anal region.* □ *The rash started in the region of the upper thigh.* □ *The plantar region is very sensitive.*

regional /'rɪ:dʒ(ə)nəl/ **adjective** in a particular region, referring to a particular region

regional enteritis /,rɪ:dʒ(ə)nəl ,entə 'raɪtɪs/ **noun** same as **Crohn's disease**

Regional Health Authority /,rɪ:dʒ(ə)nəl 'hɛlθ ɔ:t,θɔ:rɪti/ **noun** an administrative unit in the National Health Service which is responsible for planning the health service in a region. Abbr **RHA**

regional ileitis /,rɪ:dʒ(ə)nəl ,ili'ærɪtɪs/ **noun** compare **ulcerative colitis**. same as **Crohn's disease**

register /'redʒɪstə/ **noun** an official list ■ **verb** to write a name on an official list, especially the official list of patients treated by a GP or dentist, or the list of people with a particular disease □ *He is a registered heroin addict.* □ *They went to register the birth with the Registrar of Births, Marriages and Deaths.* □ **to register with someone** to put your name on someone's official list, especially the list of patients treated by a GP or dentist □ *Before registering with the GP, she asked if she could visit him.* □ *All practising doctors are registered with the General Medical Council.*

registered midwife /,redʒɪstəd 'mɪdwaɪf/ **noun** a qualified midwife who is registered to practise

Registered Nurse /'redʒɪstəd 'nɜ:s/, **Registered General Nurse** /,redʒɪstəd 'dʒen(ə)rəl nɜ:s/, **Registered Theatre Nurse** /,redʒɪstəd 'θɪətrə nɜ:s/ **noun** a nurse who has been registered by the UKCC. Abbr **RN**, **RGN**, **RTN**

Registrar /,redʒɪ'strə:/ **noun** 1. a qualified doctor or surgeon in a hospital who supervises house officers 2. a person who registers something officially

Registrar of Births, Marriages and Deaths /,redʒɪstra: əv ,bɜ:sθs ,mæriðzɪz ən

'deθs/ **noun** an official who keeps the records of people who have been born, married or who have died in a particular area

registration /,redʒɪ'streɪʃ(ə)n/ **noun** the act of registering □ *A doctor cannot practise without registration by the General Medical Council.*

regress /rɪ'gres/ **verb** to return to an earlier stage or condition

regression /rɪ'gres(ə)n/ **noun** 1. a stage where symptoms of a disease are disappearing and the person is getting better 2. (*in psychiatry*) the process of returning to a mental state which existed when the person was younger

regular /'regjʊlə/ **adjective** 1. taking place again and again after the same period of time □ *He was advised to make regular visits to the dentist.* □ *She had her regular six-monthly checkup.* 2. happening at the same time each day

regularly /'regjʊləli/ **adverb** happening repeatedly after the same period of time □ *The tablets must be taken regularly every evening.* □ *You should go to the dentist regularly.*

regulate /'regju:lət/ **verb** to make something work in a regular way □ *The heartbeat is regulated by the sinoatrial node.*

regulation /,regju'leɪʃ(ə)n/ **noun** the act of regulating □ *the regulation of the body's temperature*

regurgitate /rɪ'gɜ:s:dʒɪteɪt/ **verb** to bring into the mouth food which has been partly digested in the stomach

regurgitation /rɪ,gɜ:s:dʒɪ'teɪʃ(ə)n/ **noun** the process of flowing back in the opposite direction to the usual flow, especially of bringing up partly digested food from the stomach into the mouth

rehabilitate /,rɪ:ə'bɪlɪteɪt/ **verb** to make someone fit to work or to lead their usual life

rehabilitation /,rɪ:əbɪlɪ'teɪʃ(ə)n/ **noun** the process of making someone fit to work or to lead an ordinary life again

rehydrate /,rɪ:haɪ'dreɪt/ **verb** to restore body fluids to a healthy level, or cause this to occur

rehydration /,rɪ:haɪ'dreɪʃ(ə)n/ **noun** the act of giving water or liquid to someone who has dehydration

reinfect /,rɪ:in'fekt/ **verb** to infect someone or something again

reinfection /,rɪ:in'fekʃ(ə)n/ **noun** infection of an area for another time after recovery, especially with the same microorganism

Reiter's syndrome /'raɪtəz ,sɪnd्रəm/, **Reiter's disease** /'raɪtəz dɪ'zi:z/ **noun** an illness which may be sexually transmitted and affects mainly men, causing arthritis, urethritis and conjunctivitis at the same time [Described 1916. After Hans Conrad Reiter (1881–1969), German bacteriologist and hygienist.]

reject /rɪ'dʒekt/ *verb* 1. to refuse to accept something 2. to be unable to tolerate tissue or an organ transplanted from another body because it is immunologically incompatible ○ *The new heart was rejected by the body.* ○ *They gave the patient drugs to prevent the transplant being rejected.* 3. to be unable to keep food down and vomit it up again

rejection /rɪ'dʒekʃən/ *noun* the act of rejecting tissue ○ *The patient was given drugs to reduce the possibility of tissue rejection.*

relapse /'ri:læps, rɪ'læps/ *noun* a situation in which someone gets worse after seeming to be getting better, or where a disease appears again after seeming to be cured ■ *verb* to return to an earlier and worse state, especially to get ill again after getting better ○ *She relapsed into a coma.*

relapsing fever /rɪ'læpsɪŋ ,fi:və/ *noun* a disease caused by a bacterium, where attacks of fever recur from time to time

relapsing pancreatitis /rɪ'læpsɪŋ ,pænkrɪə'taɪtɪs/ *noun* a form of pancreatitis where the symptoms recur, but in a less painful form

relate /rɪ'leɪt/ *verb* to connect something to something else ○ *The disease is related to the weakness of the heart muscles.*

-related /rɪleɪtɪd/ *suffix* connected to ○ *drug-related diseases*

relationship /rɪ'leɪʃ(ə)nʃɪp/ *noun* a way in which someone or something is connected to another ○ *The incidence of the disease has a close relationship to the environment.* ○ *He became withdrawn and broke off all relationships with his family.*

relative density /,relətɪv 'densɪtɪ/ *noun* the ratio of the density of a substance to the density of a standard substance at the same temperature and pressure. For liquids and solids the standard substance is usually water, and for gases, it is air.

relative risk /,relətɪv 'risk/ *noun* a measure of the likelihood of developing a disease for people who are exposed to a particular risk, relative to people who are not exposed to the same risk. For example, the relative risk of myocardial infarction for oral contraceptive users is 1.6 times that of non-users. Abbr **RR**

relax /rɪ'læks/ *verb* to become less tense, or cause someone or something to become less tense ○ *He was given a drug to relax the muscles.* ○ *The muscle should be fully relaxed.*

relaxant /rɪ'læksənt/ *noun* a substance which relieves strain ■ *adjective* relieving strain

relaxation /,rɪ:læk'seɪʃ(ə)n/ *noun* 1. the process of reducing strain in a muscle 2. the reduction of stress in a person

relaxation therapy /,rɪ:læk'seɪʃ(ə)n ,θerəpi/ *noun* a treatment in which people are encouraged to relax their muscles to reduce stress

relaxative /rɪ'læksətɪv/ *noun US* a drug which reduces stress

relaxin /rɪ'læksɪn/ *noun* a hormone which is secreted by the placenta to make the cervix relax and open fully in the final stages of pregnancy before childbirth

release /rɪ'li:s/ *noun* the process of allowing something to go out ○ *the slow release of the drug into the bloodstream* ■ *verb* to let something out ○ *Hormones are released into the body by glands.*

releasing factor /rɪ'li:sɪf ,fækٹə/ *noun* a substance produced in the hypothalamus which encourages the release of hormones

releasing hormone /rɪ'li:sɪf ,hɔ:məʊn/ *noun* a hormone secreted by the hypothalamus which makes the pituitary gland release particular hormones. Also called **hypothalamic hormone**

relief /rɪ'li:f/ *noun* the process of making something better or easier ○ *The drug provides rapid relief for patients with bronchial spasms.*

'...complete relief of angina is experienced by 85% of patients subjected to coronary artery bypass surgery' [British Journal of Hospital Medicine]

relieve /rɪ'li:v/ *verb* to make something better or easier ○ *Nasal congestion can be relieved by antihistamines.* ○ *The patient was given an injection of morphine to relieve the pain.* ○ *The condition is relieved by applying cold compresses.*

'...replacement of the metacarpophalangeal joint is mainly undertaken to relieve pain, deformity and immobility due to rheumatoid arthritis' [Nursing Times]

rem /rem/ *noun* a unit for measuring amounts of radiation, equal to the effect that one roentgen of X-rays or gamma-rays would produce in a human being. It is used in radiation protection and monitoring.

REM /rem/ *abbr* rapid eye movement. ♦ **REM sleep**

remedial /rɪ'mi:dɪəl/ *adjective* acting as a cure

remedy /'remədi/ *noun* a cure, a drug which will cure ○ *Honey and glycerine is an old remedy for sore throats.*

remember /rɪ'membə/ *verb* to bring back into the mind something which has been seen or heard before ○ *He remembers nothing or he can't remember anything about the accident.*

remission /rɪ'mɪʃ(ə)n/ *noun* a period when an illness or fever is less severe

re. mist. /,rɪ: 'mɪst/ *adverb* (on a prescription) repeat the same mixture. Full form **repetatur mistura**

remittent /rɪ'mitənt/ *adjective* lessening and then intensifying again at intervals

remittent fever /rɪ'mitənt 'fi:və/ *noun* fever which goes down for a period each day, like typhoid fever

removal /rɪ'mu:v(ə)l/ *noun* the action of removing something □ *An appendicectomy is the surgical removal of an appendix.*

remove /rɪ'mu:v/ *verb* to take something away □ *He will have an operation to remove an ingrowing toenail.*

REM sleep /'rem slɪ:p/ *noun* a stage of sleep which happens several times each night and is characterised by dreaming, rapid eye movement and increased pulse rate and brain activity. Also called **rapid eye movement sleep**

COMMENT: During REM sleep, a person dreams, breathes lightly and has a raised blood pressure and an increased rate of heartbeat. The eyes may be half-open, and the sleeper may make facial movements.

ren- /rɪ:n/ *prefix* same as **reno-** (*used before vowels*)

renal /'rɪ:n(ə)l/ *adjective* referring to the kidneys

renal artery /,rɪ:n(ə)l 'a:təri/ *noun* one of two arteries running from the abdominal aorta to the kidneys

renal calculus /,rɪ:n(ə)l 'kælkjʊləs/ *noun* a small hard mineral mass called a stone in the kidney

renal capsule /,rɪ:n(ə)l 'kæpsjulə/ *noun* same as **fibrous capsule**

renal clearance /'rɪ:n(ə)l ,klɪ:rəns/ *noun* the measurement of the rate at which kidneys filter impurities from blood

renal colic /,rɪ:n(ə)l 'kɒlik/ *noun* a sudden pain caused by a kidney stone or stones in the ureter

renal corpuscle /,rɪ:n(ə)l 'kɔ:pʊs(ə)l/ *noun* part of a nephron in the cortex of a kidney. Also called **Malpighian body**

renal cortex /,rɪ:n(ə)l 'kɔ:tek:s/ *noun* the outer covering of the kidney, immediately beneath the capsule. See illustration at **KIDNEY** in Supplement

renal dialysis /,rɪ:n(ə)l dai'æləsɪs/ *noun* a method of artificially maintaining the chemical balance of the blood when the kidneys have failed, or the process of using this method. Also called **dialysis**

renal hypertension /,rɪ:n(ə)l ,haɪpə'tenʃən/ *noun* high blood pressure linked to kidney disease

renal medulla /,rɪ:n(ə)l me'dʌlə/ *noun* the inner part of a kidney containing no glomeruli. See illustration at **KIDNEY** in Supplement

renal pelvis /,rɪ:n(ə)l 'pelvɪs/ *noun* the upper and wider part of the ureter leading from the kidney where urine is collected before passing down the ureter into the bladder. Also called **pelvis of the kidney**. See illustration at **KIDNEY** in Supplement

renal rickets /,rɪ:n(ə)l 'rikɪts/ *noun* a form of rickets caused by kidneys which do not function properly

renal sinus /,rɪ:n(ə)l 'sainəs/ *noun* a cavity in which the renal pelvis and other tubes leading into the kidney fit

renal transplant /,rɪ:n(ə)l 'trænspla:nt/ *noun* a kidney transplant

renal tubule /,rɪ:n(ə)l 'tju:bju:l/ *noun* a tiny tube which is part of a nephron. Also called **uriniferous tubule**

renew /rɪ'nju:/ *verb* □ **to renew a prescription** to get a new prescription for the same drug as before

reni- /rɪ:nɪ/ *prefix* referring to the kidneys

renin /'rɪ:nɪn/ *noun* an enzyme secreted by the kidney to prevent loss of sodium, and which also affects blood pressure

rennin /'rɪ:nɪn/ *noun* an enzyme which makes milk coagulate in the stomach, so as to slow down the passage of the milk through the digestive system

reno- /rɪ:nəʊ/ *prefix* referring to the kidneys

renogram /'rɪ:nəʊgræm/ *noun* 1. an X-ray image of a kidney 2. a visual record of kidney function that shows how quickly a radioactive substance introduced into the bloodstream is removed by the kidneys

renography /ri:ngrəfi/ *noun* an examination of a kidney after injection of a radioactive substance, using a gamma camera

renovascular /,rɪ:nəʊ'veskjʊlə/ *adjective* relating to the blood vessels of the kidneys

renovascular system /,rɪ:nəʊ'veskjʊlə,sɪstəm/ *noun* the blood vessels associated with the kidney

reorganisation /ri:ɔ:gənər'zeɪʃ(ə)n/, **reorganization** *noun* 1. a change in the way something is organised or done 2. the process of changing the way something is organised or done 3. an occasion when a business or organisation is given a completely new structure

reovirus /'rɪ:əʊ,vairəs/ *noun* a virus which affects both the intestine and the respiratory system, but does not cause serious illness. Compare **echovirus**

rep /rep/ *adverb* (*written on a prescription*) repeat. Full form **repetatur**

repair /rɪ'peə/ *verb* to make something that is damaged good again □ *Surgeons operated to repair a hernia.*

repeat /rɪ'pi:t/ *verb* to say or do something again □ *The course of treatment was repeated after two months.*

repeat prescription /rɪ,pɪ:t pri'skrɪpjən/ *noun* a prescription which is exactly the same as the previous one, and is often given without examination of the person by the doctor and may sometimes be requested by telephone

repel /rɪ'pel/ *verb* to make something go away □ *If you spread this cream on your skin it will repel insects.*

repetitive strain injury /rɪ,petɪtɪv 'streɪn,ɪndʒəri/, **repetitive stress injury** /rɪ,petɪtɪv

'stres ,ɪndʒəri/ noun pain, usually in a limb, felt by someone who performs the same movement many times over a period, e.g. when operating a computer terminal or playing a musical instrument. Abbr **RSI**

replace /rɪ'pleɪs/ verb 1. to put something back ○ *an operation to replace a prolapsed uterus* 2. to exchange one part for another ○ *The surgeons replaced the diseased hip with a metal one.*

replacement /rɪ'plɪsmənt/ noun an operation to replace part of the body with an artificial part

replacement transfusion /rɪ'plɪsmənt ,træns'fju:z(ə)n/ noun an exchange transfusion, a treatment for leukaemia or erythroblastosis where almost all the unhealthy blood is removed from the body and replaced by healthy blood

replant /rɪ:'pla:nt/ verb to reattach or reinsert a body part such as a limb or tooth that has become detached

replantation /rɪ:pla:n'teɪʃ(ə)n/ noun a surgical technique which reattaches parts of the body which have been accidentally cut or torn off

replicate /'repɪleɪt/ verb (of a cell) to make a copy of itself

replication /'repɪ'keɪʃ(ə)n/ noun the process in the division of a cell, where the DNA makes copies of itself

repolarisation /rɪ:pələ'reɪz(ə)n/, repolarization noun the restoration of the usual electrical polarity of a nerve or muscle cell membrane after reversal of its polarity while a nerve impulse or muscle contraction travelled along it

report /rɪ'pɔ:t/ noun an official note stating what action has been taken, what treatment given or what results have come from a test ○ *The patient's report card has to be filled in by the nurse.* ○ *The inspector's report on the hospital kitchens is good.* ■ **verb** to make an official report about something ○ *The patient reported her doctor for misconduct.* ○ *Occupational diseases or serious accidents at work must be reported to the local officials.*

reportable diseases /rɪ:pɔ:təb(ə)l di'zi:zɪz/ plural noun diseases such as asbestos, hepatitis or anthrax which may be caused by working conditions or may infect other workers and must be reported to the District Health Authority

repository /rɪ'pozɪtɔ:/ noun a surgical instrument used to push a prolapsed organ back into its usual position

repress /rɪ'pres/ verb to decide to ignore or forget feelings or thoughts which may be unpleasant or painful

repression /rɪ'preʃ(ə)n/ noun (in psychiatry) the act of ignoring or forgetting feelings or thoughts which might be unpleasant

reproduce /rɪ:p्र'dju:s/ verb 1. to produce children 2. (of microorganisms) to produce new cells 3. to do a test again in exactly the same way

reproduction /rɪ:p्र'dʌkʃən/ noun the process of making new living beings by existing ones, e.g. producing children or derived other descendants

reproductive /rɪ:p्र'dʌktɪv/ adjective referring to reproduction

reproductive organs /,rɪ:p्र'dʌktɪv ,ɔ:gənz/ plural noun parts of the bodies of men and women which are involved in the conception and development of a fetus

reproductive system /,rɪ:p्र'dʌktɪv ,sistəm/ noun the arrangement of organs and ducts in the bodies of men and women which produce spermatozoa or ova

COMMENT: In the human male, the testes produce the spermatozoa which pass through the vasa efferentia and the vasa deferentia where they receive liquid from the seminal vesicles, then out of the body through the urethra and penis on ejaculation. In the female, an ovum, produced by one of the two ovaries, passes through the Fallopian tube where it is fertilised by a spermatozoon from the male. The fertilised ovum moves down into the uterus where it develops into an embryo.

reproductive tract /,rɪ:p्र'dʌktɪv trækt/ noun the series of tubes and ducts which carry spermatozoa or ova from one part of the body to another

require /rɪ'kwaɪə/ verb to need something ○ *His condition may require surgery.* ○ *Is it a condition which requires immediate treatment?* □ **required effect** effect which a drug is expected to have ○ *If the drug does not produce the required effect, the dose should be increased.*

requirement /rɪ'kwaɪəmənt/ noun something which is necessary ○ *One of the requirements of the position is a qualification in pharmacy.*

RES abbr reticuloendothelial system

research /rɪ'sɜ:tʃ/ noun a scientific study which investigates something new ○ *He is the director of a medical research unit.* ○ *She is doing research into finding a cure for leprosy.* ○ *Research workers or Research teams are trying to find a vaccine against AIDS.* ■ **verb** to carry out scientific study ○ *He is researching the origins of cancer.*

research and development /rɪ,sɜ:tʃ ən dɪ'veləpmənt/ noun the process by which pharmaceutical companies find new drugs and test their suitability. Abbr **R & D**

resect /rɪ'sekٹ/ verb to remove any part of the body by surgery

resection /rɪ'sekʃən/ noun the surgical removal of any part of the body

resection of the prostate /rɪ'sekʃən əv ðə 'prɒstetɪ/ *noun* same as **transurethral prostatectomy**

rectoscope /rɪ'septəskəʊp/ *noun* a surgical instrument used to carry out a transurethral resection

reservoir /'rezəvʊər/ *noun* 1. a cavity in an organ or group of tissues in which fluids collect and are stored 2. an organism in which a parasite lives and develops without damaging it, but from which the parasite then passes to another species which is damaged by it 3. a part of a machine or piece of equipment where liquid is stored for it to use

reset /rɪ'set/ *verb* to break a badly set bone and set it again correctly ○ *His arm had to be reset.*

residency /'rezɪd(ə)nsi/ *noun* *US* a period when a doctor is receiving specialist training in a hospital

resident /'rezɪd(ə)nt/ *noun* 1. someone who lives in a place ○ *All the residents of the old people's home were tested for food poisoning.* 2. *US* a qualified doctor who is employed by a hospital and sometimes lives in the hospital. Compare **intern** ■ *adjective* living in a place

resident doctor /,rezɪd(ə)nt 'dɒktə/ *noun* a doctor who lives in a building such as an old people's home

residential /,rezɪ'denʃəl/ *adjective* 1. living in a hospital 2. living at home

residential care /,rezɪ'denʃəl keə/ *noun* the care of patients either in a hospital or at home, but not as outpatients

residual /rɪ'zidʒjuəl/ *adjective* remaining, which is left behind

residual air /rɪ'zidʒjuəl 'eə/, **residual volume** /rɪ'zidʒjuəl 'vɒlvju:m/ *noun* air left in the lungs after a person has breathed out as much air as possible

residual urine /rɪ'zidʒjuəl 'juərɪn/ *noun* urine left in the bladder after a person has passed as much urine as possible

resin /'rezɪn/ *noun* a sticky sap or liquid which comes from some types of tree

resist /rɪ'zɪst/ *verb* to be strong enough to avoid being killed or attacked by a disease ○ *A healthy body can resist some infections.*

resistance /rɪ'zɪstəns/ *noun* 1. the ability of a person not to get a disease 2. the ability of bacteria or a virus to remain unaffected by a drug ○ *The bacteria have developed a resistance to certain antibiotics.* 3. opposition to a force

resistant /rɪ'zɪst(ə)nt/ *adjective* able not to be affected by something ○ *The bacteria are resistant to some antibiotics.*

resistant strain /rɪ'zɪst(ə)nt 'streɪn/ *noun* a strain of bacterium which is not affected by antibiotics

resolution /,rezə'lju:ʃ(ə)n/ *noun* 1. the amount of detail which can be seen in a microscope or on a computer monitor 2. a point in the development of a disease where the inflammation begins to disappear

resolve /rɪ'zɒlv/ *verb* (*of inflammation*) to begin to disappear

'...valve fluttering disappears as the pneumothorax resolves. Always confirm resolution with a physical examination and X-ray' [American Journal of Nursing]

resolvent /rɪ'zɒlvənt/ *adjective* able to reduce inflammation or swelling

resonance /'rez(ə)nəns/ *noun* a sound made by a hollow part of the body when hit. □ **magnetic**

resorption /rɪ'sɔ:pʃən/ *noun* the process of absorbing a substance produced by the body back into the body

respiration /,respə'reɪʃ(ə)n/ *noun* the act of taking air into the lungs and blowing it out again through the mouth or nose. Also called **breathing**

COMMENT: Respiration includes two stages: breathing in (inhala^{tion}) and breathing out (exhalation). Air is taken into the respiratory system through the nose or mouth, and goes down into the lungs through the pharynx, larynx and windpipe. In the lungs, the bronchi take the air to the alveoli (air sacs) where oxygen in the air is passed to the bloodstream in exchange for waste carbon dioxide which is then breathed out.

respiration rate /,respə'reɪʃ(ə)n reɪt/ *noun* the number of times a person breathes per minute

respirator /'respəreɪtə/ *noun* 1. same as **ventilator** □ **the patient was put on a respirator** the patient was attached to a machine which forced him to breathe 2. a mask worn to prevent someone breathing harmful gas or fumes

respiratory /rɪ'spirət(ə)rɪ/ *adjective* referring to breathing

respiratory allergy /rɪ'spirət(ə)rɪ 'ælədʒɪ/ *noun* an allergy caused by a substance which is inhaled. □ **alveolitis, food allergy**

respiratory bronchiole /rɪ'spirət(ə)rɪ 'brɒŋkiəl/ *noun* the end part of a bronchiole in the lung, which joins the alveoli

respiratory centre /rɪ'spirət(ə)rɪ 'sentə/ *noun* a nerve centre in the brain which regulates the breathing

respiratory distress syndrome /rɪ'spirət(ə)rɪ dɪ'stre:s sɪnd्रəm/ *noun* a condition of newborn babies, and especially common in premature babies, in which the lungs do not expand properly, due to lack of surfactant. Also called **hyaline membrane disease**

respiratory failure /rɪ'spirət(ə)rɪ 'feɪlju:/ *noun* failure of the lungs to oxygenate the blood correctly

respiratory illness /rɪ'spirət(ə)ri 'ilnəs/ *noun* an illness which affects someone's breathing

respiratory pigment /rɪ'spirət(ə)ri 'pɪgmənt/ *noun* blood pigment which can carry oxygen collected in the lungs and release it in tissues

respiratory quotient /rɪ'spirət(ə)ri 'kwəʊʃ(ə)nt/ *noun* the ratio of the amount of carbon dioxide taken into the alveoli of the lungs from the blood to the amount of oxygen which the alveoli take from the air. Abbr **RQ**

respiratory syncytial virus /rɪ'spirət(ə)ri sɪn'sɪtiəl ,vairəs/ *noun* a virus which causes infections of the nose and throat in adults, but serious bronchiolitis in children. Abbr **RSV**

respiratory system /rɪ'spirət(ə)ri 'sistəm/, **respiratory tract** /rɪ'spirət(ə)ri trækt/ *noun* the series of organs and passages which take air into the lungs, and exchange oxygen for carbon dioxide

respite care /'respait keə/ *noun* temporary care provided to people with disabilities, serious conditions or terminal illness, so that their families can have a rest from the daily routine
respond /rɪ'spɒnd/ *verb* 1. to react to something ○ *The cancer is not responding to drugs.* 2. to begin to get better because of a treatment
○ *She is responding to treatment.*

'...many severely confused patients, particularly those in advanced stages of Alzheimer's disease, do not respond to verbal communication' [Nursing Times]

response /rɪ'spons/ *noun* a reaction by an organ, tissue or a person to an external stimulus ○ **immune response** 1. reaction of a body to an antigen 2. reaction of a body which rejects a transplant

'...anaemia may be due to insufficient erythrocyte production, in which case the reticulocyte count will be low, or to haemolysis or haemorrhage, in which cases there should be a reticulocyte response' [Southern Medical Journal]

responsibility /rɪ'sponsɪ'biliti/ *noun* 1. somebody or something which a person or organisation has a duty to take care of ○ *Checking the drip is your responsibility.* 2. the blame for something bad which has happened ○ *She has taken full responsibility for the mix-up.* 3. the position of having to explain to somebody why something was done ○ *Whose responsibility is it to talk to the family?*

responsible /rɪ'spɒnsib(ə)l/ *adjective* referring to something which is the cause of something else ○ *the allergen which is responsible for the patient's reaction.* ○ *This is one of several factors which can be responsible for high blood pressure.*

responsive /rɪ'spɒnsɪv/ *adjective* reacting positively to medical treatment

responsiveness /rɪ'spɒnsɪvnəs/ *noun* the ability to respond to other people or to sensations

rest /rest/ *noun* a period of time spent relaxing or sleeping ○ *What you need is a good night's rest.* ■ *verb* 1. to spend time relaxing or sleeping 2. to use a body part less for a period of time ○ *Rest your arm for a week.*

restenosis /rɪ:tə'nəʊsɪs/ *noun* an occasion when something becomes narrow again, e.g. a coronary artery which has previously been widened by balloon angioplasty (NOTE: The plural is **restenoses**.)

restless /'restləs/ *adjective* not able to relax or be still ○ *restless sleep* ○ *She had a restless night.*

restless leg syndrome /,restləs 'leg ,sɪn↓drəm/ *noun* painful discomfort in the legs when not active that can lead to interrupted sleep and fatigue

restore /rɪ'stɔ:/ *verb* to give something back
○ *She needs vitamins to restore her strength.* ○ *The physiotherapy should restore the strength of the muscles.* ○ *A salpingostomy was performed to restore the patency of the Fallopian tube.*

restrict /rɪ'strɪkt/ *verb* 1. to make something less or smaller ○ *The blood supply is restricted by the tight bandage.* 2. to set limits to something ○ *The doctor suggested she should restrict her intake of alcohol.*

restrictive /rɪ'strɪktɪv/ *adjective* restricting, making something smaller

result /rɪ'zʌlt/ *noun* figures at the end of a calculation, at the end of a test ○ *What was the result of the test?* ○ *The doctor told the patient the result of the pregnancy test.* ○ *The result of the operation will not be known for some weeks.*

resuscitate /rɪ'sʌsɪteɪt/ *verb* to make someone who appears to be dead start breathing again, and to restart the circulation of blood

resuscitation /rɪ'sʌsɪ'teɪʃ(ə)n/ *noun* the act of reviving someone who seems to be dead, by making him or her breathe again and restarting the heart

COMMENT: The commonest methods of resuscitation are artificial respiration and cardiac massage.

retain /rɪ'teɪn/ *verb* to keep or hold something
○ *He was incontinent and unable to retain urine in his bladder.* ♀ **retention**

retard /rɪ'tɑ:d/ *verb* to make something slower, e.g. to slow down the action of a drug ○ *The drug will retard the onset of the fever.* ○ *The injections retard the effect of the anaesthetic.*

retardation /rɪ:tɑ:'deɪʃ(ə)n/ *noun* the process of making something slower

retch /retʃ/ *verb* to try to vomit without bringing any food up from the stomach

retching /retʃɪŋ/ *noun* the fact of attempting to vomit without being able to do so

rete /'re:tɪ/ *noun* a network of veins, arteries or nerve fibres in the body. ♀ **reticular** (NOTE: The plural is **retia**.)

retention /rɪ'tenʃən/ *noun* the act of not letting out something, especially a fluid, which is usually released from the body, e.g. holding back urine in the bladder

retention cyst /rɪ'tenʃən sɪst/ *noun* a cyst which is formed when a duct from a gland is blocked

retention of urine /rɪ'tenʃən əv 'juərɪn/ *noun* a condition in which passing urine is difficult or impossible because the urethra is blocked or because the prostate gland is enlarged

rete testis /'rɪ:tɛtɪs/ *'testɪs/ noun* a network of channels in the testis which take the sperm to the epididymis. ☞ **reticular**

retia /'ri:fɪə/ plural of **rete**

reticular /rɪ'tɪkjʊlə/ *adjective* relating to or in the form of a network

reticular fibres /rɪ'tɪkjʊlər 'faɪbəz/ *plural noun* fibres in connective tissue which support, e.g., organs or blood vessels

reticular tissue /rɪ'tɪkjʊlər 'tɪʃu:/ *noun* same as **reticular fibres**

reticulin /rɪ'tɪkjʊlɪn/ *noun* a fibrous protein which is one of the most important components of reticular fibres

reticulocyte /rɪ'tɪkjʊləsɔɪt/ *noun* a red blood cell which has not yet fully developed

reticulocytosis /rɪ'tɪkjʊləsɔɪtə'sɪs/ *noun* a condition in which the number of reticulocytes in the blood increases unusually

reticuloendothelial cell /rɪ'tɪkjʊləθeɪl ,endəʊθɪəlɪəl sel/ *noun* a phagocytic cell in the reticuloendothelial system

reticuloendothelial system /rɪ'tɪkjʊləθeɪl ,endəʊθɪəlɪəl ,sistəm/ *noun* a series of phagocytic cells in the body, found especially in bone marrow, lymph nodes, liver and spleen, which attack and destroy bacteria and form antibodies. Abbr **RES**

reticuloendotheliosis /rɪ'tɪkjʊləθeɪləsɪs/ *noun* a condition in which cells in the RES grow large and form swellings in bone marrow or destroy bones

reticulosclerosis /rɪ'tɪkjʊlə'læsɪs/ *noun* any of several conditions where cells in the reticuloendothelial system grow large and form usually malignant tumours

reticulum /rɪ'tɪkjʊləm/ *noun* a series of small fibres or tubes forming a network

retin- /retɪn/ *prefix* same as **retino-** (*used before vowels*)

retina /'retɪnə/ *noun* the inside layer of the eye which is sensitive to light. ☞ **detached retina**. See illustration at **EYE** in Supplement (NOTE: The plural is **retinae**.)

COMMENT: Light enters the eye through the pupil and strikes the retina. Light-sensitive cells in the retina (cones and rods) convert the light to nervous impulses. The optic nerve sends these impulses to the brain which interprets them as images. The point where the

optic nerve joins the retina has no light-sensitive cells, and is known as the blind spot.

retinaculum /,retɪ'nækjoləm/ *noun* a band of tissue which holds a structure in place, as found in the wrist and ankle over the flexor tendons

retinae /'retɪni/ plural of **retina**

retinal /'retɪn(ə)l/ *adjective* referring to the retina

retinal artery /'retɪn(ə)l ,a:təri/ *noun* the only artery of the retina, which accompanies the optic nerve

retinal detachment /,retɪn(ə)l dɪ'tætʃmənt/ *noun* a condition in which the retina is partly detached from the choroid

retinitis /,retɪ'naitɪs/ *noun* inflammation of the retina

retinitis pigmentosa /,retɪnai'naɪtɪs,pigmen'təʊsə/ *noun* a hereditary condition in which inflammation of the retina can result in blindness

retino- /retɪnəʊ/ *prefix* referring to the retina

retinoblastoma /,retɪnəoblæ:təʊmə/ *noun* a rare tumour in the retina, affecting infants

retinol /'retɪnɒl/ *noun* a vitamin found in liver, vegetables, eggs and cod liver oil which is essential for good vision. Also called **Vitamin A**

retinopathy /,retɪ'nɒpəθi/ *noun* any disease of the retina

retinoscope /'retɪnɔskəp/ *noun* an instrument with various lenses, used to measure the refraction of the eye

retinoscopy /,retɪ'nɒskəpi/ *noun* a method of measuring refractive errors in the eye using a retinoscope

retire /rɪ'taɪə/ *verb* to stop work at a particular age ○ *Most men retire at 65, but women only go on working until they are 60.* ○ *Although she has retired, she still does voluntary work at the clinic.*

retirement /rɪ'taɪəmənt/ *noun* 1. the act of retiring ○ *The retirement age for men is 65.* 2. the act of being retired

retraction /rɪ'trækʃən/ *noun* the fact of moving backwards or becoming shorter ○ *There is retraction of the overlying skin.*

retraction ring /rɪ'trækʃən rɪŋ/ *noun* a groove round the uterus, separating its upper and lower parts, which, in obstructed labour, prevents the baby from moving forward as expected into the cervical canal. Also called **Band's ring**

retractor /rɪ'træktə/ *noun* a surgical instrument which pulls and holds back the edge of the incision in an operation

retro- /ret्रəʊ/ *prefix* at the back, behind

retrobulbar /,ret्रəʊ'bʌlbə/ *adjective* behind the eyeball

retrobulbar neuritis /,ret्रəʊ,bʌlbə nju:ra'tɪs/ *noun* inflammation of the optic nerve

which makes objects appear blurred. Also called **optic neuritis**

retroflexion /'ret्रəʊ'fleksʃ(ə)n/ *noun* the fact of being bent backwards □ **retroflexion of the uterus** a condition in which the uterus bends backwards away from its usual position
retrograde /'ret्रəʊgred/ *adjective* going backwards or deteriorating, getting worse

retrograde pyelography /'ret्रəʊgred ,paɪə'lɒgrəfi/ *noun* an X-ray examination of the kidney where a catheter is passed into the kidney and an opaque liquid is injected directly into it

retrogression /,ret्रəʊ'gresʃ(ə)n/ *noun* returning to an earlier state

retrolental fibroplasia /,ret्रəʊ,lent(ə)l ,faɪbrəʊ'pleɪzɪə/ *noun* a condition in which fibrous tissue develops behind the lens of the eye, resulting in blindness

COMMENT: Retrolental fibroplasia can occur in premature babies if they are treated with large amounts of oxygen immediately after birth.

retro-ocular /,ret्रəʊ 'ɒkjʊlə/ *adjective* at the back of the eye

retroperitoneal /,ret्रəʊ,perɪtə'nī:əl/ *adjective* at the back of the peritoneum

retroperitoneal space /,ret्रəʊ,perɪtə'nī:əl 'speɪs/ *noun* the area between the posterior parietal peritoneum and the posterior abdominal wall, containing the kidneys, adrenal glands, duodenum, ureters and pancreas

retropharyngeal /,ret्रəʊ,færɪn'dʒi:əl/ *adjective* at the back of the pharynx

retropubic /,ret्रəʊ'pjū:bɪk/ *adjective* at the back of the pubis

retropubic prostatectomy /,ret्रəʊpjū:bɪk ,prɔstə'tektəmɪ/ *noun* removal of the prostate gland which is carried out through a suprapubic incision and by cutting the membrane which surrounds the gland

retrospection /,ret्रə'speकʃən/ *noun* the act of recalling what happened in the past

retrospective /,ret्रə'spektɪv/ *adjective* applying to the past, tracing what has happened already to selected people

retroversion /,ret्रəʊ'vɜ:sʃ(ə)n/ *noun* the fact of sloping backwards □ **retroversion of the uterus** Same as **retroverted uterus**

retroverted uterus /,ret्रəʊvɜ:tɪd 'ju:tərəs/ *noun* a condition in which the uterus slopes backwards away from its usual position. Also called **retroversion of the uterus, tipped womb**

retrovirus /'ret्रəʊvʌɪrəs/ *noun* a virus whose genetic material contains RNA from which DNA is synthesised (NOTE: The AIDS virus and many carcinogenic viruses are retroviruses.)

revascularisation /'ri:,væskjʊlərɪz̬/ ,revascularization *noun* 1. the act of restoring an adequate blood supply to an organ or tissue, especially in a surgical operation us-

ing a blood vessel graft 2. the condition of having an adequate blood supply restored

reveal /'ri:vɪ:l/ *verb* to show something □ *Digital palpation revealed a growth in the breast.*

reversal /'ri:vɜ:s(ə)l/ *noun* the procedure to change something back □ *reversal of sterilisation*

reverse isolation /'ri,vɜ:s ,aɪsə'leɪʃ(ə)n/ *noun* same as **protective isolation**

revision /'ri:vɪʒ(ə)n/ *noun* an examination of a surgical operation after it has been carried out □ *a revision of a radical mastoidectomy*

revive /'ri:vɪv/ *verb* to bring someone back to life or to consciousness □ *They tried to revive him with artificial respiration.* □ *She collapsed on the floor and had to be revived by the nurse.*

Reye's syndrome /'raɪz ,sɪnd्रəʊm/ *noun* a form of brain disease affecting young children, which is possibly due to viral infection and has a suspected link with aspirin

RGN abbr Registered General Nurse

Rh abbr rhesus

RHA abbr Regional Health Authority

rhabdomyosarcoma /,ræbdəʊ,mæɪəʊsə: 'kœmə/ *noun* a malignant tumour of striated muscle tissue. It occurs mostly in children.

rhabdovirus /'ræbdəʊvʌɪrəs/ *noun* any of a group of viruses containing RNA, one of which causes rabies

rhachio- /reɪkiəʊ/ *prefix* referring to the spine

rhagades /'rægədi:z/ *plural noun* long thin scars in the skin round the nose, mouth or anus, seen in syphilis. □ **fissure**

Rh disease /'aɪ:r 'eɪtʃ dɪ,zɪ:z/ *noun* same as **rhesus factor disease**

rheo- /ri:əʊ/ *prefix* 1. relating to the flow of liquids 2. relating to the flow of electrical current

rheometer /'ri:əmɪtə/ *noun* a device that measures the flow of thick liquids such as blood

rhesus baby /'ri:səs ,beɪbi/ *noun* a baby with erythroblastosis foetalis

rhesus factor /'ri:səs ,fækٹə/ *noun* an antigen in red blood cells, which is an element in blood grouping. Also called **Rh factor**

COMMENT: The rhesus factor is important in blood grouping, because, although most people are Rh-positive, an Rh-negative patient should not receive an Rh-positive blood transfusion as this will cause the formation of permanent antibodies. If an Rh-negative mother has a child by an Rh-positive father, the baby will inherit Rh-positive blood, which may then pass into the mother's circulation at childbirth and cause antibodies to form. This can be prevented by an injection of anti D immunoglobulin immediately after the birth of the first Rh-positive child and any subsequent Rh-positive children. If an Rh-negative mother has formed antibodies to Rh-positive blood in the past, these antibodies will affect the blood

of the fetus and may cause erythroblastosis fetalis.

rhesus factor disease /'ri:səs ,fæktə dɪ zɪ:z/ *noun* a disease which occurs when the blood of a fetus has a different rhesus factor from that of the mother. Also called **Rh disease**

rheumatic /ru:'mætɪk/ *adjective* referring to rheumatism

rheumatic fever /ru:'mætɪk 'fi:və/ *noun* a collagen disease of young people and children, caused by haemolytic streptococci, where the joints and also the valves and lining of the heart become inflamed. Also called **acute rheumatism**

COMMENT: Rheumatic fever often follows another streptococcal infection such as a strep throat or tonsillitis. Symptoms are high fever, pains in the joints, which become red, formation of nodules on the ends of bones and difficulty in breathing. Although recovery can be complete, rheumatic fever can recur and damage the heart permanently.

rheumatism /'ru:mætɪz(ə)m/ *noun* pains and stiffness in the joints and muscles (*informal*) ◇ *She has rheumatism in her hips.* ◇ *He complained of rheumatism in the knees.*

rheumatoid /ru:mætɔɪd/ *adjective* relating to rheumatism

rheumatoid arthritis /,ru:mætɔɪd ə:θraɪtɪs/ *noun* a general painful disabling collagen disease affecting any joint, but especially the hands, feet and hips, making them swollen and inflamed. ◇ **osteoarthritis**

...rheumatoid arthritis is a chronic inflammatory disease which can affect many systems of the body, but mainly the joints. 70% of sufferers develop the condition in the metacarpophalangeal joints' [Nursing Times]

rheumatoid erosion /,ru:mætɔɪd ɪ'rəʊz(ə)n/ *noun* erosion of bone and cartilage in the joints caused by rheumatoid arthritis

rheumatoid factor /ru:mætɔɪd ,fæktə/ *noun* an antibody found in the blood serum of many people who have rheumatoid arthritis

rheumatologist /,ru:mæ'tɒlədʒɪst/ *noun* a doctor who specialises in rheumatology

rheumatology /,ru:ma'tɒlədʒɪ/ *noun* a branch of medicine dealing with rheumatic disease of muscles and joints

Rh factor /,a:r 'eɪtʃ ,fæktə/ *noun* same as **rhesus factor**

rhin- /rain/ *prefix* same as **rhino-** (*used before vowels*)

rhinal /'rain(ə)l/ *adjective* referring to the nose

rhinencephalon /,rainen'kefələn/ *noun* the area of the forebrain that controls the sense of smell

rhinitis /raɪ'nartɪs/ *noun* inflammation of the mucous membrane in the nose, which makes the nose run, caused, e.g., by a virus infection or an allergic reaction to dust or flowers

rhino- /rainəʊ/ *prefix* referring to the nose

rhinology /raɪ'nɒlədʒɪ/ *noun* a branch of medicine dealing with diseases of the nose and the nasal passages

rhinomycosis /,rainəʊmətɪ'kəʊsɪs/ *noun* an infection of the nasal passages by a fungus

rhinopharyngitis /,rainəʊfærɪn'dʒaɪtɪs/ *noun* inflammation of the mucous membranes in the nose and pharynx

rhinophyma /,rainəʊ'faimə/ *noun* a condition caused by rosacea, in which the nose becomes permanently red and swollen

rhinoplasty /'rainəoplæsti/ *noun* plastic surgery to correct the appearance of the nose

rhinorrhoea /,rainəʊ'rɪə/ *noun* a watery discharge from the nose

rhinoscope /'rainəskoʊp/ *noun* an instrument for examining the inside of the nose

rhinoscopy /raɪ'nɒskəpi/ *noun* an examination of the inside of the nose

rhinosinusitis /,rainəʊ,sainə'saɪtɪs/ *noun* swelling of the lining of the nose and paranasal sinuses, as a result of either a viral infection or allergic rhinitis. It is usually treated with antibiotics, antihistamines or steroids.

rhinosporidiosis /,rainəʊ,spɒrɪdi'əʊsɪs/ *noun* an infection of the nose, eyes, larynx and genital organs by the fungus *Rhinosporidium seeberi*

rhinovirus /'rainəʊ,vایریس/ *noun* a group of viruses containing RNA, which cause infection of the nose and include the virus which causes the common cold

rhiz- /raɪz/, **rhizo-** /'raɪzəʊ/ *prefix* referring to a root

rhizotomy /raɪ'zotəmi/ *noun* a surgical operation to cut or divide the roots of a nerve to relieve severe pain

Rh-negative /,a: eɪtʃ 'negətɪv/ *adjective* who does not have the rhesus factor in his or her blood

rhodopsin /rəʊ'dɒpsɪn/ *noun* a light-sensitive purple pigment in the rods of the retina, which makes it possible to see in dim light. Also called **visual purple**

rhombencephalon /,rɒmben'kefələn/ *noun* the hindbrain, the part of the brain which contains the cerebellum, the medulla oblongata and the pons

rhomboid /'rɒmbɔɪd/ *noun* one of two muscles in the top part of the back which move the shoulder blades

rhonchus /'rɒŋkəs/ *noun* an unusual sound in the chest, heard through a stethoscope, caused by a partial blockage in the bronchi (NOTE: The plural is **rhonchi**.)

Rh-positive /,a: eɪtʃ 'pozɪtɪv/ *adjective* who has the rhesus factor in his or her blood

rhythm /'rɪð(ə)m/ *noun* a regular movement or beat

rhythmic /'rɪðmɪk/ *adjective* regular, with a repeated rhythm

rhythm method /'rɪð(ə)m ,meθəd/ *noun* a method of birth control where sexual intercourse should take place only during the safe periods when conception is least likely to occur, i.e. at the beginning and at the end of the menstrual cycle

COMMENT: This method is not as safe or reliable as other methods of contraception because the time when ovulation takes place cannot be accurately calculated if a woman does not have regular periods.

rib /rib/ *noun* one of twenty-four curved bones which protect the chest (NOTE: For other terms referring to the ribs, see words beginning with **cost-**, **costo-**.)

ribavirin /'raɪbə,vairɪn/ *noun* a synthetic drug which helps to prevent the synthesis of viral DNA and RNA, used in the treatment of viral diseases

rib cage /'rib keɪdʒ/ *noun* the ribs and the space enclosed by them

COMMENT: The rib cage is formed of twelve pairs of curved bones. The top seven pairs, the true ribs, are joined to the breastbone in front by costal cartilage. The other five pairs of ribs, the false ribs, are not attached to the breastbone, though the 8th, 9th and 10th pairs are each attached to the rib above. The bottom two pairs, which are not attached to the breastbone at all, are called the floating ribs.

riboflavine /'raɪbə'fleɪvɪn/ same as **Vitamin B₂** (NOTE: The US spelling is **riboflavin**.)

ribonuclease /,raɪbə'u:njʊ:klaɪəz/ *noun* an enzyme which breaks down RNA

ribonucleic acid /,raɪbə'nju:klɪ:k ə'sɪd/ *noun* one of the nucleic acids in the nucleus of all living cells, which takes coded information from DNA and translates it into specific enzymes and proteins. ☐ **DNA**. Abbr **RNA**

ribose /'raɪbaʊs/ *noun* a type of sugar found in RNA

ribosomal /,raɪbə'səʊm(ə)l/ *adjective* referring to ribosomes

ribosome /'raɪbəsəʊm/ *noun* a tiny particle in a cell, containing RNA and protein, where protein is synthesised

ricewater stools /'raɪswɔ:tə stu:lz/ *plural noun* watery faeces that are typically passed by people who have cholera

rich /rɪtʃ/ *adjective* 1. well supplied 2. referring to food which has a high calorific value

'...the sublingual region has a rich blood supply derived from the carotid artery' [Nursing Times]

ricin /'raɪsin/ *noun* a highly toxic albumin found in the seeds of the castor oil plant

rick /rɪk/ *noun* a slight injury to a joint caused by wrenching or spraining it ☐ *verb* to wrench or sprain a joint of the body slightly

rickets /'rɪkɪts/ *noun* a disease of children, where the bones are soft and do not develop

properly due to lack of Vitamin D. Also called **rachitis**

COMMENT: Initial treatment for rickets in children is a vitamin-rich diet, together with exposure to sunshine which causes vitamin D to form in the skin.

Rickettsia /rɪ'kɛtsiə/ *noun* a genus of micro-organisms which causes several diseases including Q fever and typhus

rickettsial /rɪ'kɛtsiəl/ *adjective* referring to Rickettsia

rickettsial pox /rɪ'kɛtsiəl pɒks/ *noun* a disease found in North America, caused by *Rickettsia akari* passed to humans by bites from mites which live on mice

rid /rɪd/ *verb* ☐ **to get rid of something** to make something go away ☐ *He can't get rid of his cold - he's had it for weeks.* ☐ **to be rid of something** not to have something unpleasant any more ☐ *I'm very glad to be rid of my flu.*

ridge /rɪdʒ/ *noun* a long raised part on the surface of a bone or organ

rifampicin /rif'æmpɪsɪn/ *noun* an antibiotic which works by interfering with RNA synthesis in the infecting bacteria, used in the treatment of tuberculosis, leprosy and other bacterial infections

right /raɪt/ *noun* the fact of being legally entitled to do or to have something ☐ *You always have the right to ask for a second opinion.*

right colic /,raɪt 'kɒplɪk/ *noun* an artery which leads from the superior mesenteric artery

right-handed /,raɪt 'hændɪd/ *adjective* using the right hand more often than the left ☐ *He's right-handed.* ☐ *Most people are right-handed.*

right-left shunt /,raɪt left 'ʃʌnt/ *noun* a malformation in the heart, allowing blood to flow from the pulmonary artery to the aorta

right lymphatic duct /,raɪt lɪm,fætɪk 'dʌkt/ *noun* one of the main terminal channels for carrying lymph, draining the right side of the head and neck and entering the junction of the right subclavian and internal jugular veins. It is the smaller of the two main discharge points of the lymphatic system into the venous system, the larger being the thoracic duct.

rigid /'rɪdʒɪd/ *adjective* stiff, not moving

rigidity /rɪ'dʒɪdɪti/ *noun* the fact of being rigid, bent or not able to be moved. ☐ **spasticity**

rigor /'rɪgə/ *noun* an attack of shivering, often with fever

rigor mortis /,rɪgə 'mɔ:tɪs/ *noun* a condition in which the muscles of a dead body become stiff after death and then become relaxed again

COMMENT: Rigor mortis starts about eight hours after death, and begins to disappear several hours later. Environment and temperature play a large part in the timing.

rima /'raɪma/ *noun* a narrow crack or cleft

rima glottidis /,ri:'ma 'glɒtɪdɪs/ *noun* a space between the vocal cords

ring /rɪŋ/ *noun* a circle of tissue, or tissue or muscle shaped like a circle

ring block /'rɪŋ blɒk/ *noun* the process of inserting local anaesthetic all the way round a digit, e.g. a finger, in order to perform a procedure distal to the block.

Ringer's solution /'rɪŋəz sə,lju:s(ə)n/ *noun* a solution of inorganic salts which is used both to treat burns and cuts and to keep cells, tissues or organs alive outside the body

ring finger /'rɪŋ ,fɪŋgə/ *noun* the third finger, the finger between the little finger and the middle finger

ringing in the ear /,rɪŋɪŋ ɪn ðɪ 'ɪə/ ♦ **tinnitus**

ringworm /'rɪŋwɜ:m/ *noun* any of various infections of the skin by a fungus, in which the infection spreads out in a circle from a central point. It is very contagious and difficult to get rid of. Also called **tinea**

Rinne's test /'rɪnɪz test/ *noun* a hearing test in which a tuning fork is hit and its handle placed near the ear, to test for air conduction, and then on the mastoid process, to test for bone conduction. It is then possible to determine the type of lesion which exists by finding if the sound is heard for a longer period by air or by bone conduction. [Described 1855. After Friedrich Heinrich Rinne (1819–68), otologist at Göttingen, Germany.]

rinse out /,rɪns 'aʊt/ *verb* to lightly wash the inside of something to make it clean, e.g. to get rid of soap ◎ *She rinsed out the measuring jar.* ◎ *Rinse your mouth out with mouthwash.*

ripple bed /'rɪp(ə)l bed/ *noun* a type of bed with an air-filled mattress divided into sections, in which the pressure is continuously being changed so that the body can be massaged and bedsores can be avoided

rise /raɪz/ *verb* to go up ◎ *His temperature rose sharply.* (NOTE: **rising – rose – risen**)

risk /rɪsk/ *noun* the possibility of something harmful happening ◎ *There is a risk of a cholera epidemic.* ◎ *There is no risk of the disease spreading to other members of the family.* □ **at risk** in danger of being harmed ◎ *Businessmen are particularly at risk of having a heart attack.* □ **children at risk** children who are more likely to be harmed or to catch a disease ■ *verb* to do something which may possibly cause harm or have bad results ◎ *If the patient is not moved to an isolation ward, all the patients and staff in the hospital risk catching the disease.*

‘...adenomatous polyps are a risk factor for carcinoma of the stomach’ [Nursing Times]

‘...three quarters of patients aged 35–64 on GPs’ lists have at least one major risk factor: high cholesterol, high blood pressure or addiction to tobacco’ [Health Services Journal]

risk factor /rɪsk ,fæktə/ *noun* a characteristic that increases a person’s likelihood of getting a particular disease ◎ *Smoking is a risk*

factor for lung cancer. ◎ *Obesity is a risk factor for diabetes.*

risus sardonicus /,raɪsəs sə:dɒnɪkəs/ *noun* a twisted smile which is a symptom of tetanus

rite of passage /,raɪt əv 'pæsɪdʒ/ *noun* a ceremony which shows that somebody is moving from one stage of their life to another, e.g. from childhood to puberty or from unmarried to married life

river blindness /'rɪvə ,blaɪndnəs/ *noun* blindness caused by larvae getting into the eye in cases of onchocerciasis

RM abbr Registered Midwife

RMN abbr Registered Mental Nurse

RN abbr Registered Nurse

RNA abbr ribonucleic acid

RNMH abbr Registered Nurse for the Mentally Handicapped

Rocky Mountain spotted fever /,rɒkɪ ,maʊntin ,spɒtid 'fi:və/ *noun* a type of typhus caused by *Rickettsia rickettsii*, transmitted to humans by ticks

rod /rɒd/ *noun* 1. a stick shape with rounded ends ◎ *Some bacteria are shaped like rods or are rod-shaped.* 2. one of two types of light-sensitive cell in the retina of the eye. Rods are sensitive to dim light, but not to colour. ♦ **cone**

COMMENT: Rod cells in the eye are sensitive to poor light. They contain rhodopsin or visual purple, which produces the nervous impulse which the rod transmits to the optic nerve.

rodent ulcer /,rəʊd(ə)nt 'ʌlsə/ *noun* a malignant tumour on the face

COMMENT: Rodent ulcers are different from some other types of cancer in that they do not spread to other parts of the body and do not metastasise, but remain on the face, usually near the mouth or eyes. Rodent ulcer is rare before middle age.

roentgen /'rɒntgən/ *noun* a unit of radiation used to measure the exposure of someone or something to X-rays or gamma rays. Symbol **R** [After Wilhelm Konrad von Röntgen (1845–1923), physicist at Strasbourg, Geissen, Würzburg and Munich, and then Director of the physics laboratory at Würzburg where he discovered X-rays in 1895. Nobel prize for Physics 1901.]

roentgenogram /'rɒntgenəgræm/ *noun* an X-ray photograph

roentgenology /,rɒntgə'nɒlədʒi/ *noun* the study of X-rays and their use in medicine

roentgen ray /'rɒntgən reɪ/ *noun* an X-ray or gamma ray which can pass through tissue and leave an image on a photographic film

role /rəʊl/ *noun* 1. the usual or expected function of somebody or something in a particular process or event ◎ *the role of haemoglobin in blood clotting* 2. the characteristic or expected pattern of behaviour of a particular member of a social group ◎ *the eldest child’s role in the family*

role playing /'rəʊl ,pleɪŋ/ *noun* the act of pretending to be somebody else in a situation, so that you have to imagine how that person feels and thinks. It usually involves several people. It is used in many training exercises and psychiatric evaluations.

rolled bandage /,rəʊld 'bændɪdʒ/, **roller bandage** /,rəʊlə 'bændɪdʒ/ *noun* a bandage in the form of a long strip of cloth which is rolled up from one or both ends

Romberg's sign /'rombɜ:gz sain/ *noun* a swaying of the body or falling when standing with the feet close together and the eyes closed, the result of loss of the joint position sense [Described 1846. After Moritz Heinrich Romberg (1795–1873), German physician and pioneer neurologist.]

COMMENT: If a patient cannot stand upright when his or her eyes are closed, this shows that nerves in the lower limbs which transmit joint position sense to the brain are damaged.

rongeur /'rɒnjgɜ:/ *noun* a strong surgical instrument like a pair of pliers, used for cutting bone

roof /ru:f/ *noun* the top part of a cavity □ **roof of the mouth** Same as **palate**

root /ru:t/ *noun* 1. a point from which a part of the body grows □ **root of hair** or **hair root** □ **root of nerve** or **nerve root** 2. part of a tooth which is connected to a socket in the jaw ► also called **radix**

root canal /ru:t kə,næl/ *noun* a canal in the root of a tooth through which the nerves and blood vessels pass

rooting reflex /'ru:tɪŋ ,rifleks/ *noun* the instinct in new babies to turn their heads towards a touch on the cheek or mouth, which is important for breastfeeding

Roper, Logan and Tierney model /,rəʊpə ,ləʊgən ən 'tɪəni ,mɒd(ə)l/ *noun* an important model of nursing developed in the UK in 1980. Various factors such as necessary daily tasks, lifespan and health status are used to assess the relative independence of an individual, which the nurse will help them to increase.

Rorschach test /'rɔ:sɑ:k tɛst/ *noun* the ink blot test, used in psychological diagnosis, where someone is shown a series of blots of ink on paper and is asked to say what each blot reminds him or her of. The answers give information about the person's psychological state. [Described 1921. After Hermann Rorschach (1884–1922), German-born psychiatrist who worked in Bern, Switzerland.]

rosacea /rə'u'zeɪʃə/ *noun* a common skin disease seen from middle age affecting the face, and especially the nose, which becomes red because of enlarged blood vessels. The cause is not known. Also called **acne rosacea** (NOTE: Despite its alternative name, rosacea is not a type of acne.)

rosea /'rəʊzia/ ♀ **pityriasis**

roseola infantum /rəʊ,zi:ələ in'fæntəm/ *noun* a sudden infection of small children, with fever, swelling of the lymph glands and a rash. It is caused by herpesvirus 6. Also called **exanthem subitum**

rostral /'rɒstr(ə)l/ *adjective* like the beak of a bird

rostrum /'rɒstrəm/ *noun* a projecting part of a bone or structure shaped like a beak (NOTE: The plural is **rostra**.)

rot /rɒt/ *verb* to decay, to become putrefied □ *The flesh was rotting round the wound as gangrene set in.* □ *The fingers can rot away in leprosy.*

rotate /rəʊ'teɪt/ *verb* to move in a circle, or make something move in a circle

rotation /rəʊ'teɪʃ(ə)n/ *noun* the act of moving in a circle. See illustration at **ANATOMICAL TERMS** in Supplement □ **lateral and medial rotation** turning part of the body to the side, towards the midline

rotator /rəʊ'teɪtə/ *noun* a muscle which makes a limb rotate

rotavirus /'rəʊtəvairəs/ *noun* any of a group of viruses associated with gastroenteritis in children

'...rotavirus is now widely accepted as an important cause of childhood diarrhoea in many different parts of the world' [*East African Medical Journal*]

Rothera's test /'rɒðərəz tɛst/ *noun* a test to see if acetone is present in urine, a sign of ketosis which is a complication of diabetes mellitus [After Arthur Cecil Hamel Rothera (1880–1915), biochemist in Melbourne, Australia]

Roth spot /'rəʊt spɒt/ *noun* a pale spot which sometimes occurs on the retina of a person who has leukaemia or some other diseases [After Moritz Roth (1839–1915), Swiss pathologist and physician]

rotunda /rəʊ'tʌndə/ ♀ **fenestra**

rough /rʌf/ *adjective* not smooth □ **rough skin**

roughage /'rʌfɪdʒ/ *noun* same as **dietary fibre**

COMMENT: Roughage is found in cereals, nuts, fruit and vegetables. It is believed to be necessary to help digestion and avoid developing constipation and obesity.

rouleau /ru:ləu/ *noun* a roll of red blood cells which have stuck together like a column of coins (NOTE: The plural is **rouleaux**.)

round /raʊnd/ *adjective* shaped like a circle □ *noun* a regular visit □ **to do the rounds of the wards** to visit various wards in a hospital and talk to the nurses and check on patients' progress or condition □ **a health visitor's rounds** regular series of visits made by a health visitor

round ligament /raʊnd 'lɪgəmənt/ *noun* a band of muscle which stretches from the uterus to the labia

round window /raʊnd 'wɪndəʊ/ *noun* a round opening between the middle ear and the

cochlea, and closed by a membrane. Also called **fenestra rotunda**. See illustration at **EAR** in Supplement

roundworm /'raʊndwɜːm/ *noun* any of several common types of parasitic worms with round bodies, such as hookworms. Compare **flatworm**

Rovsing's sign /'rɒvſɪŋz saɪn/ *noun* pain in the right iliac fossa when the left iliac fossa is pressed, which is a sign of acute appendicitis [Described 1907. After Nils Thorkild Rovsing (1862–1927), Professor of Surgery at Copenhagen, Denmark.]

Royal College of General Practitioners /'rɔɪəl ,kɒplɪdʒ əv 'dʒenə(r)əl/ *noun* a professional association which represents family doctors. Abbr **RCGP**

Royal College of Nursing /'rɔɪəl ,kɒplɪdʒ əv 'nɜːsɪng/ *noun* a professional association which represents nurses. Abbr **RCN**

Roy's model /'rɔɪz ,mɒd(ə)l/ *noun* a model for nursing developed in the US in the 1970s. It describes a person's health as being a state of successful positive adaptation to all those stimuli from the environment which could interfere with their basic need satisfaction. Illness results from an inability to adapt to such stimuli, so nurses should help patients to overcome this.

RQ abbr respiratory quotient

RR abbr 1. recovery room 2. relative risk

-rrhage /'rɪdʒ/, -**rrhagia** /'reɪdʒə/ *suffix* referring to an unusual flow or discharge of blood

-rrhaphy /'rɛfɪ/ *suffix* referring to surgical sewing or suturing

-rrhexis /reksɪs/ *suffix* referring to splitting or rupture

-rhoea /rɪə/ *suffix* referring to an unusual flow or discharge of fluid from an organ

RSCN abbr Registered Sick Children's Nurse

RSI abbr repetitive strain injury

RSV abbr respiratory syncytial virus

RTN abbr Registered Theatre Nurse

rub /rʌb/ *noun* a lotion used to rub on the skin ○ *The ointment is used as a rub.* ■ *verb* 1. to move something, especially the hands, backwards and forwards over a surface ○ *She rubbed her leg after she knocked it against the table.* ○ *He rubbed his hands to make the circulation return.* 2. □ **to rub into** to make an ointment go into the skin by rubbing ○ *Rub the liniment gently into the skin.*

rubber /'rʌbə/ *noun* 1. a material which can be stretched and compressed, made from the thick white liquid called latex, from a tropical tree 2. a condom (*informal*)

rubber sheet /,rʌbə 'ʃɪ:t/ *noun* a waterproof sheet put on hospital beds or on the bed of a child who is prone to bedwetting, to protect the mattress

rubbing alcohol /'rʌbɪŋ ,ælkəhɒl/ *noun* US same as **surgical spirit**

rubefacient /,ru:bɪ'feɪs(ə)nt/ *noun* a substance which makes the skin warm, and pink or red ■ *adjective* causing the skin to become red

rubella /ru:'belə/ *noun* a common infectious viral disease of children with mild fever, swollen lymph nodes and rash. Also called **German measles**

COMMENT: Rubella can cause stillbirth or malformation of an unborn baby if the mother catches the disease while pregnant. One component of the MMR vaccine immunises against rubella.

rubroela /ru:'bi:rələ/ *noun* same as **measles**

Rubin's test /'ru:bɪnз test/ *noun* a test to see if the Fallopian tubes are free from obstruction [After Isador Clinton Rubin (b. 1883), US gynaecologist]

rubor /'ru:bə/ *noun* redness of the skin or tissue

rudimentary /,ru:dɪ'ment(ə)rɪ/ *adjective* existing in a small form, or not developed fully ○ *The child was born with rudimentary arms.*

Ruffini corpuscles /ru:'fi:nɪ ,kɔ:pʊs(ə)lz/, **Ruffini nerve endings** /ru:,fi:nɪ 'nɜːv ,endɪŋz/ *plural noun* branching nerve endings in the skin, which are thought to be sensitive to heat

rusa /'ru:gə/ *noun* a fold or ridge, especially in a mucous membrane such as the lining of the stomach (NOTE: The plural is **rugae**.)

rule out /,ru:l 'aut/ *verb* to state that someone does not have a specific disease ○ *We can rule out shingles.*

rumbling /'rʌmblɪŋ/ *noun* borborygmus, noise in the abdomen, caused by gas in the intestine

rumination /,ru:mɪ'nɛf(ə)n/ *noun* 1. a condition in which someone has constant irrational thoughts which they cannot control 2. the regurgitation of food from the stomach which is then swallowed again

run /rʌn/ *verb* (of the nose) to drip with liquid secreted from the mucous membrane in the nasal passage ○ *His nose is running.* ○ *If your nose is running, blow it on a handkerchief.* ○ *One of the symptoms of a cold is a running nose.*

run-down /,rʌn 'daʊn/ *adjective* exhausted and unwell

running /'rʌnɪŋ/ *adjective* from which liquid is flowing ○ **running eyes**

running sore /,rʌnɪŋ 'sɔ:/ *noun* a sore which is discharging pus

runny nose /,rʌnɪ 'nəʊz/ *noun* a nose which is dripping with liquid from the mucous membrane

runs /rʌnz/ *noun* the runs same as **diarrhoea** (*informal*) ○ *I've got the runs again.* (NOTE: Takes a singular or plural verb.)

rupture /'rʌptʃə/ *noun* 1. the breaking or tearing of an organ such as the appendix 2. same as **hernia** ■ *verb* to break or tear something

ruptured spleen /,rʌptʃəd 'spli:n/ *noun* a spleen which has been torn by piercing or by a blow

Russell traction /'rʌs(ə)l ,trækʃ(ə)n/ *noun* a type of traction with weights and slings used to straighten a femur which has been fractured

[Described 1924. After R. Hamilton Russell (1860–1933), Australian surgeon.]

Ryle's tube /'raɪlz ,tju:b/ *noun* a thin tube which is passed into the stomach through either the nose or mouth, used to pump out the contents of the stomach or to introduce a barium meal in the stomach [Described 1921. After John Alfred Ryle (1882–1950), physician at London, Cambridge and Oxford, UK.]

S

Sabin vaccine /'seɪbɪn ,væksi:n/ *noun* an oral vaccine against poliomyelitis, consisting of weak live polio virus. Compare **Salk vaccine** (NOTE: This is the vaccine used in the UK) [Developed 1955. After Albert Bruce Sabin (1906–93), Russian-born New York bacteriologist.]

sac /sæk/ *noun* a part of the body shaped like a bag

saccades /sæ'keɪdz/ *plural noun* controlled rapid movements of the eyes made when a person is changing the direction in which they are focusing, e.g. when they are reading

sacchar- /sækə\| prefix same as **saccharo-** (used before vowels)

saccharide /'sækəraɪd/ *noun* a form of carbohydrate

saccharin /'sækərɪn/ *noun* a white crystalline substance, used in place of sugar because, although it is nearly 500 times sweeter than sugar, it contains no carbohydrates

saccharine /'sækərɪn/ *adjective* relating to, resembling or containing sugar

saccharo- /sækərəʊ\| prefix referring to sugar

saccule /'sækjʊ:l/, **sacculus** /'sækjʊləs/ *noun* the smaller of two sacs in the vestibule of the inner ear which is part of the mechanism which relates information about the position of the head in space

sacra /'seɪkrə/ plural of **sacrum**

sacral /'seɪkrəl/ *adjective* referring to the sacrum

sacral foramen /,seɪkrəl fə'reɪmən/ *noun* one of the openings in the sacrum through which the sacral nerves pass. See illustration at **PELVIS** in Supplement (NOTE: The plural is **sacral foramina**.)

sacralisation /,sækərələt'zeɪʃ(ə)n/, **sacralization** *noun* a condition in which the lowest lumbar vertebra fuses with the sacrum

sacral nerve /'sækərəl ,nɜ:v/ *noun* one of the nerves which branch from the spinal cord in the sacrum and govern the legs, the arms and the genital area

sacral plexus /,seɪkrəl 'pleksəs/ *noun* a group of nerves inside the pelvis near the sac-

rum which lead to nerves in the buttocks, back of the thigh and lower leg and foot

sacral vertebrae /,seɪkrəl 'vɜ:təbrə/ *plural noun* the five vertebrae in the lower part of the spine which are fused together to form the sacrum

sacro- /seɪkrəʊ\| *prefix* referring to the sacrum

sacrococcygeal /,seɪkrəkɒk'si:dʒiəl/ *adjective* referring to the sacrum and the coccyx

sacroiliac /,seɪkrəu'iliæk/ *adjective* referring to the sacrum and the ilium

sacroiliac joint /,seɪkrəu'iliæk dʒɔɪnt/ *noun* a joint where the sacrum joins the ilium

sacroiliitis /,seɪkrəu'ili'atɪs/ *noun* inflammation of the sacroiliac joint

sacrotuberous ligament /,seɪkrəu'tju:bərəs 'lɪgəmənt/ *noun* the large ligament between the iliac spine, the sacrum, the coccyx and the ischial tuberosity

sacro-uterine ligament /,seɪkrəu'ju:tərɪnəs 'lɪgəmənt/ *noun* a ligament which goes from the neck of the uterus to the sacrum, passing on each side of the rectum

sacrum /'seɪkrəm/ *noun* a flat triangular bone, formed of five sacral vertebrae fused together, located between the lumbar vertebrae and the coccyx. It articulates with the coccyx and also with the hip bones. See illustration at **PELVIS** in Supplement (NOTE: The plural is **sacra**.)

SAD *abbr* seasonal affective disorder

saddle joint /'sæd(ə)l dʒɔɪnt/ *noun* a synovial joint where one element is concave and the other convex, like the joint between the thumb and the wrist

saddle-nose /'sæd(ə)l nəʊz/ *noun* a deep bridge of the nose, usually a sign of injury but sometimes a sign of tertiary syphilis

sadism /'seɪdɪz(ə)m/ *noun* a sexual condition in which a person finds sexual pleasure in hurting others

sadist /'seɪdɪst/ *noun* a person whose sexual urge is linked to sadism

sadistic /sə'dɪstɪk/ *adjective* referring to sadism. Compare **masochism**

SADS abbr seasonal affective disorder syndrome

safe /seɪf/ **adjective** 1. not likely to cause harm ○ *Is it safe to use this drug on someone who is diabetic?* 2. in a protected place or situation and not likely to be harmed or lost ○ *Keep the drugs in a safe place.* ○ *He's safe in hospital being looked after by the doctors and nurses.* (NOTE: safer – safest)

'...a good collateral blood supply makes occlusion of a single branch of the coeliac axis safe' [British Medical Journal]

safe dose /seɪf 'dəʊs/ **noun** the amount of a drug which can be given without being harmful

safely /'seflɪ/ **adverb** without danger, without being hurt ○ *You can safely take six tablets a day without any risk of side-effects.*

safe period /'seɪf ,piəriəd/ **noun** the time during the menstrual cycle, when conception is not likely to occur, and sexual intercourse can take place, used as a method of contraception. ♦ **rhythm method**

safe sex /'seks/ **noun** the use of measures such as a contraceptive sheath and having only one sexual partner to reduce the possibility of catching a sexually transmitted disease

safety /'sefti/ **noun** the fact of being safe □ **to take safety precautions** to do things which make your actions or condition safe

safety pin /'sefti pɪn/ **noun** a special type of bent pin with a guard which protects the point, used for attaching nappies or bandages

sagittal /'sædʒɪt(ə)l/ **adjective** going from the front of the body to the back, dividing it into right and left

sagittal plane /,sædʒɪt(ə)l 'pleɪn/ **noun** the division of the body along the midline, at right angles to the coronal plane, dividing the body into right and left parts. Also called **median plane**. See illustration at ANATOMICAL TERMS in Supplement

sagittal section /,sædʒɪt(ə)l 'sekʃən/ **noun** any section or cut through the body, going from the front to the back along the length of the body

sagittal suture /,sædʒɪt(ə)l 'su:tʃə/ **noun** a joint along the top of the head where the two parietal bones are fused

STHA abbr Strategic Health Authority

St John Ambulance Association and Brigade /sənt ,dʒɒn 'æmbjʊləns ə,səʊns iər(ə)n ən bri'geɪd/ **noun** a voluntary organisation which gives training in first aid and whose members provide first aid at public events such as football matches and demonstrations

St Louis encephalitis /seɪnt ,lu:zɪs en,kefə 'laɪtɪs/ **noun** a sometimes fatal form of encephalitis, transmitted by the ordinary house mosquito, *Culex pipiens* [After St Louis, Missouri, USA, where it was first diagnosed]

St Vitus's dance /sənt 'vaɪtəsɪz dæ:ns/ **noun** a former name for Sydenham's chorea

salbutamol /sæl'bju:təmpl/ **noun** a drug which relaxes and dilates the bronchi, used in the relief of asthma, emphysema and chronic bronchitis

salicylate /sə'lɪsileɪt/ **noun** one of various pain-killing substances derived from salicylic acid, e.g. aspirin

salicylic acid /,sælɪ,siłɪk 'æsɪd/ **noun** a white antiseptic substance which destroys bacteria and fungi and which is used in ointments to treat corns, warts and other skin disorders

salicylism /'sælɪsɪlɪz(ə)m/ **noun** the effects of poisoning due to too much salicylic acid. Symptoms include headache, tinnitus, faintness and vomiting.

saline /'seɪlɪn/ **adjective** referring to or containing salt ○ *The patient was given a saline transfusion.* ■ **noun** same as saline solution

saline drip /,seɪlɪn 'drɪp/ **noun** a drip containing a saline solution

saline solution /'seɪlɪn sə,lu:ʃ(ə)n/ **noun** a solution made of distilled water and sodium chloride, which is introduced into the body intravenously through a drip

saliva /sə'laɪvə/ **noun** a fluid in the mouth, secreted by the salivary glands, which starts the process of digesting food (NOTE: For terms referring to saliva, see words beginning with **ptyal-**, **ptyalo-** or **sial-, sialo-**.)

COMMENT: Saliva is a mixture of a large quantity of water and a small amount of mucus, secreted by the salivary glands. Saliva acts to keep the mouth and throat moist, allowing food to be swallowed easily. It also contains the enzyme ptyalin, which begins the digestive process of converting starch into sugar while food is still in the mouth. Because of this association with food, the salivary glands produce saliva automatically when food is seen, smelt or even simply talked about.

salivary /sə'laɪv(ə)ri/ **adjective** referring to saliva

salivary calculus /sə'laɪv(ə)ri 'kælkjʊləs/ **noun** a stone which forms in a salivary gland

salivary gland /sə'laɪv(ə)ri glænd/ **noun** a gland which secretes saliva, situated under the tongue (the **sublingual gland**), beneath the lower jaw (the **submandibular gland**) and in the neck at the back of the lower jaw joint (the **parotid gland**)

salivate /'sælɪveɪt/ **verb** to produce saliva

salivation /,sælɪ'veɪʃ(ə)n/ **noun** the production of saliva

Salk vaccine /'sɔ:k ,væksi:n/ **noun** an injected vaccine against poliomyelitis, consisting of inactivated polio virus. Compare **Sabin vaccine** [Developed 1954. After Jonas Edward Salk (1914–95), virologist in Pittsburgh, USA.]

salmeterol /sæl'metərɒl/ **noun** a drug which relaxes and widens the airways, used to treat severe asthma

Salmonella /'sælmə'nelə/ *noun* a genus of pathogenic bacteria which live in the intestines and are usually acquired by eating contaminated food, responsible for many cases of gastroenteritis and for typhoid or paratyphoid fever
(NOTE: The plural is **Salmonellae**.)

Salmonella poisoning /'sælmə'nelə,pɔ:zɪn(ə)nɪŋ/ *noun* poisoning caused by *Salmonellae* which develop in the intestines ○ Five people were taken to hospital with *Salmonella* poisoning.

salmonellosis /'sælmənə'ləʊsɪs/ *noun* food poisoning caused by *Salmonella* in the digestive system

salping- /'sælpɪndʒ/ *prefix* same as **salpingo-** (used before vowels)

salpingectomy /'sælpɪn'dʒektəmi/ *noun* a surgical operation to remove or cut a Fallopian tube, used as a method of contraception

salpingitis /'sælpɪn'dʒaɪtɪs/ *noun* inflammation, usually of a Fallopian tube

salpingo- /'sælpɪngəu/ *prefix* 1. referring to the Fallopian tubes 2. referring to the auditory meatus

salpingography /'sælpɪnɪ'gɒgrəfi/ *noun* an X-ray examination of the Fallopian tubes

salpingolysis /'sælpɪn'glɪsɪs/ *noun* a surgical operation to open up blocked Fallopian tubes by removing any adhesions near the ovaries

salpingo-oophorectomy /'sælpɪngəu,əʊfə'rektəmi/ *noun* a surgical operation to remove a Fallopian tube and ovary

salpingo-oophoritis /'sælpɪn'əʊfə'rɪtɪs/, **salpingo-oothecitis** /'sælpɪn'əʊθə'rɪtɪs/ *noun* inflammation of a Fallopian tube and the ovary connected to it

salpingo-oophorocele /'sælpɪngəu əʊ'nfərəʊsɪ:l/, **salpingo-oothecocoele** /'sælpɪngəu əʊ'θi:kəʊsɪ:l/ *noun* a hernia where a Fallopian tube and its ovary pass through a weak point in the surrounding tissue

salpingostomy /'sælpɪn'gɒstəmi/ *noun* a surgical operation to open up a blocked Fallopian tube

salpinx /'sælpɪnɪks/ *noun* same as **Fallopian tube** (NOTE: The plural is **salpinges**.)

salt /sɔ:lt/ *noun* 1. small white crystals mainly of sodium chloride used to flavour and preserve food 2. a crystalline compound, usually containing a metal, formed when an acid is neutralised by an alkali

COMMENT: Salt forms a necessary part of diet, as it replaces salt lost in sweating and helps to control the water balance in the body. It also improves the working of the muscles and nerves. Most diets contain more salt than each person actually needs, and although it has not been proved to be harmful, it is generally wise to cut down on salt consumption. Salt is one of the four tastes, the others being sweet, sour and bitter.

salt depletion /'sɔ:lt dɪpli:ʃ(ə)n/ *noun* loss of salt from the body, by sweating or vomiting, which causes cramp

salt-free diet /'sɔ:lt fri:t'daɪət/ *noun* a diet in which no salt is allowed

salve /sælv/ *noun* an ointment

sample /'sæ:mpl/ *noun* a small quantity of something used for testing ○ *Blood samples were taken from all the staff in the hospital.* ○ *The doctor asked her to provide a urine sample.*

sanatorium /'sænə'tɔ:rɪəm/ *noun* an institution, similar to a hospital, which treats particular types of disorder such as tuberculosis, or offers special treatment such as hot baths or massage (NOTE: The plural is **sanatoria** or **sanatoriums**.)

sandflea /'sændfla:/ *noun* the jigger, a tropical insect which enters the skin between the toes and digs under the skin, causing intense irritation

sandfly fever /'sændfla:fɪvə/ *noun* a virus infection like influenza, which is transmitted by the bite of the sandfly *Phlebotomus papatasii* and is common in the Middle East

sandwich therapy /'sænwɪdʒ'θerəpi/ *noun* a system in which one type of treatment is used between exposures to a different treatment, e.g., chemotherapy given before and after radiation, or radiation given before and after surgery

sangui- /'sæŋgwɪ/ *prefix* relating to blood

sanguineous /sæŋ'gwɪniəs/ *adjective* referring to blood, containing blood

sanies /'seɪnɪts/ *noun* a discharge from a sore or wound which has an unpleasant smell

sanitary /'sænɪt(ə)ri/ *adjective* 1. clean 2. referring to hygiene or to health

sanitary towel /'sænɪt(ə)ri'_taʊəl/ *noun* a disposable pad of absorbent material worn by women to absorb the blood flow during menstruation

sanitation /'sænɪ'teɪʃ(ə)n/ *noun* the practice of being hygienic, especially referring to public hygiene ○ *Poor sanitation in crowded conditions can result in the spread of disease.*

SA node /'es 'eɪ nəud/, **S-A node** *noun* same as **sinoatrial node**

saphena /'sæfɪ:nə/ *noun* same as **saphenous vein** (NOTE: The plural is **saphenae**.)

saphenous /'sæfɪ:nəs/ *adjective* relating to the saphenous veins

saphenous nerve /'sæfɪ'nəs nɜ:v/ *noun* a branch of the femoral nerve which connects with the sensory nerves in the skin of the lower leg

saphenous opening /'sæfɪ:nəs 'ə:p(ə)nɪŋ/ *noun* a hole in the fascia of the thigh through which the saphenous vein passes

saphenous vein /sə'fi:nəs veɪn/ *noun* one of two veins which take blood from the foot up the leg. Also called **saphena**

COMMENT: The long (internal) saphenous vein, the longest vein in the body, runs from the foot up the inside of the leg and joins the femoral vein. The short (posterior) saphenous vein runs up the back of the lower leg and joins the popliteal vein.

sapphism /'sæfɪz(ə)m/ *noun* same as **lesbianism**

sapraemia /sæ'pri:mɪə/ *noun* blood poisoning by saprophytes

saprophyte /'sæprəfaɪt/ *noun* a microorganism which lives on dead or decaying tissue

saprophytic /sæprə'tɪtɪk/ *adjective* referring to an organism which lives on dead or decaying tissue

sarc- /sɑ:k/, **sarco-** /sə:kəʊ/ *prefix* 1. referring to flesh 2. referring to muscle

sarcoid /'sɑ:kɔɪd/ *noun* a tumour which is like a sarcoma ■ *adjective* like a sarcoma

sarcoidosis /sə:kɔɪ'daʊsɪs/ *noun* a disease causing enlargement of the lymph nodes, where small nodules or granulomas form in certain tissues, especially in the lungs or liver and other parts of the body. Also called **Boeck's disease, Boeck's sarcoid** (NOTE: The Kveim test confirms the presence of sarcoidosis.)

sarcolemma /,sə:kəʊ'lɛmə/ *noun* a membrane surrounding a muscle fibre

sarcoma /sə:kəʊmə/ *noun* a cancer of connective tissue such as bone, muscle or cartilage

sarcomatosis /sə:kəʊmə'təʊsɪs/ *noun* a condition in which a sarcoma has spread through the bloodstream to many parts of the body

sarcomatous /sə:'kɒmətəs/ *adjective* referring to a sarcoma

sarcomere /'sə:kəmɪə/ *noun* a filament in myofibril

sarcoplasm /'sə:kəplæz(ə)m/ *noun* semi-liquid cytoplasm in muscle membrane. Also called **myoplasm**

sarcoplasmic /,sə:kəʊ'plæzmɪk/ *adjective* referring to sarcoplasm

sarcoplasmic reticulum /,sə:kəʊ plæzmɪk rɪ'tɪkjuləm/ *noun* a network in the cytoplasm of striated muscle fibres

sarcoptes /sə:'kɒptɪz/ *noun* a type of mite which causes scabies

sardonicus /sə:'dɒnɪkəs/ ♦ **risus sardonicus**

SARS /sə:z/ *noun* a serious, sometimes fatal, infection affecting the respiratory system, first seen in China. Suspected cases of SARS must be isolated with full barrier nursing precautions. Full form **severe acute respiratory syndrome**

sartorius /sə:'tɔ:rɪəs/ *noun* a very long muscle, the longest muscle in the body, which runs

from the anterior iliac spine, across the thigh down to the tibia

saturated fat /,sætʃə'reɪtɪd 'fæt/ *noun* a fat which has the largest amount of hydrogen possible

COMMENT: Animal fats such as butter and fat meat are saturated fatty acids. It is thought that increasing the amount of unsaturated and polyunsaturated fats, mainly vegetable fats and oils, and fish oil, and reducing saturated fats in the food intake helps reduce the level of cholesterol in the blood, and so lessens the risk of atherosclerosis.

saturnism /'sætənɪz(ə)m/ *noun* lead poisoning

satyriasis /,sætə'ræɪəsɪs/ *noun* an obsessive sexual urge in a man (NOTE: A similar condition in a woman is called **nymphomania**.)

saucerisation /,sə:sərə'zeɪʃ(ə)n/, **saucerization** *noun* 1. a surgical operation in which tissue is cut out in the form of a saucer-like depression, usually in order to help material drain away from infected areas of bone 2. the shallow saucer-like appearance of the upper surface of a vertebra after a compression fracture

save /seɪv/ *verb* 1. to stop someone from being hurt or killed ○ *The doctors saved the little boy from dying of cancer.* □ **the surgeons saved her life** they stopped the patient from dying 2. to stop something from being damaged ○ *The surgeons were unable to save the sight of their patient.*

saw /sɔ:/ *noun* a tool with a long metal blade with teeth along its edge, used for cutting ■ *verb* to cut something with a saw (NOTE: **sawing – sawed – sawn**)

Sayre's jacket /'seɪəz ,dʒækɪt/ *noun* a plaster cast which supports the spine when vertebrae have been deformed by tuberculosis or spinal disease [After Lewis Albert Sayre (1820–1901), US surgeon]

s.c. abbr subcutaneous

scab /skæb/ *noun* a crust of dry blood which forms over a wound and protects it

scabicide /'skeɪbəsایd/ *noun* a solution which kills mites ■ *adjective* killing mites

scabies /'skeɪbi:z/ *noun* a very irritating infection of the skin caused by a mite which lives under the skin

scala /'skʊ:lə/ *noun* a spiral canal in the cochlea

COMMENT: The cochlea is formed of three spiral canals: the **scala vestibuli** which is filled with perilymph and connects with the oval window; the **scala media** which is filled with endolymph and transmits vibrations from the scala vestibuli through the basilar membrane to the **scala tympani**, which in turn transmits the sound vibrations to the round window.

scald /skɔ:ld/ *noun* an injury to the skin caused by touching a very hot liquid or steam. Also called **wet burn** ■ *verb* to injure the skin with a very hot liquid or steam

scalding /'skɔ:ldɪŋ/ *adjective* 1. referring to a liquid which is very hot 2. referring to urine which gives a burning sensation when passed
scale /skeil/ *noun* 1. a thin flat piece of something such as dead skin 2. same as **tartar** 3. a system of measurement or valuation based on a series of marks or levels with regular intervals between them ○ *a pay scale* 4. same as **scales** ■ *verb* to remove the calcium deposits from teeth

scalenus /'skei'lɪ:nəs/, **scalene** /'skei:lɪ:nə/ *noun* one of a group of muscles in the neck which bend the neck forwards and sideways, and also help expand the lungs in deep breathing

scalenus syndrome /'skei'lɪ:nəs 'sɪnd्रəm/ *noun* a pain in an arm, caused by the scalenus anterior muscle pressing the subclavian artery and the brachial plexus against the vertebrae. Also called **thoracic outlet syndrome**

scale off /,skei'l 'ɒf/ *verb* to fall off in scales

scaler /'skei:lə/ *noun* a surgical instrument for scaling teeth

scales /skei:lz/ *noun* a machine for weighing ○ *The nurses weighed the baby on the scales.*

scalp /'skei:p/ *noun* the thick skin and muscle, with the hair, which covers the skull

scalpel /'skei:pəl/ *noun* a small sharp-pointed knife used in surgery

scaly /'skei:li/ *adjective* covered in scales ○ *The pustules harden and become scaly.*

scan /skæn/ *noun* 1. an examination of part of the body using computer-interpreted X-rays to create a picture of the part on a screen 2. a picture of part of the body created on a screen using computer-interpreted X-rays ■ *verb* to examine part of the body using computer-interpreted X-rays to create a picture of the part on a screen

scanner /'skænə/ *noun* 1. a machine which scans a part of the body 2. a person who examines a test slide 3. a person who operates a scanning machine

scanning /'skæniŋ/ *noun* 1. the act of examining an area with the eyes 2. the act of examining internal organs of the body with a piece of electronic equipment

scanning speech /'skæniŋ spɪ:tʃ/ *noun* a disorder in speaking, where each sound is spoken separately and given equal stress

scaphocephalic /,skæfəʊsə'fælɪk/ *adjective* having a long narrow skull

scaphocephaly /,skæfəʊ'kefəli/, ,skæfəʊ' 'sefəli/ *noun* a condition in which the skull is unusually long and narrow

scaphoid /'skæfɔɪd/, **scaphoid bone** /'skæfɔɪd bəʊn/ *noun* one of the carpal bones in the wrist. See illustration at **HAND** in Supplement

scapula /'skæpjʊlə/ *noun* one of two large flat bones covering the top part of the back. Also called **shoulder blade** [NOTE: The plural is **scapulae**.)

scapular /'skæpjʊlər/ *adjective* referring to the shoulder blade

scapulo- /'skæpjʊləʊ/ *prefix* relating to the scapula

scapulohumeral /,skæpjʊləʊ'hju:mərəl/ *adjective* referring to the scapula and humerus

scar /skɑ:/ *noun* the mark left on the skin after a wound or surgical incision has healed ○ *He still has the scar of his appendicectomy.* Also called **cicatrix** ■ *verb* to leave a scar on the skin ○ *The burns have scarred him for life.* ○ *Plastic surgeons have tried to repair the scarred arm.* ○ *Patients were given special clothes to reduce hypertrophic scarring.*

scarification /skærifi'keɪʃ(ə)n/ *noun* scratching, making minute cuts on the surface of the skin, e.g. for a smallpox vaccination

scarificator /'skærifɪkətər/ *noun* an instrument used for scarification

scarlatina /,skɔ:la'ti:nə/, **scarlet fever** /,skɔ:ltə 'fi:və/ *noun* an infectious disease with a fever, sore throat and a red rash. It is caused by a haemolytic streptococcus and can sometimes have serious complications if the kidneys are infected.

Scarpa's triangle /,skɑ:rpə:z 'traiæŋgəl/ *noun* same as **femoral triangle** [After Antonio Scarpa (1747–1832), Italian anatomist and surgeon]

scar tissue /'skɑ: ,tɪʃu:/ *noun* fibrous tissue which forms a scar

scat- /'skæt/, **scato-** /'skætəʊ/ *prefix* referring to the faeces

scatole /'skætəʊl/ *noun* a substance in faeces, formed in the intestine, which causes a strong smell [NOTE: Also spelled **skatole**.)

SCC abbr squamous cell carcinoma

scent /'sent/ *noun* 1. a pleasant smell ○ *The scent of flowers makes me sneeze.* 2. a cosmetic substance which has a pleasant smell 3. a smell given off by a substance which stimulates the sense of smell

scented /'sentɪd/ *adjective* with a strong pleasant smell ○ *He is allergic to scented soap.*

schema /'ski:mə/ *noun* same as **body image**

Scheuermann's disease /'ʃeʊərnənz di:zɪ:z/ *noun* inflammation of the bones and cartilage in the spine, usually affecting adolescents [Described 1920. After Holger Werfel Scheuermann (1877–1960), Danish orthopaedic surgeon and radiologist.]

Schick test /'ʃɪk test/ *noun* a test to see if a person is immune to diphtheria [Described 1908. After Bela Schick (1877–1967), paediatrician in Vienna, Austria, and New York, USA.]

COMMENT: In the Schick test, a small amount of diphtheria toxin is injected, and if the point

of injection becomes inflamed it shows the person is not immune to the disease (a positive reaction).

Schilling test /'ʃɪlɪŋ test/ *noun* a test to see if someone can absorb Vitamin B₁₂ through the intestines, to determine cases of pernicious anaemia [After Robert Frederick Schilling (b. 1919), US physician]

-schisis /'skarɪsɪs/ *suffix* referring to a fissure or split

schisto- /'sɪstəʊ/ *prefix* referring to something which is split

Schistosoma /'sɪstə'soʊmə/, **schistosome** /'sɪstəsəʊm/ same as **bilharzia**

schistosomiasis /,sɪstəsəʊ'maɪəsɪs/ *noun* same as **bilharziasis**

schiz- /'skɪtsɪ/, **schizo-** /'skɪtsəʊ/ *prefix* referring to something which is split

schizoid /'skɪtsəɪd/ *adjective* referring to schizophrenia ■ *noun* a person who has a less severe form of schizophrenia

schizoid personality /,skɪtsəɪd ˌpɜːsə'næltɪ/ *noun* a disorder in which someone is cold towards other people, thinks mainly about himself or herself and behaves in an odd way. Also called **split personality**

schizophrenia /,skɪtsəʊ'friːniə/ *noun* a mental disorder in which someone withdraws from contact with other people, has delusions and seems to lose contact with the real world

schizophrenic /,skɪtsəʊ'frenɪk/ *noun* someone who has schizophrenia ■ *adjective* having schizophrenia

schizotypal personality disorder /,skɪtsəʊ'taɪpəl, pɜːsə'næltɪ dɪs, ɔːdə/ *noun* a schizoid personality type disorder

Schlatter's disease /'flætəz dɪ,zi:z/ *noun* inflammation in the bones and cartilage at the top of the tibia [Described 1903. After Carl Schlatter (1864–1934), Professor of Surgery at Zürich, Switzerland.]

Schlemm's canal /'flemz kə,næl/ *noun* a circular canal in the sclera of the eye, which drains the aqueous humour [Described 1830. After Friedrich Schlemm (1795–1858), Professor of Anatomy in Berlin, Germany.]

Schönlein–Henoch purpura /,ʃɔːnlain 'henpɪk, pɜː:pjʊrə/, **Schönlein's purpura** /'ʃɔːnlainz, pɜː:pjʊrə/ *noun* a blood disorder of children, in which the skin becomes purple on the buttocks and lower legs, the joints are swollen and painful and there are gastrointestinal problems

school /sku:l/ *noun* 1. a place where children are taught 2. a specialised section of a university

school health service /sku:l 'helθ ,sɜːvɪs/ *noun* a special service, part of the local health authority, which looks after the health of children in school

school nurse /sku:l 'nɜːs/ *noun* a nurse who works in a school, treating health problems and promoting health and safety

Schwann cells /'svɒn selz/ *plural noun* the cells which form the myelin sheath around a nerve fibre. See illustration at **NEURONE** in Supplement [Described 1839. After Friedrich Theodor Schwann (1810–82), German anatomist.]

schwannoma /'svɒn'naʊmə/ *noun* a neurofibroma, a benign tumour of a peripheral nerve

Schwartze's operation /'svɔːtsɪz ,ɒpəreɪʃn/ *noun* the original surgical operation to drain fluid and remove infected tissue from the mastoid process [After Hermann Schwartze (1837–1910), German otologist]

sciatic /saɪ'ætɪk/ *adjective* 1. referring to the hip 2. referring to the sciatic nerve

sciatica /saɪ'ætɪkə/ *noun* pain along the sciatic nerve, usually at the back of the thighs and legs

COMMENT: Sciatica can be caused by a slipped disc which presses on a spinal nerve, or can simply be caused by straining a muscle in the back.

sciatic nerve /saɪ'ætɪk nɜːv/ *noun* one of two main nerves which run from the sacral plexus into each of the thighs, dividing into a series of nerves in the lower legs and feet. They are the largest nerves in the body.

SCID abbr severe combined immunodeficiency

science /'saɪəns/ *noun* a study based on looking at and recording facts, especially facts arranged into a system

scientific /,saɪəntɪfɪk/ *adjective* referring to science ○ *He carried out scientific experiments.*

scientist /'saɪəntɪst/ *noun* a person who specialises in scientific studies

scintigram /'sɪntɪgræm/ *noun* an image recording radiation from radioactive isotopes injected into the body

scintilloscope /'sɪntɪləskoʊp/ *noun* an instrument which produces a scintigram

scintillator /'sɪntɪleɪtə/ *noun* a substance which produces a flash of light when struck by radiation

scintiscan /'sɪntɪskæn/ *noun* a scintigram which shows the variations in radiation from one part of the body to another

scirrhous /'sɪrəs/ *adjective* hard ○ a *scirrhous tumour*

scirrhous /'sɪrəs/ *noun* a hard malignant tumour, especially in the breast

scissor leg /'sɪzə leg/ *noun* a condition in which someone walks with one leg crossing over the other, usually as a result of spasticity of the leg's adductor muscles

scissor legs /'sɪzə legz/ *plural noun* malformed legs, where one leg is permanently crossed over in front of the other

scissors /'sɪzəz/ *plural noun* an instrument for cutting, made of two blades and two handles fastened together

scissura /'sɪʃʊrə/ *noun* an opening in something or a splitting of something

scler- /sklɪərə/ *prefix* same as **sclero-** (*used before vowels*)

sclera /'sklɪərə/ *noun* the hard white outer covering of the eyeball. See illustration at **EYE** in Supplement. Also called **sclerotic**, **sclerotic coat**, **albuginea oculi**

COMMENT: The front part of the sclera is the transparent cornea, through which the light enters the eye. The conjunctiva, or inner skin of the eyelids, connects with the sclera and covers the front of the eyeball.

scleral /'sklɪərəl/ *adjective* referring to the sclera

scleral lens /'sklɪərəl lənz/ *noun* a large contact lens which covers most of the front of the eye

scleritis /'sklɪə'rɪtɪs/ *noun* inflammation of the sclera

sclero- /'sklɪərəʊ/ *prefix* 1. hard, thick 2. referring to the sclera

scleroderma /,sklɪərə'dz:mə/ *noun* a collagen disease which thickens connective tissue and produces a hard thick skin

scleroma /'sklə'rəʊmə/ *noun* a patch of hard skin or hard mucous membrane

scleromalacia /,sklɪərəʊmə'leɪʃə/ pe 'fɔ:rəns/, **scleromalacia perforans** /,sklɪərəʊmə'leɪʃə/ *noun* a condition of the sclera in which holes appear in it

sclerosant agent /'sklə'rəʊs(ə)nt ,eɪdʒənt/ *noun* an irritating liquid injected into tissue to harden it

sclerosing /'sklə'rəʊsɪŋ/ *adjective* becoming hard, or making tissue hard

sclerosing agent /'sklə'rəʊsɪŋ ,eɪdʒənt/, **sclerosing solution** /'sklə'rəʊsɪŋ sə,lju:s(ə)n/ *noun* same as **sclerosant agent**

sclerosis /'sklə'rəʊsɪs/ *noun* a condition in which tissue becomes hard

sclerotherapy /,sklɪərəʊ'θerəpi/ *noun* the treatment of a varicose vein by injecting a sclerosant agent into the vein, and so encouraging the blood in the vein to clot

sclerotic /'sklə'rɒtɪk/ *adjective* referring to sclerosis, or having sclerosis ■ *noun* same as **sclera**

sclerotic coat /'sklə,rɒtɪk 'kəʊt/ *noun* same as **sclera**

sclerotome /'sklɪərətəʊm/ *noun* a sharp knife used in **sclerotomy**

sclerotomy /'sklə'rɒtəmɪ/ *noun* a surgical operation to cut into the sclera

scolex /'skəuleks/ *noun* the head of a tapeworm, with hooks which attach it to the wall of the intestine (NOTE: The plural is **scolices** or **scolexes**.)

scoliosis /,skəʊlɪə'sɪsɪs/ *noun* a condition in which the spine curves sideways

scoliotic /,skəʊlɪə'bɪtɪk/ *adjective* referring to a spine which curves sideways

scoop stretcher /'sku:p ,stretʃə/ *noun* a type of stretcher formed of two jointed sections which can slide under someone and lock together

-scope /'skəʊp/ *suffix* referring to an instrument for examining by sight

scopolamine /skə'pɒləmɪ:n/ *noun* a colourless thick liquid poisonous alkaloid found in some plants of the nightshade family. It is used especially to prevent motion sickness and as a sedative.

scorbutic /skə:'bju:tɪk/ *adjective* referring to scurvy

scorbutus /skə:'bju:təs/ *noun* same as **scurvy**

scoto- /skəʊtə/ *prefix* dark

scotoma /skə'təʊmə/ *noun* a small area in the field of vision where someone cannot see

scotometer /skə'u'tɒmɪtə/ *noun* an instrument used to measure areas of impaired vision

scotopia /skə'u'təʊpiə/ *noun* the power of the eye to adapt to poor lighting conditions and darkness

scotopic /skə'u'tɒpɪk/ *adjective* referring to scotopia

scotopic vision /skə'u,tɒpɪk 'vɪʒ(ə)n/ *noun* vision in the dark and in dim light, where the rods of the retina are used instead of the cones, which are used for photopic vision. ♦ **dark adaptation**

scrape /skreɪp/ *verb* to remove the surface of something by moving a sharp knife across it

scratch /skrætʃ/ *noun* a slight wound on the skin made when a sharp point is pulled across it ○ *She had scratches on her legs and arms.* ○ *Wash the dirt out of that scratch in case it gets infected.* ■ *verb* to harm the skin by moving a sharp point across it ○ *The cat scratched the girl's face.* ○ *Be careful not to scratch yourself on the wire.*

scratch test /'skrætʃ tɛst/ *noun* a test for allergy, in which a small amount of a substance is placed on a lightly scratched area of skin to see if a reaction occurs

scream /skri:m/ *noun* a loud sharp cry ■ *verb* to make a loud sharp cry

screen /skri:n/ *noun* 1. a light wall, sometimes with a curtain, which can be moved about and put round a bed to shield a person 2. same as **screening** ■ *verb* to examine large numbers of people to test them for a disease ○ *The population of the village was screened for meningitis.*

'...in the UK the main screen is carried out by health visitors at 6–10 months. With adequately staffed and trained community services, this method of screening can be extremely effective' [Lancet]

screening /'skri:nɪŋ/ *noun* the process of testing large numbers of people to see if any of them have a particular type of disease. ◊ **genetic screening**

‘GPs are increasingly requesting blood screening for patients concerned about HIV’ [Journal of the Royal College of General Practitioners]

screening test /'skri:nɪŋ test/ *noun* a test for a particular disease which is given to people who have no symptoms in order to identify how many of them have that disease or are showing early signs of it

script /skrɪpt/ *noun* a doctor’s prescription (*informal*)

scrofula /'skrʊfjʊlə/ *noun* a form of tuberculosis in the lymph nodes in the neck, formerly caused by unpasteurised milk but now rare

scrofuloderma /'skrʊfjʊlədəmə/ *noun* a form of tuberculosis of the skin, forming ulcers, and secondary to tuberculous infection of an underlying lymph gland or structure

scrota /'skrəʊtə/ plural of **scrotum**

scrotal /'skrəʊt(ə)l/ *adjective* referring to the scrotum

scrototomy /'skrəʊ'tɒtəmi/ *noun* a surgical operation to open up and examine the scrotum (NOTE: The plural is **scrototomies**.)

scrotum /'skrəʊtəm/ *noun* a bag of skin hanging from behind the penis, containing the testes, epididymides and part of the spermatic cord. See illustration at **UROGENITAL SYSTEM (MALE)** in Supplement (NOTE: The plural is **scrotums** or **scrota**.)

scrub nurse /'skrab ,nɜ:s/ *noun* a nurse who cleans the operation site on someone’s body before an operation

scrub typhus /'skrab ,taifəs/ *noun* same as **tsutsugamushi disease**

scrub up /'skrab 'ʌp/ *verb (of a surgeon or theatre nurse)* to clean the hands and arms thoroughly before performing surgery (NOTE: **scrubbing up – scrubbed up**)

scrumptox /'skrʌmpɒks/ *noun* a form of herpes simplex found especially in male sports players, passed on easily due to the presence of small cuts in the skin combined with the abrasive effects of facial stubble

scurf /skɜ:f/ *noun* same as **dandruff**

scurvy /'skɜ:vɪ/ *noun* a disease caused by lack of vitamin C or ascorbic acid which is found in fruit and vegetables. Also called **scorbutus**

COMMENT: Scurvy causes general weakness and anaemia, with bleeding from the gums and joints, and under the skin. In severe cases, the teeth drop out. Treatment consists of vitamin C tablets and a change of diet to include more fruit and vegetables.

scybalum /'sibələm/ *noun* very hard faeces

seasick /'si:sɪk/ *adjective* feeling sick because of the movement of a ship ◊ As soon as the ferry started to move she felt seasick.

seasickness /'si:sɪknəs/ *noun* illness, with nausea, vomiting and sometimes headache, caused by the movement of a ship ◊ Take some seasickness tablets if you are going on a long journey.

seasonal affective disorder /,si:z(ə)n(ə)l ə'fektɪv dɪs,ɔ:də/, **seasonal affective disorder syndrome** /,si:z(ə)n(ə)l ə'fektɪv dɪs,ɔ:də ,sɪndrəʊm/ *noun* a condition in which a person becomes depressed and anxious during the winter when there are fewer hours of daylight. Its precise cause is not known, but it is thought that the shortage of daylight may provoke a reaction between various hormones and neurotransmitters in the brain. Abbr **SAD**, **SADS**

seat-belt syndrome /'sɪ:t belt ,sɪndrəʊm/ *noun* a group of injuries between the neck and the abdomen which occur in a car accident when a person is using either a lap belt or a shoulder belt incorrectly, not over the strongest part of the chest

sebaceous /sə'beɪʃəs/ *adjective* 1. referring to sebum 2. producing oil

sebaceous cyst /sə,beɪʃəs 'sɪst/ *noun* a cyst which forms when a sebaceous gland is blocked. ◊ **steatoma**

sebaceous gland /sə,beɪʃəs 'glænd/ *noun* a gland in the skin which secretes sebum at the base of each hair follicle

seborrhoea /,sebə'rɪ:a/ *noun* an excessive secretion of sebum by the sebaceous glands, common in young people at puberty, and sometimes linked to seborrhoeic dermatitis (NOTE: The US spelling is **seborrhea**.)

seborrhoeic /,sebə'rɪ:ik/ *adjective* 1. caused by seborrhoea 2. having an oily secretion (NOTE: [all senses] The US spelling is **seborheic**.)

seborrhoeic dermatitis /,sebə'rɪ:ik ,dʒɜ:mə'taɪtɪs/, **seborrhoeic eczema** /,sebə'rɪ:k ɛk'zɛmə/ *noun* a type of eczema where scales form on the skin

seborrhoeic rash /,sebə'rɪ:ik 'ræʃ/ *noun* ◊ **seborrhoeic dermatitis**

sebum /'sɪ:bəm/ *noun* an oily substance secreted by a sebaceous gland, which makes the skin smooth. It also protects the skin against bacteria and the body against rapid evaporation of water.

second /'sekənd/ *noun* a unit of time equal to 1/60 of a minute ■ *adjective* coming after the first

secondary /'sekənd(ə)rɪ/ *adjective* 1. occurring after the first stage 2. less important than something else 3. referring to a condition which develops from another condition ■ *noun* a malignant tumour which has developed and spread from another malignant tumour. ◊ **primary** (NOTE: The plural is **secondaries**.)

secondary amenorrhoea /,sekənd(ə)rɪ et'menər̩hœə/ *noun* a situation in which a pre-

menopausal woman's menstrual periods have stopped

secondary biliary cirrhosis /,sekənd(ə)ri 'biliəri sə'rəʊsɪs/ noun cirrhosis of the liver caused by an obstruction of the bile ducts

secondary bronchi /,sekənd(ə)ri 'brɒŋki:/ plural noun same as **lobar bronchi**

secondary care /,sekənd(ə)ri 'keə/ noun treatment provided by the professional team in a hospital, rather than by a GP or other primary care provider and the primary health care team. Compare **primary care**, **tertiary care**. Also called **secondary health care**

secondary cartilaginous joint /,sekənd(ə)ri kɑ:tɪ'la:dʒinəs, dʒɔ:nt/ noun a joint where the surfaces of the two bones are connected by a piece of cartilage so that they cannot move, e.g. the pubic symphysis

secondary dysmenorrhoea /,sekənd(ə)ri dɪs'men'ri:a/ noun dysmenorrhoea which starts at some time after the first menstruation

secondary growth /,sekənd(ə)ri 'grəʊθ/ noun same as **metastasis**

secondary haemorrhage /,sekənd(ə)ri 'hem(ə)rɪdʒ/ noun a haemorrhage which occurs some time after an injury, usually due to infection of the wound

secondary health care /,sekənd(ə)ri 'helθ keə/ noun same as **secondary care**

secondary infection /,sekənd(ə)ri ɪn'fekʃən/ noun an infection which affects a person while he or she is weakened through having another infection

secondary medical care /,sekənd(ə)ri 'medɪk(ə)l keə/ noun specialised treatment provided by a hospital

secondary peritonitis /,sekənd(ə)ri ,perɪtə 'naɪtɪs/ noun peritonitis caused by infection from an adjoining tissue, e.g. from the rupturing of the appendix

secondary prevention /,sekənd(ə)ri pri'venʃən/ noun the use of methods such as screening tests which avoid a serious disease by detecting it early

secondary sexual characteristic /,sekənd(ə)ri ,sek'sjuəl kærɪktə'rɪstɪk/ noun a sexual characteristic which develops after puberty, e.g. pubic hair or breasts

second-degree burn /,sekənd dr,grɪ:bɜ:n/ noun a burn where the skin becomes very red and blisters

second-degree haemorrhoids /,sekənd dr,grɪ:'hemərɔɪds/ plural noun haemorrhoids which protrude into the anus but return into the rectum automatically

second intention /,sekənd ɪn'tenʃ(ə)n/ noun healing of an infected wound or ulcer, which takes place slowly and leaves a prominent scar

second-level nurse /,sekənd ,lev(ə)l 'nɜ:s/, **second-level registered nurse** /

,sekənd ,lev(ə)l ,redʒɪstrɪstər 'nɜ:s/ noun a trained person who delivers nursing care under the direction and supervision of a first-level nurse. Compare **first-level nurse**

second molar /,sekənd 'məʊlə/ noun any of the molars at the back of the jaw, before the wisdom teeth, erupting at about 12 years of age

second opinion /,sekənd ə'pɪnjən/ noun a diagnosis or opinion on treatment from a second doctor, often a hospital specialist

secrete /sɪ'kri:t/ verb (of a gland) to produce a substance such as hormone, oil or enzyme (NOTE: **secreting – secreted**)

secretin /sɪ'kri:tɪn/ noun a hormone secreted by the duodenum which encourages the production of pancreatic juice

secretion /sɪ'kri:ʃ(ə)n/ noun 1. the process by which a substance is produced by a gland ○ *The pituitary gland stimulates the secretion of hormones by the adrenal gland.* 2. a substance produced by a gland ○ *Sex hormones are bodily secretions.*

secretor /sɪ'kri:tər/ noun a person who secretes substances indicating ABO blood group into mucous fluids such as semen or saliva

secretory /sɪ'kri:tərɪ/ adjective referring to, accompanied by or producing a secretion

secretory otitis media /sɪ,kri:tərɪ əʊ,tatɪs 'mi:diə/ noun same as **glue ear**

section /'sekʃən/ noun 1. a part of something ○ *the middle section of the aorta* 2. the action of cutting tissue 3. a cut made in tissue 4. a slice of tissue cut for examination under a microscope 5. a part of a document such as an Act of Parliament ○ *She was admitted under section 5 of the Mental Health Act.*

Section 47 /,sekʃən fɔ:ti 'sev(ə)n/ noun a UK law under which a local authority has the power to seek an order from a magistrate's court authorising the removal of a person at severe risk from their home. The authority must have a doctor's certificate that the person is either suffering from a grave and chronic disease or is unable to look after himself or herself and is not receiving proper care and attention from other people.

security blanket /sɪ'kjʊərətɪ ,blæŋkit/ noun a familiar blanket, toy or other object which a child carries around because it makes him or her feel safe

sedate /sɪ'deɪt/ verb to calm a person by giving them a drug which acts on the nervous system and relieves stress or pain, and in larger doses makes the person sleep ○ *Elderly or confused patients may need to be sedated to prevent them wandering.* (NOTE: **sedating – sedated**)

sedation /sɪ'deɪʃ(ə)n/ noun the act of calming someone using a sedative □ **under sedation** having been given a sedative ○ *He was*

still under sedation, and could not be seen by the police.

sedative /'sedətɪv/ *noun* an anxiolytic or hypnotic drug such as benzodiazepine, which acts on the nervous system to help a person sleep or to relieve stress (*dated*) ◎ *She was prescribed sedatives by the doctor.* ■ *adjective* acting to help a person sleep or to relieve stress

sedentary /'sed(ə)nt(ə)ri/ *adjective* involving a lot of sitting and little exercise

'...changes in lifestyle factors have been related to the decline in mortality from ischaemic heart disease. In many studies a sedentary lifestyle has been reported as a risk factor for ischaemic heart disease' [*Journal of the American Medical Association*]

sedentary occupation /,sed(ə)nt(ə)ri,ɒk'ju'peɪʃ(ə)n/ *noun* a job where the workers sit down for most of the time

sediment /'sedimənt/ *noun* solid particles, usually insoluble, which fall to the bottom of a liquid

sedimentation /,sedimen'teɪʃ(ə)n/ *noun* the action of solid particles falling to the bottom of a liquid

sedimentation rate /,sedimen'teɪʃ(ə)n reɪt/ *noun* the rate at which solid particles are deposited from a solution, measured especially in a centrifuge

segment /'segmənt/ *noun* a part of an organ or piece of tissue which is clearly separate from other parts

segmental /seg'ment(ə)l/ *adjective* formed of segments

segmental ablation /seg'ment(ə)l æ'bлеɪʃ(ə)n/ *noun* a surgical operation to remove part of a nail, e.g. treatment for an ingrowing toenail

segmental bronchi /seg'ment(ə)l 'brɒŋki:/ *plural noun* air passages supplying a segment of a lung. Also called **tertiary bronchi**

segmentation /,segmən'teɪʃ(ə)n/ *noun* the movement of separate segments of the wall of the intestine to mix digestive juice with the food before it is passed along by the action of peristalsis

segmented /'segməntɪd/ *adjective* formed of segments

segregation /,segri'geɪʃ(ə)n/ *noun* 1. the act of separating one person, group or thing from others, or of dividing people or things into separate groups which are kept apart from each other 2. the separation of the alleles of each gene and their distribution to separate sex cells during the formation of these cells in organisms with paired chromosomes

seizure /'si:ʒə/ *noun* a fit, convulsion or sudden contraction of the muscles, especially in a heart attack, stroke or epileptic fit

select /'selkt/ *verb* to choose one person, thing or group, but not others ◎ *She was selected to go on a midwifery course*

selection /sɪ'leksʃən/ *noun* an act of choosing one person, thing or group, but not others ◎ *The selection of a suitable donor for a bone marrow transplant* ◎ *The candidates for the post have to go through a selection process.*

selective /sɪ'lektɪv/ *adjective* choosing only one person, thing or group, and not others

selective oestrogen receptor modulator /sɪ,lektɪv 'oestrədʒ(ə)n rɪ,septə,moðjʊlɪtə/, **selective estrogen receptor modulator** *noun* a drug which acts on specific oestrogen receptors to prevent bone loss without affecting other oestrogen receptors, e.g. raloxifene hydrochloride. Abbr **SERM**

selective serotonin re-uptake inhibitor /sɪ,lektɪv sera,tæonin ri:'ʌpterɪk in,hɪbitə/ *noun* a drug which causes a selective accumulation of serotonin in the central nervous system, and is used in the treatment of depression, e.g. fluoxetine. Abbr **SSRI**

COMMENT: The drug should not be started immediately after stopping an MAOI and should be withdrawn slowly.

selenium /sə'lɪ:nɪəm/ *noun* a non-metallic trace element (NOTE: The chemical symbol is **Se**)

self- /self/ *prefix* yourself

self-abuse /,self ə'bju:s/ *noun* same as **self-harm**

self-actualisation /,self ,æk'tjuələr'zeɪʃ(ə)n/, **self-actualization** *noun* the successful development and use of personal talents and abilities

self-admitted /,self əd'mitɪd/ *adjective* referring to a patient who has admitted himself or herself to hospital without being sent by a doctor

self-care /self 'keə/ *noun* the act of looking after yourself properly, so that you remain healthy

self-catheterisation /,self ,kæθɪtərəz'zeɪʃ(ə)n/, **self-catheterization** *noun* a procedure in which a person puts a catheter through the urethra into his or her own bladder to empty out the urine

self-defence /,self dɪ'fens/ *noun* the act of defending yourself when someone is attacking you

self-examination /,self ɪg,zæmɪ'næɪʃ(ə)n/ *noun* the regular examination of parts of your own body for signs of disease

self-governing hospital /,self ,gavənɪŋ 'hɒspɪt(ə)l/ *noun* in the UK, a hospital which earns its revenue from services provided to the District Health Authorities and family doctors. Also called **hospital trust**

self-harm /,self 'ha:m/ *noun* a deliberate act by which someone injures part of their body as the result of a personal trauma. Cutting and burning are two of the most common forms of self-harm. Also called **self-abuse**, **self-injury**, **self-mutilation**, **self-wounding**

self-image /self 'imɪdʒ/ *noun* the opinion which a person has about how worthwhile, attractive, or intelligent he or she is

self-injury /,self 'ɪndʒəri/, **self-mutilation** /,self ,mju:tɪ'lɛf(ə)n/ *noun* same as **self-harm**

self-retaining catheter /self rɪ'teɪnɪŋ 'kæθətər/ *noun* a catheter which remains in place until it is deliberately removed

self-wounding noun same as **self-harm**

sell a turcica /,selə 'tɜ:sɪkə/ *noun* a hollow in the upper surface of the sphenoid bone in which the pituitary gland sits. Also called **pituitary fossa**

semeiology /,sɪ:maɪ'ɒlədʒɪ/ *noun* same as **symptomatology**

semen /'sɪ:mən/ *noun* a thick pale fluid containing spermatozoa, produced by the testes and seminal vesicles and ejaculated from the penis

semi- /semi/ *prefix* half

semicircular /,semi'sɜ:kjʊlər/ *adjective* shaped like half a circle

semicircular canal /,semisɜ:kjʊlər kə'næl/ *noun* any one of three tubes in the inner ear which are partly filled with fluid and help to maintain balance. See illustration at **EAR** in Supplement

COMMENT: The three semicircular canals are on different planes. When a person's head moves, as when he or she bends down, the fluid in the canals moves and this movement is communicated to the brain through the vestibular section of the auditory nerve.

semicircular duct /,semisɜ:kjʊlər 'dʌkt/ *noun* a duct in the semicircular canals in the ear

semicomatose /,semi'kəʊmətəʊs/ *adjective* almost unconscious or half asleep, but capable of being woken up

semi-conscious /,semi 'kɒnʃəs/ *adjective* half conscious, only partly aware of what is going on ○ *She was semi-conscious for most of the operation.*

semi-liquid /,semi 'lɪkwɪd/ *adjective* half liquid and half solid

semilunar /,semi'lu:nər/ *adjective* shaped like half a moon

semilunar cartilage /,semi,lu:nər 'kɑ:təlɪdʒ/ *noun* same as **meniscus**

semilunar valve /,semi,lu:nər 'vælv/ *noun* either of two valves in the heart, the pulmonary valve and the aortic valve, through which blood flows out of the ventricles

seminal /'semɪn(ə)l/ *adjective* referring to semen

seminal fluid /'semɪn(ə)l ,flu:ɪd/ *noun* the fluid part of semen, formed in the epididymis and seminal vesicles

seminal vesicle /,semɪn(ə)l 'vesɪk(ə)l/ *noun* one of two glands at the end of the vas deferens which secrete the fluid part of semen.

See illustration at **urogenital system (male)** in Supplement

seminiferous tubule /semi,nɪfərəs 'tju:bju:l/ *noun* a tubule in the testis which carries semen

seminoma /,semi'nəʊmə/ *noun* a malignant tumour in the testis (NOTE: The plural is **semomas** or **seminomata**)

semipermeable /,semi'pɜ:miəb(ə)l/ *adjective* allowing some types of particle to pass through but not others

semipermeable membrane /,semi ,pɜ:miəb(ə)l 'membreɪn/ *noun* a membrane which allows some substances in liquid solution to pass through but not others

semiprone /semi'prəʊn/ *adjective* referring to a position in which someone lies face downwards, with one knee and one arm bent forwards and the face turned to one side

semi-solid /,semi 'sɒlɪd/ *adjective* half solid and half liquid

SEN abbr State Enrolled Nurse

senescence /sɪ'nesəns/ *noun* the ageing process

senescent /sɪ'nesənt/ *adjective* approaching the last stages of the natural life span

Sengstaken tube /'seŋstekən tju:b/ *noun* a tube with a balloon, which is passed through the mouth into the oesophagus to stop oesophageal bleeding [After Robert William Sengstaken (b. 1923), US surgeon]

senile /'sɪ:nɪl/ *adjective* 1. referring to the last stages of the natural life span or to the medical conditions associated with it 2. referring to someone whose mental faculties have become weak because of age

senile cataract /,sɪ:nɪl 'kætərækt/ *noun* a cataract which occurs in an elderly person

senile dementia /,sɪ:nɪl dɪ'menʃəl/ *noun* mental degeneration affecting elderly people (dated)

senile plaque /'sɪ:nɪl plæk/ *noun* a spherical deposit of beta amyloid in brain areas in Alzheimer's disease

senilis /sə'nɪlɪs/ ♀ **arcus senilis**

senility /sə'nɪlɪti/ *noun* the deterioration of mental activity associated with the last stages of the natural life span

senior /'sɪ:nɪə/ *adjective* 1. older than another person or other people 2. holding a more important position than others ○ *He is the senior anaesthetist in the hospital.* ○ *Senior members of staff are allowed to consult the staff records.*

■ **senior** a senior person

senna /'sɛnə/ *noun* a laxative made from the dried fruit and leaves of a tropical tree

sensation /sen'seʃ(ə)n/ *noun* a feeling or information about something which has been sensed by a sensory nerve and is passed to the brain

sense /sens/ *noun* 1. one of the five faculties by which a person notices things in the outside world: sight, hearing, smell, taste and touch ○ *When she had a cold, she lost her sense of smell.* 2. the ability to discern or judge something ■ *verb* to notice something by means other than sight ○ *Teeth can sense changes in temperature.*

sense of balance /,sens əv 'bæləns/ *noun* a feeling that keeps a person upright, governed by the fluid in the inner ear balance mechanism

sense organ /sens 'ɔ:gən/ *noun* an organ in which there are various sensory nerves which can detect environmental stimuli such as scent, heat or pain, and transmit information about them to the central nervous system, e.g. the nose or the skin

sensibility /,sensɪ'bilitɪ/ *noun* the ability to detect and interpret sensations

sensible /'sensib(ə)l/ *adjective* 1. showing common sense or good judgment 2. able to be detected by the senses

sensible perspiration /,sensəb(ə)l ,pɜ:spə'reɪʃ(ə)n/ *noun* drops of sweat which can be seen on the skin, secreted by the sweat glands

sensitisation /,sensɪta'zeɪʃ(ə)n/, **sensitization** *noun* 1. the process of making a person sensitive to something 2. an unexpected reaction to an allergen or to a drug, caused by the presence of antibodies which were created when the person was exposed to the drug or allergen in the past

sensitise /'sensɪtaɪz/, **sensitize** *verb* to make someone sensitive to a drug or allergen (NOTE: **sensitising – sensitised**)

sensitised person /,sensɪtaɪzd 'pɜ:s(ə)n/, **sensitized person** *noun* a person who is allergic to a drug

sensitising agent /'sensɪtaɪzɪŋ ,eɪdʒənt/, **sensitizing agent** *noun* a substance which, by acting as an antigen, makes the body form antibodies

sensitive /'sensɪtɪv/ *adjective* 1. able to detect and respond to an outside stimulus 2. having an unexpected reaction to an allergen or to a drug, caused by the presence of antibodies which were created when the person was exposed to the drug or allergen in the past

sensitivity /,sensi'trɪvɪtɪ/ *noun* 1. the fact of being able to detect and respond to an outside stimulus 2. the rate of positive responses in a test from persons with a specific disease. A high rate of sensitivity means a low rate of people being incorrectly classed as negative. Compare **specificity**

sensorineural deafness /,sensərɪ,njuərəl 'defnəs/, **sensorineural hearing loss** /,sensərɪ,njuərəl 'hɪərɪŋ lɒs/ *noun* deafness caused by a disorder in the auditory nerves or

the brain centres which receive impulses from the nerves. Also called **perceptive deafness**

sensory /'sensəri/ *adjective* referring to the detection of sensations by nerve cells

sensory cortex /,sensərɪ 'kɔ:tɛks/ *noun* the area of the cerebral cortex which receives information from nerves in all parts of the body (dated)

sensory deprivation /,sensərɪ ,deprɪ 'veɪʃ(ə)n/ *noun* a condition in which a person becomes confused because they lack sensations

sensory nerve /'sensərɪ nɜ:v/ *noun* a nerve which registers a sensation such as heat, taste or smell and carries impulses to the brain and spinal cord. Also called **afferent nerve**

sensory neurone /,sensərɪ 'njuərəʊn/ *noun* a nerve cell which transmits impulses relating to sensations from the receptor to the central nervous system

sensory receptor /,sensərɪ rɪ'septə/ *noun* a cell which senses a change in the surrounding environment, e.g. cold or pressure, and reacts to it by sending out an impulse through the nervous system. Also called **nerve ending**

separate *verb* /'sepəreɪt/ to move two or more people or things apart ○ *The surgeons believe it may be possible to separate the joined twins.* ○ *The retina has become separated from the back of the eye.* (NOTE: **separating – separated**) ■ *adjective* /'sep(ə)rətɪv/ 1. not touching, together or in the same place 2. distinct and not related or the same

separation /,sepə'reɪʃ(ə)n/ *noun* the act of separating or dividing two or more people or things, or the state of being separated

separation anxiety /,sepə'reɪʃ(ə)n æŋ'ziəti/ *noun* a state of anxiety caused in someone, especially a young child, by the thought or fact of being separated from his or her mother or primary caregiver

sepsis /'sepsɪs/ *noun* the presence of bacteria and their toxins in the body, which kill tissue and produce pus, usually following the infection of a wound

Sept- /sep/ *prefix* same as **septi-** (used before vowels)

septa /'septə/ plural of **septum**

septal /'sept(ə)l/ *adjective* referring to a septum

septal defect /,sept(ə)l 'di:fekt/ *noun* a congenital condition in which a hole exists in the wall between the left and right sides of the heart allowing an excessive amount of blood to flow through the lungs, leading in severe cases to pulmonary hypertension and sometimes heart failure

septate /'septeɪt/ *adjective* divided by a septum

septi- /sep/ *prefix* referring to sepsis

septic /'septɪk/ *adjective* referring to or produced by sepsis

septicaemia /,septɪ'si:mɪə/ *noun* a condition in which bacteria or their toxins are present in the blood, multiply rapidly and destroy tissue. □ **blood poisoning** (NOTE: The US spelling is **septicemia**.)

septicaemic /,septɪ'si:mɪk/ *adjective* caused by septicaemia, associated with septicaemia (NOTE: The US spelling is **septicemic**.)

septicaemic plague /,septɪ'si:mɪk 'pleɪg/ *noun* a form of bubonic plague in which the symptoms are generalised throughout the body

septic shock /,septɪk 'ʃɒk/ *noun* shock caused by bacterial toxins in the blood as a result of infection. There is a dramatic drop in blood pressure, preventing the delivery of blood to the organs. Toxic shock syndrome is one type of septic shock.

septo- /'septəʊ/ *prefix* referring to a septum

septoplasty /'septəplæstɪ/ *noun* a surgical operation to straighten the cartilage in the septum (NOTE: The plural is **septoplasties**.)

Septrin /'septrɪn/ a trade name for co-trimoxazole

septum /'septəm/ *noun* a wall between two parts of an organ, e.g. between two parts of the heart or between the two nostrils in the nose. See illustration at **HEART** in Supplement (NOTE: The plural is **septa**.)

septum defect /'septəm ,di:fekt/ *noun* a condition in which a hole exists in a septum, usually the septum of the heart

sequela /sɪ'kwɪ:lə/ *noun* a disease or disorder that is caused by a disease or injury which the person had previously □ *a case of osteomyelitis as a sequela of multiple fractures of the mandible* □ *biochemical and hormonal sequelae of the eating disorders* □ *Kaposi's sarcoma can be a sequela of Aids.* (NOTE: The plural is **sequelae**.)

sequence /'si:kwəns/ *noun* a series of things, numbers etc., which follow each other in order ■ *verb* 1. to put things in order 2. to show how amino acids are linked together in chains to form protein (NOTE: **sequences – sequencing – sequenced**)

sequestra /'sɪ:kwestrə/ plural of **sequestrum**

sequestration /,sɪ:kwe'streɪʃ(ə)n/ *noun* 1. the act of putting someone in an isolated place 2. the loss of blood into spaces in the body, reducing the circulating volume. It can occur naturally or can be produced artificially by applying tourniquets. □ *pulmonary sequestration* □ *A dry hacking cough can cause sequestration of the peritoneum in the upper abdomen.* 3. the formation of a sequestrum

sequestrectomy /,sɪ:kwi'strektəmɪ/ *noun* a surgical operation to remove a sequestrum (NOTE: The plural is **sequestrectomies**.)

sequestrum /sɪ'kwestrəm/ *noun* a piece of dead bone which is separated from whole bone (NOTE: The plural is **sequestra**.)

ser- /sɪər/ *prefix* same as **sero-** (used before vowels)

sera /'sɪərəl/ plural *noun* plural of **serum**

serine /'serɪn/ *noun* an amino acid produced in the hydrolysis of protein

serious /'sɪəriəs/ *adjective* 1. having very bad consequences □ *He's had a serious illness.* □ *There was a serious accident on the motorway.* □ *There is a serious shortage of plasma.* 2. thoughtful and not superficial or humorous □ *a serious discussion on the appropriateness of the treatment* □ *serious about becoming a GP*

seriously /'sɪəriəslɪ/ *adverb* in a serious way □ *She is seriously ill.*

SERM abbr selective (o)estrogen receptor modulator

sero- /'sɪərəʊ/ *prefix* 1. referring to blood serum 2. referring to the serous membrane

seroconvert /,sɪərəʊkən've:t/ *verb* to produce specific antibodies in response to the presence of an antigen such as a bacterium or virus

serological /,sɪərə'lɒdʒɪk(ə)l/ *adjective* referring to serology

serological diagnosis /,sɪərəulɒdʒɪk(ə)l ,daɪəg'nəʊsɪs/ *noun* a diagnosis which comes from testing serum

serological type /,sɪərəlɒdʒɪk(ə)l 'taip/ *noun* same as **serotype**

serology /sɪərə'lɒdʒɪ/ *noun* the scientific study of serum and the antibodies contained in it

seronegative /,sɪərəʊ'negatɪv/ *adjective* referring to someone who gives a negative reaction to a serological test

seropositive /,sɪərəʊ'pozɪtɪv/ *adjective* referring to someone who gives a positive reaction to a serological test

seropus /'sɪərəʊ,pəs/ *noun* a mixture of serum and pus

serosa /sɪ'rəʊsə/ *noun* same as **serous membrane** (NOTE: The plural is **serosas** or **serosae**.)

serositis /,sɪərəʊ'saitɪs/ *noun* inflammation of a serous membrane

serotherapy /,sɪərəʊ'θerəpi/ *noun* treatment of a disease using serum from immune people or immunised animals

serotonin /,sɪərə'taʊnɪn/ *noun* a compound which is a neurotransmitter and exists mainly in blood platelets. It is released after tissue is injured and is important in sleep, mood and vasoconstriction.

serotype /'sɪərəʊtaip/ *noun* 1. a category of microorganisms or bacteria which have some antigens in common 2. a series of common antigens which exists in microorganisms and bacteria □ also called **serological type** ■ *verb* to group microorganisms and bacteria according

ing to their antigens (NOTE: **serotyping – sero-typed**)

serous /'sɪərəs/ **adjective** referring to, producing, or like serum

serous membrane /'sɪərəs 'membreɪn/ **noun** a membrane which both lines an internal cavity and covers the organs in the cavity, e.g. the peritoneum lining the abdominal cavity or pleura lining the chest cavity. Also called **serosa**

serous pericardium /,sɪərəs ,peri 'ka:diam/ **noun** the inner part of the pericardium, forming a double sac which contains fluid to prevent the two parts of the pericardium from rubbing together

serpens /'sɜ:pɛnz/ ♦ **erythema serpens**

serpiginous /sə'pɪdʒɪnəs/ **adjective** 1. referring to an ulcer or eruption which creeps across the skin 2. referring to a wound or ulcer with a wavy edge

serrated /sə'reɪtɪd/ **adjective** with a zigzag or saw-like edge

serration /sə'reɪʃ(ə)n/ **noun** one of the points in a zigzag or serrated edge

Sertoli cells /sə'tɔ:lɪ selz/ **plural noun** cells which support the seminiferous tubules in the testis [Described 1865. After Enrico Sertoli (1842–1910), Italian histologist, Professor of Experimental Physiology at Milan, Italy.]

sertraline /'sɜ:ttralɪn/ **noun** an antidepressant drug which extends the action of the neurotransmitter serotonin. It is also used in the treatment of obsessive-compulsive disorder and post-traumatic stress disorder.

serum /'sɪərəm/ **noun** 1. a fluid which separates from clotted blood and is similar to plasma except that it has no clotting agents. Also called **blood serum** 2. blood serum taken from an animal which has developed antibodies to bacteria, used to give humans temporary immunity to a disease. Also called **antisera** 3. any clear watery body fluid, especially a fluid that comes from a serous membrane (NOTE: The plural is **serums** or **sera**.)

COMMENT: Blood serum is plasma without the clotting agents. It contains salt and small quantities of albumin, globulin, amino acids, fats and sugars; its main component is water.

serum albumin /,sɪərəm 'ælbjʊmɪn/ **noun** a major protein in blood plasma

serum bilirubin /,sɪərəm bili'rū:bɪn/ **noun** bilirubin in serum, converted from haemoglobin as red blood cells are destroyed

serum globulin /,sɪərəm 'globjʊlɪn/ **noun** a major protein in blood serum that is an antibody

serum glutamic–oxalacetic transaminase /,sɪərəm glu:tæmɪk ,oksæləsi:tɪk træns'æmɪneɪz/ **noun** an enzyme excreted by damaged heart muscle, which appears in the blood of people who have had a heart attack. Abbr **SGOT**

serum glutamic–pyruvic transaminase /,sɪərəm glu:tæmɪk pa:rɪvɪk træns'æmɪneɪz/ **noun** an enzyme secreted by the parenchymal cells of the liver, occurring in increased amounts in the blood of people with infectious hepatitis. Abbr **SGPT**

serum hepatitis /,sɪərəm ,hepə'tartɪs/ **noun** a serious form of hepatitis transmitted by infected blood, unsterilised surgical instruments, shared needles or sexual intercourse. Also called **hepatitis B, viral hepatitis**

serum sickness /'sɪərəm ,sɪknəs/ **noun** an allergic reaction to serum therapy which was formerly used as a way of boosting passive immunity

serum therapy **noun** the administration of treated serum, often from horses, formerly used as a way of boosting passive immunity

serve **verb** 1. to give a person food or drink ○ *Lunch is served in the ward at 12:30.* 2. to be useful or helpful to a person or group ○ *The clinic serves the local community well.* 3. to have a particular effect or result ○ *The letter serves to remind you of your outpatients' appointment.* (NOTE: [all senses] **serves – serving – served**)

service /'sɜ:vɪs/ **noun** 1. the act or fact of serving a person or group 2. a group of people working together

sesamoid /'sesəmɔɪd/, **sesamoid bone** /'sesəmɔɪd bən/ **noun** any small bony nodule in a tendon, the largest being the kneecap

sessile /'sesaɪl/ **adjective** referring to something, especially a tumour, which has no stem. Opposite **pedunculate**

session /'seʃ(ə)n/ **noun** a visit to a therapist for treatment ○ *She has two sessions a week of physiotherapy.* ○ *The evening session had to be cancelled because the therapist was ill.*

set /set/ **verb** 1. to put the parts of a broken bone back into their proper places and keep the bone fixed until it has mended ○ *The doctor set the man's broken arm.* 2. (of a broken bone) to mend, to form a solid bone again ○ *His arm has set very quickly.* ○ *Her broken wrist is setting very well.* ♦ **reset** (NOTE: **setting – set**)

settle /'set(ə)l/ **verb** 1. to begin to feel comfortable or at ease, or to make a person feel comfortable or at ease (NOTE: **settles – settling – settled**) 2. (of a sediment) to fall to the bottom of a liquid 3. (of a parasite) to attach itself, to stay in a part of the body ○ *The fluke settles in the liver.* (NOTE: **settles – settling – settled**)

sever /'sevə/ **verb** to cut something off ○ *His hand was severed at the wrist.* ○ *Surgeons tried to sew the severed finger back onto the patient's hand.*

severe /'sɪ'veə/ **adjective** very bad or dangerous ○ *The patient experienced severe bleeding.* ○ *A severe outbreak of whooping cough occurred during the winter.*

severe acute respiratory disorder /sɪ'veər ə'kju:tɪ rɪ'spirət(ə)ri dɪs,ɔ:də/ noun full form of **SARS**

severely /sɪ'veɪli/ adverb very badly or dangerously ○ *Her breathing was severely affected.*

'...many severely confused patients, particularly those in advanced stages of Alzheimer's disease, do not respond to verbal communication' [Nursing Times]

severity /sɪ'veriti/ noun the degree to which something is bad or dangerous ○ *Treatment depends on the severity of the attack.*

sex /seks/ noun 1. one of two groups, male and female, into which animals and plants can be divided ○ *The sex of a baby can be identified before birth.* 2. same as **sexual intercourse**

sex act /'seks ækt/ noun an act of sexual intercourse

sexarche /'sɛksɑ:kɪ/ noun the age when a person first has sexual intercourse

sex change /'seks tʃeindʒ/ noun a surgical operation accompanied by hormone treatment to change someone's physical sex-linked characteristics from female to male or from male to female

sex chromosome /'seks ,krəʊməsəʊm/ noun a chromosome which determines if a person is male or female

COMMENT: Out of the twenty-three pairs of chromosomes in each human cell, two are sex chromosomes, which are known as X and Y. Females have a pair of X chromosomes and males have a pair consisting of one X and one Y chromosome. The sex of a baby is determined by the father's sperm. While the mother's ovum only carries X chromosomes, the father's sperm can carry either an X or a Y chromosome. If the ovum is fertilised by a sperm carrying an X chromosome, the embryo will contain the XX pair and so be female. Disordered chromosomes affect sexual development: a person with an XO chromosome pair (i.e. one X chromosome alone) has Turner's syndrome; a person with an extra X chromosome (making an XYY set) has Klinefelter's syndrome. Haemophilia is a disorder linked to the X chromosome.

sex determination /'seks dɪtɜ:mi'neɪʃ(ə)n/ noun the way in which the sex of an individual organism is fixed by the number of chromosomes which make up its cell structure

sex hormone /'seks 'hɔ:məʊn/ noun an oestrogen or androgen which promotes the growth of secondary sexual characteristics

sex-linkage /'seks ,lɪŋkɪdʒ/ noun the existence of characteristics which are transmitted through the X chromosomes

sex-linked /'seks ,lɪŋkt/ adjective 1. referring to genes which are linked to X chromosomes 2. referring to characteristics such as colour-blindness which are transmitted through the X chromosomes

sexology /'sek'sɒlədʒi/ noun the study of sex and sexual behaviour

sex organ /'seks ,ɔ:gən/ noun an organ which is associated with reproduction and sexual intercourse, e.g. the testes and penis in men, and the ovaries, Fallopian tubes, vagina and vulva in women

sex selection /'seks sɪ'leksʃ(ə)n/ noun the determination of a baby's sex before conception by separating the spermatozoa carrying Y chromosomes from those carrying X chromosomes

sexuplet /'sɛksstju:płət/ noun one of six babies born to a mother at the same time

sexual /'sekʃuəl/ adjective referring to sex

sexual act /'sekʃuəl ækt/ noun an act of sexual intercourse

sexual attraction /,sekʃuəl ə'trækʃ(ə)n/ noun a feeling of wanting to have sexual intercourse with someone

sexual deviation /,sekʃuəl di:vɪ'eɪʃ(ə)n/ noun any sexual behaviour which is not accepted as usual in the society in which you live. Examples in Western society are sadism and voyeurism.

sexual intercourse /,sekʃuəl 'ɪntəkɔ:s/ noun physical contact between people which involves stimulation of the genitals, especially the insertion of a man's erect penis into a woman's vagina with release of spermatozoa from the penis by ejaculation, which may fertilise ova from the woman's ovaries. Also called **sex, coitus, copulation**

sexually transmitted disease /,sekʃuəl træns,mitɪd ɪn'fekʃ(ə)n/, **sexually transmitted infection** /,sekʃuəl træns,mitɪd ɪn'fekʃ(ə)n/ noun a disease or infection transmitted from an infected person to another person during sexual intercourse. Abbr **STD, STI**

COMMENT: Among the commonest STDs are non-specific urethritis, genital herpes, hepatitis B and gonorrhoea; AIDS is also a sexually transmitted disease. The spread of sexually transmitted diseases can be limited by use of condoms. Other forms of contraceptive offer no protection against the spread of disease.

sexual reproduction /,sekʃuəl ,ri:p're'dʌʃən/ noun reproduction in which gametes from two individuals fuse together

SFD abbr small for dates

SGOT abbr serum glutamic-oxalacetic transaminase

SGPT abbr serum glutamic-pyruvic transaminase

shaft /ʃa:f/ noun 1. the long central section of a long bone 2. main central section of the erect penis

shake /seɪk/ verb to move, or make something move, with short quick movements
(NOTE: **shaking – shook – shaken**)

shaken baby syndrome /,ʃerkən 'beibi ,sɪndrəʊm/, **shaken infant syndrome** /

seikōn /sɪkən/ *noun* a series of internal head injuries in a very young child, caused by being shaken violently. It can result in brain damage leading to speech and learning disabilities, paralysis, seizures and hearing loss, and may be life-threatening.

shaky /'ʃeiki/ *adjective* feeling weak and unsteady

share /ʃeə/ *verb* 1. to use or do something together with others 2. to divide something and give parts of it to different people or groups (NOTE: [all verb senses] **shares** – **sharing** – **shared**) ■ *noun* a single part of something divided among different people or groups

shared care /ʃeəd 'keə/ *noun* antenatal care given jointly by an obstetrician in a hospital together with a general practitioner or a midwife working in the community

sharp /ʃɑ:p/ *adjective* 1. able to cut easily ○ *A surgeon's knife has to be kept sharp.* 2. hurting in a sudden and intense way ○ *She felt a sharp pain in her shoulder.*

sharply /'ʃɑ:pli/ *adverb* suddenly and to a significant extent ○ *His condition deteriorated sharply during the night.*

sharps /ʃɑ:p/ *plural noun* objects with points, e.g. syringes (*informal*)

shave /ʃeɪv/ *noun* the removal of hair by cutting it off at skin level with a razor ■ *verb* to remove hair with a razor (NOTE: **shaving** – **shaved**)

sheath /ʃi:θ/ *noun* 1. a layer of tissue which surrounds a muscle or a bundle of nerve fibres 2. same as **condom**

shed /ʃed/ *verb* to lose blood or tissue ○ *The lining of the uterus is shed at each menstrual period.* ○ *He was given a transfusion because he had shed a lot of blood.* (NOTE: **shedding** – **shed**)

sheet /ʃi:t/ *noun* a large piece of cloth which is put on a bed ○ *The sheets must be changed each day.* ○ *The soiled sheets were sent to the hospital laundry.* □ **draw-sheet**

sheltered operation /'self ,ɒp'reɪʃʃ(ə)n/ *noun* a surgical operation to treat congenital dislocation of the hip in children, in which bone tissue is grafted onto the acetabulum

sheltered accommodation /'selfədə'meɪʃʃ(ə)n/, **sheltered housing** /'selfədə'hauzɪŋ/ *noun* rooms or small flats provided for elderly people, with a resident supervisor or nurse

shiatsu /ʃi'a:tsu:/ *noun* a form of healing massage in which the hands are used to apply pressure at acupuncture points on the body in order to stimulate and redistribute energy

shift /ʃift/ *noun* 1. a way of working in which one group of workers work for a period and are then replaced by another group ○ *She is working on the night shift.* ○ *The day shift comes on duty at 6.30 in the morning.* 2. the period of

time worked by a group of workers 3. a movement

Shigella /ʃɪ'gelə/ *noun* a genus of bacteria which causes dysentery

shigellosis /ʃɪg'e'ləʊsɪs/ *noun* infestation of the digestive tract with *Shigella*, causing bacillary dysentery

shin /ʃɪn/ *noun* the front part of the lower leg

shinbone /'ʃɪnbəʊn/ *noun* same as **tibia**

shiner /'ʃaɪnə/ *noun* same as **black eye** (*informal*)

shingles /'ʃɪŋgəlz/ *noun* same as **herpes zoster**

shin splints /'ʃɪn splints/ *plural noun* extremely sharp pains in the front of the lower leg, felt by athletes

Shirodkar's operation /ʃɪ'rɒdkɑ:z ɒpə'reɪʃʃ(ə)n/, **Shirodkar pursestring** /ʃɪ'rɒdkɑ:z 'pɜ:sst्रɪŋ/ *noun* a surgical operation to narrow the cervix of the uterus in a woman who experiences habitual abortion in order to prevent another miscarriage, the suture being removed before labour starts. Also called **pursestring operation** [After N. V. Shirodkar (1900–71), Indian obstetrician.]

Shirodkar suture /ʃɪ'rɒdkɑ:z ,su:tʃə/ *noun* a type of suture which is placed around a cervix to tighten it during pregnancy and prevent miscarriage. Also called **pursestring stitch**

shiver /'ʃɪvə/ *verb* to tremble or shake all over the body because of cold or a fever, caused by the involuntary rapid contraction and relaxation of the muscles

shivering /'ʃɪvərɪŋ/ *noun* the condition of trembling or shaking all over the body because of cold or a fever, caused by the involuntary rapid contraction and relaxation of the muscles

shivery /'ʃɪvəri/ *adjective* trembling from cold, fear or a medical condition

shock /ʃɒk/ *noun* a state of weakness caused by illness or injury that suddenly reduces the blood pressure ○ *The patient went into shock.*

○ *Several of the passengers were treated for shock.* □ **traumatic shock** a state of shock caused by an injury which leads to loss of blood ■ *verb* to give someone an unpleasant surprise, and so put him or her in a state of shock ○ *She was still shocked several hours after the accident.* (NOTE: You say that someone is in **shock**, in a state of **shock** or that they went into **shock**.)

shock lung /ʃɒk 'lʌŋ/ *noun* a serious condition in which a person's lungs fail to work following a trauma

shock syndrome /'ʃɒk ,sɪnd्रəʊm/ *noun* a group of symptoms, a pale face, cold skin, low blood pressure and rapid and irregular pulse, which show that someone is in a state of shock.

□ **anaphylactic shock**

shock therapy /'ʃɒk ,θerəpi/, **shock treatment** /'ʃɒk ,tri:tment/ *noun* a method of treat-

ing some mental disorders by giving an anaesthetised patient an electric shock to induce an epileptic convulsion

shoot /ʃu:t/ *verb (of pain)* to seem to move suddenly through the body with a piercing feeling ○ *The pain shot down his arm.*

shooting /'ʃu:tɪŋ/ *adjective (of pain)* sudden and intense

short /ʃɔ:t/ *adjective* 1. not having enough of something 2. not very tall or long

short-acting /,ʃɔ:t 'ækting/ *adjective* effective only for a short period

shortness of breath /,ʃɔ:tətnəs əv 'breθ/ *noun* the inability to breathe quickly enough to supply the oxygen needed

short of breath /,ʃɔ:t əv 'breθ/ *adjective* unable to breathe quickly enough to supply the oxygen needed ○ *After running up the stairs he was short of breath.*

shortsighted /,ʃɔ:t'saɪtɪd/ *adjective* same as **myopic**

shortsightedness /,ʃɔ:t'saɪtɪdnəs/ *noun* same as **myopia**

shot /ʃɒ:t/ *noun* same as **injection (informal)** ○ *The doctor gave her a tetanus shot.* ○ *He needed a shot of morphine to relieve the pain.*

shoulder /'ʃəuldə/ *noun* a joint where the top of the arm joins the main part of the body ○ *He dislocated his shoulder.* ○ *She was complaining of pains in her shoulder or of shoulder pains.*

shoulder blade /'ʃəuldə bleɪd/ *noun* same as **scapula**

shoulder girdle /'ʃəuldə ,gɜ:d(ə)l/ *noun* same as **pectoral girdle**

shoulder joint /'ʃəuldə dʒɔ:nt/ *noun* a ball and socket joint which allows the arm to rotate and move in any direction

shoulder lift /'ʃəuldə lift/ *noun* a way of carrying a heavy person, in which the upper part of his or her body rests on the shoulders of two carriers

shoulder presentation /'ʃəuldə ,prez(ə)n ,teɪʃ(ə)n/ *noun* a position of a baby in the uterus, in which the shoulder will first appear

show /ʃəʊ/ *noun* the first discharge of blood at the beginning of childbirth ■ *verb* 1. to cause or allow something to be visible 2. to provide convincing evidence of something

shriveled /'ʃrɪv(ə)lɪd/ *verb* to become dry and wrinkled (NOTE: **shrivelling – shrivelled**. The US spellings are **shriveling – shriveled**.)

shuffling walk /,ʃʌf(ə)lɪŋ 'wɔ:k/, **shuffling gait** /,ʃʌf(ə)lɪŋ 'geɪt/ *noun* a way of walking in which the feet are not lifted off the ground, e.g. in Parkinson's disease

shunt /ʃʌnt/ *noun* 1. the passing of fluid through a channel which is not the usual one 2. a channel which links two different blood vessels and carries blood from one to the other ■ *verb (of blood)* to pass through a channel which

is not the usual one ○ *As much as 5% of venous blood can be shunted unoxygenated back to the arteries.*

shunting /'ʃʌntɪŋ/ *noun* a condition in which some of the deoxygenated blood in the lungs does not come into contact with air, and full gas exchange does not take place

SI *abbreviation* the international system of metric measurements. Full form **Système International**

sial- /'saɪəl/ *prefix* same as **sialo-** (*used before vowels*)

sialadenitis /,saɪələnɛdɪ'nætɪs/ *noun* inflammation of a salivary gland. Also called **sialoadenitis, sialitis**

sialagogue /saɪ'æləgɒg/ *noun* a substance which increases the production of saliva

sialitis /,saɪələ'taɪtɪs/ *noun* same as **sialadenitis**

sialo- /saɪələʊ/ *prefix* 1. referring to saliva 2. referring to a salivary gland

sialoadenitis /,saɪələʊnɛdɪ'nætɪs/ *noun* same as **sialadenitis**

sialogogue /saɪ'æləgɒg/ *noun* same as **sialagogue**

sialography /,saɪə'lɒgrəfi/ *noun* X-ray examination of a salivary gland. Also called **ptyalography**

sialolith /saɪ'æləʊlɪθ/ *noun* a stone in a salivary gland. Also called **ptyalith**

sialorrhoea /,saɪələʊ'rɪə/ *noun* the production of an excessive amount of saliva (NOTE: The US spelling is **sialorrhea**.)

Siamese twins /,saɪəmī:z 'twɪnz/ *plural noun* same as **conjoined twins**

sib /sɪb/ *noun* same as **sibling (informal)**

sibilant /'sɪbɪlənt/ *adjective* referring to a sound which whistles

sibling /'sɪbɪŋ/ *noun* a brother or sister

Sichuan flu /,sɪtʃwa:n 'flu:/ *noun* a virulent type of flu which has the same symptoms as those of ordinary flu (e.g. fever, sore throat and aching muscles) but they are more pronounced (informal) (NOTE: The virus was first discovered in 1987 in Sichuan, a southwestern province of China.)

sick /sɪk/ *adjective* 1. having an illness ○ *He was sick for two weeks.* □ **to report or call in** *sick* to say officially that you are unwell and cannot work 2. about to vomit ○ *The patient got up this morning and felt sick.* □ **to be sick** to vomit ○ *The child was sick all over the floor.* □ **to make someone sick** to cause someone to vomit ○ *He was given something to make him sick.*

sickbay /'sɪkbɛɪ/ *noun* a room in a factory or on a ship where people can visit a doctor for treatment

sickbed /'sɪkbed/ *noun* a bed where a person is lying sick ○ *She sat for hours beside her daughter's sickbed.*

sick building syndrome /'sɪk 'bɪldɪŋ ,sɪn drəʊm/ *noun* a condition in which many people working in a building feel ill or have headaches, caused by blocked air-conditioning ducts in which stale air is recycled round the building, often carrying allergenic substances or bacteria (*informal*)

sicken for /'sɪkən fɔ:/ *verb* to feel the first symptoms of an illness (*informal*) ○ *She's looking pale – she must be sickening for something.*

sickle cell /'sɪk(ə)l sel/ *noun* a red blood cell shaped like a sickle, formed as a result of the presence of an unusual form of haemoglobin. Also called **drepanocyte**

sickle-cell anaemia /'sɪk(ə)l sel ə,ni:miə/ *noun* an inherited condition in which someone develops sickle cells which block the circulation, causing anaemia and pains in the joints and abdomen. Also called **drepanocytosis**, **sickle cell disease**

‘...children with sickle-cell anaemia are susceptible to severe bacterial infection. Even children with the milder forms of sickle-cell disease have an increased frequency of pneumococcal infection’ [*Lancet*]

COMMENT: Sickle-cell anaemia is a hereditary condition which is mainly found in people from Africa and the West Indies.

sickle-cell chest syndrome /'sɪk(ə)l sel 'tʃest ,sɪndrəʊm/ *noun* a common complication of sickle-cell disease, with chest pain, fever and leucocytosis

sickle-cell disease /'sɪk(ə)l sel dɪ,zi:z/ *noun* same as **sickle-cell anaemia**. Abbr **SCD**.

sickle-cell trait /'sɪk(ə)l sel ,treɪt/ *noun* a hereditary condition of the blood in which some red cells become sickle-shaped, but there are not enough affected cells to cause anaemia

sicklist /'sɪklist/ *noun* a list of people who are sick, e.g. children in a school or workers in a factory ○ *We have five members of staff on the sicklist.*

sickly /'sɪkli/ *adjective* (*usually of children*) subject to frequent sickness ○ *He was a sickly child, but now is a strong and healthy man.*

sickness /'sɪknes/ *noun* 1. a state of having an illness ○ *There is a lot of sickness in the winter months.* ○ *Many children are staying away from school because of sickness.* ♀ **sea-sickness, motion sickness** 2. a feeling of wanting to vomit

sickroom /'sɪkru:m/ *noun* a room where someone is ill ○ *Visitors are not allowed into the sickroom.*

side /saɪd/ *noun* 1. the part of the body between the hips and the shoulder ○ *She was lying on her side.* 2. the part of an object which is not the front, back, top or bottom ○ *The nurse wheeled the trolley to the side of the bed.*

side-effect /'saɪd ɪ,fekt/ *noun* an effect produced by a drug or treatment which is not the main effect intended ○ *One of the side-effects of chemotherapy is that the patient's hair falls out.*

‘...the treatment is not without possible side-effects, some of which can be particularly serious. The side-effects may include middle ear discomfort, claustrophobia, increased risk of epilepsy’ [*New Zealand Medical Journal*]

side rail /'saɪd ,reɪl/ *noun* a rail at the side of a bed which can be lifted to prevent the person falling out

sidero- /saɪdərəʊ/ *prefix* referring to iron

sideropenia /,saɪdərəʊ'pi:nɪə/ *noun* a lack of iron in the blood usually caused by insufficient iron in the diet

siderophilin /saɪdə'rɒfəlɪn/ *noun* same as **transferrin**

siderosis /,saɪdə'rəʊsɪs/ *noun* 1. a condition in which iron deposits form in tissue 2. inflammation of the lungs caused by inhaling dust containing iron

SIDS abbr sudden infant death syndrome

sight /saɪt/ *noun* one of the five senses, the ability to see ○ *His sight is beginning to fail.* □ **to lose your sight** to become blind

sighted /'saɪtɪd/ *adjective* able to see, as opposed to visually impaired

sigmoid /'sɪgmɔɪd/ *adjective* 1. shaped like the letter S 2. referring to the sigmoid colon ■ *noun* same as **sigmoid colon**

sigmoid colon /,sɪgmɔɪd 'kɔ:lən/ *noun* the fourth section of the colon which continues as the rectum. See illustration at **DIGESTIVE SYSTEM** in Supplement. Also called **pelvic colon**, **sigmoid**, **sigmoid flexure**

sigmoidectomy /,sɪgmɔɪ'dektəmɪ/ *noun* a surgical operation to remove the sigmoid colon (NOTE: The plural is **sigmoidectomies**)

sigmoid flexure *noun* same as **sigmoid colon**

sigmoidoscope /sig'mɔɪdəskəʊp/ *noun* a surgical instrument with a light at the end which can be passed into the rectum so that the sigmoid colon can be examined

sigmoidoscopy /,sɪgmɔɪ'dɒbskəpɪ/ *noun* a procedure in which the rectum and sigmoid colon are examined with a sigmoidoscope

sigmoidostomy /,sɪgmɔɪ'dɒstəmɪ/ *noun* a surgical operation to bring the sigmoid colon out through a hole in the abdominal wall (NOTE: The plural is **sigmoidostomies**)

sign /saɪn/ *noun* a movement, mark, colouring or change which has a meaning and can be recognised by a doctor as indicating a condition (NOTE: A change in function which is also noticed by the patient is a **symptom**.) ■ *verb* to write your name on a document such as a form or cheque, or at the end of a letter ○ *The doctor signed the death certificate.*

significant /sig'nifikənt/ *adjective* important or worth noting ○ *No significant inflammatory responses were observed.*

significantly /sig'nifikəntli/ *adverb* in an important or noteworthy manner ○ *He was not significantly better on the following day.*

sign language /'saɪŋ ,læŋgwɪdʒ/ *noun* a set of agreed signs made with the fingers and hands, used to indicate words by or for people who cannot hear or speak

sildenafil citrate /,sɪldənæfil 'sɪtret/ *noun* an enzyme-inhibiting drug used in the treatment of male impotence

silent /'saɪlənt/ *adjective* 1. not making any noise or talking 2. not visible or showing no symptoms ◇ *Genital herpes may be silent in women.* ◇ *Graft occlusion is often silent with 80% of patients.*

silica /'sɪlɪkə/ *noun* a compound of silicon, the mineral which forms quartz and sand. Also called **silicon dioxide**

silicon /'sɪlkən/ *noun* a non-metallic chemical element (NOTE: The chemical symbol is **Si**.)

silicon dioxide /,sɪlkən daɪ'ɒksaɪd/ *noun* same as **silica**

silicosis /,sɪlɪk'əʊsɪs/ *noun* a disease of the lungs caused by inhaling silica dust from mining or stone-crushing operations

COMMENT: This is a serious disease which makes breathing difficult and can lead to emphysema and bronchitis.

silver /'sɪlvə/ *noun* a white-coloured metallic element (NOTE: The chemical symbol is **Ag**.)

silver nitrate /,sɪlva 'nætrɪtət/ *noun* a salt of silver that is mixed with a cream or solution and used, e.g., to disinfect burns or to kill warts

Silvester method /sɪl'vestə ,meθəd/ *noun* a method of giving artificial respiration. The person lies on his or her back, then the first aider brings the person's hands together on the chest and moves them above the person's head. ♦ **Holger-Nielsen method**

Simmonds' disease /'sɪməndz dɪ,zi:z/ *noun* a condition of women due to postpartum haemorrhage, in which there is lack of activity in the pituitary gland, resulting in wasting of tissue, brittle bones and premature senility [Described 1914. After Morris Simmonds (1855–1925), German physician and pathologist.]

simple /'sɪmpəl/ *adjective* 1. ordinary 2. not very complicated

simple epithelium /,sɪmpəl ,epɪ'thɪliəm/ *noun* an epithelium formed of a single layer of cells

simple fracture /,sɪmpəl 'frækʃə/ *noun* a fracture where the skin surface around the damaged bone has not been broken and the broken ends of the bone are close together. Also called **closed fracture**

simple tachycardia /,sɪmpəl tæki'ka:diə/ *noun* same as **sinus tachycardia**

simplex /'sɪmplɛks/ ♦ **herpes simplex**

Sims' position /'simz pə,zɪʃ(ə)n/ *noun* a position of the body in which the person lies on his or her left side with their left arm behind their back and their right knee and thigh flexed. It is used to allow the anal or vaginal area to be examined easily.
